Yet, says Luther, "you will not find peace save in Christ, by despairing of yourselves, and of your own works. Hope for nothing from your own labours, your own understanding; trust solely in God and in the influence of his Spirit. If our labours and afflictions could give peace to the conscience, why should Christ have died?" But, said he, "man cannot of his own nature will be God, (or is not willing he should be God.) He would prefer to be God himself, and that God were not God. The law of God and the will of man are two adversaries, that without the grace of God can never be reconciled. The law which is good, and in which we have life, is the love of God shed abroad in our hearts by the Holy Ghost. Blessed are all they who perform the works of God's grace."

"God has formed thee with a wiser view  
Than to be led in chains, but to subdue  
Death to thee to cope with enemies, and first  
Points out a conflict with thyself the worst;"

which seems to have been the discovery of this eminent servant, after much suffering from the temptations and delusions, to which he was subject, in an especial manner, before the natural will and pride of the creature were brought under, and his eyes anointed to behold the error of a persecuting course, suggested by a self-righteous spirit. The power and workings of this subtle and deceiving foe, seems aptly described by the pious Cooper, in the following lines:

"By what unseen and unsuspected arts,  
The serpent error twines round human hearts."

First appetite enlists him, Truth's sworn foe,  
Then obstinate self-will confirms him so.  
Tell him he wanders; that his error leads  
To fatal ill; that though the path he tread  
Be flowery, and he see no cause for fear,  
Death and the pains of hell attend him there:  
In vain; the slave of arrogance and pride,  
He has no hearing on the prudent side,  
His still refuted quirks he still repeats;  
New raised objections with new quibbles meets;  
Till sinking in the quicksand he defends,  
He dies disputing, and the contest ends—  
But not the mischief; they still left behind,  
Like thistle-seeds, are sown by every wind."

An humble confession of sins brings shame to ourselves, but glory to God.

**Impostors in a London Crowd.**—The *Scottish Guardian* correspondent gives a lively picture of the scenes in the city streets, among the crowds which gather to see the Lord Mayor's procession:—"Let us faintly sketch the locality of St. Paul's church-yard. The first claimant for public regard, and peace, is the man who always sells 'gold' (rings for a penny each, on Lord Mayor's day. Listen to him. 'Look here,' he cries, 'this is not a small country village, where gawping rustics can be so easily gulled; no, my friends, it is the great city of London, where a jeweller's shop may be seen at every second step. I am here, gentlemen, in consequence of a wager between two sporting gentlemen, and to the possibility of selling one hundred gold rings in St. Paul's church-yard, in this nineteenth century.' The rings are quickly sold, and when his tray is empty, he disappears. But who comes next? A man who mounts a blacking-box, in order to make himself conspicuous, and addresses the crowd in this fashion:—'Gentlemen, you are surrounded by impostors, fellows who profess to sell so many things for a *wager*. I have come here to-day, for the purpose of rewarding the public, by giving away some spare money. Now, then, gentlemen, speculators, who'll give me two-and-fourpence for half-a-crown?' Immediately a half-crown is held up, and he gets two or three offers. He then descends to smaller sums—with each offering a premium—such as a shilling for twopence, sixpence for fivepence, twopence for three halfpence, and (O, what a rush upon him of the small boys,) a penny for a halfpenny. However, on the whole, he does not lose more than a shilling; and accomplishing his object—that of gaining popular attention—immediately flows in his gait. Glittering 'gold' chains appear—O, how dazzling, and now cheap!—to be, in fact, as he says, 'given away for the paltry sum of one shilling!' He sells lozenges of them, and when trade begins to slacken, reduces brooches, which he calls 'precious' stones surrounded with gold, to be sold for the same sum. Two confederates in the crowd are the first customers for the brooches; he puts their money in little boxes along with the brooches, and says:—'There, take back your money, as well as the brooches, and go and have something to drink.' At this the crowd rush forward, hoping to have their clay moistened after the same fashion. How vain the hope! a mirage in the desert, instead of the cooling fountain of 'Bass's Pale Ale,' at the neighbouring public house. The saucy rogue coolly pockets all the shillings, but still there are plenty of buyers. At last they begin to flag, and he, stepping off his box, abscquitates. Shortly after, he may be seen dividing his gains with his two confederates."

**The Death of Martin Luther.**—The last act of Martin Luther was honourable to his character; it was a journey, undertaken amidst much bodily infirmity, to Eisenbe, to reconcile the Counts of Mansfeld, who were at variance. Though contrary to his custom to intermeddle in secular disputes, he yielded in this case, from the attachment he felt to his native town, as well as from his desire to restore peace. He preached at Eisenbe on the 28th January, 1546, and assisted at the conferences up to 17th February. At supper on that same-day, he dwelt on his approaching death; one once asked him if, in a future state, he should recognise one another; he replied that he thought so. Having entered his chamber with some friends and his two sons Martin and Paul, aged fourteen and thirteen, he approached the window, and remained a considerable time in prayer. He said to his friend Auriferaber, "I am very feeble and my

pains increase." Medicine was given to him, and attempts were made to warm him by the friction of the hands. As he laid himself down on the bed, he said to Count Albrecht, "If I could doze half an hour, I think it would relieve me." He did sleep, and awoke in about an hour and a half—near eleven o'clock. Seeing that all present still remained by his side, he said, "What are ye here yet? why do ye not retire to rest?" He resumed his prayer, crying with fervour, "Father, unto thy hands I commend my spirit! thou hast redeemed me, Lord God of truth." Afterwards, turning to all present, he said, "Pray my friends for the gospel of our Lord—that his kingdom may be enlarged. Verily, the Council of Trent and the Pope threatened to injure it." Having slept another hour, Dr. Jonas asked him how he felt. "I am very ill," was the reply. "I think, my dear Jonas, I must remain at Eisenbe, where I was born." However, he walked a little about the chamber, laid down on the bed, and was covered with cushions. He once more betook himself to prayer. "O my Father! God of our Lord Jesus Christ, and source of all consolation, I thank thee for that thou hast revealed to me thy well-beloved Son, in whom I believe, whom I have acknowledged and preached, whom I have loved and celebrated, whom the Pope and the wicked persecute. To thee, Lord Jesus Christ I commend my soul. I leave this earthly body; I am borne away with thee!" He repeated three times, "Into thy hands I commend my spirit, O Lord God of truth; thou hast redeemed me." Suddenly he shut his eyes and became insensible; Count Albrecht and his lady assisted the physicians; all laboured to restore him, and with great difficulty, they succeeded for a moment. "Reverend father," said Dr. Jonas, "do you steadfastly die in the faith which you have taught?" "Yes," was the distinct reply, and he fell asleep. Immediately afterwards he grew pale, became cold, breathed softly, and expired, on Thursday the 18th of February, 1546.

Three days before his death he preached in the pulpit which still remains at Eisenbe, his last sermon, from Matthew xii. 35-30:—"At that time Jesus answered and said, I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent; and hast revealed them unto babes. Even so, Father: for so it seemed good in thy sight. All things are delivered unto me of my Father: and no man knoweth the Son but the Father: neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal him. Come unto me all ye that labour and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart; and ye shall find rest unto your souls. For my yoke is easy, and my burden is light."

**Our dear young People.**—When dear young people give up all to the Lord, it makes way for unclouded prospects in religion, and they escape many perplexities; and if Divine Goodness sees meet to prove them in any singular manner, it is only that they may be more richly qualified to show forth His praise.

## THE FRIEND.

SECOND MONTH 15, 1862.

The reasonable counsel contained in the Address from the Meeting for Sufferings, which we publish to-day, should receive the serious consideration

and careful observance of all our members. There is no doubt that erroneous views respecting the war, now being carried on in our country, have obtained among some amongst us; who, because it is waged by the Government to support its authority and put down rebellion, have persuaded themselves that it is so far exceptional from other national disputes, as to exonerate them from a strict maintenance of our Christian testimony against all wars and lightings, and to justify them in contributing in some ways to aid those engaged in carrying it on. We hope serious reflection will convince all such, that as this contest had its origin from the same source, and is waged in the same murderous spirit as all other wars, Friends can in no wise countenance or uphold it, without compromising their professed principles, and sanctioning the violation of the precepts and commands of Christ.

That the rebellion is wicked and suicidal, we fully believe. It is the result of crime long and obstinately persisted in, by parties among those now arrayed on each side of the contest; and the misery the country is suffering is a result which Divine Providence has permitted, in order to bring the people to a true sense of their sinfulness, and by repentance and amendment, to a course more consonant with his holy law. The determination to uphold and perpetuate slavery seems to have overridden the attachment to the Union in the great body of the inhabitants of the South, and banded them in a determination to resist to the utmost every effort to subject them to the authority of the United States, lest thereby, they should find the institution, which seems dearer to them than any thing else, so crippled and maimed, as to linger out a sickly and precarious existence for but a few more years, when it and those who have used the insatiate lusts and the crime inseparable from this system to raise them into power, must pass away. This we believe will finally be the case, let other results of the war be what they may; and it is consoling to the christian, when with the eye of faith, he can see the Omnipotent Controller of events educating good out of the evils which man in his blind infatuation brings upon himself, ordering his back-sliding to chastise him, and while teaching him righteousness by the things he suffers, causing even his wrath to bring praise to his great name.

But though this should happily prove to be the case, it could in no way sanctify the evil means by which such a result was brought about, nor evince that it was in accordance with the counsels of infinite Wisdom and Mercy, that this great sin should be broken down, by the commission of another; that slavery should be blotted out by the smothering ruins and bloody fields of war; but only that the folly and guilt of the nation, in the retributive justice of the Almighty, had brought on a savage convulsion, which, while it inflicted a deserved punishment, in its throes and struggles, has torn up the monster crime that had so long fastened itself on the land.

The idea that war is a *necessary evil*, is as false as the long-accepted opinion that duelling was the proper and only means by which private rights and character could be rightly enforced and protected. Professed christians once contended that this barbarous custom was indispensable to an honourable existence of social and domestic society; and it maintained its position until the diffusion of christian light and knowledge has gradually banished it from all truly civilized societies. But had all christians continued to countenance it by precept and practice, or incited the sentiment that some circumstances justified it, it must necessarily have held its sway over the community. It is the unfaithfulness of christians to the religion they profess, that

war, under any circumstances, is still tolerated, and nations continue to appeal to the sword for the settlement of controversies, brutal as the method is, and consequently opposed to the precepts of the Messiah. Friends then are called on as loudly now as ever, to come up in a faithful support of our noble testimony to the absolutely peaceful character of christianity, and the indispensable duty resting upon the disciples of Christ, to strive for entrance into and preservation within his kingdom, where there can be no fighting, and the passions from which war arises, are kept in entire abeyance.

#### SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 24th ult. The factory statistics of Manchester show that the shortening of the hours of labour in the factories is gradually extending, and in the course of a week or two, the movement was expected to become much more general and extensive.

The London Times publishes a letter from a war correspondent, calling attention to the fact that the U. S. gun-boat *Tuscarora* has infringed, and continues to infringe the rules of neutrality, and that the government is in the habit of the government no longer to tolerate such a flagrant disregard of neutral rights.

The brig *West Indian*, Capt. Foote, from Charleston, with a cargo of turpentine, had arrived at Liverpool. Her captain represents the United States blockade of Charleston as anything but effectual, and says that the "stone blockade," so far from stopping the entrance to the port, will eventually deepen the shallow channels. The citizens of Charleston have very little uneasiness on the subject.

The question of European intervention in the civil war in America, has been much more freely canvassed, the proceedings at Charleston and the alleged general inefficiency of the blockade, being the excuses put forth for such a step.

The privateer *Samter* having been ordered from Cadix, reached Gibraltar on the 19th ult. During her passage she burned the American bark *Neapolitan*, from Messina to Boston, with fruits. She also captured the brig *Investigator*, with ore, but subsequently allowed her to proceed.

The *Tuscarora* and *Nashville* remained at Southampton. Lord Elgin was about to leave England for India. He promised a deputation to do his best to encourage the growth of cotton in India.

The Bank of France has reduced its rate of discount from 5 to 4½ per cent.

The *Union* papers publish a despatch from Rome, asserting that the Austrian government was about to address a note to the Great Powers, declaring that the State of Piedmont constitutes a perpetual menace, and renders it necessary that she should be required to disarm.

An imperial ukase has been published at St. Petersburg, stating that in view of the increased requirements of the State, an augmentation will be made in the poll and stamp taxes, and in import duties, which in the case of the latter, will be five per cent. on articles entering Russia, and the European and Asiatic routes. A tax will also be levied upon registered letters.

The Liverpool cotton market was dull, with a decline of 1½d. Breadstuffs also dull and slightly lower.

**One Week Later.**—The steamer *Jura*, of Portland, brings date of the 31st ult. from Southampton, and reports that no demonstration was made on the arrival. The former went to London, and the latter to Paris.

The Emperor Napoleon opened the French chamber on the 17th. In his speech on that occasion, he said, "The civil war which desolates America, has greatly compromised our commercial interests. So long, however, as the rights of neutrals are respected, we must confine ourselves to expressing wishes for an early termination of these dissensions."

For foreign cotton market was firm, with a slight advance. Stock in port, 546,000 bales, of which 215,000 are American.

**UNITED STATES.—Congress.**—The Senate has passed a resolution expelling Jesse D. Bright, Senator from Indiana, on the alleged disloyalty of the latter. The House of Representatives has passed, by a vote of 93 to 59, the bill for an issue of \$150,000,000 of United States notes, in denominations of not less than five dollars each. The notes are declared a legal tender, and will be received in payment of all taxes, duties, debts and demands of

every kind due to the United States. These notes bear no interest, but are made exchangeable at the option of the holder, for United States six per cent. bonds having twenty years to run, or for United one cent. bonds redeemable at the pleasure of the Government. The bill emanates from the Treasury. To enforce the Secretary of the Treasury to fund the treasury notes and floating debt of the United States, the bill provides for the issue, on the credit of the United States, of coupon or registered bonds, to the amount of five hundred millions of dollars, being equal to the total amount of the rate of the issue. On this measure, various strong objections were pointed out, but it was urged that it was one of necessity and not of choice. The floating debt already incurred was stated to be one hundred and thirty millions, and the treasury was absolutely empty.

**New York.**—The *Delaware* Lottery, which was held at Philadelphia.—Mortality last week, 235. **Pennsylvania Railroad.**—The total gross earnings of the road, during the year 1861, amounted to \$7,300,000, and the expenses to \$3,653,062, leaving the net earnings of the road \$3,646,938, which is \$1,350,535 more than in the previous year.

**The Delaware Lotteries.**—The Senate of the State of Delaware has followed the example of the House, and passed the act declaring the forfeiture of the lottery prizes granted some years since to certain persons.

**Canada.**—The Great Western Railway, which crosses in Canada, and 3808 miles completed or under construction, of which 1075 miles are opened for traffic. The total amount expended upon these roads so far, has been about \$109,000,000.

**Brig. Gen. Stone.**—Brig. Gen. Stone, commanding a division of the Federal army on the Potomac, has been arrested and sent to Fort Lafayette as a prisoner. He is charged with having caused the terrible disaster at Ball's Bluff, in which Col. Baker lost his life; with holding correspondence with the rebels, and receiving visits from them; with aiding the rebels in their march, and suffering the rebels to build a fort or strong works under his guns without molestation, and with a treacherous design to expose his force to capture and destruction by the enemy, under pretence of orders for a movement from the commanding general which had not been given.

**The War.**—Fort Henry on the Tennessee river, about sixty miles from its mouth, was captured on the 6th inst., and Gen. Tilghman and the garrison made prisoners. The Memphis and Ohio railroad bridge in Tennessee, was also captured from Fort Henry.

Several thousand rebel infantry were posted at Fort Henry to aid in its defence, but they all fled when the attack commenced. This invasion of Tennessee has been effected by the advance of a division of Federal army through that part of Kentucky, which lies between the Mississippi and Tennessee rivers, aided by a fleet of gun-boats. The rebels still hold Columbus and Bowling Green in strong force. The captured fort mounted seventeen guns; five of the garrison were killed and ten wounded. One of the U. S. gun-boats was badly injured in the action, a ball going through the boiler, and causing the death of a number of persons by scalding.

The rebel force which recently advanced to Romney, in Western Virginia, has retreated, and the town is again occupied by Union troops.

The *Richmond* and *Washington* remain inactive. The roads are still almost impassable.

**Roanoke Island**, on the coast of North Carolina, was attacked by a part of the *Burdette* expedition on the 7th inst. According to a rebel report received, by way of Norfolk, the Federal forces had been ten days on the island, but the fight had not terminated. The island is strongly fortified, with an entrenched camp in the centre, and several thousand troops commanded by Generals Hill and Wise.

A despatch to the Cincinnati Commercial states, that the Federal forces are about to invade East Tennessee at three different points simultaneously. Gen. Carter is to go through Cumberland Gap; Gen. Schoepff is to advance by the central route, and Gen. Thomas will cross at Mill Springs, near the place where Zollicoff's army was defeated.

**Southern Items.**—Howell Cobb and others have issued an address to the people of Georgia, with the design of arousing them to a sense of their danger, and the consequent necessity of making every possible effort to support the Federal cause. The North, they say, has exhibited an energy, a perseverance and an amount of resources which was hardly expected. "An immense army has been organized for our destruction, which is being disciplined to the unthinking stolidity of regulars. With the exclusive possession of the sea, our enemy is ena-

bled to throw upon the shores of every State the nucleus of an army. And the threat is made, and doubtless the attempt will follow in early spring, to crush us with a giant's grasp, by a simultaneous movement along our entire borders. With whatever alacrity our people may react to arms, and with whatever energy our government may use its resources, we cannot expect to cope with our enemy either in numbers, equipments or munitions of war. To provide against these odds, we must look to desperate courage, unflinching daring, and universal self-sacrifice."

The *Richmond* Despatch of the 28th ult. argues that an army of two hundred thousand men is fully adequate to meet all the requirements of the South, and that it is about as large a number as the Confederacy will be able to support in arms and equipment. The immense army of the Federal government is, the writer contends, entirely too large to be employed to the best advantage, and while producing an enormous drain upon the treasury, supplies wholesale food for death by camp diseases.

The last accounts from Port Royal state that nearly all the cotton in the vicinity had been gathered. A part of that shipped to New York was sold at seventy cents per pound. Some of the obstructions placed by the rebels in the river channel, between Fort Palms and Savannah, had been removed. The U. S. troops were moderately healthy. Roses were in bloom at Beaufort on the 21st ult.

An order was issued from the War department at Richmond on the 4th, ordering all the military commanders to impress all saltpetre found in their districts, except such as is in the hands of the original manufacturers, and that the government shall pay forty cents per pound and no more.

The *Richmond* papers say that the Commissioners appointed by the U. S. Secretary of War to visit the Federal prisoners, will not be received.

Gen. Beauregard has been ordered to Kentucky; when last heard from, he was at Nashville, on his way to join the army.

A letter from New Orleans, per the steamer *Victoria*, says the superintendent and various employees of the Opelousas railroad had been arrested on a conspiracy having been discovered to deliver to the Union forces the entire railroad, and to give them other aid at Berwick Bay. The letter says this arrest has been suppressed from publication in the newspapers.

#### WEST-TOWN BOARDING-SCHOOL.

**Visiting Committee.**—The Committee, under appointment to visit the schools at West-Town, will meet there on Seventh-day, the 15th of the Second month, and proceed with the examinations on Second-day and Third-day following.

JOEL EVANS, Clerk.

Second mo. 5th, 1862.

A conveyance will be at the Street Road Station, to meet the train leaving Philadelphia at two o'clock, on Seventh-day afternoon, the 15th instaut.

#### GRISCOM STREET SOUP-HOUSE.

The daily delivery of soup is large, and a part of the Society's income being unavailable, there is reason to apprehend its funds will be inadequate to meet the demands. The coloured people not participating in the work connected with the war, and their usual avocations being interrupted, many of them are destitute of the means of living, and are drawing largely on our supply of soup. Donations of articles suitable for making soup, will be gratefully received at the House, No. 10 to Griscom street, between Fourth and Fifth streets, and Spruce and Pine streets, and in money, by JENNIFER HARRIS, Treasurer, Fourth street, below Spruce street, or by THOMAS EVANS, 817 Arch street.

#### WANTED.

A well qualified Female Teacher wishes a school for the summer; not particular as to location. For information, inquire at the office of "The Friend."

MARRIAGE, on Third-day, the 4th instaut, at Friends' Meeting, North Sixth street, JOHN E. CARTER, to CAROLINE W., daughter of Joel and Caroline W. Cadbury, all of Philadelphia.

FILE & MELIROY, PRINTERS,

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SECOND MONTH 22, 1862.

NO. 25.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

[We take from the Philadelphia Fire Marshal Almanac the following extracts, as being of general interest.]

Farmers in the rural wards of the city, should use every possible precaution as to the strength and safety of the fastenings of their barns, stables, carriage-houses and other buildings. The windows of barns ought never to be allowed to remain open, with hay or straw protruding from them, and the doors of these buildings should always be locked at night.

All openings made in the walls of stables, to give air to horses, should be wired on the inside. The Fire Marshal has on record a case of incendiarism, which a miserable creature perpetrated by inserting an ignited match through one of a number of auger holes bored to ventilate a stall in which a horse was standing. The loose hay that hung down from the loft into the rack, was fired, and the poor beast shockingly burned before he was rescued.

Kindling-wood in cellars should never be piled near a window.

Farmers should never stack hay near to a frequented road or lane, when they can avoid it. Hay-ricks close by the road-side are tempting objects to strolling vagabonds and vicious juveniles, affected with a mania for burning.

No wayfarer or vagrant should ever be permitted to sleep in the haymow of a barn or the loft of a stable, who has a pipe, a cigar, a tinder-box, or a match, especially if under the influence of drink. A number of fires in the country are caused by the carelessness of these people.

The most effectual preventive of incendiary fires is cautionness in securing property from depredation. The incendiary, unlike the burglar, does not often break locks, bolts and bars. Wherever access can be obtained without difficulty, it is there he applies his torch. His diabolical work has to be done quickly, and speedy flight is his surest shield from discovery. The noise of a forcible entrance may sound an alarm, and if he delays, though but for a moment, after striking the match, the sight of the very fire he has kindled may detect him.

In the event of a fire on the premises of a farmer, or at the country-seat of a gentleman in the rural wards, the engines from the nearest villages

do not usually reach the scene of conflagration in time to save the building in which the fire commenced, but they generally succeed in preventing the flames from extending to the adjacent buildings. The want of water is often a serious obstacle to success in mastering the devastating element. Where there is a scarcity of water on farm estates, the fire marshal would recommend the construction of artificial ponds within a convenient distance of the buildings on the place. These ponds would yield an abundant supply of water for the extinguishment of an ordinary agricultural fire, before it had time to extend much beyond the building in which it originated.

The covers to hatchways in warehouses, stores, and factories should always be shut down at night. When closed, in case of a fire in the building, they help to confine it, but when raised up, a strong draught is created, and thus the progress of the flames is certain to be accelerated. Besides, hatches, when open, are frightful man-traps to brave firemen entering upper windows in the dark in pursuit of the fire.

The opportunities for inattention to fires and lights are so various, that it is impossible to notice the whole. Incautiously approaching window and bed curtains with a light, and airing linen before the fire, are almost daily causes of fire in London, and some of the most distressing cases of loss of life have originated from these and similar causes. Children playing with fire, is also another constant cause of fire and frequent loss of life. The dresses of females taking fire adds very much to the list of lives lost by fire, if it does not exceed all the other causes put together. Taking off the burning coals from a fire, and laying them on the hearth, also causes fires occasionally. Reading in bed by candle light is another source of the same evil. A very serious annual loss is also caused by want of due care in hanging up or removing the goods in linen drapers' shop windows when the gas is burning. Flues taking fire often result in mischief, and it is believed that many serious fires have arisen from this cause, which can hardly be called accidental, as, if flues are properly constructed, kept moderately clean, and fairly used, they cannot take fire.

From what has been said, it will be seen that care and attention will do a very great deal towards the prevention of fire and consequent loss of life. It is very easy to make good rules and keep them for a time, after having been alarmed by some serious loss of property or life; but the difficulty is to maintain constant attention to the subject. The most evident plan for effecting this seems to be for the masters thoroughly to examine and consider the subject at certain stated periods, not too far apart, and to constantly warn their domestics, workmen, or others, of the danger of the improper use of fire and lights.

There is another very common cause of fire, which seems to come under the head of construction, viz: covering up a fire-place, when not in use, with wood, or paper and canvas, &c. The soot falls into the fire place, either from the flue itself, or from an adjoining one, which communicates

with it. A neighbouring chimney takes fire, a spark falls down the blocked up flue, sets fire to the soot in the fire-place, which smoulders till the covering is burned through, and thus sets fire to the premises.

It may often be observed, after a house has been on fire, that one floor is comparatively untouched, while those above and below are nearly burned out. This arises from the doors on that particular floor having been shut, and the draught directed elsewhere. If the fire appears at all serious, and there are fire engines at a reasonable distance, it is best to await their arrival, as many buildings have been lost from opening the doors, and attempting to extinguish fires with inadequate means. If no apparatus is within reach, the best thing is to collect as many buckets outside the room on fire as can be obtained, keeping the door shut; then creep into the room on the hands and knees, (if the heat and smoke are considerable,) and throw the water as nearly in the direction of the fire as possible, keeping the door shut while more water is being collected.

## SPONTANEOUS COMBUSTION.

The Fire Marshal is fully satisfied from facts daily developed by his investigations, that spontaneous combustion is a powerful agent in the production of fires, and that numerous conflagrations, attributed to design, owe their origin to this cause. Hay in the mows of barns and lofts of stables, when closely packed in large masses, and affected by dampness, either by being put in wet, or else penetrated by rain or moisture, will catch fire of itself; so will goods stored compactly in a warehouse, when damp, especially such articles as cotton, flax, hemp and rags. The process is in strict accordance with scientific laws. Damp produces decomposition, and the heat of the mass causes fermentation. Carbonic acid gas is given off by the fermentation, and a slow combustion ensues. Even haystacks, when the rains have penetrated them, will sometimes catch fire of themselves. The Fire Marshal has noticed that when a fire happens in certain conditions of the weather, for instance, after a long continued rain, or when the atmosphere is dripping with moisture, and its temperature heated and sultry, it is almost sure to be a barn, a stable, or a feed store, or else a cotton warehouse or rag store. He has on record a number of cases of fires occurring in barns, stables and rag establishments, during the prevalence of heavy fogs, accompanied by marked heat of the air. Every intelligent person, who has any knowledge of chemical affinities, understands the theory of spontaneous combustion, but ignorant people who do not comprehend it, are apt to ridicule it. Country farmers entertain strong prejudices against it, and are exceedingly incredulous in regard to it. Some of them laugh at the idea. There is nevertheless no doubt as to its reality.

(To be concluded.)

There is no readier way for a man to bring his own worth into question, than by endeavouring to detract from the worth of other men.

For "The Friend."

## Letter of Sophia Hume.

The following epistle of Sophia Hume, a native of South Carolina, but afterwards a resident in London, is recommended to the serious perusal of the readers of "The Friend." The original letter is in the hands of the transcriber, and, though bearing date nearly a century ago, it is believed, has never before been published. He has not been able to ascertain with certainty to whom it was addressed. A short account of S. H. may be found in "Piety Promoted," vol. iii.

London, 7th of Seventh mo., 1772.

Well beloved Friend,—To be silent after the receipt of thy kind memorial, would bespeak a defect in that love which most necessarily subsist in every true member of the church of Christ to each other, though divers causes may prevent expressing of it, to a manner we sometimes could wish. And though I don't foresee I shall have much to say at this time, yet I have this to say, that my spirit is truly united to thine, in the concern thou expresses, and hast expressed heretofore, on the account of the iniquitous traffic carried on by professed christians, in the buying and selling the souls of men, in more senses than one; and I wish we, as a society, as well as other professors, were more sanguine in endeavouring to put a stop to, or at least, in some shape endeavouring to affect the minds of the people with a just abhorrence of this enormous evil. Indeed, the yearly epistle touches on it, but we may say, as was formerly said on a certain occasion, "All that the people have said, is well said. But Oh, that there were such an heart in them, that they would fear me, and keep my commandments always, that it might be well with them, and with their children forever!" This of always attending on those things which tend to the honour of God, and our own peace, is a practice the greatest of christian professors are propensively defective in, notwithstanding we are so high, and so frequent in profession and confession of that christian faith, which overcomes the world. We see and mournfully behold, that abundance of professors amongst us are evidently overcome by the spirit of the world, in conjunction with their own corrupt passions; for did we, as we profess, deny the gratifications of the world, or the devil would have nothing to fasten their temptations on; these are their goods, and till people will be prevailed with to subject their will to the will of God, it will be the mournful state of them, to say and do not; though the doctrine of self-denial, or peculiar characteristic, is so often preached. But oh! that there was an heart in ministers, elders, and the people to fear God always, and not let an Yearly Meeting begin and end as usual. All that is said we assent and consent to, and then return to our former course of life; as I may say, with boldness, is too much the case. We affect such zeal for the cause of God, and the welfare of our brethren, once a year, and then return to the old practice of minding our own things, worldly things, and not the things of another,—the momentous things which concern our souls, as well as the happiness of the souls of our brethren. There is hardly to be found mourning men and women, weeping for the abominations of the times; the desolation standing where indeed it ought not, even amongst the professors of the glorious principle of the light, and which has mournfully destroyed the daily sacrifice. No family retirement to look into our accounts on week days, which makes many strangers to any weighty exercises on First-days. That the ministry, low as it is in this city, is to call the people to the first principles of the oracles of God; to wit,

attending to the teaching of his Spirit, to hearken and hear; but people don't seem to like this exercise, lest they should be reproved, which we are not often by such preachers as prophesy smooth things. We hear little but of the enduring mercy of God, and the people presume upon it; so that their hearts are set in them to do evil. One would imagine sometimes by what we hear, that every attribute of the Divine being was dispensed with, because they give this of mercy in so large a latitude. But I am weary of complaining; and lest I should weary thee, shall think of coming to a close. Yet just that I was comforted in a meeting of ministers and elders yesterday; not that the accused thing was found among us, but that dear Samuel Enlen was enabled, by Divine aid, to point out to us, in what, and how we kept it in our tents. We have not had such a salutary prescription this long time. I heartily wish it may have a good effect. Though unhappily for us, instead of saying, Lord, is it I? with the utmost temerity, too many are saying, Lord, it is not I. I now conclude, in that love I always felt for thee and thy wife, and in the fellowship of the gospel of peace, take my leave and bid you dearly farewell.

SOPHIA HUME.

My love is to every member who loves the Lord Jesus Christ in sincerity. I have great unity with John Woolman; but thou perhaps will hear few besides has, though they commend and say, If he has this faith to himself, they can be quite easy with him; but desire to be excused, if he is proposed as an example.

From the Leisure Hour.

## Second Shape.

Second shape is almost an invention of mine, though not quite. I, perhaps, should call it a free translation of the scientific term of Greek significance—*alotropism*.

There is a fashion in philosophy, no less than in the cut of a gentleman's coat or the architecture of a lady's bonnet. Every now and then one finds scientific treatises pervaded with a few pet words, representing facts or theories in vogue at the time. Far be it from me to speak disparagingly of all hard scientific terms; most of them have a real significance, though a few, it must be confessed, are employed on occasions when they need not, and are made to solace the pride of philosophy by standing for things really unknown, though philosophers do not like to say so. It is my intention, presently, to state so much about that hard word *alotropism*, by way of explanation, as shall reconcile the reader to it when next it comes in his path; and I shall begin by taking the liberty of denouncing it *second shape*.

In order to be quite intelligible, the reader must be informed that this world of ours, its atmosphere, its animals, and its vegetables, are made up of some fifty-eight or sixty different materials or elements. Chemists do not exactly know the number, because the claim of certain materials to be different from all other materials is not quite admitted. Many of them have to submit to the torture and the scrutiny of chemists for years, before their patent of nobility, their right and title to be considered as simple bodies, is fully conceded; but, until comparatively late years, the assumption was taken for granted, that one and the same body must necessarily display, in its simple and uncombined state, the same characteristics. I really do not know on what grounds this assumption was so complacently accepted, for the fact has been long known that charcoal and the diamond are one and the same body—carbon. So it was, however; the dissimilarity in appearance of the diamond and

charcoal was long known, before chemists suspected that what held good for carbon might also hold good for other bodies. At length, however, the curious fact was placed beyond doubt, and the term *alotropism* was invented—a term which I have ventured to render by the homely phrase, *second shape*. Let the reader not misunderstand me: the shape or appearance of materials is marvellously changed by composition. The very substance carbon, out of which, in its pure state, charcoal and diamonds are formed, bathes our bodies as an invisible gas; yet, the gas is not carbon alone but carbon in combination with oxygen. All the pit-coal in existence, all the charcoal, all the carbon of animals and vegetables which, after burning in close vessels, will become charcoal, once existed in this gaseous invisible form. In the form of this gas we evolve from our lungs no less than about thirteen ounces of charcoal every twenty-four hours. The charcoal is thoroughly altered from its ordinary form, seeing that it exists as a gas; but it is not uncombined, it is united with oxygen; therefore the wonder is less great than it would have been had no combination taken place. The great wonder of the allotropic or second shape condition of bodies is, that the second shape is unattended with any combination; wherefore it occurs we cannot tell: the whole thing is a mystery to us.

The most familiar example of second shape is, as I before mentioned, furnished by carbon. In charcoal the diamond exists under one form; in charcoal under another. We have all been so accustomed from our earliest school-days, to accept for granted the identity of the diamond and charcoal, chemically speaking, that perhaps my readers will not require that I should furnish proof of that identity. It may be interesting for them, however, to know that the diamond can readily be converted into coke, which is only a particular form of charcoal, and that although the converse of this—the conversion of coke into diamonds—has never been accomplished, nevertheless, I believe that the diamond has actually been made by one of those tortuous chemical operations described some time since in an article on "aluminium." By what strange agency the diamond has been made by the operations of nature, it is impossible to say. There is very little reason, however, to doubt that the origin of the gem is vegetable. Diamonds are sometimes found with little bubbles of air in their substance, and occasionally small insects; in circumstances which go to prove that the gems in question must once have existed in a soft or pasty state, and, looking at the comparatively small amount of carbon which naturally and originally existed in the mineral world, we have strong reason to believe the diamond must have been of vegetable extraction.

Next to carbon, sulphur or brimstone furnishes the most prominent example of allotropism. Every body is conversant with the ordinary appearance of sulphur or brimstone—a solid yellow inflammable body, easily redoxidable, and therefore brittle: such are the leading properties of sulphur in its common or ordinary state. The reader may now perform an experiment if he pleases; he will not require any out-of-the-way things, and the result will be far more instructive than whole pages of description.

Let him take a Florence oil-flask, and tie a piece of cloth round its neck, in order to protect the fingers when the flask becomes heated, as it will be in the course of our experiment. Having put a little sulphur or brimstone into the flask, (whether the sulphur be in lump or powder matters not), and commenced the application of heat from any convenient source—than which nothing is better

than a common spirit-lamp—let the experimenter look well to what takes place. The brimstone will soon begin to melt, and will become quite fluid. If a little of the material be now poured out upon a slab, and allowed to cool, it will concretize into the form of ordinary yellow brimstone. This is just what one would have supposed. Still continuing the application of heat, a series of very curious phenomena occur. Firstly, the whole of the brimstone previously limpid and liquefied, becomes thick, glutinous, and almost black; indeed, so thick does it become just at one instant, that, if the proper moment be chosen, the flask may be inverted without causing the flow of one particle of brimstone.

Still persisting in the application of heat, the thickened and black-coloured contents become liquid once more, but not so liquid as at first, and the colour is also different, the brown tint being still retained. The sulphur has now assumed its allotropic or second shape, a few evident proofs of which may be now adduced. If the allotropic melted sulphur be poured into cold water, it cools, of course; but what a curious result! It no longer cools into a lump of ordinary yellow brittle sulphur as before, but it assumes the appearance of glue; like which, it may be pulled into long threads. Perhaps the most striking method of illustrating this peculiar condition is shown by pouring the allotropic sulphur spirally around an inverted funnel placed to stand in cold water.

So different are the physical properties of sulphur in its second or allotropic shape, from sulphur in its ordinary condition, that it would be regarded as positively another substance, did not chemical analysis come to our aid, and prove the two to be identical. Nor is this all: sulphur is occasionally administered as a medicine; and, according to the results of a Belgian physician, allotropic sulphur possesses different medical properties from the ordinary material. No substance can be less pure (from its brittleness) than ordinary sulphur fused, for taking impressions of medallions and seals; the dark pasty substance, however, generated when fused allotropic sulphur is poured into water, is better than any other material adapted to this end.

Still more extraordinary is the allotropic or second shape presented by phosphorus; indeed, it was in reference to phosphorus that the attention of philosophers became directed to the wonders of allotropism.

(To be concluded.)

#### Diamond on War.

(Continued from page 187.)

Such are the arguments which are adduced from the christian scriptures, by the advocates of war. Of these arguments, those derived from the cases of the centurion and of Cornelius, are simply negative. It is not pretended that they possess *proof*. Their strength consists in silence, and of this silence there appears to be sufficient explanation. Of the objection arising from the payment of tribute, I know not who will avail himself. It is nullified by itself. A nearly similar observation applies to the instruction to *buy swords*; and with the case of John the Baptist I do not conceive that we have any concern. In these five passages, the sum of the New Testament evidences in favour of war unquestionably consists: they are the passages which men of acute minds, studiously seeking for evidence have selected. And what are they? There is not one of them, except the payment of tribute and the instruction to buy swords, of which it is even said by our opponents that it *proves* any thing in favour of war. A "NOR" always intervenes—the centurion was not found fault with: Cornelius was not

told to leave the profession: John did *not* tell the soldiers to abandon the army. I cannot forbear to solicit the reader to compare these objections with the pacific evidence of the gospel which has been laid before him; I would rather say to compare it with the gospel itself; for the sum, the tendency of the *whole revelation* is in our favour.

In an inquiry whether christianity allows of war, there is a subject that always appears to me to be of peculiar importance—the prophecies of the Old Testament respecting the arrival of a period of universal peace. The belief is perhaps general among christians, that a time will come when vice shall be eradicated from the world, when the violent passions of mankind shall be repressed, and when the pure benignity of christianity shall be universally diffused. That such a period will come we indeed know assuredly, for God has promised it.

Of the many prophecies of the Old Testament respecting it, I will refer only to a few from the writings of Isaiah. In his predictions respecting the "last times," by which it is not disputed that he referred to the prevalence of the christian religion, the prophet says,—"They shall beat their swords into plough-shares, and their spears into pruning-hooks; nation shall not lift the sword against nation, neither shall they learn war any more." Again, referring to the same period, he says,—"They shall not hurt nor destroy in all my holy mountain, for the knowledge of the Lord shall cover the earth as the waters cover the sea." And again, respecting the same era,—"Violence shall be no more heard in thy land, wasting nor destruction within thy borders."

Two things are to be observed in relation to these prophecies: first, that it is the will of God that war should eventually be abolished. This consideration is of importance, for if war be not accordant with His will, war cannot be accordant with christianity, which is the revelation of His will. My business, however, is principally with the second consideration—that *christianity will be the means of introducing this period of peace*. From those who say that our religion sanctions war, an answer must be expected to questions such as these: By what instrumentality and by the diffusion of what principles, will the prophecies of Isaiah be fulfilled? Are we to expect some new system of religion, by which the imperfections of christianity shall be removed, and its deficiencies supplied? Are we to believe that God sent his only Son into the world to institute a religion such as this—a religion, that in a few centuries, would require to be altered and amended? If christianity allows of war, they must tell us what it is that is to extirpate war. If she allows "violence, and wasting, and destruction," they must tell us what are the principles that are to produce gentleness, and benevolence, and forbearance.—I know not what answer such inquiries will receive from the advocate of war, but I know that Isaiah says the change will be effected by *christianity*: And if any one still chooses to expect another and a purer system, an apostle may perhaps repress his hopes:—"If we, or an angel from heaven," says Paul, "preach any other gospel than that which we have preached unto you, let him be accursed."

Whatever the principles of christianity will require hereafter, they require now. *Christianity, with its present principles and obligations, is to produce universal peace*. It becomes, therefore, an absurdity, a simple contradiction, to maintain that the principles of christianity allow of war, when they, and they only, are to eradicate it. If we have no other guarantee of peace than the existence of our religion, and no other hope of peace than in its diffusion, how can that religion sanction war?

The conclusion that it does not sanction it appears strictly logical: I do not perceive that a demonstration from Euclid can be clearer; and I think that if we possessed no other evidence of the unlawfulness of war, there is contained in this a proof which prejudice cannot deny, and which sophistry cannot evade.

The case is clear. A more perfect obedience to that same gospel, which we are told sanctions slaughter, will be the means, and the only means of exterminating slaughter from the world. It is not from an alteration of christianity, but from an assimilation of christians to its nature, that we are to hope. It is because we violate the principles of our religion, because we are not what they require us to be, that wars are continued. If we will not be peaceable, let us then, at least, be honest, and acknowledge that we continue to slaughter one another, not because christianity permits it, but because we reject her laws.

The christian ought to be satisfied, on questions connected with his duties, by the simple rules of his religion. If those rules disallow war, he should inquire no farther; but since I am willing to give conviction to the reader by whatever means, and since truth carries its evidence with greater force from accumulated testimony, I would refer to two or three other subjects in illustration of our principles, or in confirmation of their truth.

The opinions of the earliest professors of christianity upon the lawfulness of war are of importance; because they who lived nearest to the time of its Founder were the most likely to be informed of his intentions and his will, and to practise them without those adulterations which we know have been introduced by the lapse of ages.

During a considerable period after the death of Christ, it is certain, then, that his followers believed he had forbidden war, and that, in consequence of this belief, many of them refused to engage in it, whatever were the consequences, whether reproach, or imprisonment, or death. These facts are indisputable: "It is as easy," says a learned writer of the seventeenth century, "to obscure the sun at mid-day, as to deny that the primitive christians renounced all revenge and war." Of all the christian writers of the second century, there is not one who notices the subject, who does not hold it to be unlawful for a christian to bear arms: "and," says Clarkson, "it was not till christianity became corrupted that christians became soldiers."

Our Saviour inculcated mildness and peaceableness; we have seen that the apostles imbibed his spirit, and followed his example; and the early christians pursued the example and imbibed the spirit of both. "This sacred principle, this earnest recommendation of forbearance, lenity, and forgiveness, mixes with all the writings of that age. There are more quotations in the apostolical fathers, of texts which relate to these points than of any other. Christ's sayings had struck them. *Not rendering, says Polycarp the disciple of John, evil for evil, or railing for railing, or striking for striking, or cursing for cursing.*" Christ and his apostles delivered general precepts for the regulation of our conduct. It was necessary for their successors to apply them to their practice in life. And to what did they apply the pacific precepts which had been delivered? They applied them to war: they were assured that the precepts absolutely forbade it. This belief they derived from those very precepts on which we have insisted: they referred, expressly, to the same passages in the New Testament, and from the authority and obligation of those passages, they refused to bear arms. A few examples from their history will show with what undoubting confidence they believed in the un-

lawfulness of war, and how much they were willing to suffer in the cause of peace.

Maximilian, as it is related in the Acts of Ruinart, was brought before the tribunal to be enrolled as a soldier. On the proconsul's asking his name, Maximilian replied, "I am a christian, and cannot fight." It was, however, ordered that he should be enrolled, but he refused to serve, still alleging that he was a christian. He was immediately told that there was no alternative between bearing arms and being put to death. But his fidelity was not to be shaken,—“I cannot fight,” said he, “if I die.” The proconsul asked who had persuaded him to this conduct; “My own mind,” said the christian, “and He who has called me.” It was once more attempted to shake his resolution by appealing to his youth and to the glory of the profession, but in vain;—“I cannot fight,” said he, “for any earthly consideration.” He continued steadfast to his principles, sentence was pronounced upon him, and he was led to execution.

The primitive christians not only refused to be enlisted in the army, but when they embraced christianity whilst already enlisted, they abandoned the profession at whatever cost. Marcellus was a centurion in the legion called Trajana. Whilst holding this commission he became a christian, and believing, in common with his fellow christians, that war was no longer permitted to him, he threw down his belt at the head of the legion, declaring that he had become a christian, and that he would serve no longer. He was committed to prison; but he was still faithful to christianity. “It is not lawful,” said he, “for a christian to bear arms for any earthly consideration;” and he was in consequence put to death. Almost immediately afterwards, Cassian, who was notary to the same legion, gave up his office. He steadfastly maintained the sentiments of Marcellus, and like him was consigned to the executioner. Martin, of whom so much is said by Sulpicius Severus, was bred to the profession of arms, which on his acceptance of christianity, he abandoned. To Julian the apostate, the only reason that we find he gave for his conduct was this,—“I am a christian, and therefore I cannot fight.” The answer of Tarachus to Numerianus Maximus is in words nearly similar:—“I have led a military life, and am a Roman; and because I am a christian I have abandoned my profession of a soldier.”

(To be continued.)

From Littell's Living Age.

#### Home-Made Gas—A Simple Process.

A valuable improvement in the manufacture of gas, involving, indeed, a new idea, has recently been made known in London by—Leslie, already the author of several new contrivances in that branch of industry, and the inventor of the powerful gas-burner which goes by his name. It has hitherto been the custom in the manufacture of gas from coal and other bituminous substances to subject them to the process of destructive distillation at a high temperature, by which means a large quantity of permanent gas is evolved, which is then subsequently purified. This necessitates the carriage up to the metropolitan gas-works of immense quantities of useless material, in addition to the real gas-making constituent of the coal, and also renders it necessary for the companies to have large and expensive works in the heart of London, where the process of purification, with its concomitant evil of half poisoning the neighbourhood by the sickening odor with which they are surrounded, is obliged to be carried on.

Leslie's plan is to divide the process of gas-making into two distinct branches. The first operation is to be carried on at the collieries, where

coal is cheap, labour plentiful, and an acre or two more or less covered by the works of little consequence. Here the refuse coal, which is now completely wasted at the pit's mouth, is to be submitted to distillation at a low temperature in revolving cylinders, heated externally by a fire. The revolution of the retorts causes the small lumps of coal to be constantly kept in motion, and prevents one portion becoming hotter than any other.

Thus all the products are distilled off in a liquid state, and are condensed in suitable vessels, which are kept cool by water. Care is taken to keep down the temperature of the rotating retort to as low a point as practicable, in order to prevent the production of gas, which will not condense, the object being to obtain only fluid hydro-carbon oils by the first process of distillation. The oils so obtained may then be submitted to purification from the nitrogenous and sulphur compounds which are so fruitful a source of complaint when they find their way into illuminating gas; and we need scarcely say that it is far easier to remove all the nitrogen and sulphur from a gallon of this oil than from the one hundred and fifty or two hundred feet of gas, of which it is the representative. When the oil has been properly prepared and purified from all deleterious substances, Leslie proposes that it should be conveyed up to London, or wherever else it may be needed, to be converted into gas. These works need only consist of a few retorts and a gas-holder or two, all the complicated machinery now needed for the purification being rendered unnecessary. The retort being heated to redness, a little of the oil is allowed to flow into it, when instantly it is converted into permanent gas, and carried through a pipe into the gas-holder of the ordinary construction, from which the illuminating gas is supplied to the mains as heretofore.

The patentee calculates that a ton of good coal will yield one hundred and sixty-eight gallons of the hydro-carbon fluid. Now one hundred and sixty-eight gallons is almost exactly one cubic yard, and as each gallon is estimated to yield almost instantaneously one hundred and twenty-eight cubic feet of gas, we have thus twenty-one thousand five hundred and four cubic feet of gas from one hundred and sixty-eight gallons, the material for the production of which only occupying the space of one cubic yard.

In one experiment which Leslie exhibited a short time since, two and a half pounds of Bog-head coal were placed in a retort, which was kept revolving over a slow fire, at a temperature scarcely exceeding that of melting lead. Owing to the low temperature and the rotation of the retort, no gas was produced, but the constituents were all evolved in the liquid form. In a short time the two and a half pounds of coal had yielded one and a half pints of hydro-carbon fluid, leaving three-fourths of a pound of coke in the retort. When the flow of oil ceased, it was conveyed to a red-hot iron retort, into which the fluid was poured by means of a funnel. Immediately, as if by magic, the gas-holder, which was in connection with the retort, began to rise, and within a minute and a half twenty-five cubic feet of gas had come into the holder. The luminosity of this gas was then subjected to accurate measurement by means of a photometer. Those of our readers who are acquainted with the technicalities of gas-testing will understand what brilliancy and value it possessed when we state that it equalled twenty sperm candles when burning at the rate of only four feet per hour.

This progress promises to effect a complete revolution in the manufacture of gas. It will be brought up to the customers in a highly condensed and purified form. This can be stowed away in

any quantity for future use, and can be sold for private consumption, and for the supply of small villages, gentlemen's seats, railway stations, shipping, or other purposes, where it is preferred to make gas on the spot as it is wanted. All that would then be needed for the immediate production of ten, fifty, a thousand, or a million cubic feet of gas would be to draw off the proper quantity of fluid, and allow it to drop into one or more red-hot retorts, connected with a gas-holder of the proper size.

The manipulation is so easy, and the necessary apparatus so simple, that there would really be no reason why every private family should not make their own gas. As it grew dusk, it would only be necessary to tell the kitchen maid to put a small iron bottle in the fire, and when this was red-hot, the master, instead of turning the gas on at the main, as at present, would have to pour half a pint or a pint of oil into the retort, when his gas-holder will be filled with enough gas for the night's consumption, at a mere nominal expense, and of a purity and brilliancy hitherto unattainable.

*Time with Eternity.*—The prospect of a change which awaits us all from a state of probation, to a state of fixedness, seems to me increasingly awful: and as we are engaged rightly to place time in comparison to eternity, how well calculated it seems to incite us to diligence in the work and warfare, and to regard this state of being only with reference to that which will stand us in stead beyond the grave. May I, and all that I love be more and more engaged in the work of the soul's everlasting salvation, counting all things but loss and dross, that we may win Jesus Christ, and be found in Him. May I be incited to greater diligence to the work of the day, that let the summons come sooner or later, I may not be found like the foolish Virgins who had their lamps but the oil was wanting.—From the M.S.S. of a deceased minister, about two months before her death.

*Farmer's Profession.*—It is the general impression, especially among the young, that the profession of the farmer is too slow an avenue to gain. This is a great and fatal mistake. Thousands of young men have crowded into the various professions other than that of agriculture, and they have thrown themselves away in losses, irregular actions, and their grey hairs have been found with no laurels worth preserving. Let our young men who are about selecting a profession that is to furnish them with employment for a life-time, first pause to examine our commercial and general business statistics; or if these are not at hand, let them ask the necessary information of some business man. Let them inquire what has been his experience, and what the result of his observation? If I am not mistaken, he will tell you that out of twenty merchants in the circle of his acquaintance, doing business for so many years, nineteen have become bankrupt. That out of six many lawyers, only five have reached the “upper story” of that profession; and so on through the whole chapter of professions and business pursuits of life, that of the farmer is the only one in which success is the rule, and not the exception.

*Obedience to the Divine Will.*—It is not always those who are qualified to be the most conspicuous religious characters, who are the most acceptable with Him who sees not as man sees, but it is those who are wise enough to be obedient to the Divine will, who shall “shine as the brightness of the firmament; and those who turn many to righteousness shall be as the stars for ever and ever.”—Sarah [Lynes] Grubb.

For "The Friend."

When persons, arrested by the illuminations of divine grace, are made to see their sinfulness, they are often greatly humbled, so as to feel unworthy of divine notice, and unfit even for the society of religious Friends. They become sensible that they can do no good thing, and fear to attempt any act in a religious line where they may apprehend it to be called for; and when they put their hand to the plough, it is done with diffidence, and their offerings are owned by discerning Friends, who rejoice for their faithfulness. As they keep in child-like dependence upon the Lord, enduring the further operations of his humbling power, a gradual growth in the hidden life is attained, an enlargement of understanding in the Lord's way of refining his people, and the mysteries of Christ's kingdom are opened. Their changed condition has an effect upon beholders, producing serious reflection in them, showing the goodness of the Lord and the excellency of the Truth in converting sinners; and the dignity with which it clothes the lowliest members of the Lord's family, is at times displayed in these his children. Divested of self-confidence, they show proper deference to the judgment of experienced brethren and sisters, and rightly estimate the value of their counsel. In this humble, watchful state they are preserved, and are honoured for the works' sake, whatever station they may occupy in the church of Christ. Jealousy is excluded from their thoughts, heavenly love fills their hearts, and they become helpers and a strength in the Lord, to their older friends. Many have reached to a large growth in the divine life, and as by the aid of the Holy Spirit, they have maintained a humble watchfulness upon prayer, in the fear of the Lord, and the fear of losing a good condition, and of bringing reproach upon their religious profession, they have been kept through faith and obedience, and in the Lord's unmerited mercy, preserved unto the end, even of a long life.

But there appears to be no time, when our unwearied enemy is not watching and seeking to deceive and to betray, even the Lord's children and servants, for he will hunt for the precious life. If he does not succeed in leading into gross conduct, he can assume the appearance of an angel of light, and endeavour to exalt the unwatchful by his flatteries, and to draw them from a lowly state of self-denial, into an imaginary attainment of clearer vision and sounder judgment, above their brethren. By little and little, losing the true child's condition, they sometimes condemn those who have kept this safe abiding place, because they do not flatter them in their wrong opinions. How mournful to see men and women, who have known the Truth, gradually losing through the deceptive power of Satan, that tenderness and godly fear they formerly had, while they imagine themselves to be under divine guidance, becoming more and more clouded, so as not to see their own condition, while they are condemning others, and turning the children away from the Truth, and setting them against their true Friends.

Sowing discord and division in civil and religious society, is among the most mischievous evils of the present day, and will produce bitter fruits to those who practice it, and much suffering and distress to those who mourn over it. It cannot yield peace and settlement to the authors, while they are engaged in it, and less so when they are brought upon a dying bed. To be the instruments of misleading honest hearted persons, and tender unsuspecting children, so as to deprive them of the blessings of religious society and of the watchful care of their true friends, and endanger their best interests, must be a fearful departure from the

way of Truth, and every one of us has need sincerely to put up the petition, "Search me, O God, and know my heart, try me and know my thoughts, and see if there be any wicked way in me, and lead me in the way everlasting."

Whatever may be our standing in Society, however correct our religious principles or fair our character among men, let none of us boast that our building stands strong, and we are in no danger. If we are upon the immutable foundation, it was the Lord's mercy that placed us there, and He only can keep us on it. But self and all pride must be kept in the dust, and He alone exalted over all in our hearts, ruling in his kingdom set up there. In this lowly dependent state, the Lord will defend all such as the apple of his eye, against the many devices of Satan, and nothing shall be able to pluck them out of his Divine hand.

*Food Statistics for the Past Year.*—There has been sold at the Philadelphia droves yards a grand total of 554,778 head of cattle, of all kinds. This aggregate was divided as follows: Beeves, 32,365; sheep, 269,020; hogs, 199,179; cows, 4,214. It would be difficult to make an accurate guess as to what proportion of this vast quantity of flesh was consumed in the city. Much of the meat was cured and packed here and sent abroad in a compact shape. There are two or three large packing establishments in the city which have heavy contracts for supplying the army with meat. In addition to the meat that came into the city on the hoof, large quantities came hither from the West, in the form of hams, bacon, &c. There was also a large quantity of fresh meat brought into the city from the neighbouring counties, and from New Jersey, which never reached the drove yards, and of which no record was kept. When we add to all these supplies the huge quantities of poultry, fish, and oysters, brought into the city and consumed here, the conclusion may be safely arrived at, that vegetarianism is making but slow progress here. In addition to the enormous consumption of breadstuffs required to supply six hundred thousand mouths, the following figures will show the quantities of this description of food which were shipped from our port during 1861: Barrels of flour, 440,878; bushels of wheat, 2,044,343; bushels of corn, 792,725; barrels of corn meal, 28,314; bread, packages, 23,416.

*The Christian Quaker, or the mere Profession of Religion without the Reality.*—He is as well taught to deny the religions as cares and pleasures of the world; Such as profess religion from what they have either been taught by others, or read and gathered after their carnal minds out of the Scriptures, intruding into the practices of either prophets or apostles, as to external and shadowy things, not being led by the same power they had, he can have no fellowship with:—he counts all such faith and worship the imagination of men, or a mere lifeless imitation. He prefers one sign, begotten from a sense of God's work in the heart, beyond the longest prayers in that state. He leaves them all, walks as a man alone, fearing to offer God a sacrifice that is not of his own preparing. He charges all other faiths and worships, with insufficiency, and more creaturely power, which are not held and performed from a holy conviction and preparation by the angel of God, the Light of his presence in the heart and conscience. Therefore, it is, that he goes forth in the strength of his God against the merchants of Babylon; and woes and plagues are rightly in his mouth against those buyers and sellers of the souls of men. He is jealous for the name of the Lord, and therefore dares not speak peace unto

them, neither can he put into their mouths, but testifies against all such ways. Freely he received, freely he gives.—*William Penn.*

*Fungi the Cause of the Potato Disease.*—Professor De Bary, of Erlburg, in Saxony, has conducted some patient investigations on the cause of the Potato Disease. They confirm the results of other scientific observers, that it is caused by fungi. The spores, or reproductive bodies of these fungi, are very small—19,620 of them having been found on a square line or space. They abound all through the tissue of the potato plant; and hence no external applications can prevent or cure the disease, as it can in the vine mildew, where the threads of fungi are spread on the outer surface. De Bary has, however, proved that it requires an abundance of moisture to make these spores spread freely. The practical inference is, that plants should be specially grown for seed. They should be grown on high and dry ground; very little manure should be given that would encourage water luxuriance. Great width of row should be given to encourage firm, hard stems, well inured to light and air; and whenever any indications of disease appear, the underground parts should be promptly cut away. It is believed that close attention to these matters might, in time, eradicate the disease.

*Rise of the British National Debt.*—It began under Charles II, in 1660; but with all his extravagance and profligacy, it reached, in 1681, only a little more than £600,000. How small a beginning for the gigantic proportions it has since attained! In 1763, it had risen to £139,000,000. At the close of the French Revolution in 1802, it was £571,000,000. In the twelve years of the wars of Napoleon, it increased to £265,000,000, which was its maximum. From this point it rapidly decreased for thirty years, having been reduced in 1845 to £765,759,241. At the close of the Russian war in 1856, it had increased to £900,000,000; and in consequence of the Indian mutiny, the Chinese war, and the distrust of France, can hardly have diminished since. The interest on the present debt, at the rate of 3 1/2 per cent, is \$134,400,000 per year, or 896,000 a day, \$15,333 an hour, \$225 a minute.

*Holding out False Inducements.*—We must not think ourselves more wise than the great and compassionate Teacher, who was well acquainted with the timidity of his little ones, yet in their state of infancy told them plainly, that all pretensions to discipleship were vain, unless a willingness to deny self, and daily to bear the cross, was previously cherished; and I have never had unity with a certain species of fleshy wisdom, which in endeavouring to enlist soldiers under Christ's banner, adopts a mode very similar to those who keep out of view the hardness which must be endured, and endeavour to allure by temporary gratification.—*W. Lewis.*

*Small-pox and Vaccination.*—The London Times has a review notice of a pamphlet on this subject, by Dr. Collinson, (Hatchard,) in which some remarkable facts are brought out. The historical *resumé* is striking. We are (it states) too apt to underrate the destructive capacity of this pestilence, and are usefully reminded of its former ravages, independently of the circumstance that the deaths ascribed to it annually have now risen from 2277 in 1836, to 6460 in 1855, and were doubtless still more numerous in 1859. We must, indeed, revert to the pre-Jenner period, to estimate its wholesale destructiveness. There was no small-pox, as far as we can learn, in the ancient world, and the disease first appeared on the borders of the

Red Sea, about the sixth century, from what source is now barely conjecturable. The first recorded case in Europe is probably that of Elfrida, daughter of Alfred the Great, and wife of Baldwin, of Flanders, A. D. 907. But there are reasons to suppose that the disease reached England perhaps a century earlier, though it did not extend to the north of Europe until a much later date. Through the crusades, and the intercourse with the Eastern world, its ravages were extended, and it was subsequently conveyed by the Spaniards to America. In the western hemisphere, among the dark-skinned races, it was notoriously more fatal than the ravages of fire, sword, and famine combined. In Hispaniola and Mexico, counting its victims by three or four millions, it may be said to have been the principal agent in annihilating their population. Half a century later it desolated the Brazils, and half still Peru, so that its mines were for a time deserted, and its inhabitants reduced to a remnant. Prescott has likened its progress to the desolating passage of fire over the prairies; and Catlin has estimated that among the red Indians it has destroyed, in comparatively recent times, 6,000,000—that is to say, half their numbers. It entirely swept away certain tribes, such as that of the Mandans; and it is stated, that the translation of the Bible having been made for the Six Nations, by the time it was finished there was no one left to read it, the entire race having perished of small-pox. Even in Siberia and Iceland, in 1807, it carried off 18,000 out of 50,000. In 1734, it destroyed two-thirds of the inhabitants of Greenland. The statistics of Eastern countries are mainly matters of conjecture, yet we know that the capital of Tibet was deserted for three years, in consequence of one of its visitations; and in a single year in Russia, it is said to have cut off 2,000,000. It has been computed—indecided, Dr. Collinson says it may be safely asserted—that it has been more fatally destructive than any of the pestilences which have desolated mankind.

Even in civilized Europe, the computations of its ravages heretofore might be stated at hundreds of thousands annually. Dr. Lettsom says 210,000—Simon 500,000; Bernoulli, 15,000,000 every twenty-five years. M. de la Coudanme assigns it a tenth of the deaths in Sweden and France; Dr. Jurin one-fourteenth of those in England, even when it was not raging epidemically. Forty-five millions in one century, in Europe alone, is the official estimate of Denmark, in reply to English inquiries. Its ravages in particular families, imply its former effects in the aggregate, as illustrated by—Simon, in the family of our William III. William's father and mother, his wife, his uncle, the Duke of Gloucester, and his cousins, the eldest son and youngest daughter of James II, were all victims to small-pox; and the great Prince himself suffered from it so severely that his constitution was undermined, and his health permanently shattered.

Facts are then given with regard to the introduction of inoculation, at the instance of Lady Mary Wortley Montague, who, in 1717, wrote her celebrated letter from Adrianople, stating the success with which it was practised there; and the subsequent discovery of vaccination by Jenner. Vaccination was shortly propagated all over the globe by agencies which Dr. Collinson enumerates, and its results in some of the Continental countries were even more startling and complete than in the United Kingdom. Dr. Farr has combined the statistics on this head, and either in gross or detail they may be considered as conclusive. In Sweden, for twenty-eight years previous to the discovery of vaccination, 2050 out of each million died annually of small-pox, while for forty years after vaccination,

the death-rate averaged only 158. In Westphalia it came down, under similar circumstances, from 2643, to 114; in Bohemia, Moravia, and Silesia, from 4000 to 200. In Denmark the fatality of the disease became but an eleventh of what it had been; in Berlin, and large parts of Austria, one-twentieth. Finally, from observations made for twenty-one years, on 40,000 persons in Bohemia, it appears that the risk of death to vaccinated persons, if they happen to contract the small-pox, is at the rate of 5 to 100 patients, but the risk of death to non-vaccinated persons when they contract the disease, is at the rate of 29 4-5ths for every 100 patients. And the concurrent testimony of London, Vienna, and Milan shows, on an experience of nearly 26,000 cases, that small-pox after vaccination, if it occurs, is but a fifth or sixth part as dangerous as the natural disease.

The remainder of the notice is devoted to the discussion of the causes of the diminution in the protective influence of infantine vaccination. Four causes are assigned for the recent increase of small-pox. First, bad vaccination in respect of the choice of the matter employed, and of the observance of the rules propounded by Jenner. Secondly, there is reason to believe that, apart from disturbing causes, the cow-pox matter itself tends to deteriorate by descent. Thirdly, apart from the fact of all renewal of lymph having been omitted by the National Vaccine Establishment, since Jenner's time, there was some time since a demand upon its resources which it was unable to supply with lymph of the best existing quality; and, fourthly, there was no Government requirement of vaccination till recently, and even yet this is imperfectly enforced. Finally, an estimate of the effects of these causes in combination, tends to restore confidence in vaccination, when it is performed under the conditions which we now know to be necessary, and when, as is now proposed, we replace the deteriorated lymph, by resorting again to the original fountain.

 Selected.  
 DOES THOU WELL TO BE ANGRY?  
 JONAH IV. 4.

Doesst thou well, in thy sullen wrath,  
 To crush the flowers that adorn thy path,  
 To trample the thorn from the trampled rose,  
 And spread thy couch where the whirlwind blows,  
 To turn from each social haunt aside,  
 And chafe thy spirit with scorn and pride?

Is it well when thy heart's fire chords are torn  
 By the barbed point of the ranking thorn?  
 When the gust of passion its depths hath swept,  
 Waking the foes that in ambush slept—  
 And burning tears of remorse and shame  
 Fall thick from the cloud whence the tempest came?

Say, is it well, o'er thy brother's soul  
 To bid the tide of resentment roll?  
 To chase the calms of his tranquil mood,  
 Rousing his passions to conflict rude?  
 To flash his cheek, and to cloud his brow—  
 Is it well? The error is twofold now.

Why wilt thou fan with the breath of strife,  
 The flame that wasteth the joys of life  
 Hath not the portion of man below  
 Enough already of care and woe?  
 Are there not tears all around thee shed?  
 Swell not the fount whence their streams are fed.

What is it hath grieved thee? A look—a word?  
 Another's will to thine own preferred?  
 Some petty hindrance—some passing slight?  
 Perchance invasion of fancied right?  
 And is it for trifles such as these,  
 Thou art making sport of thy bosom's peace?

As melts the dew in the morning ray,  
 The clouds shall melt from thy soul away,  
 And no trace remain 'neath the morrow's sun,  
 Save of the wrong in thy passion done;  
 Then pause, while its fury thou yet mayest quell—  
 Oh! pause and control thee—it is not well!

Hannah Bowden.

*The Cinnamon Crop in Ceylon.*—The cinnamon gardens in the neighbourhood of Colombo, although for the most part gone to decay, nevertheless impart to the whole scene a singularly cheerful, agreeable aspect. The bushes, from four to six feet in height, with their smooth, beautiful, light green leaves, resemble those of the bay tree, and their pale yellow stamens shoot up doubly fresh and succulent, from the snow-white quartz soil, in which they best thrive. The flowering season of the cinnamon is in January, and the fruit ripens in April, when the sap is richest in the shrub. It may the boughs are begun to be "barked," which process continues till October. The pruning and gathering of the yearling shoots, which are about the thickness of a man's thumb, is very laborious, and employs many hands. Each labourer cuts off as many as he can conveniently carry in a bundle, then, with the point of a crooked knife, made for the express purpose, strips the entire rind from the wood, carefully scrapes off the exterior cuticle and innermost layer, and lays the stripped off cinnamon rind, now reduced to the thickness of parchment; in the sun, where it dries and curls together.

All around the hut, in which the peeling of the rind is carried on, is diffused a most exquisite aroma, caused by the breaking of the leaves or twigs. What is related, however, by travellers, of the fragrance of the cinnamon forests, which they have scented at a great distance seaward, would seem to indicate that this delicious odour emanates from various other aromatic plants in which Ceylon is so rich, rather than the cinnamon groves, the aroma of which, indeed, is not perceptible beyond the immediate vicinity. The best description of cinnamon is not so thick as stout paper; and is fine grained, flexible, light brown or golden yellow, sweet and pungent; the coarser qualities are thick-skinned, dark brown, acid, stinging, and leave a bitter after-taste. In the ware houses, the cinnamon rinds and canes stored for shipping are piled upon each other, packed in bales of about ninety pounds weight each, and carefully sewed. In all the cavities and spaces between each layer, an immense quantity of pepper is strewn, to preserve the cinnamon during its sea voyage, by which both spices are benefitted, the black pepper absorbing all the superfluous moisture, and gaining by the fragrance of the cinnamon.

*Who shall have right to the Tree of Life.*—I firmly believe, that without repenting and forsaking of past sins, and walking in obedience to His heavenly voice, which would guide into all truth, and establish there, remission and eternal life can never be obtained; but them that fear his name and keep his commandments, they, and they only, shall have right unto the tree of life. For His name's sake I have been made willing to relinquish and forsake all the vain fashions, enticing pleasures, alluring honours and glittering glories of this transitory world, and readily to accept the portion of a fool, from this deriding generation, and become a man of sorrows and a perpetual reproach to my familiar: yea, and with the greatest cheerfulness can obscinate and confirm, with no less zeal than the loss of whatsoever this dotting world accounts dear, this faithful confession, having my eye fixed upon a more enduring substance, and lasting inheritance: and being most infallibly assured, that when time shall be no more, I shall, if faithful hereunto, possess the mansions of eternal life, and be received into everlasting habitations of rest and glory.—William Penn.

It is often better to pray for those who are mistaken than to dispute with them.

 Spiritual sloth, leads to spiritual poverty.

For "The Friend."

To the Editors of "The Friend."—An Epistle of Edward Burrough addressed to Friends in 1660, is so fully in accordance with my own feelings in regard to the war, I should be glad to see the latter part of it published in "The Friend," if the editors think proper so to do. Volume 14th, of Friends' Library, pages 480 and 481.

Salem, Ohio, Second mo. 8th, 1892.

"And as concerning the times and seasons, and the present confusions and distractions that are amongst men, much might be spoken; but certainly the end of all these things shall be turned for good unto us and unto all that do abide in faith and patience unto the end. Though the present times may be of an heavy countenance towards us, like as if we should be swallowed up through the roaring of the sea, and because wickedness doth abound by that spirit that now is exalted; yet in this as respect the Lord, for certain it is, that times and seasons are in his hand, to change them at his pleasure, and to take them from one, and give them to another when he will. The day is his, and the victory is in his hand. Oh! let not mortal men glory against him; man's time is but for a moment, and it is our blessedness and peace to be still; and to have a respect to the Lord through all these overturnings. And though the spirit that now is, be wicked and abounding in iniquity, yet the Lord will limit its ray. And as for all the confusions, and distractions, and rumors of wars, what are they to us? What have we to do with them? Wherein are we concerned in these things? Is not our kingdom of another world, even that of peace and righteousness? Hath not the Lord called us, and chosen us into the possession of that inheritance, wherein strife and enmity dwell not? Yea, he hath broken down that part in us that is related therunto, and being dead in that nature of strife, bloodshed, and rage, how can we live in strife and contention in the world, or have fellowship with any therein. Can we have pleasure in the confusion and distraction amongst men, or join in any thing with them, if so be we are quickened in the new life to God, which is a life of love and peace, and free from such things? if we are crucified in the life to this world, out of which all strife and confusion arise, how can we live therein? Therefore these things are nothing to us, neither are we of one party, or against another, to oppose any by rebellion, or fighting against them, in enmity, and striving with them by carnal weapons, nor to destroy any men's lives, though our enemies; for we war not for any, or against any, for the matters of this world's kingdom. But our kingdom is inward, and our weapons are spiritual, and our victory and peace are not of this world. Our war is against sin, unbelief, and against the powers of darkness, even the sword of the Spirit, which God hath given us, and called us to war therewith, to convert people from sin and death, and from the very occasion of wars and contentions about the things that are earthly. This is our calling and work at this day; and these things all the children of the Lord are to mind, and to keep over the spirit of this world in all people, which all this enmity, strife and confusion that is up amongst men, lodgeth in, and riseth out of. These things are the fruits of the birth of this evil and sinful world, and the fruits of the Spirit of God are of another nature, even peace and meekness towards all, and not enmity towards any. In this Spirit let us live and walk, dismissing all hereunto, and praying for our enemies, and not hating them, but doing good for evil, and not rendering evil for evil; but being meek and humble, merciful and patient towards all. This is the true christian life, learned of

Christ, and this life is blessed in this world, and in the world to come. They that live here are redeemed out of the world, wherein is trouble and contention, and wars and strife. But let us not heed any of these things, for they rise and fall in their season, and are brought forth and effected in the changeable and erring spirit, which worketh not the honour of God, but is in the dishonour to him. Friends, let us be a people separate from all that live therein, waiting for the deliverance of the Holy Seed in all, and believing, that through all these things the Lord will set up his kingdom.

"Thus it must come to pass, Babylon must fall with a great noise; for in strife and confusion was she builded, and therein hath she long stood, and thereby must she fall. Tribulations must come upon the earth, that people may learn to fear the Lord through his judgments. And He will speedily do great things in the world, which cannot be believed by many, if it were told them, for hell and death must be destroyed, and the beast must be taken alive, and cast into the lake of the anger of God. But blessed are they that do wait upon the Lord, and rest under his shadow, and wait in his counsel, and receive his instructions; they shall see the marvellous works of his hands, but the wicked and unbelieving shall be turned into darkness, and shall not see the countenance of the Lord to refresh them, but their sorrow shall be increased.

EDWARD BURROUGH.

*Trees for Winter.*—No class of plants are more useful, and none made worse use of, than evergreens. For shelter there is nothing like the Norway Spruce, yet we see many gardens and houses exposed to the Northern blasts, without an evergreen, or tree, or shrub of any kind to break the force of the winter winds. Other gardens are nearly filled with evergreens, and this gives them a dark and gloomy appearance. For a screen, of course, the trees must be planted close in rows; but on the lawn, for beauty, here and there a fine specimen, intermixed with other trees, are all that is required. Trees with bright berries, like the Mountain Ash and Eucyonimus, are very desirable, and give to the winter garden a bright and lively look. A correspondent thinks that evergreens, and especially evergreen shrubs, are neglected in this country, and writes us to urge our readers to give more attention to this beautiful class. It is true that there is no country where evergreens are more needed than our own. Without them, how cheerless and desolate our gardens appear full five months of the year! Our attempts to introduce new evergreens, however, have not always been crowned with success, as many things of which we had strong hopes have proved too tender for our severe climate. Then our most beautiful native evergreen shrubs, such as the Holly, the Rhododendron, and the Kalmia, are difficult to remove, and do not thrive well with common treatment, and in an ordinary soil. They are not generally propagated or planted, and deserve far more attention from both nursery-men and amateurs than they have received. We have, however, many beautiful evergreen trees, that will grow as easily as a poplar, and are hardy enough for any climate between this and the Polar sea.

—N. Y. Rural.

*Scripture Prophecy Fulfilled.*—The American Messenger says: Caldwell, a missionary of the Presbyterian Board, stationed at Roorkee, India, a place where the government have established extensive works for making engines and other iron machinery, in a recent letter to a minister in New York city, states the following interesting fact. After the Sepoy mutiny was suppressed, the govern-

ment, as a means of safety, disarmed the people. The guns, swords, spears, and other weapons of war taken in the upper provinces, were sent to the iron-shop at Roorkee, to be recast into more peaceful implements. He states that 2,700 tons' weight of small-arms, chiefly sword-blades and gun-barrels, not including a large number of cannon of every calibre, were transformed into mattocks, hoes, crow-bars, and other useful articles; while cannon, shot and shells were melted down and moulded into different machinery required for churches and railroads, and no small portion into printing-presses. May the time not be far distant when the whole of the prediction shall also be fulfilled: "And He shall judge among many people, and rebuke strong nations afar off; and they shall beat their swords into plough-shares, and their spears into pruning hooks: nation shall not lift up the sword against nation, neither shall they learn war any more."

## CIRCULAR OF THE BIBLE ASSOCIATION OF FRIENDS IN AMERICA.

In again calling the attention of Auxiliaries to the Annual Queries to be answered previous to the general meeting of the Association in the Fourth month, the Corresponding Committee would press upon Friends, who have been engaged in the distribution of the Holy Scriptures, the importance of furnishing full and accurate answers to all the Queries, and of forwarding their report seasonably to the Depository.

It may be recollected, that in making donations to Auxiliaries, the board are guided in deciding what number of Bibles and Testaments shall be sent to each, by the information given in its report. Hence those Auxiliaries that do not report in time, are liable to be left out in the distribution.

Specific directions should be given in every case, how boxes should be marked and forwarded; and their receipt should always be promptly acknowledged.

Address John Richardson, No. 116 N. Fourth street, Philadelphia.

THOMAS KIMBER,  
CHARLES YARNALL,  
SAMUEL BETTLE, JR.,  
Committee of Correspondence.

Phila., Second mo., 1892.

## QUERIES.

1. What number of families or individuals have been gratuitously furnished with the Holy Scriptures by the Auxiliary during the past year?
2. What number of Bibles and Testaments have been sold by the Auxiliary within the past year?
3. How many members, male and female, are there belonging to the Auxiliary?
4. What number of families of Friends reside within its limits?
5. Are there any families of Friends within your limits not supplied with a copy of the Holy Scriptures in good clear type, and on fair paper; if so, how many?
6. How many members of our Society, capable of reading the Bible, do not own such a copy of the Holy Scriptures?
7. How many Bibles and Testaments may probably be disposed of by sale within your limits?
8. Is the income of the Auxiliary sufficient to supply those within its limits who are not duly furnished with the Holy Scriptures?
9. What number of Bibles and Testaments would it be necessary for the Bible Association to furnish gratuitously, to enable the Auxiliary to supply each family?
10. What number would be required in order to furnish each member of our religious Society, capable of reading, who is destitute of a copy, and unable to purchase it?
11. How many Bibles and Testaments are now on hand?

Beware of indulging too freely in conversation. Be frequent in retirement.

## THE FRIEND.

SECOND MONTH 22, 1862.

We are much obliged by our friends who furnish us with selections for "The Friend," as well as those who favour us with original communications. We wish to suggest to some of the former, more care in the selections made, to have them accurately transcribed; and where any sentences are omitted in the body of the extract, to have such omission properly designated. We sometimes find a stanza left out in a piece of poetry, or words substituted for those used by the author. Justice requires that in all such cases the change should be indicated. It cannot be expected that we should always take the time to verify the extracts, even if we know where they come from. We would prefer in all cases that the source whence the selection is made, should be given.

It is encouraging to find so many disposed to lend their aid towards enriching our columns with original and selected matter, and while offering them the above hints, we desire to return our thanks, and solicit their continued co-operation in so good a work.

## SUMMARY OF EVENTS.

**FOREIGN.**—Liverpool dates to the 2d inst. It is announced that neither France nor Great Britain will at present interfere in favour of the "Southern Confederacy."

Earl Russell has sent a letter to the Lords Commissioners of the Admiralty, prohibiting any ship of war or privateer of other belligerent from entering and remaining in the waters of any British port, except in stress of weather. The port of Nassau and other ports of the Bahamas Islands are specially mentioned. When driven in by stress of weather, provisions may be supplied, but only such quantity of coal as may be sufficient to carry the vessel to the nearest port of her own country is to be given, and no second supply is to be allowed on the same ship in the same port within a period of three months.

The U. S. steamer Tuscarora had left Southampton, and the Nashville had been ordered to depart.

The Independence Barge asserts that the Southern Commissioners have informed the English government that, in return for the recognition of the Southern Confederacy, they would establish most absolute free trade for fifty years, abolish the external slave traffic, and emancipate all the blacks born after the recognition. These offers, it is said, will not induce Great Britain to abandon the policy of neutrality, which has been decided upon.

The Liverpool cotton market was steady. Fair Orleans, 14d.; middling, 13d. Stock in port, 546,440 bales, including 216,600 American. Flour, 29s. 3s.; Red wheat, 10s. 16d. A 12s. 6d.; white, 12s. 6d. A 13s. 3d. per cent.

**Mexico.**—Vera Cruz dates to the 1st inst. The Commissioners sent by the allied plenipotentiaries to Mexico, with an ultimatum, returned to Vera Cruz on the 28th ult. They were well received by Juarez, the President of Mexico. He acknowledged the breach of the treaties, and offered satisfactory security for the future. He proposed that the allied ministers should come to Orizaba, and treat there in detail, but he required as a preliminary condition, that the whole expeditionary force should be re-embarked, except a guard of two thousand men who should accompany the ministers to Orizaba. The propositions of Juarez were considered inadmissible, and it was determined to march the allied army to the city of Mexico.

**UNITED STATES.**—The *Finnaker*.—The Treasury note bill had passed the Senate nearly in the form it came from the House. The principal amendment inserted in the Senate is that which requires all the interest on the funded debt to be paid in coin.

**State Prisoners.**—The President of the United States has directed that all political prisoners, now held in military custody, be released on their subscribing to a paper engaging them to render no aid or comfort to the enemies in hostility to the United States.

The Secretary of War will, however, in his discretion, except from the effect of this order all persons detained

as spies in the service of the insurgents, or others whose release at the present moment may be deemed incompatible with the public safety.

To all persons who shall be released, and shall keep their parole, the President grants an amnesty for past offences of treason or disloyalty which they may have committed.

**The War.**—The attack upon the fortified island of Roanoke, which commenced on the 7th inst., and was renewed on the following day, resulted in its capture. A small number of the rebel troops escaped to the mainland; all the rest were made prisoners. When General Burnside's expedition to the island, which had not been counted, but they were estimated at nearly 300. About 400 men were killed and wounded on both sides during the engagement. The rebel gun-boats which aided in the defence of the island, were nearly all captured or destroyed. Owing to the capture of the island, the rebels got on the island at the time of its capture, and consequently escaped. His son, O. Jennings Wise, was killed. Elizabeth City, a town of 20,000 inhabitants, on the Pasquotank river, was fired by the rebels, and about half the houses consumed. The inhabitants sent to the Federal authorities for assistance to quench the fires, and were thus enabled to save a part of the town. Edenton, N. C., and other towns on the Sound, have been occupied by the Federal forces, without opposition.

Advices from Port Royal to the 10th inst., state that the vessels employed for the purpose, had succeeded in cutting off all communication between Fort Pulaski and Savannah. The Federal forces had also destroyed the water pipes leading to the city, and supplying it with water. Within the last month, a number of regiments have arrived at Port Royal, and large supplies of heavy artillery.

After the capture of Fort Henry, some of the Federal gun-boats proceeded up the Tennessee river, as far as Florence, Alabama. They found the navigation unobstructed, and were warmly greeted by the Union men on shore. The success of the expedition, it is impossible to doubt the genuineness of the greetings that everywhere met them. The rebel press being wholly under the control of the politicians, are unable to express the feelings of the people. The secession clique are usually very contemptuous of the politicians of the community, who overawe by violence and opprobrium loving Union citizens. All the rebel gun-boats found upon the river, were captured or destroyed, but private property was not molested. It is stated that 20,000 muskets were captured on the Tennessee. Fort Donelson on the Cumberland river was captured on the 13th inst. A large rebel force was collected at that point, and an obstinate defence was anticipated. General Pillow, Floyd, Johnston and Buckner were all reported to be there. The attack upon Fort Donelson, by land and water, continued on the 14th and 15th inst. A despatch from the camp, dated at 6 p. m. on the 15th, says that the right wing of the rebel fortifications had been taken. The rebel forces are said to number 25,000, and their position, to be a very strong one. The outer works and bastions of the fort are located on ridges, and one has a commanding view of the river, and is 100 feet high, covered with dense timber and undergrowth. Springfield, Missouri, has been again occupied by the Union forces. The rebel army retreated after a short engagement, leaving a large amount of stores and camp equipage, which they were unable to take in their flight. The retreating rebels were pursued, and many of them captured.

Detachments from Gen. Lander's army, in Morgan county, Va., have recently surprised and broken up two rebel encampments, taking a number of prisoners. It is believed that no considerable body of armed rebels can be now found in Virginia, west of Winchester.

Bowling Green, Ky., has been evacuated by the rebel forces, and is now in possession of the Federal troops. A large portion of the rebel army has been sent from the city to the city of Fort Donelson.

**Fort Donelson, Tenn.**—This important stronghold of the rebels surrendered to the U. S. forces on the 16th inst. Generals Johnston and Buckner, with 15,000 of the Confederate troops, were taken prisoners. General Floyd escaped with 5000 rebels during the previous day. The rebels left behind them a large quantity of cowardice and treachery. Sixty-five field pieces, 200 heavy guns, 20,000 stand of arms and a large quantity of army supplies were taken. The loss of life on both sides was heavy. That of the Federal troops was estimated at 10,000. The rebels were routed.

**Affairs in the South.**—The loss of an entire army in North Carolina, and the recent disasters in Kentucky and Tennessee, appear to have had a discouraging effect upon the rebel cause. Norfolk, Va., has been placed

under martial law, and every possible effort has been made to resist its apprehended capture by the Federal forces. The Richmond (Va.) Dispatch says, "Our Tennessee exchanges give us gloomy prospects for the future in that part of the country." The threatening state of affairs in East Tennessee is alluded to, where the people are said to have an abolitionist lord, or the old Union. In every village and neighbourhood, traitors to the South were, it is said, manifesting their joy at the expected approach of the Northern army, and even in Memphis there were expressions of satisfaction on the arrival of the Federal succours. The Southern papers contain numerous articles urging the government to take some measure to keep the soldiers in service, as their term of enlistment is expiring, and they are fast becoming demoralized. In consequence of the large crop of sugar and molasses in Louisiana, much of which is now rotting, owing to the blockade, the planters to plant only half a crop of cane, and turn their attention to other products. The cotton planters of Natchitoches Parish, La., in a late public meeting, resolved that no planter, whatever may be his force, should plant or raise more than five bales of cotton of 5000 pounds each in 1862, unless the blockade is raised before the first of next month.

**Port Royal, S. C.**—The steamer Baltic was recently sent to New York, with a load of cotton. The weather was becoming very warm, and heavy rains were falling. Oranges, bananas, and other fruits were abundant. Many negroes were still employed in gathering cotton, but their number had increased so that it was impossible to find work for one half of them. It is said, many of them are suffering for want of proper care, and their increasing numbers threaten to embarrass the Government. A portion of them occupy the deserted houses of the planters, and live and revel on the property of their late masters.

**Philadelphia.**—Mortality last week, 286.

**New York.**—Mortality last week, 403.

**Western Virginia.**—The Constitutional Convention of the State has adopted as a fundamental article of the Constitution, that "no slave shall be brought, or free person of colour come into this State, for a permanent residence, after this Constitution goes into operation."

**The Loyal Indians.**—Congress has passed a resolution on the relief of the loyal Choctaw, Creek, and other Indians, who have been driven from their homes by the rebels. There were between 4000 and 5000 of these Indians at Leavenworth, in a destitute condition.

## RECEIPTS.

Received from J. Boudle, Mass., \$2, vol. 35; from Jesse Hall, O., \$1, to 52, vol. 35, for Wm. Hall, Jr., \$2, vol. 35; from Jehu Fawcett, 35, for Eliza Fawcett, \$1. Street, and Jonathan Fawcett, \$2, vol. 35, for E. Bousall, Jr., \$2, vol. 34, for Aza Ware, \$4, vols. 34, for J. B. Archer, \$1, W. W. Winder, \$2, vol. 35, from H. Harrison, III., \$2, vol. 34; from Wm. Campbell, Pa., per A. Hutton, \$2, to 24, vol. 34.

## GHISCOM STREET SOUP-HOUSE.

The daily delivery of soup is large, and a part of the Society's income being unavailable, there is reason to apprehend its funds will be inadequate to meet the demands. The coloured people not participating in the work connected with the war, and their usual occupations being interrupted, are suffering from destitution, and the means of living, and are drawing largely on our supply of soup. Donations of articles suitable for making soup, will be gratefully received at the House, No. 16 Ghiscom street, between Fourth and Fifth streets, between 10 and 11 o'clock, A. M., under the care of a gentleman named HACKETT, Treasurer, Fourth street, below Spruce street, or by THOMAS EVANS, 817 Arch street.

## WANTED.

A well qualified Female Teacher wishes a school for the summer; not particular as to location. For information, inquire at the office of "The Friend."

DIED, Sixth month 12th, 1861, ELIZABETH N., infant daughter of Samuel and Hannah Smith, aged ten months and ten days. She died of cholera, and left behind her a daughter of Samuel and Hannah Smith, aged eleven years and fourteen days; members of Plymouth Monthly and Southland Particular Meeting of Friends, Washington county, Ohio. She was lovely and pleasant in her manners, and her father, who was a member of the same church, was happy, happy, happy, and she all wanted to go to heaven. She then repeated the stanza "I want to be an angel," and quietly fell asleep in Jesus.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, THIRD MONTH 1, 1862.

NO. 26.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Christian Observer.

The Life of Columbus, and its Disregarded Lessons.

Christopher Columbus was a native of Genoa. He was the son of a wool-comber, and his forefathers had followed that trade or handicraft for several generations. But as he soon showed a predilection for a seafaring life, he was sent for a short time in his youth to the university in Pavia, where he studied geometry, geography, astronomy, and navigation. At about the age of fourteen, he made his first voyage, after which he is to be regarded as one devoted to the calling of a navigator. For twenty years we have only faint glimpses of his life as a seaman, but these show us that up to his thirty-fifth year he was ceaselessly employed; sometimes in commerce, sometimes in war; but invariably in active life on the ocean.

It was about the year 1470 that Columbus arrived in Lisbon. The efforts and enterprise of Prince Henry of Portugal had attracted to the Lusitanian capital "the learned, the curious, and the adventurous" from all parts of the world. This distinguished man, the son of King John I. and Philippa of Lancaster, sister to our own Henry IV., had for years been labouring in the study of the sciences, and in the promotion of geographical discoveries, and had assembled around him men who were devoted to scientific researches from various countries. Under his auspices a great part of the west African coast had been explored, several important settlements founded, and a way opened for the grand discoveries of Vasco de Gama, which rendered memorable the close of that century.

Columbus had been a thoughtful, reasoning, and enthusiastic navigator from his youth; and when he visited Portugal, he was led there by the interest he took in Prince Henry's undertakings. While resident in Lisbon, he married the daughter of an Italian lately dead, who had been one of Prince Henry's most distinguished navigators, and from his wife's mother he obtained the papers, charts, and journals of the deceased commander. During the intervals of his voyages to Guinea or elsewhere, he constructed maps and charts, and corresponded with men of science in Italy and other countries. The moment was one in which, all over Europe, the question was agitating men's minds, "How India was to be reached by sea?" The route afterwards taken by Vasco de Gama, by

the Cape of Good Hope, had not yet been discovered; the existence of the American continent was wholly unknown; and, among other problems then under examination, that which chiefly interested Columbus was, whether a voyage from Europe, *due west*, would not, in process of time, bring the voyagers to the eastern side of the Asiatic continent.

It is abundantly evident that, in the course of the twenty-two years which elapsed between his arrival at Lisbon in 1470, and his agreement with the sovereigns of Spain in 1492, the mind of Columbus became quite settled upon this point. And the difference which existed between the scientific view taken by him, and the popular notion which was generally prevalent, may be easily stated.

No one had yet proved that the earth was a globe, by walking, or riding, or sailing round it. Men in general regarded it as a flat surface, extending over many thousands of miles, and divided, in common language, into three great districts—Europe, Africa, and Asia. All round this vast continent flowed the measureless ocean, whose extent no one had attempted to ascertain; and beyond which there might exist what no one could divine. Taking this view, it was natural that the man who proposed boldly to plunge into this unexplored *abyss of waters, and to discover what might lie beyond it*, should be regarded in view of nearly the same light as any enthusiast would now be who should fill his balloon with gas sufficient for a month, and leave this earth on a voyage of discovery among the stars. But to Columbus, and many other men of that time who had studied the subject in the light of science, the whole matter presented itself in a totally different aspect. They had fully satisfied themselves of the globular figure of the earth; and this fact, when once it was firmly believed, changed entirely the whole position of the question. Since some travellers had journeyed half round the earth, why should not others complete the circuit? Marco Polo and Mandeville, journeying *to the east*, had travelled over thousands of miles until they reached the eastern limits of Asia. What was to prevent a navigator, keeping in the same latitude, and sailing *to the west*, from arriving at the same point? These questions were revolved in the minds of Columbus and his friends, year after year, till it became established in his mind and theirs, as a settled principle, that a ship, properly equipped and provided, and sailing from the coasts of Spain to the westward, must, in due time, arrive at the eastern shores of the great Asiatic continent.

When this belief had been thoroughly adopted, it became very natural that an ardent and enthusiastic man like Columbus, being also a fearless navigator, should begin to entertain a vehement desire to be himself the first discoverer of the great western road to China, India, and Japan. And accordingly, about 1483 or 1484, some ten or twelve years after his attention had first been directed to the question, we find Columbus asking an audience of John II. of Portugal, and laying his calculations and his plans before him. His offer was entertained, and several conferences were held

upon the subject. But already we begin to meet with that fatal mistake which embittered the whole of the great navigator's after life. Himself the son of an Italian artisan, and entirely destitute of all means for the fitting out a proper squadron of discovery, he yet "demanded," says Irving, "high and honourable titles and rewards, that he might leave behind him a name and a family worthy of his achievements."

John II. is accused of double-dealing in this negotiation; but, however this might be, it is certain that the negotiation between him and Columbus came to an unfavourable close, and, towards the end of 1484, the enthusiastic navigator, whose whole soul seems to have been now wrapped up in the great idea which had possessed him, quitted Portugal, and passed into Spain. It seems probable that he had to leave behind him creditors whom he could not satisfy. Like thousands of other projectors, "he had suffered his own affairs," says Irving, "to go to ruin, and was reduced to struggle hard with poverty. He had to beg his way from court to court, to offer to princes the discovery of a world."

A notion prevails, which seems to have some probability, that his project was next urged upon the government of his own State, Genoa, but urged in vain. It is towards the end of 1485, in the fifth year of his age, that we find him in the south of Spain, seeking to interest in his great object the Spanish nobles of Andalusia. The Duke of Medina Coll entered him at his house, and, for a time, seemed disposed to provide him with two or three vessels fit for such an enterprise. But the project appeared too vast for a subject, and the duke finally preferred to give Columbus a letter to Queen Isabella, recommending him to her notice.

The ardent navigator was thus once more engaged in the anxious toil of a court-suit, and he spent the following six years of his life in the painful and harassing task of following the king and queen from place to place, waiting their leisure to attend to him.

At last, in February, 1492, he turned his back on the Spanish court, and set out for France, with the purpose of addressing his application, in the fifty-seventh year of his age, to a *fourth* government, undismayed by three previous failures. Irving justly remarks that it is impossible not to admire the great constancy of purpose and loftiness of spirit displayed by Columbus. More than eighteen years had now elapsed "since he first espoused the project. What poverty, neglect, ridicule, contumely, and disappointment had he not suffered; yet nothing could shake his perseverance."

But while we readily accord to the great navigator all this praise, it would be wrong to overlook the fact, which now begins to be very apparent, that a disregard of the counsel of God to Baruch, (Jer. xiv. 5) was the grand mistake of his life. He quitted the court of Spain—not because the king and queen refused to entertain the project, but on a *quarrel about terms*! "His principal stipulations were," says Irving, "that he should be invested with the titles and privileges of admiral and viceroy over the countries he should discover, with one-tenth of all gains, either by trade or con-

quest." "More moderate conditions were offered to Columbus, and such as appeared highly honourable and advantageous. It was all in vain; he would not cede one point of his demands, and the negotiation was broken off."

We do not meddle with the dispute, whether this conduct on the part of Columbus was "mercenary" or not. We merely take notice of the fact, that this determination to be great was the one grand source of all the miseries of his subsequent life. The position assumed by him was unlike that of any other discoverer. Vasco de Gama, Cabral, and others, were, again and again, sent forth by the neighbouring government of Portugal. They expected and received honours and rewards for their courage, enterprise, and success; but we never hear, on their part, of any strife or contention about terms, or of any "demand" for such or such great honours, titles, or privileges. This peculiar pretension was put forth only by this son of a Genoese wool-comber. As we have already said, we mean not to discuss the abstract justice of his pretensions; we desire not to stigmatize him as greedy of gain; but we point out *this* as the one fatal mistake of his life; as that which embittered every step of his otherwise splendid career; and, finally, overshadowed his latest days with all the gloom of disappointed hopes and frustrated expectations.

(To be continued.)

Diamond on War.

(Continued from page 100.)

These were not the sentiments, and this was not the conduct, of the insulated individuals who might be actuated by individual opinions, or by their private interpretations of the duties of christianity. Their principles were the principles of the body. They were recognized and defended by the christian writers their contemporaries. Justin Martyr and Tatian talk of soldiers and christians as distinct characters; and Tatian says that the christians declined even military commands. Clemens of Alexandria calls his christian contemporaries the "Followers of Peace," and expressly tells us that "the followers of peace used none of the implements of war." Lactantius, another early christian, says expressly, "It can never be lawful for a righteous man to go to war." About the end of the second century, Celsus, one of the opponents of christianity, charged the christians with *refusing to bear arms even in case of necessity*. Origen, the defender of the christians, does not think of denying the fact; he admits the refusal, and justifies it, *because war was unlawful*. Even after christianity had spread over almost the whole of the known world, Tertullian, in speaking of a part of the Roman armies, including more than one third of the standing legions of Rome, distinctly informs us that "not a christian could be found amongst them."

All this is explicit. The evidence of the following facts is however, yet more determinate and satisfactory. Some of the arguments which, at the present day, are brought against the advocates of peace, were then urged against these early christians; and these arguments they examined and repelled. This indicates investigation and inquiry, and manifests that their belief of the unlawfulness of war was not a vague opinion, hastily admitted, and loosely floating amongst them; but that it was the result of deliberate examination, and a consequent firm conviction that Christ had forbidden it. Tertullian says, "Though the soldiers came to John and received a certain form to be observed, yet Jesus Christ, by disarming Peter, disarmed every soldier afterwards; for custom never sanctions any unlawful act." "Can a soldier's life be

lawful," says he, in another work, "when Christ has pronounced that he who lives by the sword shall perish by the sword? Can any one, who possesses the peaceable doctrine of the gospel, be a soldier, when it is his duty not so much as to go to law? And shall he, who is not to revenge his own wrongs be instrumental in bringing others into chains, imprisonment, torture, death?"—So that the very same arguments which are brought in defence of war at the present day, were brought against the christians sixteen hundred years ago; and, sixteen hundred years ago, they were repelled by these faithful contenders for the purity of our religion. It is remarkable, too, that Tertullian appeals to the precepts from the mount, in proof of those principles on which this Essay has been insisting:—that the dispositions which the precepts inculcate are not compatible with war, and that war, therefore, is irreconcilable with christianity.

If it be possible, a still stronger evidence of the primitive belief is contained in the circumstance, that some of the christian authors declared that the refusal of the christian to bear arms, was a fulfilment of ancient prophecy. The peculiar strength of this evidence consists in this—that the fact of a refusal to bear arms is assumed as notorious and unquestioned. Irenæus, who lived about Anno 180, affirms that the prophecy of Isaiah, which declared that men should turn their swords into ploughshares, and their spears into pruning-hooks, had been fulfilled in his time; "for the christians," says he, "have changed their swords and their lances into instruments of peace, and they know not now how to fight." Justin Martyr, his contemporary, writes,—"That the prophecy is fulfilled, you have good reason to believe, for we, who in times past killed one another, do not now fight with our enemies." Tertullian, who lived later, says, "You must confess that the prophecy has been accomplished as far as the practice of every individual is concerned, to whom it is applicable."

It has been sometimes said, that the motive which influenced the early christians to refuse to engage in war, consisted in the idolatry which was connected with the Roman armies. One motive this idolatry unquestionably afforded; but it is obvious, from the quotations which we have given, that their belief of the unlawfulness of fighting, independent of any question of idolatry, was an insuperable objection to engaging in war. Their words are explicit: "I cannot fight if I die."—"I am a christian, and, therefore, I cannot fight."—"Christ," says Tertullian, "by disarming Peter, disarmed every soldier;" and Peter was not about to fight in the armies of idolatry. So entire was their conviction of the incompatibility of war with our religion, that they would not even be present at the gladiatorial fights, "lest," says Theophilus, "we should become partakers of the murders committed there." Can any one believe that they would not even witness a battle between two men, would themselves fight in a battle between armies? And the destruction of a gladiator, it should be remembered, was authorized by the state as much as the destruction of enemies in war.

It is, therefore, indisputable, that the christians who lived nearest to the time of our Saviour, believed, with undoubting confidence, that he had unequivocally forbidden war—that they openly avowed this belief, and that, in support of it, they were willing to sacrifice, and did sacrifice, their fortunes and their lives.

Christians, however, afterwards became soldiers. And when?—When their general fidelity to christianity became relaxed;—when, in other respects, they violated its principles;—when they had begun "to dissemble," and "to falsify their word," and

"to cheat;"—when "christian casuists" had persuaded them that they might "sit at meat in the idol's temple;"—when christians accepted even the priesthoods of idolatry. In a word, they became soldiers, when they had ceased to be christians.

The departure from the original faithfulness was, however, not suddenly general. Like every other corruption, war obtained by degrees. During the first two hundred years, not a christian soldier is upon record. In the third century, when christianity became partially corrupted, christian soldiers were common. The number increased with the increase of the general profligacy; until at last in the fourth century, christians became soldiers without hesitation, and, perhaps, without remorse. Here and there, however, an ancient father still lifted up his voice for peace; but these, one after another, dropping from the world, the tenet that *war is unlawful*, ceased at length to be a tenet of the church.

Such was the origin of the present belief in the lawfulness of war. It began in unfaithfulness, was nurtured by profligacy, and was confirmed by general corruption. We seriously, then, and solemnly, invite the conscientious christian of the present day to consider these things. Had the professors of christianity continued in the purity and faithfulness of their forefathers, we should now have believed that war was forbidden; and Europe, many long centuries ago, would have reposed in peace.

Let it always be borne in mind by those who are advocating war, that they are contending for; corruption which their forefathers abhorred; and that they are making Jesus Christ the sanctioner of crimes, which his purest followers offered up their lives because they would not commit.

An argument has sometimes been advanced in favour of war from the Divine communications to the Jews under the administration of Moses. It has been said that as wars were allowed and enjoined to that people, they cannot be inconsistent with the will of God.

We have no intention to dispute, that, under the Mosaic dispensation, some wars were allowed, or that they were enjoined upon the Jews as an imperative duty. But those who refer, in justification of our present practice, to the authority by which the Jews prosecuted their wars, must be expected to produce the same authority for our own. Wars were commanded to the Jews, but are they commanded to us? War, in the abstract, was never commanded. And, surely, those specific wars which were enjoined upon the Jews for an express purpose, are neither authority nor example for us, who have received no such injunction, and can plead no such purpose.

It will, perhaps, be said that the commands to prosecute wars, even to extermination, are so positive and so often repeated, that it is not probable, if they were inconsistent with the will of Heaven, they would have been thus peremptorily enjoined. We answer, that they were not inconsistent with the will of Heaven then. But even then, the prophets foresaw that they were not accordant with the universal will of God, since they predicted that when that will should be fulfilled, war should be eradicated from the world. And by what dispensation was this will to be fulfilled? By that of the "rod out of the stem of Jesse."

But what do those who refer to the dispensation of Moses maintain? Do they say that the injunctions to the Jews are binding upon them? If they say this, we have at least reason to ask them for greater consistency of obedience. That these injunctions, in point of fact, do not bind them, they give sufficient proof, by the neglect of the greater portion of them, enforced as those injunctions were,

by the same authority as that which commanded war. They have, therefore, so far as their argument is concerned, annulled the injunctions by their rejection of them. And out of ten precepts to reject nine and retain one, is a gratuitous and idle mode of argument.

It is told that we still acknowledge the obligation of many of these precepts. I answer that we acknowledge the duties which they enjoin, but not because of the authority which enjoined them. We obey the injunctions, not because they were delivered under the law, but because they are enforced by Christianity. The command, "Thou shalt not kill," as never been abolished; but Christians do not prohibit murder because it was denounced in the eclogue, they would have prohibited it if the eclogue had never existed.

And why was the law superseded? Because it made nothing perfect.—"The law was given by Moses, but grace and truth came by Jesus Christ," in the manner in which the author of "truth" pre-empted some of his most important precepts, is much our present purpose. "It had been said by him 'I told time, an eye for an eye.' &c. He then introduces his own precept with the contradicting phrase—'But I say unto you.'" This, therefore, appears to be a specific abrogation of the authority of the legal injunctions, and an introduction of another system; and this is all that our present purpose requires. The truth is, that the law was abolished because of its imperfections; yet we take hold of one of these imperfections in justification of our present practice. Is it because we feel that we cannot defend it by our own religion.

(To be continued.)

#### Spontaneous Combustion.

(Concluded from page 133.)

A writer of high scientific authority thus speaks of spontaneous combustion:

"The fires that owe their origin to spontaneous combustion, are much more numerous than the public are aware of, or will readily believe. Indeed, we are convinced that many fires, whose mysterious occurrence in places where neither lamps nor stoves were used, have caused them to be included among the list owing their origin to the mevelence of the incendiary, have in truth been produced by natural causes of ignition, which latter information would be guarded against. Dr. Imman has read before the Literary and Philosophical Society of Liverpool, a larger and more complete account of what is known of the circumstances and causes of spontaneous combustion, than I have yet seen. It also contains a report of various experiments by the author himself, which tend still further to throw a light on this heretofore nascent and somewhat obscure subject. In stating the influence of different substances, on painters' oil, for instance, in evolving heat, and producing spontaneous combustion, Dr. Imman found that charcoal had the most powerful influence; indeed, of this fact painters are already aware, inasmuch as they know that lamp black and their oil are at once to be ground, or they will ignite even in a few minutes. Next to charcoal, stood sponge, then orsted, saw-dust, cotton, wool, low and shavings. He precise measure and time in which these various substances absorb oxygen when mixed with oil, are noted in a tabular form. We were rather surprised to find worsted, an animal substance which merely sines, and does not tend, under ordinary circumstances, to burst into flame when fire is applied, ranking here next to charcoal, and before cotton-wool; but our impression of the greater risk of spontaneous combustion from cotton than from animal wool, is nevertheless borne out by

these experiments; for Dr. Imman afterwards remarks in reference to cotton, though not specially to animal wool, that in effect, and on account probably of the relative forms and surfaces and access to air, of the different substances, 'it is far more difficult to get small quantities of tow to ignite, even under very favourable circumstances, than cotton-wool; indeed we may say that when the quantities used are small, it is difficult to procure actual ignition with anything but cotton-wool; when the quantity used is large, it is only a question of time.'

"One point well worthy of notice is the enormous amount of oxygen absorbed by painters' oil in the first twelve hours, compared with the ultimate quantity. This, the writer suggests, may explain how it is that fires so frequently break out within a very brief period after workmen have quitted premises where they may have been using painters' oil, and have left their greasy aprons, rags, or pieces of cotton on which their hands may have been wiped near to each other, or to a warm steam-pipe or stove not yet cold (or in a warm summer day to sunshine, we might add) or that some few drops of oil have extended from the cans to some dust, saw-dust, shavings, and the like. In such cases we have the materials provided and the train laid, as it were, for a conflagration which will burst out in an hour or two.

"Professor Graham refers to instances of olive oil igniting upon saw-dust; of greasy rags from butter, heaped together, taking fire within twenty-four hours; of the spontaneous combustion of a tape measure, covered with oil varnish; and even of an oilskin umbrella put aside in a damp state. The ignition of such materials, generally, it must be noted, is greatly favoured by a slight warmth, such as the heat of the sun."

Another writer says: It is a fact better ascertained than accounted for that fixed oils, when mixed with any light kind of charcoal, or substances containing carbon, such as cotton, flax, or even wool, which is not of itself inflammable, heat by the process of decomposition, and, after remaining in contact some time, at length burst into flame. This spontaneous combustion takes place in waste cotton that has been employed to wipe machines, and then thrown away and allowed to accumulate into a heap. An instance of this kind is mentioned, where the waste wool in a manufactory for spinning worsteds was thrown into a corner and neglected; it then heated, and was on the point of bursting into flame, when the attention of the workmen was directed to the heap by the smoke and smell. In cotton mills the danger exists in a still greater degree, and it is believed that the destruction of many cotton factories has been occasioned by this means. The cause of this peculiar property of fixed oils deserves more attention than has hitherto been paid to it.

Mr. Marsh, an able chemist, found that iron long under water, when reduced to powder, invariably becomes red-hot, and ignites anything it touches. A general knowledge of this is important, and it accounts for many spontaneous fires. A piece of rusty old iron, brought in contact with a cotton bale in a warehouse, or on shipboard, may occasion much loss of life and property.

It is calculated that upwards of \$100,000 worth of cotton has been lost by fires at sea during the past year, mostly occasioned by spontaneous combustion from the use of oil in the cotton presses at New Orleans, or on shipboard.

Several fires have come under the notice of the fire marshal, that broke out under singular circumstances in the cocklofts of old dwellings in a bad state of repair, and which, from a mystery

that seemed to characterize them, gave a great deal of concern and disquietude to the families occupying the houses. The origin of these fires was a last satisfactorily traced to the spontaneous ignition of collections of greasy rubbish, occasioned sometimes by the warmth of chimneys passing through the loft, and at other times by the intense heat of the sun, expending its power upon the roofs and penetrating through open trap-doors on extremely hot days. In two of these instances, strong suspicion attached to servant girls, who were at length discovered to be entirely innocent.

The cockloft, in most houses, is made the depository of all kinds of refuse things, such as dirty rags, old hats, bonnets, and other articles of cast-off wearing apparel, remnants of worn out bed clothing, &c. This filthy stuff is allowed to accumulate for years without being disturbed. The permanent housekeeper never gives it a thought. A family vacating a dwelling, hardly ever removes it. The succeeding tenant finds it there, when he comes in, and does not touch it; and so the accumulation goes on from time to time. This rubbish invariably contains matter of an oily nature, and combustion may ensue from the effect of heat at any moment. As a measure of domestic safety, the fire marshal would advise every family to clear their lofts of all such vile collections, particularly where the house has suffered from the ravages of time.

The tendency to spontaneous combustion from the mingling of oil with saw-dust, is so great, that it would be prudent for oil merchants, and druggists, and all other dealers in and manufacturers of oily and greasy substances, to discontinue the use of saw-dust or straw, for cleaning the floors of their establishments, where they become coated with oil or grease. With every precaution on their part, a fire might happen. A small quantity of sweepings, the removal of which had been forgotten, left in an oil store or factory at night, would be sufficient to cause a conflagration.

*The Reality of the Inwardness of Christ.*—The situation and prospects in every age, of the true disciples of our Lord and Saviour, must prove to the Christian mind a subject of vast importance; and it deeply concerns every one of us to know for ourselves, how far we are promoting, by individual reception of the heaven of His Gospel, that universal diffusion of unmixed "glory" which, we are assured, "shall cover the earth as the waters cover the sea." The government and dominion of "the Prince of life," "the Prince of Peace," which is ultimately to subdue and reduce all things unto itself, (Daniel, i. 4,) the Society of Friends have pre-eminently held, to be wholly of a spiritual character; it is to be set up within man, and "cometh not by observation," neither stands in any more outward observances, but in "righteousness, peace, and joy in the Holy Ghost." They have all along considered the standing, lasting, and indispensable ordinance of the Gospel to be, the manifestation of the Saviour by his Spirit, as the Guide into all truth; according to the whole tenor of the 14th chapter of John, and likewise that language of the Apostle to the Hebrews:—"Christ was once offered to bear the sins of many; and unto them that look for him, shall be appear the second time, without sin, unto salvation." Chap. i. 25. This Society has therefore deemed it essential to know the reality of the presence of Christ dwelling in their hearts by faith; and has judged it in the highest degree needful, to love and wait for his appearing and counsel, to bow the neck to his yoke, and to commit themselves in all things most unreservedly to his leadings. In this way they believe it was,

that our blessed Redeemer engaged to manifest himself unto those, and make his abode with them, who should keep his commandments; and thus also it is, that such who do his will are given to know of his doctrine.—*John Barclay.*

Selected.

"What! shall we receive good at the hand of God, and shall not we receive evil."

jon. ii. 20.

I have had my days of blessing,  
All the joys of life possessing;  
Unnumbered they appear!  
Then let faith and patience cheer me,  
Now that trials gather o'er me;  
Where is life without a tear?

Yes, O Lord! I sinner looking  
O'er the sins Thou art rebuking,  
Must own thy judgments light,  
Surely, I, so oft offending,  
Must, in humble patience bending,  
Feel Thy chastisements are right.

Let me, o'er transgression weeping,  
Find the grace my soul is seeking;  
Receiving at Thy throne  
Strength to meet each tribulation,  
Looking for the great salvation,  
Trusting in my Lord alone.

While, 'mid earthly tears and sighing,  
Still to praise Thee, feebly trying,  
Still clinging, Lord, to Thee;  
Quietly on Thy love relying,  
I am Thine—no, living, dying,  
Surely, all is well with me.

## THE FOREST MOSS.

Selected.

By forest fountains hath thou seen  
The winsome fairy sight  
Where banks are clad in mosses green,  
Some dark, and some so bright!

As when upon a velvet lawn,  
Beneath the noon-tide ray,  
Where the thick foliage intervenes,  
Shadows and sunlight play.

But in the moss a sunshine dwells  
No gloomy sky can dark green,  
The light that other green forsakes,  
Will yet with this reside.

In hearts where sorrow's shadow lies,  
Are spots of dark, dark green,  
But dwelling near the Fountain of Life,  
There's sunlight moss between.

And happy, in a world like this,  
Where clouds so often frown,  
The heart, that, like the forest moss,  
Hath sunshine of its own.

Amid my list of blessings infuse,  
Stand this the foremost, "That my heart has bleed."  
"Thy Heaven's last effort of good-will to man;  
When pain can't bless, Henry nauts quit in despair."  
*Young.*

From the Leisure Hour.

## Second Shape.

(Concluded from page 195.)

Phosphorus, even in its ordinary condition, is a very extraordinary body—extraordinary not only on account of its properties, but also on account of the strange places where it is found, and whence it is extracted. Sulphur exists, it is true, in the animal and vegetable kingdoms: very few animal bodies are without it. Chemists can readily detect the presence of sulphur in silk, eggs, wool, feathers, horn, and hair; but the great store-house or magazine of sulphur is the mineral kingdom, after all, especially in the neighbourhood of volcanoes. Phosphorus, too, exists in the mineral world, but very sparingly. In the vegetable world, too, we find it, but only in small quantities. The animal

kingdom is our great phosphorus magazine. The blood contains it; the other animal fluids contain it; and, as for bones, a considerable percentage of their weight consists of phosphorus. Many who read these pages, may be conversant, perhaps, with the leading properties of phosphorus; may know that it is like wax in appearance; that it shines in the dark; that it takes fire at a temperature not much above that of the human surface, and that it is very poisonous. All these are very marked properties—far more marked than belong to ordinary sulphur. We shall presently discover to what extent they can be altered by the assumption of second shape, or allotropism.

Allotropic phosphorus is made from ordinary phosphorus, very much in the same manner that allotropic sulphur is made from ordinary sulphur, namely, by the application of heat. The phosphorus requires to be heated, however, in close vessels, in such manner that the supply of atmospheric air may be limited. The reader has already been informed that when ordinary phosphorus is heated in atmospheric air it burns; and if thus heated in an open vessel with an unlimited supply of atmospheric air, it would burn all away. Heated in a close vessel, combustion soon finds its limits in the exhaustion of all that part of the air (oxygen) which supports combustion, and the phosphorus, instead of burning away, is converted into a puce-coloured powder, which latter is nothing more than phosphorus in its allotropic or second shape. But how different is it from common phosphorus! That substance requires to be kept in water, lest at any time it may burst into flame; but so little prone to combustion is allotropic phosphorus, that Professor Schrötter, of Vienna, its discoverer, surprised the chemical section of the British Association, in the year 1849, by bringing some of the curious material in his waistcoat pocket, merely wrapped up in a little paper. Allotropic phosphorus may, in point of fact, be represented as *incombustible*. True, it can be used to advantage in the manufacture of lucifer matches and congraves, as we shall in the sequel find; nevertheless, it may be said to be incombustible. The fact is, that when heated above a certain temperature, by friction or otherwise, it becomes ordinary phosphorus once more, and therefore answers the purpose of a lucifer match constituent.

More striking and more important are the medical peculiarities of allotropic phosphorus. Ordinary phosphorus is a terrible poison, whereas the allotropic variety, so far from being poisonous, is almost devoid of any well-marked physiological action. Soon after the manufacture of lucifer matches, or rather, the successors of lucifer matches, "congraves," became general, the consequence to those engaged was a frightful and too often fatal disease. Persons the most liable to the affection were such as had carious or decayed teeth. The disease was characterized by rapid destruction of the teeth at first, but subsequently of the jaw-bones themselves. So frightful were the ravages of this phosphorus disease, that, according to the police regulations of Prussia, and, I believe, of France, an examination of all persons about to be engaged in the lucifer match manufacture was rendered imperative, and only those having perfectly sound teeth were permitted to take part in the occupation. Notwithstanding all these precautions, the phosphorus disease committed frightful ravages at times. Listen now to a practical application of allotropic phosphorus. Lucifer matches were made of it, and the phosphorus disease was at an end!

The last example I shall cite of allotropism, or second shape, is perhaps the most extraordinary, though, owing to the gaseous nature of the subject,

of it, my remarks will not be so readily followed, except by the chemical reader. Everybody knows that the atmosphere is invisible, and most people have been taught that the atmosphere is composed of two gases, "oxygen" and "nitrogen," about twenty-one of the former to seventy-nine of the latter. Well, oxygen, the first constituent, is subject to a very remarkable state, to the peculiarity of which, attention was first directed by M. Schönbein, a chemist of Basle. He thought he had discovered a new compound, and he termed it *ozone*; but philosophers are now pretty well agreed that ozone is only oxygen in an allotropic condition.

I shall totally omit a description of the methods of converting ordinary into extraordinary or allotropic oxygen; contenting myself with a statement of the enormous difference between the two as to properties. Common oxygen is devoid of smell, whereas ozone is endowed with a pungent penetrating odour. Common oxygen does not bleach; ozone removes organic colours with almost the energy of chlorine. Common oxygen manifests no action upon silver-leaf: ozone corrodes it almost instantaneously. Common oxygen does not impede putrefaction: ozone not only does this, but restores flesh already putrefied to its original sweetness. What marvellous distinctions are these! And yet, so readily is ozone changed into common oxygen, that though it goes in as ozone at one extremity of a red-hot pipe, it comes out as oxygen at the other.

Now, the most important point in connection with ozone is this: it is extensively generated in the great laboratory of nature, and the quantity of it naturally existing in the atmosphere is variable. Chemists have devised an unfailling method of detecting ozone. For this purpose a certain paper is used, the nature of which I need not fully describe; suffice it to say, that the paper turns blue if exposed to an atmosphere containing ozone, and that the shade of blueness is commensurate with the amount of ozone present.

Enough has been stated concerning the properties of ozone, to render manifest the influence it must exercise in the grand economy of nature. Present in extreme quantity, it is not difficult to contemplate the energy of its action on the lungs; how it must produce coughs, chest diseases, influenza, always troublesome, often mortal; for the influenza has sometimes been scarcely less to be dreaded than the cholera itself. Absent, or present in diminished amount, the consequences of such a state can be readily imagined. Scething malaria will then attack their victims unbecked; typhus will rage, and all the large class of diseases known as infectious will assert their empire. Verily, how little do we know of the influences which wander like spirits around and about us: how blind, or slow, are we to see the wonderful agencies of God!

For "The Friend."

[We take from one of our exchange papers the following extracts from a sermon preached by H. Blunt. Although addressed to the inhabitants of Great Britain, the warning it contains is appropriate to the present condition of our country.]

Although the laud of Canaan was made over by solemn covenant to the seed of Abram, the justice of God would not consent to their taking possession, until the guilt of the present inhabitants should cry aloud for that punishment with which they were afterwards so fearfully visited. When this period should arrive, the Israelites were to enter in and take possession, "utterly to destroy all they had, and to spare them not, but to slay both man and woman, infant and suckling, ox and sheep, camel and ass."

Surely the effects of a sentence so fearfully

For "The Friend."

## Daniel Wheeler's Testimony.

That faithful champion for the Truth, Daniel Wheeler, when engaged in his religious visit to this country, manifested much anxiety on account of an unsound ministry, which he feared was growing upon the Society, and which would rather fill the ear of the hearers with notions, and tend to bring a day of further trial and calamity upon us, than direct to the only sure and inexhaustible Fountain of light and life, Christ Jesus.

The subjoined are some of his memorandums—stirring and arresting,—referring more or less directly to the subject. "Fourth month 15th, (Philadelphia Yearly Meeting). My way was opened to exhort all to turn to the Lord with full purpose of heart, in the very depths of humility. My soul had mourned over the low state of things among us: the sorrowful and manifest declension, which had so greatly warred and defaced our religious Society, might be traced to our having departed in heart from that precious principle of light and life, bestowed in redeeming mercy on every individual of the human race. It is high time to lay aside the unfruitful works of darkness, and to put on the whole armour of light; for the day is fast upon, and the night is at hand."

Again, Fifth month 31st, 1839: "The last sitting of the Select (Yearly) Meeting (New York) was held. In this I had to state in plain terms my fears as to the present state of the ministry; and had to remind Friends of the devastation in our Society in England, from this very cause of unsound ministry having crept in among us. My mind found some relief."

Again, Seventh month 3rd: "Attended the Select (Quarterly) Meeting, (Nantucket, N. E.), which was a low time; in which I had to speak of the awful responsibility attached to those in the stations of ministers and elders: and to warn those present, of a day of farther trial awaiting our Society; which, from its nearer approximation to the world, would have more difficulty to maintain its standing, than in former instances, when Friends, like Israel of old, dwelt more alone."

And again, Ninth month 2nd. "In the last sitting of the Select (Yearly) Meeting (Ohio), I had some remarks to make on the great responsibility of those in the station of elders, who, if not appointed from on high, are incapable of discerning from whence the ministry proceeds; and to add my belief, that there is a ministry growing in the Society, which, if not checked, would fill the minds of the hearers with things like the "abomination of desolation" spoken of by the prophet, that would stand in the holy place, where it ought not,—in the place of vital religion, and would make truly desolate and destitute of the presence of the Lord. It was the elders of Ephesus who were sent for, and charged to take heed to themselves and to the flock, by the great apostle."

Some among us may be disposed to get over these awakening admonitions, by saying they belong to a by-gone period. But if the predictions themselves do, have not the truths which they so solemnly set forth, become as bitter fruits, largely partaken of by us, being even now in our hands and mouths. So that we may well retrospectively be warned; at least plainly perceive that a prophet of the Lord has been amongst us whose precepts should be duly regarded in calling us to a return to our "first love." Well, the mercy of our Heavenly Father is from everlasting to everlasting upon them that fear him, and would yet embrace us as a Society, stripped and peeled as we are; He would gather and restore us, if on our parts we would but return unto Him, humble ourselves before Him,

severe, and yet so unquestionably just, could never have been intended to pass away with the guilty generation which it swept into perdition. Does it not cry with a warning voice at the present day, and at the present hour, to every nation under heaven?

Does it not speak with a peculiar emphasis to ourselves, my brethren, as the inhabitants of a country which has most guiltily sinned, and yet for a long series of years most abundantly prospered?

The iniquity of the Amorites was long, very long, nearly four hundred years in filling up—for that period elapsed before the Israelites came into possession—but still it eventually did, and the moment it had so filled, the justice of God was manifested in their total extirpation. Turn not a deafened ear, or a hardened heart, I beseech you, to so solemn a warning. Are there no events passing around you to lead you to fear that the iniquity of our own nation may also be filling up? that our day of trial may be approaching? that the mercies so abundantly received, so little acknowledged, so long abused, may, as in the case of the Amorites, be annulling our title-deed, and preparing the way for the new possessors; and that yet a little while, and a perfectly just and a holy God will be compelled to say, "The iniquity of the people is now full!"

It is for you, brethren, and for myself, under the Divine grace and guidance, yet to endeavour to postpone that sentence; the sins of every nation must be made up of the sins of the individual members of that nation; every humble, holy, prayerful follower of the Lord Jesus Christ, and servant of our God, however low his rank, however weak his attainments, is keeping back the day of solemn and certain visitation. I do not scruple to assert, because from my heart I believe it to be true, since all revelation teaches, and all history confirms it, that the essentially christian part of the community, the men and the women, and the children who fear to offend God, and who love his commandments, who are found in his temples and at his altar in public, and upon their knees in private, are the salt which has kept, and is at this moment keeping—God only knows how long they will be permitted to keep us—from those trials which may be approaching. It is not the wisdom of our statesmen, it is not the courage of our soldiers, it is not whether one party or another hold the helm of government, which can preserve us from the day of visitation; it is instrumentally to be done by the prayers and the lives—the devoted and consistent piety of the people of God.

You, then, who love your country, and who love your own little ones, who are entering upon life at a most awful period, think how powerful an additional motive you have for an increase of faith, and holiness, and self-denial, and obedience. Our iniquity is not yet full; but remember that when the waters are at the brim, one drop will make them overflow. The eye of the Lord is even now upon this guilty country, and upon its guilty inhabitants; the sword of the Lord is even now applied to strike: "Offences must needs come, but wo to that man by whom the offence cometh; but wo to those who assist in filling up the rapidly rising measure. Be not content, in times like these, even with mere personal holiness; use your efforts with all over whom you possess the slightest control; urge them to a greater devotedness to God, and to a quiet, peaceable demeanour, to habits of order, and obedience to "the powers that be."

At such a time every one will be a faithful servant of his earthly king who is a true believer in the King of kings. "Pray for the peace of Jerusalem;" be much in prayer, both in your families

and in secret, that a God of wisdom may direct the council of our rulers in the administration of the affairs of our country, at this peculiarly trying and difficult crisis. The evil day may still be averted; the gathering tempest which even now darkens and lowers in the distance, may yet be dispersed; devotedness of heart, and soul, and life to God, will yet be accepted; prayer will yet be heard; the hand of the Lord, the providence of the Lord, and the day of the Lord, may yet be more publicly acknowledged by us than they have been, and the glory of the Lord, instead of our own glory, may be made the more frequent subject of our boast.

But time is hastening on, the judgments of God are abroad, our condemnation slumbereth not; the smoking furnace, the symbol of national trial and national suffering, as in the vision of Abram, may be already kindled in our land; if it be, my christian brethren, if no prayers, no efforts shall avail to postpone its approach, let us, then, only supplicate our God that the burning lamp, may, as of old, accompany it; that the Divine presence may not forsake his children; that "One like unto the Son of God," may be with us in the furnace, tempering its heat, shortening its duration, sanctifying its fires; that thus, as a nation and as individuals, we come out of the furnace chastened, purified, but not consumed; our dress purged away, and every christian grace and every holy affection shining more and more brightly to the glory of God our Saviour.

For "The Friend."

It may not be amiss to remind the members of the Society of Friends wherever scattered, that the bond of our union is love. "By this shall all men know that ye are my disciples, if ye love one another," and the reverse is shown by the apostle when he says, "If ye bite and devour one another, take heed that ye be not consumed one of another." In an unguarded moment when we are off the watch, how easy it is for us to let in evil surmises concerning our friends, even those sometimes that have been our confidants. I now remember reading an anecdote of an old Scotch woman, (if my memory serves me) which will perhaps illustrate the subject a little; she was very cautious about receiving ill reports of her neighbours: one of her neighbour women having expressed herself very freely about another female acquaintance and evidently to her hurt, the honest old woman told her that she would put on her bonnet, and step over the way and enquire of the individual how it was with her. Now would it not be well for us to "step over the way" before judging too harshly, and make some inquiry, how it is with our friends.

An upright honest heart does not fear to ask an explanation of the motives of others, in the spirit of meekness, seeking the welfare of a brother beloved. If the door of the heart is closed against evil surmises, and nothing permitted to have its seat there but love for our fellow creatures, and for Him who created us, the spoiler would not be permitted to disturb us. How dangerous it is for us to judge our brother without cause; if our love to him is as it is for ourselves, we cannot desire his hurt, but our desire will be that as we have obtained mercy for our many departures from the truth, the same may be extended to him. How desirable then would it be, if we who profess to be the followers of Him who is holy, harmless, un-dressed and separate from sinners, would endeavour in our conduct and conversation, to manifest to those around us, that we love God above all things, and our neighbour as ourselves. W.

Westmoreland, Pa., Second month 16th.

and again as our forefathers did, keep His statutes and commandments. Agreeably to His ancient assurance to a degenerate and rebellious people: "Oh, that there were such an heart in them, that they would fear me, and keep all my commandments always, that it might be well with them, and with their children forever."

For "The Friend."

#### An Exhortation to Faithfulness.

In this day of outward perplexity, both in the world and amongst the professors of christianity generally, it becomes the duty of those who know the truth, and have been redeemed from the spirit of the world, and have come under the peaceable Spirit of Christ, seriously to enquire, what the Lord may require at their hands, that all may fulfil their obligations to Christ and their fellow men. It is very evident, that parties and confederacies have not, neither can they bring about that perfect work which the Lord designs; but, as the turnings and overturnings of his hand are made manifest, both in societies and nations, such as have been taught of Him, may be made individually servicable towards bringing in everlasting righteousness, or the establishment of the kingdom of Christ on the earth. And although this may be by or through outward sufferings, nevertheless if faithfulness to manifested duty be attended to, it will yield, to such as are willing thus to expose themselves for the Truth's sake,—to take up the cross and despise the shame,—the peaceable fruits of peace; and whatever tribulations may attend such in the performance of manifested duty, the spirit of glory and of God shall rest upon them. In times like the present, the truly anointed and called of God, must look to the same Director the fathers did, and the same consequences must follow, for it has been well said, "Man's extremity is God's opportunity." For both the world and the church there is treasured up in Christ wisdom and strength equal to the day; and amidst the backslidings of some of this society in times past, there has been raised up those who have been as "Saviours on Mount Zion," for the deliverance of his people or heritage; and my desire for my brethren and sisters, wherever scattered, is, that they may put on strength in the name of the Lord, and remember the saying of the apostle, "If God be for us, who can be against us?" "When the enemy comes in like a flood, then shall his Spirit lift up a standard against him." The enemy is a coward before Christ, who now as well as formerly, bruises the head of the serpent, and as his name or power is above every name, it becomes the duty of the valiants of Israel not to flee but to stand armed with the paupery of God. "For no weapon that is formed against his truth or people shall prosper, and every tongue that riseth against them will be condemned." Yet the spirit of Christ is the spirit of love, and "wilteth not that any should perish;" it will enable all to bear patiently the sufferings and baptisms, for the body's sake, that they may be restored to the love of the Truth; and however difficult, at all times and on every occasion, to manifest the gentleness of the Lamb, the innocence of the dove, with the faithfulness Truth requires, in an undeviating way; such who move under the "wisdom from above" as the way is opened before them, leaving consequences with the Lord, will be blessed. But Oh! that none may fail and come under like condemnation with him "who knew his Lord's will, but did it not." Such will pass under the judgments of the Most High; our early Friends never feared to meet the adversary, and were often able to say, "the Truth reigneth over all." S. C.

East Shelby, N. Y., Second mo. 13th, 1862.

For "The Friend."

#### "Straws Show which Way the Wind Blows."

"How's Business?"—It seems to me this query is the first propounded by nearly every one I meet; whether at home, in the street, or in the meeting-house yard, it appears to keep uppermost with almost all—and if not the first question, it is sure to follow a general inquiry after the health of the family. The ungodly thirst for gain which so characterizes the present day, has attacked us also—the enemy seems to have besieged us, and through this, as through other means, our destruction is only a question of time, unless there is a speedy return to the Rock of Ages, and a reinforcement of valiants direct from the Lamb's army. "Straws show which way the wind blows,"—the most nicely poised vane, on the highest steeple, in the most exposed locality, does not reveal the drifts of the wind more clearly, than does this query on the lips of so many, show the tendency of the multitude. Yesterday I was in company with a few select friends, and observing one whom I had always regarded with feelings of love, sitting alone and apparently unengaged, I felt drawn to take a seat by him, with a spirit more than usually quiet, and a heart in mercy warmed and tendered by the favours of heaven during the day. I hoped he might have a message for me, or that a conversation might ensue, such as kindred spirits animated with love to God only can appreciate. But how did my whole inner man droop and secretly sigh, when I was greeted with the infecting query, "How is thy business now?" my disappointment was so great and so poorly hidden, that I doubt not he thinks me near to bankruptcy, but I am not; and so long as I can live in the fear of the Lord and walk before him acceptably, reverses, should they come, cannot harm me, but will prove my more complete salvation through faith; the promises of God are sure beyond all impious management, and all I ask is a quiet acquiescence, an unquestioning obedience, and a firm confidence to and in Him; then money-making will have no charms and bankruptcy no terrors; neither poverty nor riches will ever be imposed upon me unless for a Divine purpose, and my bark be fitted to the burden. Then what matters it? why all this anxiety about success in business. Oh, doubting christian! let us leave these things, and unite in seeking first the kingdom of heaven and the righteousness thereof, when all things necessary will be added.

## THE FRIEND.

THIRD MONTH 1, 1862.

It is one of the sad evidences of the perverted views of Christianity prevalent in the community, or at least of the want of that humble, compassionate frame of mind which always clothes the true Christian, that a disposition is continually manifesting itself to make public demonstration of rejoicing at the successful issue of battles, in which thousands of fellow beings have been killed or wounded; and which must, therefore, inflict great misery on the latter, while it gives occasion to the most poignant sorrow and suffering in the various families scattered over the land, which are thus bereft of their nearest and dearest friends and supporters.

How little thought seems to be taken of the hundreds of immortal spirits suddenly ushered into an awful eternity, amid the maddening scenes and excitements of the furious deadly combat! The public turn a deaf ear to the dying groans, the

agonizing ejaculations of the poor imolated soldiers; and shut out from view the heart-sickening sight of the mangled bodies and mutilated limbs of the wounded, who cry for help amid the horrid din and struggles of the bloody field, or sink into death, or hopeless decrepitude within the wards of the military hospitals.

Exaggerated accounts of the number of the "enemy" killed and wounded, are generally palmed upon the community, in order more fully to gratify the morbid taste for recitals of sanguinary conflicts and slaughter, which has been called forth and nourished by this fratricidal war. No voice is heard amid the tens of thousands who shout in exultation over the dreadful havoc, reminding them that those who have fallen were not only men with souls to be saved or lost, but our fellow countrymen; long united to us by the ties of a common interest; a common citizenship and a common welfare; now, it may be, *deluded* or *forced* into the wicked attempt to overthrow the government, but yet with unfeigned claim upon our christian commiseration; and for whose sufferings and untimely end our grief should be too deep to allow of any thing like a public exhibition of joy for advantages supposed to be gained. If the religion we profess did not forbid it, yet a little reflection might convince us how inconsistent is this boasting and rejoicing over the misery and destruction of those engaged in supporting the rebellion, with the desire—as publicly expressed—to win back their alienated feelings of attachment and allegiance to the government they are striving to subvert. Is it not calculated to gall and exasperate them, and will it not call forth or increase in them jealousy and hate, closing up the way to reconciliation, and goading them into an unyielding determination to endure the miseries of a long protracted struggle rather than forego their separate organization? But above all, may we not reasonably fear that it may increase the Divine displeasure, should the Dread of Nations see that instead of being humbled and penitent under the rod of deserved correction which He has stretched over us, the heart of the nation is lifted up with pride in its vaunted power, and is glorying in the sore calamities that have fallen on our erring brethren.

A heavy responsibility lies at the door of many of the professed ministers of the gospel, who have used their position and influence to impress upon their hearers a belief that both slavery and war are consistent with the religion of Christ. In the South, elaborate argumentation has been poured forth from the pulpit, with the wish and intention of bestowing the sanction of the gospel on the enslavement of men and women, and their reduction to the condition of chattels; and similar sophisms have been occasionally echoed from the North; while both there and here, equal violence has been done to the injunctions and the example of the blessed Saviour of men, by the same class in nearly every denomination, virtually teaching that those injunctions and that holy example may be rightfully disregarded, so far as to permit the professed disciples of the meek and long suffering Son of God, to imitate the hatred and revenge, and engage in the murder and misery which constitute the origin, the essence and the end of war; if the war is waged in what each party to the strife considers a just cause.

It is amazing that men who assert that the Holy Scriptures are an infallible rule of faith and practice; who claim to be teachers of the message of Salvation to a perishing world, and to be imbued with the Spirit of Him who came to seek and to save that which is lost, at this late period in the last and glorious dispensation,—wherein the prophets of

the Most High have declared the nations of the earth should learn war no more,—should strive to reconcile war with the peaceful, benign precepts of the New Testament, and with the loving, forgiving Spirit of the Lamb, who freely laid down his life, for poor lost man; and urge its compatibility with that thorough regeneration of the heart, without which it is impossible to enter the kingdom of heaven. They surely know that for more than a century after the promulgation of the gospel by the apostles, the christian converts refused to fight or remain in the army, because of the requirements of the faith they had adopted; many suffering martyrdom rather than disobey the commands of their Master; and that it was not until a love of the honours and riches of the world had taken hold of very many of the professors of Christ's name, and corruption began to abound in the church, that those holding the station of teachers of the Truth, yielding to the insidious and corrupt influence of popular opinion, betrayed the trust committed to them, and began to preach the lawfulness of war among those professing christianity, though, at the same time, forced to admit that many of the injunctions of Christ were directly opposed to it.

The contest going on in our country has afforded the sorrowful spectacle of not a few of those occupying the station of ministers of the Prince of Peace, entering the contending armies, and both, by precept and example, giving all their influence to stimulate the combatants on each side to espouse heartily and carry on resolutely the murderous conflict. On each side they have publicly offered up prayers to Him whom they profess to be their common Lord and Master; who has solemnly reiterated his command, to love their enemies,—to resist not evil,—to do good to those who hate them, and despitefully use them; to forgive all injuries; to bless and curse not; to do unto others as they would have others do unto; and who has pronounced his blessing on the peace-makers—who have addressed their petitions to Him, to protect and uphold the cause for which they are respectively engaged, and to discomfit and destroy those who are opposed to them.

We observe however, some of the religious journals among us, while they speak in terms of approbation of the war on the part of the government, severely condemn the course pursued by two "divines," one of whom holds the station of bishop, and the other is a candidate for a like position, both of whom are said to be leading officers in the rebel forces; because it is alleged their entering the army is unfit for, and inconsistent with the office they hold in the "church." But are not the precepts and spirit of the gospel equally applicable to all who profess to believe in it, be their station in the professing church what it may? Christ adapts his dispensation to the wants of lost sinners, making no difference between teachers and hearers in the obedience required to his known commands; all his true disciples being equally "a chosen generation, a royal priesthood, a peculiar people," to show forth his praise of Him, who hath called them out of darkness into his marvellous light. If then it is wrong and inconsistent with the requirements of Christ, for bishop and priest to engage in war, it is equally wrong and inconsistent for the people whom they teach and lead.

In the examination of and decision upon any subject involving religious duty, it is of the greatest importance, we should so train our minds to be application of the principles of Truth revealed in the gospel, as to arrive at conclusions which be consonant with the Divine will. Whoever has put his hand to the plough with the earnest desire and determination not to look back, must not

indulge the strong natural propensity to judge of things affecting his accountability by any lower standard than that will, nor desire any thing in comparison with the approbation of the Sovereign of the Universe. The current opinions of the world, however enforced by the long continued practice of fallen man, are no sufficient evidence of truth or right, for that which is highly esteemed amongst men is abomination in the sight of God.

Unwillingness to practice self-denial, and a determination to shun the cross, have led the great body of the christian world to reject the requirements of the religion it professes, in relation to wars and fightings, and hence we find the teachers of the people claiming its authority therefor, and their pupils loudly exulting over its successful prosecution, though it must ever be attended with such appalling scenes, as are thus described by a visitor on the battle plain at Fort Donnellson,—often on a much larger scale.

Federal and rebels were promiscuously mingled, sometimes grappled in the fierce death-struggle, sometimes facing each other as they gave and received the fatal shot or thrust, sometimes lying across one another, and again heaped in piles which lay six or seven deep. I could imagine nothing more terrible than the silent indications of agony that marked the features of the pale corpses which lay at every step. Though dead, and rigid in every muscle, they still writhed and seemed to turn to catch the passing breeze for a cooling breath. Starting eyes, gaping mouths, clenched hands, and strangely contracted limbs, seemingly drawn into the smallest compass, as if by a mighty effort to rend asunder some irresistible bond which held them down to the torture of which they died. One sat against a tree, and, with mouth and eyes wide open, looked up into the sky, as if to catch a glance at its fleeting spirit. Another clutched the branch of an overhanging tree, and hung half suspended, as in the death pang he raised himself partly from the ground. The other hand grasped his faithful musket, and the compression of the mouth told of the determination which would have been fatal to a foe had life eluded a minute later. A third clung with both hands to a bayonet which was buried in the ground, in the act of striking for the heart of a rebel foe. Great numbers lay in heaps, just as the fire of the artillery mowed them down, mangling their forms into an almost undistinguishable mass. Many of our men had evidently fallen victims to the rebel sharpshooters, for they were pierced through the head by rifle bullets, some in the forehead, some in the eyes, others on the bridge of the nose, in the cheeks, and in the mouth.

What a picture of the last acts and dying emotions of hundreds of the professed followers of Him who declared that his kingdom was not of this world and therefore his servants could not fight!

#### SUMMARY OF EVENTS.

FOREIGN.—News from England to the 9th ult. Parliament was opened on the 6th ult. In the Queen's speech on that occasion, the recent difficulty with the United States was referred to in the following words:—"A question of great importance, which might have led to very serious consequences, arose between Her Majesty and the Government of the United States of North America, being the seizure and forcible removal of four passengers from on board a British mail packet by the commander of a ship of war of the United States. That question has been satisfactorily settled by the restoration of the passengers to British protection, and by the disavowal, by the United States government, of the act of violence committed by her naval officer. The friendly relations between Her Majesty and the President of the United States are, therefore, unimpaired." Both Houses of the British Parliament had voted an address to the Queen, in response to her speech. The vote was unanimous. The opposition approved of the course of the government in the Trent affair. Lord Derby thought

that the United States government had assented with a very bad grace to the demands of the British government.

Lord Palmerston said that the distress in the manufacturing districts in England, from the blockade of the Southern ports, would not justify the interference of the government, and that they would continue in their neutral course.

Lord Russell stated in Parliament, that he had informed the delegates of the Southern Confederacy, who had waited upon him to urge its recognition, that the Queen could not acknowledge the independence of the seceded States until the fortune of arms or a more perfect mode of negotiation shall have more clearly determined the respective positions of the two belligerents.

The Times, in an editorial on American affairs, says, that in the last six months America has contrived to spend more money in a shorter time, and to less purpose than any people who ever lived on the face of the earth. It proceeds to argue that the abjuration of the South, and the future Union, has become impossible.

The Bank of France has reduced the rate of discount from 4 to 4 per cent.

The French government has contracted a loan of four millions sterling with English capitalists.

The Liverpool cotton market was nearly fully fortified.

Breadstuffs had a declining tendency.

UNITED STATES.—Congress.—Very little business has been transacted in this body thus far. The Treasury Note bill had not yet become a law, in consequence of the two Houses disagreeing on some of its features. It is expected that the debate would be adjourned in a few days. The Tax bill had not been reported to Congress by the Committee charged with the duty of preparing it.

The Rebellion.—It may give a clearer idea of the present state of the struggle to arrange events under a few local heads.

Missouri.—The rebel army commanded by General Sterling Price, having been driven out of the State, no considerable organizations of armed rebels remain within its limits. Gen. Curtis, with the Federal forces, conducted the pursuit of Price's army, as far as Bentonville, Arkansas. Many of the fugitives were captured in their retreat, including Brig. Gen. Price, son of Sterling Price, and other officers of rank.

Kentucky.—The only important place now held by the rebels in Kentucky, is Columbus on the Mississippi river, where they are entrenched in a carefully fortified position. The Confederate armies, in other parts of the State, have been compelled to fall back into Tennessee.

Tennessee.—The number of prisoners taken at Fort Donnellson, proved to be 13,300. About a thousand more were subsequently captured, and an equal number came voluntarily to the surrender. The rebels are now in the hands of the Federal army. The captives have been forwarded to Chicago, Detroit, Fort Wayne, Alton, and other places for safe keeping. Clarksville, upon the Cumberland river, about fifty miles from Nashville, was taken possession of by Com. Foote, on the 20th. The rebels retreated to Nashville, leaving set fire, against the remonstrances of the citizens, to the costly railroad bridge across the Cumberland. A great part of the Confederate troops, which have been driven from Kentucky, are said to be collected near Nashville, awaiting the advance of the Federal army which was directed to move on Nashville, by way of Cumberland. Gen. Beauregard was at Nashville. He was reported to be sick with typhoid fever. The gunboat expedition on the river, found white flags flying in every direction, with decided manifestations of Union feeling on the part of many of the people. Gen. Harris has called a meeting of the Legislature for the 24th of the second month. Reports were current, and generally believed at Louisville on the 24th, that Nashville would be surrendered without serious opposition.

Virginia.—No change in the aspect of affairs. There is said to be no prospect of success on the part of the State.

South Carolina.—Two steamers from Fort Royal, taken with the rebels, have arrived at New York, with dates to the 19th ult. All was quiet there. There was no further intelligence from the expedition against Savannah. The gun-boats met with several torpedoes, which had been placed in the water, but by way of the torpedoes were removed without injury. There are reports, by way of Norfolk, that Savannah has been captured by the Federal forces, but the rumors are probably premature. A rebel steamer has been captured, and a battery placed on the island of Florida, in the Savannah river, and the city of the connection between Fort Pulaski and the city.

North Carolina.—The last intelligence from General Burnside shows that he is gradually advancing with his gun-boats up the Chowan river, towards the Seaboard and Roanoke Railroad, which crosses that river near its

Life of Columbus, and its Disregarded Lessons.

(Continued from page 202.)

Columbus was, amidst all the superstition of his age, a sincerely religious man. He must have had, also, some knowledge of Holy Writ, if it be truly stated of him that "he met the dignified ecclesiastics on their own ground; pouring forth many magnificent texts of Scripture, and predictions of the prophets, which he regarded as types and announcements of the sublime discovery which he proposed." Yet it is hardly to be supposed that he had a thorough acquaintance with Holy Writ. He had either never seen, or else had overlooked, the 1st lessons of the wisest of men. A serious consideration of the recorded experience of the great king of Israel, if rightly taken to heart, might have saved Columbus years of anguish and of bitter suffering. His whole soul seemed bent upon becoming a prince;—upon rising to high estate, and accumulating great wealth. Had he contemplated with the religious feeling which generally distinguished him the confessions of King Solomon, they must have given to his heart some juster notions of the True Wisdom. For all that he desired, the Israelitish king had possessed in the fullest abundance. He himself says, "I was king over Israel Jerusalem;—I made me great works; I builded me houses; I planted me vineyards; I had great possessions; I gathered me silver and gold, and peculiar treasure of kings and of the provinces. I was great, and increased more than all that were before me: also my wisdom remained with me. Then I looked on all the works that my hands had wrought, and on the labour that I had laboured to do:—and, behold, all was vanity and vexation of spirit." It was this one lesson which Columbus needed. He had the noble enthusiasm of a great discoverer, but with it was mingled the eager craving for earthly honours, titles, rank, and great possessions. This lowered his character, and "strifes and emulations" into which it led him, made the last ten years of his life one long series of painful struggles and unmerited woes.

We left Columbus, however, on his journey out of Spain, in 1492, to seek for better entertainment some other court. But it was the will of God that Spain, and not France or England, should, for two or three centuries, possess the wealth of

Mexico and Peru. Hence, the disconsolate projector, while in the act of leaving Spain, was suddenly recalled, and found all his demands at once conceded. An ardent admirer of Columbus, and one who had entire faith in his project, rushed forward, after the Genoese navigator had actually departed for France; and passionately entreated Queen Isabella not to forfeit so great a glory as was tendered to her. The appeal succeeded—Columbus was overtaken and brought back, and on the 17th of April, 1492, the final agreement was signed, by which this poor Genoese, who probably scarcely knew where to find food or clothing, was invested with the viceroyalty of a new world. On his side we see nothing but a grand idea, an enthusiastic resolve. Means he had none; these were to be furnished to him by the Spanish king and queen. Yet, simply for propounding this one idea, and offering his own services in carrying it out, he demanded and obtained "the office of high-admiral in all the lands and continents which he might discover or acquire; also, the office of viceroy and governor-general over all the said lands and continents, with the privilege of nominating all the provincial governors, under the approval of the Spanish sovereigns."

The remaining provisos were equally pretentious on his part; making him the actual sovereign of these unknown lands, which others were to provide him with the means of discovering.

Now to these demands many plain and palpable objections will instantly occur. The one pursuit for which Columbus was well fitted was that of a discoverer; and, in fact, it was to this work that the remainder of his life was really devoted. But the work of an exploring navigator, and that of a viceroy and governor-general, are entirely different,—so different as to be practically incompatible. And it was the attempt to unite the two, that constituted the main difficulty of Columbus's subsequent life; and gave rise to more than half of his sufferings and distresses.

Again: it was Columbus's firm belief that it was to Asia,—to a land of great khans and moguls, of wealth and settled government,—that his course was directed. He knew not, he never dreamed, that his actual landing would be among tribes of naked savages. Yet did he calmly propose to take into his possession those great Asiatic kingdoms of which Marco Polo and Mandeville had spoken; and with three small vessels, and about a hundred men, to make himself lord, grand-admiral, and viceroy of the empire of China! It is abundantly clear that had things turned out as Columbus expected, a Chinese or Japanese prison would probably have been his residence for the brief remainder of his life. That his whole project was not thus nipped in the bud, arose from the fact, that the real state of things was wholly different from what he had supposed; and that his landing, when actually effected, was not upon a wealthy and civilized Asiatic continent, but among the naked Indians of the American islands.

However, having thus obtained his desire, little knowing what "apples of Sodom" he was eagerly grasping, Columbus set forth; quitted Palos on

the 3rd of August, 1492; landing on an island which he called San Salvador, on the 12th of October. And here we meet with the first exhibition of his eager desire for greatness, in that, the moment he had landed on this insignificant spot, among wild Indians, he forthwith called upon all present "to take the oath of obedience to him, as admiral and viceroy, representing the persons of the sovereigns."

Soon leaving this newly discovered island, the voyagers proceeded onwards to the more important islands of Cuba and Hispaniola. Here they found, indeed, great and valuable territories, of which they took possession; and on the latter of which Columbus raised a fort. Leaving here a few men, in the month of January, 1493, the admiral quitted the American seas for Europe; arriving in Lisbon early in March; and proceeding onwards till, in April, he presented himself before Ferdinand and Isabel in Barcelona. Here, doubtless, was the meridian splendor of his life, so far as outward pomp and show and seeming glory could gratify and content the heart of man. Yet was hollowness and falsehood in everything beneath the surface. With the queen, indeed, sincerity and truth existed; but Ferdinand had never heartily consented to Columbus's demands, and soon found means to nullify all his concessions; while, among the courtiers generally, hatred and jealousy of the "upstart foreigner" were universal.

An otherwise slight circumstance seems to exhibit, at this point, the self-worship, the self-seeking, which was the one unfavourable feature in Columbus's character. A pension had been promised to the man who should first descry the western land. A sailor, one of the crew, who had first hailed the land, expected this honour and reward. But Columbus himself, on the previous evening, had seen a light on the waters, and had pointed it out to a companion. On this ground, the pension was adjudged to the admiral, and the poor sailor, in a passion of anger and disappointment, foreswore his country, and fled to Africa.

But now, amidst acclamations of joy on all sides, the second expedition was rapidly prepared. On the 25th of September, 1493, the bay of Cadiz saw a squadron of three large ships, and fourteen smaller ones, with fifteen hundred men, surrounding "the admiral" on his second voyage. Lust for gold was the prevalent feature with all; and all were confident of realizing enormous riches. The golden visions of Columbus had seized hold upon all imaginations; he himself was so carried away by these baseless fancies, as to vow to furnish, within seven years, an army of four thousand horse and fifty thousand foot, for the rescue of the holy sepulchre. Nothing could more vividly show the excited state of his mind than this monstrous speculation. All the lands he had yet discovered were peopled by naked Indians, wholly destitute of wealth. Yet, with this fact before him, this ardent and enthusiastic man, who died, after all, in the deepest poverty, deemed himself the possessor of the wealth of empires.

There was nothing mean or sordid in his views; he was magnificent in his plans and purposes; but still, to be great, and to do great

things, was the temptation which ruled and over-balanced his mind.

This second voyage of Columbus extended from September, 1493, until June, 1496; and it might have served to prove to the enthusiastic navigator how different is the *reality* of a course of ambition from the *romance* which imagination so vividly portrays. More islands were explored; the mainland of America being still not even imagined by Columbus or any of his followers. But the glorious expectations of enormous wealth which Columbus had himself encouraged, and which had filled his vessels with greedy hidalgos, who dreamed of nothing but easy and abundant gains, were all grievously dissipated. Cuba, Hispaniola, Jamaica, and Gaudaloupe were not, to any great extent, gold-producing countries. Provisions for so large a body of adventurers soon ran short; and Columbus was obliged to order and compel his followers to labour for the production of food. Great indignation was excited among the hidalgos or gentry; insurrections and conspiracies broke out; bitter complaints were carried home to Spain, and in 1495, Juan Aguado, in manifest contravention of the agreement which the Spanish sovereigns had signed, was sent out to investigate his conduct. From the very commencement, the "demand" of Columbus had been that he should be supreme, under the crown of Spain, in all the lands which he should discover. Yet here was a man sent forth, under royal authority, to receive complaints against him. Could there be a stronger or a more instructive proof of the intrinsic folly and cupidity of all such "demands" and "conventions"?

Very naturally we next hear that Columbus, grieved and indignant at such a proceeding, resolved himself to return to Spain, and to meet the accusations which Aguado had received from crowds of discontented persons. He landed in Spain, on this, his second return, in far different guise from that in which he had presented himself on his first. Not now in the splendor of a warrior on his day of triumph, but clad in the humble garb of a Franciscan monk. "The change agreed but too well with his faded hopes and altered prospects. Of the dreams of conquest and glory which had filled his mind, how little had been realized, and how much of suffering and disappointment had been endured." The aspect of his companions, also, told a like tale. From his shattered vessels "a feeble train of wretched men crawled forth, emaciated by the diseases of the colony, and by the hardships of the voyage, and who had nothing to relate but tales of sickness, poverty, and disappointment."

(To be concluded.)

#### Dymond on War.

(Continued from page 203.)

We therefore dismiss the dispensation of Moses from any participation in the argument. Whatever it allowed, or whatever it prohibited in relation to war, we do not inquire. We ask only what christianity allows and prohibits, and by this we determine the question.—It is more necessary to point out the inapplicability of these arguments from the Old Testament, because there are some persons of desultory modes of thinking, who find that war is allowed in "the Bible," and who forget to inquire into the present authority of the permission.

There are some persons who suppose themselves sufficiently justified in their approbation of war, by the example of men of piety of our own times. The argument, as an argument, is of little concern; but every thing is important that makes us acquiescent in war. *Here are men, say they, who make*

*the knowledge of their duties the great object of their study, and yet these men engage in war without any doubt of its lawfulness.* All this is true; and it is true also, that some good men have expressly inculcated the lawfulness of war; and it is true also, that the articles of the Church of England specifically assert it. But what, if it should have come to pass, that "blindness in part, hath happened unto Israel?"

What is the argument? *That good men have engaged in war, and therefore that christianity allows it.* They who satisfy themselves with such reasoning, should bear in mind that he who voluntarily passes over the practice of the first two centuries of christianity, and attempts to defend himself by the practice of after and darker ages, has obviously no other motive than that he finds his religion, when vitiated and corrupt, more suitable to his purpose than it was in the days of its purity. This state of imperfection and impurity has diffused an influence upon the good, as upon the bad. I question not that some christians of the present day who defend war, *believe* they act in accordance with their religion; just as I question not that many, who zealously bore fagots to the stake of the christian martyrs, *believed* so too. The time has been, when those who killed good men *thought* "they did God service." But let the succeeding declaration be applied by our present objectors,—"*These things will they do unto you, because they have not known the Father nor Me.*" Here, then, appears to be our error—that we do not estimate the conduct of men by the standard of the gospel, but that we reduce the standard of the gospel to the conduct of men. That good men should fail to conform to the perfect purity of christianity, or to *perceive* it, need not be wondered, for we have sufficient examples of it. Good men in past ages allowed many things as permitted by christianity, which we condemn, and shall for ever condemn. In the present day there are many questions of duty on which men of piety disagree. If their authority be rejected by us on other points of practice, why is it to determine the question of war? Especially why do we insist on their decisions, when they differ in their decisions themselves? If good men have allowed the lawfulness of war, good men have also denied it. We are therefore again referred to the simple evidence of religion; an evidence which it will always be found wise to admit, and dangerous to question.

There is, however, one argument brought against us, which if it be just, precludes at once all question upon the subject;—That a distinction is to be made between rules which apply to us as individuals, and rules which apply to us as subjects of the state; and that the pacific injunctions of Christ from the mount, and all the other kindred commands and prohibitions of the christian Scriptures, have no reference to our conduct as members of the political body. This is the argument to which the greatest importance is attached by the advocates of war, and by which thinking men are chiefly induced to acquiesce in its lawfulness. In reality, some of those who think most acutely upon the subject, acknowledge that the peaceable, forbearing, forgiving dispositions of christianity, are absolutely obligatory upon individuals in their full extent, and this acknowledgment I would entreat the reader to bear in his recollection.

Now it is obvious that the proof of the rectitude of this distinction, must be expected of those who make it. General rules are laid down by christianity, of which, in some cases, the advocate of war denies the applicability. *He, therefore, is to produce the reason and the authority for exception.* Now we would remind him that general rules are

binding, unless their inapplicability can be clearly shown. We would remind him that the general rules in question, are laid down by the commissioned ministers of Jesus Christ, and by Jesus Christ himself; and we would recommend him, therefore, to hesitate before he institutes exceptions to those rules, upon any authority *inferior* to the authority which made them.

The foundation for the distinction between the duties of individuals and those of communities, must, we suppose, be sought in one of these two points:

1. That as no law exists, of general authority amongst nations, by which one state is protected from the violence of another, it is necessary that each independent community should protect itself; and that the security of a nation cannot sometimes be maintained otherwise than by war.

2. That as the general utility and expediency of actions is the foundation of their moral qualities, and as it is sometimes most conducive to general utility and expediency that there should be a war, war is, therefore, sometimes lawful.

The first of these positions will probably be thus enforced. If an individual suffers aggression, there is a Power to which he can apply that is above himself, and above the aggressor; a power by which the bad passions of those around him are restrained or by which their aggressions are punished. But amongst nations there is no acknowledged superior or common arbitrator.—Even if there were, there is no way in which its decisions could be enforced, but by the sword. War, therefore, is the only means which one nation possesses of protecting itself from the aggression of another.

This, certainly, is plausible reasoning; but it happens to this argument as to many others, that it assumes that as established, which has not been proved, and upon the proof of which the truth of the whole argument depends. It assumes, that the reason why an individual is not permitted to use violence, is *that the laws will use it for him.* And in this the fallacy of the position consists; for the foundation of the duty of forbearance in private life, is *not* that the laws will punish aggression, but *that christianity requires forbearance.* Undoubtedly, if the existence of a common arbitrator were the foundation of the duty, the duty would not be binding upon nations. But that which we require to be proved is this—that christianity exonerates nations from those duties which she has imposed upon individuals. This, the present argument does not prove; and, in truth, with a singular unhappiness in its application, it assumes, in effect, that she has imposed these duties upon neither the one nor the other.

If it be said that christianity allows to individuals some degree and kind of resistance, and that some resistance is therefore lawful to states, we do not deny it. But if it be said that the degree of lawful resistance extends to the slaughter of our fellow christians—that it extends to war—we do deny it: We say that the rules of christianity cannot, by any possible latitude of interpretation, be made to extend to it. The duty of forbearance then, is *antecedent* to all considerations respecting the condition of man; and whether he be under the protection of laws or not, the duty of forbearance is imposed.

The only truth which appears to be elicited by the present argument, is, that the difficulty of obeying the forbearing rules of christianity, is *greater* in the case of nations than in the case of individuals: *The obligation to obey them is the same in both.* Nor let any one urge the difficulty of obedience in opposition to the duty; for he who does this, has yet to learn one of the most awful rules

of his religion—a rule that was enforced by the precepts, and more especially by the final example, of Christ, of apostles, and of martyrs, the rule which requires that we should be “obedient even unto death.”

Let it not, however, be supposed that we believe the difficulty of forbearance would be as great in practice as it is great in theory. We hope hereafter to show that it promotes our interests as certainly as it fulfils our duties.

The rectitude of the distinction between rules which apply to individuals and rules which apply to states, is thus maintained by Dr. Paley on the principle of EXPEDIENCY.

“The only distinction,” says he “that exists between the case of independent states and independent individuals, is founded in this circumstance; that the particular consequence sometimes appears to exceed the value of the general rule;” or, in less technical words, that a greater disadvantage may arise from obeying the commands of christianity, than from transgressing them. *Expediency*, it is said, is the test of moral rectitude, and the standard of our duty. If we believe that it will be most expedient to disregard the general obligations of christianity, that belief is the justifying motive of disregarding them. Dr. Paley proceeds to say, “In the transactions of private persons, no advantage that results from the breach of a general law of justice, can compensate to the public for the violation of the law; in the concerns of empire this may sometimes be doubted.” He says there may be cases in which “the magnitude of the particular evil induces us to call in question the obligation of the general rule.” “Situations may be feigned, and consequently may possibly arise, in which the general tendency is outweighed by the enormity of the particular mischief.” Of the doubts which must arise as to the occasions when the “obligation” of christian laws ceases, he however says that “moral philosophy furnishes no precise solution;” and he candidly acknowledges “the danger of leaving it to the sufferer to decide upon the comparison of particular and general consequences, and the still greater danger of such decisions being drawn into future precedents. If treaties, for instance, be no longer binding than while they are convenient, or until the inconvenience ascend to a certain point (which must be fixed by the judgment, or rather by the feelings of the complaining party),—one, and almost the only method of averting or closing the calamities of war, of preventing or putting a stop to the destruction of mankind, is lost to the world for ever.” And in retrospect of the indeterminate-ness of these rules of conduct, he says finally, “these, however, are the principles upon which the calculation is to be formed.”

(To be continued.)

*Aerolites.*—These phenomena seem to have been unusually frequent of late. A meteoric stone fell on the farm of Zephaniah Eddy, of Cluttenston, Vt., on the 13th of December, about 5 40 P.M., accompanied with a very intense light, as brilliant as a calcium light. The stone indented some three inches into the frozen ground, and heated the pebbles and charred the grass around. The stone bears a close resemblance to sand-stone, colored reddish brown by sesquioxide of iron; it is very rough, as though broken off from a larger stone, and measures about five inches by four, and three inches thick, tapering in the form of a wedge. At Artemesia Falls, Ct. Apr., the 18th of Dec. an extraordinary meteor appeared between sunset and dark. A ball of fire, described as nearly the apparent size of the moon, descending from near the zenith, in a south-westerly direction, producing a sound as of

heavy cannon or thunder, and leaving a trail of fire the whole distance, and “straighter than a gun-barrel,” which was several minutes in losing its brightness; and when it did finally fade, there remained a train of smoke of the exact appearance, for volume and colour, of that emitted from an ordinary stove-pipe when there is a newly-built fire in cold weather. A small meteoric stone fell on the Connecticut River, just above Springfield, Mass., at about six o'clock on Sunday night, January 12th, barely missing a boy who was skating down from Chipee. Upon going to pick it up it burned his hand; but it was afterward chopped out of the ice, into which it had melted.—*Late Paper.*

For “The Friend.”

#### Quakerism—Christianity.

The following, extracted from a recent periodical, is commended to the serious perusal of the readers of “The Friend.” Would that the eye were anointed to see, and the ear opened to hear the things which so greatly belong to our peace. That thus we might be induced individually to rally to the standard we are so unquestionably called to uphold before it be too late. “For, why should we be as one that turneth aside by the flocks of thy companions?”

“Quakerism can never die; for it is christianity revealed afresh in apostolic simplicity and purity. It is not the expression of an age, but the breathing of eternity. And, however the changelings of our day may impose the shadow for the substance, the Quakerism of Fox, Penn, and Barclay will rise superior to the struggle, and assert its rights anew. We have no fear that the cause which cost our forefathers the loss of life, liberty, love, and law, will ever fail; but we fear for their children’s children, lest their greed of gold, their love of luxury, their pleasure of popularity, and their choice of change, should scatter them to the four winds, and so leave the court of the spiritual temple to be trodden by others more devout and worthy.”

*Combat Between a Tiger and Panther.*—The New Castle (Eng.) Chronicle, relates an occurrence which had recently transpired at Edmou’s menagerie in that city. The exhibition was closed, and most of the men having charge of the animals had repaired to their lodgings, at a neighbouring inn. A policeman who was passing heard a loud crash in the caravan, which proved to be one occupied by a Bengal tiger, followed by the noise of a severe struggle. In a very short time the men were called from their lodgings, and having obtained lights, about a dozen of them entered the menagerie. It was feared that the tiger, which is known to be exceedingly ferocious, had broken out of its cage and was at large in the area, but on approaching the place where it was usually confined, the men saw that the enraged animal had broken through a wooden partition into an adjoining cage containing a panther, with which it was engaged in a deadly struggle. An iron bar was brought into requisition and the tiger was strongly belabored with it in order to drive him back into his compartment, and rescue the panther from his grasp, but these means only increased the fury of the savage beast, and after a fearful fight of not less than ten minutes duration he seized the exhausted panther by the throat in his powerful jaws, and held him with bull-dog tenacity until he was quite dead. The tiger then walked quietly into his own compartment, and allowed a new partition board to be thrust between himself and the body of his vanquished foe. The panther which was valued at 100 guineas, was taken out quite dead. The tiger is said to be the same ani-

mal that killed a lioness in London some time ago. It would seem from the incident just related that the native ferocity of this savage creature remains unabated.

Selected.

#### Domestic Trials.

There are many christians, in vigorous health and in prosperity, who know but little of the trials of the faith and patience to which others are exposed. Look at this mother of a large family, with small means and feeble health. The sick child in the cradle is crying. The household work, all unaided, is to be done. There is food to be cooked; there are clothes to be washed, garments to be mended, beds to be made, rooms to be cleaned, and a group of children to be watched over and trained. The husband, perhaps, cold and thoughtless, never gives his wife a sympathizing word. A sick babe keeps her awake at night, and pale and emaciate, she is scarcely able to drag her limbs along through the toils of the day. Her nervous system is entirely shattered. She has no recreation, no change. It is the same weary round day and night, month after month, year after year.

Why God leads so many of his children through such trials we know not; but beautiful, indeed, is the aspect of religion, when we see one passing through such valleys of humiliation, with a calm and placid spirit. There are many such. Christianity has no heroines superior to these. Martyrdom has no flames more trying to faith than these. There are probably no crowns in heaven brighter than those prepared for victors in such warring, wasting, interminable conflicts. When faith is thus triumphant, and passion is subdued, and the whole spirit is brought into subjection to God’s law, we have the highest victory christianity can give.

The great battles of earth are fought at Marathon, Austerlitz, and at Waterloo. The battles of the cross, to win a celestial crown, are fought in the crowded shop, amid the harassments of traffic, and at the kitchen fire, where children cry, and duties press, and nerves ache, and the spirit sinks almost crushed beneath its load. The faith which triumphs here is surely celestial. Care-worn mother, thou who art so weary and so heavy laden, be of good courage. Thy trials are great; thy conflicts severe. If thou comest off victor, great will be the conquest and the reward; and, thou canst do all through Christ strengthening thee.

*Good Everblooming Roses.*—A “subscriber,” Alleghany county, Pa., asks for a list of twelve of the best old, and twelve of the best new everblooming roses. The following we recommend:

ONE DOZEN BEST OLD ROSES, FREE BLOOMERS.

*Hybrid Perpetual.*—Géant des Batailles, Duchesse de Cambridge, Docteur Arnal, and Madam Knorr. *Bourbon.*—Reveil, Imperatrice Eugénie, and Souvenir de Malmaison. *Tea.*—Devenusien and Gloire de Dijon. *Décoré.*—Agrippina. *Noisette.*—Mad. de Longchamps and Amie Vibert.

ONE DOZEN BEST NEW ROSES, FREE BLOOMERS.

*Hybrid Perpetual.*—Ereque de Nimes, Madame Bill, Mad’le de Bonneure, Comtesse de Chabillant, Eugene Appert, and Victor Verdier. *Bourbon.*—Victor Emmanuel. *Tea.*—President, Mad. Palcot, Mad. Blachet, and Homer. *Noisette.*—Lisiss.—*Late Paper.*

We cannot find our interest in anything short of giving all up to best duties, and sometimes I think, should it please the Lord to say us on a sick bed, we should then be thankful that He had enabled us to be dedicated to Him in health.

*Kite Strings.*—These are very important articles; for what is your kite good for if you have no string! The sticks may be slender and firm, and evenly balanced, the paper strong, and the tail just of the right weight and length, but what can you do with your kite if you have no string? You may throw it up, but it will not stay up. You may go upon the house top and cast it off, but it will neither go higher nor stay there, but sink speedily to the ground. But see that ball of nice white twine! Your father saw that you wanted it, and so he brought it home when he came from the store. You fasten it to your kite, go out when a fine breeze is blowing, and now how well behaved your kite is, and how nicely it soars; up, up, it rises till it is almost out of sight. But suppose there is a little flaw in that string, and it breaks, or some rude boy comes along and cuts it near your hand, what now of your kite? How soon it feels the cut way up the string, and begins to dance and plunge and reel, crazy it would seem, to enjoy its liberty; but alas to enjoy it only for a moment, for down, down it comes, and is all torn and broken in a tree top, or soiled and lost in a pool of mud.

So it is with the little boy or girl that breaks loose from restraint. Sometimes children think it would be a nice thing to get away from a parent's or teacher's government or control; but that is the string by which they rise, if ever, to places of eminence and usefulness in the world. Cut it, and they are like the kite with a broken string, that reels and sinks, and is lost. "My son, keep thy father's commandment, and forsake not the law of thy mother. Bind them continually upon thine heart, and tie them about thy neck. For the commandment is a lamp, and the law is light; and reproofs of instruction are the way of life." L. H. R.

#### BIOGRAPHICAL SKETCHES

For the Friend.

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

MICHAEL THOMAS, an esteemed elder of Radnor Monthly Meeting, deceased Second month 1st, 1772, aged sixty-two years.

#### DEBORAH DUNN.

Deborah Dunn was born Second mo. 10th, 1708, of poor but believing parents, who brought her up in the way of Truth. Through the assistance of the Lord's good Spirit, she improved under the godly education she received, and as she grew in years, demeaned herself in an exemplary manner, adorning the doctrine of God her Saviour, by a circum-pet conversation, which gave grace to her poverty and lowly condition in life.

After her marriage to Zaccheus Dunn, of Salem Monthly Meeting, New Jersey, she proved a loving, faithful, and frugal wife, an affectionate, judicious mother, a kind neighbour, much given to visiting the sick and afflicted, and a hospitable and warm-hearted entertainer of Friends. She was diligent in attending meetings for divine worship, and was ever anxious to take her children with her, expressing at times her surprise that parents could be contented to leave their families at home on such occasions. She was deeply concerned both in meetings, and out of them, for the promotion of Truth, and was an approved elder in the church. Her decease took place Second mo. 5th, 1772, she being about sixty-four years old. Her friends were favoured with a well grounded assurance, that from the trials of time, she passed into rest with the faithful. Her remains were interred at Pilesgrove, of which Particular Meeting she was a member.

#### ELIZABETH TEST.

Elizabeth Test, of Salem, New Jersey, was born about the year 1708, of parents, not members of the religious Society of Friends. When young in years, she came under the discipline of the cross of Christ, and being instructed thereby in righteousness, she became convinced of the truth, and in early life was admitted into membership amongst us. Her circum-pet life and exemplary conversation brought her into esteem, and she was placed in the station of an overseer in the church, in the duties of which she faithfully laboured for a while. Her Divine Master, however, called her to the performance of other services, and conferred a gift in the ministry upon her, which she exercised to the comfort and edification of the church.

She was married to Francis Test to whom she was a faithful wife, regulating her family with frugality and discretion. She was exemplary in plainness, and concerned to bring up her children in the simplicity the Truth calls for; whilst she was a very loving and tender mother, her concern was that her children should know the restraints of a godly education. She was enabled to give them seasonable advice, and was at times concerned to gather them together, that in silence they might wait upon the Lord.

She departed this life Second mo. 11th, 1772, "after a long and sharp spell of sickness," experiencing death to be to her a release from suffering, and an entrance into everlasting joy. She was aged about sixty-four years.

#### RICHARD LUNDY.

Richard Lundy, son of Richard and Jane Lundy, was born in Bucks county, in the Province of Pennsylvania, Fifth mo. 20th, 1692. His parents were members of the religious Society of Friends, and the views of christian doctrine in which he was educated, became, through his yielding to the teachings of the Holy Spirit, the convictions of his riper years. His residence for a long period of his life was within the limits of Kingwood Monthly Meeting, New Jersey. From the testimony of his Friends of that meeting, we learn, that he was a man much esteemed by Friends and others, being of a meek and quiet spirit. He was exemplary in life and conversation, and a pattern of plainness and humility. His love to the society of which he was a member, was sincere, and he contributed liberally according to his ability, to its pecuniary needs.

He was diligent in his attendance at meetings for worship and discipline, held near his home, and often gave up to attend those of his Quarterly and Yearly Meetings, until the illness of his wife rendered his absence from her impracticable. He was for some time in the station of elder, and often travelled with ministers, visiting neighbouring meetings.

He is noted as having been an affectionate husband, a tender father, a kind friend; one who was punctual and just in all his dealings amongst men, and whose kind and charitable actions, testified that he was concerned to do unto others as he wished others to do unto him. He was loving and hospitable, his house and heart being freely open for all who needed help, particularly for the kindly welcome of those who were travelling in the work of the ministry. He highly valued the company of the Lord's dedicated servants, particularly such as laboured in the word and doctrine. He lived in the fear of the Lord, which wrought in him great love for the brethren, and he greatly desired to see love and unity prevailing amongst Friends. The announcement of any cause of contention and discord greatly affected him.

His last illness was short. During its continuance, he expressed his entire resignation to the Lord's will concerning him, whether it should be for life or death. He continued in a quiet, patient frame of mind, until his departure, Second month 28th, 1772, he being then nearly eighty years of age. His Friends say, "Although our loss is great, we are comforted in the hope that he is gone to inherit the crown immortal, which is laid up for all those who love and fear the Lord."

#### JAMES BROWN.

Of James Brown, son of William Brown, we have little account preserved. He was esteemed a valuable minister of the gospel, and sometimes travelled abroad in the service of Truth. He died at Wilmington, Third mo. 4th, 1772, having been a minister many years.

DANIEL WALKER, an elder of the Valley Meeting, deceased Third mo. 15th, 1772, aged seventy-two years.

HUGH EVANS, of Philadelphia Monthly Meeting, deceased Fourth mo. 5th, 1772, aged ninety-one years. He had for very many years acceptably filled the station of elder.

#### JOHN SCARLET.

John Scarlet was born in the county of Chester, Province of Pennsylvania, about 1690. His parents were members of the religious society called the Church of England, but they frequently attended the meetings of Friends, and thus their son, whilst quite young, being convinced of the truth of the principles held by these last named people, was received into membership amongst them. As he continued faithful to the knowledge received, he grew in grace, and became a serviceable man in the church, living in love and great unity with the faithful members. He became a member of Exeter Monthly Meeting, and was for thirty years an elder thereof.

As a man he was peaceable and loving, and he had a good report among his neighbours. He was a kind husband, a tender parent, given to hospitality, and entertaining his friends cheerfully and freely. Although, during the latter part of his life, he was disabled in his limbs, and deprived of his sight, yet, through the good presence of his heavenly Comforter, he was often cheerful.

He departed this life at his son, John Scarlet's, in Robeson township, Berks county, Pennsylvania, Fourth mo. 30th, 1772, aged about eighty-two years.

*Wild Hogs.*—The Belgian papers state that in the forest of Ardennes for the space of twenty years very few wild boars were seen, but that in the present year the forest is infested with them. On one day lately, as many as twenty-five were seen together, and on others, forty, sixty, and even a hundred. The latter were in a potato-field close to the forest, and a gentleman who was out shooting, fired at them, and though his gun was only loaded with shot, killed one. Last week a singular incident occurred. A drove of pigs were sent to feed in a potato-field near the village of Harre, on the borders of the forest; a number of wild boars rushed in among them, the pigs took fright and ran as fast as they could into the village, the wild animals accompanying them. All the men of the place were at work in the fields at the time, and the women and children, seeing the animals, rushed from the houses in dismay. Many of the pigs and their visitors entered the cottages and did considerable damage. At last the wild boars returned of their own accord to the forest.

For "The Friend."

## THE LITTLE GRAVE.

I stood beside the little, new-made grave,  
Within an old and simple burial place,  
Chilly the winter winds around me blew,  
And they had laid within this silent earth  
The darling of devoted parent hearts,  
The last dear bud upon the household tree,  
The last sweet life of all the loved ones given,  
Nay, tent a little while, then borne away,  
By a dread summons from the courts of death.

Beside me there  
A shadow lay upon the brow of youth,  
And fearful eyes, and lips all tremulous  
With the warm feelings of their childish hearts;  
To these I turned: "My children, such is death!  
She who once trod with you the path of hope,  
Whom you so late beheld, whose twining arms  
Were round you in your free and joyous play—  
She lies here, pale, cold and inanimate;  
So even the very young, like you, are called  
By our great Father to another sphere.  
The form clad in its simple robe of white,  
Reminds me of that glorious similitude,  
The raiment of the Holy Son of God,  
With which life clothes the souls of those He loves.  
My children, seek not to adorn your forms,  
The casquets frail of your immortal lives,—  
Seeing there is no gem, however prized,  
And no attire, however rich it be,  
That can be won by you. But rather strive  
To decorate your souls with those rare gifts  
That Heaven bestows, and let your virtues shine!

This little grave!

Alas, what buried hopes, what fond emotions  
Are here enclosed. Within that childless home,  
Years in their circling course can scarcely bring  
The joy and sunshine of earth back again.  
O, desolated heart! O, mourning hearts!  
This sad bereavement of your sweetest hopes  
No pen of mine can faithfully portray.  
My sympathy is wide, and in its sense,  
(Indeed, it feels) of what your loss must be;  
But they are soothing to your grief-worn hearts,  
Those recollections of the filial love,  
The dutiful obedience, and the mild,  
Submissive life of your departed child.  
As much to me as to you, is your father's trace,  
As day by day the lamp of life grew dim,  
Her meek, young spirit's reverent walk with God.

To the eye of faith,

Lifting its gaze above this darkening scene,  
May you not picture there, your youthful band  
Fondly and rapturously gazing at the throne,  
Resplendent in the glorious light of heaven?  
Oh, then! in pain, and weariness, and sorrow,  
Look steadily upon those beacons, set  
To lure your spirits to God's purer air!  
Remembering this, that "where your treasure is  
There will your hearts be also."

I.

Chester Co., Second month.

Selected.

Methinks if you would know,

How visitations of divinity

Affect the pious soul, 'tis shown you there!

Look yonder at that cloud, which through the sky

Sailing along, doth cross in her career

The rolling moon! I watched it as it came,

And deemed the deep opaque would blot her beams.

But melting, like a wreath of snow, it hangs

In folds of wavy silver round, and clothes

The orb with richer beauties than her own:

Then passing leaves her in her light serene.

An *American Fish*.—The Hassar, (*Doras costata*), a South American fish, makes rather long journeys on land, and will go on the whole night through, in search of fresh water, when the pond in which it has hitherto lived dries up. The shelly plates which cover the body, and the hard ventral fins, enable it to perform such a tour. It can even live for several hours in the hottest sunshine. The Indians, who often fill baskets with these emigrants, (for the fish is very dainty,) assert quite correctly, that the Hassar takes a stock of water with it for the journey.

It finds all the ponds dried up, it beds itself in the soft limy soil, and subsides into a state of apathy, until the rainy season arouses it again.

But even more than through its migrations, is this remarkable fish distinguished by its maternal affection, only found in this instance among fish. Richard Schomburgk, in his *Travels in British Guiana*, tells us that not only does the Hassar form a perfect nest for its spawn, of all sorts of fibres among the aquatic plants, but it watches with the most active maternal care till the young brood slip out. The nest is a real work of art, like that of the magpie. In April, the Hassar begins forming the nest, until it resembles a hollow globe, flattened at the poles, the upper one of which reaches to the surface of the water. An orifice, fitted to the size of the mother, opens into the interior. The maternal anxiety of the Hassar is, however, shamefully perverted to its destruction. A small basket is held before the hole, which may be easily found. The nest is then gently tapped, and the Hassar rushes furiously into the basket, with bristling spines, which inflict a tolerably severe wound.—*Sapenny Magazine*.

For "The Friend."

## Sunset Thoughts.

There is nothing in nature that stirs my soul like the beautiful and fleeting visions that frequently meet our view at the close of the day. There is nothing that assimilates so nearly to my finite idea of heaven, in all the range of created things, causing my pulse to beat quickly, and my heart to thrill with undefinable emotions.

There are many beautiful things, many grand and noble objects in the perfect creations of our Almighty Father, and I am reminded of a testimony I once heard from a beloved minister of the gospel of Christ, (who is now gathered to the assembly of the just, made perfect, clothed with the righteousness of saints,) that everything is beautiful and perfect, as it comes from the hand of nature's God; man alone, the being of all other objects, most expressly created to praise and glorify Him, the *viser* of man, is the only blot upon the fair face of nature. And scarcely ever since, have I looked upon a view surpassingly fair, that the words of this augusted man, uttered with all the earnestness and authority of Truth, have not recurred forcibly to my mind.

There is much, indeed, to soothe and gratify, as well as to elevate and purify us, in the beauties of nature, if we only lay aside the incubus of worldly care, the excitement of worldly thoughts and enjoyments, striving to see and feel our dear heavenly Father in these wonders of His forming hand; but it is surprising when the heart is steeled by such deadening influences, how little we are able to appreciate these beauties, or be affected by them profitably. There are seasons, I know, when the soul, under the weight of deep religious exercise, or in times of trial and affliction seems covered, as it were, with a pall, obscuring all things fair and lovely; but oh! the joy of the awaking, when the covering is removed, and an added glory is given to all creation, as a beam of radiance, from the city of our God.

There are many beautiful and grand objects in nature, I may repeat, and her wonderful sympathy and adaptation, have proven an unending theme of interest and admiration to the reverent, enquiring mind. There is loneliness in the opening bud, in the sweet, expanding flower, as the exquisite delight of the florist can testify; and science, in her varied ways, has opened continual channels of enjoyment to her lovers, but to me, there is nothing so fair as the firmament at the close of day, when the heavens are radiant with clouds of gold, and crimson, and purple, royally draping the couch of the setting-sun. A living glory seems to lie in

the ever changing clouds that chase each other in such varied hues, fleeting, yet filling us with wonder and delight. And just at the horizon, they are little a little space, and we can almost imagine that in that glimpse of clear, pale golden light, lies far, far away, the bourne of the weary, the glorious home of the blessed.

Unless envious to excess, these indulgences of the imagination are not, I think, injurious, but rather useful, for they impart a freshness to our feelings, and an elasticity to the heart; but let us be careful that we strive not, with irreverent hands, to draw aside the veil that hides the mysteries of another world, for we shall rarely know nothing more than our heavenly Father designs we should; and unprofitable, idle speculations injure our soul's cause with Him, and draw us away from that child-like humility that is ever pleasing in His sight.

I.

Chester Co., Second month.

*Russia Sheet-Iron; a Field for a Fortune.*—The Philadelphia Gazette says:—"Few persons are aware of the enormous expense and difficulties attending the importation of Russia sheet-iron into this country, and the quantity consumed. The uses to which this iron is applied are mainly in the manufacture of stoves, the difference in its favour, in points of durability, being very great. The imitations that have been attempted in this country have been hitherto so unsuccessful that a field of discovery lies still open in this department, in which some future inventor will yet doubtless realize a princely fortune. That much of the American Russian iron is sold for the genuine is true enough, the imitation in outward appearance being so close as almost to defy detection by any other than an experienced judge. The imitation in this respect has been very complete; but the art of making it wear, and not crumple from exposure to dampness, still to American manufacturers a hidden secret. The industrious quality of Russia-made sheet-iron is really extraordinary. We have seen stoves manufactured of it, which had been in use for a period of thirty years, with the sheets almost imperceptibly reduced in thickness. From these facts it is obvious that stoves made of the genuine Russian iron are vastly cheaper, at almost any cost, than those manufactured of the imitations, which burn out in a season or two and give less heat."

## Dwelling in Tents.

Life in tents was especially appropriate to those whose wealth lay in flocks and herds, and whose residence was necessarily changed according to the wants of their charge. Abraham, Isaac and Jacob moved their tents when the pasture failed, and pitched them in a fresh spot. The ten sons of Jacob led their flocks from the vale of Hebron to Shechem and to Dothan; and the twelve tribes, while in the desert, and to no small extent afterwards, were dwelling in tents. Hence the current expression, "Every man to his tent, O Israel!" and the frequent allusions in Scripture to this mode of life.

Thus each part of the tent is mentioned; the coarse cloth of which it was made, the poles and cords on which the covering rested, and the wooden pins used to fasten the cords to the ground.—Judges iv. 21; Isa. liv. 2.

These temporary dwellings were easily removed. A few moments sufficed to pull up the stakes of a tent, loosen its cords, drop its coverings to the ground, fold it up, and pack it on the camel's back, ready for a day's journey, and a quick erection at its end. So, King Hezekiah says, "Mine age is departed, and is removed as a shepherd's tent."

This early removal is a great convenience to the modern tribes of Arab robbers, who, when threatened with an attack, can strike their tents almost at a moment's warning, and disappear across the desert.

Travellers in the East are obliged to use tents, and thus necessarily become familiar with this time-honoured mode of life, which clears up many allusions in the Bible. Every morning and evening, the christian on such a journey is forcibly reminded how easily his "earthly house of this tabernacle" may be dissolved, and of his need of "a house not made with hands eternal in the heavens." He is also perpetually taught that he is a pilgrim and a stranger on earth, ever journeying, and says, with the poet,

"Here Arah-like I roam,  
And nightly pitch my moving tent  
A day's march nearer home."

Says Lord Lindsay, "There is something very melancholy in our morning fittings. The tent-pins are plucked up; and, in a few minutes, a dozen holes, a heap or two of ashes, and the marks of the camel's knees in the sand, soon to be obliterated, are the only traces left of what has been, for a while, our home!" "Often," says M'Cheyne, "we found ourselves shelterless, before being fully dressed. What a type of the tent of the body! Ah! how often is it taken down before the soul is made meet for the inheritance of the saints in light!"

Dwellers in tents are ill-protected from robbers, or from wild beasts, and need the supervision of a watchful Providence. Moses had felt this, times without number, while leading the Israelites through that houseless wilderness, beneath the pillar of cloud and of fire; he remembered, too, the various wanderings of the patriarchs of old, each one the object of infinite love and care; and in the 90th Psalm extols God for all; "Lord, *Thou* hast been our dwelling-place in all generations." Happy is the man that has placed himself in the care of a covenant-keeping God, and knows that wherever his abode may be, and whatever its forms and materials, he dwells in the secret place of the Most High, and abides under the shadow of the Almighty; and that when the earthly tabernacle falls, an eternal mansion awaits him on high.—*Id.*—*Bp.*

**Fruit Culture.**—Alfred Chamberlain, of Newport, Rhode Island, has recently succeeded, after years of patient study and experiment, in perfecting a plan for growing fruits and flowers in small wire baskets, filled with moss, and has obtained a patent for it from the government. In one basket, which was lately shown at a horticultural exhibition in Brooklyn, New York, were growing, in full flower and vigour, a miscellaneous collection of plants, usually contained on flower stands; another basket was filled with strawberry plants, in all stages of growth, those fully ripe being of extra size and of most luscious flavour, here in November; in a third basket was a grapevine, which had yielded a dozen bunches of superior grapes; in a fourth was a peach tree, which had produced ten large peaches, as fine in colour and taste as any that are grown in the ordinary way, and was fully set in fruit buds for next year's crop. But the crowning wonder was a pine-apple, also grown in the moss-baskets, and far superior, in every respect, to those grown in pots and pits. Chamberlain stated, that as he had obtained a patent, he would tell them the ingredients he used, which were moss, bone-dust, charcoal and sand, and that the plants were watered with liquid manure about twice a week.

If any be defamed, show thy love by stopping or rebuking the defamator.

### Beware of Narrowness and Partiality.

Having lately met with the following remarks, respecting the danger from allowing the mind to dwell too constantly and exclusively upon any one subject or idea, and being somewhat struck with the force of them, it seemed as though they might interest the readers of "The Friend."

"There is no one idea in all the Universe so great and so nutritious that it can furnish [adequate] food for an immortal soul. Variety of nutriment is absolutely essential, even to physical health. A mind that surrenders itself to a single idea, becomes essentially insane. It has no faith in any man who does not believe exactly with itself. It accuses every man of unworthy motives who opposes it. Men of one idea are always extremists, and extremists are always [troublesome.] I might truthfully add that an extremist is never a man of sound mind. Like blind Samson of old, they may prostrate the pillars of a great wrong, but they crush themselves and the Philistines together. The greatest and truest reformer that ever lived, was Jesus Christ; but ah! the difference between his broad aims, universal sympathies, and overflowing love, and the malignant spirit that moves those who angrily beat themselves to death against an instituted wrong!

"The selection of a single idea [or subject of contemplation and advocacy] and making it the motive and pivot point of action, and supreme object of devotion, is mental and moral suicide. It makes that a despotic king, which should be a tributary subject. It enslaves the soul to a base partisanship. It is right to be an advocate of christian reform; but the effect of adopting any one of these reforms as the supreme object of a man's pursuit, never fails to belittle him. One of the most pitiable objects the world contains, is a man of generous natural impulses, grown sour, impatient, bitter, abusive, uncharitable, and ungracious; by devotion to one idea, and the failure to impress it upon others with the strength by which it possesses himself. Many of these fondly hug the delusion to themselves that they are martyrs, when in truth they are only suicides. Many of these look forward to the day when posterity will canonize them, and lift them to the glory of those who were not received by their age because they were in advance of their age. So they regard with contempt the [unappreciated] world, and lie down in a delusive dream of immortality.

"Whether the effect of devotion to a single idea be disastrous or otherwise to the devotees, nothing in all history is better proved, than the fact that it is a damage to the idea. If I wished to disgust a community with any special idea, I would set a man talking about it, and advocating it, who would talk of nothing else. If I wished to ruin a cause utterly, I would submit it to the advocacy of one who would thrust it into every man's face, who would make every other cause subordinate to it, who would refuse to see any objection to it, who would accuse all opponents of unworthy motives, and who would thus exhibit his absolute slavery to it. We have only to learn that a man can see nothing but his pet idea, and is really in its possession, to lose all confidence in his judgment. When in a court of justice, a man testifies upon a point that touches his personal interests or feelings or relations, we may say that his testimony is not valuable.—not reliable. It decides nothing for us. We may say that the evidence does not come from the proper source. We do not expect candor from him, for we perceive that his interests are too deeply involved, to allow sound judgment and utter truthful expressions. It is precisely thus with all

For "The Friend."

professional agitators and reformers—all devotees of single ideas. They are personally so intimately connected with their idea—are so enclaved by it—are so interested in its prosperity—that they are not competent to testify with relation to it.

"It is not the quality of the idea which a man entertains that kills him. If a man undertake to live upon a single idea, it really makes very little difference to him whether that idea be a good or a bad one. It is because the human soul cannot live upon one thing alone, but demands participation in every expression of the life of God, that it withers and starve upon even the grandest and most divine idea. When a man has so long dwelt upon a subject that it has finally taken possession of him, it becomes a standard by which to decide the validity of all other truth. If he did not believe the Bible was on his side of the question he would discard the Bible. Experiments, opinions, (or established rules) that make against his faith are either rejected or explained away. Now this man's mind is not only reduced to the size of his idea, and assimilated to its character, but it has lost its soundness. His reason is disordered. His judgment is perverted—depraved. He sees things in unjust and illegitimate relations. The subject that absorbs him has grown out of proper proportions and all other subjects have shrunk away from it, and though regarded by the community as of sound mind, I think him demonstrably insane."

It can hardly be expected that a mind can long maintain its true balance, that suffers its attention to be constantly turned to the consideration of a special subject, to the exclusion of others having equal claims upon it. The advocacy of one branch of the law and testimony, to the exclusion or in violation of all others, is sure to bring confusion to the mind, and harm upon the church. Read Malachi ii, 8, 9.

**Plainness and Watchfulness.**—This worthy woman was a pattern of great plainness, and was often grieved to see and hear of the superfluity that abounded among some of the professors of the truth, and the undue liberty they took, saying, "It was not so in the beginning, for then there was nothing too near and dear to part with for Truth's sake." She was likewise much troubled to hear the needless vain talking, foolish jesting, and see the light and airy carriage among such, that were unbecoming our holy profession, saying, "Time ought not to be so spent, for an account must be given unto God for all these things." It pleased the Lord to preserve her out of such things to the end of her days, and it is not doubted but the Lord hath given her a portion among his redeemed ones.—*From a Memorial of Susannah Garton.—Pety Promoted.*

**Mind thine own Business.**—Study to be quiet and mind thine own business, is one useful, necessary direction to all who would thrive at home; there is an active enemy, who seeks to draw out the mind after other people's business, to the neglect of our own; whereby hurt and loss attend, and the feet of the mind are gadding from house to house, and abide not within our own doors; the domestic affairs of the soul are neglected, the house gets unclean and confused; and when the Holy Head of the family and Husband of the soul, comes, he finds things unmet for his reception, and refuses to take up his residence. Here some bemoan his absence, which is chiefly or wholly owing to their want of care in having all things clean and in order, and being at home to receive him when he comes.—*Samuel Bathergill.*

was rapidly developed; or, what is more probable, was less carefully concealed, as the intercourse between the whites and the negroes gave them confidence:

To what extent these labourers desire to be free, and to serve as still further in putting down the rebellion, has been a subject of examination. The desire to be free has been strongly expressed, particularly among the more intelligent and adventurous. Very early almost a fresh tale of escapes, both solitary and in numbers, was connected with a courage, a forecast and a skill worthy of heroes. But there are other apparent features in their disposition, which it would be untruthful to conceal. On the plantations I often found a disposition to evade the inquiry whether they wished to be free or slave; and though a desire for freedom was expressed, was rarely in the passionate phrases which would come from an Italian peasant. The secluded and moonstruck life of a plantation, with strict discipline and ignorance enforced by law and custom, is not though even there they find at least a stunted growth, irrepressible as they are. The inquiry was often answered in this way: "The white man do what he please with us; we are yours now, massa." One, if I understood his broken words rightly, said he did not care to be free if he could only be a good master. Others said they would like to be free, but they wanted a white man for a "protector." All of proper age, when inquired of, expressed a desire to have their children taught to read and write, and to learn themselves. On this point they showed more earnestness than any other. When asked if they were willing to fight in case we needed them to keep their masters from coming back, they would seem to shrink from that, saying that "black men have been kept down so like dogs, they would run before white men."

#### SUMMARY OF EVENTS.

**London.**—English dates to the 16th ult. In the House of Lords on the 15th, Lord Staaboe called attention to the reports of additional stone blockades at Charleston, and asked what steps the Government would take. Earl Russell had no official information, and knew not whether the reports were correct. Government had received no official information from the Secretary of War as unjustifiable, and the American Government responded that they had no intention to permanently destroy harbours. The views of the French Government were identical with those of England.

In the House of Commons, John A. Turner called attention to the distress in the manufacturing districts, owing to the American troubles, and urged the Government to do everything in its power to develop the cotton production elsewhere.

The Government is busily preparing all the information relative to the American blockade to lay before Parliament.

Letters from Vienna are filled with most lamentable accounts of inundations. The district submerged in Vienna alone comprises a population of 80,000 persons, who have to be provided for. Several towns were also inundated by the Danube, including Presburg and Pest.

The Liverpool markets were without material change.

**UNITED STATES.—Congress.**—The U. S. Treasury Note bill has finally passed and been approved by the President. By one of its provisions, the fifty millions of dollars already here appropriated may be used in the payment of duties on imported goods, while apart from these such duties must be paid in coin. The issue is made a legal tender, but interest on the funded debt is to be paid in coin.

The bill granting homesteads to actual settlers on the public lands, and providing a bounty for soldiers in lieu of land, passed the House of Representatives, with only sixteen negative votes. The House has also passed a bill prohibiting all persons in the naval or military service of the United States from aiding in the return of fugitive slaves, under the penalty of dismissal from the service.

The number of members of the House of Representatives has, with the concurrence of the Senate, been fixed at 241.

**War News.**—An order has been issued by the War Department taking military possession of all the telegraph lines in the United States, and prohibiting from being published in the newspapers, all communications in regard to military operations not expressly authorized by the military authorities.

**Arkansas.**—The late Gen. Price, had been driven from Fayetteville, Ark. Many sick and wounded were left in the town, which was partially

burned by the rebels. The U. S. army would not advance further into Arkansas as present.

**Missouri.**—Five military operations are reported in this district, which is now nearly free of armed rebels. There are still some at or near New Madrid, in the south-eastern corner of Missouri, under command of Jeff. Thompson. He recently made an attempt to move northward, but was attacked and routed by the U. S. troops. The rebel forces were the worse for the encounter.

**Kentucky.**—Columbus, on the Mississippi, having been abandoned by the rebels, they have no foothold now, in the State. The Memphis papers say that the Columbus forces will fall back to Island No. 10 on the Mississippi, about forty miles below Columbus, which it is said, is a strong position. The rebel commands the river, and can be fortified with heavy guns, and made impregnable against any attack from the river.

**Tennessee.**—Nashville has been occupied by the U. S. forces, without opposition. A large quantity of cotton was captured, which the Treasury department has ordered to be sent to New York. The rebel forces, under Beauregard and Johnston, had retreated southward, followed by Gen. Buel and the Northern army, which was steadily pressing them backward. Senator Andrew Johnson, who has been elected to the vacant seat of the United States—General. It is said that he will open a military Provisionary Government of Tennessee, until the loyal civil Government shall be reconstructed. General Grant has declared martial law over West Tennessee, with the understanding that when a sufficient number of troops are sent to the river, which he desires to maintain law and order, all military restrictions will be withdrawn. The rebel legislature was in session at Memphis. The Richmond War department has called on Tennessee to furnish thirty-two more regiments for the rebel army.

**Alabama and Mississippi.**—Lieut. Gwin, in the gunboat Taylor, recently ascended the Tennessee river in Eastport, Mississippi. He met with increased Union sentiment in South Tennessee and North Alabama. In several of the northern counties of Mississippi, the Union sentiment is said to be strong, and the rebels are being driven from themselves openly, were only deterred by their fears of the tyranny and coercion, which are practised by marauding bands of rebels. Lieut. Gwin informed the inhabitants of the different towns along the banks of the river, that he would hold secessionists Brigadier-General. The expected information of the capture might be committed upon Union men residing among them.

**Virginia.**—Important military movements have taken place on the upper Potomac. Gen. Banks' division of the army, which is now in the Potomac, and the upper's Fry, occupies the valley of the Shenandoah. The U. S. forces met with no opposition; on the contrary large numbers of refugees returned to their homes, and expressed great joy at the appearance of the troops. The condition of the country was found to be deplorable in the extreme, in consequence of the ravages of war.

**North Carolina.**—Official despatches from Gen. Burnside state, that the expedition up the Chowan river had returned. It did not go beyond Winton. The rebels everywhere fled on the approach of the U. S. troops.

**South Carolina.**—The expected information of the capture of Savannah has not yet arrived. At the latest dates, all communication had been cut off between Fort Pulaski and the city.

**New York.**—Mortality last week, 424.

**Passports.**—The U. S. Secretary of State has rescinded the order requiring persons leaving the country to procure passports. It is now optional with parties to provide themselves with passports or not, as they may deem necessary or proper.

**Boston.**—On the night of the 25th ult., a most destructive conflagration occurred, destroying property to the amount of one million of dollars. Two thousand bales of cotton and vast quantities of grain were destroyed.

**The Baltimore and Ohio Railroad,** is being rapidly rebuilt, and will soon be in running order. About forty miles of iron and cross-girds were carried off by the rebels.

**The Tax Bill,** which was reported to Congress on the 34 inst., by the Committee of Ways and Means, is a very long document, consisting of more than a hundred sections. It provides for the appointment by the President, of a Commissioner of Internal Revenue, with a salary of five thousand dollars. His office is to be in the Treasury department, with a suitable number of clerks. The country is to be divided, as the President may direct,

into convenient collection districts, with an Assessor and Collector to be appointed by the President for each district, who shall have power to appoint such deputies as may be necessary. The bill provides for a duty—

On spirituous liquors . . . . .	15 cents per gallon.
On ale and beer . . . . .	\$1 per barrel.
On stem and leaf tobacco . . . . .	3 cents per pound.
On cigars to add when manufactured . . . . .	5 cents each.
On cigars . . . . .	5, 10 and 20 cents per pound, (according to value.)

On lard and linned oil, burning fluid and crude coal oil . . . . .	5 cents per gallon.
On refined coal oil . . . . .	10 cents per gallon.
On gas per 1000 cubic feet . . . . .	25 cents per 1000.
On bank note paper . . . . .	5 cents per lb.
On writing paper . . . . .	2 " "
On printing paper . . . . .	3 mills " "
On soap . . . . .	5 " "
On salt . . . . .	10 " per 100lbs.
On sole leather . . . . .	1 cent per lb.
On upper leather . . . . .	3 " "
On flour . . . . .	10 cts. per bbl.
All other manufactures . . . . .	3 per cent. ad valorem.

There are also stamp duties, taxes on income, on carriages, on salaries, on bonds, salaries, on railroad and steamboat travel, &c., &c.

**Southern Items.**—Jeff. Davis's message to the rebel Congress in session at Richmond, has been published. He states that recent events have demonstrated that more had been attempted by the rebel government than it had power to execute. He says that he has endeavored to protect by arms the whole territory of the Confederate States, seaboard and inland, serious disasters had been incurred. Some of these discomfites are referred to as deeply humiliating, but the hope is expressed that the people by appointments hereunder will nerve to go on still greater exertions, and soon secure results more favourable to the rebel cause. The policy of enlistments for short terms is strongly condemned, and the recent reverses, he thinks, may be attributed, in great measure, to this cause. In regard to the finances of the Confederacy, he says, "The report of the Secretary of the Treasury will exhibit the gratifying fact that we have no floating debt; that the credit of the government is unimpaired, and that the total expenditures of the government for the year has been in round numbers, \$170,000,000—less than one-third of the sum wasted by the enemy, in his vain efforts to conquer us—and less than the value of a single article of export—the cotton crop of the year." From a passage in the inaugural address, it appears that Davis relies confidently upon the enormous cost at which the war is conducted by the United States. He says its early termination in favour of the South, may be secured as quite certain, should the U. S. government must break down under the rapidly growing burden of debt.

On the 27th ult., a resolution passed the rebel Senate by an unanimous vote, declaring that no peace propositions, which any portion of the soil of the Confederate States may be given up, shall be entertained, and that the war must be continued until the forces of the United States are entirely expelled from the Confederacy.

The New Orleans Bee confesses to the magnitude of the calamity at Fort Donelson, and condemns the neglect of the Government in not sending a sufficient number of troops westward. It says a general call to arms has become an inevitable necessity. The Memphis Avalanche of the 22d says, that the Governor of Alabama has called for twelve regiments from that State, and if not forthcoming, other means will be used to fill the requisition.

The Governor of Georgia calls also for twelve regiments from that State, and says if the requisition is not filled by the 4th of Third month, a draft will be ordered.

The Raleigh Register says that all prisoners taken on the banks of the Cape Fear have been released on parole.

When the rebels evacuated Nashville, they were obliged to leave 1600 sick and wounded in the town.

#### RECEIPTS.

Received from Benj. Cope, Pa., for A. L. M. Grew, \$3, to vol. 37; from M. Thelwell, N. Y., \$2, to vol. 37; from J. M. Bacon, Ill., for E. Traube, \$5.50, to 22, vol. 35.

DIED, on the 5th of last month, DAVID FAWCETT, in the sixty-sixth year of his age; an esteemed member and elder of Salem Meeting, Ohio. He bore a protracted illness with christian patience; and, we trust, to him the Scripture language is applicable: "Mark the perfect man, and behold the upright for the end of that man is peace."

# THE FRIEND.

VOL. XXXV.

SEVENTH-DAY, THIRD MONTH 15, 1862.

NO. 28.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Christian Observer.

Life of Columbus, and its Disregarded Lessons.  
(Continued from page 210.)

Columbus, however, was kindly received by Ferdinand and Isabella, and ships for a new expedition were promised him. But the secret opposition of those who envied him his fame and advancement, so delayed the preparations, that nearly two years were wasted before the six vessels provided for his third voyage were ready to sail. At the end of May, 1498, Columbus again departed.

But his downward course, not indeed, into crime, but into undeserved misery, was rapid. This third voyage, while he acted as an explorer and discoverer, was a memorable one, for in it he first discovered and landed on the great American continent. But when he resumed his office of viceroy, but post which he had so much coveted, he found nothing but turmoil, contention, and actual disgrace before him.

Trinidad and the mainland of America having been discovered, Columbus returned to Hispaniola and St. Domingo, in August, 1498. Here he found all things in confusion. His brother Bartholomew, whom he had left in charge of the colony, had been involved in war, first with the Indians, and then with a conspirator, named Roldan. The latter had gathered such a party that the admiral was compelled to make a treaty with him, and to overlook his many offences. Other outbreaks and conspiracies followed, and the discontented, when put down and expelled from the colony, returned to Spain, and carried thither such stories of the tyrannies and cruelties of Columbus, that even Isabella herself, his faithful friend and patroness, was forced at last to consent to the sending forth, again, a royal commissioner, to inquire into the truth of these complaints. These disastrous events were not at all surprising, in the commencement of a new and distant colony; but they exhibit in a strong light the fatal error of Columbus, in claiming to unite with him the fame of a discoverer, the more hazardous function of founder and governor of a great foreign possession.

The new commissioner, Don Francesco de Bobadilla, received the fullest powers to investigate and redress the grievances of the colonists; powers so full, indeed, that under them he proceeded, on his arrival at St. Domingo, to put the admiral and his brother into irons, and to send them back

to Spain. Thus the great discoverer of the new world left the lands which he had given to Spain, in October, 1500, "shackled like the vilest of culprits, amidst the scoffs and shouts of a miscreant rabble, who sent curses after him from the shores of the island he had so recently added to the civilized world." He arrived at Cadiz, in December, a prisoner and in chains. There was a general burst of indignation throughout Spain, and the king and queen so far shared in the feeling, as to send instant orders that he should be released, and treated with all distinction. He appeared before the sovereigns in Granada on the 17th of December. "When the queen beheld the venerable man approach, and thought on all he had done, and all he had suffered, she was moved to tears." Very naturally, the long-suppressed feelings of the injured hero burst forth; "he threw himself on his knees, and for some time could not utter a word, for the violence of his tears and sobs." Was there ever a more striking proof given, of the wisdom and kindness displayed in the counsel to Baruch, "Seekest thou great things for thyself? seek them not, saith the Lord?" The whole of these unmerited sufferings of the great navigator may be traced to his unwise determination to be "great"; to have great wealth, great power, great honour and distinction. By this one error, he made thousands of foes, and no degree of purity or virtue could avail, in the presence of such hosts of envenomed detractors.

One more step remained, between him and the grave. Columbus was now in Spain; he was soothed and comforted, but to his greatly coveted government and dignity he was never restored. Ferdinand had but grudgingly conceded his "demands" in 1492, and now, ten years having passed away, and the admiral being in Spain, there was no alacrity shown in doing him the justice which he sought, or in replacing him in the "vicereignty" of the new world. Another commissioner, Ovando, was appointed to supersede Bobadilla, and Columbus was told that an interval of repose would allow bad passions to subside, and would promote the peace and welfare of the colony. Thus, all through 1501 and the first portion of 1502, Columbus was detained in Spain, while old age was rapidly creeping upon him. But his active mind could not rest, nor could he fail to perceive that his discoveries were still exceedingly imperfect. Reflection on the past only served to convince him that much remained to be done, and he soon made a fresh application to the sovereigns to be allowed to prosecute his still unfinished investigations. Ferdinand judged this a good opportunity of keeping the admiral employed at a distance from Cuba and Hispaniola. Four small ships were granted him, and in the sixty-seventh year of his age, he again sailed forth on this his last voyage of discovery. His first occupation, which consumed four months, was in exploring the Bay of Honduras, and the whole of that coast, in search of a strait which he still fancied would open to him the road to India and to China. The whole of this voyage was one of hardship, toil, and danger. Storms, strife with the natives, and the weak and shattered condition of his

vessels rendered it, from May, 1502, to June, 1503 a period of great difficulty and trouble. At last, in the latter month, he brought his two remaining vessels into harbour at Jamaica, where he stranded them, to avoid their total loss by foundering. Here then was detained a whole year, by the cruel disregard of Ovando, the governor of St. Domingo, who, not desiring his presence in that colony, sent him word that "he could not spare vessels to bring him off." Twelve months elapsed before this ruthless man felt compelled, by mere shame, to take steps to the admiral's release. At last, on the 28th of June, 1504, two vessels having arrived, Columbus left his island-prison for St. Domingo; from whence, on the 12th of September, he took his last voyage back to Spain. In November, he reached Seville—"a broken-down old man, encumbered with debt, and surrounded with needy adventurers, who laid their ruin at his door." He had purposed, in the days of his golden dreams, the equipment, like a prince, of a royal army, for the rescue of the holy sepulchre! Instead of which, hear his own description of himself, in one of his letters to his sovereigns:

"Such is my fate, that twenty years of service, through which I passed with so much toil and danger, have profited me nothing; and at this day I do not possess a roof in Spain that I can call my own. If I wish to eat or sleep, I have nowhere to go but to the inn or tavern, and I seldom have wherewith to pay the bill. I have not a hair upon me that is not gray; my body is infirm; and all that was left me, as well as to my brothers, has been taken away and sold, even to the frock that I wore, to my great dishonour. I implore your highnesses to forgive my complaints. I am, indeed, in as ruined a condition as I have related. Hitherto I have wept over others; may Heaven now have mercy upon me, and may the earth weep for me!"

In this spirit he returned to Spain—to find a grave. His sincere friend and patroness, the admirable Isabella, died shortly after his return, and Ferdinand was ever cold-hearted and selfish. "He received him with many expressions of kindness, but with those cold, inflectional smiles which convey no warmth to the heart." Appeal after appeal was made, but the replies of Ferdinand were always evasive. In fact, the king had no intention of conceding the one point respecting which Columbus was chiefly anxious. To bequeath the perpetual vicereignty of "the Indies" to his son Diego, and to his descendants, as a matter of hereditary right, was the point always uppermost in his mind. "This," he writes to the king, "is a matter which concerns my honour. As to all the rest, do as your majesty may think proper—give or withhold as may be most for your interest, and I shall be content. I believe the anxiety caused by the delay of this affair is the principal cause of my ill-health." Strange infatuation! Had Columbus calmly reviewed his past life, he might have seen that this greatly prized vicereignty had been his ruin—had been the cause of all his sufferings. And to his son it must have brought equal woes. If it were a power real and absolute, it would have uncrowned the king of Spain, and rendered the heirs

of Columbus "lords of the Indies." But if unreal, as in times past, it was sure to bring other Bobadillas and Ovandos from Spain to harass, counteract, and persecute the viceroy. Columbus could hardly have left to his son a more fatal legacy. Yet he himself confesses that the denial of this claim was breaking his heart: "the anxiety caused by this affair is the principal cause of my ill-health." "It appears that his majesty does not see fit to fulfil that which he, with the queen, who is now in glory, promised me by word and seal. I have done what I could, and must leave the rest to God."

And so he died, in May, 1506, being about seventy years of age. He was a sincerely religious man, after the religion of his day. He was enthusiastic, noble-minded, sincere, and warm-hearted. Of the grand mission and achievement of his life it is needless to speak, for men are forward and eager to recognize and to extol it. Our object has been, while sympathizing with his wrongs, to point out the chief lesson which is taught us by his history. Had he possessed the practical wisdom of our own Wellington, whose noblest distinction it was, that he never sought, never asked, anything for himself, how different would have been his fate! His fame, the honour attaching to his name and family, was already assured by his own deeds, and needed not the extrinsic help of titles or privileges. And had he left his reward to the free will of the sovereigns whom he so greatly served, it could not have been a niggardly one. Leaving the toils and anxieties of government to others, had he asked and obtained better and more efficient fleets of discovery, he might, in his own lifetime, have circumnavigated America, and colonized Mexico and Peru.

Among the many lessons of practical wisdom for every-day life which are scattered up and down the pages of the Holy Scriptures, there is, perhaps, scarcely one which is more needed for constant use, or one which men are more ready to pass over with silent disregard, than God's message to Baruch, "Seekest thou great things for thyself? seek them not, saith the Lord." Although again and again enforced by Christ himself, in such words as,—"Lay not up for yourselves treasures on earth; for where your treasure is, there will your hearts be also;"—"A man's life consisteth not in the abundance of things which he possesseth;"—"How hardly shall a rich man enter into the kingdom of God!"—these emphatic warnings fall ineffectually upon "ears that are dull of hearing." Apostles have followed their Master in warning their hearers, that "they that will be rich, fall into temptation and a snare, and into many foolish and hurtful lusts, which drown men in destruction and perdition;" and in exhorting them to "set their affections on things above, not on things on the earth;" but, throughout all ages, "the love of this present world" has carried away the vast majority of hearers, and "the deceitfulness of riches has choked the word, so that it remained unfruitful."

Yet beacon-lights, marking the rocks on which many gallant ships have foundered, are not wanting. Numerous, indeed, are the fearful mementos which have come to us from past ages, of those who either have "made shipwreck of the faith," or else, as God's erring children, have had their "offences visited with the rod, and their sin with scourges." We are not called upon, nor are we able, to discriminate actually between the one class and the other; but when we observe a notable instance of a great and perhaps a good man, bringing suffering and humiliation on himself by disregarding all these warnings, it seems a plain duty to compare the fault with its consequences; so that, even to human eyes, "God may be justified when he speaketh, and be clear when he judgeth." And

among all the records of the past, we know of no more remarkable proof of the practical wisdom and benevolence of the message to Baruch than is given in the biography of which we have sketched the outline.

We follow the great navigator with sympathy and with painful commiseration. We abhor the hard-hearted self-boss of his numerous enemies, and the frigid indifference of those who ought to have been his zealous protectors. But still, amidst all this, we trace the main cause of all Columbus's sufferings to himself. Not to any crimes, not to any excesses, not to any immoralities, but simply to that one mistaken idea with which he set out; an idea which ran entirely counter to that divine wisdom which had said, "Seekest thou great things for thyself? seek them not, saith the Lord."

For "The Friend."

#### Parental Indulgence, and Neglect of Restraint.

[The following, met with among the man-cripts of a deceased Friend, and written a number of years ago, is herewith submitted, if approved by the editor, for publication in "The Friend."]

At a time when the subject of education is eliciting so much attention, and claiming the time and effort of many of the sincere-hearted in the present day, I have thought it might be of advantage, having been much interested myself therein, to look back a century or two and observe the manner in which our early Friends seemed exercised about it, acting as they did under a living concern that the testimonies and principles given them to bear and uphold in their purity, might be committed to clean bands, and the society of which they were members, and the world at large, lose nothing by the transfer. Restraint seemed an important consideration in their view of the subject, even though it acted to repress the hilarity of youthful spirits, and induce a conduct not in character with their years; but taught in the school of Christ themselves, they had learned that self-denial was an important feature in that work which was to "prepare the way of the Lord," and that without it, there was little prospect of the children committed to their care becoming men and women for God.

George Fox says, "I was much exercised too with school-masters and school-mistresses, warning them to teach children sobriety in the fear of the Lord, that they might not be nursed and trained up in lightness, vanity and wantonness. I was made to warn masters and mistresses, fathers and mothers in private families, to take care that their children and servants might be trained up in the fear of the Lord, and that themselves should be therein examples and patterns of sobriety and virtue to them. For I saw that as the Jews were to teach their children the law of God, the old covenant, and to train them up in it, and their servants, yea the very strangers were to keep the sabbath among them, and be circumcised, before they might eat of their sacrifices; so all that made a profession of Christianity ought to train up their children and servants in the new covenant of light, Christ Jesus, who is God's salvation to the ends of the earth, that all may know their salvation."

Ambrose Rigge, in one of his epistles, thus writes, "Friends, stand as witnesses for God in your day, against all ungodliness and worldly lusts, both amongst yourselves and the world. Be ye circumspect and watchful over yourselves and your children, and indulge them not in anything that is evil, but timely reprove and restrain it, lest it become your sin; and command them to observe the law of God written in their hearts; for if you love the Truth as you ought yourselves, you will train up your children in it when they are young. Keep

them to the plain and sound language, which the Truth required, and led all the faithful into in the beginning; and keep them in plain and modest apparel and behaviour, in due subjection to the Truth in all things, in an holy conversation as much as you lies, that they may grow up in the grace of God, as plants of his renew. This is your duty, the Lord requires it of you, even to watch over your children, as those that must give an account to God, while they are under your wings."

Yearly Meeting epistle, 1709. "Dear Friends, brethren and sisters in Christ, who are heads of families, and especially such who are elders in the church of Christ, be all diligent and careful to watch over the young generation; that sobriety, plainness and virtue, may be encouraged and promoted, and exemplarily recommended by you to them; that the liberty too many of our youth take in following the fashions and customs of the world, which tend to the dishonour and reproach of the testimony of the blessed Truth, may be discouraged, and such as are found in the same, dealt with, in the fear wisdom and love of God, that they may be won and brought into humility and subjection to the Lord and his truth.

"And let us remember, and the youth know that when apparent signs of the plague of leprosy appeared on the walls in the houses of Israel, it was the care of the priest under the law, to have the houses cleansed, and the lepers also. And surely Christ's priesthood should not fall short of their care to endeavour to stop and remove the manifest tokens of the leprosy of the great sin of pride, and all its perfluity of naughtiness. And therefore let all concerned be earnestly stirred up to sincere obedience to the light of Christ, our great high priest; that he may cleanse the hearts and houses of that growing plague, which tends to the ruin of families and posterity.

"And further, that nothing may be wanting in Friends' care towards their children, let all be concerned to see that they do not only watch over them for good, but that they also rule over them in the fear of the Lord; and none, in the fondness of affection, lose the authority wherein the Lord has set them for their children's preservation. And let all be examples to them, in wisdom, moderation, and plainness, in language and habit; and not examples only, but also to restrain them from anything that might be their hurt, either inwardly or outwardly; neither providing for them costly and gaudy attire unbecoming godliness, nor letting them have money to gratify themselves therein."

*A Testimony for Christianity in its native Purity.*—Although there are, I trust, in all religious professions, those who are promoters of the coming of the Redeemer's kingdom on the earth living up to the light afforded, yet does it seem to me that this people are peculiarly called to exalt the testimonies of the unchangeable Gospel, even in its meridian effulgence. Let not our children conclude that if there ever was utility in our plain and peculiar manner of life and unceremonious worship, that has long since ceased; for surely the Lord will have a simple hearted people still, and a people who hold Christianity in its native purity; yea, our off-pring are designed to come forward, and practically add to the language, "I am the Lord's;" glorifying Him with their bodies and with their spirits; for He is worthy of their energies, while in their full vigour to be sanctified for His own blessed purposes, and that all His gifts should redound to His honour I am persuaded, there is no real peace, or lasting and solid satisfaction, out of dedication to Him to whom we owe our life and breath.—Sarah (Lynes) Grubb.

*The Great Wall.*—Another day's journey brought us to Chataon—a hamlet at the foot of the Great Wall. The road for the last fifteen miles had been so bad that we were obliged to leave our horses at Nankin, hiring in their place, lartar ponies. Nothing less sure-footed than these shaggy, hardy little beasts, could have carried us through those rugged mountain paths, which we would have done on foot, but that one mile march over the sharp rock which forms the pavement would have left us shoeless.

At daybreak on the following morning, we climbed the highest peak of the mountain range, and there, standing on the top of the great wall, reflected upon the stupendous folly of this wonderful work of human industry, which is said to have cost the country two hundred thousand lives from her physical exhaustion. The wall, which is built of stone and brick, is twenty feet high and fifteen feet broad, surmounted by double parapets, oop-holed on the north side. As far as the eye can follow the mountain range, it winds over the ridges of the precipitous black rocks, like a gigantic serpent crawling along, and with its breath hissing all around; for, ture where you will, nothing meets the view but the desolate, dreary raft of rock, unrelied by a blade of grass or a tuft of moss, and huge boulders strewn the base of the mountain sides. It was the whim of a tyrant to build a wall where nature had already built a barrier far more effectual than anything that human art could construct. However, there it remains, after a lapse of nearly two thousand years—a monument of the cruel folly of one man, and the patient industry and sufferings of many thousands.

Having made an abortive attempt at a sketch, and tried in vain to discover one redeeming feature in this vast scene of desolation, I secured my brick, and descending to the pass, remounted to proceed homeward. Our guard could hardly believe his senses—certainly he doubted ours. When at Nankin, mine host inquired what we were going to the Great Wall for. Our honest answer met with no credit. Were there not walls everywhere? Was not the wall of P-kin much better worth looking at? And then, as for shooting, why come so far for game when it could be bought in the market at our very doors? His impression evidently was that we had some sinister project in view; but when we returned with the brick, the good man simply burst out laughing, and set us down for a couple of harmless mauiacs.

#### Books of the Bible.

When and by whom were the books of the Old Testament first collected and arranged?

By Ezra, about 450 years before Christ. The five books of Moses had been kept with the ark of the covenant, (Deut. xxxi. 24–26,) and Joshua had written the portion of Scripture bearing his name “in the books of the laws of God. Joshua, viii. 24–26.

What are the most prominent translations of the Bible that have been made?

The Septuagint, the Vulgate, the Douay, and the English, or King James's Bible.

What is the meaning of the word Septuagint? Seventy. The translation was so called because it was made by seventy, or more strictly speaking, by seventy-two men; six having been chosen from each of the twelve tribes of Israel for this purpose.

When and where was this translation made? At Alexandria, in Egypt, about 400 years before Christ. It was a translation of the Old Testament only from the Hebrew into the Greek.

How was this regarded by the Jews in the time of Christ?

It was regarded with peculiar reverence. Our Saviour and the apostles in their discourses generally quoted from this version.

What is the Vulgate translation?

It is a Latin translation of the Septuagint, not of the Hebrew, and so called the Vulgate, because, being the only version which the Roman Catholic church holds to be reliable, it is in that church the common version.

When and by whom was this translation made?

By Jerome, about the year A. D. 400. It was hastily made, and became very incorrect by many changes.

What of the Douay Bible?

It is an English translation of the Vulgate, with notes and comments, and is the only English Bible approved by the Roman Catholic church.

From what did it receive its name?

From the place where it was first published—Douay, a town in France.

When was it published?

In 1610.

Why does it differ so much from our English Bible?

Because it was made, not from the original Hebrew, but from the Vulgate, which was from the Septuagint, and very imperfect. It could not be as correct as a translation made directly from the Hebrew?

Why is our English version called King James's Bible?

Because it was made during the reign of James I., King of England.

When was it begun and when completed?

In the year 1607, the work was commenced, and was finished in about three years, and was published in 1611.

By whom was this translation made?

Fifty-four of the most learned men of the kingdom were appointed for the task. Seven did not serve, leaving forty-seven, as the number who were actually engaged in the work.

How was the labour apportioned among this number?

They were divided into six classes, to each of which a certain portion of the Bible was given to translate, not from the Latin nor from the Septuagint, but directly from the original Hebrew and Greek.

How will our English translation compare with other versions of the Bible?

It is said by the most competent judges to be better than any other.

When and by whom was the Bible first divided into chapters?

It is generally said to have been done by Cardinal Hugo, A. D. 1240. But as early as the third century, the four gospels had been divided into chapters.

When and by whom were the chapters divided into verses?

By Robert Stephens, in the year 1551. It is said that he performed the greater part of this laborious task while on horseback, on a journey from Paris to Lyons.—S. S. Journal.

*Census of Canada.*—The Canada papers have published abstracts of the census of 1861, from which we obtain the following facts.—Of the 2,506,755 inhabitants of Canada, 1,917,777 were born within the Province. The native Canadians of British, and those of French origin, are nearly equal in their numbers, being 1,037,170 and 880,607, respectively. Next to these, the two most numerous classes of their population, come the Irish, with 241,423; the English and Welsh, with 127,423; the Scotch, with 111,959; the natives

of the States, with 61,399; and the Germans and other Teutons, with 23,855. Among these are 11,413 coloured persons, almost all resident in Upper Canada. The rest are too few in number to have much weight in the community. It is noticeable, however, that there are only 12,717 Indians left among them, and that only 3061 Frenchmen make Canada their home, of whom more than three-fourths are residents of Upper Canada.

*Curious Anology.*—There is, in the natural world, a remarkable phenomenon connected with insect-life, which has often occurred to my mind, while meditating on this subject, as presenting a curious analogy.

Most persons know that every butterfly (the Greek name for which, it is remarkable, is the same that signifies also the SOUL—*Psyche*) comes from a grub or caterpillar; in the language of naturalists called a *larva*. This last name (which signifies literally a *mask*) was introduced by Linnaeus, because the caterpillar is a kind of outward covering, or disguise, of the future butterfly within. For, it has been ascertained by curious microscopic examination, that a distinct butterfly, only undeveloped and not full-grown, is contained within the body of the caterpillar; that this latter has its own organs of digestion, respiration, &c., suitable to its larval-life, quite distinct from, and independent of, the future butterfly which it incloses. When the proper period arrives, and the life of the insect, in its first stage, is to close, it becomes what is called a Pupa inclosed in a chrysalis or cocoon (often composed of silk; as is that of the silkworm which supplies us with that important article), and lies torpid for a time within this natural coffin, from which it issues, at the proper period, as a perfect butterfly.

But sometimes this process is marred. There is a numerous tribe of insects, well known to Naturalists, called *Ichneumon flies*; which, in their larva-state, are *parasitical*; that is, inhabit, and feed on, other larvae. The Ichneumon-fly being provided with a long sharp sting, which is, in fact, an *ovipositor* (egg-layer), pierces with this the body of a caterpillar in several places, and deposits her eggs, which are there hatched, and feed, as grubs (larvae) on the inward parts of its victim.

The common cabbage-caterpillar (producing a white butterfly) which often does such mischief in our gardens, is often thus attacked; and these being common near our houses, are more easily observed than most others.

A most wonderful circumstance connected with this process is, that a caterpillar which has been thus attacked goes on feeding, and apparently thriving quite as well during the whole of its larval-life, as those that have escaped. For, by a wonderful provision of instinct, the ichneumon-grubs within do not injure any of the organs of the larva, but feed only on the future butterfly inclosed within it. And, consequently, it is hardly possible to distinguish a caterpillar which has these enemies within it from those that are unattacked.

But when the period arrives for the close of the larval-life, the difference appears. You may often observe the common cabbage caterpillar retiring, to undergo their change, into some sheltered spot, such as the walls of a summer-house; and some of them—those that have escaped the parasites—assuming the pupa-state, from which they emerge butterflies. But as for the others, the ichneumon-grubs at this period issue forth, and spin their little cocoons of bright yellow silk (about the size and shape of grains of wheat) from which they are to issue as flies. Of the unfortunate caterpillar nothing remains but an empty skin. The hidden butterfly has been secretly consumed.

Now, when you are contemplating with wonder this most curious phenomenon, consider whether there is not something analogous to it in the condition of some of our race; whether a man may not have a kind of secret enemy within his own bosom, destroying his soul—*Psyché*—though without interfering with his well-being during the present stage of his existence; and whose presence may never be detected till the time arrives when this *great change* should take place.

Christian reader, reflect whether this may not be your case. And remember that it is in your power, now, through the help that is promised, to detect and destroy these secret but deadly enemies within you!—*Whately's Future State, Lec. X.*

Byrnard on War.

(Continued from page 211.)

It is obvious that this reasoning proceeds upon the principle that it is *lawful to do evil that good may come*. If good will come by violating a treaty, we may violate it. If good will come by slaughtering other men, we may slaughter them. I know that the advocate of expediency will tell us that that is *not* evil of which good, in the aggregate, comes; and that the good of evil actions *consists* in the good or evil of their general consequences.—I appeal to the understanding and the conscience of *every* reader!—Is this distinction honest to the meaning of the apostle? Did he intend to tell his readers that they might violate their solemn promises, that they might destroy their fellow christians, *in order that good might come*? If he did mean this, surely there was little truth in the declaration of the same apostle, *that he used great plainness of speech*.

We are told that "whatever is expedient is right." We shall not quarrel with the dogma, but how is expediency to be determined? By the calculations and guessings of men, or by the knowledge and foresight of God? Expediency may be the test of our duties, but what is the test of expediency?—Obvious! I think, it is this; *the decisions which God has made known respecting what is best for man*. Calculations of expediency, of "particular and general consequences," are not intrusted to us, for this most satisfactory reason—that we cannot make them. The calculation, to be any thing better than vague guessing, requires prescience, and where is prescience to be sought? Now it is conceded by our opponents, that the only possessor of prescience has declared that the forbearing, non-resisting character is best for man. Yet we are told, that sometimes it is *not* best, that sometimes it is "inexpedient." How do we discover this? The promulgator of the law has never intimated it. Whence then, do we derive the right of substituting our computations for His prescience? Or, having obtained it, what is the limit to its exercise? If, because we calculate that obedience will not be beneficial, we may dispense with his laws in one instance, why may we not dispense with them in ten? Why may we not abrogate them altogether?

The right is however claimed; and how is it to be exercised? We are told that the duty of obedience "may sometimes be doubted,"—that in some cases, we are induced to "*call in question*" the obligation of the christian rule—that "situations may be feigned,"—that circumstances "*may possibly arise*," in which we are at liberty to dispense with it—that still it is dangerous to leave "it to the sufferer to decide" when the obligation of the rule ceases; and that of all these doubts "philosophy furnishes no precise solution."—I know not how to contend against such principles as these. An argument might be repelled; the assertion of a fact

might be disproved; but what answer can be made to "possibilities" and "doubts"? They who are at liberty to guess that christian laws may sometimes be suspended, are at liberty to guess that Jupiter is a fixed star, or that the existence of America is a fiction. What answer the man of science would make to such suppositions I do not know, and I do not know what answer to make to ours. Amongst a community which had to decide on the "particular and general consequences" of some political measure, which involved the sacrifice of the principles of christianity, there would of necessity be an endless variety of opinions. Some would think it expedient to supersede the law of christianity, and some would think the evil of obeying the law less than the evil of transgressing it. Some would think that the "particular mischief" outweighed the "general rule," and some that the "general rule" outweighed the "particular mischief." And in this chaos of opinion, what is the line of rectitude, or how is it to be discovered? Or, is that rectitude, which appears as each separate individual to be right? And are there as many species of truth as there are discordancies of opinion?—Is this the simplicity of the gospel? Is this the path in which a wayfaring man, though a fool, shall not err?

These are the principles of expediency on which it is argued that the duties which attach to private life do not attach to citizens.—I think it will be obvious to the eye of candour, that they are exceedingly indeterminate and vague. Little more appears to be done by Dr. Paley than to exhibit their doubtfulness. In truth, I do not know whether he has argued better in favour of his position, or against it. To me it appears that he has evinced it to be fallacious; for I do not think that *any thing* can be christian truth, of which the truth cannot be more evidently proved. But whatever may be thought of the conclusion, the reader will certainly perceive that the whole question is involved in extreme vagueness and indecision: an indecision and vagueness which it is difficult to conceive that christianity ever intended should be hung over the very greatest question of practical morality that man has to determine; over the question that asks whether the followers of Christ are at liberty to destroy one another. That such a procedure as a war is, under any circumstances, sanctioned by christianity, from whose principles it is acknowledged to be "abhorrent," ought to be clearly made out. It ought to be obvious to loose examination. It ought not to be necessary to ascertaining it, that a critical investigation should be made, of questions which ordinary men cannot comprehend, and which, if they comprehended them, they could not determine; and above all, that investigation ought not to end, as we have seen it does end, in vague indecision—in "doubts" of which even "Philosophy furnishes no precise solution." But when this indecision and vagueness are brought to oppose the christian evidence for peace; when it is contended, not only that it militates against that evidence, but that it outbalances and supersedes it—we would say of such an argument, that it is not only weak, but idle; and such a conclusion that it is not only unsound, but preposterous.

Christian obligation is a much more simple thing than speculative philosophy would make it appear; and to all those who suppose that our relations as subjects dismiss the obligation of christian laws, we would offer the consideration, that neither the Founder of christianity nor his apostles ever made the distinction. Of questions of "particular and general consequences," of "general advantages and particular mischiefs," no traces are to be found in their words or writings. The morality of christi-

anity is a simple system, adapted to the comprehensions of ordinary men. Were it otherwise, what would be its usefulness? If philosophers only could examine our duties, and if their examinations ended in *doubts without solution*, how would men, without learning and without leisure, regulate their conduct? I think, indeed, that it is a sufficient objection to all such theories as the present, that they are not adapted to the wayfaring man. If the present theory be admitted, one of these two effects will be the consequence: the greater part of the community must trust for the discovery of their duties to the sagacity of others, or they must act without any knowledge of their duties at all.

But, that the pacific injunctions of the christian Scriptures do apply to us, under every circumstance of life, whether private or public, appears to be made necessary by the universality of christian obligation. The language of christianity upon the obligation of her moral laws, is essentially this,—*"What I say unto you, I say unto all."* The pacific laws of our religion, then, are binding upon all men; upon the king and upon every individual who advises him, upon every member of a legislature, upon every officer and agent, and upon every private citizen. How then can that be lawful for a body of men which is unlawful for each individual? How if one be disobedient, can his offence make disobedience lawful to all? We maintain yet more, and say, that to dismiss christian benevolence as subjects, and to retain it as individuals, is simply impossible. He who possesses that subjugation of the affections and that universality of benevolence, by which he is influenced to do good to those who hate him, and to love his enemies in private life, cannot, without abandoning those dispositions, butcher other men because they are called public enemies.

The whole position, therefore, that the pacific commands and prohibitions of the christian Scriptures do not apply to our conduct as subjects of a state, appears to me to be a fallacy. Some of the arguments which are brought to support it, so fitly dispense with the principles of christian obligation, so gratuitously assume, that because obedience may be difficult, obedience is not required, that they are rather an excuse for the distinction than a justification of it—and some are so lamentably vague and indeterminate, the principles which are proposed are so technical, so inapplicable to the circumstance of society, and in truth, so incapable of being practically applied, that it is not credible that they were designed to suspend the obligation of rules which were imposed by a revelation from Heaven.

The reputation of Dr. Paley is so great, that, as he has devoted a chapter of the Moral Philosophy to "War and Military Establishments," it will perhaps be expected, in an inquiry like the present, that some specific reference should be made to his opinions; and I make this reference willingly.

The chapter "on War" begins thus:—"Because the christian Scriptures describe wars, as what they are, as crimes or judgments, some men have been led to believe that it is unlawful for a christian to bear arms. But it should be remembered, that it may be necessary for individuals to unite their force, and for this end to resign themselves to a common will; and yet it may be true that that will is often actuated by criminal motives, and often determined to destructive purposes." This is a most remarkable paragraph: It assumes, at once, the whole subject of inquiry, and is an assumption couched in extraordinary laxity of language.—"It may be necessary for individuals to unite their force." The tea-table and the drawing-room have often told us this; but *philosophy* should tell us

how the necessity is proved. Nor is the morality of the paragraph more rigid than the philosophy. "Wars are crimes," and are often undertaken from "criminal motives, and determined to destructive purposes;" yet of these purposes, and motives, and crimes, "it may be necessary" for Christians to become the abettors and accomplices!

Paley proceeds to say, that in the New Testament the profession of a soldier is nowhere forbidden or condemned; and he refers to the case of John the Baptist, of the Roman centurion, and of Cornelius; and with this he finishes all inquiry into the christian evidence upon the subject, after having expended upon it less than a page of the edition before me.

These arguments are all derived from the silence of the New Testament, and to all reasoning founded upon this silence, no one can give a better answer than himself. In replying to the defences by which the advocates of slavery attempt to justify it, he notices that which they advance from the silence of the New Testament respecting it. He says—"It is urged that 'Slavery was a part of the civil constitution of most countries when christianity appeared: yet that no passage is to be found in the christian Scriptures, by which it is condemned or prohibited.'" "This," he rejoins, "is true; for christianity, soliciting admission into all nations of the world, abstained, as he believed it, from intermeddling with the civil institutions of any. But does it follow, from the silence of Scripture concerning them, that all the civil institutions which then prevailed were right, or that the bad should not be exchanged for better?" I beg the reader to apply this reasoning to Paley's own arguments in favour of war from the silence of the Scriptures. How happens it that he did not remember it himself?

(To be continued.)

For "The Friend."

#### Recent Exploring Expeditions.

The following account taken from the present month's number of *Silliman's Journal*, will be interesting to those who desire to obtain the latest information concerning the various efforts now making towards a more perfect knowledge of the surface of the earth.

#### AFRICA.

*Speke's Journey to Lake Nyanza.*—Those who have kept informed in respect to the progress of African discovery will remember that on the celebrated journey (often referred to in this Journal), in which Major Burton visited and explored one of the great lakes of eastern Central Africa, known as the "Tanganika," his associate, Capt. Speke, discovered at a considerable distance northeast and at a much higher altitude, a second immense lake called by the natives the Nyanza, to which the loyal Englishman prefixed the name of his sovereign, calling it the Victoria Nyanza. It is this second lake which was supposed to be the source of the Nile. In regard to it, however, nothing definite was known, as the explorer only saw the southern extremity and had only very meagre and indefinite information respecting its extent toward the north. The possibility and indeed the plausibility of the proposed solution of the vexed problem of the Nile, induced the British Government to co-operate with the Royal Geographical Society, in sending Capt. Speke to Zanzibar, once more, thence to retrace his steps to the Nyanza, and traverse the lake if possible to its northern shores, where of course it could be determined whether a great river flowed from it. He set out upon this second journey, April 21st, 1850, having as an associate Capt. Grant. They left Zanzibar for the

interior, Sept. 25, 1850. Letters have been received from them, dated Khoko in Western Ugogo, Dec. 12, 1850.

*Petherick's Expedition to Gondokoro.*—To co-operate with Capt. Speke, John Petherick, (author of "Egypt, the Soudan and Central Africa; being sketches from sixteen years travel," London, 1851, 8vo.), for many years British Consul at Khartum, has been commissioned by the Government and society already mentioned, to go up the Nile to Gondokoro, fourteen hundred miles above Khartum and nineteen hundred above Alexandria, where he will be able to establish a depot of provisions and apparatus for Capt. Speke, and if need be, engage with him in exploring any part of that region. Gondokoro, described as being in north latitude, 4° 30' and east longitude 31° 50', is the seat of an ivory mart during the months of December and January, when traders from Khartum visit it and obtain their ivory in exchange for grain and beads. Here also Knobelcher established a Roman Catholic mission, which was abandoned in 1859.

The appeal of the Royal Geographical Society for funds to the extent of £2000, in aid of this expedition, gives the following additional statements:

"Immediately above Gondokoro, a succession of rapids prevent farther navigation; below Gondokoro the passage is perfectly open to boats, sailing at the times when the periodical winds are favourable. During ten months of the year Gondokoro is deserted; the scanty and barbarous population of the village is dispersed over its barren neighborhood, and an expedition, such as that under Captain Speke and Grant must necessarily be—exhausted of means of bates, and wholly ignorant of the negro languages of Northern Africa—will be sure to tempt hostility, and to incur serious danger of absolute want of supplies. If Captain Speke be unable to reach Gondokoro in December or January, his position will be exceedingly precarious, while farther advance to the north would be impossible.

"The first of J. Petherick's proposed objects, is to form a sufficient depot of grain at Gondokoro, under the charge of his own men, to insure to Captain Speke means of subsistence and security from violence whenever he should reach that place; the second is, to explore the district coloured orange, in the accompanying sketch map.

The third is, to effect a meeting with Captain Speke, and to assist him through the hostile tribes between the lake and the Nile. Many of these negro tribes are known to J. Petherick, and it is precisely where the party under Captain Speke would be most helpless, that that of J. Petherick would comparatively speaking, be most at home; and even if the union of the two parties did not actually take place, the aid which J. Petherick's presence in the country might, with reason, be expected to afford to Captain Speke, can hardly be overrated.

"These circumstances being taken into account, together with the fact of J. Petherick's services being now available, who, beyond any other Englishman, is peculiarly fitted for carrying out the expedition he proposes, the President and Council of the Royal Geographical Society consider that they would fall short of their duty if they left any legitimate means unemployed for securing those services to the advancement of geography and the honour of this country. Her Majesty's Government having declined to send out this additional expedition, the President and Council make their appeal to the liberality of individual Fellows of the society, and to that of the public.

"The sum required to be raised is £2000.

Should this be quickly obtained, J. Petherick will undertake to reach Gondokoro in November, 1851. He will then explore until March, 1852, when the setting in of the rainy season prevents further movements. Starting afresh in August, 1852, he proposes to continue his travels until February, 1853, and after that to return to Gondokoro, reaching his depot in 1853 or early in 1854."

Although only £1000, or half of the sum called for, was raised, J. Petherick set out in April, 1851. Letters have been received from him dated Koro-Ko, Aug. 9, 1851.

The following instrumental instructions for his guidance were issued by the Honorary Secretary of the Society, P. Galton, Esq.:

"The observations that it is absolutely requisite you should make, are—

"1. You are earnestly recommended to use every opportunity of practising with your sextants upon stars while on the lower Nile, and able to check your results with known latitudes; also to practise observing eclipses and occultations under the same circumstances.

"2. As a general rule, observations should be made at marked points, such as the confluence of rivers, prominent hills, and native towns, rather than at mere encampments.

"3. Reliable latitudes of different places on the White Nile being desired, travel to the north on your further line of travel. The latitude of Gondokoro is especially desired, and the meridian altitudes of at least six stars; three north and three south should there be observed.

"4. Longitudes by the exceedingly simple methods of the eclipses of Jupiter's satellites, or of occultations of stars, to be made at Gondokoro and at the furthest point of your travel, or at places adjacent to these. The local time should there be determined by more than the one method of altitudes to guard against error, and the method of altitudes on both sides of the meridian should always be used. Any longitude south of the parallel of the Bahr el Ghazal would be very valuable.

"5. The elevation above the sea of the following places by observation of the temperature of boiling water:—Cairo, Thebes, Assou, Junction of Atbara, Khartum, the capital of the Shilluk country, the river at a point opposite the Bahr el Ghazal, Gondokoro, and different stations on your further route.

"6. The three boiling point thermometers to be occasionally compared, and to be carefully preserved, with the view of determining any changes in their index errors. They are also to be compared with those of Captain Speke, in the event of the hoped-for meeting taking place between you and that gentleman.

"7. Simultaneous observations of the rise and fall of the Nile, at Gondokoro and Khartum, should be instituted, and also at as many other places as trustworthy observers may be found to make them.

"8. It is of great geographical importance that the breadth, depth and velocity of the upper White Nile and its tributaries be ascertained, in order that their sections may be protracted, and the quantity of water that passes down them be determined. A few notes on practical methods of doing this will be prepared and given to you by—George.

"9. The compass bearing of marked hills should be frequently taken, and the position whence they are observed, defined and laid down as unmistakably as possible by cross bearing. Your course and estimated distances should be noted continuously day by day, and the variation of the compass frequently determined.

"10. Time observations with your chronometer

should be taken, whenever latitude observations are made. These will serve to connect distant points whose longitude has been reliably determined by the rare occurrence of satellite eclipses and occultations.

"11. If any architectural monuments are met with, it would be important to take sketches or photographs of them, however rude; to make a general plan by measurement, (for which a measuring tape should be taken) and to note any peculiarities of construction or style, such as the use of the arch, the angles of the walls, doorways and windows. If there be any inscriptions or hieroglyphs, they should be copied, or impressions taken of them, if possible, with coarse paper damped in water and pressed with a brush, upon the inscription. Any small objects of art or antiquity found amongst the natives, should if possible, be collected.

"12. Every observation is to be copied from your rough notes into the register-book which is supplied to you. Your entries, up to the last opportunity of communicating this winter with Khartum, are to be forwarded from Gondokoro to the Secretary of the Royal Geographical Society."

*Latest Intelligence from Dr. Livingstone.*—From the proceedings of the Royal Geographical Society, London, it appears that Bishop Mackenzie, of the United University, Central African Mission, arrived off the mouth of the Zambezi in February, 1861, where he found Dr. Livingstone and his associates about to start on an exploration of the Rufuma river, in hopes of discovering by its waters a more convenient access to the Nyassa and Shire districts. The bishop and one of his companions joined the expedition.

A letter from Dr. Livingstone to the late Professor Ritter, dated from the Rufuma, March 2, was presented to the Berlin Geographical Society at its August Meeting.

Subsequent intelligence shows that the attempt of this bold traveller to ascend the Rufuma in his new steamer, the *Pioneer*, was not successful. After grounding several times he had been obliged to desist, and return to the Zambezi. The failure was attributed to the fact that the boat drew five feet of water, and did not arrive from England till the rainy season was far advanced.

*Lejean's Expedition to Gondokoro.*—G. Lejean, who is said to have been aided in his outfit by the emperor of the French, set out early in 1860 from Khartum, and went south, hoping to find the source of the White Nile in the Lake Nyanza of Speke,—the same end in part which J. Petherick proposed to himself. Lejean reached Gondokoro, and was then prevented by illness from pushing his explorations farther. But the Journal of the Geographical Society of Paris, gives us reason to expect good results from his investigations in Eastern Soudan and high Nubia.

*Roscher and von der Decken.*—Karl v. d. Decken, a friend of the late Dr. Roscher, (murdered in his attempt to reach Lake Nyassa from the East African coast,) endeavoured to prosecute the discoveries of Roscher, but was robbed and driven back. A recent letter to Sir Roderick Murchison says that v. d. Decken will now try to reach the peaks of Kilimanjaro.

(To be concluded.)

*Fruit-Raising in Baltimore.*—T. Baynes, in a recent *American Farmer*, gives the following account. The amount per acre is of no account, as all experience shows that the more extensive the operations, though the net profit is greater, the proportionate profit is less; but as a statement of what can be realized in one season from about one-

sixth of an acre of small fruits is in itself interesting:

"The portion of my garden, eighty-five feet square, gives the following result, viz—

GRAPES.		
763 pounds, at 10 cents . . .		\$76 30
200 pounds, at 15 cents . . .		30 00

150 pounds, at 10 cents . . .		15 00
<hr/>		
1283		\$140 00
42 quarts of strawberries, at 10 cents . . .	\$4 20	
5½ quarts of gooseberries, at 25 cents . . .	14 50	
17½ quarts of raspberries, at 20 cents . . .	3 50	
4 quarts of red currants, at 8 cents . . .	32	
3 quarts of black currants, at 8 cents . . .	24	
13 quarts of white currants, at 8 cents . . .	1 04	
Rhubarb . . . . .	1 00	
		\$24 80
Grapes . . . . .	140 00	
		\$164 80

\$164 80 for 85 feet square is equal to \$1031 25 per acre.

Labour for digging and hoeing was twelve dollars. Besides, my attention (which is a pleasure) will not amount to over half an hour per day during the season."

#### NIGHT SHOWETH KNOWLEDGE.

When I survey the bright  
Celestial sphere,  
So rich with jewels hung, that night  
Doth like an Ethiop bride appear,  
My soul her wings doth spread,  
And heavenward flies,  
The Almighty mysteries to read  
In the large volumes of the skies.

For the bright firmament  
Shoots forth no flame  
So silent, but is eloquent  
In speaking the Creator's name;

No unregarded star  
Contracts its light  
Into so small a character,  
Removed far from our human sight,

But if in steadfast look  
We shall discern  
In it, as in some holy book,  
How man may heavenly knowledge learn.

Thus those celestial fires,  
Though seeming mute,  
The fallacy of our desires,  
And all the pride of life confute.

For they have watched since first  
The world had birth;  
And found sin in its utter acur,  
And nothing permanent on earth.

#### THE RIVER.

Beneath this fair, unclouded sky,  
How sweetly glides the tranquil river,  
Each scene of beauty passing by,  
To ocean's breast it flows forever.  
Now in the sunshine sparkling bright,  
I'lld now awhile in deepest shade;  
Through calm, through storm, by day, by night,  
Alike its onward course is made.  
Here with the willow-bough it plays,  
There gently sports with weed or flower,  
Yet naught its onward course delays,  
Naught stays the progress of each hour.  
When all the world is hushed in sleep,  
Unchecked, it holds its constant way,  
What time the stilly hours creep  
From lonesome night to busy day.

As tends this river to the sea,  
So every thought and word should tend  
Unto that blest eternity  
Wherein mortality shall end.  
Men, mourn not if for life's brief years,  
Barren hath been the path we've trod,  
If it avail, 'mid joys and tears,  
To bring us nearer to our God.

For "The Friend."

#### The Government of the Tongue.

The difficulty attending the due management of this unruly member is expressed in forcible terms by the Apostle James. It is, however, only through the shining of the true Light, that the awakened mind is enabled to perceive the full importance of the duty adverted to, and is made sensible of its many failings and short comings in this respect. The light which discovers our deficiencies, will also, as it is yielded to and obeyed, give power to overcome them, and we shall thus prove that divine Grace is indeed sufficient for all our needs. Looking over an old volume published in 1675, I met with some remarks, which seemed worthy of being revived. The following are extracts, the language being a little changed in some instances.

"The due management of the tongue may rightly be esteemed one of the greatest mysteries of wisdom and virtue. This is intimated by the Apostle, 'If any man offend not in word, the same is a perfect man, and able also to bridle the whole body, James iii. 2.' 'Tis storied of Bumbo, a primitive Christian, that coming to a friend to teach him a Psalm, he began to him the thirty-ninth, 'I said I will look to my ways, that I offend not with my tongue;' upon hearing of which verse, he stopped his tutor, saying, 'this is enough for me, if I learn it as I ought,' and being after six months rebuked for not coming again, he replied, that he had not yet learned his first lesson, nay, after nineteen years he professed that in that time he had scarce learned to fulfil that one line. I give not this instance to discourage, but rather to quicken me to the study, for a lesson that requires so much time to learn, had need be early begun with."

Among the manifold errors into which an ill-regulated tongue is apt to fall, is one which the writer terms the uttering of "uncharitable truth," it being as possible to impair a man's reputation by true reports as by false ones. There are of course, many cases in which justice and right require that the truth should be spoken of our neighbour, and in which it may not only be lawful, but a duty to expose his failings and wrong doing. These are rightfully excepted; but apart from all cases of this class, if we will narrowly examine the grounds of our conduct, we shall probably often find a disposition prompting us to allude in some disparaging way to the weaknesses, the eccentricities, or what we may deem the errors, of others. The writer points out several of the more obvious causes of this tendency to utter "uncharitable truth," and among them he enumerates pride. "In the first place I may reckon, pride, a humour which as it is always mounting, so it will make use of any foot-stool towards its rise. A man who affects an extraordinary splendor of reputation, is glad to find any foils to set him off, and therefore will let no fault or folly of another enjoy the shade, but brings into the open light, that by the comparison, his own excellences may appear the brighter. I dare appeal to the breast of any proud man, whether he do not upon such occasions, delight to make some paraisical reflections on himself; whether he be not apt to say, *I am not like other men, or as this publican, though probably he leaves out the 'God I thank thee.'* Now, he that cherishes such sentiments as these in himself, will

doubtless be willing to propagate them, to other men and to that end, renders the blemishes of others as visible as he can. But this betrays an ungenerous spirit, which from a consciousness that he wants solid worth, on which to base a reputation, is fain to found it on the ruins of other men. The true diamond sparkles even in the sunshine; 'tis but a glow-worm virtue that owes its lustre to the darkness about it." "Another prompter to destruction is *envy*. He that has a pique against another, would have him as hateful to all mankind as he is to him, and therefore as he grieves and repines at anything that may advance his estimation, so he exalts and triumphs when any thing occurs which may depress it, and it is usually very industrious to improve the opportunity, say, has a strange sagacity in hunting it out. No virtue doth more quickly send a carcass, than an envious person those *dead flies* which corrupt his neighbour's ointment, the vapor whereof his hate, like a wind, scatters and disperses far and near. Nor needs he any great crime to practise on; every little infirmity or passion, looked on through his optics, appears a mountain's guilt. He can improve the least speech or freak into a leprosy, which shall overspread the whole man, and a cloud no bigger than *man's hand*, like that of Elisha, may quickly, with the help of prejudice, grow to the utter darkness of the brightest reputation. No man that is eminent for piety, (or indeed for moral virtue,) but he shall have many of his eyes upon him, *watching for his haltings*, and if any the least obliquity can be espied, he is used worse than the vilest malefactor, for such are tried but at one bar, and know the utmost of their doom, but these are arraigned by many tongues, and before partial tribunals."

For "The Friend."

The last number of the London Quarterly Review contains an interesting article on "Railway Control," from which we take some extracts for "The Friend."

"The iron rail has superseded the road of other metal; the six-legged horse has, for long journeys, driven the quadruped out of, or into the field; and the single stage-coach has made way for the train of more convenient carriages. The United Kingdom is to its infinite advantage—intersected by 10,500 miles of railway, of which two-thirds are constructed with a double line of rails; and the gaps over the country are being filled up at the rate of 100 miles a year. The enormous sum of 400,000,000, has been expended within the last thirty-five years upon these works; the total receipts derived from them during the year 1860 amounted to 27,766,822; and the net revenue for the same period was upwards of fourteen millions and a half.

"There are now in the United Kingdom upwards of 300 railway companies, leasing and leased, working and worked, agreeing and combining, quarrelling and competing, entering into every conceivable complication with each other, and possessing in all directions ties of commercial ambition or objects of conflicting interest. They vary in the length of their lines from 2 miles to 1,000 miles, and in the amount of their capital from 20,000 to 37,000,000. They employ, altogether, 120,000 officers and servants; and they possess 6,000 locomotive engines, 15,000 passenger carriages, and 180,000 trucks, wagons, and other vehicles. They carried, in the year 1860, besides 18,000 season and periodical ticket-holders, 163,000,000 passengers, of whom about an eighth were first-class, five-sixteenths were second-class, and nine-sixteenths were third-class; and they re-

ceived from them thirteen millions of money as the price of their conveyance.

"These various companies command patronage, money, custom,—all that confers power, to an extent previously unheard of in the history of associations. They have noble lords and honourable members for their active agents and astute rulers. They have opportunities of affording advantages, or withdrawing them; of granting or withholding favours; of indulging in gratuities, and of acquiring popularity, which they often employ to great advantage.

"To the tender mercies of this heterogeneous society of companies are our 163 millions of travelling public handed over, a helpless mass. They are all, as a rule, equally ignorant of the condition of the engine and carriages, and of the line over which they are to pass; of the strength of the bridges, the efficiency of the signals, or the regularity with which they are worked. They cannot, of course, know what train is before them, or what train will follow them; nor can they be aware of any of the thousand and one risks to which they are exposed.

"The public cannot, then, be expected to exercise of itself, any efficient control over this vast, highly organized, powerful conveyance-machine; but it has nevertheless great power if its influence be properly directed; for railway companies are extremely sensitive; well instructed public opinion. The public knows very little of the dangers that it incurs, but it is a good judge of the incongruities which it encounters. It is patient under them to an extraordinary degree. Railways are worked for profit; and whilst a company is in undisturbed possession of its territory and traffic, it naturally strives to get as much as it can out of the public, and to give as little as possible in return.

"Nevertheless, when the public convenience is at stake in a particular locality, local boards, local authorities and local newspapers are sometimes of avail in obtaining a remedy."

"In the cases of accidents, or of danger to life and limb, are given instances of overworking; of parsimony on the part of railroad companies; and of known culpable and hazardous ignorance on the part of their servants, which had they been discovered by some British traveller in this country, would most probably have been adduced as evidence of the wretched management of our railway system, and of American recklessness of human life.

"That railway travelling is safer than any other mode of travelling is well known. Taking the average of a series of years, it would appear that for an average journey, say of 10 miles, only 1 in every 8,000,000 of passengers is killed, and only 1 in every 330,000 is injured, from causes over which they have no control. These numbers vary materially, however, from year to year. In the last half of 1860, as is shown by the latest return, and before us, 136 persons were returned as killed, and 414 as injured; but of these only 36 were killed and 364 injured as passengers; and of these again only 23 were killed and 351 injured from causes beyond their own control. There is no doubt that these numbers are below the mark. Many that these numbers are undoubtedly killed and injured whose deaths are not included in the official returns, in consequence of the necessary information not being furnished by the railway companies.

"Of those disasters which have acquired the name of railway accidents, 840 have been inquired into and reported on during eleven years by the officers of the Board of Trade. These were not by any means all that occurred; but they were selected

for inquiry from among those which were reported by the railway companies, or which came under the notice of the Board in other ways; and they may fairly be considered as representative of the principal accidents which were accompanied with personal injury. Of the total number of accidents, an annual average of 44 out of 76 consisted of collisions between trains and engines. We will notice such of the accidents reported on as appear to us most worthy of attention.

"In the case of a collision on one of the Scotch lines, it was ascertained that the engine-driver and fireman had been out for more than thirty hours, and that the guard, who had suffered from two broken ribs a fortnight previously, and had returned to his work for the first time after that misfortune, had been on duty from nine o'clock one evening until eleven o'clock on the next morning, but one, with only two hours and a half for sleep during that period! The engine broke down, the guard was fast asleep in his van, and a passenger train which was following came into collision with the train of which he was supposed to be taking charge.

"On an Irish railway, an engine driver, whose ordinary duties extended from 5 A. M. till 10 P. M., with three hours' intermission, fell asleep from overwork, and caused an accident.

"At no great distance from Birmingham, in one case, a signal-man had been on duty for twenty-six hours; and there were engine drivers and firemen, in another case, whose average duty amounted to sixteen hours a day, but who had been out for nineteen, twenty-one, and twenty-six hours. At Nortonman a pointsman worked habitually for eighteen hours a day.

"The engine-driver of a coal train near London, was at work from 6 A. M. one day until 8.30 the next morning. The engine-drivers in North Wales were occasionally kept out for twenty-three hours; and the ordinary duties of a station-master on the South-West of London, extended over sixteen hours on week days, and thirteen hours on Sundays. Certain other men came on duty at six A. M., and were sent out with a fresh train after working to between 10 and 11 P. M., and others again remained on duty from the middle of one day to the evening of the next day.

"These and other instances of over-work of servants are examples of one way in which accidents are caused. There are other causes which are equally inexhaustible, but there are none which are more discreditably to the directors and managers of railways.

"One collision brought to light the case of a little girl, thirteen years of age, who was doing duty as gate-keeper and signal-man at an important post in Staffordshire. In other cases, a little boy was acting as pointsman in Lancashire; a youth of sixteen was doing regular duty of fifteen hours daily in a midland county; another youth was in charge of telegraph instruments in Kent, and, although these instruments were intended specially to provide for the safety of the traffic, he was saddled with numerous other duties which rendered it impossible for him to attend to them. A youth of nineteen, also was found to have been in charge of a long train in North Wales, who had only once previously been on the line, who knew nothing of the running of the trains, or of the company's regulations, and who had not been provided with a watch, a time-table, or a book of rules.

"Over-work, as we have already stated, tends to occasion want of discipline; and sometimes regulations are disobeyed from the want of means, or from the force of circumstances. Time-tables are so drawn up that they cannot be carried out. Re-

gulations are printed and supplied to the servants of a company which are not suitable, and which they are punished for not complying with when an accident happens."

After pointing out "in extenso," the common causes of accidents, the modes of overcoming or removing them, and the precautions and system of management which the public had the right to insist upon being adopted and carried into effect, the article concludes thus.

"The sum of our conclusions may be stated in a very few words. The means of railway control which may best be made available for the benefit of the public are competition and publicity. Competition produces convenience, and publicity caution. By a judicious encouragement of competition, or in other words, by preventing those former combinations from being made legal which would tend to neutralize this valuable resource, as much accommodation may be obtained for the public as they can reasonably expect, and more than they could get in any other way. Publicity would be gained by the Government's placing at once at the disposal of the press and the public, that timely information as to the true causes of accident which they have a right to possess. Responsibility would then be attached to the higher officers of railway companies; error would be exposed, and truth proclaimed; warnings would be afforded, and instruction imparted; the lessons of experience would be prominently set forth, and would, in a greater degree than at present, be practically enforced; and an increased measure of precaution, upon which safety principally depends, would, without doubt, eventually be ensured."

Whoever deserts his duty, to give himself up to occupations which suit his taste, (how plain soever they may appear,) does nothing acceptable to God or beneficial to himself, since in fact, he seeks his own gratification. God must be served according to his will; we cannot serve him as we choose. What religion is that which refuses compliance with the will of God?

## THE FRIEND.

THIRD MONTH 15, 1862.

### SUMMARY OF EVENTS.

**Foreigns.**—Liverpool advices to the 26th ult. Orders had been received at Sheerness to dismantle all the gunboats lately prepared for the anticipated difficulty with Africa.

The Daily News and Star print, with favourable comment, the permission of Secretary Seward, allowing the British troops to pass through Maine.

It is reported that a number of English steamers have been insured to run the blockade of the Southern ports of the United States.

The address of the French Assembly, in reply to the speech of Napoleon, while regretting the existence of the civil war in America, expresses a confident belief that the war will be all the shorter, if not interfered with.

The terrible inundations, in Germany, from the rising of the rivers, had caused great distress and irreparable damage. The floods extended all over the north and east of France toward the Belgian boundary.

The Liverpool cotton market was active, at a small advance. Sales of the week, 85,000 bales. Stock in port, 473,000 bales, including 176,000 American. Breadstuffs, dull and declining.

**UNITED STATES.**—On the 7th inst., the President transmitted a message to Congress, recommending the adoption of a joint resolution, which shall declare in substance that the United States ought to co-operate with any State which may adopt gradual abolition of slavery, giving to such State pecuniary aid to be used by any such State in its discretion to compensate for the inconveniences, public and private, produced by such a change of system. He recommends this as an initiative step, anticipating important results from it. It

was referred to the Committee of the Whole on the State of the Union. A bill for the employment of the deserted slaves in South Carolina, and for the occupation and cultivation of lands, passed the Senate on the 10th inst. vote of 26 to 14. The two District Committees in the House and Senate have decided to report a bill for the immediate abolition of slavery in the District of Columbia. The Senate has passed the House bill, which prohibits all officers, soldiers, &c., in the service of the government, from serving in the rebel army.

**New York.**—Mortality last week, 456. Under five years of age, 231. On the 8th inst., the banks of this city held \$30,436,644 in specie. The premium for gold, 2 per cent. The market for grain on the 13th was less active. Sales of Spring wheat, \$1.22 a 1.24; white Michigan, \$1.47 to 1.50; oats, 35 cts. a 40 cts.; yellow corn, 58 cts. a 59 cts.

**Philadelphia.**—Mortality last week, 293. Red wheat, \$1.32 a 1.31; rye, 74 cts.; oats, 36 cts. a 38 cts.; new yellow corn, 53 cts. a 55 cts.

**The War.**—Military operations have become so extended, that it is difficult to present a clear view of them, in the narrow limits assigned for this purpose.

**Arkansas.**—A despatch from Gen. Halleck, on the 10th inst., announces that the U. S. forces, under Gen. Curtis, had defeated the rebel army commanded by Price and McClellan at the river, and that the remainder of the Federal troops were killed and wounded; the loss of the rebels, who were completely routed, was still greater.

**Missouri.**—The rebel forces at New Madrid having been defeated and reinforced from Columbus and Memphis, are reported to be formidable in number, and strongly entrenched. The Union army commanded by General Pope, was close at hand, and a battle was daily expected on the 9th inst.

**Tennessee.**—The military restrictions on trade between the States of Kentucky and Nashville, have been removed, and post-office facilities have been extended to the city and various parts of the State. The U. S. forces have occupied Murfreesboro, thirty miles south of Nashville. The rebel army numbering about 25,000, had retreated into Alabama. Accounts from Memphis represent much activity at present there, and the fight which will be soon taken by the U. S. army. All the gold and silver in the banks and the treasures of private individuals, had been sent to New Orleans for safety. No accurate statement has been given of the loss of life at the capture of Fort Donelson. From a comparison of the different accounts it appears that not less than two thousand men were killed on both sides, and three thousand wounded in this sanguinary conflict.

**Virginia.**—Leesburg, Loudoun county, has been occupied by a part of Gen. Banks's command. The U. S. forces have extended their lines in the valley of the Shenandoah, taking possession of such points as appeared desirable. On the 10th inst., it was not doubted at Washington, that the rebels had evacuated Centerville, Winchester, and other important points, indicating a general falling back of their forces. On the 11th, the U. S. forces took peaceful possession of Manassas. The so-called blockade of the Potomac by the rebel batteries is considered virtually at an end. Gen. Hooker reports that all the rebel batteries opposite his division have been deserted, and the guns spiked. He has taken some double pieces of cannon. On the 8th inst., an unlooked-for messenger had a portion of the rebel force on the Fronton Roads. The rebel iron plated steamer Merrimac came out of Norfolk harbor, moved slowly down the channel leading to Newport News, and steamed direct for the United States sailing frigates Cumberland and Congress, which were lying in the mouth of the James river. As soon as she came within range of the Cumberland, the latter opened fire, but the balls had no effect on her. In the meantime the rebel steamers Yorktown and Jamestown came down the James river, and joined in the engagement. The Merrimac kept on her course, and on the 10th inst. she was seen to enter the channel and lay open her sides. This movement was repeated, and then the steamer started for the Congress. The latter having had a sharp engagement with the Yorktown and Jamestown, and having no regular crew on board of her, she was obliged to surrender. The officers were taken off by Jamestown, but the crew were to be taken by the Congress.

The vessel was then fired. The Minnesota attempted to engage in the conflict, but ran aground off near Newport News. The frigate Cumberland sank, carrying down a large part of her crew; some escaped by swimming to the shore, and others were seen clinging to the sides of the attacks of the Merrimac, her rangers might have proceeded much further but for the arrival of the new iron clad steamer, the Monitor, which entered the roads from New York in the evening, and at once went to the rescue of the Minnesota. The Monitor was attacked by

the Merrimac and all the rebel boats that night, and, on the following day, but least begun off without sustaining any injury.

**North Carolina.**—General Braxide's command have taken possession of Winton, and were moving toward Suffolk, Va., a station of importance on the Sea Board and Roanoke Railroad.

**Georgia.**—Affairs in the neighbourhood of Savannah, at the latest dates, had not changed. Com. Dupont with his fleet has taken Brunswick, and secured the control of the whole sea coast of the State.

**Florida.**—Fernandina, and the river and town of St. Mary's have been occupied by the U. S. forces. The fortifications at these places were very strong, but the rebels, in the approach of Com. Dupont's fleet, went out attempting resistance. Fort Clinch, which was the first place seized by the rebels, has been relinquished.

**Southern Items.**—A despatch from Atlanta, Ga., states that Murfreesboro, Tenn., has been taken by the Union forces, and that Gen. Johnston has retreated with the rebel army to Decatur, Ala., a station on the Memphis and Charleston Railroad.

The rebel Congress in session, at Richmond, has adopted, by a vote of 71 to 11, a resolution directing the military commanders to destroy all the cotton and tobacco that is in danger of falling into the hands of the U. S. government.

A number of Unionists have been discovered and arrested in Richmond.

Specie was quoted in Richmond at 40 a 50 per cent. premium.

Bishop Andrews has postponed indefinitely the General Conference of the Methodist Episcopal Church, South, which was to meet at New Orleans on the 1st proximo.

There is no great scarcity of necessaries at the South, though many articles, such as tea, coffee, butter and salt, and many of the sweet potatoes are abundant and cheap, and many persons make them their chief article of food.

The rebels have established powder mills in Virginia, South Carolina, Georgia and Alabama.

The people of the South are warmly urging and demanding that Jeff. Davis, the President of the Confederacy, should take the field personally.

The rebel legislature at Memphis, Tenn., after several ineffectual attempts to transact business, finally dispersed. Gov. Harris was using all his efforts to rouse the people to renewed exertions for the rebel cause, but with only partial success.

### RECEIPTS.

Received from Jesse Hall, agt., O., for Nathan Cook, \$2, vol. 35; from Alfred Mearns, agt., O., \$2, vol. 35, and for John Hoyle, Senr., John Hoyle, Jr., J. M. Grew, and F. M. Grew, \$2 each, vol. 35, for J. C. Hill, \$5, vol. 14, vol. 34; from T. S. Cobb, Mich., \$2, vol. 34.

### TRACT ASSOCIATION.

The Annual Meeting of the Tract Association of Friends will be held in the Committee-room of Arch Street Meeting-house, on Fourth-day evening, the 26th instant, at 8 o'clock. Members of the Association and other Friends interested are invited to attend.

CHARLES J. ALLEN, Clerk.

Phila., Third month, 1862.

### ANNUAL MEETING OF THE CONTRIBUTORS TO THE ASYLUM.

A Stated Annual Meeting of the "Contributors to the Asylum for the Relief of Persons Deprived of the Use of their Reason" will be held on Fourth-day, the 19th of Third month, 1862, at 8 o'clock, P. M., at Arch Street Meeting-house, Philadelphia.

WILLIAM BETTLE, Clerk.

**WEST-GROVE BOARDING-SCHOOL FOR GIRLS,** (ON THE PHILADELPHIA AND BALTIMORE CENTRAL RAILROAD.)

The Summer Session will open on Second-day, the 5th of Fifth month next.

For information and circulars, address

THOMAS COSMAD, Principal,  
West-Grove P. O., Pa.

**MARRIED,** on the 15th of First mo., 1862, at Friends' Meeting, London Grove, Chester Co., Pa., Lewis Presby and ENNA T. PHILLIPS.

FILE & MELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

Recent Exploring Expeditions.

(Continued from page 222.)

THE POLAR REGIONS.

*The Polar Expedition of Dr. Hayes.*—The return of Dr. I. I. Hayes, who set sail from Boston, July 10, 1860, for the purpose of adding to our knowledge of the Arctic Regions, and especially of ascertaining whether there is an open Polar Sea, has already been mentioned in this journal (xxvii, 452). Immediately after his arrival in Boston he addressed a letter to Henry Grinnell, Esq., President of the American Geographical Society in New York, and on the 13th of November he made a public statement before the same society, under whose auspices in part he went forth, in respect to the results which his expedition accomplished. A few days later he addressed the Academy of Natural Sciences in Philadelphia upon the same subject. Full reports of these communications have been made in the newspapers of the day, but so far as we are aware Dr. Hayes has not yet printed any complete authentic account of his voyage. Indeed it is too soon to expect him to do so.

In a letter addressed to Prof. B. Silliman, Jr., he speaks as follows in reference to one of these addresses: "You will understand that I do not undertake in it a discussion of results, for my materials are yet unreduced. I shall merely describe what I saw and what was done in behalf of the science of the Arctic regions. My materials are I believe of much value. Since the death of A. Sonntag I have laboured almost alone, and of course I have not done all that might have been accomplished by a corps of workers. The duties of my command occupied much of my time and I embraced every opportunity to collect photographic views. Of these I have nearly two hundred, many of them quite good. My scientific friends will, I trust therefore be lenient towards my imperfections or deficiencies in my results. The photographic views especially of the glaciers will not be without a certain scientific value.

"The expedition has been for the most part fortunate and satisfactory."

Awaiting from Dr. Hayes a more elaborate statement of the voyage, we place upon record here for convenience of reference a few of the principal data.

The United States, Dr. I. I. Hayes, commander, set sail from Boston, July 10, 1860, and returned to that port October 23, 1861. The first stopping place was Proven, in lat. 72°, then Upernivik, and then Tessuisak, in lat. 73° 40', from which he set sail, (going northward through Melville Bay,) Aug. 22, 1860. After various repulses by the ice, the vessel entered Smith's Straits, Sept. 2. The ice was so extraordinarily thick that it prevented any access to the western coast of the straits, and Dr. Hayes contrary to his plan was driven into winter quarters on the east coast about ten miles north of Cape Alexander and about twenty miles south in latitude, and ninety miles south by coast line of Dr. Kane's winter quarters in 1854-5. He named his harbour Port Foulke after a distinguished member of the Philadelphia Academy. The loss of Dr. Hayes's dog team, the death of his chief scientific reliance, A. Sonntag, the peculiar condition of the ice and other difficulties seriously interfered with the proposed sledge journey to the North,—but persevering, amidst great obstacles, Dr. Hayes succeeded in going as far north as 81° 35' latitude which he attained on the 18th of May. He returned to his winter quarters in June. The remainder of the summer he spent in scientific researches and in making ready for his return voyage. He saw no reason to suppose that by spending a second winter in that high latitude he could with his reduced force accomplish enough to warrant the increased expenditure. The results of his voyage are thus briefly stated:

"1. A detailed survey of the west coast of North Baffin Bay, Smith Strait, Kennedy Channel, and the extension of the survey to the north of any previous explorations. This survey embraces about 1,300 miles of coast line.

"2. The discovery of a new channel opening westward from Smith Strait, parallel with Jones' and Lancaster Sounds.

"3. A detailed survey of the coasts of Whale Sound, and the coasts to the north and south of it. This survey embraces about six hundred miles of coast line.

"4. Surveys of glaciers by which their rate of movement is estimated.

"5. Complete sets of pendulum experiments.

"6. Sets of magnetic experiments at Port Foulke, Cape Isabella, in Whale Sound, at Upernivik and Godhavn.

"7. Topographic and hydrographic surveys, including tidal observations.

"8. Large collections of specimens of natural history, and geological and mineralogical collections.

"9. A continuous set of meteorological observations.

"10. An extensive collection of Photographic views.

"11. The accomplishment of a more northern latitude than ever before attained upon land.

"12. Fresh confirmation of theories respecting the open Polar Sea."

*Torrell's Polar Expedition.*—The Swedish Polar expedition under Torrell which was fitted out with extraordinary completeness has failed in

its chief objects. The ships lay for more than a month in the Treurenberg Bay, on the north coast of Spitzbergen, shut in by pack ice, and were afterwards much hindered by bad weather and other difficulties, while the sled expedition to the North Pole was wholly given up on account of the floating ice.—*Petermann's Journal.*

*The North Atlantic Telegraph Explorations.*—Since the possibility of a transatlantic telegraph was so successfully demonstrated by C. Field and his associates in their great experiment of 1858, various plans have been suggested for accomplishing the same results in a manner more likely to be of lasting service. The scheme upon which most attention has been bestowed, proposes to run a line from the North of Scotland to the Faeroe Islands a distance of about two hundred and twenty-five miles, thence to Iceland about three hundred miles, thence to South Greenland about six hundred miles and thence to the coast of Labrador also about six hundred miles. The greatest of these intervals in which the telegraph wire would necessarily be submerged is less than a third of the distance between the points on the coasts of Ireland and Newfoundland which were successfully united in the experiment above referred to.

In one of the meetings of the Royal Geographical Society last year, this new project was discussed, and a great deal of fresh matter pertaining to the physical geography of the regions specified, was brought forward. Five papers were read. The first by Capt. McClintock, R. N., gave an account of his soundings on the *Buldog* in the summer of 1860. The second by Sir C. T. Bright gave a report of the soundings on the *Élix* under command of Capt. Young. The third paper was a report of an exploration of the Faeroes and Iceland by Dr. John Rae. The fourth paper was by J. W. Taylor, Esq., on the Fjords of South Greenland, and the fifth was by Col. T. P. Shaffner on Electric Circuits. These papers are printed in the Proceedings of the Royal Geographical Society, Vol. v, No. ii.

From the paper of Sir Leopold McClintock we make the following extracts in relation to the soundings which were made under his directions.

"Leaving the Faeroe Isles on the 6th of July, we sailed across towards Ingólfsfönd upon the southeast shore of Iceland, a distance of 280 miles, and found the depth to be generally less than 300 fathoms, the greatest depth being 650 fathoms. The specimens of the bottom consisted chiefly of fine sand, or mud and broken shells, and, in two instances, of minute volcanic debris; the temperature of the sea at 100 fathoms below the surface scarcely varied from 46°. The depth of water upon this section of the telegraph route is so moderate that it would be an easy matter to lay down a cable between Faeroe and Iceland. Since my return I find that Beru Fiord, upon the east coast of Iceland, has been examined with a view to its selection as the landing-place for a cable; it is about 80 miles to the northeast of Ingólfsfönd, and has the advantage of being somewhat nearer to Faeroe."

\* \* \* \* "Five days of very calm weather enabled us to complete the line of soundings between Faxø Bay (on the southwest coast of Iceland) and the southeast coast of Greenland. The depths generally were very regular, the greatest being 1572 fathoms, and situated in mid-channel; but within 40 miles of Greenland the depth decreased from 806 fathoms to 223 fathoms, in the short distance of 31 geographical miles.

"The nature of the bottom was chiefly ooze, that is, fine mud partly consisting of minute organic remains; but near to Iceland volcanic mud and sand were more frequently brought up. The temperature of the sea at 100 fathoms below the surface gradually diminished from 46° degrees near Iceland, to 39° off the Greenland coast. Circumstances which it is unnecessary to allude to here prevented me from commencing before 13th August the line of soundings between the southwest coast of Greenland and Hamilton Inlet on the Labrador coast, a distance of 500 miles.

"The Greenland shore was still blockaded by such a vast accumulation of drift-ice that we could not approach within 45 miles of it, at which distance the depth was ascertained to be 1175 fathoms. This line of soundings to Hamilton Inlet shows that the greatest depth—which is in mid-channel—is 2032 fathoms; and that the decrease is very gradual until within about 80 miles of Labrador, where there is a change from about 900 fathoms to 150 in 7 or 8 miles.

"The ocean-bed consisted of ooze, but with fewer microscopic organisms than previously met with, whilst the average temperature of the sea at 100 fathoms below the surface was 40°.

"Seven days were all I could devote to the examination of Hamilton Inlet. Its length was found to be 120 miles, whilst its width varies from about 15 miles at its mouth to scarcely half a mile at the "Narrows," which are about half way up to its head, and above which it expands into an inland sea of about 20 miles in width. All this great inlet was rapidly explored, its main channel from the "Narrows" to seaward was sounded, and the whole laid down by Reed, master and assistant-surveyor, with sufficient accuracy for ordinary purposes; but these soundings are not nearly sufficient to meet the requirements of a cable route, nor even to decide whether a cable should be landed there.

"We found the depths to be very irregular, and seldom sufficient to secure a submerged cable from disturbance by icebergs. A perfect survey is absolutely necessary, and may show that the shallow water and reefs of rocks, which to our imperfect knowledge appeared intricate and unfavourable, may not only be avoided, but may afford a sure protection against the intrusion of icebergs within the mouth of the inlet. There are some small rocky islets off the mouth of this inlet, and of these Horn Islets lie nearly in the middle, and connect the widest channel entrance to about 5 miles; the greatest depth obtained in this channel was 49 fathoms. Had the depth of water amounted to 70 fathoms in as far as this position, I could not hesitate in pronouncing favourably of Hamilton Inlet as a terminus to the cable from Greenland."

*Be Little, Low and Poor.*—The Lord God of my life be thy Teacher; point thy mind to the pure seed of the Kingdom, and open it to thee;—make thee so little, that thou mayst enter into it, and keep thee so low and poor, that thou mayst abide in it;—managing these troublesome times in the outward, for thy advantage in the inward; that the city and temple of the living God may be built in it, and thou mayst know him daily dwelling and walking therein. Thus, mayst thou be married to

the Lord, and become one spirit with him; finding that daily removing from thee, [which is to be removed,] even by the mighty arm and pure operation of his Spirit, till all that is contrary be done away; then may thy soul dwell with its Beloved, in fullness of joy, life, and peace for evermore.—*From a Letter of Isaac Pennington.*

#### Martyrdom of Patrick Hamilton.

Within a few hours of the sentence passed on him by the Archbishop of St. Andrew's, the stake was ready for the martyr, and the martyr for the stake. The spirit of power and of love was upon him. The officials of the archbishop offered him his life if he would recant the confession he had made in the cathedral. But in vain. The executioners then stepped forward and bound him to the stake by an iron chain. "Thus bound, he prayed like his Master, for his persecutors; for "there were many of them blinded by ignorance, that they knew not what they did." For himself he prayed that Christ "would strengthen him by his Holy Spirit, that he might steadfastly abide the cruel pains of fire." The fagots were kindled three, but the flames took no steady hold of the pile, and the good man's sufferings were protracted in consequence. The flames were at last thoroughly kindled. But, surrounded by them, he still remembered in his torments his widowed mother, and commended her with his dying breath to the care and sympathy of his friends. "When nearly burnt through his middle by the fiery chain, a voice in the crowd of spectators called aloud to him, that if he still had faith in the doctrine for which he died, he should give a last sign of his constancy. Whereupon he raised three fingers of his half-consumed hand, and held them steadily in that position till he ceased to live. His last audible words were "How long, Lord, shall darkness overwhelm this kingdom! how long wilt thou suffer this tyranny of men? Lord Jesus, receive my spirit." The execution lasted for nearly six hours; "but during all that time," says one who witnessed with profound emotion the whole scene—Alexander Alane, then a canon of St. Andrew's but thereafter a reformer and sufferer for Christ's sake—"the martyr never gave one sign of impatience or anger, nor ever called to heaven for vengeance upon his persecutors; so great was his faith, so strong his confidence in God."

Thus tragically but gloriously died, on the 29th of February, 1528, when only four-and-twenty years of age, this noble martyr in a noble cause. "The death of Sir Patrick, the father, on the streets of Edinburgh eight years before, was the death of a hero of chivalry," says Professor Lorimer, in his Life of Patrick Hamilton: "the death of his son, at St. Andrew's, was the death of a hero of religion, in the noble battle of God's truth, in the high service of the religious emancipation of his country. In both sire and son we discover the same high sense of honour and duty, as they severally understood what honour and duty required at their hands; in both the same intrepid daring in the presence of danger, the same forwardness in the path of self-devotion. But along with these grand resolute qualities there were also exhibited some striking contrasts. The father died a victim to the faction and ambition of his powerful house: the son gave himself a sacrifice to his country and the church of God. The father poured out his blood in the tragic rage of insulted honour, and to vindicate his good name as a soldier and a Hamilton; his son yielded his life with the calm and gentle, but resolute, fortitude of a martyr, praying with his last breath, "Father, forgive them." The brave Sir Patrick died the last, or all but the last,

of the Scottish Knights of the middle age, the age of chivalry. His son had nothing in him of the middle age, save the noble and generous blood which it transmitted to him. He was the first illustrious Scotsman of modern times.—*From "Work and Conflict."*

*Flying Flaxes of Ceylon.*—There are more singular inhabitants of Ceylon trees than monkeys. The flying-flaxes hang from them like fruit. The flight of these creatures is directed by means of a membrane attached to the inner-side of each of the hind-legs, and kept distended at the lower extremity by a projecting bone, just as a fore-and-aft sail is distended by a "gaff." "Over the entire surface of the thin membrane of which they are formed, sentient nerves of the utmost delicacy are distributed, by means of which the animal is enabled during the darkness to direct its motions with security, avoiding objects against contact with which, at such times, its eyes and other senses would be insufficient to protect it." By day they suspend themselves from the highest branches of the silk-cotton trees, hanging by the claws of the hind-legs, with the head turned upward, and pressing the chin against the breast. At sunset, taking wing, they hover, with a murmuring sound occasioned by the beating of their broad membranous wings, around the fruit-trees, on which they feed till morning, when they resume their pensile attitude as before. They hang in such prodigious numbers, that the braucles often give way beneath their accumulated weight. They fly in clouds as thick as bees or midges. "When at rest or asleep, the disposition of the limbs of the flying-flax is most curious. At such times, it suspends itself by one foot only, bringing the other close to its side, and thus it is enabled to wrap itself in the ample folds of its wings, which envelop it like a mantle, leaving only its upturned head uncovered. Its fur is thus protected from damp and rain, and to some extent its body is sheltered from the sun. As it collects its food by means of its mouth, either when on the wing or when suspended within reach of it, the flying-flax is always more or less liable to have the spoil wrested from it by its intrusive companions before it can make good its way to some secure retreat in which to devour it unmolested. In such conflicts they bite viciously, tear each other with their books, and scream incessantly till, taking to flight, the persecuted one reaches some place of safety, where he hangs by one foot, and grasping the fruit, he has secured in the claws and opposable thumb of the other, he hastily reduces it to lumps, with which he stuffs his cheek-pouches till they become distended like those of a monkey; then suspended in safety he commences to chew and suck the juices, rejecting the refuse with his tongue."

*Strong Arguments or wise Considerations in the fleshly Wisdom.*—As touching disputes, indeed, I have no love to them: Truth did not enter my heart that way, nor do I expect to propagate it in others that way; yet, sometimes a necessity is laid upon me, for the sake of others. And truly, when I do feel a necessity, I do it in great fear; not trusting in my spear or bow, I mean, in strong arguments or wise considerations, which I (of myself) can gather or comprehend; but, I look up to the Lord for the guidance, help, and demonstration of his Spirit, that way may be made thereby in men's hearts for the pure seed to be reached to, wherein the true conviction, and thorough conversion of the soul to God, is witnessed. I had far rather be feeling Christ's life, Spirit, and power in my own heart, than disputing with others about them.—*Isaac Pennington.*

## The Forgotten Sheaf.

Selected.

Some weeks after the close of harvest, when all the grain had been ripened, reaped, and safely stored, I was walking with a farmer across one of his own bare stubble fields, when suddenly in a hollow spot we came upon a single sheaf of corn lying on the ground alone. The owner of the field, yielding to a habit, which operated like an instinct, of preserving with scrupulous care every portion of the precious food of man, instantly stooped and grasped the sheaf, with the intention of carrying it home. Some what to his surprise, it did not come easily to his hand, as it would have done in harvest. Thereupon he seized it with both hands and pulled; but it stuck fast and resisted his effort. The reason was soon made plain. In the hurry of that busy sunny day when the dried corn was carried from the field to the stackyard, this sheaf had accidentally dropped from the cart and lain in the hollow unscathed. After the harvest, showers had come; and after the showers, heat. Although the sheaf had been once dry and ready for safe preservation in the granary, it had not continued in that condition, when left lying on the ground. Exposed first to the moisture and then to the warmth, and not turned over or moved for many days, the grains of corn in the sheaf began to smell the ground again. They swelled and burst, and sent down some small roots as if to feel their way. These penetrated into the earth, and tasted its sap, and so grew stronger. Others followed, and now thousands of strong fibres were deeply bedded in the soil and greedily drinking up its moisture. The whole sheaf was glued to the ground, and wholly spoilt. It could not now take its place in the garner; it was unfit for either seed or food. It must needs be cast away as chaff.

The sight was a sad one; the farmer seemed to sigh as he wrenched it violently from the ground, examined its hopelessly corrupt condition, and then threw it away as useless. The kind of the loss more than the quantity, grated harshly upon the instincts of the husbandman. The sight of good grain, that had once been almost saved, turned into corruption again by lying too long on the ground and too close to it, seemed to cast the shadow of a greater sorrow heavily over his heart.

The image of that once rich and promising, but now fallen, ruined, outcast sheaf, remained in my mind all the day; and at night when I was alone, it occupied and absorbed my thoughts. The Lord Jesus, when he was here on earth, often walked through cultivated fields at various stages of their progress; and he seems never to have allowed any prominent fact or feature to pass away, without reading off to his disciples the spiritual lesson which their dead letters contained. When portions of seed fell on the way-side, he warned them against a heedless hearing of the word; when grain that had quickening spring on shallow ground, was seen withering in spring for want of deepness, he pointed out that the early goodness of nubroken hearts soon fades away before temptation; when the stalks that grew among thorns were seen in harvest, standing tall, but white, chaffy, worthless, he spoke of the worldly cares and wealth that choke the word and undo the man; when the fields were lying round him ripe, he lamented that the lost souls were so many, and the winners of souls so few. By his own method in his ministry, I see clearly the lesson that the Lord would have taught, if he had seen the sheaf once ripe, but now rotting because it had fallen back and cleaved again to the ground.

Converts, remember that sheaf of corn, once rustling ripe and dry, a benighted, yellow, golden

treasure, filling the husbandman's bosom, and gladdening his heart,—lying outcast in the furrow now, a black decaying heap. "Let him that thinketh he standeth take heed lest he fall."

Ah! young converts, you are not done with danger yet! The world has a proverb for you, good and useful in its own place;—"Do not halloo till you are out of the wood;" and the Scripture has also its own proverb prepared for your case;—"Let not him that putteth on his armour boast himself as he that putteth it off." When you grow careless or confident, you will certainly stumble. Watch and pray that ye enter not into temptation. The dangers are many and various, but the one which is perhaps most to be dreaded, and to which our attention is at present specially called, is the insinuating, enticing, and deadening power of the world.

The danger of the young convert is like the danger of the sheaf of corn. He has passed through deep waters. His sins, while he felt they were not forgiven, so pressed him down that his heart within him melted and became as water. After he had lain a while in a horror of great darkness, he was led at last into light and liberty. Christ came to him, and his coning was like the morning. At his appearing the shadows flew away. Having no righteousness of his own, he grasped the righteousness of God by faith. Trusting in the blood of Christ for pardon of sin, he enjoyed peace with God.

Well: but perhaps it is a year or two years since he passed, as he believes from death into life; and he walks less tremblingly, less watchfully, less prayerfully, than at first. Worldly company becomes pleasant again, and he begins to think he may enjoy it without sin. Young people near him, who have neither felt their own sins a burden, nor tasted the redeeming love of Christ, go freely into pleasures from which he stands aloof. The old appetite revives. Christ's yoke seems heavy; and he secretly envies the liberty of the world. At that moment, perhaps, some one suggests that he might allow himself more liberty and yet be safe. When he has, at his own hand and without seeking to know his Lord's will, tasted one of world's sweets, a thirst for more secretly springs in his heart, and that thirst soon finds its gratification. Ah, he is *growing into the ground* like the forgotten sheaf. A little more of that, and his very soul will cleave to the dust, a spectacle to men for a while, and the object of divine judgment at last.

Do not cling very close to the world, or drink deeply of its joys: lie loose, and turn often over; lest thou should grow into it, and become like it, and perish with it. Let thy treasure be in heaven, and if thy feet must needs lean on earth, keep them busy in a walk with God, and a work for men. Diligent in business, instant in prayer, and joyful in hope. When weak in thyself, thou wilt be strong in the Lord. "He that endureth to the end, the same shall be saved."

*The Jesuits.*—According to a late published statement, the entire number of members of this remarkable fraternity is now 7231. Of these, 2203 are Frenchmen, 1635 Germans, 740 Spaniards and Portuguese, 563 Italians, 542 Belgians, 349 Austrians, 265 Englishmen, 206 Dutch, 126 Irishmen, 240 North Americans, 220 South Americans and 136 Gallicians. The most considerable Roman Catholic foreign missions are under the charge of the Jesuits. Many of the Italian Jesuits, it is stated, live at home on account of the suppression of their colleges, but great numbers of them have been sent to Germany, Belgium, England, and America.

*The Horse-Hair Worm.*—A gentleman from Detroit had the kindness to send me one of those long thread-like worms, (*Gordius*), found often in brooks, and called horse-hairs by the common people. When I first received it, it was coiled up in a close roll at the bottom of the bottle, filled with fresh water, that contained it, and looked more like a little tangle of black sewing silk than any thing else. When to unwind it, that I might examine its entire length, I placed it in a large china basin filled with water, and proceeded very gently to disentangle its coils, when I perceived that the animal had twisted itself around a bundle of its eggs, holding them first in a close embrace. In the process of unwinding, the eggs dropped away, and floated to a little distance. Having finally stretched it out to its full length, perhaps half a yard, I sat watching to see if this singular being, that looked like a long black thread in the water, would give any signs of life. Almost immediately, it moved towards the bundle of eggs, and, having reached it, began to sew itself through and through the little white mass, passing one end of its body through it, and then returning to make another stitch, as it were, till the eggs were at last completely entangled as in an intricate net-work of coils. It seemed to me almost impossible that this care of off-spring could be the result of any instinct of affection in a creature of so low an organization, and I again separated it from the eggs, and placed them at a greater distance, when the same action was repeated. On trying the experiment a third time, the bundle of eggs had become loosened, and a few of them dropt off singly into the water. The efforts which the animal then made to recover the missing ones, winding itself round and round them, but failing to bring them into the fold with the rest, because they were too small, and evaded all efforts to secure them, when once parted from the first little compact mass, convinced me that there was a definite purpose in its attempts, and that even a being so low in the scale of animal existence has some dim consciousness of a relation to its off-spring. I afterwards unwound also the mass of eggs, which, when coiled up as I first saw it, made a roll of white substance about the size of a coffee-bean, and found that it consisted of a string of eggs, measuring more than twelve feet in length, the eggs being held together by some gelatinous substance, that cemented them, and prevented them from falling apart. Cutting this string across, and placing a small section under the microscope, I counted on one surface of such a cut, from seventy to seventy-five eggs; and estimating the entire number of eggs according to the number contained on such a surface, I found that there were not less than eight millions of eggs in the whole string. The fertility of these lower animals is truly amazing, and is, no doubt, a provision of nature against the many chances of destruction to which these germs, so delicate, and often microscopically small, must be exposed.—*Professor Agassiz, in the Atlantic.*

All our times are in God's hand; our time to come into trouble, our time to continue in trouble, and our time to come out of trouble, is at His disposal. God seldom comes at our time, always at His own; and if our deliverances from dangers, our success in our endeavours, our supply of wants, had come sooner or later, it had not been so good for us.

How needful that our daughters should be no less patterns of decorum and modesty in their dress and appearance, than in the more important parts of their conduct.

For "The Friend."

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

FRISCILLA DAVES.

Priscilla, daughter of Joseph and Jenima Thomas of Willistown, Chester County, was born in 1726 or 1727; she was educated as a member of the Society of Friends, and was orderly in her life and conversation when quite young. In the year 1747 she was married to Abraham Daves, and became a member of Germantown Particular Meeting. Some time after her marriage, being favoured with precious visitations of Divine Love, she gave up more unreservedly thereto, and became more exemplary in her Christian walk. As she continued obedient to the openings of Truth in her mind, she grew in grace and in religious experience, and about the year 1758, a gift in the ministry of the gospel was committed to her. Her communications were sound and very acceptable to her friends. They were mostly delivered in few words or short pathetic sentences, which being spoken in much awe and godly fear, under the Divine anointing, ministered grace to the hearers.

She became a very useful and serviceable member in the Church, being well qualified to assist Friends in the support of our Christian Discipline, in an honest, faithful and loving spirit. As she grew in years, she evidently grew in grace and in the saving knowledge of the Blessed Truth.

She was of a meek and quiet spirit, more in substance than in show, was one who endeavoured to train up her children in the fear of God, and in commendable industry. She was faithful as a wife, kind and helpful as a friend and neighbour, and greatly beloved. In disposition she was affable, prudent in conduct, endued with a becoming modesty and sweetness of spirit.

Her last illness was short, the severe pain of which she bore with christian patience and resignation to the Divine will. She said she had not, in health, been unmindful of that time, and that she felt easy with her then condition, thinking that she was nearly done with a troublesome world. Her death took place Eighth month 1st, 1772, she being in the forty-sixth year of her age.

JOANNA SYKES.

Joanna, daughter of Robert and Ann Murken, was born in Nottingham Township, Burlington County, New Jersey, in 1683 or 1684. Her worthy parents gave her a religiously guarded education, and being favoured with the convictions of Divine grace in early life, she embraced them in love, and became exemplary in life and conversation. Thus, she was enabled to avoid the follies and vanities of this wicked world, and to turn a deaf ear to its many allurements. As she grew in years, through faithfulness to the renewed extendings of Divine instruction, she grew in heavenly knowledge, and received the sweet adorning of a meek and quiet spirit. Her words tended much to edification, and her example was consistent and savoury, in harmony with the precepts of the Gospel of Christ. She manifested her zeal for the public worship of her Heavenly Father by her steady attendance of meetings appointed for that purpose, and whilst in them, was an earnest labourer after inward retirement of soul, and a participator in true spiritual communion.

In the year 1704, she was married to that valuable Friend, John Sykes, with whom she lived in near love and unity for sixty-seven years. When about forty-five years of age she received a gift in the ministry of the gospel of Christ, and was much esteemed for her faithful labours therein. Her me-

morial says, she was "helpful to build up the waste places of our Zion, manifesting the fruits of the Spirit of life in Christ Jesus to abound, and under the influence thereof [she] was frequently concerned for the young and rising generation, exhorting them to give up their time when young to serve the Lord, and to come to an experimental knowledge of the life and power of Heavenly religion in themselves. As she lived near the truth, it preserved her lively therein, and she was established firmly on the immovable foundation, in purity and peace. Her blessed Saviour crowned her last days with serenity of mind, enabling her, not only to bear the sufferings of a severe illness with patience, but to speak very powerfully to her Friends and neighbours who came to see her before her close. Her words were very reaching to all, particularly to the young. She exhorted these to give up the flower of their days to the service of the Lord, assuring them, that in so doing they would find peace. She said it was at this time a great comfort and satisfaction to her, that she had given up in obedience to the Truth when young. It had been a stay to her in youth, and now in old age it was a staff to lean upon, and afforded such peace as to make her feel quite easy. She believed that her day's work was nearly accomplished, and nothing appeared in her way. Thus in peaceful trust and holy resignation to the will of her God, she departed this life Ninth month 20th, 1772, being in the eighty-ninth year of her age. Her friends of Chesterfield, of which meeting she was a member, say, "It may justly be added, that she was a loving wife, a tender mother, and a kind neighbour."

JANE ELLIS.

Jane, a daughter of John Hughes, was born in Merionethshire, in the principality of Wales, in the early part of the year 1683. Her parents with their family, removed to Pennsylvania in the year 1698, and settled at Gwynedd, the first meetings of Friends there being held alternately at the houses of John Hughes and John Humphreys.

Jane was religiously inclined from childhood, and in the year 1702, she was married to Thomas Ellis, a truth seeking young man, then recently received into membership amongst Friends. They lived together in great harmony, he proving a valuable man and serviceable in Religious Society, of which he was for many years an elder.

In the year 1720, she passed through many baptisms in the persuasion that she was called to the work of the ministry. Deep and various were the conflicts she endured before she submitted to the Divine requisition in this respect, but through the Lord's assisting grace, having at last given up her own will, she was opened in public testimony as a living minister of the gospel. Her labours of love were highly acceptable to her friends at home, and to the churches abroad, where she was at times led in gospel authority to plead her Master's cause, and to proclaim the blessed doctrine of life and salvation. In the year 1751, in company with Rebecca Harvey, a valuable member of the gospel, one of the daughters of Griffith Owen, she visited Friends generally to the North and East. She also visited the meetings of Friends in Maryland, in company with Hannah Hurlford. All such concerns she was careful to lay before her friends at home, that she might have the unity of the church in her travels for the promotion of the Truth, and the accounts she brought home with her evinced that her labours of love were to the satisfaction of her friends abroad. She was frequently employed in the weighty work of visiting the families of Friends, in which she had often very acceptable service.

Her deportment was meek and loving, her conversation familiar and cheerful, so that her society was attractive, and she gained the love and esteem of those who knew her. As a wife she was loving, as a parent tender, as a mistress kind, prompt to notice and nourish any appearance of good in those under her care, and disposed to discourage every thing tending to evil. In the church she was a nursing mother, faithful in labouring to promote love and charity amongst all its members. Her ministry, which was sound and edifying throughout her long life, continued lively and awakening, even after her memory had much failed through age. She often expressed in her public testimonies towards her close, that she was waiting for her final change, expecting it every day and every night, that it was rather her choice to be released, yet, that she submitted all to the Divine will. She was much concerned for the prosperity of Truth, and often exhorted her children and grandchildren to walk in the fear of the Lord.

She lost her beloved husband in 1760, after which she resided with her married children. She was diligent in the attendance of meetings for worship and discipline, and exemplary in them for her humble waiting on the Lord for Divine counsel and wisdom, until in extreme old age infirmity of body confined her at home for some months. Her love, however, to the Truth was not lessened, neither was her attachment to meeting with her friends for social worship, and she at times requested Friends to come and sit with her in her chamber to wait upon the Lord. These opportunities were often highly favoured, and very comfortable to those gathered with her, and she always seemed greatly refreshed, being rejoiced to see her friends, and to feel the Lord's good presence with them. She would urge them not to forget the favour and to come and see her when they could. She appeared always to receive the visits of her friends kindly, and her conversation with them was teaching and edifying, attended with love and sweetness.

During her last illness she uttered many comfortable things. At one time she said, "It is a fine thing at such a time as this to have the Lord to be our friend." She evidently witnessed the Lord's presence with her to the close, which occurred Ninth month 20th, 1772, she being eighty-nine years and six months old. She and her husband had long been members of Exeter monthly meeting. She died at the house of her son in law Thomas Lee, at Oley.

*Snow in Africa.*—The German missionary, Rebbmann, when travelling in the mountainous country of Jagger, (eastern coast of Africa), in 1848, thought he saw in the distant horizon the tops of two mountains covered with snow. The permanent presence of snow in that latitude was thought improbable, and the general conclusion in Europe was, that the missionary had been deceived by some optical illusion. The fact is now fully established, however, by a letter which Dr. Barth, of Berliu, has received from Baron de Becken, who, in company with—Thornton, a geologist, has, after surmounting immense difficulties, succeeded in reaching Kilimandjaro, one of the two mountains seen by the missionary, and intends going to the other, called Kenya. Kilimandjaro is of volcanic origin, and its height, according to the Baron's measurement, is above 20,000 English feet, (6500 metres), and the upper 8000 are covered with snow.

A creature's place is a low place, but a sinner's place is a lower.

## ENDURANCE.

Selected.

If thou faint in the day of adversity, thy strength is small.—Prov. xv. 10.

Faint not beneath thy burden, though it seem  
Too heavy for thee, and thy strength is small;  
Though the fierce raging of the noon-tide beam  
On thy defenceless head untemper'd fall.

Though sad and heart-sick with the weight of woe,  
That to the earth would crush thee—journey on;  
What though it be with faltering steps and slow,  
Thou wilt forget the toil when rest is won.

Nay! murmur not, because no kindred heart  
May share thy burden with thee—but alone  
Still struggle bravely on, though all depart;  
Is it not said that "each must bear his own?"

All have not equally the power to bless;  
And of the many, few could cheer our lot;  
For "the heart knoweth its own bitterness,  
And with its joy a stranger medieth not."

Then be not faithless, though thy soul be dark;  
Is not thy Master's seal upon thy brow?  
Oh! has His presence seal'd thy sinking bark?  
And thinkest thou He will forsake thee now?

Hath He not bid thee cast on Him thy care,  
Saying He careth for thee? Then arise?  
And on thy path, if trod in faith and prayer,  
The thorns shall turn to flowers of Paradise.

Selected.

How great the goodness of the Lord!  
Can any man so dull, be found,  
Whose hardened soul will not be moved  
His love to feel—His praise to sound?  
No! to be still my highest aim  
To measure His almighty love!  
My God has not forgotten me,  
My heart shall not ungrateful prove.

Who, but this God who needs no me,  
First formed me by His wondrous power?  
And though His counsel I reject,  
He leads me on, from hour to hour.  
Who gives my conscience inward peace?  
Who lifts my soul when it would fall?  
Who gives me such that's good to enjoy?  
His gracious hand provides it all.

Then, O my soul! look at this world  
Where He has given thee a place;  
The glory that surrounds thee here,  
Is but the shadow of His face.  
To all these joys thou hast a right,  
Through God's good-will they all are thine;  
For thee did Christ endure the cross,  
That thou might'st sit in His kingdom shine.

And shall I cease to praise my God,  
Refuse His way to understand?  
And shall He call and I not hear,  
Nor see the guiding of His hand?  
His will is written on my heart,  
And strength is given by His word:  
Him will I love with love supreme,  
And all His children in their Lord.  
So shall I best resemble Him,  
If this my gratitude and love,  
Shall stamp His image on my heart,  
And thus my prompt obedience prove.  
So shall His love possess my soul,  
Urged it to keep the path that's right;  
And though, through weakness, I may fall,  
Sin shall not triumph in the fight.  
Oh! may Thy goodness and Thy love  
Always remain before my eyes;  
And give me needful strength to yield  
My soul a living sacrifice!  
In times of joy, may it restrain,  
And comfort me when grief is near;  
And so possess my sinking heart,  
That the last foe shall cause no fear!

**A Destructive Earthquake in Greece.**—While the vicinity of Naples has been subjected to frequent earthquakes, and Mount Vesuvius has reminded the inhabitants of Portici, Resina and the other villages clustering upon its sides, that their

homes may at any moment share the fate that befel Herculaneum and Pompeii, the comparatively quiet shores of Greece have been undergoing to some extent the effects of the same volcanic force. A powerful earthquake has visited the northern part of the Peloponnesus, apparently following in its course the coast of the gulf of Lepanto, from Corinth to Patras; although it fortunately was attended by little loss of life. The weaker structures in the old quarters of Corinth were the first to yield, and many of the streets were rendered impassable by the rubbish of fallen walls. It may be remembered that this same locality was severely tried by a similar calamity, some four or five years since; and the solitary temple which adorns the site of one of the wealthiest and most luxurious cities of ancient Greece was said to have lost one of the few columns that then remained. No masonry, however massive, is able successfully to resist the periodical return of the earthquake, which has proved to be more destructive of the works of antiquity than even the fanaticism of the Turks themselves during the long ages of their dominion in Greece.

## Diamond on War.

(Continued from page 221.)

Now I am compelled to observe, that in the discussion of the lawfulness of war, Dr. Paley has neglected his professed principles of decision and his ordinary practice. His professed principles are these; that the discovery of the "will of God, which is the whole business of morality," is to be attained by reterring, *primarily*, to "his express declarations when they are to be had, and which must be sought for in Scripture."—"Has he sought for these declarations? Has he sought for "Resist not evil," or for "Love your enemies," or for "Put up thy sword," or for "The weapons of our warfare are not carnal," or for "My kingdom is not of this world?" He has sought for none of these; he has examined none of them. He has noticed one of them. His professed principles are, again, that *when our instructions are dubious, we should endeavour to explain them by what we can collect of our Master's general inclination or intention.* Has he conformed to his own rule? Has he endeavoured to collect this general inclination, and to examine this general tendency? He has taken no notice of it whatever. This neglect, we say, is contrary to his ordinary practices. Upon other subjects, he has assiduously applied to the Christian Scripture, in determination of truth. He has examined not only their direct evidence, but the evidence which they afford by induction and implication,—the evidence arising from their general tendency. Suicide is nowhere condemned in the New Testament; yet Paley condemns it, and how? He examines the sacred volume, and finds that by implication and inference, it may be collected that suicide is not permitted by Christianity. He says that patience, under suffering is inculcated as an important duty; and that the recommendation of patience, implies the unlawfulness of suicide to get out of suffering. This is sound reasoning; but he does not adopt it in the examination of war. Could he not have found that the inculcation of peaceableness forms as good an argument against the lawfulness of war, as the inculcation of patience against the lawfulness of suicide? He certainly could have done this, and why has he not done it? Why has he passed it over in silence?

I must confess my belief, that he was unwilling to discuss the subject upon Christian principles; that he had resolved to make war consistent with Christianity; and that, foreseeing her "express declarations" and "general intentions" militated

against it, he avoided noticing them at all. Thus much at least is certain, that in discussing the lawfulness of war, he has abandoned both his avowed principles and his corresponding practice. There is, to me at least, in the chapter "On War," an appearance of great indecision of mind, arising from the conflict between Christian truth and the power of habit,—between the consciousness that war is "abhorrent" to our religion, and the desire to defend it on the principle of expediency. The whole chapter is characterized by a very extraordinary laxity both of arguments and principles.

After the defossilibility of war has been proved, or assumed, in the manner which we have exhibited, Dr. Paley states the occasions upon which he determines that wars become justifiable. "The objects of *just wars*," says he, "are precaution, defence, or reparation."—"Every *just war* supposes an injury perpetrated, attempted, or feared."

I shall acknowledge, that if these be justifying motives to war, I see very little purpose in talking of morality upon the subject. It was wise to leave the principles of Christianity out of the question, and to pass them by unnoticed, if they were to be succeeded by principles like these. It is in vain to expatiate on moral obligations, if we are at liberty to declare war whenever an "injury is feared." An injury, without limit to its insignificance! A fear, without stipulation for its reasonableness! The judges, also, of the reasonableness of fear, are to be they who are under its influence; and who so likely to judge amiss as those who are afraid! Sounder philosophy than this has told us, that "he who has to reason upon his duty when the temptation to transgress it is before him, is almost sure to reason himself into an error." The necessity for this ill-timed reasoning, and the allowance of it, is amongst the capital objections to the philosophy of Paley. It tells us that a people may suspend the laws of God when they think it is "expedient;" and they are to judge of this expediency when the temptation to transgression is before them.—Has Christianity left the lawfulness of human destruction to be determined on such principles as these!

Violence, rapine, and ambition, are not to be restrained by morality like this. It may serve for the speculation of a study; but we will venture to affirm that mankind will never be controlled by it. Moral rules are useless, if, from their own nature, they cannot be, or will not be applied. Who believes that if kings and conquerors may fight when they have fears, they will not fight when they have them not? The morality allows too much latitude to the passions, to retain any practical restraint upon them. And a morality that will not be practised, I had almost said, that cannot be practised, is an useless morality. It is a theory of morals. We want clearer and more exclusive rules; we want more obvious and immediate sanctions. It were in vain for a philosopher to say to a general who was burning for glory, "You are at liberty to engage in the war provided you have suffered, or fear you will suffer an injury; otherwise Christianity prohibits it." He will tell him of twenty injuries that have been suffered, of a hundred that have been attempted, and of ten thousand that he fears. And what answer can the philosopher make to him?

I think that Dr. Paley has, in another and a later work, given us stronger arguments in favour of peace than the Moral Philosophy gives in favour of war. In the "Evidences of Christianity" we find these statements—"The two following positions appear to me to be satisfactorily made out: first, That the gospel *ovites some qualities*, which have usually engaged the praises and admiration of mankind, but which, in reality, and in their gene-

ral effects, have been *prejudicial to human happiness*; secondly, that the gospel has brought forward *some virtues, which possess the highest intrinsic value*, but which have commonly been overlooked and condemned.—The second of these propositions is exemplified in the instances of passive courage or endurance of suffering, patience under affronts and injuries, humility, irascibility, pliability.—The truth is, there are two opposite descriptions of character under which mankind may be generally classed. The one possesses vigor, firmness, resolution, is daring and active, quick in its sensibilities, jealous in its frame, eager in its attachments, inflexible in its purpose, violent in its resentments. The other meek, yielding, complying, forgiving, not prompt to act, but willing to suffer, silent and gentle under rudeness and insult, forgiving and conciliatory where others would demand satisfaction, giving way to the pushes of impudence, conceding and indulgent to the prejudices, the wrong headedness, the intractability of those with whom it has to deal.—The former of these characters is, and ever hath been, the favourite of the world.—Yet so it hath happened, that with the founder of Christianity, *this latter is the subject of his commendation, his precepts, his example*; and that the former is so, *in no part of its composition*. This morality shows, at least, that *no two things can be more different than the heroic and the Christian characters*. Now it is proved, in contradiction to first impressions, to popular opinion, to the encomiums of orators and poets, and even to the suffrages of historians and moralists, that *the latter character possesses most of true worth*, both as being most difficult either to be acquired or sustained, and as *contributing most to the happiness and tranquillity of social life*.—If this disposition was universal, the case is clear; the world would be a society of friends; whereas, if the latter disposition were universal, it would produce a scene of universal contention. The world would not be able to hold a generation of such men. If, what is the fact, the disposition be partial; if a few be actuated by it amongst a multitude who are not, in whatever degree it does prevail, it prevents, allays, and terminates quarrels, the great disturbers of human happiness, and the great sources of human misery, so far as man's happiness and misery depend upon man.—The preference of the patient to the heroic character, which we have been noticing, is a peculiarity in the Christian institution, which I propose as an argument of wisdom.

These are the sentiments of Dr. Paley upon this great characteristic of the Christian morality. I think that in their plain, literal, and un-splendid meaning, they exclude the possibility of the lawfulness of war. The simple conclusion from them is, that violence, and devastation, and human destruction cannot exist in conjunction with the character of a Christian. This would be the conclusion of the inhabitant of some far and peaceful island, where war and Christianity were alike unknown. If he read these definitions of the Christian duties, and were afterwards told that he thought himself allowed to plunder and to murder one another, he would start in amazement at the monstrous inconsistency. Casuistry may nukeher "distinctions," and philosophy may talk of her "expedients," but the monstrous inconsistency remains. What is the fact? Mahometans and Pagans do not believe that our religion allows of war. They reproach us with the inconsistency. Our wars are, with them, a scandal and a taunt. "You preach to us," say they, "of Christianity, and would convert us to your creed:—first convert yourselves; show us that yourselves believe in it." Nay, the Jews at our own doors tell us, that our wars are an evi-

dence that the Prince of Peace is not come. They bring the violence of Christians to prove that Christ was a deceiver. Thus do we cause the way of truth to be evil spoken of. Thus, are we, who should be the helpers of the world, its stumbling-blocks and its shame. We, who should be lights to them that sit in darkness, cause them to love that darkness still. Well may the Christian be ashamed for these things: Well may he be ashamed for the reputation of his religion: And he may be ashamed too, for the honoured defender of the Christian faith who stands up, the advocate of blood; who subtilises the sophisms of the schools, and roves over the fields of speculation to find an argument to convince us that we may murder one another! This is the "wisdom of the world"; that wisdom which is, emphatically, "FOOLISHNESS."

(To be continued.)

*Whitening Sugar. A Curious Discovery.*—The common sugar of our tables is made from the juice of sugar-cane, which grows only in very warm countries. This sugar-cane resembles the stalks of our Indian corn, though its juice is much sweeter. In making sugar, the cane is cut into short pieces, and passed through a mill to press out the juice. This liquid runs off into a reservoir, from which it is dipped into boilers and boiled down. This process sends off the watery part of the sap in steam, leaving the sugar behind. When it is boiled down to syrup, this is put into large wooden trays called coolers. Here it becomes grain sugar.

But what a dark, dirty brown mass it is. Can it be whitened? Yes; and here we will tell how man first learned to do it. A hen, that had walked through a puddle of clay and water, went into a sugar-house and walked over a pile of brown sugar. Some one noticed that wherever she stepped the sugar was whitened. This man opened his eyes wide, and by several experiments soon discovered the fact that moist clay would whiten sugar. And that man's discovery led on to a systematic use of earthen jars, wider at one end than the other, and hence came the old fashioned "loaf-sugar." The raw sugar is put into one of these long jars, with the widest end upward. When the jar is nearly full of sugar, clay is put on the top and kept constantly wet. The water runs through the clay and sugar, and finds its way out through a small hole at the bottom of the jar. In this way the whole mass of sugar becomes white.

Our young readers should watch even hen tracks, and all other such things, for sharp looking and close thinking often amount to something useful. A dull head would have shouted "Shoo, shoo!" to the old hen, and scurped off her muddy tracks, and thought no more about it. No so this wide-awake man, as much of a philosopher in his way, as Isaac Newton in his, when he saw the apple fall.—*Am. Agriculturist.*

*Cure for Frosted Feet.*—It is said that frosted feet can be speedily and certainly cured by being bathed and well rubbed with kerosene or coal oil, for a few times, at night before retiring to bed. Several persons have already tried it, all of whom unite in pronouncing it an effectual cure, which, if they are correct, is an easy and cheap mode of getting rid of a very sore and troublesome affliction. Those who have tried it inform us that the feet should be well warmed by a hot stove during and after the application of the oil, and it will certainly effect a speedy cure. Persons suffering from the pain of frosted feet, will, no doubt, do well in giving it a trial, for it is surely a very cheap treatment, and one that is very easily applied.—*Harrisburg Union.*

Having been a constant reader of "The Friend," almost from its commencement, I can, with many others, acknowledge it has been the source of much pleasure and, I trust, lasting good to me. Greatly would we miss its weekly visits, and as much of my life has been spent in the society of young persons and little children, it has always been a satisfaction to have something of the kind to hand to them, that we know will contain what is suitable for them to read, couched in chaste and dignified language, for in almost all other periodicals "The Friend" will find more or less to reject as inconsistent with his principles. But I have often thought it would be more acceptable to many families were there a juvenile department, or a portion of each number devoted to matter suited to the capacity of *little children*. As I once heard a Friend remark, "we must not expect children to come up to our capacity, but we must descend to theirs." Are there not gifted ones in our society, who would be willing to follow the example of Newton and Watts, who thought it not beneath their dignity to spend time writing for *infant minds*. There being few obituary notices of children published in "The Friend," comparatively few instances of early *piety of recent date* come before us. During the last few months, very many dear children within the verge of our Yearly Meeting have been called away; many of whom have given evidence of preparation for the solemn change. Memoirs of these, rightly prepared for other tender minds, might be more impressive than notices of older persons, by showing that death also lieth at their door. Oh! how my heart yearns for the *children*, in this day of excitement and dejection, fearing many are too much neglected. Would that parents were more alive to the best interests of their beloved offspring; that they would begin early, and grow not weary in the pleasing though arduous task of instruction. The infant mind so early begins to receive impressions, that they cannot commence too soon. Habits will be formed, and "it is a great thing to get habit on the side of virtue." Parents must be interested in and devoted to the work; not merely collect their children and read to them; they will improve faster, and be more interested if we talk to them, question, explain or sympathize the subject. What child is not delighted with Bible history, or biography, when so presented? Before our dear little boy was three years old, he became much interested in the account of "Little Samuel and the new coat his mother made him each year, often asking to have it read. He would take the Bible and turn over its leaves with solemn interest, as though conscious it contained a treasure. When retiring for the night, which is a very important period of the day, he would say, "now mother say a little verse"—and, now, that he is gone to join the ceaseless hymn of the redeemed, I desire; whilst recounting my many failures, to encourage mothers often to lay aside their many cares, and the almost constant toil for the wants of the poor perishable body, and devote more time to the *better part*. Yes, and fathers, too. Why this almost incessant devotion of our waking hours to work, business or pleasure. Let us circumscribe our temporal wants, (many of which are perhaps more imaginary than real,) till we can command time for our own and the children's instruction in better things. That devoted servant, Daniel Wheeler, set a bright example in this respect. His son writes, "From their early years, he patiently laboured to imbue the minds of his children with the love and fear of the Almighty. He instructed them diligently in the holy scriptures; and endeavoured to explain in a manner suited to their

capacities, the truths they contain. He was also persevering in his efforts to exhibit to them the example of the righteous of other generations, and especially that exemplification of the fruits of his own principles, which the lives of the early members of our society so strikingly display. For this purpose he set apart a portion of time daily, in which to read to his family works of this discipline; a practice that was continued up to the period when his religious labours called him from them. Perhaps some might be ready to think that such a course would be found irksome to the young; but certainly in the present instance the result was widely different, and his children can now recall the feelings of solemn interest and enjoyment that often attended these readings, and the short period of quiet by which they were invariably followed. It was also his custom each evening, when his children had retired to rest, to visit their chambers, and endeavour to direct their hearts to their great Creator and Preserver. On these occasions, he would repeat, or teach them to repeat passages of Scripture, or poetry of a devotional character, to which his own admonitions were frequently added; and he generally closed those sweet and well remembered seasons with a solemn aue, during which, doubtless, his pious spirit was ever engaged in committing them to the Lord." Now, let us notice what *fruit* such teaching bore. Five out of his six children have gone to rest, having ample evidence of acceptance with Him whom their parents loved. Of the eldest son, William, a sorrowing brother, the youthful companion of his father in the far-off isles of the Pacific, once said, "I know little about his death, ut I know how he lived; he fed on heavenly food." This is the food every true parent will strive to aid his children to obtain.

"Train up a child," &c., *do not leave it come up*; training seems to be necessary; something for the parent and teacher to do. Drawing instruction from the outer world, we know the ground must be *repared*, good seed *sown*, the young plants frequently and carefully *tended*, some kinds requiring a mode of treatment, some another; then, (accents excepted,) they gradually grow, watered with the rain and dew of heaven, come in form; bud, blossom, and bear precious fruit. What a solemn responsibility then rests upon those who have a garden of immortal plants growing up around them, so plastic and susceptible, that the poet has justly said, "ye may make them what ye will." Well may we exclaim, Who is sufficient for these things, and "look up for help." Should not every one Friend be willing to lend a helping hand, and o all that duty calls for, to instruct and preserve these precious lambs of the flock, cheered by the assurance, "*when he is old he will not depart from me*." S. H.

Ohio, Third mo., 1862.

**Extraordinary Surgical Operation.**—A paper as recently read by — Nunnelly, of this town, before the Royal Medical and Chirurgical Society, is a remarkable case in which that gentleman had successfully removed the entire tongue, for cancer of the organ, and restored the patient to comfort and apparent health. The man, otherwise of robust constitution and in the prime of life, was assiduously under the agony of the diseased tongue, and such difficulty of taking food as threatened on to destroy life by starvation. The operation of extirpating the diseased member was most severe and painful, and, in fact, involved a series of "cesses extending over several days; but at the end, and when the tongue was finally removed, so did was the recovery that the man ate and en-

joyed a good dinner the next day, and continues to this time in vigorous health. But what will perhaps still more surprise some people is, that he can talk without even a stump or a bit of the root of the tongue. He can pronounce every letter of the alphabet, many of them perfectly, (all the vowels,) most of them distinctly. The three there is the most difficulty in are K, Q, and T, which are difficult and indistinct in the order they are named, K being much more so than T. In conversation, he can be readily understood, if not hurried or excited.—*Leeds (England) Intelligencer.*

Selected.

Patrick Livingston, the day before his departure, said, "I am in unity with all faithful Friends, and in love to all men." \* \* \* "Let life reach unto all here!" \* \* \* about half an hour before he was removed hence, he said, "Blessed, praised, magnified, and exalted be the mighty, powerful, great and everlasting name of the Lord God, forevermore. Oh! that Thy life may arise in full dominion over all, and that Friends may be kept in love, concord and unity together, and show it forth in word, work, testimony, life and conversation unto all!" adding, "Life being over all; here we have all we need, and here there is a lying down in true submission to the will of the Lord, and laying down our heads in peace and rest with him forevermore;" which last words he repeated twice, and said, "Here is victory over death, hell, and the grave, and resting in peace with the Lord forevermore."—*Poety Promoted.*

**Coal Mine Accidents.**—A parliamentary return states, that in the ten years commencing with 1851, 605,151,910 tons of coal have been raised in Great Britain, and the number of lives lost at the work has been 8,466—a life lost for every 71,450 tons of coal raised. The 3,000,000 tons which are brought to London every year, must therefore occasion, on an average, no less than 70 deaths, or about one every five days. We have no means of knowing accurately what proportion of casualties attend mining in the Pennsylvania coal districts, but the general impression is, that the business is attended with very little danger, there being no loss of life to be compared with that which occurs in the deep mines of Great Britain.

## THE FRIEND.

THIRD MONTH 23, 1862.

We give place in our columns to-day, to the message transmitted to congress by President Lincoln, recommending a guarantee of pecuniary aid by the General Government, to such States as may be willing to initiate the abolition of slavery within their borders. It is a highly interesting document to every citizen of the United States, not only on account of the reasoning by which the proposed action is recommended, but as being the first official message from the Presiding Officer of our country, clearly recognizing slavery as an evil, and proposing the adoption of means for its gradual extinction.

The system of slavery is so enormous an evil, and the right to freedom and self-possession so clearly inalienable to all, unless forfeited by crime, that it is not to be wondered at, many are anxious for the immediate and unconditional emancipation of the poor slaves. But there are so many existing circumstances connected with the system which, for many generations, has been interwoven with the

domestic and social institutions of a people counted by millions; and there are so many serious consequences affecting both master and slave, inseparable from a sudden and universal disruption of the relation they have held to each other throughout life, that wisdom and justice both dictate that whatever course may be adopted for the removal of this stupendous moral and material evil, shall be so carefully adapted, and so cautiously but expeditiously carried out, as to secure the happy result desired, with as little loss or suffering to both parties as practicable.

The exclusion of all slave-holding from the Society of Friends, was the work of many years, and its abolition in the northern and middle States was still more gradual. In the latter, natural causes operated so continuously towards its extinction and the deterioration of servile labour, that when the State authority decreed the termination of the system, there were comparatively few whose legal claims were closed by the act; or whose loss was so severe as to require pecuniary compensation. The state of things in regard to slavery in the Southern States, is very different to that referred to; the interests of eleven millions of people being more or less intimately involved in its removal. While we cannot recognize any natural or acquired right of property in any man to his fellow, we can readily see that equity and good policy may sanction a community in giving help to those who are called upon to sacrifice highly valued claims of property, created and long cherished by the laws of the State, but which claims, the State, in compliance with the will of the majority, may now decide to destroy. It is true, that the Constitution of the United States does not directly sanction slavery, but it recognizes it as an existing system, for which it provides some defence; and the legislative support and protection given to it in the councils of the nation, have sadly characterized and disgraced the policy pursued for many years past. It has now brought the dire calamity of civil war upon us, and the scourge is being felt throughout the land,—in the South, with deplorable, heart-sickening severity. If carrying out the proposition made by the President, will have a decided effect towards terminating this dreadful conflict, while it induces the slave-holding States to commence the freeing of their slaves, and thus initiates a change in them that will secure the country from the repetition of such an awful strife, we apprehend no right-minded citizen should murmur at whatever burden he may have to bear for securing so blessed a result.

MESSAGE FROM THE PRESIDENT.

Fellow citizens of the Senate and House of Representatives—I recommend the adoption of a joint resolution by your honorable bodies which would be substantially as follows:

Resolved, That the United States ought to co-operate with any State which may adopt gradual abolition of slavery, giving to such State pecuniary aid to be used by such State in its discretion, to compensate for the inconvenience, public and private, produced by such change of system.

If the proposition contained in the resolution does not meet the approval of Congress and the country, there is the end; but if it does command such approval, I deem it of importance that the States and people immediately interested should be at once distinctly notified of the fact, so that they may begin to consider whether to accept or reject it. The Federal government would find its highest interest in such a measure, as one of the most efficient means of self preservation.

The friends of the anti-slavery cause entertain the hope that this government will ultimately be forced to acknowledge the independence of some part of the disaffected region, and that—all the slave States north of such parts will then say—The Union for which we have struggled being already gone, we now choose to go with the southern section. To deprive them of this hope substantially ends the rebellion, and the initiation of

emancipation completely deprives them of it as to all the States initiating it. The point is not that all the States tolerating slavery would very soon, if at all, initiate emancipation; but that while the offer is equally made to all, the north tabled, and the south equally make certain to the more southern that, in no event will the former ever join the latter in their proposed confederacy. I say initiation, because, in my judgment, gradual and not sudden emancipation is better for all. In the mere financial or pecuniary view, any member of Congress, with the north tabled, and treasury reports before him, can readily see for himself how very soon the current expenditures of this war would purchase, at fair valuation, all the slaves in any named State. Such a proposition on the part of the general government sets up no claim of the north tabled, and no violation of the right of slavery within State limits, referring, as it does, the absolute control of the subject in each case to the State and its people immediately interested.

It is proposed as a matter of perfectly free choice with them. In the annual message last December, I thought the Union must be preserved, and hence all indispensable means must be employed. I said this not hastily, but deliberately. War has been made, and continues to be an indispensable means to this end. A practical re-acknowledgment of the national authority would render the war unnecessary, and no further blood made is an offer only. I hope it may be esteemed no offence to ask whether the pecuniary consideration tendered would not be of more value to the States and private persons concerned, than are the institution and property in it, in the present aspect of affairs. A practical measure, must the adoption of such a resolution, could be merely initiatory, and not within itself a practical measure, it is recommended in the hope that it would soon lead to important practical results. In full view of my great responsibility to my God and to my country, I earnestly beg the attention of Congress and the people to the subject.

(Signed.) ABRAHAM LINCOLN.

#### SUMMARY OF EVENTS.

FOREIGN.—Liverpool dates to the 1st. The markets for breadstuffs and cotton were inactive. Prices unchanged. Consols, 93½. Earl Russell, in a despatch to Lord Lyons, expresses the opinion that the U. S. blockade of the Southern ports was effective, notwithstanding the escape of the *Florida*, and that it must be respected by the British government. The pirate Sumter remained at Gibraltar closely watched by two U. S. war vessels. The discussion of Italian affairs in the French Chamber has excited great interest. Prince Napoleon demanded that the French troops should be withdrawn from Rome, and asked for the suppression of the temporal power of the Pope. La Guerrierie, the known confidant of the Emperor, spoke in favour of the Pope's temporal power. The French Ministry promised to explain the policy of the government on a future occasion. The population of the United States to the census of 1861, consisted of 18,642,604 males and 18,739,721 females—total, 37,382,325.

Nearly nine hundred thousand persons, four and a half per cent. of the population, are, (says the London Spectator), now receiving parish relief—a terrible background to all our boasted progress.

MEXICO.—Vera Cruz dates to the 4th inst. Negotiations between the Mexicans and Allies commenced at Orizaba on the 1st inst. The mortality among the allied troops continued. The Spanish troops were returning from their interior. The English forces were to leave the country.

UNITED STATES.—War Orders.—The President of the United States has directed Gen. McClellan to organize the army of the Potomac, preparatory for active service, and to divide it into five corps, to be commanded respectively by Gen. M. D. R. Taylor, Gen. G. B. R. Meade, Gen. Wadsworth and Banks. Gen. McClellan having taken the field at the head of the army of the Potomac, he is relieved, until otherwise ordered, from the command of the other military departments. The entire field of operations is divided by the President into three great departments. That of the Potomac is commanded by Gen. Halleck, that of the Potomac under Gen. McClellan, and the intervening district called the Mountain Department, is assigned to Gen. Fremont.

Congress.—The House Committee on Territories reported a bill providing temporary governmental govern-

ments over the rebellious portions of the United States. It authorized the President to institute such governments with the aid of the military and naval power; governors, &c. to be appointed, and legislatures to be organized, to be established, to remain until the people form new State governments. The bill was strongly opposed as a measure "to dissolve the Union, and abolish the Constitution of the United States." A motion to lay on the table was carried by a vote of 65 to 56. On the 10th inst. the Senate, by a vote of 27 to 23, alleged disloyalty, was, after debate, rejected by the Senate; yeas, 11; nays, 28. The resolution recommended by the President, in his message, of the 7th inst., declaratory of the purpose of the United States, to co-operate with any State or States, in measures for the relief of the rebels, was, after debate, rejected by the House of Representatives by more than a two-thirds vote.

The Foreign Relations.—The relations between the United States and European Powers are said to be now entirely free from any apprehension of disturbance. The one of all the recent correspondence is conciliatory and friendly.

California.—This State has suffered severely by the late inundations. The San Francisco Herald says, the calamity has inflicted a blow from which the State will not recover in half a century. Many hundreds of persons have been drowned, and thousands have been reduced to poverty.

New York.—Mortality last week, 435.

Philadelphia.—Mortality last week, 292.

The Baltimore and Ohio Railroad.—The work of repairing this road has been pushed forward with energy. It is believed that it will be in good running order in the course of another week.

The War.—New Mexico.—A serious conflict occurred on the 21st ult., near Fort Craig, between the U. S. forces and a body of rebel troops from Texas. Several hundred men were killed and wounded, without any decided result.

Arkansas.—The rebels in Richland county, which was briefly referred to last week, was one of the most sanguinary of the present war. The rebel general, M. Culloch, was killed; Gen. Stark dangerously wounded; Col. M. Intosh was killed, together with a number of officers of inferior rank. About 600 rebels were taken prisoners. The loss of the U. S. troops, in killed and wounded, is said to be about 1500; that of the rebels is supposed to be from 3000 to 4000. After the engagement, Gen. Price, with about 10,000 men, retreated to the eastward. Gen. Van Dorn went to the aid of the rebels, and on the 10th inst. he was at St. Louis. The rebels evacuated New Madrid, the only place of importance held by them in the State, on the night of the 13th inst. They escaped by the river, leaving a large quantity of guns, stores and ammunition which they were to recover again. The partial engagement which took place near New Madrid, on the night of the 10th inst., was bloodshed. Tennessee.—A body of rebels near Paris was attacked, on the 12th, by some of the U. S. troops, and dispersed. The rebels lost about 100 men. Gen. Bragg had arrived in Tennessee, with some thousands of rebel troops, from Pensacola. He and Gen. Beauregard, at Jackson, constructing fortification at Blair's bridge in the country were called to work on them.

Virginia.—There has been a general falling back of the rebel forces, and nearly all appear to have retreated beyond the Rappahannock river. At Winchester, Va., and other places, the withdrawal of the rebels, has been expected by the U. S. troops, a warm welcome has been extended by a portion of the inhabitants. Many of the people have remained loyal in their feelings, though compelled to yield to the secession pressure. This body of rebels is now reported to be at and near Gordonsville. But a property of value was left by the rebels at Manassas. Many cannon and great quantities of shot and shell were found in the deserted batteries on the Potomac. The Mississippi River.—The rebel forces which evacuated Columbus, Ky., went principally to the 10, a street, near the late rebel headquarters, near the N. W. corner of Tennessee. They were here fortified with a large number of cannon, commanding the approaches by the river. On the 16th, a powerful fleet of mortar and gun-boats commanded by Com. Foote, made an attack on the island. On the 17th, it was captured, and the rebels on the island had been taken, with all the ammunition and transports of the rebels; but this proved to be incorrect. The rebels have another strong position on the river at Fort Randolph, Tenn., which must be carried before the Federal forces can reach Memphis.

Southern News.—Jeff. Davis transmitted a message to the rebel Congress on the 11th inst., with the official reports received at the War department of the defence and fall of Fort Donelson. He considers the reports unsatisfactory, and has consequently suspended Generals

Floyd and Pillow, until the case can receive full investigation. The Congress at Richmond, a few days since, resolved unanimously, that it was the undesirable duty of the President to suspend the Confederate States, if, after all the calamities of the most protracted war, "but that they will never, on any terms, affiliate politically with a people who are guilty of an invasion of their soil and the butchery of their citizens."

The Richmond Examiner explains the southward movement of the Confederate States, and the taking up of a new line of defence around Richmond, as one of necessity, in view of the great numerical superiority of the U. S. army in its front. The Examiner says, it is distressing to give up so large a portion of Virginia, even for a season, but trusts the step will tend to secure its final success of the South.

Great alarm prevails at Memphis. Many persons have left the city, and cotton and all other valuable merchandise was being shipped down the river.

Unchristian Proscription.—The Constitutional Convention of Illinois engaged in reconstructing the government forms of the State, has voted to exclude negroes not only from the right of voting, but from residence within the boundaries of Illinois.

New York Salt Trade.—The annual report of the Superintendent of the New York Salt Springs, just published, shows that the New York Salt Club, \$125 a \$1.30; rye, 81 cts.; 83 cts.; oats, 38 cts. at a 39 cts. \$1.38 a \$1.38 a—Prime red wheat, \$1.32 a \$1.33; white, \$1.30 a \$1.50; rye, 70 cts. a 73 cts.; new yellow corn, 53 cts. a 54 cts.; oats, 34 cts. a 35 cts.; clover seed, \$4.50 a \$4.75; timothy, \$3.37 a \$2.50.

The Grain Markets.—The following were the quotations on the 17th inst. New York.—White Western wheat, \$1.30 a \$1.30; rye, 81 cts.; 83 cts.; oats, 38 cts. at a 39 cts. \$1.38 a \$1.38 a—Prime red wheat, \$1.32 a \$1.33; white, \$1.30 a \$1.50; rye, 70 cts. a 73 cts.; new yellow corn, 53 cts. a 54 cts.; oats, 34 cts. a 35 cts.; clover seed, \$4.50 a \$4.75; timothy, \$3.37 a \$2.50.

#### RECEIPTS.

Received from C. Walton, for Jacob Parvia, Pa., \$2, vol. 35, for Wm. B. Smith, \$2, vol. 34, from Jos. Hoyle, O., for Mark Willis, \$2, vol. 35.

#### WEST-TOWN SCHOOL.

The Committee to superintend the Boarding-School at West-Town, will meet in Philadelphia on Saturday, the 4th of next month, at 2 o'clock, P. M.

The Board of the Institution, and that on Admission, meet on the same day; the former, at 10 o'clock, and the latter, at 11 o'clock, A. M.

The Visiting Committee attend the semi-annual examination of the schools, commencing on Third-day morning, and closing on Fifth-day afternoon of the same month.

Third month 19th, 1862. JOEL EVANS, Clerk.

#### TRACT ASSOCIATION.

The Annual Meeting of the Tract Association of Friends will be held in the Committee-room of Arch Street Meeting-house, on Fourth-day evening, the 26th instant, at 8 o'clock. Members of the Association and other Friends interested are invited to attend.

CHARLES J. ALEX, Clerk.

Philad., Third month, 1862.

WEST-GROVE BOARDING-SCHOOL FOR GIRLS, (ON THE PHILAD. AND BALTIMORE CENTRAL RAILROAD.)

The Summer Session will open on Second-day, the 5th of Fifth month next.

For information and circulars, address THOMAS COSARD, Principal, Third mo. 5th, 1862. West-Grove P. O., Pa.

MARRIAGE, on Fourth-day, the 12th instant, at Friends' Meeting-house, on Orange street, NATHAN SMEDLEY, of Delaware county, Pa., to SARAH L., daughter of John C. and Rebecca S. Allen, of this city.

DIED, on the 12th of Fifth month last, at his residence in Stanford, Dutchess Co., N. York, FARR UROG, aged eighty-one years; a member and elder of Creek Monthly Meeting of Friends. Possessing by nature a sweet and amiable disposition, and having early submitted to the yoke of Christ; he was a much beloved and truly valuable member both of our religious Society and the community at large. His upright walk and Christian example giving him a place in the respect and affection of his neighbours of all denominations, and his sudden removal leaves a blank not easily filled, yet we reverently believe that our loss is his eternal gain.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, THIRD MONTH 29, 1862.

NO. 30.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

## The Lessons of Men's Lives.

George Brummell, entered the fashionable world at the age of twenty-one, with a princely fortune to command. He gave himself wholly and entirely to the cultivation of the highest tastes of fashionable life. He spent £800 a year on dress alone, and so reposed was in his manners and grace, that he came to be admitted to the highest circles of the nobility; and the "Prince Regent," says his biographer, "would occasionally attend his dressing room for an hour in the morning, to watch the mysterious grace with which he discharged the duties of his toilet." Years passed away, and this man's fortune was spent. His friends then deserted him; he fled to the Continent—begged for his bread in the streets of Paris, and died in a lunatic asylum. He had sown the wind—he reaped the whirlwind; and with him the fashions of this life were found to be "vanity of vanities and vexation of spirit."

The great Duke of Marlborough accumulated a million of money, and died in wretchedness of mind, while his property went to enrich a family who were looked upon by him during his lifetime as his greatest enemies. A Scottish nobleman took a friend to the summit of a hill on his property, and told him all that he could look on was his own. Surely, your lordship must be a happy man, said this friend; to which he replied, "I do not believe that there is in all this vast circuit a more unhappy man than myself."

The wealthy Colouel Charteris, when dying, said he would give £30,000 to any one who could prove to his satisfaction that there was no such race as hell.

Elwes, the miser when dying, was found weeping with anxiety and grief, because he had mislaid a ve-pound note.

But of all men who have sought for enjoyment in riches, perhaps the case of the late William Beckford, of Fonthill Abbey, in England, is the most remarkable. Inheriting a large fortune, he at first resided in Portugal, where he lived in a monastery, "the ceiling of which was gilded and painted, the floor spread with Persian carpets of the finest texture; the tables decked with sublim evers and asins of chased silver." "A stream of water flowed through his kitchen, from which were formed reservoirs containing every kind of river fish. On one side were heaped up loads of game and veu-

son; on the other side were vegetables and fruit in endless variety. Beyond a long line of stores extended a row of ovens, and close to them, hillocks of the finest wheaten flour, rocks of sugar, jars of the purest oil, and pastry in various abundance." The magnificent saloon in which he dined was covered with pictures, and lighted up with a profusion of wax tapers in services of silver, and the banquet usually consisted of rarities and delicacies of every season, from different countries.

When in England, he pulled down a splendid mansion, erected by his father, at a cost of nearly a quarter of a million of money, to build an abbey, whose towers, like the tower of Babel, might reach to heaven. A wall nearly twenty miles in circumference enclosed his mansion and grounds, and so costly were the furnishings of the place, that its glories transcended those of oriental splendor. One who saw the abbey and grounds says, "Gold and silver vases and cups are so numerous here that they dazzle the eye; and when one looks around at the cabinets, candelabra and ornaments which decorate the rooms, we may almost imagine that we stand in the treasury of some oriental prince, whose riches consist entirely in vessels of gold and silver, enriched with precious stones of every sort, from the ruby to the diamond." Such was Beckford, of Fonthill Abbey, with his princely mansion, and an income of £100,000 a year. But was he happy? No. He was wretched; and a reverse of fortune having unexpectedly come upon him, he was driven from his mansion, spent the last of his days in misery, and died, another painful example of the folly of setting the heart on earthly enjoyments, and proving again the truth of the wise man's words, "Vanity of vanities, saith the preacher, all is vanity and vexation of spirit."

William Pitt, son of the great earl of Chatham, was endowed with the rarest gifts of nature, and, at the early age of twenty-four, was prime minister of England. "The mightiest intellects," says one who knew him well, "bent before him, and the highest offices were in his patronage. Each morning when he rose he was entitled to assert that, in all the vast empire of England, the sun shone on none who was in reality, however he might be in name, more powerful than himself. And yet this great man during his public career, was always wretched, miserable, unhappy." "He died," says a biographer, "in his forty-seventh year, on the anniversary of the very day on which he entered Parliament. Oh, what a difference there was between the buoyant youth of twenty and the careworn statesman of forty-seven! Before the eyes of the one sparkled a long vista of political enjoyments and honours; before the eyes of the other were the anxieties and cares which had attended them when grasped. He had followed, as his object in life, unsoftened ambition, and he found it vanity and vexation of spirit;" and died," says Witherforce, "of a broken heart."

Robert Clive was a mercantile clerk in India. He had a passion for the life of a soldier, and obtained an ensigncy in the army of the East. Here he rose until he became the conqueror of India, and had the treasures of the East poured at his

feet. "The whole kingdom," wrote his father to him, "is in transport at the glory and success you have gained; come away, and let us rejoice together." He returned, was impeached by the House of Commons, and was so disgraced and disappointed that he took his own life.

Among those who have sought for happiness in the honours and excitement of public life, Richard Brinsley Sheridan, the orator, is a melancholy instance of the folly of such a course. In the House of Commons, so powerful was the impression produced by his speeches, that members could not trust themselves to vote on any question on which he spoke, until the excitement had subsided." Yet this man died in wretchedness and want. His last words were, "I am at-olutely undone."

Turn we now to the field of literature. There we have in the foremost rank, Sir Walter Scott. "Never, perhaps, in any period of the world's history," says a contemporary of Scott, "did literary talent receive a homage so universal as that of Scott. His reputation was co-extensive not only with the English language, but with the boundaries of civilization. In one year, too, his literary productions yielded him £15,000. The King conferred on him a baronetcy, and wherever he appeared, at home or abroad, he was the lion of the day. All the good things of life were his. His mansion at Abbotsford realized the highest conception of a poet's imagination, and seemed like 'a poem in stone.' His company was of the most honorable of the land, and his domestic enjoyments all that his heart could desire. Yet he was not happy. Ambitious to found a family, he got into debt, and in old age he was a ruined man." When about to leave Abbotsford for the last time, he said, "When I think on what this place now is, with what it was not long ago, I feel as if my heart would break. Lonely, aged, deprived of all my family, I am an impoverished and embarrassed man." At another time he writes, "Death has looked the dark avenue of love and friendships. I look at them as through the grated door of a burial place filled with monuments of those who once were dear to me, and with no other wish than that it may be open for me at no distant period." And again—"some new object of complaint comes every moment. Sicknesses come thicker and thicker; friends are fewer and fewer. The recollection of youth, health, and powers of activity, neither improved nor enjoyed, is a poor ground of comfort. The best is the long halt will arrive at length, and close all." And the long halt did arrive. Not long before he died, Sir Walter requested his daughter to wheel him to his desk. She then put a pen into his hand, but his fingers refused to do their office. Silent tears rolled down his cheeks. "Take one back to my own room," he said, "there is no rest for Sir Walter but in his grave." A few days after, he died, realizing in reference to all his fame, honour and renown, the truth of Solomon, "Vanity of vanities, saith the preacher, all is vanity and vexation of spirit."

Campbell, the author of the "Pleasures of Hope," to his old age wrote, "I am alone in the world. My wife and the child of my hopes, are dead;

my only surviving child is consigned to a living tomb, (a lunatic asylum)—my old friends, brothers, sisters, are dead, all but one, and she, too, is dying; my last hopes are blighted. As for fame, it is a bubble that must soon burst. Earned for others, shared with others, it was sweet; but at my age, to my own solitary experience, it is bitter. Left in my chamber alone, by myself, it is wonderful my philosophy at times takes flight; that I rush into company; resort to that which blunts but heals no pang; and then, sick of the world, and dissatisfied with myself, shrink back into solitude?" And in this state of mind he died.

Charles the Fifth resigned the crown in despair of getting happiness on the throne. Catherine of Russia, an empress of the most ambitious character, sought for happiness in earthly glory, yet could not get rest in sleep, from the torments of a guilty conscience. And many other cases might be adduced to show how true it is, as the poet says—

"Unhappy lies the head that wears a crown."

These are examples of the vanity of pursuing the mirage of life. The objects of pursuit, had they been sanctified and good, would have yielded happiness, if rightly realized; for divine Providence has so constituted man that, even as a mundane being, he may possess much real enjoyment. Be it ours, then, to "set the affections on things above, and not on things below, that perish in the using," to lay up treasures in heaven, where "neither moth nor rust doth corrupt, and where thieves break not through nor steal;" so to run that we may obtain, and so to struggle for the crown that, like Paul, we may be enabled to say, "I have fought a good fight, I have finished my course, I have kept the faith; henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous Judge, shall give me at that day; and not to me only, but unto all them also, that love his appearing."—*J. H. Wilson, London.*

#### Diamond on War.

(Continued from page 230.)

We have seen that the principle on which Dr. Paley's Moral Philosophy decides that war is lawful, is, that it is expedient. I know not how this argument accords with some of the statements of the Evidences of Christianity. We are there told that the non-resisting character possesses "the highest intrinsic value," and the "most of true worth;" that it "prevents the great disturbances of human happiness," and destroys "the great sources of human misery," and that it "contributes most to the happiness and tranquillity of social life." And in what then does expediency consist, if the non-resisting character be not expedient? Dr. Paley says, again, in relation to the immense mischief and bloodshed arising from the violation of christian duty—"We do not say that no evil can exceed this, nor any possible advantage compensate it, but we say that a loss which affects all, will scarcely be made up to the common stock of human happiness, by any benefit that can be procured to a single nation." And is not therefore the violation of the duty inexpedient as well as criminal? He says again that the warlike character, "is in its general effects, prejudicial to human happiness."—and therefore, surely, it is inexpedient.

The magistrate "beareth not the sword in vain; for he is the minister of God, a revenger to execute wrath upon him that doeth evil." From this acknowledgment of the lawfulness of coercion on the part of the civil magistrate, an argument has been advanced in favour of war. It is said, that by parity of reasoning, coercion is also lawful in

the suppression of the violence which one nation uses towards another.

Some men talk as if the principles which we maintain were subversive of all order and government. They ask us—Is the civil magistrate to stand still and see lawless violence ravaging the land? Is the whole fabric of human society to be dissolved? We answer, No; and that whenever these men may have derived their terrors, they are not chargeable upon us or upon our principles. To deduce even a plausible argument in favour of war from the permission "to execute wrath upon him that doeth evil," it is obviously necessary to show that we are permitted to take his life. And the right to put an offender to death, must be proved, if it can be proved at all, either from an express permission of the christian scriptures, or, supposing christianity to have given no decisions, either directly or indirectly, from a necessity which knows no alternative. Now every one knows that this express permission to inflict death is not to be found; and, upon the question of its necessity, we ask for that evidence which alone can determine it—the evidence of experience; and this evidence, the advocate of war has never brought, and cannot bring. And we shall probably not be contradicted when we say, that that degree of evidence which experience has afforded, is an evidence in our favour rather than against us.

But some persons entertain an opinion, that in the case of murder, at least, there is a sort of immutable necessity for taking the offender's life. "Whoso sheddeth man's blood, by man shall his blood be shed." If any one urges this rule against us, we reply, that it is not a rule of christianity; and if the necessity of demanding blood for blood is an everlasting principle of retributive justice, how happens it that, in the first case in which murder was committed, the murderer was not put to death?

The philosopher however would prove what the christian cannot; and Mably accordingly says, "In the state of nature, I have a right to take the life of him who lifts his arm against mine. This right, upon entering into society, I surrender to the magistrate." If we conceded the truth of the first position, (which we do not,) the conclusion from it is a sophism too idle for notice. Having, however, been thus told that the state has a right to kill, we are next informed by Filangieri, that the criminal has no right to live. He says, "If I have a right to kill another man, he has lost his right to live." Rousseau gives a little farther. He tells us, that in consequence of the "social contract" which we make with the sovereign on entering into society, "Life is a conditional grant of the state;" so that we hold our lives, it seems, only as "tenants at will," and must give them up whenever their owner, the state, requires them. The reader has probably hitherto thought that he retained his head by some other tenure.

The right of taking an offender's life being thus proved, Mably shows us how his exercise becomes expedient. "A murderer," says he, "in taking away his enemy's life, believes he does him the greatest possible evil. Death, then, in the murderer's estimation, is the greatest of evils. By the force of death, therefore, the excesses of hatred and revenge must be restrained." If language wilder than this can be held, Rousseau, it think, holds it. He says, "The preservation of both sides (the criminal and the state,) is incompatible; one of the two must perish." How it happens that a nation "must perish," if a convict is not hanged, the reader, I suppose, will not know.

I have returned to these speculations for the purpose of showing, that the right of putting offenders

to death is not easily made out. Philosophers would scarcely have had recourse to these metaphysical abstractions if they knew an easier method of establishing the right. Even philosophy, however, concedes us much:—"Absolute necessity, alone," says Pastoret, "can justify the punishment of death;" and Rousseau himself acknowledges that, "we have no right to put to death, even for the sake of example, any but those who cannot be permitted to live without danger." Beccaria limits the right to two specific cases; in which, "if an individual, though deprived of his liberty, has still such credit and connexions as may endanger the security of the nation, or, by his existence, is likely to produce a dangerous revolution in the established form of government—he must undoubtedly die." It is not, perhaps, necessary for us to point out why, in these suppositious cases, a prisoner may not be put to death; since I believe that philosophy will find it difficult, on some of her own principles, to justify his destruction: For Dr. Paley decides, that whenever a man thinks there are great grievances in the existing government, and that, by heading a revolt, he can redress them without occasioning greater evil by the rebellion than benefit by its success—it is his duty to rebel. The prisoner whom Beccaria supposes, may be presumed to have thought this; and with reason too, for the extent of his credit, his connexions; and his success, is the plea for putting him to death; and we must therefore leave it those who indulge in such speculations, to consider how it can be right for one man to take the lead in a revolution, whilst it is right for another to hang him for taking it.

What then does the lawfulness of coercion on the part of the magistrate prove upon the question of the lawfulness of war? If capital punishment had never been inflicted, would that have proved? Obviously nothing. If capital punishments cannot be shown to be defensible, what does it prove? Obviously nothing: for an unauthorized destruction of human life on the gallows, cannot justify another unauthorized destruction of it on the field.

Perhaps some of those who may have been hitherto willing to give me a patient attention, will be disposed to withdraw it, when they hear the unlawfulness of defensive war unequivocally maintained. But it matters not. My business is with what appears to me to be truth; if truth surprises us, I cannot help it—still it is truth.

Upon the question of defensive war, I would beg the reader to bear in his recollection, that every feeling of his nature is enlisted against us; and I would beg him, knowing this, to attain as complete an abstraction from the influence of those feelings as shall be in his power. This he will do if he is honest in the inquiry for truth. It is not necessary to conceal that the principles which we maintain may sometimes demand the sacrifice of our apparent interests. Such sacrifices christianity has been wont to require: they are the tests of our fidelity; and of those whom I address, I believe there are some, who, if they can be assured that we speak the language of christianity, will require no other inducements to obedience.

The lawfulness of defensive war is commonly simplified to *The Right of Self-defence*. This is one of the strongholds of the defender of war, the almost final fortress to which he retires. *The instinct of self-preservation*, it is said, is an instinct of nature; and since this instinct is implanted by God, whatever is necessary to self-preservation is accordant with his will. This is specious, but like many other specious arguments, it is sound in its premises, but, as I think, fallacious in its con-

clusions. That the instinct of self-preservation is an instinct of nature, is clear—that because it is an instinct of nature we have a right to kill other men, is not clear.

The fallacy of the whole argument appears to consist in this,—that it assumes that an instinct of nature is a law of paramount authority. God has implanted in the human system various propensities or instincts, of which the purposes arise. These propensities tend to their own nature *to abuse*; and when gratified or followed to excess they become subversive of the purposes of the wisdom which implanted them, and destructive of the welfare of mankind. He has therefore instituted a superior law, sanctioned by his immediate authority; by this law, we are required to regulate these propensities. The question therefore is, not whether the instinct of self-preservation is implanted by nature, but whether christianity has restricted its operation. By this, and by this only, the question is to be determined. Now he who will be at the trouble of making the inquiry, will find that a regulation of the instincts of nature, and a restriction of their exercise, is a prominent object of the christian morality; and I think it is plain that this regulation and restriction apply to the instinct before us. That some of these propensities are to be restrained is certain. One of the most powerful instincts of our nature, is an affection to which the regulating precepts of christianity are peculiarly directed. I do not maintain that any natural instinct is to be eradicated, but that all of them are to be regulated and restrained; and I maintain this of the instinct of self-preservation.

The establishment of this position is, indeed, the great object of the present inquiry. What are the dispositions and actions to which the instinct of self preservation prompts, but actions and dispositions which christianity forbids? They are non-forbearance, resistance, retaliation of injuries. The ruth is, that it is to *defence* that the peaceable precepts of christianity are directed. *Offence* appears not to have even suggested itself. It is "Reist not evil," it is "Overcome evil with good," it is "Do good to them that hate you;" it is "Love your enemies;" it is "Render not evil for evil;" it is "Whoso smiteth thee on one cheek;" All this supposes previous offence, or injury, or wrong; and it is *then* that forbearance is enjoined.

(To be continued.)

From the Leisure Hour.

### The Watch, and how to Use It.

Clocks had been in use for centuries, and most excellent and ingenious clocks had been constructed and domiciled all over Europe, before any one ventured upon the attempt to make a clock for the pocket, or a watch. Before a watch could exist at all, it was necessary that some substitute should be discovered in place of the weight, whose gravity was the moving power in clocks. This desideratum was supplied by the invention of the main-spring, which made its appearance about the middle of the sixteenth century, and was first used, not for watches, but in the manufacture of small portable clocks, which the rich carried about with them on their travels, and sometimes even on their persons.

The main-spring is an elastic coil of thin steel, highly tempered. It is out of sight in the watch, being enclosed in a small barrel, to whose inner end the outer end of the coil is fixed, while the inner end is fastened to an axis at the centre, and round which it may be wound so as to cause the barrel to make as many revolutions as the coil

spring makes turns in unwinding. Here, then, is the mechanical force which keeps the machinery of a watch in motion. But it is plain that if this power were thus applied, it would vary greatly in its action on the wheels. When the spring was tightly coiled, the wheels would be dragged rapidly round; and when the force of the coil was diminished, they would move very slowly. This would never do. To obviate this defect, and supply a power that shall act with equal force during the whole uncoiling of the spring, comes in the beautiful invention of the fusee. The fusee is a cone with a spiral groove attached to the side of the first wheel of the watch, and connected with the barrel by a chain, hooked at its ends to both, when the watch is wound up, the key is placed on the axis of the fusee, and the chain wound off the barrel on to the cone. Thus wound up, the spring is at its greatest power of recoil; but the chain, pulling them near the point or smallest part of the cone, acts with the shortest lever power; as the spring uncoils and its elasticity diminishes in force, the chain, being gradually wound on the outside of the barrel, gradually descends the cone and lengthens the leverage. By this ingenious adjustment of increased lever power to diminished force, an equality of power is maintained, and the influence of the spring on the wheels is the same during the whole period of the recoil, or until the watch needs winding up again. Perhaps there is not a more beautiful contrivance than this of the fusee, in the whole domain of mechanics, or one which more efficiently answers the end for which it was designed. Those watches, now very common, which go while winding up, have a spring, called the going fusee, contained in the interior of the fusee-wheel, by which the works are kept in motion while the fusee itself is turned by the key.

The invention of the fusee, however, important as it was, did not insure the production of serviceable watches. Two centuries ago watches were a luxury, possessed by few; and, as is generally the case with articles of utility so long as they are luxuries, were good for little. The works were a rude modification of clock-works—the chain round the fusee was a piece of cat-gut—and for want of a balance-spring, or some efficient substitute for the pendulum, their performance could not be relied on. In fact, the first watchmakers did not pretend to more than showing an approximation to the hour of the day, and modestly withheld the minutest hand from their dials, being hopeless of measuring the minutes by such miniature machines.

But an immense improvement was impending. In 1655, that most irritable and acrimonious of English philosophers, Dr. Robert Hooke, applied for a patent for the balance-spring. It is this little instrument, which is scarcely thicker than a hair, that was destined to transform the watch from a comparatively worthless and luxurious toy, into the faithful friend and servant of millions. Let us see if we can recognize its function.

If the reader will open his modern English watch, he will see the balance, which is a wheel finely poised on its axis, vibrating with a regular and equal motion. Unlike all the other wheels in the watch, it never moves completely round, but backwards and forwards. This peculiarity of motion is imparted to it by means of certain contrivances, some of them very elaborate, varying in watches of various descriptions, called escapements. Beneath the balance-wheel he will see the balance-spring, coiled like a minute hair round the axis, which it surrounds four or five times. The balance itself was intended as a substitute for the pendulum; but it never was an efficient substitute for that, until the balance-spring was invented and brought

to its aid. It had been perceived that in clocks, the pendulum absorbed in its own more or less extended oscillation every inequality in the rotation of the wheel-work; and analogy suggested to Hooke, and experience afterwards proved, that the balance-spring would do the same thing. In its application to the balance of a watch, one extremity of the spring is fastened to a point independent of the balance, while the other is attached near its axis. The balance-spring is generally flat in watches, coiled concentrically; but in chronometers for naval or scientific purposes, the cylindrical form is preferred, as affording the most perfect isochronism. A recent improvement has been effected by electro-gilding the balance-springs, thus preserving them from rust—an invention which was patented by — Dent.

This balance-spring, above all other manufactured things, shows the extraordinary value which may be conferred on raw material by human labour. Four thousand hair-springs scarcely weigh more than a single ounce; but often a cost more than a thousand pounds! "The chief of the sculptor," says — Thomson, "may add immense value to a block of marble, and the cameo may become of great price from the labour bestowed; but art offers no example wherein the value of the material is so greatly enhanced by human skill as in the balance-spring."

The introduction of the balance-spring, which was rightly regarded as the crowning invention in the mechanism of the watch, put the watch-makers in possession of all they wanted in order to enable them to produce a really serviceable article, and may be said almost to have created the trade of watch-making. Within a single generation after the publication of the invention, watches had increased in number a hundred-fold, and have gone on increasing from that day to this in more than an arithmetical ratio.

In their first popular form, watches assumed a shape nearly globular; they were on the average even smaller in diameter than they are at present, but they were turnip-shaped and heavy, and it was the fashion to enclose them in ponderous double cases of guinea gold, covered with elaborate chasing, and which more than doubled their weight and size.

(To be continued.)

*True and False Peace in Death.*—"Death is an honest hour." If by this saying it is meant that death is a sure antidote to dishonesty, it is a great mistake. It is no very uncommon occurrence for men to die affirming that which they know to be false. Criminals have done this who knew that they would be dead in ten minutes; and those dying in their beds have not unfrequently done the same thing.

Nor is the known nearness of death a surer remedy for carelessness and indifference toward God. Many whose composure in death friends have attributed to religion, have owed their composure to the absence of all proper religious sensibility. Their resignation is the lastitude of disease; their peace, the deadness of conscience; their wish to depart, a desire to be free from suffering.

If this yielding to death as it approaches, so often witnessed, is in one view a merciful provision of the Almighty, it testifies loudly in another against any change for the better as likely to result from knowing that death is near.

Men sometimes die in great terror, because they see things in their true light. The more light the more terror. In other cases they are much oppressed with fear, when this fear is no bad sign, or

at least a better sign than composure would be in their case.

Quietness in death, or that which is called peace, needs to be examined as carefully as agitation and fear. A delusive peace may result:

1. From unbelief. The larger part of professed infidelity is a mere pretense, and plays the coward at the first approach of danger; but in some few instances men are given over to strong delusion to believe a lie. In such cases, as no judgment is believed in, none is feared.

2. From ignorance. This is the true ground of the quietness which is often manifested by the dying. Upon conversing with them, it is evident that they have no just views of sin, nor of its remedy. Their peace, though professing to be christians, is to be accounted for substantially upon the same principle as that on which we account for the quiet deaths of the eminent heathen which are reported to us; they know neither themselves nor the God to whom they are going; nor have they any conception of that regeneration which is indispensable in order to happiness in a world of spirits.

#### Aerial Navigation.

We find in the Smithsonian Report the following letter from Prof. Henry, of the Smithsonian Institution, to — Lowe, the aeronaut, in relation to his projected crossing of the Atlantic in a balloon:—

Dear Sir:—In reply to your letter of February 25th, requesting that I would give you my views in regard to the currents of the atmosphere and the possibility of an application of a knowledge of them to aerial navigation, I present you with the following statement, to be used as you may think fit.

I have never had faith in any of the plans proposed for navigating the atmosphere by artificial propulsion, or for steering a balloon in a direction different from that of the current in which the vehicle is floating.

The resistance to a current of air offered by several thousand feet of surface, is far too great to be overcome by any motive power at present known which can be applied by machinery of sufficient lightness.

The only method of aerial navigation, which in the present state of knowledge appears to afford any possibility of practical application, is that of sailing with the currents of the atmosphere. The question, therefore, occurs as to whether the aerial currents of the earth are of such a character that they can be rendered subservient to aerial locomotion.

In answering this question, I think I hazard little in asserting that the great currents of the atmosphere have been sufficiently studied, to enable us to say with certainty that they follow definite courses, and that they may be rendered subservient to aerial navigation, provided the balloon itself can be so improved as to render it a safe vehicle of locomotion.

It has been established by observations extending now over two hundred years, that at the surface of the earth, within the tropics, there is a belt along which the wind constantly blows from an easterly direction; and, from the combined meteorological observations made in different parts of the world within the last few years, that north of this belt, between the latitudes of 30°, and 60° around the whole earth the resultant wind is from a westerly direction.

The primary motive power which gives rise to these currents is the constant heating of the air in the equatorial, and the cooling of it in and toward the polar regions; the eastern and western deflec-

tions of these currents being due to the rotation of the earth on its axis.

The easterly current in the equatorial regions is always at the surface, and has long been known as the trade winds, while the current from the west is constantly flowing in the upper portion of the atmosphere, and only reaches the surface of the earth at intervals, generally after the occurrence of a storm.

Although the wind, even at the surface, over the United States and around the whole earth between the same parallels, appears to be exceedingly fitful, yet when the average movement is accurately recorded for a number of years, it is found that a large resultant remains of a westerly current. This is well established by the fact that on an average of many years, packet ships sailing from New York to Great Britain occupy nearly double the time in returning that they do in going.

It has been fully established by continuous observations collected at this Institution for ten years, from every part of the United States, that, as a general rule, all the meteorological phenomena advance from west to east, and that the higher clouds always move eastwardly. We are, therefore, from abundant observation, as well as from theoretical considerations, enabled to state with confidence, that on a given day, whatever may be the direction of the wind at the surface of the earth, a balloon elevated sufficiently high, would be carried easterly by the prevailing current in the upper or rather middle region of the atmosphere.

I do not hesitate, therefore, to say, that provided a balloon can be constructed of sufficient size, and of sufficient impermeability to gas, in order that it may maintain a high elevation for a sufficient length of time, it would be wafted across the Atlantic. I would not, however, advise that the first experiment of this character be made across the ocean, but that the feasibility of the project should be thoroughly tested, and experience accumulated by voyages over the interior of our continent. It is true that more eclat might be given to the enterprise, and more interest excited in the public mind generally, by the immediate attempt of a passage to Europe; but I do not think the sober sense of the more intelligent part of the community would be in favour of this plan; on the contrary, it would be considered a premature and foolhardy risk of life.

It is not in human sagacity to foresee, prior to experience, what simple occurrence, or what neglect in an arrangement, may interfere with the result of an experiment; and therefore I think it will be impossible for you to secure the full confidence of those who are best able to render you assistance except by a practical demonstration, in the form of successful voyages from some of the interior cities of the continent to the seaboard.

JOSEPH HENRY.

For "The Friend."

#### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

STEPHEN COMFORT.

Stephen, son of John Comfort and Mary, his wife, was born in Bucks County, Pennsylvania, Twelfth month 26th, 1720. His parents both died when he was quite young, and he was brought up by a relation, who gave him very little school learning. Although in his outward education much was wanting, yet his friends of Middletown Monthly Meeting say, it was "largely supplied by the teachings of Divine grace, whereby he learned the fear of the Lord, which the wise man says, is the beginning of wisdom, and to depart from evil,

which is understanding." Through attention to the inward teacher, he became religiously careful over his own conduct, and was thereby preserved from many of the follies and extravagancies incident to youth.

In the twenty-fifth year of his age, he came forth in the ministry, his communication being for some time a few words of exhortation to those assembled, particularly the youth, to love, fear and serve the Lord. His brief counsel was very acceptable, and as he continued faithful to the measure of Light and Grace communicated, he grew in his gift, and became a lively minister; one, who as a wise scribe, well instructed in heavenly things, needed not to be ashamed.

He was of an open, cheerful disposition, which made him a pleasant companion amongst men, and being honestly concerned for the promotion of piety among the members, and of good order in the church, he was very useful in religious society. In meetings for worship, he was often engaged in testimony and in supplication, to the comfort and edification of his friends. He at times, was concerned to travel in the work of the Gospel ministry in the different provinces, and returned with testimonials of the unity and satisfaction of those visited with his labours.

During his last illness, which he bore with patience and resignation, he said he knew not what Providence intended to do with him, or why he was so afflicted, but he trusted it was for some wise and good end, and in that belief, desired to be content. He had carefully endeavored to be faithful to the Divine requireing, and in this he witnessed peace. He often expressed his great love to mankind in general, and the near union and fellowship he felt with all faithful Friends.

In this pious condition of mind he continued, being sensible to the last, departing this life Ninth month 27th, 1772, aged nearly fifty-two years.

ELIZABETH SMITH.

Elizabeth, daughter of Richard Smith, Jr., was born in Burlington, New Jersey, about the year 1724. She was early in life sensible of the visitations of Divine Love, and as she submitted thereto, the effects thereof were manifest in her sober carriage and innocent deportment. As she grew up towards womanhood, by keeping under the guiding hand of her dear Saviour, who had visited her youthful heart, she was enabled to maintain composure in temper and steadiness in conduct very exemplary.

She lost her mother when young, and much care in her father's household devolving upon her, she, by her dutiful attention to her remaining parent, and general circumspection in her behaviour, won his tender love, and that of all the members of the family. A blessing seemed to rest upon her labours, and upon her own soul also.

She had a great esteem for the Holy Scriptures, encouraging the reading thereof by others, and being diligent in that good practice herself. She believed it right to appear as a minister of the Gospel, and her words, though few, were acceptable and edifying to the church. As she continued faithful to her calling, waiting on the Master for daily strength and direction, she grew in her gift, and was often made instrumental to hand forth in due season of the treasures of wisdom and knowledge." She was often led to neighbouring meetings, and sometimes to places more remote. In the spring of 1764, she, with Sarah Morris and Joyce Benezet, of Philadelphia, visited the meetings through New England, and attended the Yearly meeting at Newport, and she at other times had religious service in some of the southern col-

nies. Her memorial says, "In her public testimony she was greatly favoured, her words being touching and forcible. When led to reprove, the effect was often seen in the solid and weighty countenances of her hearers. Attentive to the prospect of duty which presented, she warned with a striking awfulness, reprov'd with faithfulness, wisely advised, or consoled with tenderness. To the youth she was often drawn forth in great affection, cautioning them with earnestness to beware of the delusive momentary pleasures of this world, and inviting them to the substantial and abiding fruits of virtue and sobriety. To the mind humbled under religious exercise, she was kind and encouraging, endeavouring to raise the hand ready to droop, and strengthen the feeble. She often retired to wait upon the Lord, to know her strength renewed. Her conversation was strictly ordered yet cheerful, her words few, sensible and instructive. Being blessed with a feeling heart, she was frequently the means of assisting the poor and afflicted.

In the latter part of her life she was much afflicted with a severe disorder, which eventually rendered a painful and dangerous operation necessary. She bore her sufferings with so much patience and fortitude, as gave evidence of Divine support, at a period when all the strength of the natural mind is inadequate to console and sustain. Thus she manifested in the hour of extremity the happy effect of a religious life, and of firm christian faith. Before the operation, she appeared in vocal solemn supplication to the Almighty, entreating him to be near her to support in the coming trial, adding with great reverence, "Thou art the God of my life, who hast kept me and fed me all my life long, be now near and support by thy presence, and if it is thy will to put an end to my being here, I submit. And oh, be graciously pleased to give me rest in thy mansion with thy dear Son, the Lamb immaculate, for ever and ever."

After this, she for several years, enjoyed a tolerable share of health; during which time she often was able to attend meetings for worship and discipline, although sometimes in great bodily weakness. A concern to hold herself in readiness to visit friends in England had long rested on her mind, and notwithstanding her weakness of body, she felt it would be right for her to lay her prospect before her monthly meeting. She did not know that she ever would have strength to accomplish such a visit, and neither did her friends, yet her Monthly and Quarterly meetings, in 1771, set her at liberty to perform it, her friend Sarah Morris being under a similar concern. The will was taken for the deed. Her health became more seriously affected, and it was evident that her close must soon come. During the last summer of her life, although very weak in body, she was often favoured in public ministry and in sittings in private families, she being alive and strong, in the best sense. She prepared in her weakness a short account of her religious experience as follows: "24th of Eleventh month, 1771, "As it hath pleased Providence to permit for this year past, a weakening disorder to attend me, which has reduced me to a low ebb, and believing my time in this world may not be long, this testimony lives in my heart to the praise of the Lord, who was pleased in the riches of his mercy to favour me with an early taste of his goodness, and by the secret yet powerful draught of renewed love extended to my soul, let me see it be his pleasure to wean me from the inordinate love of all fading and transitory things, and to make me in some degree a vessel for his use, and after leading me through a variety of trying dispensations and deep baptisms which

gradually wrought a willingness in my heart to be just what he would have me to be, if he would be with me all my life long.

"Here I entered into solemn covenant if he would be my God, I would obey him and give up to all his requirements. After this, my mind was much composed, and so continued to be nearly a year. I was then in the twenty-first year of my age, I delighted much to wait often on the Lord, and could not but admire and secretly adore that Hand of Power, whose canopy of heavenly regard covered my spirit by day and by night. Under this dispensation, the Lord was graciously pleased to give me a sight and sense that he would commit a gift of the ministry to my trust, in which if I was faithful until death, he would give me a crown of life.

"After some time my mouth was opened to testify to others what the Lord had done for my soul, and invite them to come, taste and see for themselves how good the Lord is. It is not in my heart, neither am I of ability of body to say 'much' at this time, but deep gratitude and love dwell with me to the God of my life, who has many times graciously condescended to my humbling admiration, to fulfil his covenant of being with me, failing not even, in the most trying and painful bodily affliction he has permitted to attend me, though some of them have been of a difficult and dangerous kind. In a state of complicated distress, my mind was often refreshed with the sensible enjoyment of Heavenly regard, and in the deepest conflicts, I could often set my soul to the truth of the apostle's experience, viz: "the more my suffering abounded, the more did my consolation in Christ abound."

"After recovering from this dangerous illness, I enjoyed a good share of health, till about a year since, at which time it came weightily on my mind to open to my friends a prospect I had about fourteen or fifteen years ago, that it would at some time in my life, be required of me to resign and offer up myself to pay a religious visit to Friends in England. [This concern] it affected him much, by my dear brother John. After sitting a while in a weak state of health. After sitting a while in silence, he said, "perhaps it may be to prepare thee for a greater change. I apprehended this might be the case, yet a sense remained with me that my resignation would not be perfect till I laid it before Friends of our Monthly and Quarterly meetings, and left it to their consideration. This I freely did, the Lord having wrought a willingness so to do, and for every act of obedience therein I felt the reward of peace.

"And now, though under great bodily affliction, I have no cause to doubt but that the offering has been accepted of Him, who is the alone preparer of every sacrifice that he accepts, and although he may see meet, in his wisdom, to release me from the performance of that weighty service, let none think it strange. As the Heavens are higher than the earth, so are his ways above man's ways. I have no other end to answer or desire in committing these hints to writing but that it may give my friends some satisfaction, and that God in all things may be glorified by me, whether in life or death, and that his great name may have the praise of his own works. That he, who in the riches of his mercy, condescended to be unto me a morning light, may graciously grant that his presence may attend my spirit in my last moments, and the joy of his salvation be as an evening song."

"Being reduced to a state of great bodily weakness, and seeing that her continuance here could not be long, she awaited her change with lively hope, and

often manifested great cheerfulness in the prospect before her. She felt an inward support raising her above all her bodily afflictions, and was enabled to say there was nothing for her to do but to wait her master's pleasure, which she thought would be shortly accomplished. "Oh!" she exclaimed, "what a satisfaction it is to think there is nothing to trouble one, when so near a change, nor to think the time long. It is a painful, lingering illness, but the time is best at hand when I shall be cured by the best of Physicians, without mortal assistance; when the time comes, I shall rejoice."

"She frequently said there was nothing for her to do but bear her pain with patience; she once said that in a time of great suffering she had reasoned after this manner, "why am I so afflicted?" On this came a reply to her mind, "My beloved Son who never offended me, drank of the cup before thee." So she continued, "I am helped along with one kind hint after another." To a relation, after giving an account of a painful night she had just passed, and the suffering she was still enduring, she added, "but I have been refreshed, and the passage of Scripture where it says, 'thou makest the outgoings of the morning and evening to rejoice,' came into my mind with a sweetness I cannot express." She then said that the morning in the text seemed to her to mean the early part of life, and the evening the close of it.

"She often spoke of the peace and consolation she had found in having lived in the fear of her Creator. A night or two before her departure, on her saying she thought it was easier for her to leave the world than for those who had children to part with, a friend said, "there are many who love thee!" On this she said that it might be so, and that would be consummated hereafter. Near her end with great tenderness she expressed her belief that she was passing away, and added, "I would not have you troubled; it is to joy unspeakable and full of glory."

Her death took place Tenth month 2nd, 1772, she being about forty-eight years of age.

*Autodivian Trees.*—We saw, a few days since, two remarkable specimens of petrified trees from Pike's Peak. They belong to the University of Chicago, and so far as our knowledge extends, though a young institution, it has the finest and largest specimens of the autodivian forests with which we are acquainted. One is lost in his own thoughts, while attempting to grasp the vast resources which have past over our planet since these immense trees grew.

While the change to stone is complete, the structure of the wood is as perfectly preserved as if no change had occurred. The petrifying agent was Silica, and it may be seen increasing some portions of the surface in white and blue globules.

From the curvature of the annual rings of growth, we judge the tree from which these specimens come, to have been at least fourteen feet in diameter, and their number and thickness indicate that it must have required about one thousand and six hundred years to grow to that size. The larger specimen of the two is only that stands nearly erect, and is five feet and a half high, and weighs one ton and a half (3000 pounds). The other specimen is nearly as long, weighing half as much, and is nearly uniform in size from end to end, while the larger specimen tapers from the base to about half the size at the top.

The species to which these wonderful specimens belong, has probably been long extinct, but they appear to resemble very closely, in every respect, the California redwood; and for a public institution of learning they constitute a most beautiful

and lasting monument of the primeval forest to which they belonged. They are well worthy of the attention of the curious and the scientific.—*Chicago Tribune.*

## DON'T RUN IN DEBT.

Selected.

Don't run in debt, never mind, never mind,  
If your clothes are faded and torn;  
Fix 'em up, make them do, it is better far,  
Than to have the heart weary and worn.

Who'll love you more for the cut of your hat,  
Or your ruff, or the tie of your boots?  
The shape of your vest, or your shoes or cravat,  
If they know you're in debt for the new?

There's no comfort, I tell you, in walking the street  
In fine clothes, if you know you're in debt,  
And feel that some tradesman perchance you may meet,  
Who will sneer, "They're not paid for yet."

Good friend, let me beg of you, don't run in debt,  
If the chairs and the sofas are old;  
They will fit your back better than any new set,  
Unless they are paid for with gold.

If the house is too small, draw closer together,  
Keep it warm with a hearty good will;  
A big one, unpaid for, in all kinds of weather,  
Will send to your warm heart a chill.

Don't run in debt now, dear girls; take the hint;  
If the fashions have changed since last season,  
Old Nature is out in the very same tint,  
And old Nature, we think, has some reason.

Just say to your friends, that you cannot afford  
To spend time to keep up with the fashions;  
That your purse is too tight, and your honour too bright,  
To be tarnished by such silly passions.

Geats, don't run in debt; let your friends, if they can,  
Have their horses, fine feathers, and flowers;  
But, unless they are paid for, be more of a man  
Than to envy the snubbing hours.

If you're money to spare, I have nothing to say;  
Spend your pounds and your pence as you please;  
But mind you, the man who his note has to pay,  
Is the man who is never at ease.

Kind husband, now don't run in debt any more;  
"Twill fill you with a cup full of sorrow,  
To know that a neighbour will call at your door  
With a bill you must settle to-morrow.

O, take my advice, it is good, it is true;  
But, lest you may some of you doubt it,  
I'll whisper a secret now, seeing 'tis you;  
I've tried it, and know all about it.

For "The Friend."

## Let Divine Love Spread and Prevail.

There is doubtless a large number of Friends distributed through all the Yearly Meetings, who desire the prosperity of the Truth, in whom divine love prevails, leading them to seek the spiritual welfare of their brethren and sisters, and to endeavour to strengthen the bond of christian fellowship which subsists in the household of faith. The breaches of the unity which once subsisted in our Society, ought to increase the fervency of the living members, to labour and breathe in spirit for the gathering back into the fold of Christ, those who have fallen in with the world, and are strangers to the cementing and humbling efficacy of the love of God, over-spreading and outstriking their hearts. Where the loss of this love has made way for the reception of wrong principles and practice, leading in the spirit of meekness with a brother or sister, who has lost the true vision, may reach the witness in them, draw from error, and would yield far more peace to the faithful labourer, than talking about these defects to other persons. Where it was known that this restoring, uniting disposition was at work in different parts, to heal the breaches, and to stop the spreading of divisions, the example of such christian labourers would extend its har-

monizing influence, and tend to enlist others in the same good cause. As individuals in the smaller meetings were brought to lay down their arms, and come into true fellowship, the way would gradually open for the reunion of larger meetings, the benefits of religious association would afresh spring up, and the joy and peace which is in the Holy Spirit would, we might hope, be diffused throughout the body at large.

In the course of their travels, some ministers have been instrumental in removing differences, and restoring love and unity between offended parties, of which John Richardson gives the following instances in his own experience. He says, "After the Lord had healed me, he sent me forth in the work of the ministry, and the first journey I took was into Lincolnshire; and through Coventry to Warwick, to see William Dewsbury. One thing is remarkable; in giving him an account of the particular towns and places I had passed through, in answer to his inquiry what way I came, I mentioned Coventry, which was the last and the worst; for some of the rude people flung stones at me with great violence, as I was speaking in the meeting, so that had the Lord suffered them to hit me, they might have spoiled me; but my faith in the Lord, and the strength of the Truth, bore up my mind above the fear of what wicked men could do to me. After William had heard my account, he fixed his eyes on me, and said, thou must go back again to Coventry. I appeared unwilling for two reasons; first, because I thought I had cleared myself of that people; secondly, I thought it not safe to run into the danger of suffering, unless I was satisfied the Lord required it of me. But William was positive, and said I must go, for there was a service for me to do there. Upon a deliberate consideration of the matter, and seeking to the Lord to know his will in it, I found my way clear to go, and I had some service and good satisfaction, and left Friends nearer to one another than when I first met them; for there had been a misunderstanding amongst some Friends in that city."

"This labour was a blessing to the members of that meeting, and no doubt brought its reward to him. On coming to Tamworth, he found there was a difference, especially between two Friends, who had made a considerable figure in the meeting. He says, "I felt it upon me to go to one of them, and warn him of the spirit of prejudice and envy; and if he gave way to it, it would cut out his love to Friends and Truth, and he would decline meetings, and come to nought, and turn his back on the Truth, which came to be fulfilled as I afterwards heard, for he became a loose man, and listed himself to be a soldier." These cases convey instruction and warning; one party received the designed benefit of faithful labour, and though the other resisted the proffered help and counsel for his preservation, the honest messenger had his reward, and was clear of his downfall. "Brethren, if a man be overtaken with a fault, ye which are spiritual, restore such a one in the spirit of meekness, considering thyself, lest thou also be tempted."

*The Miracles of a Seed.*—Have you ever considered how wonderful a thing the seed of a plant is? It is the miracle of miracles. God said, "Let there be plants yielding seed," and it is further added, "each one after his kind."

The great naturalist, Cuvier, thought that the germs of all past, present, and future generations of seed were contained, one within the other, as if packed in a succession of boxes. Other learned men have explained this mystery in a different way. But what signify all their explanations? Let them

explain it as they will, the wonder remains the same, and we must look upon the reproduction of the seed as a continual miracle.

Is there upon earth a machine, is there a palace, is there even a city, which contains so much that is wonderful as is enclosed in a single little seed—*one grain of corn, one little brown apple-seed, one small seed of a tree, picked up, perhaps, by a sparrow for her little ones, the smallest of a poppy or a blue-bell, or even one of the seeds that are so small that they float about in the air invisible to our eyes?* Ah! there is a world of marvel and brilliant beauties hidden in each of these tiny seeds. Consider their immense number, the perfect separation of the different kinds, their power of life and resurrection, and their wonderful fruitfulness.

Consider first their number. About a hundred and fifty years ago, the celebrated Linnaeus, who has been called "the father of botany," reckoned about 8,000 different kinds of plants; and he then thought that the whole number existing could not much exceed 10,000. But a hundred years after him, M. de Cadolle, of Geneva, described 40,000 kinds of plants, and he supposed it possible that the number might even amount to 100,000.

Well, let me ask you, Have these 100,000 kinds of plants ever failed to bear the right seed? Have they ever deceived us? Has a seed of wheat ever yielded barley, or a seed of a poppy grown up into a sunflower? Has a sycamore tree ever sprung from an acorn, or a beach tree from a chestnut? A little bird may carry away the small seed of a sycamore in its beak to feed its nestlings, and on the way may drop it on the ground. The tiny seed may spring up and grow where it fell, unnoticed, and sixty years after it may become a magnificent tree, under which the flocks of the valley and their shepherds may rest in the shade.

Consider next the wonderful power of life and resurrection bestowed on the seeds of plants, so that they may be preserved from year to year, and have even from century to century.

Let a child put a few seeds in a drawer and shut them up, and sixty years afterwards, when his hair is white and his steps tottering, let him take one of these seeds and sow it in the ground, and soon after he will see it spring up into new life, and become a young, fresh, and beautiful plant.

M. Jouannet, relates that in the year 1835, several old Celtic tombs were discovered near Bergorac. Under the head of each of the dead bodies there was found a small square stone or brick, with a hole in it, containing a few seeds, which had been placed there beside the dead by the heathen friends, who had buried them, perhaps 1,500 or 1,700 years before. These seeds were carefully sowed by those who found them. What was seen to spring from the dust of the dead? Beautiful sun-flowers, blue corn flowers, and clover, bearing blossoms as bright and sweet as those which are woven into wreaths by the merry children now playing in our fields.

Some years ago, a vase, hermetically sealed, was found in a mummy-pit in Egypt, by the English traveller, Wilkinson, who sent it to the British Museum. The librarian there, having unfortunately broken it, discovered in it a few grains of wheat and one or two peas, old, wrinkled, and as hard as stone. The peas were planted carefully under glass on the fourth of June, 1844, and at the end of thirty days these were seen to spring up into new life. They had been buried probably about 3,000 years ago, perhaps in the time of Moses, and had slept all that long time, apparently dead, yet still living in the dust of the tomb.—*Gausson.*

Wordly pride and spiritual pride are alike detestable.

For "The Friend."

Will the editor please, if it meet his approbation, to insert in "The Friend" the enclosed, taken from the collection known as "Kendall's Letters."

\* Eleventh mo. 7th, 1800.

"*Esteemed Friend*,"—The ingenious manner in which I found the hints I lately ventured to give thee were received, induces me to throw before thee some thoughts which have at times struck me, respecting the dangers that await ministers in our Society, more especially the young, and shall I add, those of thy sex. I think it possible, at least, in the first place, that an honest and grateful desire to bear testimony to the Lord's goodness in His tender and fatherly dealings with his poor children in this state of probation, may carry some forward into an office unto which, in its more solemn and important services, they were never called or qualified; and this is more penitently likely, when a fresh sense of mercies received may raise this language in the soul. "What shall I render unto the Lord for all his benefits?" Surely, I will take the cup of salvation, graciously handed me, and call upon the name of the Lord." Having thus stepped forward on motives of gratitude and obedience, the fear of looking back after putting our hand to the plough, may rather tend to push forward, while tenderness in the minds of some Friends, and want of judgment in others, may have precluded all plain dealing, and the wholesome advice of true eldership. Thus, where only a little incense from 'the fields of offering,' when the dew of Hermon has refreshed the breathing plants, might be looked for, the works of an apostle may be attempted, and the result is evident. The sacred cause is not promoted; may, worse, is injured, and those who love it above all things are wounded: wounded, too, in the house of their friends, where wounds are most deeply felt. To those also who may have been rightly called, there is great need of suspecting the possibility of deception, especially if of sanguine temperament, and the mind apt to take lofty excursions, in the dangerous regions of imagination. There is a judicious remark of some unknown writer on this head, of which I took a copy, and it is at thy service. "There is no faculty of the soul more exposed to the attacks of our ever active enemy, at least, more liable to be injured by thee, than the imagination; its nature is so restless and unmanageable, that the utmost vigilance of a well regulated mind, and the assiduous use of all the weapons of our warfare, are scarcely sufficient for keeping it in that degree of subordination, which is necessary for repelling the enemy's assaults. And when, in addition to this disadvantage, the mind is much unfurnished with knowledge, the judgment weak, and the temper sanguine, it is no wonder that the father of lies should rule in the imagination." But by all this, I am not desisting to discourage what is right, and am fully persuaded that here is a way yet to cast up, wherein the wayfarer may, though a fool, take of the wisdom of this world, but not attend; and that if the eye be single, and he heart attentive to the simple path of duty, the whole body will be filled with light sufficient for his duties required. "What I wish to enforce is, that in teachers, as fully, (if not more so,) as in hearers, great watchfulness, care, and fear, with great simplicity of soul, are required." \* \* \* \* \*  
 "With simplicity of good-will to the best and most glorious cause, do I thus write; I hope thou wilt not misconceive me, for truly do I desire that thou'st light may go forth as brightness, and her salvation as a lamp that burneth; that the beneficial light thus handed to the weary traveller, may

lead him safely on his journey, and to the city of the great King.

I am thy real friend, R. G."

*Grafting the Grape*.—In the February number of the *Genesee Farmer*, we find the following article, from the pen of Samuel Miller, of Clandale Nursery, near Lebanon, Pennsylvania, which we deem valuable at this time. As early in the spring as the ground can be got away from the stock to be grafted upon, clean away from around the stem, two three inches deep, saw or cut off the vine smooth; then prepare your graft, (which should have been cut from the vine in the early part of the winter.) If your stock is thick, say one inch or more in diameter, cut out a wedge to correspond with the wedge on the graft; if the stock be less than three-quarters of an inch in diameter, then merely split down clean, as in the usual way of old grafting, but if the graft be not held firmly, it is well to tie around the split with a bit of matting or strong thread, which will set off before doing any damage. When you have inserted the graft, draw the earth in, and press firmly around the joint where operated upon, and up to, and barely exposing the bud, filling it with dry mould; if the earth be wet. Use no cement whatever; I believe it is a great evil. Be sure to cover your graft with loose straw, or some kind of rubbish that will not pack tight; this is to keep the frost from hoisting out the graft, in case freezing occurs afterward, which frequently is the case, as I have grafted in February sometimes, as well as to shade the bud and keep the air off somewhat—a necessary precaution. When the graft begins to grow, the natural or stock suckers must be kept down, or they will soon rob the graft. I have usually succeeded in this way with about eighty per cent, while I hear universal complaints of failure. For root grafting in the house, my best success has been obtained when done in the saddle mode—and this done late in the spring when the vines begin to grow. One important part has almost been overlooked. You must select stocks of nearly similar wood; for instance, Delaware will hardly take at all on a rank log, while upon Clinton and our wild frost grape it takes very freely. Almost any kind will take upon Isabella.—*Late Paper*.

*Keep in the Simplicity*.—I believe myself called upon to bear an open, unqualified, unflinching testimony, not only against all pride, extravagance, ostentation and excess, but also in a peculiar manner against all the secret insinuations and covered appearances, under which they are creeping in, and growing up amongst us as a Society. I have for years believed, that the delineation amongst Friends from the true standard of simplicity is great; and I am of the mind, that if they had diligently hearkened unto, and implicitly obeyed the dictates of best Wisdom, they would have been led to "apply all the gifts of Divine Providence to the purposes for which they were intended." I believe that it is my duty to live in such a humble, plain, homely, simple manner, as that neither in the furniture, food, or clothing used, any misapplication of the gifts of Divine Providence may be admitted or encouraged.

*The Way Christ Reigns*.—The will of God is ever best for us; and I am beyond a doubt confirmed, that every attempt to escape from what He appoints us, and each impatient thought or motion under it, but adds to our affliction; and that, until we bow without reserve, and without an inward murmur, to the all-righteous sway of His sceptre and over us, we shall remain, in some degree, un-

happy, and in pains. But when all within us bows, the work is cut short; we see, we feel, we own His hand in all; in all we kiss the rod. Then He who hath appointed it, most sweetly reigns.

## THE FRIEND.

THIRD MONTH 29, 1802.

War continues to desolate our country, and deprave the morals of the people. Victory stimulates the loyal portion of the community to renewed exertions to obtain a final triumph over all armed opposition to the government; while defeat inflames the evil passions of the rebels, and with the consciousness of numerical and material weakness, their hatred towards the free States appears to augment, and urges them into the infatuated policy of destroying their own property, and thus cutting off their only resources, lest they may fall into the hands of those they are determined to consider as their enemies.

In the present state of excitement in the public mind, and the wide-spread passion for the bloody arbitrament of the sword in this quarrel, there seems little room for Friends to do more than meekly and unyieldingly maintain their peaceable principles in conversation and example; striving, so far as they may be enabled, to extend the feelings of good-will and conciliation, which become the disciples of the Saviour of men. There is great loss sustained by allowing the mind to become engrossed or unsettled by the military movements and exploits of the day, or to imbibe the feelings of hostility and revenge which so generally prevail towards those who have risen up in rebellion against the government. Friends are especially called on in this serious juncture, to seek for ability to walk consistently with their high vocation; ever-bearing in mind that according to the declaration of the apostle, all the law is fulfilled in one word, even in this: Thou shalt love thy neighbour as thyself; and that this love cannot exist where men are in the spirit of war, seeking to take each other's lives, and to do each other all the damage they can inflict, and that it will not allow of our rejoicing in the murderous triumph of the battle field.

An upright, faithful support of the religion of Christ may be allowed to introduce us into much mental conflict, and, in the course of time, may even expose us to danger; but the experience of those who have trodden the narrow way before us, teaches, that in the discipline of the human heart, He who alone knows its deceitfulness, not unfrequently sees meet to employ affliction, and permits his devoted child to feel as though the tide of adversity set strongly against him; so that the performance of the Divine will would seem to involve, suffering, losses, and dangers which he cannot escape. But resignation is his duty, and a firm reliance that He who calls for the test of his obedience, and knows the motive to action, will, in his almighty power and his fatherly pity, provide for every exigency, and cause all things eventually to work together for his good. Much is said about love of country, and in praise of those who are willing to die in its defence; but he is the true patriot whose humble, blameless life, and fervent, effectual prayers, rise as a sweet memorial before the throne of the Majesty on high, and draw down the regard and blessing of Him who ruleth in the kingdoms of men; moving him in pity to the workmanship of his hand, to restrain the wrath of wicked men, to stay the scourge of war, and permit the land once more to enjoy the blessing of peace.

## SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 9th inst. The blockade of the Southern ports of the United States had been discussed in Parliament. It was condemned by some of the speakers for its want of policy, and it was expected that its only prospect of bringing about a conclusion of the war, was the recognition on the part of Great Britain and the great European Powers, of the independence of the Southern States. The Solicitor-General was of the opinion that, as they had hitherto done, Government was to maintain, as they had hitherto done, an impartial neutrality between the contending parties. With regard to the blockade, its efficiency must be judged by Great Britain by those principles of international law which had been laid down by the most distinguished jurists, and of which she had been acting on, when questions of blockade had arisen. England had a strong interest as any country in the world in maintaining the rights of blockade by a belligerent power, and she was bound to exercise the greatest caution before she took any course which might actually destroy the value of her independence and strength had been established. He also quoted numerous precedents to show that the present blockade was as efficient as other blockades had been in former years, and that it would be a violation of the principles of international law if the principles of neutrality to break it. The Solicitor-General spoke earnestly and ably, and resumed his seat amidst cheers from all parts of the House.

The steamer Annie Shields had arrived at Queenstown, having run the blockade of Wilmington, N. C., with a cargo of iron and other articles. The London money market was easy, and the rates of interest low. The arrivals of specie from Australia and other quarters, during the previous week, had amounted to \$6,000,000. American securities were in demand, at advancing rates.

The Liverpool cotton market was without material change. Fair New Orleans was quoted at 14d.; Uplands, 13d. Stock in port, 440,000 bales, including 166,000 American. Breadstuffs dull, and prices declining.

**Three Days Later.**—There had been a debate in the House of Lords, respecting the bill for the extension of the war in the House of Commons. Lord John Russell sustained the neutrality policy of the Government. He then proceeded to reply to the proofs adduced by Lord Campbell of the inefficiency of the blockade, recounted the efforts of the United States to break it, and considered it effective, and considered that the want of cotton in our own markets, and the deficiency of our manufactured goods in the Confederate States, were the best test that the blockade was not an empty proclamation. As to the number and size of the vessels which had defied the blockading squadrons, much exaggeration existed, many of the vessels which had run the blockade being only coasters of small draught, ranging from creek to creek.

**UNITED STATES.**—Congress.—Much time has been occupied lately in speech-making, with but little progress in the business of legislation. The tax bill has been under discussion in the House of Representatives, its different items being closely scrutinized. The bill for the abolition of slavery in the District of Columbia has been discussed in the Senate.

**New York.**—Mortality last week, 417.

**Philadelphia.**—Mortality last week, 296; of consumption, 52.

**Southern Items.**—Succession newspapers now very seldom reach the North. It is, however, ascertained, that great alarm exists in Richmond since the retreat of the rebel army from Memphis. The Union is said to be ready to march to the city for a timely flight, and were stopped by the military authorities, who have entire possession of the city. The Memphis Appeal, contains a despatch from Richmond, dated the 11th inst., stating that President Davis is coming West soon, and is said to be ready to rally to the cause. Memphis is said to be plenty at Memphis, but there is a scarcity of good fire-arms. Pikes were being made in great numbers, to supply the deficiency. Many Union men had left Memphis, abandoning their property to be confiscated. The following terms were offered for the purchase of the roads, so that all the rolling stock of the roads can be sent down to New Orleans, when it becomes necessary. The New Orleans Crescent of the 11th, notices the prevalent disposition to invest in the great staples, sugar and molasses; 5000 lbs. of the former and 5000 of the latter, having recently changed hands. It is intimated that a desire to get rid of the Confederate currency is at the bottom of the movement, some parties being apprehensive that the city may soon fall into the hands of the U. S. Government.

**War News.**—Certain newspapers have persisted in the publication of military details in violation of the orders of the War department, the Secretary of War has ordered the enforcement of the penalties, and a special court martial to be held at Washington, for the trial and punishment of the offenders. The editors of three journals, (two in New York, and one in Boston), have, it is stated, been arrested, and tried by court-martial.

**The Two.**—*New Mexico.*—From the accounts given by the Santa Fe Gazette, it would seem that the U. S. troops had suffered a defeat in the late engagement. Six regiments of Federal troops have been ordered from Fort Scott to assist in driving the rebels back to the Rio Grande. According to latest dates, the army of Gen. Curtis remained near the great battle field of Pea Ridge, in the N. W. corner of the State. The prisoners taken have been sent under an escort to St. Louis. The rebel force, in the vicinity, under Price and Van Dorn, was formidable in number. A considerable body of rebels attacked the town of Salem, Fulton county, were recently attacked and routed by some U. S. troops from Missouri. Many of the rebels were killed and wounded, and others taken prisoners. *Missouri.*—The rebel position at Island No. 10 on the Mississippi, is found to be more formidable than was at first supposed, and the boats commanded by Coon. Foote, had not, in a week's time, made much impression, and it was thought the attempt would scarcely succeed without the co-operation of a land force. The river banks at that place are at present overflowed.

**Tennessee.**—A large body of rebels were reported to have advanced to Savannah in the southern part of the State. The main army of the rebels was concentrated near Corinth, Mississippi, where it is reported about 50,000 were collected, under the command of Gen. Beauregard. The Memphis Appeal expects Gen. Beauregard will soon perfect the organization of the discipline and the military tactics. A special agent of the Post-office department acting in Tennessee and the border of Kentucky, reports as follows: "It is gratifying to find wherever I have been, that there is a strong desire for the re-establishment of the mails, and willingness among the people to return to a regular and orderly life." About 5000 rebels having entrenched themselves on the summit of the Cumberland mountains, near Pound Gap, on the frontiers of Virginia, Gen. Garfield assembled the mountain with a force of infantry, to disperse them. The rebels fled as soon as the attack commenced, abandoning their arms and baggage to the victors. Some of the killed and wounded on both sides. *North Carolina.*—Newbern, N. C., has been taken by Gen. Burnside after a severe engagement, in which 537 of the Federal soldiers were killed or wounded. About 200 rebels were taken prisoners. Their loss, in killed and wounded, is not known, but is supposed to be very heavy. The U. S. troops, as the rebels were protected by their entrenchments. Gen. Burnside reports the capture of 46 heavy guns, 18 pieces of light artillery, large quantities of ammunition, &c., together with a number of vessels and valuable merchandise, consisting of rosin, turpentine, and tanned hides. In consequence of the expedition of Newbern, Gen. Burnside sent an expedition to Beaufort, N. C., but the place was evacuated before the U. S. troops arrived. They found the rebels had blown up Fort Macon before their departure, and had also burned the steamer Nashville, which was lying in the bay.

**Florida.**—Gen. Dupont in command of an expedition from Port Royal, has taken possession of St. Augustine and Jacksonville, and also of Port Marion. St. Augustine is the oldest city in the United States, having been settled by the Spaniards, before the first settlement of London in Virginia. The place was at first surrendered without resistance. The government has now entire possession of East Florida. *Louisiana.*—Gen. Butler's expedition of land and naval forces has arrived at Ship Island, near the entrance of the Mississippi. An early attempt to capture New Orleans was anticipated, but a probable obstacle.

**The Markets.**—The following were the quotations on the 23d inst. *New York.*—Red wheat, \$1.35 a \$1.37; barley, 88 cts. a 90 cts.; oats, 37 cts. a 49 cts.; rye, 80 cts. a 82 cts.; yellow corn, 58 cts. a 60 cts.; the price of New York City flour, 100 lbs., was \$22.00, on sales of gold at 1 1/2 premium. The money market easy, the rate of discount being from 5 1/2 to 7 per cent. *Philadelphia.*—Red wheat, \$1.20 a \$1.31; white, \$1.40 a \$1.50; rye, 70 cts.; yellow corn, 51 cts. a 51 cts.; oats, 36 cts.; clover seed, \$5.09 a \$5.27.

## RECEIPTS.

Received from Israel Buffinton, agt., Mass., \$2, vol. 35, and for S. Lincoln, P. Tripp, P. Chace, N. Buffinton, M. Chace, M. Buffinton, and Wm. F. Woods, \$2 each, vol. 35; from Wm. P. Bedell, agt., Jo., \$2, vol. 34, for Jos. Embree, \$2, to 14, vol. 34, for St. Stanley, \$2, vol. 35; from Asa Garetson, agt., O., for Francis Davis, \$2, vol. 6, vol. 36, for E. Kennard, \$3, to 27, vol. 33; from Ed. H. Wood, D. C., \$2, vol. 35; from S. Hobson, agt., O., for Jos. Penrose, \$5, to 27, vol. 35.

## WEST-TOWN SCHOOL.

The Committee to superintend the Boarding-School at West-Town, will meet in Philadelphia on Sixth-day the 4th of next month, at 2 o'clock, P. M.

The Committee on Instruction and that on Admissions meet on the same day; the former, at 10 o'clock, and the latter at 11 o'clock, A. M.

The Visiting Committee attend the semi-annual examination of the schools, commencing on Third-day morning, and closing on Fifth-day evening of the same week.

Third month 19th, 1862. JOEL EVANS, Clerk.

For the accommodation of the Visiting Committee, convenances will be at the Street Road of West-Town, meeting on the 19th of Philadelphia, at 2 and 4.30 P. M., on Second-day afternoon, the 31st instant.

## WEST-TOWN BOARDING-SCHOOL.

The Summer Session of Friends' Boarding-school at West-Town will commence on Second-day the 12th of Fifth month next. Parents and others intending to send their children as pupils, will please make early application to DEBBE KNIGHT, Superintendent, at the School, or to CHARLES J. ALLEN, Treasurer, No. 304 Arch street, Philadelphia.

**WEST-GROVE BOARDING-SCHOOL FOR GIRLS,**  
(ON THE PHILADELPHIA AND BALTIMORE CENTRAL RAILROAD.)

The Summer Session will open on Second-day, the 5th of Fifth month next.

For information and circulars, address

THOMAS CONARD, Principal,  
West-Grove P. O., Pa.

Third mo. 5th, 1862.

**DIED,** on the 22d of First month, 1862, at his residence in East Whiteland, Chester county, Penna., DEBY, wife of David Covey; a beloved mother and elder of Philadelphia Particular and Goshen Monthly Meeting, in the sixty-sixth year of her age. She bore a protracted illness with a remarkable degree of patience and resignation, manifesting an entire submission to the will of her heavenly Father; and though (at times) her sufferings were very great—never was heard a murmur or complaint. Frequent and fervent were her supplications to be released, and that patience might be granted to the end. At one time she remarked, "I have nothing to boast of but infirmities, and nothing to recommend me to His mercy, but poverty." Again: "Death is an honest hour, and to die the death of our righteous, we are privileged to yield it up." Her last words were, "I have a passport to a peaceful eternity as I believe in the Redeemer of men; He came to seek and save that which was lost." Toward the close, her spirit was one of almost constant prayer, and, in her extreme weakness, could be heard to say, "I yield myself to God." She exhorted those around to be faithful to each manifest duty, and assured them she saw nothing in her way; "no cloud, no darkness to prevent my entrance into the better land." Heaven is a happy home, and the grave is a quiet resting place. She has passed away another "Mother in Israel," and while we mourn for the departed, it is not as those without hope—having the comforting assurance that her purified spirit has been admitted into that sacred city, "not one of whose inhabitants can say, I am sick."

She died on the 15th of Second month, HANNAH SYKES, an esteemed member of the religious Society of Friends; well known in this city where she long resided, and in Burlington county, N. J., of which she was a native. Her health had failed some months before her death. Her friends who were with her some time before, and at the time of her close, felt a comfortable assurance that her departure was in peace.

Second mo. 19th, 1862, in Penn township, Chester county, Pa., ESTHER, wife of Samuel Harvey; a member of West Grove Particular and New Garden Monthly Meeting, aged nearly eighty-two years.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, FOURTH MONTH 5, 1862.

NO. 31.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From "All the Year Round."

## Earthquake at Mendoza.

On the evening of the 20th of March, 1861, the town of Mendoza lay calmly, quietly, subsiding into the night, as she had done every evening for more than two centuries past. The sun had long since sunk behind the Andes, whose lofty snow-draped peaks no longer reflected his declining rays. It was nearly twenty minutes past eight, vesper was just over, and the churches poured forth their throng of worshippers into the streets. Mendoza was never a busy city in the European or Bazaar-Ayren sense of the word, though she was the emporium of all the trade between Chili and the Argentine Provinces, and now that the work of the day was over, it was hardly possible to imagine a more perfect calm in any live of men. A few of the shop-keepers only were still occupied, especially those in the Arcade of Soto Mayor, where the brilliant paraffin lamps attracted crowds of ladies to make purchases in preparation for the Holy Week, then close at hand. The saloons of the Progress Club were crowded with young men, the elite of the city. The cafés were full, their billiard tables all occupied, and their patios (or central court-yards of the houses) crowded with citizens taking their evening cup of coffee, and smoking their evening cigar. The horses on the stand in the plaza lazily drooped their heads, knowing their day's work to be nearly over. And over all, the moon, then entering her second quarter, cast long shadows over the streets, and silvered all the towers and the domes.

Twenty minutes past eight.—There seems to be a loud rumbling as of a heavy cart over a stony pavement. Few heed it, few even hear it; but some Chilians, men from the land of earthquakes, who are sensitive to the least warning, shout "An earthquake! an earthquake!" as they rush to the centres of the patios and the street corners. They scarcely get to a safe distance from the walls around them, when with a terrible roar the earth heaves—once, twice, three times—and Mendoza is not. Where Mendoza had been, lies a sepulchre of ruins: not a cry, not a wall breaks the continued stillness of the moonlit night; every voice is hushed in terror or in death. Fourteen thousand people lie under the mound of ruined brickwork, dead, dying, or grievously hurt. The shocks continue at intervals throughout the night, and

throughout the next day, and the next, and for a month and more, but they can do no more harm. That first awful space of ten seconds sufficed for perfect ruin; nothing was left standing, not a house, not a wall, not even a stone fence, for twenty leagues around the city. Men standing in open spaces, at street junctions, in large patios, in the plaza, or on the alameda, are thrown down, and many even there are buried in the ruins of their houses. Those who escape, struck dumb and paralyzed with terror, remain where they stood as the town fell, and quake with dread. Horses and oxen that were grazing in the fields, being thrown down, dare not rise again for days, till custom gives them courage, and they are driven by hunger to their pasture. The earth in many places opens huge gulfs, wherein walls, parts of houses, wretched men also, are swallowed up. The canals are drained, the courses of the rivers altered, and lakes and springs rise in the most unaccustomed places. When after the first shocks the few survivors muster courage to look about them, they pick their way by moonlight over masses of fallen brickwork guided by the moan of pain which now first begins to proclaim some living sufferer below. Here is an immense pile of rubbish where the principal street ran by the Church of Santo Domingo. That chief building has fallen outwards, and hundreds of worshippers who had but just risen from prayer, kneeling on the marble pavement under the dome, are there killed—crushed and buried beneath the great walls. The dealer, thrown out into the street from his own doorstep, finds speedy death under the fall of his own house. His wife, perhaps crossing the patio, is thrown down, but escapes with a few slight bruises. Her children were all within; she is alone in the world, childless and a widow.

The governor escapes almost by a miracle; he steps into the patio to bow out an evening visitor, his horse tumbles behind him, and the visitor is buried in the doorway, but the host escapes, so stupefied that for days he can do nothing. More active men also escape, and as soon as the first shock of terror is past, their active energies send them to the rescue of those who may yet be saved. Thus many, covering down in angles and corners formed by beams resting on ruined walls, and bridging over a space beneath, are dragged up to life again. Some are unhurt, most are severely bruised, and many have bones broken. Quickly from deep down under the brickwork, the wounded and dying are dragged out by scores and by hundreds, and are laid under the shady trees in the plaza and in the alameda, till that broad promenade, the pride and the breathing place of the city, becomes one vast open-air hospital. And now as the moon sets, at midnight, come troops of country people from the suburbs. To help in the work of mercy? No. They pass on, heedless of the cry for succour from the wounded and dying at their feet; they come to tear up the ruins with spades and with crowbars, intent only on plunder. They dig down into what an hour or two before were shops and stores, they break open the tills and the iron chests in which the money was kept. They dig down into what were saloons and luxuriously

furnished boudoirs, and are away again to their low wooden huts in the suburbs, that had stood the earthquake shock, laden with plunder in money, gilded ornaments, jewelry and rich clothing. These hidden, again they grope their way back through the thick darkness to renew their heartless task. A glare now breaks upon the darkness. Where the Arcade stood, the rich shops of the city, and the boasted Club-house, paraffin oil was burnt in abundance. The lamps were all smashed in the ruin, but the burning bricks took the fire down with them. French silks, Manchester cottons, Yorkshire wools and rich carpets, soaked in the spit oil, became as tinder, and the fire creeps along, now smouldering for a space, now leaping up into flame, as it finds a vent into the upper air, till at length it bursts forth in a general conflagration. Woe to those buried alive under these ruins, for on comes the remorseless fire, and there are none to stay its course. What the earthquake has left the fire will destroy, and nothing shall be left of the old city but cinders and heaps of broken brickwork. Will they not help now, if they are paid for it. "Help me out," cried a man who had nothing but his head left visible. "What will you give us?" said they. "Two dollars, which is all I have with me." "Give us six, and we get you out." "I have not so much," said the poor fellow. "Then, you may stay where you are," and they pointed mockingly to the flames rapidly approaching. The fire rolled on and on, and over him, and when it had passed it left only undistinguishable ashes. Nine of one family were buried to death for want of aid to get them out; they were all in one room, and the roof so fell that they were protected, but without means of egress, until the ruins were removed. Their brother was imbedded near them, where he could converse with them, and also speak to those passing near, to whom he appealed for assistance. At last somebody got him out. Then he began to relieve his family, but before he could do so efficiently, the flames reached the place from a fire raging on both sides. He remained until he was seriously burnt, encouraging his family with hopes, and calling for assistance, but none came. He was at last obliged to leave the spot, and at that moment he could distinctly hear them praying. I saw the remains of his family when they were clearing away the rubbish. Nothing was left but a large mass of charred bones. The dead and those who were maimed and could offer no resistance, were robbed of their clothes, and left naked. Many people were got out alive several days afterwards. One man was found alive after being sixteen days under the ruins; he died three days after his rescue.

Dr. Biancas, who was despatched by the government of Buenos Ayres, immediately on receipt of intelligence of the catastrophe, with succors for the survivors, thus writes to General Mitre, the governor, under date of the 25th of April: "It is impossible to paint to you how excellent the picture of desolation presented by this unhappy capital. At a distance of forty-two leagues, on entering the province, the traveller first sees the ravages of the earthquake of the 20th of March—fractured walls

and fallen ranchos. As he approaches the fallen city, these ravages become more notable, until for a radius of twenty leagues around, not a house is to be found, not a fence remains standing, one small hermitage, situated in the northern part of the district, known as Guamayan, alone excepted. The beautiful city of Mendoza, surrounded by pleasant alamedas and water-courses, presents a most moving spectacle, that of an immense heap of ruins under which lie buried more than ten thousand victims, crushed, suffocated, or burnt on that dreadful night. To the shock followed the fire, and to this the plunder by the mob; who, by reason of the nature of their dwellings, escaped without injury. More than two thousand wounded were dug out from under the ruins, of whom a great part are since dead; there are, perhaps, not two hundred persons in Mendoza, who did not spend some hours or days beneath the ruins. The tales that are told are horrible. The inhabitants are at present living under the trees, in tents, or in huts. The shocks yet continue daily. The great earthquake of the 20th of March came from the north-west, and took a straight course of twenty leagues, terminating at the city of Mendoza, which stretched almost due north and south. It was of an undulating character, and from the explorations made by the English geologist, — Forbes, it seems that there has been no volcanic eruption, but an ejection of a great quantity of gases along the Sierra, and near to the place called Uspallata, where there are great gulfs in the earth, and large masses of rock have been torn from their base. In some of these parts, deep gulfs, which may be seen in several wide, dark-looking water flows, and in one of them a sort of lake has been formed, more than three hundred metres long by fifty wide."

A survivor thus describes his escape: "We felt the shock of an earthquake, and fled to the street, I being the last. As I reached the door of the office, the earth gave so violent a shake, that the shop and office fell together, shutting me in between the walls for a quarter of an hour, suffering from the continual shocks, and having no outlet. As soon as the shocks ceased, gaining strength from my fears, I made every exertion to move away the bricks which covered the door; I succeeded in turning over two bricks, and making an opening, by which I got out with much difficulty. What horror! So soon as I stood upon the ruins, I looked over the city by moonlight; everything was in the dust, even the churches; not one house remained standing. Crossing the ruins towards my house, to see if I could save my family, I heard, on passing by the shop of Don Juan A. Rosa, voices from below calling for help. I could not pass them. I set to work to clear off the rubbish, which was above, with my hands and nails, and, after an hour's work, succeeded in rescuing two of Jose's children. We afterwards saved another who was further on, and then I went on to my house, to see if I could not do the same for my family. After much trouble, I found the house, and climbed on to the ruins, calling for my wife and children; but none answered. I then went to the house of my son, who lives in the plaza, but could not find it, such was the sameness of ruin. Don José de la Cruz Centeno, who was seated in the plaza, much bruised, and who lived next door to Mercedes showed me which was her house. I climbed over the ruins, calling to her, till I reached the gable of the room where she slept, which remained standing, but leaning over most dangerously to the north. I called, and she answered me from below the ruins. I went round, and never heeding the risk, set to work to get her out, by taking off the bricks above her. Alone, bruised in spirit, and sorrowful, with-

out tools, I raised the bricks with my hands, and discovered the head of my daughter. As soon as I had given her air, and she told me that the child she had in her arms was not dead, I called to Centeno to hire some peons, or send some who could assist me; many came, but did not dare to help me when they saw the leaning gable, which, if it fell, would bury us all together. One peon only took pity, coming me at work alone, and, after two or three hours' work removing bricks, we got out the child before it died, but it was necessary to cut off all the clothes of my daughter at the waist, and thus only we rescued her bruised and hurt. . . . I have lost Demitita (his wife), my daughter Adela, my son-in-law Euceterio, and my two servants; also the uncle and aunt of my wife."

(To be continued.)

#### Dymond on War.

(Continued from page 235.)

"The chief aim," says a judicious author, "of those who argue in behalf of defensive war, is directed at the *passions*;" and accordingly, the case of an assassin will doubtless be brought against me. I shall be asked—Suppose a ruffian breaks into your house, and rushes into your room with his arm lifted to murder you, do you not believe that christianity allows you to kill him? This is the last refuge of the cause: my answer to it is explicit—I do not believe it.

I have referred to this utmost possible extremity, because I am willing to meet objections of whatever nature, and because, by stating this, which is enforced by all our prejudices and all our instincts, I shall at least show that I give to those who differ from me, a fair, an open, and a candid recognition of all the consequences of my principles. I would, however, beg the same candor of the reader, and remind him, that were they unable to abide this test, the case of the ruffian has little practical reference to war. I remind him of this, not because I doubt whether our principles can be supported, but because, if he should think that in this case I do not support them, he will yet recollect that very few wars are proved to be lawful. Of the wars which are prosecuted, some are simply wars of aggression; some are for the maintenance of a balance of power; some are in assertion of technical rights, and some, undoubtedly, to repel invasion. The last are perhaps the fewest; and of these only it can be said that they bear any analogy whatever to the case which is supposed; and even in these, the analogy is seldom complete. It has rarely indeed happened that wars have been undertaken simply for the preservation of life, and that no other alternative has remained to a people, than to kill or to be killed. And let it be remembered, that unless this alternative only remains, the case of the ruffian is irrelevant; it applies not, practically, to the subject.

I do not know what those persons mean, who say, that we are authorized to kill an assassin by the *law of nature*. Principles like this, heedlessly assumed, as of self-evident truth, are, I believe, often the starting-point of our errors, the point of divergence from rectitude, from which our other obligations proceed. Some men seem to talk of the laws of nature, as if nature were a legislatrix who had sat and framed laws for the government of mankind. Nature makes no laws. A law implies a legislator; and there is no legislator upon the principles of human duty, but God. If, by the "law of nature," is meant anything of which the sanctions or obligations are different from those of revelation, it is obvious that we have set up a moral system of our own, and in opposition to that which has been established by Heaven. If we

mean by the "law of nature," nothing but that which is accordant with revelation, to what purpose do we refer to it at all? I do not suppose that any sober moralist will stately advance the laws of nature in opposition to the laws of God; but I think that to advance them at all—that to refer to any principle or law, in determination of our duty, irrespectively of the simple will of God, is always dangerous; for there will be many, who, when they are referred for direction to such law or principle, will regard it, in their practice, as *final* standard of truth. I believe that a reference to the laws of nature has seldom illustrated our duties, and never induced us to perform them; and that it has hitherto answered little other purpose than that of amusing the lovers of philosophical morality.

The mode of proving, or of stating, the right to kill an assassin, is this:—"There is one case in which all extremities are justifiable; namely, when our life is assaulted, and it becomes necessary for our preservation to kill the assailant. This is evident in a state of nature; unless it can be shown that we are bound to prefer the aggressor's life to our own; that is to say, to love our enemy *better* than ourselves, which can never be a debt of justice, nor anywhere appears to be a duty of charity." If I were disposed to hold argumentation like this, I would say, that although we may not be required to love our enemies *better* than ourselves, we are required to love them as ourselves; and that in the supposed case, it still would be a question equally balanced, which life ought to be sacrificed; for it is quite clear, that if we kill the assailant, we love him *less* than ourselves, which may, perhaps, militate a little against "a duty of charity." But the truth is, that the question is not whether we should love our enemy better than ourselves, but whether we should sacrifice the laws of christianity in order to preserve our lives—whether we should prefer the interests of religion to our own—whether we should be willing to "lose our life, for Christ's sake and the gospels."

This system of *counter-erime* is of very loose tendency. The assailant violates his duties by attempting to kill me, and I, therefore, am to violate mine by actually killing him. Is his meditated crime, then, a justification of my perpetrated crime! In the case of a condemned christian martyr who was about to be led to the stake, it is supposable, that by having contrived a mine, he may preserve his life by suddenly firing it, and blowing his persecutors into the air. Would christianity justify the act? Or what should we say of him if he committed it? We should say that whatever his *faith* might be, his *practice* was very unsound; that he might *believe* the gospel, but that he certainly did not fulfil its duties. Now I contend that for all the purposes of the argument, the cases of the martyr and the assaulted person are precisely similar. He who was about to be led to the stake, and he who was about to lose his life by the assassin, are both required to regulate their conduct by the same laws, and are both to be prepared to offer up their lives in testimony of their allegiance to christianity: the one in allegiance to her, in opposition to the violation of her moral principles and her moral spirit; and the other, in opposition to errors in belief or to ecclesiastical corruptions. It is therefore in vain to tell me that the victim of persecution would have suffered for religion's sake, for so would also the victim of the ruffian. There is nothing in the sanctions of christianity which implies that obedience to her moral law is of less consequence than an adherence to her faith; nor, as it respects the welfare of the world, does the consequence appear to be less; for he

who, by his fidelity to christianity, promotes the diffusion of christian dispositions and of peace, contributes, perhaps, as much to the happiness of mankind, as he who by the same fidelity recommends the acceptance of an accurate creed.

A great deal hangs upon this question, and it is therefore necessary to pursue it further. We say, then, first,—that christianity has not declared that we are ever at liberty to kill other men: secondly,—that she virtually prohibits it, because her principles and the practice of our Saviour are not compatible with it; and, thirdly,—that if christianity allowed it, she would in effect and in practice allow *war*, without restriction to defence of life.

The first of these positions will probably not be disputed; and upon the second, that christianity virtually prohibits the destruction of human life, it has been the principal object of this essay to insist. I would, therefore, only observe, that the conduct of the Founder of christianity, when his *enemies approached him "with swords and staves,"* appears to apply strictly to self-defence. These armed men came with the final purpose of murdering him; but although he knew this purpose, he would not suffer the assailants to be killed or even to be wounded. Christ, therefore, would not preserve his own life by sacrificing another's.

But we say, thirdly, that if christianity allows us to kill one another in self-defence, she allows *war*, without restriction to self-defence. Let us try what would have been the result if the christian Scriptures had thus placed human life at our disposal: suppose they had said—*You may kill a ruffian in your own defence, but you may not enter into a defensive war.* The prohibition would admit, not of some exceptions to its application,—the exceptions would be so many, that no prohibition would be left; because there is no practical limit to the right of self-defence, until we arrive at defensive war. If one man may kill one, two may kill two, and ten may kill ten, and an army may kill an army;—and this is defensive *war*.

Supposing, again, the christian Scriptures had said, *An army may fight in its own defence, but not for any other purpose.* We do not say that the exceptions to this rule would be so many as wholly to nullify the rule itself; but we say that whoever will attempt to apply it in practice, will find that he has a very wide range of justifiable warfare; a range that will embrace many more wars than moralists, laxer than we shall suppose him to be, are willing to defend. If an army may fight in defence of their own lives, they may and they must fight in defence of the lives of others; if they may fight in defence of the lives of others, they will fight in defence of their property; if in defence of property, they will fight in defence of political rights; if in defence of rights, they will fight in promotion of interests; if in promotion of interests, they will fight in promotion of their glory and their crimes. Now let any man of honesty look over the gradations by which we arrive at this climax, and I believe he will find that, *in practice*, no curb can be placed upon the conduct of an army until they reach it. There is, indeed, a wide distance between fighting in defence of life and fighting in furtherance of our crimes; but the steps which lead from one to the other will follow in inevitable succession. I know that the letter of our rule excludes it, but I know the rule will be a letter only. It is very easy for us to sit in our studies, and to point the commas, and semicolons, and periods of the soldier's career; it is very easy for us to say he shall stop at defence of life, or at protection of property, or at the support of rights; but armies will never listen to us—we shall be only the Xerxes

of morality throwing our idle chains into the tempestuous ocean of slaughter.

What is the testimony of experience? When nations are mutually exasperated, and armies are leved, and battles are fought, does not every one look with what-ever motives of defence one party may have begun the contest, both, in turn, become aggressors? In the fury of slaughter, soldiers do not attend, they cannot attend, to questions of aggression. Their business is destruction, and their business they will perform. If the army of defence obtains success, it soon becomes an army of aggression. Having repelled the invader, it begins to punish him. If a war is once begun, it is vain to think of distinctions of aggression and defence. Moralists may talk of distinctions, but soldiers will make none; and none can be made; it is without the limits of possibility.

(To be continued.)

From the Lectures Hour.

#### The Watch, and how to Use It.

(Continued from page 225.)

The superiority of one description of watch over another consists in the comparative excellence of the escapement, which is an apparatus contrived for securing and maintaining equal vibration of the balance; of course, we infer that the other parts of the watch are constructed with good materials and by a skillful workman. In all cases it is the escapement which gives a specific designation to the watch, among the watch-makers and dealers. The oldest description of watch, now in common use among us, is the vertical, so called from its old vertical escapement. It is the simplest contrivance, and probably the most readily manufactured, but in principle it is least reliable for accuracy; although, where the workmanship and material are both of the highest quality, vertical watches are found to act satisfactorily.

Superior to the vertical is the horizontal or cylinder watch, so called from its horizontal escapement, introduced by Graham, in the beginning of the last century. In this form of escapement, the impulse is given to a hollow cut in the cylindrical axis of the balance, by teeth projecting from a horizontal crown-wheel. These watches may be, and are, made remarkably flat and portable, and are, from their neatness, great favourites with the public. If well made, they will perform admirably; but they are subject to much wear by the very nature of their construction, and are consequently less durable than any other description of watch now made.

The lever watch, named after the lever escapement invented by Mudge, by which the impulse is given to the balance by a lever attached to anchor-pallets, is now considered the best and most useful watch manufactured. As its first appearance it was very imperfect; but the principle was recognized as sound, and it has been made, for many years past, the subject of so many improvements as to leave little further to be desired.

There are various other descriptions of watches which might be mentioned; but each and all of them would be found to consist of some variation, modification, or combination of the mechanisms of those already mentioned. There is no end to the ingenuity of watch-makers, or their enterprise either. Watches are made that will strike the hour, the half-hour, and the quarters;—they play sweet tunes—to sound an alarm—to wind themselves up without a key, by simple pressure of a spring at the edge of the case, or even, without the volition of the wearer, by the motion of the body in walking. Again, some will show the time in any longitude, as well as that of Greenwich, and some will

mark the progress of the hours by small protrusions on their edges, so that a man may feel what o'clock it is in the dark. Moreover, watches are made of all sizes, from five or six inches in diameter down to the diameter of the third of an inch, or the size of a silver three penny piece. A lever watch of this diminutive size was exhibited by — Funnell, of Brighton, at the Crystal Palace, in 1851. But we cannot dilate on these curiosities of the art.

One word on the subject of compensation. On whatever principle a watch is constructed, it will not keep time with anything like *perfect* accuracy unless a provision be made for compensation. The reason is, that all substances in nature are liable to expansion by heat and contraction by cold. Just as a long pendulum vibrates slower than a short one, so an expanded balance-wheel vibrates slower than a contracted one. Hence it is that even the best made watches, whatever the form of their construction, are found, if uncompensated, to go fast, or gain time, in cold weather, and slower, or to lose time, in hot weather. This defect is met by the adoption of what is called the compensation-balance. This contrivance substitutes for the common steel balance-wheel a balance-wheel in two halves, united together by a cross-bar; the outer part of the wheel is brass, and the inner part steel, and its flat outer edge is loaded with weights. The compensation is effected in this way:—The heat which expands the balance-spring diminishes its elastic force, and would cause the watch to lose; but the same heat expands the outer or brass part of the wheel more than it does the inner or steel part—brass expanding more than steel by heat, and contracting more by cold; a curvature inwards of the whole arm of the ring ensues, which lessens the checking power of the balance, so that the spring requires less force to influence it. On the other hand, the cold, which contracts the balance-spring, increases its elastic force, and would cause the watch to gain; but the same cold contracts the brass more than the steel, and, by curving the arm outwards, increases the checking power of the balance, so that the spring has no more influence over it than it had before. The weights on the balance are moveable, and may be adjusted with such accuracy as to cause a close approximation, in watches of first class workmanship, to perfect time. The compensation-balance is, however, an expensive article, and is found attached only to high-priced watches.

A few words of advice on the subject of watches, and then we have done. Choose a lever if you can afford it, and let it be as good as you really can afford. Buy it of a man who has a character to lose, and to whom you can look for redress in case of failure. Be suspicious of cheapness, and do not put too much faith in the guarantees for a year or two years; because a flimsily made watch may go for a year or two tolerably well, and yet, before you have worn it five, may have cost you twice its value in repairs, and prove a torment and a deluder instead of an honest friend and guide. In making your selection, do not be led by ornament—by fancy backs or dials, or "jewelling in ten holes." Ten holes may be jewelled for a guinea, and the watch be none the better for it. With a respectable maker, the absence of needless ornament is often a concomitant of superior work.

Having bought your watch, remember that it is worth taking care of. Wind it, as nearly as possible, at the same time every day, preferring the morning to the evening. Avoid sudden jerks in winding, and do not turn the watch while you are turning the key, but hold it firm and steady. Keep the key in good condition, free from dust and cracks; it is not a bad plan to plug its orifice: a

particle of dust or rust in the key may get into the watch, and put you to the expense of an extra cleaning. Keep the key in your bed-room, not in your pocket.

When a watch is hung up, it should be supported and at rest: when laid horizontally, it should rest on a soft substance for support, or the motion of the balance may generate a pendulous motion of the wheels, causing a variation in time.

When a watch varies from atmospheric influences, or from some change in the mode of wearing it, the hands may be occasionally set right, but the regulator should not be touched; if the watch gains or loses continually, then the regulator should be altered; but it should be delicately handled, and moved but a little at a time. In setting the hands, it is best to set them forwards. In watches set or regulated at the back, the glass should not be opened at all. The watch-pocket should at all times be kept free from dust and accumulations of every kind.

Two years is quite long enough to keep a watch without cleaning. If you cannot consign it for that purpose to the hands of the maker, intrust it only to some respectable and responsible person. The very best watches are often ruined by the hands of blundering and incapable workmen, while even a bad watch may be made, by the treatment of a clever artist, to perform tolerably well.

Lastly, take a lesson from your watch. That little machine, if you have taken the above advice regarding it, will be found constantly doing its duty. Do you the same; work on with your life's work as that does, "unbating and unretiring." Let it teach you regularity and punctuality; so shall you not be ashamed to look it to the face, and be enabled, when your hours are all numbered, to give a good account of the time intrusted to your keeping.

For "The Friend."

The following epistle written about seventy-five years ago, has a good savour, and I have thought some portions of the counsel it contains might have a useful application, even at this distant period.

It is entitled "A Watch-Word—In love to Friends in this Land."

"Dear Friends,—Inasmuch as the Lord in his great mercy, for wisest purposes, hath called us as a people to maintain a distinguished testimony to the light and knowledge of the inward and spiritual appearance of his Son Jesus Christ, whose meek and peaceable government, appeared with lustre in many of our worthy predecessors, inasmuch that they became a spectacle of wonder to the nations beholding their peaceable principle and conduct; being concerned for gathering the people unto Christ their Shepherd, and his peaceable government and kingdom, more than for the securing their safety by setting up, or pulling down earthly powers; being made sensible from a degree of solid experience, that were the minds of the people in this day of gospel light and power, subjected to its holy influence, they would witness a redemption from that spirit of strife and contention, which is sorrowfully prevalent in this depraved age.

"The Lord, in his unmerited mercy and great condescension, having continued to favour us, in this day, with a degree of his divine presence and power, which a remnant evidently experience, to their mutual comfort and encouragement, under a sense thereof I would feelingly entreat you, dear friends and brethren, to remember that we have lately passed through a day of great commotion and distress, wherein the foundations of many were tried and shaken, and ruin seemed to threat-

en; the prospect of which brought many into the valley of deep humiliation, where they were led into covenant with the Lord our God, in which day of covenant making the cries of humble and contrite spirits reached his holy ear; and he was pleased in his matchless goodness to condescend to the low estates of his people, and set as it were an hedge about us, preserving us as in the hollow of his hand; so that we experienced a wonderful deliverance.

"Now seeing that storm hath passed over, and the spirit which sought our ruin, seems to be at peace with us, or rather I should say, hath transformed into an appearance of soliciting our friendship, and would, if possible, draw us after it; let us beware, dear Friends, and carefully watch over our own spirits, often recurring to a remembrance of the day of covenant making, and inquiring in the temple of our hearts individually, after Him who called us out of the spirit and commotions of the world, and caused us to experience Jerusalem to be a quiet habitation, wherein alone will be our safety, and the Lord who then in mercy preserved us, will continue to be our only sure guide and counsellor. Dear Friends, attend to his leadings and counsel, and beware of the friendship of the world, for however clothed it may appear with specious pretences, it will prove to be a snare and an enemy as to our progress in the way of truth and righteousness.

"I have beheld the confusions and commotions of the present times, and as I have been led to look around me over the Lord's little flock that is scattered up and down in this land, prayers have been begotten in my heart to him, the Great Shepherd of Israel, that he would be pleased to preserve them from the dangers to which they are exposed, being made sensible that nothing but watching unto prayer, and keeping a single eye unto the Great Shepherd and Governor of the whole earth, can be the means by which we shall obtain sure preservation. I would, therefore, feelingly entreat all friends everywhere, that they labour for a settlement on that foundation which standeth steadfast. To thy tents, O Israel! God is thy tent, and as we dwell in him, neither divination nor enchantment can prevail against us.

"Beware that we mix not with the people, neither run with them into a party spirit to join in setting up or pulling down any; for know, dear Friends, that from thence arises cause of great contention, with which we can have no unity as followers of Him who was meek and low of heart. Let us often recur to the divine principle we hold forth to the world; I am persuaded it would have a good tendency, and minds would thereby be awakened on all occasions to look unto the end of all things temporal, and as we become rightly sensible that "Here we have no continuing city," we shall be the more concerned to have an interest in that city that hath foundations, whose builder and maker is God.

"If we duly consider the great end for which we are called, and distinguished by such a degree of spiritual light and knowledge, (that the declaration made to Israel of old, seems not inapplicable to us, 'Ye above all the families of the earth have I known,') we should be led to consult every step we took on all occasions, lest we defeat the gracious purpose of Him who hath marvellously raised us up and preserved us to be a people engaged to hold up an ensign unto the nations, an ensign of the meek and peaceable government of Christ our Saviour.

"Aid, dear Friends, I have this testimony to bear, being firm in the faith, that were we sufficiently attentive to this pure inward principle

agreeable to our profession, the Sun of righteousness would shine in us with lustre, and the rays of his divine light and glory would more effectually reach the minds of the surrounding people, whereby we should become as 'a city set on a hill that could not be hid,' the light of which could not be evaded.

"Suffer me, therefore, in that love which seeketh only the honour of Him who hath called us, to entreat all, that they beware of the little foxes that have often spoiled the tender vines; for there are many things which appear small and lawful in the eyes of the world, and may be, and I believe are almost insensibly run into, but when brought to the light of Truth, and viewed with an eye of designing improvement, are of great magnitude, and have become as heavy burdens, laying a foundation for deep anxiety and distress to the minds of those who have desired to journey heavenward. Therefore I would have us all to watch, that we be not hurried into the commotions of the day, of however great moment the occasion may appear in the eyes of the world, and not so much as to put forth a finger for the setting up, or pulling down of any, lest we exclude ourselves in a day of trial and affliction which may await us, from a happy recourse to that Tower, the name of the Lord, unto which the righteous in all ages have fled and found safety. Let us be weighty in our spirits, 'wise as serpents, harmless as doves,' looking with steady attention unto our holy God and High Priest, waiting for his gentle leadings, that our conduct and conversation among the people may be in the innocency and simplicity of truth, maintaining our christian testimony in its various branches with that firmness and consistency that becometh us, a highly favoured people; then would our Zion appear beautiful among the nations, adorned with the robes of righteousness, and we should contribute more to our own peace and safety, and the real welfare of the people, than by any hand of outward assistance that we could possibly lend them.

"From an apprehension of religious duty, I communicate these lines, and with the salutation of love, am  
Your real friend,

"HUSON LANGSTROTH."

"Philadelphia, Eleventh mo. 9th, 1757."

Select-d.

Who can at once, deliverance gain  
From all that has enslaved, enticed?  
Or hope abruptly to obtain  
The stature of a man in Christ?  
Faith must anoint the eye to see;  
Love the awakened heart must warm;  
Grace must from sin's dominion free,  
And growth in grace the saint must form.

For by degrees the work of God,  
Is in the heart of man revealed:—  
There, first, conviction's chastening rod  
That desert makes a fruitful field,  
Prepared for culture from on high,  
There grace divine the seed must sow;  
And there, arising to the eye  
That blade must first its greenness show.

That blade, which warmed by light and love,  
Watered by dews of reverent fear,  
Aspiring to its source above,  
Shall bear the yet unripened ear,  
And lastly, must the car, matured,  
The fulness of its corn possess,  
Ere in the garner safe be stored,  
The husbandman his toil may bless.

Horses.—Great Britain and Ireland have 2,500,000 horses; France, 3,000,000; the United States, 5,000,000, which is more than any European country. The horses of the whole world are estimated at 57,420,000.

For "The Friend."

The following advices are so evidently from the spring of gospel love, and so well suited to the state of things in some places, that the revival of them is likely to be useful.

Y. W.

*Abstract from the minutes of the Yearly Meeting of Ministers and Elders, held in Philadelphia, for Pennsylvania, New Jersey, &c., in the Ninth month, 1787.*

It being the sense of this meeting, that the revival of those pertinent and weighty advices issued by our brethren in London, in their Yearly Meeting, 1775, for the especial use and notice of Ministers and Elders, may tend to our improvement and solid instruction; it is therefore recommended to our several select Quarterly Meetings to promote the reading and considering of them at such proper times and seasons as may appear to them most likely to answer the valuable purpose for which they were intended.

The Clerk of this meeting being desired to furnish each Quarter with a copy of these advices, extracted from the minutes of said Yearly Meeting, by Henry Drinker, Clerk:—

A memorial of some necessary advices recommended to Ministers and Elders as caution and counsel in the love of the Gospel.

1st. Against undue and restless behaviour under the ministry of any Friend, whilst in the unity of the body.

2nd. That all be cautious of using unnecessary orembles and laying too great a stress on their testimony, by too positively asserting a divine mission, and frequently repeating the same, seeing no such pretensions will obtain credit where it is not manifestly so; and where it is so, the baptizing power of Truth accompanying the words is the best evidence.

3rd. Against misquoting and misapplying the Holy Scriptures, and it is desired that all those concerned be careful in reading them.

4th. To be careful how they fall upon disputed points in their testimony, and making such objections as they do not clearly answer, and also against giving repeated expectations of coming to a conclusion, recommending the people, &c.

5th. Against hurrying meetings towards conclusion by unnecessary additions, when the meeting was left well before.

6th. Against unbecoming tones, sounds, gestures and all affections which are not agreeable to a christian gravity.

7th. Against undertaking or running into engagements they have not knowledge of, as some have done to their own hurt, the injury of others and the reproach of their religious profession, but to employ themselves in business they are acquainted with, to avoid an idle life.

8th. Not to speak against persons or reports upon hear-say, but to treat with the parties concerned, and thereby prevent sowing discord.

9th. That their apparel and furniture of their houses, their tables and way of living be with decency, moderation and temperance, that they be herein good examples to others.

10th. Against men and women travelling as companions in truth's service, to avoid all occasion of offence thereby.

11th. To beware of too much familiarity, tending to draw out the affections of one another to their hurt.

12th. That ministering Friends be careful not to hinder one another's service in public meetings, out every one have a tender regard for others, that nothing be offered with a view to popularity, but in humility and the fear of the Lord.

13th. Against running in their own wills to dis-

turb or interrupt any people in their worship, or presuming to prophecy in their own spirits against any nation, city, town, people or person.

14th. That ministers, when they travel in the service of Truth be careful not to make their visits burthensome or the Gospel chargeable.

15th. That Ministers and Elders be careful to keep their whole conversation unspotted, being examples of meekness, temperance, patience and charity.

And lastly, as prayer and supplication to God is an especial part of worship, it must be performed in spirit and in truth with a right understanding seasoned with grace; therefore let ministers be careful how and what they offer in prayer, avoiding many words and repetitions, and not to run from supplication into declaration, as though the Lord wanted information, and let all be cautious of too often repeating the high and holy name, or His attributes in a long conclusion, neither let prayer be in a formal and customary way to conclude a meeting, without an awful sense of Divine assistance attending the mind.

*Discovery of the Telescope and Pendulum.*—It seems scarcely credible that that wonderful far-seeing instrument which brings the most distant worlds under our curious ken, should have had its origin in children's play; yet so it is. The children of a spectacle-maker in Middleburg were allowed at times, probably on wet days, to play in their father's workshop. On one of these occasions they were amusing themselves with some spectacle-glasses, when one of them placed two together, one before the other, and looked through them at the weathercock on a neighbouring steeple. To the child's astonishment the vane appeared larger and nearer to him than when seen through one glass only. The father was called to see the sight, and struck with the singular fact, resolved to turn it to advantage. His first plan was to fix two glasses on a board, by means of brass rings, which might be brought nearer to each other or further off at pleasure. He was thus enabled to see distant objects better and more distinctly than before. The next improvement was to place the glasses in a tube, which may be termed the first telescope. Galileo soon heard of it, and applied it to astronomical purposes. The mention of this great man recalls to mind his accidental discovery of the pendulum. A correct time-measure had long been a desideratum in the world. Water-clocks had been tried and found wanting; Alfred's candles would not do for the world at large. Another lucky accident must supply the want; and it came as follows: The future great astronomer, though then only a young man, was in the cathedral of Pisa. One of the vergers had been supplying a lamp with oil, which hung from the roof, and left it swinging to and fro; this caught Galileo's attention, and carefully noting it, he observed that it vibrated in equal times, and first conceived the idea of applying it to the measurement of time. It cost him fifty years to complete his pendulum. After the telescope and pendulum, we can hardly pass over Sir Isaac Newton's discovery of the law of gravity, though it is too well known to require more than naming. An apple accidentally falling to the ground before his face revealed to him this mighty, all-pervading secret of nature! What vast results have sprung from these seeming trifles! Distant worlds have not only been discovered, but weighed and measured; the pathless ocean can be travelled over with the same certainty as if guide-posts were created every three or four miles; and time can be measured to the greatest nicety!—*Chambers's Journal.*

For "The Friend."

## Caution.

The concern of the Yearly Meeting of 1860, relative to Friends resorting to hotels, was some relief to my feelings; but again and again has my mind been introduced into sorrow on this subject, believing as I do, that one of the corner-stones of the foundation of domestic happiness is being removed, by families residing in the country, whilst the husband and sons are transacting business in the city. Though the female part of the family may feel it irksome to stay in the city during the summer months, how much easier to bear this by turns, so as to have the comforts of an open house for the father and brothers, than to water our pillow with tears, mourning over, and interceding for the return of an estranged father, or a prodigal son, made so, by having to resort to hotels, restaurants, and room-keeping, for that which should be served up by an affectionate wife, or loving sister. Some may think this a trifling subject to bring into view, but it is one that will sorrowfully develop itself, and be felt by many, that could not, or would not see this effect produced. Another disadvantage is the absence of the father from the noon-day meal, whose assistance to the wife, and example to the children, is of much importance, and who hail with delight the coming and presence of the beloved head of the family; but how is this to be enjoyed, when early morning hides him from their view, and the shades of evening, or later, tells of his arrival, often too fatigued to enter into the pleasant toil of entertaining, or preparing them for the various duties of the coming day. For I have been informed that a father (in these practices) should say, "he never conversed with his younger children but on First-days, as they were not up when he left, and had retired when he returned." Another serious disadvantage is the waste of precious time in the cars, and bringing into familiarity, associates, that never would have been met with, if the comforts of a city home had been allowed them, and which sometimes results in mixed marriages, that would not have occurred, if the portals of a father's house had been open to receive them.

If there is nothing in these remarks, let them pass away as the morning cloud, but if there is, let Friends look at the subject, and see if the practice has not a tendency to unsettle the mind, and lead away from that inwardness and gathered frame of spirit, which is apparent in those who desire to be kept alive in the Truth; and as it is little by little we swerve, so it is by becoming too familiar with the world, we lose by degrees our strength, and let fall by turns our various testimonies, and in time cease to be self-sacrificing or self-denying. For although the times are sad, yet I trust there are those remaining among us, who have no greater joy than to hear, that the children walk in the Truth, and who are willing to warn them of temptations, and assist in removing difficulties that would draw away from the strait and narrow way that leads to eternal life. O! if all the called were willing to become the chosen of the Lord, what a host of worthies would appear, the language of whose conduct would be, "here am I, send me." Then would valiants be raised to fill the vacant places, which silently proclaim, work while it is day, for the night cometh wherein no work can be done, "for in the grave who shall give thee thanks."

Without submission and obedience how unfounded must be our hope of heaven, if an entrance into heaven be restricted to those who are like-minded with Christ.

For "The Friend."

## Musings and Memories.

## ASK AND YE SHALL RECEIVE.

In reading lately a collection of remarkably interesting letters from a man of bright talents, some years since deceased, to a near relative, I met with the following lines, "Passing leisurely along the street during one of the sultry days we have recently had, I heard one *hot corn* woman say to another of the same calling, 'I'll keep crying a little longer, for every time I cry, somebody comes. I went on repeating the words of the woman for some squares, till by and by, in a lazy sort of a way, I thought of moralizing on the efficacy of *right crying*. But I am not going to trudge in 'Old Humphrey's road.' Doubtless he could bring in many scripture passages as applicable to such a subject, and draw at least one good moral from the *hot-corn woman's* experience."

This brief passage of the letter set me musing. I thought of the efficacy of the cries for deliverance of the children of Israel formerly during the seasons of their varied captivities. I thought of the mercies promised for patient unwearied asking, and the many instances recorded in which the promises had been richly fulfilled. With my mind's eye, I saw Achab bowing to her father, the faithful unflinching Caleb, with the petition, "Thou hast given me a South land, give me also springs of water;" and very vividly came the response of the loving parent, "he gave her the upper springs, and the nether springs." A very effectual cry was that.

When the heart is prepared by the Holy Spirit to continue in fervent prayer for greater humility and more dedication to the Lord's service than it has heretofore attained, it must be that a blessing will come for the heaven prompted cry. The cries of true prayer will be answered, although it may not be in just such a manner or measure as we desire. If the Lord raises the petition in us, he will grant it as he sees to be best for us. Ask, and ye shall receive.

Christian, faint and weary! seeing thou hast not attained all thy heart's desire, do not give out yet. Cry earnestly, cry a little longer. It may be that for thy petitions in days past, the visitation of the Lord's holy spirit, through the mercies which alone come by Jesus Christ has taken away some of thy earthly weaknesses, and thou hast received from time to time, in token of acceptance, the penny of peace. Cry again! and yet again. How happy it will be to feel in the hour of death that all corruption of flesh and spirit has been removed, and that, through the prevailing efficacy of thy earnest cries, the offering on Calvary without, and the washing of the Holy Spirit within, has prepared thee to close thy earthly day of labour in joy, and to enter unto the everlasting reward prepared for the people of God.

## AGITATION THAT PURIFIES.

The trials, the tossings, the varied afflictions of the christian, tend to his purification. If a man or a woman is found giving more than usual evidence of heavenly-mindedness, you may almost be sure, that the path in which he or she has been led, has been, either from inward or outward conflicts, a peculiarly trying one. I have somewhere met with a remark, which furnishes an illustration or an outward figure of this. It was stated, that if water, in a perfectly calm condition, was foul with mud, it would for a long period hold the impurity in solution, but that if it was much agitated, or set in lively onward motion, the sediment quickly

deposited, leaving the fluid pure and transparent. The soul that is passing from a state of nature to a state of grace, cannot fail to be agitated. The immense intense anxiety and fears and doubts, awakens intense anxiety and fears and agitations assail it. Those who have come out of great tribulation, yet this tribulation has no doubt been often much confined to inward spiritual conflicts. Some of those who have attained considerable christian growth, who have exhibited in beautiful perfection the christian graces, have had small share of outward trials. Nevertheless, their cup has had its bitterness in it. They have tasted the wormwood and the gall; they have been tossed with inward conflicts, and have known their baptisms when there seemed none to comfort them, none that cared for them.

If the soul has been really awakened to a sense of its inward corruption, if it feel the necessity of knowing the Lord Jesus Christ for itself, and of attaining to a state of obedience unto him in his inward requirements, it will it must be shaken with inward conflicts. The fear of running too fast, the dread of lagging behind the heavenly Guide, will agitate the mind. The old corruptions of nature often retard, the impatience an unsettled state, sometimes hurry it forward in zeal without true knowledge. If, however, the heart is really touched by Divine grace, if it is really longing for a perfect salvation through the one offering of the Lord Jesus Christ, and the sanctifying power of his inward baptism, it will, amid all the vibrations of its weakness, turn back to him. It may sometimes be too fast, and at other seasons too slow, yet the Lord Jesus is the point it is seeking to centre in. I recently met with the following entry in the diary of a woman Friend recently deceased. At the time it was written, the Friend was in great agitation of mind, partly under a sense of remaining infirmities, partly under the conviction that she would be called upon publicly to advocate the gospel of her blessed Lord and Saviour. The fear lest she should put her hand to the work without the proper call, or neglect obedience to a manifest requiring of duty, caused her great agitation. She was often troubled, and during these seasons of conflict, could scarcely find the centre of rest. The date on the diary was Ninth mo. 2d, 1825.

"On Third-day, I attended Burlington Quarterly Meeting, which, I thought, was a favoured opportunity. Richard Jordan went fully and clearly into the offices and mission of our divine Master. He concluded his ministerial labours, by saying, 'This is my faith!' Some may call it enthusiasm! But I hope I may live and die in this enthusiasm! I spent part of the evening of that day at the house of our friend, Stephen Grellet. His conversation was very instructive. After a time of silence, he very sweetly commented on the vibration of the needle, which, although always true at last to the attracting point, is nevertheless for a time much agitated. I was willing to hope that a part of his remarks belonged to me. Indeed, I could truly say, that the vibrating, fluctuating state of the needle was a fit illustration of the condition of my mind."

Selected.

## Indispensable Duty of Parents.

If parents rightly discharge their duty towards their children, it might go a great way, together with their own good examples, in making religious impressions upon them, as well in influencing them to perform their duty towards their parents. But through the failure of parents in both these respects, I believe thousands of children have been lost, out-

of which number I will not exclude many within the compass of our Society. Abraham, by his faithfulness, is called the friend of God; and God give this character of him, "I know him, that he will command his children and his household after him and they shall keep the way of the Lord, to do justice and judgment." Gen. xviii. 19. And Isaac was repeatedly commanded, diligently to teach their children, and to tell their sons, sitting down rising up, in the house, and on the way-side, to keep the law of the Lord, and fear him all the days of their lives. David instructed his son to keep the law of God; and we find, on the other hand, though Eli reproved his sons, yet, because he did not restrain them, the judgments of God came upon him. A father was to train up a child in the way he should go; he, who truly loved his children was to chasten them sometimes; and to bring them up in the fear, nurture, and admonition of the Lord, and to have them in subjection with all gravity. I most plainly appear, how great, how awful, and how indispensable a duty lies upon parents towards their children, in order to their instruction in the way and fear of the Lord, by commanding, instructing, correcting, restraining, admonishing, and keeping them in subjection from their childhood—also in due measure, time, and place, as the different occasions may require. But, contrary hereto, we have observed two sorts of parents, who, by their own ill management, and not keeping their authority, over, and discharging their duties to their children by divine obligation they are enjoined to do have ruined them with regard to all that is good. The first are such, who, though they may be more in their own lives and conversations, and are no bad examples to their children, yet, by their foolish indulgence, falsely called love, have thereby been very means of their ruin. A child may be not unfavourably compared to a young growing twig, easily bent at first, but as it increases in strength, becomes pliable, and when it is a great tree, is unbendable and thus, most children when young may, by thoughtless care of parents, be trained up very much as the parent pleases; or else, to what purpose, were the above precepts given? But, as evil and folly are naturally bound up in the heart of a child, so, that evil nature, not being kept down or restrained by an indulgent parent, gradually becomes stronger and stronger, and in the end he comes past bending, and rules. Thus, I have, with sorrow, seen some foolishly indulgent parents, who were so blind as not to see faults in their children or if they did see them, through excessive indulgence, would not restrain them, which in the end has proved their ruin. No wonder then, if such parents should lose all authority over their children as well as keep them in disregard their parents for want of such children in due subjection, as soon as they attain to any degree of understanding which they will soon do, to discern their parents' fondness. And, when too late, those very parents begin to feel the smart of their own folly; and yet by reason of their blindness, can hardly even then see, that they have been the original cause of it, for want of keeping their children in due subjection, and some have cried out for advice, complaining their son has grown so disobedient, they know no what to do. And yet I have known when Friend have gone under a religious concern to such parent to give them advice, instead of taking it well, as they ought to do, they have been so blind and stupid as to return undue reflections; and others again, who have taken it better, would excuse themselves with the most plausible reasons they could invent saying, the child is wild and playful, and they do not like to correct it, as it has a weak constitution

—Joseph Price.

For "The Friend."

Having noticed in the columns of "The Friend," a few numbers back, some observations relative to Ohio Yearly Meeting setting up meetings in Iowa, under its care, I have thought it might not be unwelcome information to the readers of that Journal to know that there are now three meetings for worship, two Preparative and one Monthly Meeting granted, but not yet opened; all which are subordinate to Stillwater Quarterly Meeting, and are located as follows: a meeting for worship and a Preparative Meeting in Cedar county, and two meetings for worship and one Preparative Meeting in Lion county, and a Monthly Meeting, to circulate between the places for holding the two Preparative Meetings.

The sad lapse which has overtaken our once peaceful Society, is greatly to be lamented by every sincere honest-hearted member of it, whose chief desire ought to be to behold the beauty of Zion, and the enlargement of her borders. It seems to me that its future prosperity very much depends upon the faithfulness of those who remain as watchmen upon the shattered walls; to sound the alarm should the enemy make an attack in an opposite or unsuspected quarter; and upon whom may also devolve the responsibility of exercising the discipline upon those who have been induced to run after the lo here's and to there's, whereby they have wandered far from the path of rectitude, some on the right, and some on the left hand. May those upon whom this responsible trust rests, seek for ability where alone it is to be found, to discharge it, in the spirit of meekness and love, that it may be manifest to the object of their labours their chief concern is to restore, if possible, and bring the wanderer back to the Father's house; where there is bread enough and to spare. When treating with those who may violate the discipline of the society, let it not be too easily concluded, that because a brother or a sister has fallen into this or that error, it follows as a consequence, by a certain routine of discipline, they must be testified against, indulging in the mistaken opinion there is nothing further required than to query if they are satisfied with the views they have espoused, or the course they have taken; overlooking in great measure the responsibility that rests upon them, as good stewards of the manifold grace of God, and it is to be feared, in many instances, not having come to the experience of having the beam removed out of their own eye that they may see clearly to pluck the mote out of a brother's eye.

Iowa, Third mo. 10th, 1862.

For "The Friend."

My heart did so respond to those remarks in last week's number of "The Friend," respecting the early religious care that should be taken of the dear children, that I rejoiced on reading them; and have desired that parents may be encouraged to "sow the seed in the morning," and in the evening withhold not those hands: for thou knowest not whether shall prosper, either this or that, or whether they both shall be alike good." My attention, too, was much arrested lately in reading that account of Daniel Wheeler,—the care he took of his children in early life,—to me there was deep instruction couched in it. Many dear children, too, within our Yearly Meeting, within the past year, have been called away; the death of some, that have come under my knowledge, have been strikingly impressive. There was found in a Bible of a dear little girl, of twelve years of age, after her decease, copied in her own hand-writing, two verses she had selected, I think, from the reading in the family an evening or so previous to her sick-

ness, as follows:—"And now, little children, abide in Him; that when he shall appear, we may have confidence, and not be ashamed before him at his coming." 1 John iv. 28. "Ye are of God, little children, and have overcome them: because greater is he that is in you, than he that is in the world." 1 John iv. 4.

Another dear child, about the same age, a short time before her last sickness, requested her mother "to get her new bonnet without a fill on it;" then another little girl was found by her parent taking some lace off the neck of her dress: when queried with why she did so, she replied, "because I fear my heavenly Father will be displeased with it." Ah, these things are loud preaching! We may remember there were those formerly, who brought the children to Christ, and there were those who "forbad them."

My heart has mourned over some parents amongst us, whom it is to be feared are secretly pleased to see their children looking a "little smart," dressed in some particulars after the vain fashions of the world. Can ye not see, my dear friends, that ye are weakening your own hands, and our precious testimonies? Let us all, both older and younger, strive more and more for the adorning "which is not corruptible, even the ornament of a meek and quiet spirit, which is in the sight of God of great price."

Third mo. 25th, 1862.

*Population of the World.*—Dietrich, director of the office of statistics at Berlin, has published, in the annals of the academy of that city, the result of his researches relative to the population of the globe. In his calculation of the total number of inhabitants, which he puts down at upwards of 1,288,000,000, Dietrich estimates the number of the different human races as follows:—The Caucasian, 369,000,000; the Mongol, 552,000,000; the Ethiopian (negres), 196,000,000; the American (Indians), 10,000,000; the Malays, 200,000,000. The leading religions he divides as follows:—Christianity reckons 335,000,000 adherents; Judaism, 5,000,000; the Asiatic religious, 600,000,000; Mahomedanism, 160,000,000; and Polytheism, 200,000,000. Of the Christian population, 170,000,000 are Roman Catholics; 80,000,000 are Protestants, and 76,000,000 are members of the Greek Church.—*Extract.*

*Responsibility in the Care of Families.*—Concerns doth move me to fear, lest the lightness of my family shall be laid to my charge, for lack of more earnest and diligent instruction which should have been done. I bless God that he hath given me to see this fault, and to lament it from the bottom of my heart. I would that I esteem nothing available for me, which will not further the glory of God; for whosoever wittingly neglecteth to clear his conscience, cannot have peace with God. (I am) conscious of this, that we pa-tors, many of us, are too cold, and bear too much with the wicked world. So on every side, and of every sort, we provoke God's anger.—*Ridley.*

## THE FRIEND.

FOURTH MONTH 5, 1862.

To every one willing to receive the precepts of Holy Scripture, as conveying truths of imperative obligation upon all who are favoured with the knowledge of them, the incompatibility of slavery with the christian religion is easily demonstrated. The community in which we live, almost univer-

sally admit this, and are not backward, at the present time, in giving full expression to the sentiment. The exacting of involuntary labour from the poor slaves, without rendering them any recompense but the miserable pittance of scanty food and the meanest raiment, is easily seen to be directly opposed to the two commands upon which hang all the laws and the prophets, Thou shalt love the Lord thy God with all thy heart, soul and might; and thou shalt love thy neighbour as thyself; the manifest exalt of the system calling forth in very many, a righteous indignation against the injustice and tyranny of the hard-hearted masters. But while we entertain these feelings respecting slavery, and feel ourselves justified in condemning those who uphold and practise it; citing it as the great national sin which has brought upon the nation the judgments of the A mighty, it would be well if the community in the "free States," were brought to see how deeply very many of its members are imbued with the same evil feeling respecting the coloured people, which prevails in the South, and how completely some of the usages towards them that have obtained amongst us, are in direct violation of the teachings of the Gospel, and like slavery, must be most offensive in the Divine sight.

A few days ago, while sitting in one of the cars on the Philadelphia and West Chester Railroad via Media, then about starting from the station in West Philadelphia, we were started by a peremptory order from the conductor to some one, to "get out of the car," with a threat immediately following, that if the individual addressed did not at once obey, he should be "carried out." Upon turning to see who it was to be thus summarily expelled, we saw a coloured man of respectable appearance, who had risen from his seat, and was looking at the conductor, we thought, as though he did not fully comprehend the meaning of the demand made upon him, but certainly indignant at the unjust and contumelious treatment he was undergoing in the presence of a large number of men and women. Warning the conductor not to attempt carrying his threat of taking hold of him into execution, as soon as he understood that the rules of that road required him to occupy the back seat [which appeared to be full,] or to ride in the baggage-car, he walked out of the car, and we left him standing on the platform in the station, looking grieved and disappointed that the colour of his skin had subjected him to such an outrage upon his rights and his feelings. A card hung up in the cars, forbidding "coloured persons" from occupying any seat in the passenger cars but the back one, and stating they could be accommodated in the baggage car, showed that the conductor was but obeying orders, though the manner of doing it was exclusively his own.

Now such a rule and such a circumstance is as direct a violation of the comprehensive texts we have quoted, as is slavery, and could not occur where regard was had to the test prescribed by our Saviour, "whosoever ye would that men should do to you, do ye even so unto them." It may not be as great a sin as slavery, but it must be greatly displeasing to Him who made of one blood all nations of men, to see a people upon whom He has bestowed so many blessings, thus oppressing their fellow-men, and depriving them of their proper rights, merely because He, the Creator of all, has given them a dark-coloured skin. The same unrighteous discrimination against our coloured fellow-citizens continues to be made by the companies owning the Passenger Railways in Philadelphia, no one of them being allowed a seat within their cars, however unable from age, disease or

fatigue, to walk, or however important it may be for them to occupy as little time as possible in going from one place to another. It is true, they are allowed to stand upon the platforms in front and back of the cars, but let any of us estimate what a degrading and insulting distinction this is, by supposing ourselves placed under similar circumstances. Could such a reverse take place, how grievously injured would we feel ourselves to be, and how little entitled to the character of Christians would we deem those who thus tyrannized over us. But we need not suppose such a case, in order to illustrate the inconsistency of those who sanction such acts, and their persistent violation of the Divine law. As before observed, we loudly condemn the slaveholder for his oppression of the poor blacks; and his determined adherence to the odious system of slavery is justly denounced as a crying crime; but may not the language of the Apostle be applied to us: "Therefore thou art inexcusable, O man, whosoever thou art that judgest; for wherein thou judgest another, thou condemnest thyself, for thou that judgest doest the same things. But we are sure that the judgment of God is according to truth against them which commit such things. And thinkest thou this, O man, that judgest them which do such things, and doest the same, that thou shalt escape the judgment of God?"

These, and similar unjust and oppressive acts having their origin in pride and vulgar prejudice, blind those yielding to them to their true interest, for none can thus violate the Divine law with impunity, and retribution will sooner or later be meted out by Him who has declared that he will arise for the defence of the poor and needy.

We think it incumbent upon the members of our religious Society to use the influence they may have, in a proper manner, to remove these unrighteous burdens from our coloured brethren, and as far as may be in their power, to bring the public mind into a more healthy and christian tone respecting their rights and privileges. By thus acting we can, at least, free ourselves from responsibility, and may be a means of mitigating or warding off the punishment which our beloved country is exposed to.

SUMMARY OF EVENTS.

**FOREIGN.**—News from Liverpool to the 20th ult. The stock of cotton in port amounted to 403,500 bales, including 150,000 American. Prices had advanced 1/4. The cotton market was dull, without any special change in the quotations. Consols 93 1/4. The bill on the Bank of England had increased £221,000 during the week.

President Lincoln's Emancipation message attracted much attention in England. The Liverpool Post says, there can be no doubt but that it will have an incalculable effect in Europe, and that effect will be most favourable to the Northern cause.

Additional troops were about being sent from France to Mexico. A new brigade was to leave Toulon in a few days.

The Pope has been quite ill, and his strength is much prostrated. Precautions were being taken by the Austrian government to guard the Venetian frontiers from invasion. The advanced posts had been doubled, and the garrisons augmented. Troops had also been posted along the line of the river Po.

An insurrection which for some time past has been progressing in Greece, appears to have become formidable. The government has an army of 30,000 men engaged. It is for its suppression that the Emperor has proclaimed the second son of Victor Emmanuel king of Greece, as Otto the Second.

A project of emancipation has been adopted for the Dutch Islands in the West Indies. A Surinam paper gives the chief features of the plan, as follows: All slaves in the Dutch West Indies will be set free on the 1st of Seventh month, 1863, under the following condi-

tions: A compensation of three hundred guilders for each slave-man, woman or child, to be paid to the owner; slaves to remain under apprenticeship on the estates for a term of three years, during which time they are to be paid wages for their work, half of such wages to accrue to the government.

**UNITED STATES.**—*New York.*—Mortality last week, 406. A New York paper says that representatives of New Orleans have been making purchases in the New York dry-goods market, and that merchants from Georgia are also there, paying up old bills, or laying in new stock for the Southern trade. The exports of breadstuffs are less active. The import trade has increased. Several persons were instantly killed, and a large number burned or otherwise injured, some of them fatally. There were twenty men and boys, and fifty-eight women and girls employed in the place, few of whom escaped unhurt.

*Memphis and Ohio railroad* has been again put in running order, from Baltimore to Wheeling, and travel was about ready to begin upon it throughout the whole route. Upwards of seventy locomotives on this road were either partially destroyed or stolen by the rebels. Gen. Banks' division of the army of the Ohio crossed the river at Wheeling on the 15th ult., and sent forces beyond Strasburg. Gen. Shields reports the loss of the Federal troops at about 1500 killed and 300 wounded, and that of the rebels at 500 and 1000 wounded. Other statements make the rebel loss about 1000 killed and wounded, and 300 prisoners. The rebel forces, under General Magruder, who were located at Gold Bethel, have evacuated the town, having previously fired the houses. Nothing was left but a mass of ruins.

*North Carolina.*—An expedition despatched by Gen. Burnside, visited Washington, N. C., where they were well received. The citizens showed no excitement or fear, few expressions of opinion were given, and the masses were silent. The U. S. troops took peaceable possession of Beaufort, N. C. The report that Fort Macon had been abandoned and blown up by the rebels, was incorrect. It was still occupied by a garrison of several hundred men. The burning of the city of Beaufort by the rebels was also incorrect. It occurred from Beaufort on the night of the 18th ult., with a cargo of cotton, and again ran the blockade, although the U. S. vessels of war were on the look out to intercept her.

*North Carolina and Georgia.*—No change has been recently reported in the state of affairs on the seaboard of these States. Gen. Hunter has gone to Port Royal to take the chief command of the U. S. forces.

*Florida.*—Gen. Sherman visited Jacksonville on the 19th ult., and was waited on by a committee of citizens, who represented the feeling of all in the town as strongly for the Union. Many of the inhabitants left with the rebel troops. Rebel bands were prowling in the vicinity, and destroying the property of those suspected of loyalty to the United States. The prevailing sentiment in Eastern Florida is thought to be loyal. Pensacola has been evacuated by the rebels, and is now in the hands of Mr. Aze. Gen. Sherman has issued a proclamation to the people of Florida, in which he states, that the troops of the United States had come to protect the loyal citizens, and enable them to repossessate a government.

Intelligence from this city represents that great preparations had been made to resist the expected attempts for its capture. The rebels are reported to have a number of powerful iron clad steamers to aid in the defence.

*New Mexico.*—Advices from Santa Fe to the 10th ult., report the capture of the city by the army from Texas. The Texans generally expected private property at Santa Fe, but seized all the goods of the merchants.

*Arkansas.*—The supplies of forage and provision having failed, the army of the State has been made to retreat to the army of Gen. Curtis back round to Cross Timbers, nearer the northern line of the State. The remnant of the rebel army, under Generals Van Dorn and Price, which it is believed, retreated to Van Buren and Fort Smith, where they can receive supplies from Memphis and Little Rock, has been driven back. Very little Union sentiment has yet appeared in Arkansas.

*Missouri.*—Although the rebellion has been mainly suppressed in Missouri, bands of outlaws, from time to time, create fresh disturbances. On the night of the 20th ult., about a hundred rebels made an attack upon Hummonsville, Polk county. They were defeated by the

militia, many of the rebels being killed and wounded. About the same time the town of Warrensburg was attacked by a guerrilla band of two hundred. They were likewise driven off with severe loss. The bombardment of Island No. 10 has been kept up at intervals, but without much apparent effect. Owing to the high state of the river and the overflow of the adjacent country, the rebels are unable to make any further advance. They are commended by Gen. Bragg, have received reinforcements, and are constantly getting more cannon in position. Their number is said to be 15,000 or 16,000.

*Tennessee.*—The appointment of Andrew Johnson as military governor appears to have had favourable results. He has addressed the people in Nashville, and issued a proclamation of a conciliatory character, expressing a desire to win the people back to the Union. Wm. H. Polk, brother of the late President, and several other influential citizens will, it is said, co-operate with Gen. Johnson in putting the State machinery in operation. The Memphis papers contain Richmond despatches of the 16th ult., stating that 2000 United States soldiers had crossed the Cumberland mountains, and captured two companies of the Southern troops. A courier arriving at Knoxville, reported that from 4000 to 6000 U. S. troops were advancing upon the city, and were only twenty-five miles distant. The rebel forces had concentrated at and near Corinth, Miss, near the State line, and at the junction of several important railroads. Gen. Beauregard has the chief command assisted by Polk, Chestnut and Clark. The united rebel armies under Johnston are pressing forward from the city, under Gen. Buel, had advanced to the lower tier of the counties in Western Tennessee. At the latest advices, the two hostile armies were within fifteen miles of each other.

*The Rebel Government.*—The Senate at Richmond has confirmed Jeff. Davis's nomination of Cabinet officers, as follows:—Secretary of State, Judah P. Benjamin, of Louisiana; Secretary of War, George W. Randolph, of Florida; Secretary of the Navy, S. R. Mallory, of Florida; Secretary of the Treasury, C. G. Meminger, of South Carolina; Secretary of the Interior, Thomas H. Watts; Post-Master General, M. Reagan.

*Cotton.*—Both Houses of the rebel Congress have passed a resolution, advising that no cotton should be planted this year. The U. S. government is taking means to encourage the growth of cotton in all suitable lands under Gen. Johnston's military supervision at Savannah, Tenn., for the purpose of buying up the surplus.

*Rain in California.*—A rain gauge carefully kept and registered by Dr. Snell, of Sonora, shows that from the 11th of Eleventh month, 1861, to the 14th of First month, 1862, seventy-two inches of rain fell at that place. *The Grain Market.*—The following are the quotations on the 31st ult. *New York.*—Red wheat, \$1.30 a \$1.36; ryw, 80 cts. a 81 cts.; barley, 90 cts. a 92 cts.; mixed Western corn, 57 1/2 cts.; prime white corn, 70 cts.; oats, 57 cts. a 46 cts. *Philadelphia.*—Red wheat, \$1.30 a \$1.31; white, \$1.35 a \$1.40; ryw, 70 cts.; yellow corn, 54 cts. a 55 cts.; oats, Southern, 31 cts. a 32 cts.; Pennsylvania, 34 cts.

RECEIPTS.

Received from Steph. Hobson, agt., O. for Jos. Perrose, \$5, to vol. 27, 35.

PHILADELPHIA ASSOCIATION OF FRIENDS FOR THE INSTRUCTION OF POOR CHILDREN.

A Stated Meeting of the Association will be held on Second-day evening, Fourth month 7th, 1862, at half past seven o'clock.

Wm. SMELLEY, Ja., Clerk.

WEST-TOWN BOARDING-SCHOOL.

The Summer Session of Friends' Boarding-school at West-Town will commence on the 15th of Fifth month next. Parents and others intending to send their children as pupils, will please make early application to DEBBE KNIGHT, Superintendent, at the School, or to CHARLES J. ALLEN, Treasurer, No. 304 Arch street, Philadelphia.

MARRIED, on Fourth-day, the 15th ult., at Friends' Meeting, London Grove, LEWIS PERSEY to EDITH T. PHILLIPS, both of London Grove.

DEPARTED, at Friends' Meeting, Westland, Washington County, Pa., on the 10th of 4th month, 1862, THOMAS Y. FRENCH, of Salem, Ohio, to ELMER H. BLACKBURN, of the former place.

PYLE & MELROY, PRINTERS,

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, FOURTH MONTH 12, 1862.

NO. 32.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From "All the Year Round,"

## Earthquake at Mendoza.

(Continued from page 242.)

For two days such of the city authorities as survived remained paralyzed, hardly thinking their lives their own, and not attempting anything; thus the fire raged on unchecked, and the plunderers followed their villainous work unpunished. Already the air was laden with the stench of putrefying bodies; the wounded and dying lay stretched on the ground in the open air, almost destitute of food and water, for the ordinary water-courses were swallowed up, and the market people dared not approach the town to sell, so that it seemed those few that the earthquake and the fire had spared. The only sound which broke the silence raised by some nuns on two posts in a meadow, where they had erected an altar, and held daily service for the souls of those who had perished. Nine nuns escaped from the ruins of their convent; one after being five days buried made her way out with no other assistance than her scissors. On the twenty-third, the governor killed three bullocks and distributed the beef, and on the twenty-fifth kindly arrived from the city of San Juan; next day six plunderers were shot by some soldiers sent from San Juan to preserve order, so the evil was checked, and by this time also the fire had pretty well burnt itself out; but stronger and stronger rose the odor of corruption from the ruin-covered streets, till the search for any who might yet survive was perforce suspended, and the sick under the lambeda. For the city was become a putrid city of the dead, and living men could not dwell in its atmosphere.

So passed the weary days. Fortunately rain is rare in Mendoza, yet hundreds of the wounded lie for want of proper attention and food; but on from all parts came the ready offering of sympathy and sorrow, from San Juan first, then across the Andes from Chili, then from San Guis and Cordova, and at last magnificent assistance from the central government at Parana, and from an distant Buenos Ayres. Sheds were erected and fitted up as hospitals, surgeons and physicians fled with each other in eagerness to succor and to save, so that at length many of the dying were brought back again to health and strength, and

money was given to them for their sustenance during convalescence. But most of them rose from their couches only to find themselves bereft of all; everything in the city was lost, hardly the ground was left on which the houses had once stood. Even to the end of April shocks continued; generally there were two or three every day, as an English visitor writes on the twenty-second. "I am writing this in a shed, but it is all cracked, and one gable-end is down, twice I have run out. As slight shocks still continue, two or three a day, I am afraid of the place falling." The same gentleman also writes, "It is useless attempting to describe the sufferings that existed when I first arrived; I am not wanting in courage or in strength of mind to witness such scenes, but what I have seen here has completely overpowered me, and made me as inactive as a child and as powerless. The heap of ruins, the corpses strewn in all directions, stripped, and in some cases half eaten by dogs and rats, the stench, and above all, the sufferings and stupefaction of the survivors, are altogether so appalling that only stern duty and necessity induced me to stay an hour in the place."

By the great earthquake on the 20th of March, several villages in the neighbourhood of Mendoza were also completely destroyed. Its effects were also slightly felt at Valparaiso and other cities on the western slope of the Andes, and more distinctly at Cordova and throughout the Argentine Confederation, even so far eastward as Buenos Ayres, where on the night of the 20th, a French water-maker noticed that all the pendulums of his clocks, which were swinging from north to south, had become endowed with a most singularly irregular motion, concerning which phenomenon he wrote a letter on the day following to the leading journal of the city; but no explanation was given till the next week, when the mail from Mendoza brought the truth. On the eastern slopes of the Andes, the earthquake seems to have exerted its extreme violence, as may be seen in a letter dated San Juan, 25th March, 1861. "Paula has just arrived from Chili. The earthquake which destroyed Mendoza caught her, with Gorica and Emilia, at the foot of the central Cordillera of the Andes. The mercy of God has alone preserved them. It is horrible to hear their account of the fearful scene they witnessed. Deep caverns were opened into the bowels of the mountains; the mountain summits were parted asunder; the road was blocked up with rocks rolled down from above, and with rubbish brought with them in their fall. The earth in places burst open like a bomb-shell, ejecting water, all the way from Upsallata. Enormous stones were thrown from one mountain to another, with the report of cannon. Some passengers on the road were crushed by the falling rocks. It was a scene of indescribable horror which surrounded them; they fearing every moment that they would be buried under the rocks which came rolling down the sides of the mountain."

Professor Forbes who had been making geological researches in Peru and Bolivia, was in Rosario at the time of the earthquake, and immediately proceeded to Mendoza, to examine the phenomena

of the catastrophe, concerning which he reports somewhat as follows to the Government of the Argentine Republic, by whom he was appointed their commissioner. "Data have enabled me to arrive at the decisive conclusion that the earthquake was caused by a revival of volcanic action on the eastern side of the principal chain of the Cordilleras, and the endeavour to find out for the escape of gases by the fracture of supervening rocks. To examine the effect of the earthquake in the Cordilleras, I proceeded direct to the hills in front of the city, and found the stripe—the course of the earthwave as marked on a map annexed,—here marked in all directions by ruins, which track I followed up to Upsallata for six days. Within its limits rocks had been broken in pieces, and borne or thrown to other places; there were fissures in the earth, and the springs had increased their flow." Prof. Forbes also gives some practical advice concerning the rebuilding of the city. The north-east portion of the old city was built upon low marshy ground, which "sunk from one to eight feet, and was torn up as though it had been plowed, for a width of about two hundred and eighty yards; and in some places springs had come to the surface." Thus he recommends an extension of the city to the westward, on the rocky slopes of the Sierra. The old city was almost entirely built of adobes, concerning which he says, "The old system of brick houses will, of course, be rejected, nor ought the streets to be so narrow as before, this having occasioned the chief loss, the hollow walls falling into them from both sides upon the people. With broad streets and with houses of wooden framing, filled in with lath and plaster, no danger need be feared from any subsequent earthquake."

M. Bravard, a French naturalist, resident at Mendoza, had predicted the destruction of the city by an earthquake, basing his prediction upon the volcanic formation of the whole of the north-western portion of the province. Bravard perished while sitting on the corner of his bed pulling off his stockings, on the night of the 20th of March.

Mendoza was one of the most important cities of the Argentine Republic; situated at the foot of the Andes, and commanding the principal pass to Chili and Upsallata, it was the centre of all the traffic with the west coast. The population was variously estimated at from fourteen to seventeen thousand, of whom not more than two thousand escaped. The loss may be estimated at thirteen thousand, which is below the number usually named by men well acquainted with the city; of these the greater part found death and burial at the same moment, but many, it is believed, languished for days under the ruins, there being none to dig them out. A large proportion also of those who were rescued died from gangrene, before surgeons could arrive from Chili to perform the necessary amputations. All the surgeons of the city itself were killed. Numbers of children escaped, and, strange to say, nearly all the blind people! The former were taken charge of by the Chilean government and removed to an asylum at Santiago de Chili.

To the traveller accustomed to the interminable plains of Buenos Ayres, Santa Fé and Cordova, or wearied with the sandy deserts of San Juan, the province of Mendoza has always been a most welcome oasis on the tedious journey across the continent of South America; here he finds himself once again in an enclosed country, riding along well kept roads, between water courses, shaded by double rows of magnificent poplars, almost equalling in size those time honoured trees which line the banks of the sluggish canals of Belgium and the Low Countries. The rocky and volcanic nature of the soil of Mendoza has forced the inhabitants to adopt a mode of agriculture widely differing from that pursued in the other provinces of the republic; they have been forced to dig canals for the artificial irrigation of the whole of their pastures, and the natural grasses being very poor, lucerne is very extensively planted throughout the province, the different fields being divided by stone fences to prevent the encroachments of the cattle. All these fences were thrown down by the earthquake, and the autumn crops entirely destroyed by straying cattle.

The city is now in process of rebuilding; inhabitants already pour into it from other parts, and though earthquakes become of common occurrence, they will in future be no more destructive than they are in the wood-built cities of Chili and Peru.

#### Dymond on War.

(Continued from page 243.)

But, indeed, what is defensive war? A celebrated moralist defines it to be, war undertaken in consequence of "an injury perpetrated, attempted, or feared;" which shows with sufficient clearness how little the assassin concerns the question, for fear respecting life does not enter into the calculation of "injuries." So, then, if we fear some injury to our purses, or to our "honour," we are allowed to send an army to the country that gives us fear, and to slaughter its inhabitants: and this, we are told, is defensive war. By this system of reasoning, which has been happily called "martial logic," there will be little difficulty in proving any war to be defensive. Now we say that if christianity allows defensive war, she allows all war—except indeed that of simple aggression; and by the rules of this morality, the aggressor is difficult of discovery; for he whom we choose to "fear" may say that he had previous "fear" of us, and that his "fear" prompted the hostile symptoms which made us "fear" again. The truth is, that to attempt to make any distinctions upon the subject is vain. War must be wholly forbidden, or allowed without restriction to defence; for no definitions of lawful or unlawful war will be, or can be attended to. If the principles of christianity, in any case, or for any purpose, allow armies to meet and to slaughter one another, her principles will never conduct us to the period which prophecy has assured us they shall produce. There is no hope of an eradication of war but by an absolute and total abandonment of it.

What then is the principle for which we contend? *An unremitting reliance upon Providence for defence, in all those cases in which we should violate his laws by defending ourselves.* The principle can claim a species of merit, which must at least be denied to some systems of morality—that of simplicity, of easiness of apprehension, of adaptation to every understanding, of applicability to every circumstance of life.

If a wisdom, which we acknowledge to be unerring, has determined and declared that any given conduct is right, and that it is good for man, it appears preposterous and irreverent to argue that an-

other can be better. The Almighty certainly *knows* our interests, and if he has not directed us in the path which promotes them, the conclusion is inevitable, that he has voluntarily directed us amiss.—Will the advocate of war abide this conclusion? And if he will not, how will he avoid the opposite conclusion, that the path of forbearance is the path of expediency?

It would seem to be a position of very simple truth, that it becomes an *erring* being to regulate his actions by an acquiescent reference to an unerring will. That it is necessary for one of these erring beings, formally to insist upon this truth, and systematically to prove it to his fellows, may reasonably be a subject of grief and of shame. But the hardness of guilt denies the truth, and the speculative nature of philosophy practically supercedes it;—and the necessity therefore remains.

We have seen that the duties of the religion which God has imparted to mankind require irresistibility; and surely it is reasonable to believe, even without a reference to experience, that he will make our irresistibility subservient to our interests—that if, for the purpose of conforming to his will, we subject ourselves to difficulty or danger, he will protect us in our obedience, and direct it to our benefit—that if he requires us not to be engaged in war, he will preserve us in peace—that he will not desert those who have no other protection, and who have abandoned all other protection because they confide in his alone.

And if we refer to experience, we shall find that the reasonableness of this confidence is confirmed. There have been thousands who have confided in heaven in opposition to all their apparent interests, but of these thousands has one eventually said that he repented his confidence, or that he repented in vain?—"He that will lose his life for my sake and the gospel's, the same shall find it." If it be said that we take futurity into the calculation, in our estimate of *interest*, I answer—So we ought. Who is the man that would exclude futurity; or what are his principles? I do not comprehend the foundation of those objections to a reference to futurity which are thus flippantly made. Are we not immortal beings? Have we not interests beyond the present life? It is a deplorable temper of mind, which would diminish the frequency, or the influence of our references to futurity. The prospects of the future *ought* to predominate over the sensations of the present. And if the attainment of this predomance be difficult, let us at least, not voluntarily, argumentatively, persuade ourselves to forego the prospect, or to diminish its influence.

Yet, even in reference only to the present state of existence, I believe we shall find that the testimony of experience is, that forbearance is most conducive to our interests.

The reader of American history will recollect that in the beginning of the last century, a desultory and most dreadful warfare was carried on by the natives against the European settlers; a warfare that was provoked, as such warfare has almost always originally been, by the injuries and violence of the christians. The mode of destruction was secret and sudden. The barbarians sometimes lay in wait for those who might come within their reach on the highway or in the fields, and shot them without warning; and sometimes they attacked the Europeans in their houses, "scalping some and knocking out the brains of others." From this horrible warfare the inhabitants sought safety by abandoning their homes, and retiring to fortified places, or to the neighbourhood of garrisons: and those whom necessity still compelled to pass beyond the limits of such protection,

provided themselves with arms for their defence. But amidst this dreadful desolation and universal terror, the *Society of Friends*, who were a considerable proportion of the whole population, were steadfast to their principles. They would neither retire to garrisons, nor provide themselves with arms. They remained openly in the country, whilst the rest were flying to the forts. They still pursued their occupations in the fields or at their homes without a weapon either for annoyance or defence. And what was their fate? They lived in security and quiet. The habitation, which, in his armed neighbour, was the scene of murder and of the scalping knife, was to the unarmed Quaker a place of safety and of peace.

Three of the society were however killed. And who were they? They were three who abandoned their principles. Two of these victims were men, who, in the simple language of the narrator, "used to go to their labor without any weapons, and trusted to the Almighty, and depended on his providence to protect them (it being their principle not to use weapons of war to offend others or to defend themselves); but a spirit of distrust taking place in their minds, they took weapons of war to defend themselves, and the Indians who had seen them several times without them and let them alone, saying they were peaceable men and hurt nobody, therefore they would not hurt them,—now seeing them have guns, and supposing they designed to kill the Indians, they therefore shot the men dead." The third whose life was sacrificed was a woman, who "had remained in her habitation," not thinking herself warranted in going "to a fortified place for preservation, neither she, her son, nor daughter, nor to take thither the little ones; but the poor woman after some time began to let in a slavish fear, and advised her children to go with her to a fort not far from their dwelling." She went;—and shortly afterwards "the bloody cruel Indians lay by the way, and killed her."

The fate of the Quakers during the rebellion in Ireland was nearly similar. It is well known that the rebellion was a time not only of open war but of cold-blooded murder; of the utmost fury of bigotry, and the utmost exasperation of revenge. Yet the Quakers were preserved even to a proverb; and when strangers passed through streets of ruin, and observed a house standing uninjured and alone, they would sometimes point and say—"That, doubtless, was the house of a Quaker."

(To be continued.)

#### The Eagle.

An eagle will only carry off such object as he can seize in sweeping by. He will not descend to any spot of ground unless he can leave it again, describing the same bold curve with which he came. He will not risk being hemmed in within narrow limits. An open field is indispensable to him for his tactics. The object must be freely exposed, or he will hardly venture to attempt making it his own. As a swallow rushes downward in a curve to catch the insects hovering over the pond, and upward again on high, in his flight describing an ellipse, so does the eagle, and thus only, sweep down to seize a lamb or other animal. It must be swept off the ground in full flight—it must be caught up at once, without any hindrance: there must be "ample room and verge enough" for him to continue his sweeping flight, or the eagle will prefer not to break his fast, and will refrain from attempting that by which he may come to grief. Protection is thus afforded many a creature that would otherwise never be safe from so formidable an enemy. A small bush is sufficient guard against his attack; for he always takes heed not to approach

places where he may get his talons entangled and be held fast, or not have sufficient space for the movement of his wings. But for this fear of getting into difficulty, he would be less often, and fast more rarely than he does. It might seem that, with his keenness of vision and speedy locomotion, he need not long be in want of a meal; that in ranging over an entire principality, or a dukedom, he surely would be able to find some game or other. And he doubtless does see enough that would suit his purpose well; but nothing exactly in the situation that makes it advisable for him to attempt to bear it off. There are lands below in the meadow, but they have instinctively become aware of their impending danger, and have crowded together in one dense mass, with the ewes outside; or they have all taken shelter beside a sloping bank, or beneath a tree, or alongside of a hedge. None of these positions suit the eagle. In the mountains the chamois do the same, or they stand sideways, pressing close against the rock: here the eagle cannot get near them, for fear of injuring his wings. Sometimes, too, they will take shelter around, or under a large fragment of stone, determined to defend themselves to the last; but into a warfare of this sort the eagle has no intention of entering. Among those stones and clefts may lurk a danger he cannot see, and had not calculated on; so he leaves them, however unwillingly, to look elsewhere for a kid, in a situation so exposed that, without stop or stay, he may clutch it as he skims by within a foot of the ground. And so he often knows the pangs of hunger. It is only when driven to extremity that an eagle will descend upon the earth, and battle with his prey. It is contrary to his instinct to do so. The air seems to be his peculiar element, and earth an uncongenial spot, and moreover, full of pitfalls: it is, too, rendered doubly dangerous by being the abode of man. Of him the eagle has, in common with all wild animals, an insurmountable dread.

As the mountains around the Königs See abound in chamois, the eagle very naturally resorts there; and opportunity is frequently afforded of witnessing his tactics, modified by circumstances. The following account gives an instance of most cunning stratagem; but it also shows how impotent for attack the eagle is when his victim is not entirely exposed:—A good-sized chamois buck had got upon a ledge of rock, and was gazing downward and about him, as these animals like to do. An eagle perceived him; but as the bird could not approach close to the rock on account of his breadth of wing, he resolved to obtain the prize he had marked as his own in another manner. So he sailed by the chamois on his narrow path as near as he dared come; then again and again; and as the animal retreated in order to quit his perilous position, the eagle, wheeling around in a smaller circle, met him inopportunely, to hem in and cut off his retreat. By thus rushing past within a few feet of him, and filling him with terror, he hoped to bewilder the chamois, and cause him to fall over the precipice, in which case he would have to descend, and carry off his booty. And, in fact, the chamois, from trepidation, probably, in turning a corner, slipped, with one hind foot, over the ledge. He lost his balance, and fell headlong over the rocks, as the eagle intended that he should. But after lodging for a short time on an intervening slope, the carcass rolled off, and came toppling down into the lake. The whole proceeding had been watched by two persons in a boat. They now rowed across to get the chamois; while the eagle, disappointed of his victim, wheeled about them, watching all they did.—*Forest Creatures, by Charles Boner.*

For "The Friend."  
BIOGRAPHICAL SKETCHES  
OF Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

## REBECCA DAVIS.

Rebecca, the daughter of Joseph and Rebecca Need, was born at Darby near Philadelphia, in the year 1694. We know not how early in life she was, through the Lord's assisting grace, brought to bow to the cross of Christ, and to follow her dear Saviour in truth and love. At the time of reaching maturity, her character was established as a sober, religious woman, and she soon became serviceable in the church.

In the year 1714, she was married to John Davis, a Friend of her own Monthly meeting, "with whom she lived in a loving exemplary manner, [being] careful to instruct her children in virtue and godliness." She was for many years an elder in the church, much concerned "for the promotion of piety and virtue, and the maintenance of our christian discipline; beloved and esteemed by Friends and neighbours as a pattern of sobriety and self-denial."

She was very diligent in the attendance of her religious meetings, until prevented by age and the consequent infirmities of body, and was a good example therein, "manifesting an awful worthy exercise of mind for the arisings of that Divine Spring which is the crown of our assemblies."

She departed this life Ninth month 5th, 1772, aged about seventy-eight years.

## JEREMIAH ELFRETH.

Jeremiah Elfreth was born about the year 1693. He stood for many years in the station of elder in Philadelphia Monthly Meeting, and was in many respects very useful in religious and civil society. After a very active and exemplary life, he deceased Tenth month 19th, 1772, aged seventy-nine years.

## ELIZABETH STEVENS.

Elizabeth, the daughter of that valuable Friend Richard Johns, of the Cliffs, on the western shore of Maryland, was born there in 1694. Her father, who was convinced of the Truth through the ministry of George Fox, was an exemplary Friend and lively minister of the gospel of Christ. She was brought up consistently with the truth professed by her parents, and being through the influence of Divine love and the visitations of the Holy Spirit, herself instructed in Divine things, she became a valuable Friend, and a sound minister of the blessed Truth.

Of her labours in the ministry whilst her residence was in Maryland, we have little account. There she was married to John Stevens, and after his death she, in 1748, removed with her family to Philadelphia. She was a woman of great usefulness in religious society, and much dedicated to the service of her Divine Lord and Master. To the poor and afflicted she was very charitable, and was often qualified to comfort those in tribulation, through the blessed openings of the gospel of peace and consolation. Over her offspring she exercised a vigilant, loving care, seeking to impress their minds in early life with the importance of religion, as a stay and staff to support and strengthen. She was of a lively, cheerful disposition, which, under christian restraint, rendered her company and conversation not only pleasant but useful.

After a useful life, as she grew towards old age, her mind was supported by the crook of the Heavenly Shepherd's love. Her ministry continued lively and animating, and her love for attending religious meetings was fervent. She often said she hoped the last place she should be at before her

death, might be a meeting house. This wish was granted. She attended a week day meeting, went home, and after dinner was affected with paralysis, which affected her organs of speech. In a short time her speech was restored, when seeing Friends about her much concerned at her situation, said to this effect. "There is no will with me for life or death. I am assured, if it please Divine Providence, who has been with me all my life long, to remove me now, it will be well. I neither feel pain of body nor mind." Her power of articulation then again failed her, and in about twenty-four hours after her attack, on the 19th of the Twelfth month, 1772, she passed away in peace, being in her seventy-eighth year, and having been a minister of the gospel more than fifty-years.

## WILLIAM HORNE.

William Horne, a son of Edward and Elizabeth Horne, was born in the County of Sussex in Great Britain, in the year 1714. His mother was an acceptable minister of the Gospel, but his father, for want of attention to the manifestation of Truth, had swerved from the path of pure rectitude, and suffered both in his inward and outward condition therefrom. In the year 1723, intending to remove to Pennsylvania, they applied to their Quarterly Meeting for a certificate of removal, and received a very honest document which they presented to Philadelphia Monthly Meeting early in the following year.\* They soon removed to Darby, where their son William continued to reside during his life. His mother kept her integrity and was of great service in religious society, and his father probably witnessed something of the restoration which his Friends in England ardently desired for him. Their son William was religiously trained and guarded, and became an abundant labourer in the church militant, receiving in the year 1746, a gift in the ministry of the gospel. He had in the Seventh month, 1787, been married in Philadelphia to Elizabeth Davis, and they were engaged to endeavour to bring up their children in the nurture and admonition of the Lord. As he was careful to wait upon the Lord Jesus for the qualification to minister, and concerned to watch his limitations as well as openings, he became an able minister of the gospel. His travels in America on religious service led him to almost every place where there were Friends, and from the returning

\* The certificate is worthy of preservation. "From our Quarterly Meeting held at Horsham in the County of Sussex, the 18th day of the Tenth month, 1723. To you well beloved Friends of Philadelphia in the province of Pennsylvania, love, mercy and peace be with you all. Forasmuch as our friend Edward Horne and Elizabeth his wife, late of this county, having signified to us their intention of transporting themselves to settle with you, and desiring our certificate: these are therefore to certify, that the said Edward was in his tender years a hopeful youth, and we believe had a visitation of the love of God upon his soul, which very much recommended him to our satisfaction; so that we had good unity with him. But for want of watchfulness, and through inadvertency, we do believe, he came to some loss in divers respects. Nevertheless, by his conduct and proceedings of late, in order to rectify what may have been amiss, he we have good reason to hope, as he keeps to Truth, he will retrieve both his inward and outward condition, which will be to our great satisfaction, and we earnestly desire he may. We therefore hope you may safely receive him as a member. As to Elizabeth his wife, she is a woman for whom we have a good esteem, being of an innocent and inoffensive conversation, and we believe she has received a gift of the ministry, with which we have good unity. We desire the many blessings of the Lord, and be made serviceable amongst you. With the salutation of our love unfeigned, we dearly salute you all, and remain your friends and brethren in the Truth."

certificates furnished him, it appears that his labours of love were acceptable to Friends. In the Fourth month, in the year 1763, he embarked for England, on a religious visit, which in a little over a year he finished, and returned home to the great satisfaction of his friends and family, in the Tenth month, 1764.

His memorial says, "His ministerial labours were frequent, lively and edifying, and he adorned the doctrine he preached by a circumspect life and conversation. He was zealously concerned for the maintenance of good order in the church, a good example in his family, careful to bring up his children in diligently attending religious meetings, and manifesting his care in divers respects for their present and future welfare. He was kind and hospitable to Friends, his house and heart being open for their reception."

His decease took place Eleventh month 11th, 1772, he being in the fifty-ninth year of his age.

OF MORDECAI YARNALL, who deceased Fifth month 17th, 1772, a biographical sketch has been published in "The Friend." Of JOHN WOOLMAN who deceased Tenth month 7th, 1772, aged fifty-two, his journal furnishes a copious account. Of JOHN BORDEN, an elder of Shrewsbury, who deceased sometime during this year nothing of importance has been found.

#### Literary Perspective.

The calm assiduity with which Newton applied himself to repair the loss sustained through the heedlessness of his dog Diamond, in communicating fire to papers on which he had wrought out some most abstruse and important problems in science, is well known to all who are tolerably versed in the history of literature. Some parallel cases, less generally known, are worthy to be collated.

When Carlyle was writing his "French Revolution," he lent the first volume of the manuscript to a literary friend for perusal. By some mischance it was left lying on the parlour-floor, and forgotten. Weeks ran on, and at length the historian sent for his manuscript. Upon inquiry, it was found that the house-maid, finding on the floor what she conceived to be a bundle of waste paper, had used it to light the parlour fire. Carlyle was in the utmost consternation for a while, but soon set himself reluctantly to work, and re-wrote the whole book.

Audubon, the naturalist, upon leaving home for an absence of some months, committed to the care of a relative a wooden box, with the strictest injunctions as to its safe-keeping. When he returned, he called for his box, the dearly-prized deposit of all his drawings. It was produced and opened, and what was his dismay to perceive that a pair of rats had taken possession, and had there raised a large family. A few gnawed bits of paper were all that remained of what had once been a thousand life-like pictures of American birds. The shock was overwhelming, and for a time he was utterly prostrated in body and mind. His nights were passed in sleeplessness, and his days in listless apathy. At length a re-action took place, and consoling himself with the reflection that he could now draw and paint better than before, he again took up his pencils, his note-book and his gun, and went forth to the woods; and, after three years' untiring labour, his portfolio was replenished.

The distinguished jurist, Edward Livingston, employed his best powers faithfully for four years in preparing a code of criminal jurisprudence for the then State of Louisiana, and by the most unwearied exertions had succeeded in reducing to

order the chaotic mass of materials which was placed at his disposal. His labours were completed, and a fair copy of the work prepared for the printer. On the day before that on which the copy was to be delivered, he was occupied till a late hour in comparing the copy with the original. Having retired to rest, he was speedily roused from sleep by the cry of fire, and hastening to the room where he left his papers, he found not a vestige of them unaccounted. It was at first a stunning blow, but he speedily regained his equanimity; on the very next day recommenced his task, and at the end of two years had restored the whole work.—*N. Y. Observer.*

#### CHILD-LIKE SUBMISSION.

BY PAUL GERHARDT—1653.

What pleases God, O pious soul,  
Accept with joy, though thunders roll  
And tempests lower on every side,  
Thou knowest nought can thee betide  
But pleases God.

The best will is our Father's will,  
And we may rest there calm and still;  
Oh! haste it hour by hour thine own,  
And wish for nought but that alone  
Which pleases God.

His thought is aye the wisest thought;  
How oft man's wisdom comes to nought,  
Mistake or danger in its track,  
It brings forth ill, and seldom works  
What pleases God.

His mind is aye the gentlest mind,  
His will and deeds are ever kind;  
He blesses whom against us speaks  
The evil word, that rarely seeks  
What pleases God.

His heart is aye the truest heart,  
He bids all we and harm depart;  
Defending, shielding day and night  
The man who knows and loves aright  
What pleases God.

He governs all things here below,  
In him lie all our weal and woe;  
He hears the world within his hand  
And so to us bear sea and land  
What pleases God.

And o'er his little flock he yearns,  
And when to evil ways he turns,  
The Father's rod of smiteth sore,  
Until it learns to do once more  
What pleases God.

What most would profit us he knows,  
And ne'er denies us good to those  
Who with their utmost strength pursue  
The right, and only care to do  
What pleases God.

If this be so, then, World, from me  
Keep, if thou wilt, what pleases thee;  
But thou, my soul, be well content  
With God and all things he has sent,  
As pleases God.

And must thou suffer here and there;  
Cling but the firmer to his care;  
For all things are beneath his sway,  
And must in every truth obey  
What pleases God.

True faith will grasp his mercy fast,  
And hope bring patience at the last  
Then both within thy heart enshrine,  
So shalt thou thine heritage be thine  
That pleases God.

To thee forever shall be given  
A kingdom and a crown in heaven;  
And there shall be fulfilled in thee,  
And thou shalt taste and bear and see  
What pleases God.

Schetch.

*Materials in their Invisible State.*—If a piece of silver be put into nitric acid, a clear and colourless liquid, it is rapidly dissolved, and vanishes from the sight. The solution of silver may be mixed with water, and, to appearance, no effect whatever is produced. Thus, in a pail of water we may dissolve and render invisible more than fifty dollars worth of silver, lead, and iron; but every other metal can be treated in the same way, with similar results. When charcoal is burned, when candles are burned, when paper is burned, these substances all disappear and become invisible. In fact, every material which is visible can, by certain treatment, be rendered invisible. Matter which, in one condition, is perfectly opaque, and will not admit the least ray of light to pass through it, will, in another form, become quite transparent. The cause of this wonderful effect of the condition of matter is utterly inexplicable. Philosophers do not even broach theories upon the subject, much less do they endeavor to explain it. The substances dissolved in water, or burned in the air, are not, however, destroyed or lost.

By certain well known means they can be recovered, and again be made visible; so exactly in the same state as they were before their invisibility; others, though not in the same state, can be shown in their elementary condition; and thus it can be proved that, having once existed, it never ceases to exist although it can change its condition like the caterpillar, which becomes a chrysalis, and then a gorgeous butterfly. If a pailful of the solution of silver be cast into the stream, it is apparently lost by its dispersion in the water; but it nevertheless continues to exist. So, when a bushel of charcoal is burned in a stove, it disappears in consequence of the gas produced being mixed with the vast atmosphere; but yet the charcoal is still in the air. On the brightest and sunniest day, when every object can be distinctly seen above the horizon, hundreds of tons of charcoal, in an invisible condition, pervade the air. Glass is a beautiful illustration of the transparency of a compound which in truth, is nothing but a mixture of the rust of three metals.

The power of matter to change its conditions from solid capacity to limpid transparency causes some rather puzzling phenomena. Substances increase in weight without any apparent cause; for instance, a plant goes on increasing in weight a hundred fold for every atom that is missing from the earth in which it is growing. Now, the simple explanation of this is, that the leaves of plants have the power of withdrawing the invisible charcoal from the atmosphere, and restoring it to its visible state in some shape or other. The lungs of animals and a smokeless furnace change matter from its visible to its invisible state. The gills of fishes and the leaves of plants reverse this operation, rendering invisible or gaseous matter visible. Thus the balance in nature is maintained, although the continual change has been going on long prior to the creation of the "extinct animals."—*Presse.*

For "The Friend."  
"The spirit that has acted and ruled in me, shall yet break forth in thousands."—*E. Burroughs.*

Every one has a deep interest in the salvation of his own soul, beyond every other concern in this world, and consequently it demands his most serious and unflinching attention and labour, through the aid of the Holy Spirit, for its accomplishment. The more steadfast and persevering he is in this great work, obeying the dictates of Truth in forsaking all evil in thought, word and deed, and doing the will of God manifested to him in his soul, the more he will come to "walk in the light as He is in the light, and know the blood of Jesus Christ

his Son, to cleanse him from all sin." In this state he will have fellowship with those of like blessed, heavenly experience, and as he grows in grace, he will be clothed with tenderness and compassion for those who, rejecting the visitations and the wooings of the Spirit of Christ, are choosing their own way and wills, and becoming more and more darkened, and sunk in the spirit and ways of the world. Where there is a body of such living believers united, in a family, in a meeting, or in a religious Society, they are not only a strength and comfort to one another, but the tendency of their spiritual travail and exercise will be to reach, and to convict disobedient members, and to draw them to forsake their wrong course, to lay down their wills, and come into true fellowship with the flock and companions of Jesus, walking in the Spirit, and thereby helping in the work of the Lord, and spreading the kingdom of the adorable Redeemer.

History shows that degeneracy has gradually crept into many christian churches which were gathered under the self-denying example and labour of men devoted to the love and service of the Lord Jesus. To the elders of the church of Ephesus, the Apostle Paul said, "Take heed, therefore, unto yourselves, and to all the flock, over the which the Holy Ghost hath made you overseers, to feed the church of God, which he hath purchased with his own blood. For I know this, that after my departing shall grievous wolves enter in among you, not sparing the flock. Also, of your own selves shall men arise, speaking perverse things, to draw away disciples after them. Therefore, watch and remember that by the space of three years I ceased not to warn every one night and day with tears. And now, brethren, I commend you to God, and to the word of his grace, which is able to build you up, and to give you an inheritance among all them which are sanctified." He then knelt and prayed with them, and on parting with this faithful watchman and father in the Truth, they sorrowed most of all, that they should see his face no more. This degeneracy was realized in that church, of which He who held the seven stars in his right hand, and walked in the midst of the golden candlesticks, declared, "I know thy works, and labour, and thy patience, and how thou canst not bear them which are evil: and thou hast tried them which say they are apostles, and are not, and hast found them liars: and hast borne and hast patience, and for my name's sake hast laboured, and hast not faint-ed. Nevertheless, I have somewhat against thee, because thou hast left thy first love. Remember, therefore, from whence thou art fallen, and repent, and do the first works; or else I will come unto thee quickly, and will remove thy candlestick out of his place, except thou repent."

Notwithstanding the great display of divine power and goodness in gathering the first christian churches to the knowledge of the truth as it is in Jesus, yet for want of doing their first works and seeing to their first love in humble obedience to its requirements, they lost the spirit of true discernment and sound judgment, and when men, reproate concerning the faith, rose up among them, speaking perverse things to draw away disciples after them, they were corrupted, and gradually fell from the life and strength and dignity in which they stood while the first ministers, and apostles of Christ Jesus, were among them, and their candlesticks were finally removed out of their place.

The Society of Friends was gathered by a measure of the same divine life and power, out of all ceremonial performances, and a mere theoretical profession of religion, to learn of Christ manifested in the soul, and thus to be built on Him, the eter-

nal Rock and foundation, against which no power can prevail. Coming to Him, as unto a living stone, disallowed indeed of men, but chosen of God and precious, they also as lively stones were built up a spiritual house, a holy priesthood, to offer up spiritual sacrifices, acceptable to God by Jesus Christ; showing forth the praises of Him who had called them out of darkness into his marvellous light. But during the life-time of the first ministers of that day, some who had experienced the work of Truth on their hearts, grew self-willed, rejected the advice and judgment of the members who held fast their allegiance to Christ, and in their rebellious spirit brought much distress and difficulty on the sound members.

In the last epistle written by George Fox, directed to be read at the proper time, and which was read after his decease, in the London Yearly Meeting of 1691, we have the following passages: "And now, Friends, all your meetings, both men's and women's, Monthly, Quarterly, and Yearly, &c. were set up by the power, Spirit and wisdom of God; and in them you know that you have felt his power, and Spirit, and wisdom, and blessed refreshing presence among you, and in you, to his praise and glory, and your comfort: so that you have been a 'city set on a hill that cannot be hid.'"

"And although many loose and unruly spirits have risen betimes to oppose you and them, in print and other ways, you have seen how they have come to nought. The Lord hath blasted them, brought their deeds to light, and made them manifest to be trees without fruit, wells without water, wandering stars from the firmament of God's power, and raging waves of the sea, casting up their mire and dirt." \* \* \* "This hath been the condition of many God knoweth, and his people!"

"Therefore all stand steadfast in Christ Jesus your head, in whom ye are all one, male and female, and know his government, of the increase of whose government and peace there shall be no end." \* \* \* "Therefore, in God's and Christ's light, life, Spirit and power, live and walk; that is over all (and the Seed of it) in love, in innocency and simplicity. In righteousness and holiness dwell, and in his power and Holy Ghost, in which God's kingdom doth stand."

"As for this spirit of rebellion and opposition that hath risen formerly and lately, it is out of the kingdom of God and heavenly Jerusalem; and is for judgment and condemnation, with all its books, words and works. Therefore, Friends are to live and walk in the power and Spirit of God that is over it, and in the Seed that will bruise and break it to pieces. In which Seed you have joy and peace with God, and power and authority to judge it: and your unity is in the power and Spirit of God, that doth judge it; all God's witnesses in his tabernacle go out against it, and always have and will."

"Let no man live to self, but to the Lord, as they will die in him; and seek the peace of the church of Christ, and the peace of all men in him: for 'blessed are the peace-makers.' Dwell in the pure, peaceable, heavenly wisdom of God, that is gentle and easy to be entreated, that is full of mercy; all striving to be of one mind, heart, soul, and judgment in Christ, having his mind and Spirit dwelling in you, building up one another in the love of God, which doth edify the body of Christ, his church, who is the holy head thereof. Glory to God through Christ, in this age and in all other ages, who is the Rock and Foundation, the Emmanuel, God with us, Amen."

"There is no schism, no division, no contention, nor strife in heavenly Jerusalem, nor in the body

of Christ, which is made up of living stones, a spiritual house. Christ is not divided, for in him there is peace. Christ saith, 'In me you have peace.' And he is from above, and not of this world; but in the world below, in the spirit of it there is trouble; therefore, keep in Christ, and walk in him, Amen."

The history and the journals of Friends show that degeneracy and difficulties have appeared in different parts of the Society, where the members have not kept their habitations in Christ, living in godly fear and humility before Him, watching unto prayer in the heartfelt conviction that without Him they can do nothing. But those who abode in Him as branches of the true Vine, have produced the fruits of the Spirit, and been preserved as lights and way-marks to their fellow-members; and thus, through the power and goodness of God, the Society has stood to this day, embodying within its limits, many living members of the church of Christ, and true testimony bearers to the principles of christianity, as embraced and held forth by consistent Friends from its rise to this period. They have had many painful exercises for its welfare, putting up fervent prayers for one another, and for the rising generation, that they may be brought and kept under the yoke of Christ, and thereby be prepared for the stations of standard-bearers and counsellors in the Society, to maintain its existence in displaying an ensign for the Truth, and inviting others to enlist under the banner of the Prince of peace. More than two hundred years have elapsed since Friends began their work in the world, and they have spread many noble principles which have enlightened and proved a blessing to many other christian professors. He who formed us into a religious body, can sustain us, and we fully believe, will cause the angel of his presence to surround and defend us from all the wiles of the enemy of souls, if the members look constantly to Him, the great Master Builder, to guide and direct and build us up in Him, the chief Corner-stone and immovable Foundation. "Christ loved the church, and gave himself for it, that he might sanctify and cleanse it with the washing of water by the Word; that he might present it to himself a glorious church, not having spot or wrinkle or any such thing, but that it should be holy and without blemish. This is his gracious design concerning us, equally with others, and if we walk in holiness, loving one another in sincerity, and following Him, we shall not only be continued as a religious Society, but be enabled to fulfil the blessed purposes for which he raised us up, to the praise of his great name."

#### Depth of Mines.

An English journal, after valuing the total product of the mines of Great Britain at £41,461,102 per annum, and computing that England's supply of coal will last at least seven hundred years longer, at present rates of consumption, gives the following account of the depth to which the bowels of the earth have been pierced in England:

The depth to which we mine for coal, is already great. The pit at Duckenfield, in Cheshire, is 2004 feet below the surface to the point where it intersects the "Black Mine Coal," a seam which is four feet six inches thick, and of the best quality for domestic and manufacturing purposes; from this point a farther depth of 500 feet has been attained by means of an engine plane in the bed of coal, so that a great portion of the coal is now raised from the enormous depth of 2504 feet. At Pleddleton, near Manchester, coal is daily worked from a depth of 2135 feet; and the canal coal of Wigan is brought from 1773 feet below the

surface. Many of the Durham collieries are equally deep, and far more extended in their subterranean labyrinth. Some of those, and others in Cumberland, are worked out far under the bed of the sea; and on both sides of the island we are rapidly extending our sub-oceanic burrowing.

Doleth tin-mine, in Cornwall, is now working at 1800 feet from the surface, and rapidly sinking deeper. The depth of Tresavean, a copper mine, is 2118 feet. Many other tin and copper mines are approaching these depths; and under the Atlantic waves, in Bottalack, Levant and other mines, man is pursuing his labours daily at half a mile from the shore.

To aid the miner in these severe tasks, gigantic steam-engines, with cylinders one hundred inches in diameter, are employed in pumping water from those vast depths. Winding-engines, which are master-pieces of mechanical skill, are ever at work raising the minerals from each dark abyss, and "man-engines" of considerable ingenuity—so called because they bring the weary miner to the light of day, saving him from the toil of climbing up perpendicular ladders—are introduced in many of our most perfectly conducted mines.

Our coals cost us annually one thousand lives, and more than double that number of our metallic miners perish from accidents in the mines, or at an unusually early age—thirty-two—from diseases contracted by the conditions of their toils. By the industry of our mining population, there is annually added to our national wealth considerable more than thirty millions sterling. This, when elaborated by the process of manufacture, is increased in value tenfold. While we are thus drawing upon that "hoarded treasure, guarded by dragons white and red," which the enchanter Merlin is fabled to have concealed in the caves of the earth, we should not cease to remember how much of mental labour and muscular power is expended, and how large a percentage of humble life is annually sacrificed in the contest with those hydra-headed evils which are truly personified by the dragons of the legend.

For "The Friend."

#### Plant-Lice.

Extracted from Dr. Harris' Treatise on Insects Injurious to Vegetation.

Aphides, or "plant lice," as they are usually called, are among the most extraordinary of insects. They are found upon almost all parts of plants, the roots, stems, young shoots, buds, and leaves; and there is scarcely a plant which does not harbor one or two kinds peculiar to itself. They are, moreover, exceedingly prolific, for Reaumur has proved that one individual in five generations may become the progenitor of nearly six thousand millions of descendants.

It often happens that the succulent extremities and stems of plants, will, in an incredibly short space of time, become completely coated with a living mass of these little lice. These are usually wingless, consisting of the young, and of females only; for winged individuals appear only at particular seasons, usually in the Autumn, but sometimes in the Spring, and these are small males and larger females. After pairing, the latter lay their eggs upon or near the leaf buds of the plant upon which they live, and, together with the males, soon after, perish.

The genus to which plant-lice belong is called *Aphids*,—from a Greek word, which signifies to exhaust. Their bodies are short, oval and soft, and are furnished at the hinder extremity with two little tubes, knobs, or pores, from which exude almost constantly, minute drops of a fluid as sweet

as honey; their heads are small, their beaks very long and tubular; their eyes globular, but they have not eyelids; their antennae are long and usually taper toward the extremity, and their legs are also long and very slender, and there are only two joints to their feet. Their upper are nearly twice as large as the lower wings, are much longer than the body, gradually widened toward the extremity, and are nearly triangular; they are almost vertical when at rest, and cover the body above like a very sharp ridged roof.

The winged plant lice provide for a succession of their race by stocking the plants with eggs in the autumn, as before stated. These are hatched in due time in the spring, and the young lice immediately begin to pump up sap from the tender leaves and shoots, increase rapidly in size, and in a short time come to maturity. In this state it is found that the brood, without a single exception, consists wholly of females, which are wingless, but are in a condition immediately to continue their kind. Their young, however, are not hatched from eggs, but are produced alive, and each female may be the mother of fifteen or twenty young lice in the course of a single day. The plant lice of this second generation are also wingless females, which grow up and have their young in due time; and thus, brood after brood is produced, even to the seventh generation or more, without the appearance or intervention throughout the whole season, of a single male. This extraordinary kind of propagation ends in the autumn with the birth of a brood of males and females; which, in due time acquire wings, and pair; eggs are then laid by these females, and with the death of these winged individuals, which soon follows, the race becomes extinct for the season.

Plant lice seem to love society, and often herd together in dense masses, each one remaining fixed to the plant by means of its long tubular beak; and they rarely change their place until they have exhausted the first part attacked. The attitudes and manners of these little creatures are exceedingly amusing. When disturbed, like restive horses, they begin to kick and sprawl in the most ludicrous manner. They may be seen at times, suspended by their beaks alone, and throwing up their legs as if in a high frolic, but too much engaged in sucking, to withdraw their beaks. As they take in great quantities of sap, they would soon become gorged, if they did not get rid of the superabundant fluid, through the two little tubes or pores at the extremity of their bodies. When one of them gets running-over full, it seems to communicate its uneasy sensations, by a kind of animal magnetism, to the whole flock, upon which they all, with one accord, jerk upwards their bodies, and eject a shower of the honeyed fluid. \* \*

We are often apprised of the presence of plant lice on plants growing in the open air, by the ants ascending and descending the stems. By observing the motions of the latter, we soon ascertain that the sweet fluid discharged by the lice, is the occasion of these visits. The stems swarm with slim and hungry ants, running upwards, and others lazily descending, with their bellies swelled almost to bursting. When arrived in the immediate vicinity of the plant lice, they greedily wipe up the sweet fluid which has distilled from them, and when this fails, they station themselves among the lice, and catch the drops as they fall.

The lice do not seem in the least annoyed by the ants, but live on the best possible terms with them; and, on the other hand, the ants, though unparrying of other insects weaker than themselves, upon which they frequently prey, treat the plant lice with the utmost gentleness, caressing them with

their antennae, and apparently inviting them to give out the fluid, by patting their sides. Nor are the lice inattentive to these solicitations, when in a state to gratify the ants, for whose sake the aphides not only seem to shorten the periods of the discharge, but actually yield the fluid when thus pressed. A single louse has been known to give it drop by drop successively to a number of ants that were waiting anxiously to receive it. When the plant lice cast their skins, the ants instantly remove the latter, nor will they allow any dirt or rubbish to remain on or about them. They even protect them from their enemies, and run about them in the hot sunshine, to drive away the little ichneumon flies that are forever hovering near, to deposit their eggs in the bodies of the lice. \* \* \* \* \*

Some plant lice live in the ground, and derive their nourishment from the roots of plants. We annually lose many of our herbaceous plants, if cultivated in a light soil, from the exhausting attacks of these subterranean lice. Upon pulling up China Asters, which seem to be perishing from no visible cause, I have found hundreds of little lice of a white color, closely clustered together on the roots. I could never discover any of them that were winged, and therefore conclude from this circumstance, as well as from their peculiar situation, that they never acquire wings.

Whether these are of the same species as the *aphis radicum* of Europe, I cannot ascertain, as no sufficient description of the latter has ever come to my notice. These little lice are attended by ants, which generally make their nests near the roots of the plants, so as to have their milch-kine, as the plant lice have been called, within their own habitations; and in consequence of the combined operations of the lice and the ants, the plants wither and prematurely perish.

When these subterranean lice are disturbed, the attendant ants are thrown into the greatest confusion and alarm; they carefully take up the lice which have fallen from the roots, and convey them in their jaws into the deep recesses of their nests; and here the lice still contrive to live upon the fragments of the roots left in the soil. It is stated that the ants bestow the same care and attention upon the root lice as upon their own offspring, that they defend them from the attacks of other insects, and carry them about in their mouths to change their pasture; and that they pay particular attention to the eggs of the lice, frequently moistening them with their tongues, and in fine weather, bringing them to the surface of the soil, to give them the advantage of the sun. On the other hand, the sweet fluid supplied in abundance by these lice, forms the chief nutriment both of the ants and their young, which is sufficient to account for their solicitude and care for their valuable herds.

(To be continued.)

*The Obedience which is of Faith.*—There is "a path which no fowl knoweth, and which the culture's eye hath not seen;" "God understandeth the way thereof, and he knoweth the place thereof;" and often doth he, in his infinite wisdom, constrain his children to feel that it is a way in which they must submit to learn the obedience which is of faith. It is a way that is marked "by the footsteps of the flock;" strait indeed and narrow, but it leads to everlasting life. And scoff not at it, ye that are mighty in the wisdom of this world! It is foolishness perhaps, to you, but it is no foolishness with Him who seeth in secret, and who looks not as ye do, at the outward action, but at the humble resignation of heart which submits to perform it.—*Mary Ann Kelly.*

For "The Friend."

## Christ Within—The Way of Life.

Instruction may be gleaned from the sentiments of the pious William Law, as expressed in a letter declining a visit from a person who requested an interview for the express purpose of religious conversation. He says: "My chief objection against a visit of this kind, is the reason which you give for it, viz: For my instructive conversation on the spiritual life. An appointment for religious conversation has a taking sound, and passes for a sign of great progress in goodness; but with regard to myself, such a meeting would rather make me silent, than a speaker in it. First, because I hurt myself, and am only netting a part, if I speak to persons on spiritual matters, either sooner or further than as the Spirit of God which dwelleth within and where it listeth) would be resisted in me, if I held my tongue. Secondly, because it is deluding the persons I speak to, and helping them to be content with an imaginary false good, should I, as a spiritual assistant, speak to them of anything but that which is their own evil and their own good; for true edification arises only from such knowledge, and not from devout harangues on the spiritual life in general, though set forth in the most evocative words.

The Spiritual Life is nothing else but the working of the Spirit of God within us, and therefore our own silence must be a great part of our preparation for it; and much speaking or delight in it will be often no small hindrance of that good which we can only have from hearing what the Spirit and voice of God speaketh within us. This is not enough known by religious persons: they rejoice in kindling a fire of their own, and delight too much in hearing of their own voice, and so lose that inward unction from above, which can alone new create their hearts. To speak with the tongues of men, or angels, on religious matters, is a much less thing than to know how to stay the mind upon God, and abide with him in the closet of our hearts, observing, loving, adoring, and obeying His holy power within us."

*A City set upon a Hill.*—Such who walk most piously to what they profess, are in most esteem among the more thinking and religious people; and the unfaithful, loose, libertine professors of the Truth are slighted, and I believe will be more and more cast out as the unsavoury salt, which is good for naught a religion, and is indeed trodden under the feet of men; for a great part of the men in the world view such an understanding as to know what we profess, and also what we should do and be in many things; let us therefore walk wisely before all, and let it be an occasion of stumbling, nor give offence either to Jew or Gentile, nor to the Church of God, but so we may indeed be as a city set upon a hill which cannot be hid.—John Richardson.

## THE FRIEND.

FOURTH MONTH 12, 1862.

The whole history of the human race, whether relating to individuals or to nations, give satisfactory evidence, that the same Almighty Being who created and upholds the universe, sends down from his providential government, to all that all his dispensations to men are infinitely wise and just; let us set before men and nations good and evil, wanting to both the power of choice, and while carefully giving them the positive assurance that they will please him by striving for and following the former, He will unfailingly secure to them

the final consummation of their hopes and struggles, He as clearly announces that, if yielding to the temptations of the enemy of their happiness, they give themselves up to do that which is evil and hateful in his sight, retribution for the sin will inevitably find them out, either sooner or later.

All his ways are equal. Through the inspired writings of holy men of old, we are taught that "the Most High *retheth* in the Kingdoms of men," and as these Kingdoms are made up of individual free agents, he deals with communities according to the immutable, unerring laws he has enacted for the government of man, causing their own wickedness to correct them and their backsliding to reprove them.

If these views are correct—and what christian can doubt them!—the present deplorable condition of our beloved country, ought incite all to a serious consideration of the causes which have brought the existing calamities upon it; and to an earnest inquiry how far we or those with whom we may be associated, and over whom we may exert more or less influence, may be directly or indirectly implicated in the sin that is so signally invoking the Divine displeasure. We cannot believe that the great body of the inhabitants of the United States are so darkened in their views of the christian religion, or so recklessly regardless of its benign precepts, as to delight in war for its own sake; what is it then that has so deluded and saddened so many millions,—hitherto engaged in the peaceful pursuits of gainful labour, as to induce them eagerly to plunge into the present deadly, civil, fratricidal strife? There mainly must have been some general and persisting departure from the way of righteousness, which, in just retribution, has brought this scourge upon the nation, blighting the sources of our dearly loved wealth, and bringing suffering and sorrow into hundreds of homes scattered throughout the land, formerly the abodes of plenty and contentment.

The whole circumstances of this calamitous war, from its first calamities are chastenments from the hand of an offended Creator, and giving us reason to believe that unless there is a return to a more general obedience to His holy law, we have little ground to expect a speedy cessation of the punishment He is inflicting.

The prominent sin of slavery, the general lust for wealth, whether justly or unjustly acquired, the thoughtless ingratitude for manifold blessings enjoyed, together with the prevalence of fraud and embezzlement among men filling high stations, have all been commented on in the public journals; showing so prevalent and wide a departure from the first principles of the oracles of God," as could hardly fail to bring a needful correction upon the land. It must be confessed, that this is too true. These may be denominated the sins of the world, and it may perhaps be said, that with the exception of allowing slavery, this nation has not more deeply sinned in these respects than others which have long gone on, steeped in guilt, and yet prosper. Our finite powers are all too feeble to measure or understand the counsel and judgments of the Most High. He has certainly blessed the people of this land in a remarkable manner, and as in his justice he may rightly demand a course of rectitude in life and conversation corresponding thereto, so in his unmerited mercy it is unwholly his design that the present chastisement shall in the end yield the penurable fruits of righteousness, which alone exalt a nation.

But is it not worthy the consideration of all those who are interested in religious associations, and especially of those who may take part in the conduct

of the affairs pertaining to their profession, that there may be ways in which the professing church, if it has not directly contributed to the amount of national guilt, has at least crippled its power for resisting evil, and weakened its capacity for promoting practical piety, and availing petitioning for the continued extension of the Divine mercy and preservation. We know that the "mystical body" of the church, of which Christ is the head, is made up of living members, irrepealable of sect or denomination; and these being all sanctified and guided by the one Holy Spirit, are united to each other in the Head; knowing a blessed unity in the bond of peace. But we think of one who was watched the count of months for the last twenty-five years, in the different associations of professing christians, or who reads the "religious journals" in their service, who has failed to remark the effects of a spirit of innovation and controversy, that has crept in among them; sometimes it is true, leading to clearer and more spiritual views of the gospel, but more generally presenting the sad spectacle of "churches" torn and rent in pieces; each part apparently hostile to the other, and too often, in the heat of party feeling, forgetful that Christ's cause can be promoted or defeated only in his loving, lamb-like spirit, ready to pronounce their anathema upon all who are not included within their narrow bounds of christian fellowship. The natural result of these multiplied divisions, and enmities, is to engender debates, and lead those who are not under the restraining, crucifying power of Truth, to bite and devour one another, and thus to destroy, in great measure, that influence for good, which every true christian ought to possess; and to render "the churches" in their collective capacity, almost powerless in stemming the tide of wickedness that has swept over the land. Must not these things be offensive to the Divine sight, and should not our profiting in the christian life be desired to hear, with our hearts broken in misery, under which so many parts of our beloved country now groan. We do not mean to imply by these remarks, that truth is not to maintain an unceasing controversy with error, or that the faithful believe must not earnestly contend for the faith once delivered to the saints: what we refer to, is the interference with the religious doctrines and practices of different denominations, by those who have never been transformed by the renewing of their minds; and the consequent confusion and distraction introduced, when the meekness and gentleness of a little child, and the judgment of Truth alone, should reign. "There is no holy and one Spirit;" and human wisdom cannot always determine the constituent parts of that body, but when any of its members are commissioned to open the eyes of those who are blind, or to bring back them who have been turned out of the right way, they will do it in that same spirit which enabled Ananias of old to lay his hands on one whom he had deemed an enemy to the church, with the endearing language of *brother*, and to address them with an authority derived from Him who alone is able to cast the scales for fall from their eyes.

There is a little counterfeiter love passed off among christians, which, lacking all true discernment, confounds and embraces good and evil together; but there is a great way of that heaven-born clarity which "sufferech long, and is kind," "is not easily provoked, thinketh no evil" which "searcheth out tongues, believeth all things, hopeth all things, endureth all things;" and which, under circumstances the most adverse and disheartening, "never faileth." Our own beloved religious Society cannot plead exemption from the evidences of the presence of the destructive, dividing spirit of the world within its borders, and too often in-

fluencing its councils. Defection from first principles has introduced departures from the christian standard of conduct maintained by our forefathers; confusion and insubordination have sprung up as an inevitable sequence; and there has been too strong a disposition manifested, even among many of those who have sincerely desired to adhere to and uphold the Truth in its simplicity and its integrity, to overlook the requirements of that charity which is from above; and at times, when encountering the trials and difficulties of the day, not sufficiently to bear in mind that we are brethren, ranged though we may appear to be in battle array against one another. Well would it be for our Society, as well as for all other religious denominations, well would it be for our country, were the judgments that are now abroad in the land, to bring all who are professing to be the disciples of Christ, and who take part in the affairs of the "churches," into true repentance, humility and a godly fear; that so an effectual effort might be made in each and all, to bring about the fulfilment of that loving petition of the dear Redeemer for his people, "that they all may be one: as thou, Father, art in me, and I in thee, that they also may be one in us: that the world may believe that thou hast sent me." This would effect more speedy deliverance for our country than all her victorious armies, and draw down the peculiar favour and blessing of the great Arbitrator of nations upon it, through its future career.

#### SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 28th ult. The Liverpool cotton market was dull. New Orleans fair, 12½d. Stock in port 400,000 bales, of which 144,000 are American. Bread stuffs were dull and low. Flour 26s. a 20s.; red wheat, 10s. 6d. a 11s. 10d., per 100 pounds; white, 12s. a 12s. 6d.

The U. S. gunboat *Ascagora* and the pirate Sumter were still at Gibraltar.

The London Daily News rejoices at the adoption by the House of Representatives of President Lincoln's emancipation project, considering it as an important step toward the restoration of human rights.

The King of the Belgians is reported to be ill and in a critical condition. The Pope's ill health continues.

The Spanish Government has ordered Gen. Prim not to negotiate with the Mexicans, until the allied troops have entered the City of Mexico.

The insurrection in Greece had not been quelled, but the government troops had obtained some successes in the contest with the rebels.

The Austrian government has taken another step favorable to the freedom of the press. The promise of greater freedom in matters of religion is held out.

Advices from Havana to the 2nd inst., mention the arrival of several small schooners loaded with cotton, from the blockaded ports in the United States. Vera Cruz dates of the 23d ult., state that the Spanish troops occupy Cordova, Orizaba and Tehuacan.

President Juarez had indicated a loan on six Spanish commercial houses of \$500,000 for the Treasury. The Allies had protested against this proceeding in an ultimatum requiring the nullification of the loan, a negative answer to be considered as a *cessu belli*.

The bill abolishing *impeachment* in the United States Senate has adopted the resolution recommended by the President, in favour of compensating the States for the slaves that may be emancipated under State laws. The vote was 32 in favour to 10 against the resolution, the opposition being from the Senators from the Border and Pacific States. As this resolution had previously passed the House by a large majority, it is to be understood now as representing the avowed policy of the legislative as well as of the executive branch of the Government.

The bill abolishing slavery in the District of Columbia, has passed the Senate by a vote of 29 to 14. The slaveholders are to receive a compensation for the slaves liberated, the average price paid for each slave is, however not to exceed \$500.

**The U. S. Army.**—An order has been issued from the War Department closing all the recruiting stations in the different States. It is stated that there are already many more troops in the field than there is any necessity

for. Another order establishes two more military departments. One, to be called the Department of the Great South, includes the portion of Virginia and Maryland lying between the Mountain Department and the Blue Ridge, and is assigned to General Banks. The other, includes the portion of Virginia east of the Blue Ridge and west of the Potomac and the Fredericksburg and Richmond railroad, it is named the Department of the Eastern Shore, and is given to General McDowell.

**New Mexico.**—At the latest dates the Texas rebels were in full possession of Santa Fe, and had organized a rebel government. More U. S. troops had arrived in the Territory, and another battle was thought to be at hand.

**Mississippi.**—All accounts concur in the statement that the rebels are concentrating a very large army at Corinth, in the north east corner of the State. The position is naturally strong, and formidable defences have been erected there under the direction of Beauregard and other able commanders. The artillery is in great plenty, and is said to be well supplied in most other respects.

**Massachusetts.**—Affairs at Island No. 10 remained nearly in the condition previously reported, until the last week when a bold and hazardous movement was made by the rebels to capture the *Missisquoi* at Madrid, landing it on the Tennessee shore in face of the rebel batteries. Part of the steamers and transports, by means of which he was enabled to cross the river, (which is now very high) ran the batteries on Island No. 10 at which the men, guns and transports, lay. Pope captured through a canal, cut for the purpose, across a neck of land enclosed in a bend of the river. The rebellion having thus become untenable, their batteries on the Tennessee shore were hastily abandoned, and the Island was surrendered to Com. Foote on the 7th inst., with all the men, guns and transports, &c. Pope captured three generals, six thousand prisoners of war, one hundred siege guns, field batteries, an immense number of small arms, provisions, &c. The U. S. army sustained no loss.

**Alabama.**—A letter from the military Governor, Andrew Johnson, addressed to the President, states that the secession sentiment is still strong in Nashville, although the people appear more ready to submit to the rightful authority of the Government. No farther military operations of moment are reported. A gunboat expedition recently made an expedition up the Tennessee river as far as Florence, Ala. They met with no resistance on the way, and only discovered one battery of the rebels, which was already deserted. **Latest from Tennessee.**—On the 6th inst., the great rebel army composed of Gen. Beauregard, made an attack on the forces of Gen. Grant, at Fort Fisher, near the Tennessee river. A desperate battle took place with fearful slaughter on both sides, but resulting finally in the repulse and defeat of the rebels.

**Virginia.**—The election in Western Virginia, has generally gone in favour of the Union. The States are preparing for the gradual emancipation of the slaves within its limits. The trade on the Chesapeake and Ohio Canal has been fully resumed, and great quantities of western produce are being sent eastward by that route. Fort Sworie, on the Rappahannock, has been abandoned by the rebels, and the river is now open to the mouth of a distance of forty miles from its mouth. A rebel force of 30,000 men, under the command of Gen. Magrader, is at Yorktown, in a carefully chosen position. Their fortifications extend two miles in length, and mount heavy guns, with the ground in front of them covered with a broad swampy, as to be impassable. On the 7th inst. the U. S. forces under Gen. McClellan, had advanced to Yorktown. The rebel works were carefully examined, and were found to be very strong and the approaches difficult.

**Florida.**—The latest advices from Gen. Brunsdell, state that the rebel force still held out, and operations for its capture were progressing.

**Georgia.**—The store-ship supply, which sailed from the Savannah river on the 29th ult., reports that the United States batteries on shore were all ready to commence the attack on Fort Fisher, which was believed to have probably begun on the 30th. The rebels had made formidable preparations for the defence of Savannah.

**Southern Texas.**—The New Orleans Crescent of the 26th ult., states that the price of flour had advanced to \$22.00 per barrel, and urges the Committee of Safety to take possession of all the flour in market, in order to prevent a further rise.

Preparations have been made to burn Memphis if the rebels shall be compelled to abandon it. Some of the most prominent citizens of Memphis say, they would yield forthwith, if it were ascertained that the States Government would not attack and capture their property.

The Charleston Mercury of the 22d ult., states that President Davis, in secret session, has advised the Congress that the prisoners released on parole by the United States Government, should be absolved from their oaths and be allowed to take part in the struggle for independence. The women of Charleston are contributing their jewels, silver spoons, watches, &c., to build a gunboat for the army.

The Richmond papers state that Jeff. Davis has appointed, and the Senate confirmed, a full set of territorial officers for Arizona.

The Memphis Appeal says:—We have good news from Mississippi. The planters are piling up their cotton, and the Congress that the prisoners released on parole are ready to work on the fortifications; and they say they are ready to make any sacrifice the Government may require. Should the invader continue his advance, he will be lighted on his way by ironing batteries and blazing cotton.

**The Revenue.**—The receipts from customs during the Third month last, at Boston and other eastern ports, were three times as large as in the Third month, 1861, while those at New York have more than doubled. The receipts from all the ports last week amounted to about \$2,000,000.

**New York.**—Mortality last week, 455.

**Philadelphia.**—Mortality last week, 304. Of consumption, 37; inflammation of the lungs, 26; convulsions, 26; under 20 years, 167, under one year, 68.

**The Markets.**—On the 7th inst., the banks of the city of New York held \$37,769,353 in specie. The money market was easy, gold 27 premium. The following were quotations on the 7th inst. New York.—Spring wheat, \$1.28 a \$1.26; winter red, \$1.30 a \$1.23; white Michigan, \$1.37 a \$1.42; rye, 80 a 81 cts.; oats, 55 a 61 cts.; corn, 50 a 51 cts.; cotton, 15 a \$1.30; white, \$1.37 a \$1.45; rye, 70 cts.; yellow corn, 55 cts.; oats, 35 a 36; clover seed, \$5.00 a \$5.25. The cattle market was fully supplied last week. The sales ranged from 7 to 9 cts.

#### RECEIPTS.

Received from G. F. Head, Agt., Mass. for R. Churchill, Jr., N. S., \$2, vol. 31. From the Board of Agt., Co. for Eph. Williams, \$4, vols. 34 and 35; from N. D. Tripp, N. Y., \$2, vol. 35.

#### WEST-TOWN BOARDING-SCHOOL.

The Summer Session of Friends' Boarding-school at West-Town, will commence on Second-day, the 12th of Fifth month next. Parents and others intending to send their children as pupils, will please make early application to Deans EXAMER, Superintendent, at the School, or to CHARLES J. ALLEN, Treasurer, No. 304 Arch street, Philadelphia.

#### FRIENDS' ASYLUM FOR THE SANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSHUA H. WORTINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

#### FRIENDS' HORSES.

Friends coming to the city to attend Yearly Meeting or at other times, on the service of Society, can have their horses taken care of at the stable of the Montgomery hotel, north east corner of Sixth and Willow street; at the White Horse Hotel, Callowhill Street, above Fifth; at Watson's Stable, Marshall below Brown, and at Robert Smith's stable in Bristol, Bucks County.

#### BIBLE ASSOCIATION OF FRIENDS IN AMERICA.

A Stated Annual Meeting of the "Bible Association of Friends in America," will be held at the Committee-room, Arch Street Meeting House, on Seventh-day evening, the 30th inst., at 8 o'clock. Friends generally are invited to attend.

MARRIED at Friends' Meeting, Muncy, Locomo Co., Pa., on Fourth day, the 5th of Third month, 1862, JOSEPH R. WHITTAKER to SARAH E., daughter of John and Louisa WARDER; all of the former place.

#### PYLE & MELROY, PRINTERS.

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, FOURTH MONTH 19, 1862.

NO. 33.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

## Plant-Lice.

Extracted from Dr. Harris' Treatise on Insects Injurious to Vegetation.

(Continued from page 234.)

The peach trees suffer very much from the attacks of plant-lice, which live under the leaves, causing them by their punctures to become thickened, to curl and form hollows beneath, and corresponding crispy and reddish swellings above, and finally to perish and drop off prematurely.

The injuries occasioned by plant-lice are much greater than would at first be expected, from the small size and extreme weakness of the insects, but they take up by their numbers what they want in strength individually, and thus become formidable enemies to vegetation. By their punctures and the quantity of sap which they draw from the small veins, the functions of these important organs are changed or interrupted, the food of the plant which they elaborated to nourish the stem and mature to fruit, is withdrawn before it can reach its proper destination, or is contaminated, and left in a state unfitted to supply the wants of vegetation.

The punctures of these lice seem to poison some plants, and affect others in a most singular manner, producing warts or swellings, which are sometimes solid and sometimes hollow, and contain in their interior a swarm of lice, the descendants of a single individual, whose punctures were the original cause of the tumor. I have seen reddish tumors of this kind as big as a pigeon's egg growing upon leaves, to which they were attached by a slender stalk, containing thousands of small lice in their interior. The lice which inhabit or produce these ails, generally differ from the others, in having shorter antennae, being without honey-tubes, and a frequently being coated with a kind of white oom, which, however, disappears when the insect becomes winged.

These downy plant-lice are now placed in the genus *triosoma*, (which means woolly body,) and are most descriptively species belonging to it, was first described under the name of *Aphis lanigera* y — Housmann, in the year 1801, as infesting the apple trees of Germany. It seems that it had been noticed in England as early as 1787, and has since acquired there the name of the American light, from the erroneous supposition that it had been imported from this country.

In Gloucestershire, England, so many apple

trees were destroyed by these lice in 1810, that it was feared the making of cider must be abandoned. In the north of England, the apple trees are greatly injured and some annually destroyed by them, and in 1826, these *Aphides* abounded there in such incredible luxuriance, that many trees seemed at a short distance as if they had been whitewashed.

Solutions of soap, or a mixture of soap-suds and tobacco-water, used warm and applied with a watering pot or garden engine, may be employed for the destruction of these insects. Prof. Lindley, recommended syringing plants as often as necessary to remove the lice, with a solution of half an ounce of strong carbonate of ammonia in one quart of water, which has the merit of being clean as well as effectual. Against the depredations of the plant-lice that sometimes infest potato-fields, drenching the plants with lime has found a good remedy. Lice multiply much faster, and are more injurious to plants in a dry than in a wet atmosphere; hence in green-houses attention should be paid to keep the air sufficiently moist; the lice are readily killed by fumigations with tobacco or sulphur. To destroy subterranean lice on the roots of plants, I have found that watering with salt water was useful if the plants were hardy, but many herbaceous plants cannot be treated in this way, but may sometimes be relieved by free and frequent watering with soap-suds.

Plant-lice would undoubtedly be much more abundant and destructive, if they were not kept in check by certain redoubtable enemies of the insect kind, which seem expressly created to diminish their numbers. These lice destroyers are of three sorts. The first are the larvae of the hemipterous beetles, familiarly known by the name of "lady-bird" and scientifically by that of *Coccinella*. These little beetles are generally yellow or red, with black spots, or black, with white, red or yellow spots; there are many kinds of them, and they are very common and plentiful insects, generally diffused among plants. They live both in their perfect and young state upon plant-lice, and hence their services are very considerable. Their young are small flattened grubs, of a bluish or blue-black colour, spotted usually with red or yellow, and furnished with six legs, near the fore part of the body. They are hatched from little yellow eggs, laid in clusters among the plant-lice, so that they find themselves at once within reach of their prey, which, from their superior strength, they are enabled to seize and slaughter in great numbers.

In July, 1848, a friend sent me a whole brood of lady birds and grubs, which being found upon potato vines, were thought by some of my neighbours to be the cause of the rot. In a few weeks the grubs were transformed into beetles about as big as half a pea, and having nine black dots on their dull orange-coloured wing shells. It need hardly be added that these little insects were wholly innocent of all offence to the plants, upon which, when in pest, was found with the common potato-plant lice, they may always be found.

There are some lady birds of very small size, and blackish colour, sparingly clothed with short hairs, and sometimes with a yellow spot at the end

of the wing covers, whose young are clothed with short tufts or flakes of the most delicate white down. These insects belong to the genus *stymnus*, (which means a lion's whelp,) and they well merit such a name, for their young in proportion to their size, are as sanguinary and ferocious as the most savage beasts of prey. I have often seen one of these little tufted creatures prying upon plant-lice, catching and devouring with the greatest ease, lice nearly as large as its own body, one after another in rapid succession, without apparently satiating its hunger or diminishing its activity.

The second kind of plant-lice destroyers, are the young of the golden-eyed lace-winged fly, *Chrysopa Euriptera*. This fly is of a pale green colour, and has four wings resembling delicate lace, and eyes of the brilliancy of polished gold, as its generic name implies, but notwithstanding its delicacy and beauty, it is extremely disgusting, from the offensive odor that it exhales. It suspends its eggs by threads, in clusters, beneath the leaves where plant-lice abound. The larva is a rather long and slender grub, provided with a pair of large curved and sharp teeth, ( *jaws*.) moving laterally, and each perforated with a hole through which it sucks the juices of its victims. The havoc it makes is astonishing, for one minute is all the time it requires to kill the largest plant-louse and suck out the fluid contents of its body.

The last of the enemies of plant-lice are the young of various two-winged flies, belonging to the genus *Syrphus*. Many of these flies are black, with yellow bands on their bodies. I have often seen them hovering over small trees and other plants, depositing their eggs, which they do on the wing, like the bot-fly, curving their tails beneath the leaves, and fixing here and there an egg, wherever plant-lice are discovered. Others lay their eggs near the buds of trees, where the young may find their appropriate nourishment as soon as they are hatched.

The young are maggots, thick and blunt behind, tapering and pointed before, their mouths are armed with a triple pointed dart with which they pierce their prey, elevate it above their heads and feast upon its juices at leisure. Though these maggots are totally blind, they are enabled to discover their victims without much groping about, in consequence of the provident care of the parent flies, which leave their eggs in the very midst of the sluggish lice. — Kirby says, that on examining his currant bushes, which but a week before, were infested by myriads of Aphides, not one was to be found, but beneath each leaf were three or four full fed maggots, surrounded by heaps of the slain, the trophies of their successful warfare. He also says, he has found it very easy to clear a plant or small tree, of lice, by placing upon it several larvae of *Coccinella* or *Syrphii*.

*The inward principle see oen.*—Being quickened by it in our inward man, we could easily discern the difference of things, and feel what was right and what was wrong, and what was fit and what not, both in reference to religion and civil concerns.—*William Penn.*

*A Scene at a Review.*—There was a beautiful instance of fine horsemanship displayed at a late review held at Vienna, upon the occasion of the fiftieth anniversary of the establishment of the military order of the Maria Theresa, when some thirty thousand cavalry were in line. A little child in the front row of the spectators, becoming frightened, rushed forward just as a squadron of Hussars were charging at full tilt—sweeping down with maddening velocity, almost on the child. Terror paralysed alike the spectators and the mother of the child, while the lovely and amiable Empress almost fainted with horror, for the child's destruction seemed inevitable. The little one was almost under the horses' feet—another instant would have sealed its doom—when a Hussar without lessening his speed or loosening his hold, threw himself along his horse's neck, and seizing the child, placed it in safety in front of his saddle without so much as changing the pace or breaking the alignment in the least. A hundred thousand voices hailed with pride and joy the deed, while two voices could but sob their gratitude—the one a mother's, the other that of her sympathizing and beloved Empress. A proud moment that must have been for the Hussar, when his Emperor, taking the enamelled cross of merit, attached it to his breast—a proud moment alike for the sovereign and the man.—*London Paper.*

*The Hod-carrier.*—One day last summer, near the hour of noon, — Black left his store for the purpose of seeing how the work was getting on at his house which he was then having built. Soon after he arrived, the bell rang for the hour of twelve. This notified the men that dinner time had come, and now each one sought a seat where they could comfortably enjoy their repast. In one place sat three or four young men, who, opening the baskets they had brought with them, were soon engaged in demolishing the contents, and to judge from the merry peals of laughter which occasionally burst from them, they had a jovial time. In another place sat two men whose little daughters had brought them hot dinners. At the first tap of the bell these little girls were there, each bearing a basket containing hot meat and vegetables. It was evident from the provision made for their comfort, that they had good wives at home.

Off by himself, sat an old man, a hod-carrier, whom Black had often noticed as being one of his most faithful workmen. He uncovered a little old basket, from which he took some bread and cold meat; but, unlike the others, before partaking of it, he clasped his hands and reverently bowed his head, asked God's blessing. How many are there who daily sit down to tables covered with every luxury to tempt the palate, and never think of Him from whom all these mercies flow; whose voices are never heard in thanksgiving. They regard not the words of inspiration which saith: "Whether therefore ye eat or drink, or whatsoever ye do, do all to the glory of God."—*Similey School Times.*

*What to Eat, and When.*—When a piece of land is exhausted of the element which is the principal ingredient of a certain crop, that ingredient must be supplied, or the crop will fail in quantity and quality; hence the thrifty farmer ascends the veins of the soil, and supplies it with the needed manure every year. The human body is exhausted of its elements day by day, and day by day must these elements be supplied by what we eat and drink; but the required proportion of these elements changes with the seasons, with the temperature of the weather, and he who eats the

same in quantity and quality in July as at Christmas, will die in a month, because the adult eats for two reasons—to warm and to nourish. All food contains two chief principles—Carbon to keep from freezing; Nitrogen, to keep from famishing. The proportion of these elements varies with the food. Those who work a great deal, require a great deal of nourishment, of nitrogen, for it is the flesh-forming principle. Those who are exposed a great deal to the cold, should eat the carbonaceous, the heat-supplying food. Butter and fat are three fourths carbon; vegetables have but little, berries none. Hence Greenlanders, in their icy homes, luxuriate in blubber and whale oil, while the people of the sunny south revel in oranges and bananas, on the plain and the peach, on dates and figs, on lemons, tamarinds, pine-apples, &c. We who live in latitudes between, are permitted the diet of the Polar Seas and the tropics, in their season. A wise man will take but little carbonaceous food on a suddenly hot day; but if suddenly cold, it is best for him to eat more of fuel making food. An infinite number of fevers and of colds would be avoided if timely attention were paid to these things. By the aid of these statements, the following tables may be used to great advantage, showing the amount of carbon, or heat-forming principle, in several articles of food. There is not one per cent. of nitrogen, or flesh-forming principle, in fruits, berries, and the more common vegetables. Meats have about fifteen per cent. The meats average twenty-five per cent. of nutriment, that is, including both carbon and nitrogen. Of all meats, mutton is the most nutritious, thirty per cent.; fish least, twenty per cent. Of all vegetables, white beans are the most nutritious, ninety-five per cent.; wheat flour, ninety per cent.; turnips, the least, five per cent. Of fruits, plums are the most nutritious, thirty per cent.; apples, seventeen; melons and cucumbers, three, the rest being water and waste. The more waste, the more open the bowels are:

—*Journal of Health.*

Concerning the Times and Seasons, both which have been and which are yet to be.

When God made man in his own image, placing him in paradise, and giving him dominion over the works of his hands, then was a time of great joy to Adam and Eve, and should have still been so to them, and all mankind, had they continued in the state wherein they were created.

When Eve, and by her means Adam, hearkened to the voice of the serpent, disobeyed the Lord their Creator, aspiring after wisdom and the knowledge of good and evil out of God's way; then was a season of misery to Adam and all his posterity; the holy and heavenly image being lost, and a cursed image gained in the stead thereof, and so man thrust out of paradise and the blessedness thereof, into the earth, which was cursed for man's sake. So in this state, sin and the curse is man's

portion, instead of the holiness and blessedness, which his Creator had allotted him.

When God promised the blessed Seed and revealed himself to the fathers in the faith, begetting sons to himself, who heard his voice, obeyed and walked with him, then was a blessed time and season to them, though sin and death reigned in the world. But when the sons of God also forgot him, and mingled their seed with the corrupted world, then the deluge came, sweeping away all but Noah with his family, and the creatures saved in the Ark.

When the Lord chose the Jews to be a people to himself, from amidst all nations, delivering them by his outstretched arm out of Egypt, destroying Pharaoh and his host, and led them through the wilderness, fitting the succeeding generations for the good land, bringing them into it, blessing and establishing them in it, while they feared him and walked in covenant with him, then was a blessed time and season with that people. But when they provoked God, brought his judgments often, and at last utter ruin and desolation upon themselves, then were seasons of great misery and distress, and at last of utter destruction to them.

While the Gentiles were cast off and were no people, being of the corrupt seed which God had not chosen, nor had any delight in, and while they knew not the living God, but worshipped stocks and stones, and so were liable to the pouring down of his wrath and indignation upon all occasions, and to utter ruin and destruction, when their iniquities were full, it was a sad time and season with them, wherein they were estranged from the life of God, and his holy covenant of promise, and were without God in the world.

When the Lord preached the gospel to the Gentiles by his holy apostles and ministers, manifesting Christ to them, the hope of glory, the mystery hid from ages and generations, engraving them into the holy vine and olive tree, giving them to partake of the sweetness and fatness thereof, even of the riches of his grace and goodness in his Son, who is eternal life and gives eternal life to all his; there was such a time and season of love, grace, mercy and peace from God our father and from the Lord Jesus Christ, (both towards Jews and Gentiles,) as had not been known in the world before.

When the Christian church apostatized, the love in many waxing cold, men minding the name of christianity and form of godliness, but not the life and power, and so the Lord was provoked against them to remove their candlestick out of its place and give up the outward court to the Gentiles, and so the spirit was lost and departed from, the life lost, the power lost, the everlasting gospel hid from men's eyes, and darkness and men's inventions set up instead thereof, in nations, tongues and peoples and the witnesses to any appearances of God's living truth and holy power persecuted, then was a sad time, then was a season of death and darkness reigning over all nations, kinds, tongues, and people, and the cup of fornication drunk by them all, and all generally bewitched by it, except those whose names are written in the Lamb's book of life. This was the greatest time of darkness (wherein the mystery of iniquity most deeply wrought in the deepest ways of deceit,) that ever was in the world.

When the church comes again out of the wilderness, when the Spirit and power of God builds up again the gospel church in its primitive glory when the everlasting gospel is preached again to all nations, kinds, tongues and languages, in the authority and power of God, when the Spirit of the Lord is poured out plentifully on his sons and daughters, and they prophecy, walk and live in it, when God dwells and walks in his people

and his true light shines in them, dispelling the darkness thoroughly, and filling them with the glory and majesty of the Lord, and they ascend up out of the world's spirit and nature, into his spirit and nature, even in the sight of their enemies, and the full wrath of the Lamb be poured out upon Babylon, and the full glory revealed in Zion; then shall there be such a day of brightness and pure heavenly glory, as shall dazzle the eyes of all beholders.

But the passing away of this night, and the bringing forth of this day, will be very terrible and dreadful, both in particulars and nations. The kingdoms of this world must indeed become the kingdoms of our Lord and of his Christ; but it will require great power to bring it about. The wrath and strength of the spirit of darkness will be working against the Lord and his power to the utmost; and the more it works against the Lord and his power, the more will the Lord's power and the wrath of the Lamb, be revealed against that spirit, and against all its devices and undertakings against the counsel and power of the Lord. Oh! blessed are they that are of the Lamb's nature and spirit, of his righteousness and meekness; for the wrath of the Lamb will not be kindled against them, but he will be a munition of rocks unto them, and their inward life shall be preserved, and they shall enjoy peace with the Lord in the midst of all that shall outwardly befall them.

ISAAC PENNINGTON.

Dated at Meshobon in Kent,  
22d of the Sixth month, 1679.

**Grandfather's Advice.**—What would you advise me to do, Grandpa? Jim Blake does every thing he can to vex me. He hides my books to make me miss my lessons, trips me when we run races, and brags how big he is beside me, and how easily he can take me down; and to-day he broke the snapper off the new whip you gave me, and when I ran to tell the teacher he called out 'tattle-tale.' I wish I could leave school, or get him turned out."

All this was said by little Sammy Halsey on his way from the large front gate, where his grandfather had taken him in his carriage on his way to the barn. Imagine his surprise when the white-haired old man, whose quiet temper had always been held up as a model for imitation, turned about and said, "I dont know, Sammy, unless you contrive in some way to *break every bone in his body*; that is the way my father once conquered an enemy."

"Why, Grandpa, I thought your father was a minno."

"So he was, and at the time I refer to was a Christian boy."

Sammy's wondering, dissatisfied look, Grandpa said, "Take hold and help me unharness Bill, and while we are at work I will tell you about it."

"When my father, whose name was Robert, was a boy, he and his brother Richard used to have some differences. They loved each other, but still their high temper sometimes led them astray. After awhile my father became a christian, and by his godly example reproved many of the wicked and thoughtless practices of his companions. He refused to accompany them when going to rob an orchard, or disobey their parents, and persisted in reproving their conduct on all proper occasions, so that even his brother was for a time turned against him."

"By and by, I have heard my uncle say, 'we couldn't stand Robert's pious ways any longer, particularly as he had told father of some of our

wrong doings, and got us punished. So one day I caught him alone in the orchard, got a horse-whip, and gave him a regular thrashing; and knowing that he would tell my father, and get me whipped in return, I gave him several extra cuts on that account. I came in rather slowly when the horn was blown for supper, for I dreaded father's angry looks, and besides, I began to be ashamed of my disgraceful conduct. As Robert had not tried to restrain me, but had walked away without speaking, I felt sure that he would make up for it by telling of me as soon as he reached the house. To my surprise, one seemed to know about it, and Robert greeted me as kindly as if nothing had happened, though I knew his back was so sore that he could hardly sit up. Just before bed-time, I said in a kind of sneaking way, 'Didn't you tell father of me, Bob?' 'No, Richard, no one but my Father in heaven, and he has kindled me to forgive you.' *This remark, and the kind look of his face, broke every bone in my body.* I begged his forgiveness alone and before the whole family, and from that day was a changed boy. I never again did anything to grieve him, and before long began, I trust, to walk in the straight and narrow path with him. Poor, dear Robert, after many sufferings and toils, he has gone to glory."

Sammy's grandfather added, "I have heard uncle Richard say in a trembling voice, '*That time he broke every bone in my body.*'"

By this time the horse was turned into the field, the wagon-house closed, and Sammy walking in his grandfather's side in a different mood from that in which he had entered the carriage.

As grandpa went into the house he said, "Sammy, don't you think you had better try uncle Robert's way of subduing an enemy? Take my advice, try it; 'heap coals of fire upon his head,' and he will be apt to surrender."—*American Messenger.*

**Planting Apple Trees.**—Never before have apple trees been so extensively planted as during the past autumn. Farmers are beginning to realize that raising good fruit is a profitable business. The apple crop the past season was not as large as in 1850, but the prices, notwithstanding the high rates of freight, have been good, and it is said that the fruit-growers have realized as much profit from their crop as in the previous more plentiful years. We hear of cases where \$400 an acre has been paid for Baldwin apples on trees—the buyer to gather the fruit. An intelligent farmer, a few days since, told us that he was going to plant 1000 Baldwin apple trees, and remarked that his only regret was that he had not done so ten years ago. He had no doubt that this, and other winter varieties, will always command a fair price. Even if they do not he thought "it would pay to grow them to feed cattle and hogs." The varieties planted most extensively are the Baldwin, the Golden and Roxbury Russett, and Rhode Island Greening. There can be no doubt that the soil and climate of Western New York are very favourable to the growth of apples, pears, &c. The fruit is exceedingly fair, and will always command good prices. A considerable quantity of winter apples have been sent from here to England. We have no doubt that those who have exercised due care in assorting out all poor and bruised fruit, and in seeing that they have been carefully handled, will realize handsome profits from their investments. Many apples are also sent from this neighbourhood to Canada. The variety which commands the highest price in Montreal is the Pomme Grise. It will readily bring \$4.50 to \$5 per barrel, while the Baldwin sells for \$5.50. It is a most excellent

apple, but of not sufficient size to suit the popular demand with us. It is a favourite with all who judge apples by the taste, rather than by the eye. The Bourassa is also a popular apple in Montreal. Both these varieties bear well in this section, and should be more generally planted, especially by all who expect to send apples to Canada.—*Genesee Farmer.*

Dynard on War.

(Continued from page 256.)

It were to no purpose to say, in opposition to the evidence of these facts, that they form an exception to a general rule. The exception to the rule consists in the *truth* of the experiment of non-resistance, not in its *success*. Neither were it to any purpose to say, that the savages of America or the desperadoes of Ireland spared the Quakers because they were *previously* known to be an unoffending people, or because the Quakers had *previously* gained the love of these by forbearance or good offices:—we concede all this: it is the very argument which we maintain. We say that a *uniform, undividing* regard to the peaceable obligations of christianity, *becomes the safeguard of those who practise it.* We venture to maintain that no reason whatever can be assigned why the fate of the Quakers would not be the fate of all who should adopt their conduct. No reason can be assigned why, if their number had been multiplied ten-fold or a hundred-fold, they would not have been preserved. If there be such a reason let us hear it. The American and Irish Quakers were to the rest of the community, what one nation is to a continent. And we must require the advocate of war to produce (that which has never yet been produced) a reason for believing that although individuals exposed to destruction were preserved, a nation exposed to destruction would be destroyed. We do not, however, say, that if a people, in the customary state of men's passions, should be assailed by an invader, and should by a sudden, choose to declare that they would try whether Providence would protect them—of such a people, we do not say that they would experience protection, and that none of them would be killed, but we say that the evidence of experience is, that a people who habitually regard the obligations of christianity in their conduct towards other men, and who steadfastly refuse, through whatever consequences, to engage in acts of hostility, *will experience protection in their peacefulness*; and it matters nothing to the argument, whether we refer that protection to the immediate agency of Providence, or to the influence of such conduct upon the minds of men.

Such has been the experience of the unoffending and unresisting, in individual life. A *national* example of a refusal to bear arms has only once been exhibited to the world: but that one example has proved, so far as its political circumstances enabled it to prove, all that humanity could desire, and all that scepticism could demand in favour of our argument.

It has been the ordinary practice of those who have colonized distant countries, to force a footing, or to maintain it with the sword. One of the first objects has been to build a fort and to provide a military. The adventurers became soldiers, and the colony was a garrison. Pennsylvania was, however, colonized by men who believed that war was absolutely incompatible with christianity, and who therefore resolved not to practise it. Having determined not to fight, they maintained no soldiers, and possessed no arms. They planted themselves in a country that was surrounded by savages, and by savages who knew they were unarmed. If east-

ness of conquest, or incapability of defence could subject them to outrage, the Pennsylvanians might have been the very sport of violence. Plunders might have robbed them without retaliation, and armies might have slaughtered them without resistance. If they did not give a temptation to outrage, no temptation could be given. But these were the people who possessed their country in security, whilst those around them were trembling for their existence. This was a land of peace, whilst every other was a land of war. The conclusion is inevitable, although it is extraordinary—they were in no need of arms because they would not use them.

These Indians were sufficiently ready to commit outrages upon other states, and often visited them with desolation and slaughter; with that sort of desolation and that sort of slaughter, which might be expected from men whom civilization had not reclaimed from cruelty, and whom religion had not awed into forbearance. "But whatever the quarrels of the Pennsylvanian Indians were with others, they uniformly respected, and held as it were sacred, the territories of William Penn." "The Pennsylvanians never lost man, woman, or child by them, which neither the colony of Maryland, nor that of Virginia could say, no more than the great colony of New England."

The security and quiet of Pennsylvania was not a transient freedom from war, such as might accidentally happen to any nation. She continued to enjoy it "for more than seventy years," and subsisted in the midst of six Indian nations, "without so much as a militia for her defence." "The Pennsylvanians became armed, though without arms; they became strong, though without strength; they became safe, without the ordinary means of safety. The constable's staff was the only instrument of authority amongst them for the greater part of a century, and never, during the administration of Penn or that of his proper successors, was there a quarrel or a war."

I cannot wonder that these people were not molested—extraordinary and unexampled as their security was. There is something so noble in this perfect confidence in the Supreme Protector, in this utter exclusion of "slavish fear," in this voluntary relinquishment of the means of injury or of defence, that I do not wonder that even ferocity could be disarmed by such virtue. A people, generously living without arms, amidst nations of warriors! Who would attack a people such as this? There are few men so abandoned as not to respect such confidence. It was a peculiar and an unusual intensity of wickedness that would not even revere it.

And when was the security of Pennsylvania molested and its peace destroyed?—When the men who had directed its councils and who would not engage in war, were omitted in its legislature:—when they who supposed that there was greater security in the sword than in Christianity, became the predominating body. From that hour, the Pennsylvanians transferred their confidence in christian principles to a confidence in their arms; and from that hour to the present they have been subject to war.

Such is the evidence derived from a national example of the consequences of a pursuit of the christian policy in relation to war. Here are a people who absolutely refuse to fight, and who incapacitated themselves for resistance by refusing to possess arms, and this was the people whose land, amidst surrounding broils and slaughter, was selected as a land of security and peace. The only national opportunity which the virtue of the christian world has afforded us of ascertaining the

safety of relying upon God for defence, has determined that it is safe.

If the evidence which we possess do not satisfy us of the expediency of confiding in God, what evidence do we ask, or what can we receive? We have his promise that he will protect those who abandon their seeming interests in the performance of his will, and we have the testimony of those who have confided in him, that he has protected them. Can the advocate of war produce one single instance in the history of man, of a person who had given an unconditional obedience to the will of heaven, and who did not find that his conduct was wise as well as virtuous, that it accorded with his interests as well as with his duty? We ask the same question in relation to the peculiar obligations to irreverence. Where is the man who regrets, that in observance of the forbearing duties of christianity, he consigned his preservation to the superintendence of God?—And the solitary national example that is before us confirms the testimony of private life; for there is sufficient reason for believing that no nation, in modern ages, has possessed so large a portion of virtue or of happiness as Pennsylvania before it had seen human blood. I would therefore repeat the question—What evidence do we ask, or can we receive?

(To be continued.)

*How Letters Miscarry.*—Ten or twelve thousand letters are posted annually without any address, any writing whatever, on the covers; this is sheer forgetfulness, beyond the power of the post-office to cure; and it is found that the ratio of such examples of forgetfulness, to the total number of letters posted, is singularly uniform. Again, one newspaper in five thousand slips out of its cover in the letter-box or the mail-bag; and until new methods of fastening are adopted, we may confidently expect a similar ratio of mishaps next year. At the chief office alone, two hundred letters are posted every day unsealed and unfastened, taking one day with another, and the ratio deducible from this number might be safely relied on for the days of the forthcoming year. Sixty thousand letters were refused by the addressees in 1858, on account of the postage not having been pre-paid; this is probably a number likely to lessen, rather than to remain permanent, because the annoyance of having a letter returned for such a reason, would serve as a lesson to the addresser. More than twenty thousand letters, now arrive daily at the chief office, bearing only the name of an addressee, with the simple addition of the word "London," but without any street or house being denoted. Every year there are letters containing money which can neither be delivered to any addressee, nor, for want of an address on the inside, be returned to the writers; the money for which there is thus no owner, is placed to an insurance fund for the Post-office clerks. Let us learn from the following to make our queen's heads "stick to their letters." In 1860, more than fifty thousand postage stamps were found in letter-boxes and mail-bags, rubbed from their proper places on letters and newspapers.—*Chambers's Journal.*

*The Way of Peace*—Question.—But what is the way of peace, which neither the profane, nor any sort of professors out of the life and power, ever knew, or can know?

Answer. It is an inward way, a way for the inward Jews, for the inwardly-renewed and circumcised to walk in. It is an holy or sanctified way, for the sanctified ones to walk in. It is a living way, which none but the living can find. It is a new way, which none but those to whom God hath given

the new eye can see. It is a way that God prepares and casts up, and leads men's spirits into (who hearken unto him) and guides the feet of his saints in. It is a strait and narrow way, which no lust of the flesh, nor wisdom of the flesh can find out or enter into. Oh! how low, how low, how poor, how empty, how naked, must he be, that enters into this way, and walks therein! Many may seek after it, and may think to find it, and walk in it; but few shall be able, as our Lord Jesus Christ said, Here circumcision outward avails not; here want of that circumcision hinders not; here bodily exercising profits little. The new creature is all here; the cross of Christ is all here; the power of God is all here; and he that walks according to this rule, peace is upon him, and the whole Israel of God. But he that knows not this rule, nor walks according to this rule, peace is not upon him, nor is he one of the inward Israel of God, who receive power to become sons, who receive the law of the Spirit of life in Christ Jesus, which is the inward rule of the inward Israel.

This was the way of peace from the beginning; this is the way of peace still; and there is not another. To be new created in Christ Jesus, to be ingrafted into him, to abide in him, to have the circumcision of the flesh (the body of the sins of the flesh cut off) by the circumcision of Christ (made inwardly in the heart without hands), and to walk not after the flesh, but after the Spirit, even in the newness of the Spirit, here is life and peace, rest and joy for evermore. The Lord of his tender mercy give me a sense of it, and lead me into it more and more. Amen.—*Isaac Penington.*

*Ways of Good Society.*—Christian parents will do well to study the following from the late Dr. J. W. Alexander, than whom there was no man more qualified to speak. Himself with the most refined tastes, and with rare accomplishments, he could appreciate with peculiar zest all that society contains that is elegant and delicate. Yet we find him speaking as follows:—

As I grow older as a parent, my views are changing fast as to the degree of conformity to the world which we should allow to our children. I am horror-struck to count up the profligate children of pious persons, and even ministers. The door at which those influences enter which counter-veil parental instruction and example, I am persuaded is yielding to the ways of good society. By dress, books and amusements, an atmosphere is formed which is not that of christianity. More than ever do I feel that our families must stand in a kind but determined opposition to the fashions of the world, breasting the waves like the Eddy-stone lighthouse. And I have found nothing yet which requires more courage and independence than to rise even a little, but decidedly, above the par of the religious world around us. Surely the way in which we commonly go on is not the way of self-denial, and sacrifice, and cross-bearing, which the New Testament talks of. Then is the offence of the cross ceased. Our slender influence on the circle of our friends is often traced by our leaving so little difference between us.—*Exchange.*

"I have Coveted no Man's Silver or Gold."—I visited Leicestershire pretty generally, and a woman of some account, whose name was Jemima Mountney, was convinced, and was exceedingly tender and loving, being thoroughly reached and satisfied. When we parted, she was so open hearted that I was called aside by her, and after having said something to me about her inward condition, she offered me some pieces of gold, which I told her I durst not touch. She very

courteously, and with a becoming, gentle mien, told me she was both able and willing, and as she had no other way that she could show her gratitude for that spiritual good she had received from my ministry, she could do no less, beseeching that I would receive it as the true token of her love and respect. In answer, I said it was what I never had done, nor could I now do it; but all the reward I desired and expected, was that she might carefully, with a sincere heart, endeavour that her obedience did keep pace with her knowledge, the hearing of which would rejoice my soul. We parted in great love and tenderness.—*Samuel Bowas.*

For "The Friend."

The Yearly Meeting.

"It is not of him that willesh nor of him that runneth, but of God who showeth mercy." Rom. ix. 16.

The rightly exercised members of the true church, must ever feel that they cannot of themselves do anything for the promotion of the Lord's cause in the earth, or the carrying on of the all-important work of the soul's salvation in themselves; it is only as there is a co-operating with him who still continues to be the adorable Head over all things to his church and people, that a blessing will rest on the labours of the truly concerned members thereof. If those who go up to our annual assembly, went under this sense and feeling, and dwelt under it, our annual gatherings would become our yearly solemn feasts.

The present is felt to be a low time amongst us. If we are sensible of our situation we cannot but acknowledge this to be the case with us. And truly it is a condition that is trying to those who are longing to hear the voice of Him who spake to his servant through the cloud formerly, saying, "Speak to my people that they move forward." But we may remember the command first was, "Stand still and see the salvation of God which he will show you this day." "The Lord shall fight for you and ye shall hold your peace." Oh! the necessity there is at this day, when we are beset as it were before and behind, and hemmed in on either side, to be willing to be brought into this condition of standing still in order to see his great salvation, and know him to fight our battles, whilst everything that is of our own will and running in us, is made to bow to the command, "Hold your peace." The mind of man is ever active. Stillness is not agreeable to our nature, and our enemy, who is seeking to lay Zion waste, (but he shall not prevail,) knows this; and has he not gained advantage on this ground, in some who were and may still be concerned for the doctrines and testimonies of our Religious Society? but their restless uneasy spirits having never been brought sufficiently under the hammer and fire of God's power, to transform them, they have grown impatient under the chastening hand, and under the plea of standing firm for the support of our doctrines and testimonies, and bearing a testimony against the unsoundness which is known to be making sad inroads in many places, with much apparent zeal and profession of heavenly-mindedness, they have determined to pursue their own course, irrespective of the judgment of the body.

There is ground for fear, such are exerting a hurtful influence on many around them. For not being of the number of those who are content with being still, they (it is to be feared,) have a life in dwelling upon the failings and short-comings of others with whom they have heretofore been in religious fellowship, and by holding up the dark side to the view of the too credulous, and perhaps somewhat tried and discouraged ones, lead them to conclude that all are nearly gone out of the right way,

and if they continue where they are, they too are in danger of going with the current, as they term it. Such as these, in whose hearts the seeds of disunity have been sown, are in danger of finally becoming aliens to the commonwealth of Israel, unless they are in mercy made sensible, that a beam is in their own eye, and are willing to have it plucked out, so that they may see clearly the mote that may be in their brother's eye.

It is our high profession to be led under the immediate guidance of the Holy Spirit, which if acted up to, must prevent the laying of plans or forming conclusions what we shall do, and what a meeting ought to do, before there has been a gathering into stillness, and humbly waiting to know the will of our adorable Head, and the High Priest of every rightly gathered assembly. Let any who may be tempted to conclude that if things are not soon, what they consider better, they will set up their standard in opposition to the established order of our Religious Society, pause and reflect whether this is a proper frame of mind to be in; whether they are not in danger of missing the penny which will be given to all who are willing to labour in the Lord's vineyard. If we watch for evil we may always find it, but are we not commanded to watch over one another for good. "Bear ye one another's burdens and so fulfil the law of Christ."

How important is it for those upon whom the ark of the testimony rests, to feel the responsibility of their situation, and to remember "That it is not of him that willesh nor of him that runneth but of God who showeth mercy," that so they may be enabled to bear the ark to the glory of God. Human contrivance,—what sad work it often makes when resorted to in conducting the affairs of the church! Surely the Lord will one day confound the wisdom of the wise and bring to nought the understanding of the prudent. Fruitless will it be to make concessions of right to wrong, or adopt measures for the sake of satisfying any, thinking thereby to promote the peace of society; for although mercy and long forbearance are taught us by the precepts and example of our Blessed Saviour, yet he is of purer eyes, "Thau to behold iniquity in Jacob, or transgression in Israel" with any degree of approbation. The present is a day of great commotion in the world and confusion in society; happy is it for those who know for themselves Jerusalem the quiet habitation, in this day of shaking and of treading down. As there is an abiding in the faith and in the patience, moving only as the cloud is lifted up from the tabernacle, and a standing still at the Master's bidding, he will assuredly manifest himself to be "strength in weakness and a present help in the needful time." Oh! that all may be preserved from attempting to move forward in their own will and strength, thinking that something must be done that will promote the harmony of the church, or we shall become altogether a scattered and shattered people. Happy would it be for us if we were brought into the true unity and harmony again: then would the united travail of our spirits arise as sweet incense to the God and Father of us all, that he would be pleased in his mercy to arise for our help, and enable us to build up the broken down walls, and set up the gates. But no mortals ever could command the morning in their day, or cause the day-spring to know its place.

It is only as there is an abiding in humble waiting before the Lord, and suffering all our gifts and qualifications to pass through the fire of his altar, that we can become prepared to labour for the building up of the old wastes.

The present is a day wherein human learning

and wisdom is much sought after and obtained, and unless the watch is maintained, these will raise the mind above the meek and lowly appearance of the Spirit of Christ in the heart. These human attainments, (comparable to the wise Scribes and Pharisees,) if not watched and kept in subordination, will get into Moses's seat. Yet there is ground to believe there are still those preserved amongst us in a good degree of lowliness and humility before the Lord, under a sense of their own weakness, and whose cries are put up in secret to the Father of mercies, that he would be pleased to arise for our help, for vain is the help of man. The prayers of these will assuredly enter into the ears of the Lord of Sabaoth, and in his own time he will make bare his arm for their help. "And they shall call them The holy people, the redeemed of the Lord: And thou shalt be called, sought out, a city not forsaken." Isaiah 62 chap. 12 ver.

Chester County, Fourth mo. 11th, 1862.

The Great Pythoness at the Zoological Gardens.

—An advertisement from the Zoological Society, of London, announces that at the Society's gardens "the large pythoness may be now seen incubating her eggs," as well as the Keeper can estimate, about one hundred in number. These, enclosed in a white, leather-like substance, are about the size of those of a goose, the majority of a dirty-white appearance, connected by a membrane. Among them are two small red eggs, and many are indented—probably by the great pressure of the serpent's body. It is remarkable that the reptile has not broken fast for twenty-three weeks, the male serpent having meanwhile indulged in occasional rabbits. Once, and once only, says the *Athenaeum*, has the keeper seen her absent from her interesting incubatory operation; and then, before he could get round to the back of the cage, to have a better view of the eggs, she was on them again. In fact, she much resembles an old hen with a brood, puffed up with maternal pride and conceit, and is a highly excitable condition. It will be interesting to watch the result.

For "The Friend."

Is not this beautiful extract from the journal of Mary, wife of Isaac Penington, worthy a place in "The Friend."

"Many are the trials I have met with, but as they came by the Lord's ordering, they have not hurt me, but rather tended to strengthen me in the divine life. Once my mind sustained great hurt by running out into prejudice against some Friends; nevertheless, after a time of deep and unknown sorrow, the Lord removed this thing, gave me a clearness in His sight, and restored me to love and acceptance with his beloved ones. And he hath many times refreshed my soul in his presence, and given me an assurance that I knew that state, in which he would never leave me, nor suffer me to be drawn from him. And though infirmities beset me, yet my heart cleaveth to the Lord, in the bond of everlasting love, which cannot be broken, and his divine strength supports me. Being sensible that faith which gives victory, and keeps me low in a sense of my own weakness, yet quickens me in a lively hope of seeing Satan trodden under my feet by the grace of God, which is all-sufficient. For I feel and know where my help lieth, and when I slip in word or thought, I know my advocate, and having recourse to him, feel pardon and healing, going on to overcome, watching against that which easily besets me. And I do believe the enemy cannot prevail over me; although he is sufficient to prove me, that I might keep continually on the watch, and place my whole depend-

dence on the Lord, who only can make war with the dragon. And by this discovery of my own weakness, I am also taught to be tender of the tempted. Sweet is this state, though low: for in it I receive my daily bread, which is given of the Lord; for I cannot live to him, but as he breatheth the breath of life upon me every moment."

*Report of the Proceedings of the Tract Association of Friends, for the year 1862.*

The Board of Managers Report:—That during the period for which they were appointed, they have given attention to the duties which have devolved upon them; and although the operations of the Association continue to be smaller than they once were, the distribution of tracts has been as extensive during the last twelve months as at any time within the past six years.

During the year ending Third mo. 1st, 1862, we have printed 1000 Select Readers, No. 1, 1000 Juvenile Books, 7000 copies of the Moral Almanac for 1862, and 57,600 Tracts. Of the latter there was a stock on hand Third mo. 1st, 1861, of 197,620, and the stock on hand Third mo. 1st, 1862, was 185,704, showing a distribution during the year of 69,516 Tracts. During the same period, 5,913 Almanacs, 215 Select Readers and 896 Juvenile Books have been disposed of; a few of the almanacs gratuitously. The Moral Almanac for 1863, is nearly ready for the printer, and will be issued about the usual time. The tracts taken from the depository during the year were intended for distribution nearly as follows, viz:

The Eastern Penitentiary, Moyamensing, and other prisons in Philadelphia,	4,724
The Soup Houses,	4,600
The Insane Asylum, Blockley,	250
Among coloured people, chiefly at the schools for this class,	778
Sailors and others on our wharves and on vessels,	880
Invalids at the Philadelphia Dispensary,	355
Various places in the city not particularly designated,	1,563

Making a total distribution chiefly in the city,	13,150
In other parts of Pennsylvania, Massachusetts, Rhode Island, New York State, New Jersey, Baltimore, Ohio, Indiana, Illinois, Iowa, Wisconsin, California,	5,628
Among soldiers at and near Philadelphia, Washington, Chambersburg, West Chester, Havre de Grace and other places,	1,83
In Canada,	562
England,	4,090
Liberia,	1,028
For places not particularly designated, Sold for cash, (5000 of which were sold to Friends in Indiana.)	2,174
	1,029
	41
	165
	212
	210
	13,060
	1,626
	105
	105
	12,517
	12,711

Total 69,516

A few of the above were in bound volumes, and about 500 were in the German language.

A good supply of the excellent selections and treatises, constituting our series of tracts, has been kept constantly on hand at the Depository, accessi-

ble to those disposed to aid us in the work of distribution; and from this stock a considerable variety of reading matter could be selected, which would doubtless prove both interesting and valuable to many in whose hands they might be placed. Some Friends appear to be thoughtful and attentive to the subject, and to watch for suitable opportunities for handing to individuals such of the series as seem adapted to their particular cases. A greater concern in this respect, both among members of the Association and other Friends, would very much tend to increase the distribution of our publications, and to extend the usefulness of the work in which we are engaged. The circulation of even a few in this way is more desirable than the mere scattering of large numbers, where many of them will probably fall into the hands of such as will neither read nor value them. A single one of these unobtrusive little messengers, seasonably placed, has sometimes yielded an enriching reward both to the giver and receiver. Even among those who have ample opportunities for obtaining any description of reading-matter, a tract on a particular subject, has often been read with lasting benefit. Believing this to be a field of labour, in which many persons might occasionally by watchfulness, be helpful to some with whom they meet, the members of the Association and others, are invited to co-operate with us, in the endeavour to place our tracts, in the way of being truly useful.

The present day is one of great excitement, not only in the political, but also in the literary and religious world. Books are greatly multiplied, some of them of a doubtful character, and many of them pernicious or hurtful in one way or another; and many persons, both young and old, are eagerly devouring the confused mass which is thus spread out before them. It is therefore important, that we should all be found doing our part toward furnishing and distributing reading matter more suitable to engage the attention of rational and accountable beings designed for immortality.

Signed by direction and on behalf of the Board of Managers.

ISAAC MORGAN, JR., Clerk.  
Phila., Third mo. 13th, 1862.

*Officers of the Association.*—Clerk, Charles J. Allen; Treasurer, Joseph Scattergood.

*Managers.*—John C. Allen, Edward Richie, Horatio C. Wood, William Kinsey, Mark Baldwin, Nathaniel H. Brown, Joseph S. Elkinton, Thomas Hutchinson, Isaac Morgan, Jr., George J. Scattergood, Jacob W. Fry, Charles Rhoads, Edward Maris, Joseph Rhoads, John S. Stokes.

For "The Friend"

The sword of the christian is doubtless given him to fight with "the world, the flesh and the Devil," and it will rarely have leisure to rest in its scabbard, for these foes are every where found and seldom at rest. But when the weapons of christians, forgetful of their common enemies, turn against each other, is not this clashing of swords sweep music in the ears of the Evil One? Does he not know they turn their strength from their true warfare, and that thereby his kingdom will gain power? He who is an "unwearied adversary" sees quickly their unguarded out-posts, steals upon them in the rear, and overcomes their weak garrisons.

Oh Friends, through wars and rumors of wars, keep the post committed to your special charge! Be faithful servants of your King! Ye who are watchmen on the walls, will not the grand enemy, if despairing of other entrance, sow the *spirit* of warring, and thereby destroy the power of the

Prince of Peace among you? At the point of greatest danger, it is wise to keep the strongest fence and use the closest vigilance. "Not by might nor by strength, but by *my Spirit*, saith the Lord."

HEAVENLY PEACE.

Selected.

"If He giveth quiet, who can make trouble?"

Quiet from God! How beautiful to keep

This treasure the All-merciful hath given;

To feel, when we awake and when we sleep,

Its incense round us like a breath from Heaven!

To sojourn with the world, and yet apart;

To dwell with God, and still with man to feel,

To bear about forever in the heart.

The gladness which his spirit doth reveal!

Who shall make trouble then? Not evil minds,

Which like a shadow o'er creation lower,

The soul which peace hath thus attained, finds

How strong within both truth reign the Calmer's power.

What shall make trouble? Not the holy thought

Of the departed; that will be a part

Of those undying things His peace hath wrought

Into a world of beauty in the heart.

What shall make trouble? Not slow, wasting pain,

Nor e'en the threatening, certain stroke of death;

These do but wear away, then break the chain

Which bound the spirit down to things beneath.

*Keep to the Root or Spring of Life.*—Dear Friends, mind the principle, mind the root, into which the Lord hath engrafted us; that we may abide and grow up therein, and daily find and feel the sap thereof springing up in us, and quickening us more and more to God. Ye know how ye entered, even so, ye must abide and grow up,—even, in the light, in the life, in the power, which gathered, preserveth and causeth to flourish. So, my dear Friends, let us all dwell in our everlasting habitation, and no more go forth, but sink into the kingdom, and wait to feel the dominion, righteousness, holiness, purity and power thereof, daily revealed more and more in our hearts. For there is no other root or spring of life, than that into which the Lord hath gathered us, no other true life and power in any vessel upon the earth, besides that which springs therefrom. Therefore feel, oh feel that which establisheth and that wherein the establishment is, and your union, life, and strength therein; that ye may not be bowed down or overborne by whatever happens, either from within or without; but may feel and enjoy the rest and peace of your souls, in that which is over all and orders all to the good of those who fear him, and in uprightness wait upon him!—*Isaac Pennington.*

From The Popular Science Review.

The Breath of Life.

Not only figuratively, but in actual reality, can the life of man be compared to a fire, or lighted candle. Respiration may be regarded as the same process as combustion, only performed in a slower manner. Fuel is placed in a furnace, and the combustion which we see take place with the evolution of heat and light is owing to the combination of the oxygen—with the wonderful constituent of the atmosphere—with the carbon and hydrogen of the fuel. In a similar way we place food (which is fuel) in our bodies, and then by the act of respiration we draw into the lungs oxygen, and thus, uniting with the carbon and hydrogen of the food, also produces a disengagement of heat.

Another point worthy of attention is, that the combustible matter of the food—the carbon and hydrogen—when burned in the body by means of air drawn in by the lungs, produces exactly the

same amount of heat as it would have done had the same quantity been consumed in an ordinary furnace by means of the free atmospheric oxygen; the only difference being, that in the latter case the combustion takes place rapidly, evolving an intense heat for a short time, whilst in our bodies the fuel is burned more slowly, thus evolving less heat for a longer time, the total amount of heat liberated by the combustion of a given weight of carbon, whether it be burned in the form of coal or beef, being always the same.

This, therefore, is the cause of the high temperature of the human body. We each carry about within us a portable furnace of the most perfect construction. Fuel is thrown on at intervals during the day, the need of a fresh supply being made known by the feeling of hunger (as it is in some steam-engines by the ringing of a bell); whilst a draught of air is drawn in at each inspiration, by which means the process of combustion proceeds uninterrupted.

The analogy is strictly correct, even if pursued further. In a furnace we can augment the energy of combustion by increasing the draught of air; and so in our bodies, if we increase the normal number of respirations per minute, a considerable rise of temperature is the result, the excess of heat being radiated into the surrounding atmosphere, and carried off in the form of perspiration. This explains why persons in arctic regions consume such enormous quantities of food in comparison with those in more temperate latitudes. In order to keep up the natural heat of the body (which is invariably the same—99° 5' Fahr.) in the midst of the intense cold of the surrounding media, it is necessary for considerable quantities of fuel to be rapidly burned in the body, so as to restore the amount of heat lost by radiation; and not only is the total weight of food which is required in the arctic regions vastly greater than that consumed in warm climates, but the former contains a greater percentage of combustible matter; the fruits which constitute so large a proportion of the food of the inhabitants of the South containing not more than about twelve per cent. of carbon, whilst the blubber or fat which forms the staple diet of the Esquimaux or Lap, contains nearly eighty per cent. of that combustible. Plenty of food, therefore, takes the place of clothing, in the same manner as warm raiment is a partial substitute for food. The warmer we are clad the less fuel it is necessary to burn in order to keep up the supply of animal heat lost by radiation; whereas, if we were to walk about naked, or were exposed to an arctic temperature, we should be enabled to consume twenty or thirty pounds of whale's fat together with several quarts of train oil and brandy without difficulty, finishing off with a few tallow candles by way of dessert, the combustible matters here indicated being not more than sufficient to supply the enormous radiation of heat consequent upon a difference of perhaps one hundred and twenty degrees between the temperature of the body and that of the external air.

The analogy between the life of man and the flame of a candle or stove, is thus seen to be something more than a mere fanciful theory. Warmth and vitality are produced equally in each case by the combination of combustible matter with the oxygen present in the atmosphere; and in either case, if the supply of air be insufficient or vitiated, a similar result will follow; for the pale, sickly, flickering flame of a candle burning in an atmosphere deficient in the necessary supporter of combustion, or containing noxious gases, is strictly parallel to the delicate, sickly, etiolated appearance caused in human beings by an impure atmosphere, whilst the

ultimate result is the same in both cases; namely, the extinction of vitality, or death.

An attentive examination into the phenomena of combustion, as exemplified in the burning of a candle, shows us, therefore, that not only is it necessary to take account of the food which we eat, that is to say, of the fuel with the combustion of which we keep up the requisite temperature; but that a careful attention to the quality of the air we breathe is no less important to our health and comfort. A candle burning in a close room not only consumes a certain quantity of the vivifying principle of the atmosphere, diminishing the amount of oxygen present and available for other purposes, but it likewise communicates to the air an equal volume of another gas—carbonic acid,—a substance possessing the most deadly properties—the pure gas suffocating animals placed in it as if they had been plunged into so much water. Even when it is present in the air in only small quantities, it produces very deleterious effects, four per cent. acting like a narcotic poison in the atmosphere, and even a less proportion producing depressing effects of a most injurious description. If, then, a candle which consumes so small a quantity of oxygen causes such a change in the atmosphere, how much more will the respiration of human beings tend to vitiate it. It has been calculated that a man every twenty-four hours consumes nearly four hundred cubic feet of air, with evolution of the deleterious carbonic acid gas; and that were he to be enclosed for twenty-four hours in a room eight feet square by nine feet high, he would be moribund at the end of the time. And these are not merely fanciful or supposititious cases. The action of contaminated confined air upon the health of the inhales is one of the most potent and insidious causes of disease. Any addition to the natural atmosphere that we breathe must be a deterioration, and absolutely noxious in a greater or less degree. Our health, says Thackeray, would immediately suffer did not some vital conservative principle accommodate our functions to circumstance and situation. But this seems to get weaker from exertion. The more we draw on it the less balance it leaves in our favour. The *vis vite*, which, in a more natural state, would carry the body to seventy or eighty years, is prematurely exhausted, and, like the gnomon shadow, whose motion no eye can perceive, but whose arrival at a certain point at a definite time is inevitable, the latent malaria, which, year after year, seems to inflict no perceptible injury, is yet hurrying the bulk of mankind with undeviating, silent, accelerating rapidity to a premature grave. Pure air is the food designed by nature for the constitution. Man subsists upon it more than upon his meat and drink; and there are numberless instances of persons living for months and years on a very scanty supply of aliment; but no one can subsist even for a few minutes without a copious supply of the aerial element.

Deaths from the respiration of many persons in a confined space are, unhappily not rare; and without going back to the shocking instance of the Black Hole at Calcutta, we may refer to an equally lamentable occurrence which happened a few years ago in an emigrant ship, in which, during a storm off the English coast, the emigrants were confined below. In less than six hours more than sixty persons perished!

The paramount necessity which exists, according to these instances, for fresh air, equally holds good in less extreme cases. Just as surely as a total deprivation of oxygen, or the presence with it of any excess of deleterious gases, produces death; so the breathing of a partially inhaled atmosphere is

equally certain to occasion sickness and disease, if its inhalation be persisted in. The evils of exhausted air are also more to be guarded against, because persons can live in it without being aware of its danger, as far as their sensations are concerned. When we enter a crowded assembly on a cold day, the air is always at first repulsive and oppressive; but these sensations gradually disappear, and we then breathe freely, and are unconsciously of the quality of the atmosphere. Science, however, reveals the fact, that the system sinks in action to meet the conditions of the impure air; but it does so at the expense of a gradual depression of the vital functions; and when this is continued, disease follows. *No disease can be thoroughly cured when there is a want of ventilation.* It is related, that illness continued in a family until a pane of glass was accidentally broken, and then it ceased: the window not being repaired, a plentiful supply of fresh air was admitted. Nearly all the churches in the empire require some artificial means of ventilation to render them physically fit receptacles for the body during a prolonged service. Now, the minister must not be twitted with this; for with the oratory of a Jeremy Taylor, or of a Tillotson, people could not be kept awake in an atmosphere charged with carbonic acid, the emanations of a thousand listeners.

For "The Friend."

How shall we overcome evil? shall we hold it up to view, give it a chance to be attractive to those that are easily deceived in appearances, talk much of it, struggle hard to overthrow it, and perchance lose our own strength in the contest? Not so saith Paul; "By the dispensation of God," who giveth rule to His true and faithful servants, "overcome evil with good." That husbandman whose chief care is ever to protect weeds, who so regardeth the winds and clouds that he falleth to sow good seed, has need to fear the coming of "the Lord of the harvest," for "he which soweth sparingly shall reap also sparingly, and he who soweth bountifully shall reap also bountifully."

*The Substance of Religion.*—I am low, in mind and body, yet I dare not let go my confidence, that heavenly mercy will not leave me to follow a vain shadow, or to kindle a fire, and warm myself with the sparks. There is nothing that my soul longs after with so much earnestness, as the *real substance of the religion of Jesus*, the soul-satisfying bread of life, daily ministered to nourish and keep alive the immortal spirit.—*Mary Capper.*

*Much Speaking in Meetings for Discipline.*—Oh! that the Lord were rightly trusted in and waited for; He would not tarry longer than best; and when he did appear, the healing, helping virtue would be with him, and he would do more for us in our Meetings for Discipline, in one hour, than a host of us can do for ourselves in our whole lifetime.—*Job Scott.*

*Bees in a Sugar Refinery.*—The *Entomological Gazette* of Stettin contains the following:—The extensive meadows on the banks of the Oder naturally induce many farmers to keep bees; but these wise insects seem to prefer obtaining their honey with as little labour as possible, and have for years past been in the habit of frequenting two sugar refineries at no great distance. Under such favourable circumstances the yield of honey was very great, and the farmers came at last to keep ten or even twenty times more hives than formerly. The sugar-refiners, however, after long finding the bees very troublesome, made the discovery that they were not only annoying but rather expensive visi-

tors, and accordingly adopted means to destroy them. This was effected by suddenly closing all the doors and shutters, and then opening one small window, to which the bees immediately flew, and were killed in thousands by a jet of boiling water. The dead bees were afterwards thrown into the boilers to extract the sugar they had appropriated. It has been estimated that as many as eleven millions have been thus destroyed in a year, and that about £50 worth of sugar has been extracted from them. It is a remarkable fact that the bees would never touch beet-root sugar till refined, owing to the pungent smell of the plant, but cane sugar was equally acceptable to them whether refined or not."

## THE FRIEND.

FOURTH MONTH 19, 1862.

"An Old Subscriber" calls our attention to the expression in the editorial of last week, 7th page 255.—"He sets before man and nations, good and evil,"—fearing lest it may be construed to imply that the Almighty is the author of evil. Of course we had no thought of conveying such a sentiment, but simply that man was left by his Heavenly Father, with the power of choice between good and evil, in the same way as declared by Moses, when speaking in the name of the Most High to the children of Israel, "See, I have set before thee, this day, life and good, and death and evil."

We would call the attention of Friends attending the Yearly Meeting, to the assortment of books, Friends Journals, &c., now on hand at the bookstore, No. 308 Arch Street. There have been several works stereotyped within a few years, and printed in a neat and uniform style, and to be had at a very moderate price. Such as Journal of John Richardson, Life of Thomas Ellwood, Phipps on Man, Journal of the Life and Travels of Wm. Savery, Journal of Henry Hull, Barclay's Apology and Catechism, Journal of George Fox, Journal of Samuel and Mary Neal, No Cross No Crown, Life of John Woolman, Penn's Rise and Progress, and Sewel's History. There are also many other works of an interesting and instructive character kept constantly on hand.

### SUMMARY OF EVENTS.

**Formosa.**—Liverpool dates to the 4th inst. The sales of cotton for the week, amounted to 32,000 bales. New Orleans fair, 12½d., Middling, 12½d. Stock in port 456,000 bales, including 142,000 of American. Bread stuff dull and declining. Flour from 25s. to 28s. 6d. The brig *Adelante* and Mary Wright arrived at Liverpool on the 3rd inst., having successfully run the blockade at Charleston. They had 1400 bales of cotton and a quantity of tobacco and rosin. They left Charleston in company with a bark and four schooners, all laden with cotton and rosin.

The steamer *Mars*, bound from Waterford to Bristol, was wrecked near Milford during a fog and gale, and about fifty lives were lost.

The London Times has a sarcastic article on the taxes about to be imposed in the United States. It says it will take the whole army, when released from duty in the field, to collect them, and insinuates that they will not be submitted to.

George Peabody, the American banker, residing in London, has appropriated the sum of £150,000 sterling and placed it in the hands of trustees, to be employed under their direction in measures for ameliorating the condition of the poor of London.

The Paris *Patrie* believes that the French and Spanish Governments intend signing a new treaty for the regulation of their joint action in Mexico. It is supposed that Great Britain will withdraw from the joint expedi-

tion, but this will cause no rupture between the Allies. England merely abstains from interfering, the chief part of the proceedings being now managed by France.

Six vessels were to go to Cherbourg to escort the French Emperor to England to witness the great industrial exhibition.

**UNITED STATES.**—The Tax Bill, which has been under consideration in Congress for some weeks past, has been passed by the House of Representatives by a vote of 125 to 13. Its provisions are very comprehensive, embracing a great variety of subjects. The proposition to tax slaves was negative.

**Emancipation.**—The President has approved the joint resolution of the House of Representatives, that the United States ought to co-operate with and afford pecuniary aid to any State which may adopt the gradual abolishment of slavery. The bill for the immediate abolition of slavery in the District of Columbia, has passed the House by a vote of 93 to 39. Only two members from the slave-holding States, Blair of Missouri and Fisher of Delaware, voted for it.

**New York.**—Mortality last week, 393.  
**Philadelphia.**—Mortality last week, 286.

**New Mexico.**—On the 28th of last month, another battle took place between the U. S. troops and the rebels from Texas, in which the latter appear to have held their ground. The U. S. troops lost about 80 men, that of the rebels is not known.

**Arkansas.**—It is reported that the rebels are withdrawing their forces from northwestern Arkansas, and are concentrating them at Focalland, in the northern part of that State. Their force at that point is represented to be 10,000.

**Missouri.**—The captures at Island No. 10, and the adjacent shores, proved to be very large and important, embracing 110 heavy guns and 33 pieces of artillery, 900 miles, 1200 horses, 6,000 mules, and a vast quantity of ammunition and stores to the value of nearly \$2,000,000. Six steamers and transports were taken, and an equal number had been scuttled and sunk by the rebels, some of which can be raised. The total number of prisoners taken was 5,000, including Major-General Makall and Brigadier-Generals Grant, Walker and Schanz. Works upon the Island had been skillfully constructed, and were of great strength. The rebels appear to have been seized with a panic, and to have fled precipitately as soon as Gen. Pope transferred his command across the river.

**Tennessee.**—The late sanguinary battle in this State, was fought on the western shore of the Tennessee river, about ten miles from the Alabama border. The rebel commanders in chief were Gen. Albert S. Johnston, Beauregard and Pickens. The attack was wholly unexpected by the Federal Army. It began on the 6th inst., and on the morning of the 6th, and the battle, which continued throughout the day, caused severe losses to the U. S. troops. The contest was renewed on the 7th, both armies having received reinforcements, and each numbering it is supposed, about 70,000 men. Towards evening, the rebels retired in good order, but leaving thousands of their dead and wounded on the field. No clear and reliable statement of the losses on either side has been given. That of the Federal army in killed and wounded has been estimated at 8,000, and that of the rebels at 10,000. Gen. Prentiss and about 9,000 of the Federal army were taken prisoners. Many officers ran on both sides were killed. On the part of the rebels, the Commander in Chief, Gen. Albert Sidney Johnston, Gen. Bushrod Johnson and George W. Johnson, Provisional Governor of Mississippi, and the destroyed of life, respect to the numbers engaged, and the destruction of life, the battle is the most terrible that has yet occurred in this war. Gen. Beauregard in his dispatch to Richmond, claims a victory for the rebel forces. He states that he has returned to Corinth, Miss., and is able to hold the river.

**Alabama.**—Huntsville, Ala., was taken on the 10th inst., by Gen. Mitchell's division of the U. S. Army. Huntsville is 116 miles south of Nashville, and on the line of the Memphis and Charleston railroad. Its capture is considered a chief line of railway communication between the Southern States. Two hundred rebel prisoners were taken, together with seventeen locomotives and a large number of cars. Making use of the rolling stock captured at Huntsville, Gen. Mitchell immediately started armed expeditions over the railroad both east and west from that town. The first expedition proceeded as far as Stevenson, an important rail road station at the junction of the Chattanooga road, capturing two thousand more rebel soldiers, and five locomotives; while the western excursion extended to Decatur, Ala., where the railroad crosses the Tennessee river. Here the national forces arrived just in time to save the rail road

bridge, which had been fired by the rebels. By this movement the U. S. forces are enabled to hold and control the Charleston and Memphis rail road for a distance of 83 miles.

**Virginia.**—On the 11th inst., the iron plated rebel steamer Merrimac again made her appearance. She captured three small vessels and returned with them to Norfolk.

The rebel force at Yorktown has been largely reinforced, and it is reported that Gen. Joseph E. Johnston and Lee, are both there. The rebels' position extends across the Peninsula from Yorktown to Warwick, near the James river, a short distance from Mulberry Point. The concentration of the making in line of the creek from James river, shortens their line of defence, and enables them to command, with their fortifications, all the roads up the Peninsula. Gen. McClellan was making his approaches cautiously, but it was the general impression that a severe struggle would take place.

**Scouters Teams.**—The Richmond Dispatch, says the only policy which can afford the secession cause a hope of success, is to concentrate their whole force at a few vital points—to abandon their frontiers and seaboard cities—and to make no serious resistance except at points where they are fully prepared for desperate battles.

The Richmond Examiner suggests that Congress should take some measures to check the evils arising from the large issue, and consequent depreciation of Treasury notes. It is recommended that all future issues should bear interest. The expenses of the rebel government are estimated to be more than \$2,000,000 a day, and that is the rate at which the currency is being diluted.

**The Mississippi River.**—The Navy Department has received intelligence that Com. Foote, with his fleet, and Gen. Pope's army, had set out for Fort Pillow, a rebel fortification on the river below New Madrid. It is the expectation that there will be little or no resistance at Memphis if Fort Pillow shall be taken.

### RECEIPTS.

Received from H. Knowles, Agt. N. Y., for Geo. W. Brown, \$2. vol. 35; from Robert Milhous, 0, 50c, Vol. 34, per E. Hollingsworth.

### WEST-TOWN BOARDING-SCHOOL.

The Summer Session of Friends' Boarding-school at West-Town, will commence on Second-day, the 12th of Fifth month next. Parents and others intending to send their children as pupils, will please make early application to the Superintendent, at the Boarding-School, or to CHARLES J. ALLEN, Treasurer, No. 304 Arch Street, Philadelphia.

### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)  
Physician and Superintendent,—JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES REAG, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

### FRIENDS' HORSES.

Friends coming to the city to attend Yearly Meeting or at other times, on the service of Society, can have their horses taken care of at the stable of the Montgomery and Bank east corner of Sixth and Willow streets; at the White Horse Hotel, Calverhill Street, above Fifth; at Watson's Stable, Marshall below Brown; at Cooway's stables, north side of Fraue Street, below Sixth; at Pennsylvania Hotel, Sixth below Arch Street; at M'Cree's stable, Third above Market; at Robert Smith's stable in Bristol, Bucks County, and at Israel English's stable, Camden, N. J.

### BIBLE ASSOCIATION OF FRIENDS IN AMERICA.

A Stated Annual Meeting of the "Bible Association of Friends in America," will be held at the Committee-room, Arch Street Meeting House, on Seventh-day evening, the 19th inst., at 8 o'clock. Friends generally are invited to attend.

Died, on the 10th of Twelfth mo., 1861, at his residence in Pennsylvania, Ohio, Jonathan H. Smith, an amiable and pious man, in the 66th year of his age, an esteemed member of Pennsylvania Particular and Monthly Meeting.  
He was born on the 15th of the Sixth month, 1801, GEORGE STRYKER, in the sixty-eighth year of his age. A member of the Monthly Meeting of Friends of Philadelphia.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, FOURTH MONTH 26, 1862.

NO. 34.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FIFTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Dymond on War.

(Concluded from page 260.)

*This is the point from which we wander—WE DO NOT BELIEVE IN THE PROVIDENCE OF GOD.* When this statement is formally made to us, we think, perhaps, that it is not true; but our practice is an evidence of its truth—for if we did believe, we should also *confide* in it, and should be willing to stand upon it the consequences of our obedience. We can talk with sufficient fluency of 'trusting in Providence,' but in the application of it to our conduct in life, we know wonderfully little. Who is it that confides in Providence, and what does he trust him? Does his confidence induce him to set aside his own views of interest and safety, and simply to obey precepts which appear inexpedient and unsafe? This is the confidence that is of value, and of which we know so little. There are many who believe that war is disallowed by Christianity, and who would rejoice that it were for ever abolished; but there are few who are willing to maintain an undaunted and unyielding stand against it. They can talk of the loveliness of peace, ay, and argue against the lawfulness of war; but when difficulty or suffering would be the consequence, they will not refuse to do what they know to be unlawful, they will not practise the peacefulness which they say they admire. Those who are ready to sustain the consequences of undeviating obedience are the supporters of whom Christianity stands in need. She wants men who are willing to *suffer* for her principles.

It is necessary for us to know by what principles we are governed. Are we regulated by the injunctions of God, or are we not? If there be any lesson of morality which it is of importance to mankind to learn, and if there be any which they have not yet learnt, it is the necessity of simply performing the duties of Christianity without reference to consequences. If we could persuade ourselves to do this, we should certainly pass life with greater consistency of conduct, and as I firmly believe, a greater enjoyment and greater peace. The world has had many examples of such fidelity and confidence. Who have been the Christian martyrs of all ages, but men who maintained their fidelity to Christianity through whatever consequences? They were faithful to the Christian creed: *see* ought to be faithful to the Christian morality; without morality the profession of a creed is vain.

Nay, we have seen that there have been martyrs to the duties of morality, and to these very duties of *peacefulness*. The duties remain the same, but where is our obedience?

I hope, for the sake of his understanding and his heart, that the reader will not say I reason on the supposition that the world was what it is not; and that although these duties may be binding upon us when the world shall become purer, yet that we must now accommodate ourselves to the state of things as they are. This is to say that in a land of assassins, assassination would be right. If no one begins to reform his practice, until others have begun before him, reformation will never be begun. If apostles, or martyrs, or reformers had "accommodated themselves to the existing state of things" where had now been Christianity? The business of reformation belongs to him who sees that reformation is required. The world has no other human means of amendment. If you believe that war is not allowed by Christianity, it is your business to oppose it; and if fear or distrust should raise questions on the consequences, apply the words of our Saviour—"What is that to thee?—Follow thou me."

Our great misfortune in the examination of the duties of Christianity, is, that we do not contemplate them with sufficient simplicity. We do not estimate them without some addition or abatement of our own; there is almost always some intervening medium. A sort of half-transparent glass is hung before each individual, which possesses endless shades of colour and degrees of opacity, and which presents objects with endless varieties of distortion. This glass is coloured by our education and our passions. The business of moral culture is to render it transparent. The perfection of the perceptive part of moral culture is to remove it from before us.—*Simple obedience without reference to consequences, is our great duty.* I know that philosophers have told us otherwise: I know that we have been referred, for the determination of our duties, to calculations of expediency and of the future consequences of our actions:—but I believe that in whatever degree this philosophy directs us to forbear an unconditional obedience to the rules of our religion, it will be found, that when Christianity shall advance in her purity and her power, she will sweep it from the earth with the besom of destruction.

The positions, then, which we have endeavoured to establish, are these:—

- I. That the general character of Christianity is wholly incongruous with war, and that its general duties are incompatible with it.
- II. That some of the express precepts and declarations of Jesus Christ virtually forbid it.
- III. That his practice is not reconcilable with the supposition of its lawfulness.
- IV. That the precepts and practice of the apostles correspond with those of our Lord.
- V. That the primitive Christians believed that Christ had forbidden war; and that some of them suffered death in affirmation of this belief.
- VI. That God has declared in prophecy, that it

is his will that war should eventually be eradicated from the earth; and this eradication will be effected by Christianity, by the influence of its *present* principles.

VII. That those who have refused to engage in war, in consequence of their belief of its inconsistency with Christianity, have found that Providence has protected them.

Now we think that the establishment of any considerable number of these positions is sufficient for our argument. The establishment of the whole forms a body of evidence, to which I am not able to believe that an inquirer, to whom the subject was new, would be able to withhold his assent. But since such an inquirer cannot be found, I would invite the reader to lay prepossession aside, to suppose himself to have now first heard of battles and slaughter, and dispassionately to examine whether the evidence in favour of peace be not very great, and whether the objections to it bear any proportion to the evidence itself. But whatever may be the determination upon this question, surely it is reasonable to try the experiment whether security cannot be maintained without slaughter. Whatever be the reasons for war, it is certain that it produces enormous mischief. Even waiting the obligations of Christianity, we have to choose between evils that are certain and evils that are doubtful; between the actual endurance of a great calamity, and the possibility of a less. It certainly cannot be proved that peace would not be the best policy; and since we know that the present system is bad, it were reasonable and wise to try whether the other is not better. In reality, I can scarcely conceive the possibility of greater evil than that which mankind now endure; an evil, moral and physical, of far wider extent, and far greater intensity, than our familiarity with it allows us to suppose. If a system of peace be not productive of less evil than the system of war, its consequences must indeed be enormously bad; and that it would produce such consequences, we have no warrant for believing either from reason or from practice—either from the principles of the moral government of God, or from the experience of mankind. Whenever a people shall pursue, steadily and uniformly, the pacific morality of the gospel, and shall do this from the pure motive of obedience, there is no reason to fear for the consequences: there is no reason to fear that they would experience any evils such as we now endure, or that they would not find that Christianity understands their interests better than themselves; and that the surest and the only rule of wisdom, of safety and of expediency, is to maintain her spirit in every circumstance of life.

"There is reason to expect," says Dr. Johnson, "that as the world is more enlightened, policy and morality will at last be reconciled." When this enlightened period shall arrive, we shall be approaching, and we shall not till then approach, that era of purity and of peace, when "violence shall be no more heard in our land, wasting nor destruction within our borders"—that era in which God has promised that "they shall not hurt nor destroy

in all his holy mountain." That a period like this will come, I am not able to doubt: I believe it because it is not credible that he will always endure the butchery of man by man; because he has declared that he will not endure it; and because I think there is a perceptible approach of that period in which he will say—"It is enough." In this belief I rejoice: I rejoice that the number is increasing of those who are asking—"Shall the sword devour for ever?" and of those who, whatever be the opinions or the practice of others, are openly saying, "I am for peace."

Whether I have succeeded in establishing the position that WAR, OF EVERY KIND, IS INCOMPATIBLE WITH CHRISTIANITY, it is not my business to determine; but of this, at least, I can assure the reader, that I would not have intruded this inquiry upon the public, if I had not believed, with undoubting confidence, that the position is accordant with everlasting truth;—with that truth which should regulate our conduct here, and which will not be superseded in the world that is to come.

From The Popular Science Review.

### The Breath of Life.

Instances innumerable might be pointed out in connection with our trades and professions, showing that no one can break with impunity the law of nature, which demands that the food destined to nourish and warm the body should be converted into heat, and vitalized by a constant supply of fresh and pure air. The importance of this subject becomes more evident if we turn to a few statistics. In a life of fifty years a man makes upwards of five hundred millions of respirations, drawing through his lungs nearly one hundred and seventy tons' weight of air, and discharging nearly twenty tons' weight of the poisonous carbonic acid. It has been also calculated that, to ventilate a room effectually, every person requires ten cubic feet of fresh air per minute; a church, therefore, eighty feet long, fifty feet wide, and forty feet high, and containing one thousand persons, would require the whole atmospheric contents of the building to be renewed every sixteen minutes. A room containing a million cubic feet of air, in which were assembled ten thousand persons, would likewise require a total change every ten minutes; and an apartment twelve feet each way, and with ten persons in it, would require an entire change of air every seventeen minutes.

This quantity of ten cubic feet of air per minute for each individual, is what is required to supply him with the amount of oxygen necessary for the performance of the functions of respiration; whilst the constant change of the atmosphere is imperatively necessary to get rid of the products of respiration, viz. the carbonic acid and aqueous vapor, as well as the effluvia from the body; for, disagreeable as it may be to refer to such a subject, this is the most noxious cause of contamination with which we are in the habit of coming in contact. "We instinctively," says Berman, "shun approach to the dirty, the squalid, and the diseased, nor use a garment that may have been worn by another; we open sewers for matters that offend the sight and smell, and contaminate the air; we carefully remove impurities from what we eat and drink, filter morbid water, and fastidiously avoid drinking from a cup that may have been pressed to the lips of a friend. On the other hand, we resort to places of assembly, and draw into our mouths air loaded with effluvia from the lungs and skin and clothing of every individual in the promiscuous crowd; exhalations, offensive to a certain extent from the most healthy individuals, but which, rising from a living mass of skin and lung

in all stages of evaporation, disease, and putridity, and prevented by the walls and ceiling from escaping, are, when thus concentrated, in the highest degree deleterious and loathsome."

The evils produced by allowing the carbonic acid from the breath to accumulate in the air, have been already mentioned; those engendered by inhaled animal effluvia are still more fatal in their results; and, according to competent authorities, it seems to be an invariable result that the accumulation and stagnation of the breath and perspiration of human beings crowded for a period in confined air, and neglecting personal cleanliness, produce plague or fever that may be communicated to healthy persons by contact or respiration. The most memorable example of this is the Great Plague of London, which was caused by the total absence of proper ventilation in the filthy and overcrowded hovels in which the greater part of the poorer population of London lived, together with the filth and putrefying abominations which habitually filled not only the streets but even the houses of the lower classes. According to Berman, the goal fever was another disease which, arising from a neglect of the vital necessity for fresh air, was, a few centuries ago, an object of dread to society. The unfortunate and the criminal alike were immured in damp, cold, ill-aired dungeons, and kept in a state of inactivity. They inhaled the pent-up noxious effluvia emitted from their own bodies; and, from the want of means for personal purification, their clothes and bedding during their incarceration became saturated with the fatal exhalations. In this condition the miserable prisoners engendered, and became victims to a disease of deadly malignity. They sickened, and with little apparent illness they died. The prison-house was thus the focus of a contagion that spread far and wide beyond its walls, and spared few who were so unhappy as to come within its influence. It was remarked, that although a prisoner happened to escape the infection, his clothes, nevertheless, emitted a pestilence that scattered death around him wherever he went. The assizes held at Oxford in 1577 were long remembered, and were called the *Black Assizes*, from the horrible catastrophe produced on that occasion by the goal fever. Baker, in his Chronicle, tells us, that all who were present in court died in forty-eight hours—the judge, the sheriff, and three hundred other persons! so terrible was the retribution suffered by the community for its hardness of heart in denying to criminals even those personal requirements necessary for avoiding disease and preserving life.

Another similar catastrophe is recorded by Blaine as having occurred in 1750. During the sessions a sickening noxious smell was experienced by the persons in court, and within a week afterwards many who had been present were seized with a malignant fever. Among those who died were the Lord Mayor, the two judges, an alderman, a barrister, several of the jury, and forty other persons. It was remarkable that the prisoners who communicated the infection were not themselves ill of fever; and it was still more remarkable that none of those who were ill of it (to the greater number of whom it proved mortal) communicated it to their families or attendants, which showed that persons who were treated in clean and airy apartments, as those who were taken to it, do not communicate the disease to those in the constant habit of attending upon them.

Historians relate with just indignation that nearly three hundred martyrs died at the stake in the reign of the bigot Mary. But how insignificant appear the number and sufferings of these victims of regal fanaticism when compared with the tortures

of suffocation and death from stench, that were endured by thousands of persons in this and succeeding reigns, when every prison was a legal sepulchre.

Equally striking are the good results which have followed a judicious application of ventilation where it was formerly absent. It is scarcely possible to conceive a more repulsive and abominable state than that in which our ships of war were during the latter part of the last century, owing to the disregard, or rather the studied opposition, with which those then in authority treated all proposals to improve their ventilation. We regard other nations with whom we happen to be at war as our enemies, but a few figures, eloquent in their simplicity, will convince any one that incapacity, narrow-mindedness, or obstinacy in high places, are vastly more fatal in their results to our gallant sailors than the most formidable enemy they ever faced. In the year 1779 there were 70,000 seamen and marines voted by Parliament; of these 28,592 were sent sick to the ho-pitals, or 1 in 2.4. In 1784, of 85,000 men afloat, 21,371 were sent ashore sick within the year, or 1 in 4. But in 1804, when ventilation was partially, if not thoroughly, carried out in every ship, of the 100,000 men of which the navy that year consisted, 11,978 passed through the hospital, or only one in 8.3.

The evils of inefficient ventilation have been strikingly shown in the case of the Custom House, where the difficulty of ventilating a large public room has been very manifest. There the atmosphere in some of the apartments was so defective, as to produce general symptoms of ill health among the officers whose official seats were placed in it. The functionaries were described to have had "a sense of tension or fullness of the head, with occasional flushings of the countenance, throbbings of the temples and vertigo, followed not unfrequently by confusion of ideas," that must be very disagreeable to persons occupied with important and sometimes intricate calculations. A few were affected with unpleasant perspiration at their sides. The whole of them complained of a remarkable coldness and languor at their extremities, more especially the legs and feet, which became habitual. The pulse in many cases was more feeble, frequent and sharp, and irritable, than it ought to have been. The sensations in the head occasionally rose to such a height, notwithstanding the most temperate regimen of life, as to render cupping requisite, and at other times depletory remedies; and co-tiveness, though not a uniform, was yet a prevailing symptom.

The identity between the combustion of a candle and that living kind of combustion which is ever going on within us has thus been clearly exhibited. Like the candle, man depends for his life and vigour upon the chemical action exerted between the atmosphere and combustible matter; the combustion of the latter giving rise in each case to heat and vitality. Like the flame of a candle too man's health and strength languish and faint unless properly and uninterruptedly supplied with that mysterious breath of life—oxygen; whilst the feeble hold which the flame, even under the most favourable circumstances, has upon the wick, and the ease and totality of its extinction by the most trivial circum-tance,—not only by a deprivation of air, but even by a puff of wind too much,—should teach us, even in our pride of health and strength, that our spark of life may be extinguished by the same causes, and our bodies may be left lifeless as a snuffed-out candle; the food—the combustible matter—may be there all the same; the oxygen may be in waiting, ready to combine with it; but the spark of fire, that spirit of life which

der conscience will be subjected to great trial of their confidence in divine protection, but let them remember that the angel of the Lord's presence is constantly near them that fear Him, to defend and deliver them in the hour of need; but should He permit cruel men to take their lives, as their faith and hope are in the Lord Jesus, the arms of mercy would be extended to receive them into glory.

#### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

##### JOHN SIMCOCK.

John Simcock, a son of John Simcock of Chester, well known in the early settlement of Pennsylvania, as a useful citizen and an eminent minister of the gospel, was born in or about the year 1685. He was of a steady, religious character in his youth, and having his heart set on things above, as of the greatest moment and most worthy of the attention of an immortal being, he sought for a companion in life, one of like feelings with himself. This he found in Mary Wallin, a daughter of Nicholas, to whom he was married early in 1706, and with whom he lived in great love and unity for more than sixty-five years. Her religiously-minded parents had sought to bring her up in the way of Truth, and as she submitted her neck to the cross of Christ, they found their earnest concern and prayer for her, in a good degree answered. She became a faithful labourer in the gospel, and was a true helpmate to her exercised husband.

John Simcock settled after marriage within the limits of Abington Monthly Meeting, where he and family resided, until in 1760 or about that time, he removed them to Kingwood, New Jersey. John was a man of a quiet, modest spirit, and although a man of few words, he won the love and esteem of his friends and neighbours; he was servicable in the church and stood in the station of elder.

He was diligent in the attendance of meetings whilst favoured with ability of body, and was concerned therein in patient waiting for the arising of life. His friends express the belief that "he was often comforted therein." He frequently said he did not attend meetings because others did, but because he found a secret benefit in so doing. He was a tender husband, affectionate father and kind neighbour, having a testimony against much use of spirituous liquors.

He had a large share of afflictions, under which he was very patient, and bore the infirmities attendant on old age, with apparent resignation of mind. He several times expressed his willingness to depart saying, that he waited for his dissolution, and hoped he should be patient until the Lord's time, which was the best time. He lost his beloved companion in 1771, to whose memory he prepared a suitable memorial, after which he still lingered in faith and patience, until on the 23rd of Fourth month, 1773, his dear Saviour was pleased to release him from the sufferings of time, he being in the 88th year of his age.

##### ZACCHAEUS DUNN.

Zacchaeus Dunn was born about the year 1690, of parents who were not in profession with Friends. In early life being favoured with the visitations of Divine Grace, he yielded thereto, and became circumspect in life, and grew in religious experience. Many were the exercises of mind which he experienced, before he was joined in membership with the Religious Society of Friends. One cause of trial grew out of the necessity he felt of attending week-day religious meetings. He was, however, rewarded with strength to become diligent herein,

and to be faithful in his various religious duties. In the year 17—, he was married to Deborah — who proved a valuable help to him in his religious exercises and conflicts. Soon after his marriage he received a gift in the ministry, which was exercised to the comfort of his friends.

As his family increased, he was concerned to bring his children up in conformity with the profession he made, and was careful to take as many of them to meeting with him as could well go. He was very watchful over them for good, was an affectionate husband and a peaceable neighbour, being indeed exemplary in his general conversation.

Towards the close of his life, although he seldom appeared in the ministry, yet his friends thought he grew more lively therein, apparently ripening for another world. He lost his beloved wife in the year 1772, which was no doubt a great trial to him, although he deemed his own course nearly over. He had a long and tedious illness, being enabled to bear the consequent suffering with remarkable patience. Near his close he was heard to say, O merciful God, relieve me if it please thee! but I must wait." Soon after this he peacefully departed, Sixth month 26th, 1773. He was buried at Pilesgrove, near which place he had resided. He was aged about 77 years.

##### ROBERT JONES.

Robert Jones was born in Denbighshire, in the principality of Wales, about the year 1693, of parents not professing the Truth as held by us. Submitting to the cross of Christ he became religiously inclined, and was in good measure convinced of the religious principles held by Friends, before he removed to Pennsylvania, which was about the year 1757. As he continued faithful to the openings of the Spirit of Truth on his mind, he grew in experience, and was received into membership in our Religious Society, and became a useful member of Gwynedd Monthly Meeting.

After a few years, a gift of gospel ministry was committed to him, his labours in which, were sound and edifying. He was blessed with a good understanding and sound judgment, and being a friend to good order and discipline, whilst his own conversation was exemplary, enforcing and upholding his labours, he was very servicable in the church. His place of residence was remote from the meeting-house, yet even in the decline of life, when his infirmities of body rendered it difficult and painful for him to attend, he was often found there with his friends. Thus he manifested that the love which he felt for them in his youth, continued unabated to the last.

He departed this life, Sixth month 24th, 1773, being in the 83rd year of his age.

##### DANIEL MORGAN.

Daniel Morgan was born in Moyamensing, near the City of Philadelphia, in the year 1691. Whilst still young, his parents removed into Gwynedd, then just being settled, where he was strictly educated in christian conformity to the principles of Truth. As he grew in years he felt the necessity of becoming for himself acquainted with the inward operations of Divine Grace. Being favoured to experience them, and being faithfully obedient thereto, he came to attain to a good degree of growth in righteousness, and attained the station of a Father in the church. He received a gift in the ministry, and felt himself constrained to encourage others to faithfulness in the improvement of their talents, that when time to them should terminate, they might receive the answer of *well done*.

He was not called to travel much in the work of

the ministry, but was frequent in the exercise of his gift in his own and adjacent meetings, where his labours were well received. His innocent, loving disposition, and his readiness to do good to all, in every way he could, rendered him generally beloved and respected by his friends and neighbours.

His last illness, which was the palsy, was short. After a few days of unconsciousness, he deceased Seventh month 6th, 1773, in the 82nd year of his age.

##### SAMUEL SATTERTHWAITE.

Samuel Satterthwaite was born within the limits of Chesterfield Monthly Meeting, New Jersey, Seventh month 26th, 1695, of honest parents, professing the Truth. As he grew up, through the merciful visitations of Divine Grace, and his submission thereto, he became sober and religiously exemplary in his life and conversation. He was a lover of meetings and a diligent attendant thereof. He was useful in Religious Society, and for many years was an approved elder of Chesterfield Monthly Meeting.

In general society he was a good neighbour, a kind friend, and one very careful not to give a just cause of offence to any one. He died Eighth month 16th, 1773, in the 78th year of his age.

##### ELIZABETH WOOLMAN.

Elizabeth, a daughter of Henry and Elizabeth Burr, of Burlington County, New Jersey, was born there in the year 1695. Her valuable and religiously concerned parents gave her a religiously guarded education, and through submission to the gracious visitations of her heavenly Father's love, she was strengthened to live a self-denying, exemplary life, even in her young days. In the year 1714, she was married to Samuel Woolman, to whom she proved an affectionate wife, and a true helpmate in every thing appertaining to life and salvation. As a wife and a widow she was alike exemplary, and few have exceeded her in religious care over her children. She laboured earnestly for their spiritual good, restraining them from participating in the follies and vanities of childhood, and causing them frequently to read the holy scriptures, and other religious books. She often in a prudent and becoming manner, gave them wholesome advice and admonition. Of the good result of her labours with them, we may see some trace in the journal of her son John, and it is believed that all her children, were in good measure obedient to that Divine Grace, whose seasoning virtue they saw so beautifully exemplified in the conduct of their parent.

Elizabeth was a good neighbour, a woman given to hospitality, whose house and heart were open to entertain her friends. She was of good service in the church, being long an overseer of Rancocas Particular Meeting, and an elder of Burlington Monthly Meeting. She freely contributed of her means towards the support of the poor, and was a diligent attendant of meetings, in which she was concerned to wait in reverence and patience upon the Gracious Helper of Israel, for the arising of his pure influence on her mind, this she ever found the best preparation for a proper discharge of every religious duty. In her last illness she was contented and resigned to the will of her blessed heavenly Father, waiting until he should release her from her afflicted body. She departed this life, Ninth month 8th, 1773, aged about 78 years.

Ingratitude is a crime so shameful, that the man was never yet found, who would acknowledge himself guilty of it.

*Right Views of this Life.*—We are placed here on earth only for a season: like travellers at an inn, we are permitted to take shelter for a night in this frail habitation:—it is a strange place, and has but temporary and middling accommodations; and all the comfort it affords, is far inferior to the abundance, which we have to expect will be dealt to us in our Father's mansion, our heavenly home. None of those numerous objects which we see around, rightly belong to us; they are not our property strictly speaking; but are lent to us for the supply of our necessities, for our comfort, for the right enjoyment of them. I have often wished that this view of life might occasionally occupy our minds. Let us consider what would be some of the consequences of taking such a view of life as I have ventured to point out. Let us see what ought properly to follow, from the establishment of such a principle as this, that the earth we inhabit is not our rest, that we are but pilgrims and wanderers upon the face of it, that none of those things which our senses can perceive, are our own; but that we are only for a time permitted the use of them: how could we, with this principle in our sight, abuse those innumerable blessings, which the great Giver of every good and perfect gift, has been pleased to bestow;—how could we do otherwise than apply all those natural things, which are in mercy provided for us, to the purposes for which they were intended. Then among many other good effects there would be no servile and degrading obedience to custom and fashion; but such simplicity in our way of living, such denial of whatever is superfluous, expensive, useless, or productive of injury to the mind, as is now scarcely thought of or understood.—John Barclay.

*An aspiring, lofty, domineering Spirit.*—This spirit must be kept out from among you; this aspiring spirit, this lofty ruling spirit, which loves to be great, which loves to have dominion, which would exalt itself, because of the gifts it has received, and would bring others into subjection; this spirit must be subdued amongst Christ's disciples, or it will ruin all. The Lord gives grace and knowledge for another end than for men to take upon them to be great, and rule over others because of it. And he that, because of this, thinks himself fit to rule over men's consciences, and to make them bow to what he knows or takes to be truth, he loseth his own life hereby; and so far as he prevails upon others, he doth but destroy their life too. For it is not so much speaking true things that doeth good, as speaking them from the pure, and conveying them to the pure: for the life runs along from the vessel of life in one, into the vessel of life in another; and the words (though ever so true) cannot convey life to another, but as the living vessel opens in the one, and is opened in the other.—Isaac Pennington.

From the Leisure Hour.

### Mahogany.

Perhaps there is hardly a word in the English language which is more truly a household word than the one which stands at the head of this article. Under the domestic roof nearly all our surroundings are of mahogany; our book-cases, tables, chairs, desks, sideboards, sofas, musical instruments, and for the most part our bedsteads, are made of this material, and the use of it is so general that we can hardly conceive of a furnished house without the appliances of mahogany furniture. Yet, though the material is so common, there are comparatively few of us who have taken the trouble to inquire whence it is all derived, and to what sources and industrial agencies it is owing.

It may not be unprofitable, therefore, and it will be far from uninteresting, to take a brief survey of the history of a mahogany trunk, from its growth in the untrodden forest, where its unbragous limbs may yield a shelter to the panther and the wild boar, to its arrival in merry England, where, in polished state, it is of course expected to groan under the weight of John Bull's good cheer.

There are various sorts of mahogany, differing in an almost fabulous ratio in value. Thus, the African mahogany, which grows plentifully in the districts of Senegal, and is shipped to this country from Sierra Leone, is of comparatively small value, owing to its liability to warp into ugly shapes; the wood is hard and of close texture, but, in consequence of its characteristic falling, it is never used for purposes of ornament, and is chiefly in demand for the construction of articles of small expense and great strength, such as engine-frames, gun-carriages, mangles, etc. Other kinds are found in the East Indies; but very little mahogany of oriental growth comes to this country, save in the shape of manufactured articles. Of the mahogany which is brought to these islands, by far the major portion is felled in the forests on the coast of Honduras, a province of Mexico, where it grows in vast quantities, rarely in groves or even in groups of trees, but mingled with other forest timber and surrounded with dense scrub and underwood, utterly impenetrable by the ordinary traveller. The tree is a grand and magnificent object, having enormous branches of solid timber, and sometimes reaching to an enormous height; but, unlike most of the tropical trees, it seems to have no special partiality for any particular locality. The seeds are winged, and are carried in all directions by the wind, and it would seem that wherever they drop, they take kindly to the soil and flourish; thus they grow luxuriantly in low marshy grounds, or in a deep alluvial soil, and they are found also flourishing on rocks apparently bare of soil, and sending their roots deep into the stony fissures, which they widen and rend asunder by the slow force of their expansion.

It is a fact, however, that the different value of the wood is determined for the most part by the locality where it grows: that which takes root on a fat or wet soil is soft, even-grained, pale and porous, and is of the lowest value, while that which grows without moisture, save what it derives from the atmosphere, is hard, figured, knotty, and involuted in grain, and densely close in texture, as well as of a deep rich colour. The difference in value between the two kinds may be estimated by the fact, that for the best sort pianoforte-makers have been known to give as much as £200 per cubic yard, while the same quantity of the commoner kind would be well sold for ten or twelve pounds. The more valuable kind is, however, rarely used in the mass, but is cut up into veneers for the polished surfaces of fine cabinet work. Of these finer sorts, known in the market under the name of Spanish mahogany, the larger portion comes from the mountainous districts of Cuba and St. Domingo. Formerly large quantities came to England from Jamaica, but the supply from thence has nearly ceased, owing to the exhaustion of the stock; the Jamaica mahogany was much prized, and is said still to command the highest biddings. No attempts have ever been made, so far as we are aware of, to establish mahogany plantations; as the tree takes two hundred years to grow before it is accounted fit for felling, we need not wonder if it has been neglected by the planter. The use of mahogany with us is comparatively recent; for although the beauty of the wood was recognised in Sir

Walter Raleigh's time, by his ship carpenter while lying off Trinidad, in 1595, it was not brought into notice in England until the beginning of the eighteenth century, when Dr. Gibbous, an eminent physician, exhibited to his friends the first articles of English domestic furniture manufactured from it.

We will now proceed to get out our logs of mahogany from the depths of the Honduras forest. The work is done by gangs of men, who may be either slaves or free labourers, or the gang may consist of both working together. They are all under the control of a captain, and their number among them a mahogany hunt-man, the nature of whose peculiar function will presently appear. The number of the whole gang can be hardly less than five-and-twenty, and sometimes amounts to as many as fifty. The work always commences in the month of August, and it is the hunt-man who inaugurates the proceedings. It is his business to hunt out trees, which must be growing in the neighbourhood of a river—the bearer the better—and which it will pay to cut down. The woods, as we have already remarked, being impenetrable to travellers, he sets out on his mission armed with a maneb, a kind of ponderous cutlass formed for delivering powerful blows; with this instrument he carves every step of his way through the bushy and tangled underwood, until he arrives at some elevated point. Here he ascends a tree and looks out for mahogany wood; he knows it instantly at sight, because in this month the leaves of the tree are of a brilliant orange colour, and he can trace the well-known hue over a large expanse of forest many miles in extent. He takes a very careful survey and forms a scheme of operations, contriving to plan as much work and no more, as can be accomplished during the season. Having marked down his prey, which will consist of a number of trees standing pretty nearly together, if he can so arrange things, though he will not scruple to take in a promising trunk at a mile or two distant from the rest—his next course is to cut his way to them. While chopping away at this work, he sometimes discovers that the huntman belonging to some rival gang has marked the same prey, and is hewing his way to it from some other point of observation. In this case, the race and the strife become desperate: Pompey on this side, hews and chops, and toils, and sweats, yelling at his labour like a madman; while Sambo, on that side, sweats and toils; and chops and hews, and responds with yells just as frantic and more defiant. It is a pretty pair of black babes in the wood, brandishing their gleaming weapons, not at each other, but at the stubborn bush which keeps them asunder. This energetic warfare, however, leads to no bloodshed—only to excessive perspiration. As, among whalers, the first harpoon into the blubber secures the whale, so among mahogany hunters, the first manchet that severs the bark secures the trunk.

Having marked down his prey, and set his band upon them, the huntman returns to the captain and reports progress. The captain summons his gang, and, following in the track made by the huntman, the felling of the trees is immediately commenced. This is anything but a summary operation. In the first place, the tree is not cut down near the root, like a British oak, but is severed at the height of some ten or more feet from the ground; the reason of this being, probably, that the lower part of the trunk is soft, and is as likely to sink as to swim when it gets into the water, and is in other respect valueless. A stage has therefore to be erected round each tree with an opening on one side for the fall. Though felling in

this manner is evidently most perilous, yet a fatal accident rarely happens, and the trees are felled in less time than would be imagined possible. After the felling comes the lopping and clearing, which is done at more leisure by one section of the gang, while the others are differently employed; and the branches, it may be observed, yield better timber than the trunk, their wood being of much closer grain and more richly figured, though the trunk, from its greater mass, is invariably of most value. While the loppers are busy with their axes, the rest of the gang are engaged in the onerous labour of cutting an open and practicable road through the dense forest for the transport of the logs to the river's brink. This forms by far the most wearisome part of their labour, and generally occupies them for several months. Before they begin, they build themselves comfortable habitations by the river side, and during the felling season the several mahogany works form so many villages on the banks of the stream, all of which are destined to disappear when the season comes to a close.

(To be concluded.)

Selected.

## LITTLE THINGS.

Scorn not the slightest word or deed,  
Nor deem it void of power;  
There's fruit in each wind-wafted seed,  
Waiting its natal hour.

A whispered word may touch the heart,  
And call it back to life;  
A look of love bid sin depart,  
And still unboly strife.

No act falls fruitless; none can tell  
How vast its power may be,  
Nor what results enfolded dwell  
Within it, silently.

Work, and despair not; give thy mite,  
Nor care how small it be;  
God is with all that serve the right,  
The holy, true, and free!

## Robbing the Hermit.

In wandering around the top of Mt. Tabor, we found an old hermit who had been here several years. He wore a frock-dress, a cap, and long white beard, spoke Italian, and lived in a part of a ruin under ground. Originally from Russia, he had shortly after his arrival taken up his lodgings here, and was attacked by a party of Bedouins, who searched his premises for money and robbed him of everything he had, scarcely sparing his beard, and leaving him to endure the cold without any thing to cover him but the leaves. I think he said that three days afterwards, the Arabs returned, bringing everything back, laying them at his feet, and asking his blessing. They had been attacked by a disease soon after the robbery, and attributing it to their treatment of the old hermit, they restored not only what they had taken, but also brought provisions, with which they continue to furnish him up to the present time, all esteeming him as a prophet.

Before leaving, we offered a small sum of money to the hermit, who had taken pains to attend us and exhibit some places which in his long and lonely walks he had discovered; but he declined. "Why should I take money to tempt these wild men to rob me?" Our guide kissed his hand with much reverence, and we parted from him.—*From Osborne's Palestine, Past and Present.*

The foregoing story of society in a primitive condition, shows with great plainness the connection between riches and the sword. The subject being brought into microscopic proportions; that those who heap together riches are tempted to defend them with the sword.

*The True Teaching of the Heavenly Anointing.*—However we may be disposed to cherish christian charity one towards another, as religious professors, yet I am fully persuaded, that whenever the principles of our religious society are thoroughly understood, they will always be found striking at the root of a tree, upon which most other denunciations are feeding; and this must and will be the case, so long as the preachers and teachers of the people are paid for the performance of their offices, and are trained up for them. I am far from asserting, that there are not individuals of other societies, who are truly called to the work of preaching the gospel, and who are labouring in the noble cause from pure and disinterested motives; but I do fear that the number of these is comparatively small: and it is my belief, that if no money was permitted to circulate in connection with the outward performance of any religious service, the religion of Jesus would soon shake off the defilements with which it has been sullied, and again shine forth in primitive purity and lustre, "clear as the sun, fair as the moon, and terrible" to sin and iniquity, "as an army with banners." Oh! that men would come to that true teaching of the heavenly anointing within them, which would abide in them and teach them all things; and which is Truth itself and no lie. Then would they be sensible, that they needed no man to teach them; for teachings of man would be to them as that water, of which "whosoever drinketh, shall thirst again;" but when they have tasted of the water given them by the Prince of life himself, which should be in them "a well of water springing up into everlasting life," "whosoever drinketh of this, shall never thirst."—*Daniel Wheeler.*

Our Saviour indicates a signal characteristic of himself, when he says, "And I lay down my life for the sheep." But this same mark should be found upon all his disciples. The circumstances are different, as the persons are too; but, in either case, it is the sacrifice of one's self for the benefit of his fellow man. With us, it may not be the actual suffering of death, as it was with our Lord; but that we may truly follow him, and do what we can for the good of others, we must hold life, with all its endearments, subject to any call of sacrifice that may be made upon us; and actually give up, from day to day, just as much of the present life, its pleasures or its interests, as may be necessary, in order that we render the best possible service in the kingdom of Christ. We have the privilege of daily martyrdom, to be followed by its honours and blessedness, in whatsoever circumstances we may be placed; how much of the sufferings that sometimes accompany the spirit and the act, we need not concern ourselves to inquire.

Again: Christ says, "I have power to lay it down, and I have power to take it again." We have not such power in our own hands; but our Lord holds it for us, so that our position is independent of the world, and of the powers of evil, just as his was; and as in his case he did resume more than he laid down, so will be given to us, by his Almighty hand, more than any creature has to surrender for the highest objects of his existence.—*Late Paper.*

*A Christian Exhortation for our Youth.*—Very great is the danger when the young and inexperienced are proud and opinionated. This naturally raises them above instruction, putting them out of the way of being truly profitable, either to themselves or others. Such, unless their hearts are mercifully turned by a supernatural power, are never likely to be fit for governing families, or to

act as members in the church of God. Seeing, unless their unmortified wills and tempers are submitted to, however unreasonable, they will break the peace of society, and violate the wholesome order thereof, being like the unsubjected bulls of Bashan. Therefore, in much affection and desire for the welfare of tender youth, I would caution and warn them carefully to avoid the company and conversation of such, though under the same profession, who disregard their parents and those who have the rule over them; who slight or speak contemptuously of their betters, such as ministers and elders, &c., or of the Christian advices frequently given forth by the Yearly and other meetings, or of the wholesome discipline established amongst us as a people in the wisdom of Truth.—*John Griffith.*

For "The Friend."

The following extract from a monthly report of one of the benevolent institutions of Philadelphia, supported by the liberality of its citizens, gives some idea of the wretchedness and degradation to which little children are often exposed, and from which the effort is making to rescue them by the humane. "The Union School and Children's Home," which is the institution alluded to, has often as many as one hundred and fifty children of from six months to six years of age, within its walls. Probably the notice may interest the readers of "The Friend."

"One or two cases may be cited for the benefit of those managers, who not being members of this committee, are not brought so closely in contact with the bitter fruits of this moral pestilence. Three children of two and a half, five and seven years, were brought by the officers; their mother charged with being a habitual drunkard, had been committed to prison, and on the same day the corpse of her infant was removed by the Guardians of the Poor, from the miserable room in which she lived. Eight families were in the house, all of whom were coloured, and the sad, pale face of the eldest little girl, looked as though a long life-time of sorrow had cast its shadow over her youthful brow. Two others were brought by the same officers, one an infant of scarcely a year old, the mother in the station house, committed for drunkenness, alike unconscious of the presence of her children, or their removal from her. Still another, a girl of seven years. Mother in prison. Father in the army. And yet another, a little motherless boy, whose intemperate father had enlisted in one of the regiments, now recruiting in this city, and for weeks this little boy had had no home but the soldiers barracks; they were ordered out to camp, but the father was no where to be found, and as company after company marched away, the little fellow was left alone, until an officer of the regiment saw him, and had him sent to our Home. Such is a brief outline of the cases that are constantly brought to the notice of your committee, and we feel confident that no member of it, who has ever listened to the thrilling lectures of John B. Gough, could fail to realize, that they are not over-wrought pictures, but faithful delineations of sad realities. Stop this great evil, and our Home would almost be tenantless.

"The bright side of the picture. On last committee day, a lady came to the Home, bringing with her a nice looking-girl, whom some of the managers took to be her daughter, but she proved to be one of the earliest inmates of the Institution, she had served out her apprenticeship, received her ten dollars, and still finds a good home with her, who for ten years, has been her kind guardian."

Spiritual sloth, leads to spiritual poverty.

Extracted.

### The Trials of a Housekeeper.

"Thou art wise if thou beat off petty troubles, nor suffer their sting to fret thee. Thou art wise and shalt find comfort if thou study their pleasures in trifles, for slender joys oft repeated fall like sunshine on the heart."

*The Trials of a Housekeeper!*—Where is the mother or mistress of a family, who does not understand full well the meaning of these emphatic words? as they meet her eye, a dim shadow recollection comes before the mental vision, each of which awakens something of the uneasiness which their presence originally occasioned. The terms are in every ones mouth, and dull indeed must the ear be that does not hear them daily in the social intercourse of life. But what are those trials that thus afflict one portion of the human family particularly! not surely the loss of health, or reputation, or friends; nor sickness nor death; for these are incidental to every rank and station, while the vexations to which we refer seem to be confined to one particular condition. What, then, are the influences which too frequently transform the cheerful, good humoured bride into the peevish, fretful, discontented wife or mother? That they are usually trifles in themselves may readily be conceded, but that they are therefore unworthy of regard and sympathy does not by any means follow.

"The deepest wretchedness of life is continuance of petty pains;" and none but the uninitiated can doubt that the mistress of a family is constantly exposed to trifling annoyances, which are in reality more difficult to bear, than serious afflictions. How often where we see overwhelming reverses borne with fortitude and equanimity, does the temper give way before those petty inconveniences which are involved in the very existence of the social relations. How often do we see the woman who can stand by the dying bed of a parent, a companion, or a child, with the calmness of christian submission; who can bear the unwonted privations and humiliations of poverty without a murmur; yet suffer herself and all around her to be made thoroughly uncomfortable, by one of those trivial accidents to which she is liable in the management of her domestic affairs: To such an extent is this true, that those great events that form eras in the history of woman, cannot be regarded as a proper criterion by which to judge of the strength of her character, or the equanimity of her temper. Never until she has been tried as a housekeeper, is the worth of her character or its deficiencies fairly tested.

It is because we have not learned to seek strength from above for the ordinary purposes of life, that the formidable trials obtain so much power over our happiness and usefulness; we feel that grace alone can enable us to bear great afflictions, but do not expect it on those small occasions, which are constantly occurring, and which more than any other, go to make up the sum total of domestic happiness or misery. We have called these small occasions, they are so in their nature, but not in their consequences.

Whatever mars the happiness of a family, whatever affects injuriously the temper and moral character of children, or domestics, possesses an importance, which we cannot adequately estimate; and what more likely to do this, than frequent ebullitions of anger, frequent paroxysms of fretfulness and impatience in her to whom they look for guidance and instruction? Long after she has forgotten the feeling and the circumstances that called it forth, the fatal influence is operating on those ductile minds, and preparing them for a repetition of the same scenes in future ages. We talk of the commencement and finishing of the

education of our children,—as if this education were not commenced with the first dawn of infant intellect, progressing ever since without one moment's intermission. The mother is herself the first book read by her child; and what it sees there, will certainly be copied in his heart and in his life. Her character and deportment, more than any or all other influences, are educating her children; and happy is it for society, when the lessons daily learned from her are such as may safely influence their conduct and conversation. But may it never be forgotten, that example rather than precept, is to form the character of those committed to our charge. It is worse than idle to expect that the formal calculations of sweetness and patience will make our children amiable and forbearing, when they see us irritated by trifles and thrown off our guard by the unavoidable evils of life. Woman, as the centre of the domestic circle, should diffuse sunshine and warmth through the whole atmosphere of home.

But if she, who should be the guardian genius of that hallowed spot, meets her husband with reprimands, and it may be with reproaches, instead of cheerful words and kind welcome; if her face wear habitually a wintry frown, instead of the light smile which won his heart, what hope of happiness remains for him on earth? a fearful responsibility rests upon the wife under such circumstances; and should the husband of her love make shipwreck of hope, of honour and happiness,—should he fly for solace away from home; would not conscience whisper, thou art the cause of his undoing? How many good and noble qualities have we seen obscured by the indulgence of habitual fretfulness, while the unconscious victim of this miserable propensity, imagined herself the most blameless and unfortunate of human beings! Beauty, wit, genius, learning, what are they all when combined with this unlovely and uncomfortable trait of character. Dear young Friends, we entreat you to earn the appellation of amiable, good-tempered women, not by the display of that hollow courtesy which is reserved for public occasions, to advance your own selfish ends, but by the constant practice of kindness and forbearance in the domestic circle. Cultivate at all times, a spirit of accommodation and self-denial, in your intercourse with others, for depend upon it, if as young woman, you do not learn to subdue your own will, and consult the happiness of those around you, you will be miserable. There is no magic influence, to convert the selfish daughter into the patient devoted mother, or the careless young girl into the dis-interested woman. Nothing but the power of the Holy Spirit can enable you to overcome the natural selfishness of the human heart; and without this, every effort will be to a great degree, unavailing.

There must be a new principle implanted within us, ere we can bear with patience the trials of life, or cheerfully yield our will to that of another. Everything in the education of woman should be to develop a spirit of self-devotion and self-renunciation. This spirit can never be too much cultivated by our sex, because by it "our highest triumphs are to be achieved," and it bears with us as it is vanquished or victorious," the destinies of the world. It is the true mission of woman to exhibit to mankind the moral beauty of that love, which seeketh not her own but the good of others, and finds its own highest honour and happiness in so doing.

In this limited, but important sphere she will be one of the most active and efficient agents of her Heavenly Father's work of man's renovation, and generations yet unborn shall arise and call her blessed.

*Our balking influence, or that which tends to bring religion into discredit.*—A great portion of mankind seem to have no time to spare for salvation—business, business—money, money—are the main objects of their desire. Where then are found among such professing christians, the salt of the earth—the lights of the world? What light or example does the devotee to this world afford to the rising generation? Is there anything in his spirit, in his conduct, in his language, in his countenance, that draws and invites to Christ, and tells the youthful beholder, that the salvation of his soul, and the glory of his Creator, are the great purposes to which the faculties of his mind and the strength of his body should be devoted, above everything else? Is he leading him in the paths of righteousness, and contributing to make him, as he rises in life, a valuable citizen, a spiritual christian, that he may become a leader and instructor of others in the same path? No such thing. His practice, his carnal doctrines, his slavery to the world, tend to drive others from religion, and to bring it into discredit.—*The Pursuit of Riches.*

*An Interesting Relic.*—Dr. Perkins exhibited at the missionary meeting at London, recently, a copy of the New Testament which he found in Persia, which was seven hundred years old. It was written in the ancient Syriac language, (the same spoken by Jesus Christ when on earth,) upon parchment, with a red for a pen. Of course the volume was bulky, though not as large as we should suppose a Testament made in that way would be. It was not thicker than a Webster's unabridged, and not more than two thirds as large. Dr. Perkins found three or four copies of the Testament in this form in that country, which were, if we understood him, the only written language that the people had. By the aid of these he made a language for the Nestorians, and instructed them in it for nearly thirty years. Dr. Perkins said also that this New Testament, which had been transcribed in this rude manner several times, and handed down from the time of Christ, was, in every important respect, the same as the scripture which we now have—a remarkable proof of the authenticity of our Bible.—*Caldeanion, St. Johnsbury, Vt.*

*The great thing in the Work.*—Oh! that we who are young, may so tread in the path of the just, that we may be prepared to fill up the vacated seats in the militant church, of those who are gone before, and who have watched up their measure of enduring. \* \* \* \* \* Faithfulness unto that which is good, seems to me the great thing in the work, I am sensible we can thus only walk worthy of our vocation and privileges.—*John Barclay.*

*Gentle Instructions of the Holy Spirit.*—I never more clearly saw the necessity there was for us who profess the Truth, singly to attend to the gentle instructions of the Holy Spirit, who only doth, and ever will, lead and guide into all truth, and preserveth from those errors and failings which are so abundantly evident amongst us, whereby our hands are weakened in respect to a careful exercise of the discipline of the church.—*John Churchman.*

## THE FRIEND.

FOURTH MONTH 26, 1862.

PHILADELPHIA YEARLY MEETING.

The session of this meeting commenced on Second-day morning, the 21st. At the time of our

going to press, the business of the meeting had progressed satisfactorily, and the prospect was that the meeting would conclude on Fifth day evening or Sixth day morning. In a future number we shall give the proceedings of the meeting in detail.

#### SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 6th inst. The steamship Great Eastern, is advertised to leave Millford for New York on the 6th of next month. The financial report of the Ministers to Parliament, gives the amount of revenue for the past year, as £59,574,476, and the same expenditure at £70,838,000, showing a deficit of £1,160,000. Gladstone, in the course of his speech, adverted to the great drawbacks arising from the American crisis, which had turned out worse than was anticipated. The cotton crisis was a most serious feature to England. A blockade of course would result. It proved far more rigorous, and extended over a greater line of coast than had been anticipated, and its effect had been nearly to double the price of cotton. The loss on the American trade was great, the exports having fallen from nearly 22,000,000 sterling, in 1861, to only £10,000,000 in the year with America. According to recent returns, was, however, improving. The Manchester market is steady and firmer. Flour had declined 6d. a lb.; and wheat was steady at previous rates.

The Paris Monitor announces that in order to lighten the burdens of the treasury and enter for into the economy promised in the budget, the Emperor has ordered a reduction of 32,000 men in the effective strength of the army. The disbanding of the 101st and 102d Infantry regiments, and sale of 2200 horses, is also ordered. It is asserted that detachments of the French troops have arrived orders to traverse the frontiers to prevent the passage of brigands from the Pontifical States into Italy, and to arrest such persons even should they be found unarmed. The French troops have also been instructed to arrest any Pontifical gen d'armes who may still be lingering.

It is officially declared that the Spanish government has most resolutely determined not to infringe on the sovereignty and independence of Mexico.

A letter from the Prussian Minister of Finance to the Minister of War, is published, urgently requesting the Emperor to grant a loan of 100 millions of marks, to meet present additional taxes. The St Petersburg Academy Gazette, states that the Russian Minister of the Interior, has officially announced that the Government intends preserving the censorship over all periodicals, but to do away with it generally, and to relax the laws on the present additional taxes. The Committee say that the present Administration cannot be held blameless for suffering thirty-seven days to elapse after it came into power, without making any movement for the protection of the ships and other property at that place. There are certainly 1000 men, including the rebel vessels, 2,000 heavy guns, which, with military stores of all kinds, fell into the hands of the rebels. The whole property is valued at \$9,760,000.

**New Mexico.**—The contest at Apache Pass, was a severe one, the numbers engaged. The U. S. troops lost 150, in killed, wounded, and missing, and the rebels about 400, including 100 prisoners. The Texans had a considerable force in the Territory, and it was supposed would not withdraw without further bloodshed.

**Tennessee.**—There are 7,000 sick soldiers at Nashville 2,000 these are from Memphis, taken by the Confederates at Donelson, Bowling Green and Nashville. Since the great battle on the Tennessee river, the rebel army has its head quarters at the foot of Pea Ridge, extending ten miles from Corinth, and the advance of the U. S. troops was recently eight miles from Pittsburg, leaving only a space of two miles between the opposing armies. An expedition from Gen. Halleck's army, with gun boats and transports, proceeded up the Tennessee river to a point near Eastport, Mississippi, where they landed, and proceeded inland to Bear River Bridge, where they destroyed the two bridges, and then returned to Eastport, thus cutting off the communication of the rebel army at Corinth with Alabama, and the rest of the Confederacy, except New Orleans. The flotilla commanded by Com. Fouts, is operating against Fort Pillow, on the Mississippi, about eight miles above Memphis.

**The Mississippi River.**—The New Orleans correspondence of the Memphis Appeal, says that the rebel government is now constructing in New Orleans, thirteen large iron-clad gun boats. The largest is armed with thirty guns. They are enclosed with iron plates, and are considered invulnerable. It was the confident expectation at New Orleans, that these boats will be able to drive the U. S. fleet from the Mississippi.

**Alabama.**—At the latest dates, Gen. Mitchell was at Iuka, no great distance from the great rebel army at Corinth, which he had just routed across the Tennessee at Decatur and Florence. Beauregard's army had been re-inforced from Arkansas and other quarters.

**Virginia.**—The siege at Yorktown continues, with such daily incidents as usually attend sieges, with occasional sorties from the rebels, and artillery engagements, &c., all attended with some loss of life on both sides. On the 16th, one of the divisions of the U. S. army had a sharp encounter with the rebels, in which 164 of the Federal troops were killed or wounded. The attack was made by the rebels, who were driven back with a loss of 100 men, and the capture of 1000 muskets. The rebels are straining every nerve to make a desperate resistance at Yorktown. Jefferson Davis is reported to be there and in command of the Confederate forces, who are said to number about 100,000 men. The operation of General Grant's army in the valley of the Shenandoah, continued to be successful. In various skirmishes the rebels had been defeated, and a number of them taken prisoners. His forces were still moving southward. Gen. McDowell's division is moving down towards Richmond, and by the latest accounts, was in front of Fredericksburg.

**Florida.**—Apalachicola, Florida, has been taken by the Federal forces, the rebels offering no resistance. Most of the inhabitants fled on the approach of the U. S. troops.

**Georgia.**—Fort Pulaski, eighteen miles below the City of Savannah, has been taken by the Federal forces. The garrison surrendered unconditionally, after a bombardment of two or three days. The capture was effected with very little loss of life. The number of prisoners taken, was 374, together with the entire armament, 47 guns, and a large supply of ammunition and stores.

**New York.**—Mortality last week, 395.

**Philadelphia.**—Mortality last week, 303.

**Affairs in the South.**—According to a late decree of the rebel Congress, every able-bodied white man, from fourteen to sixty years of age, in the Confederate States, is attached to their force, and may be seized upon at any moment, and forced into active service. There will therefore be apparently no lack of men wherever to prolong the rebellion, but the means for sustaining large forces in the field are evidently wanting everywhere. During the past week, the Confederates have supplied the rebel armies with the bulk of their provisions, but now, Tennessee, Kentucky and Missouri are held by the Federal forces, and such parts of Virginia and North Carolina as are still in the power of the rebels, may be nearly starved. The *MacG.* & *Telegraph*, says, that in that region, since the Unionists have taken possession of Tennessee, prices of every article of food had risen rapidly, that of beef had doubled, corn is \$1.40 a bushel, and salted pork of the most miserable description, is from 35 to 40 cents per pound.

**RECEIPTS.**  
Received from Aaron Sharpless, Pa., \$2, vol. 35, and for Miss S. H. Adams, \$2 to 134, vol. 36; from Aaron Coultour, Mich., \$2 to 134, vol. 36, per M. C.; from Abigail Healy, \$2, to 32, vol. 35.

#### FRIENDS' ASYLUM FOR THE INSANE.

**NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)**  
Physician and Superintendent, — JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

#### WEST-TOWN BOARDING-SCHOOL.

The Summer Session of Friends' Boarding-school at West-Town, will commence on Monday, the 12th of

Fifth month next. Parents and others intending to send their children as pupils, will please make early application to the Rev. Edward Superintendent of the School, or to CHARLES J. ALLEN, Treasurer, No. 304 Arch street, Philadelphia.

#### HAVERFORD SCHOOL ASSOCIATION.

The Stated Annual Meeting of the Haverford School Association, will be held at the Committee Room, Arch Street, on the second-day afternoon, Fifth month 12th, 1862, at 4 o'clock.

W. S. HILLES, Secretary.

Phila., Fourth mo, 26th, 1862.

**MARRIED,** on the 20th of Third month, 1862, at Friends Meeting, Bart, Lancaster Co., Pa., CHARLES BALLINGER, of Cropwell, N. J., to HANNAH ELIZABETH, daughter of Isaac H. and Elizabeth F. Moore, of the former place.

**DIED,** on the 26th of Second month last, WILLIAM GRACE, in the seventy-second year of his age. He was a native of the County of Northumberland, in Great Britain, and removed to the State of Ohio in 1819, and America, about the 20th year of his age; and soon afterwards settled within the compass of Stillwater Monthly Meeting, in the County of Belmont. Through submission to the teaching of the Grace of God, he became qualified for usefulness in the service of the Church, and about the forty-second year of his age, he was appointed an elder; in which capacity it may be said of him, he was sound in judgment and prudent in counsel. His last illness was not fully of two weeks duration; being impressed from the first attack, that it was designed to terminate his earthly pilgrimage.

After a time of close conflict and inward trial, he said, "I feel acceptance with the Father and his beloved Son," adding, "I humbly trust my sins have been forgiven." "Let me say to my dear friend that visited him, 'I am fast verging towards the future life, and I have few misgivings as to the future.'" On another occasion, "I am unwavering in my attachment to our Christian principles and testimonies," and again said, "Why speed not thy chariot wheels, O Lord!" and raising his hands said, "Let me say to my dear friend, Albeit in how sweet is thy love and presence! no more shall I open portay." Referring to our late Friend, Henry Hull, he said, "He testified on his death bed, 'I have not followed cunningly devised fables,'" and added, "many others have borne the same testimony, and so can I also."

The foregoing is a very small part of what dropt from his lips, of like import, during his illness, he having sent a message to the writer of this notice, that his views and feelings were in union with those expressed on the same subject by that dignified minister of the Gospel, the late William Finner, who said, "I am nothing, and all I desire may be said of me, and that I love the brethren that I have sinned my course, and have kept the faith."

On the 16th of First month, 1862, MARY BALBY, relict of Henry Balby, in the sixty-fifth year of her age, a member of Somerset Monthly Meeting of Friends, in Philadelphia, died, and through the intercession of this dear Friend, we desire to add our testimony to the unchanging power and efficacy of that Divine Grace, which she had chosen for a guide, through many years of probation, and shone with increasing lustre, as the years of death darkened over her closing pilgrimage. During her last illness, she expressed a strong desire to see her lot, yet, through all, her mind appeared solemnly centred on the Rock of ages, and some of those who were near her presence that trying season, can bear witness to the sweet presence of the Comforter around her dying bed. From early life she had endeavoured to stand on the blessed Mother's side, and through the certainties which she has since befallen our beloved Society, His sustaining power enabled her to stand faithful in her allegiance. For a considerable time previous to her death, her mind seemed to be gradually withdrawing from subjection to the world; and in the last moments of her life, she drew near the "rest prepared," thus giving an encouraging illustration of the language of Holy writ, "The path of the just shined more and more unto the perfect day."

On the 26th of First month, 1862, RANNEA JOXBY, in the seventy-third year of her age, a member of Woodbury Monthly Meeting of Friends, New Jersey.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, FIFTH MONTH 3, 1862.

NO. 35.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS.

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From The Popular Science Review.

## Artificial Light.

Up to the close of the last century the best contrivances in use for obtaining artificial light were limited to oil lamps of very imperfect and uneconomical construction, and candles of wax and tallow. Blazing torches of pine, ends of rope soaked with tar, and occasional bonfires of tar-barrels, might serve for special occasions, but could hardly be looked upon as available for ordinary purposes, and other better contrivances were unknown. In warm countries, where tolerably pure vegetable oils are easily and cheaply obtained, where the winter nights are not very long, and where, therefore, little artificial light is needed, a piece of twisted cotton or yarn partly resting in a saucer of oil serves all purposes. Lamps of the most elegant form, but of this very simple construction, were in all former times, and are still, used by all classes in Greece and Italy. Such lamps date back to the remotest antiquity, and a sea-shell has no doubt served as their original model. The jar of oil on a shelf always at hand serves indifferently for feeding the lamp and for cooking, and indeed many travellers have recorded, though by no means with satisfaction, that they have seen the very lamp itself, burning in the chimney, taken down from its place in order that a part of its rich contents might be poured out to assist in some savory fry going on below.

In cooler climates, where the winter nights are much longer, and where oil readily congeals, lamps were long ago replaced by candles. At first rushes, and afterwards cotton wicks, were dipped in hard animal fat or tallow in a molten state, and when cool were ready for use. A better kind of candles was made after a time, by pouring purified tallow into moulds in which twisted wicks were previously fixed; and hence the division of tallow candles into moulds and dips. Both required constant snuffing, and if long neglected were dangerous, owing to the unburnt carbon which collected at the top of the wick, and at last fell off in a state of red-heat.

Candles manufactured from beeswax, purified and bleached by long exposure to the sun and by some chemical process, served as an admirable but very costly substitute for tallow; but no large quantity could ever have been obtained, and they could never enter into general use.

The sixty years that have passed since the beginning of this century, have witnessed marvellous

improvements in almost every article of domestic use, and so much has been added to the stock of common comforts, rendering many of the luxuries of former times quite indispensable, that the habits and tastes of all classes have become affected to an extent little thought of. In this matter of illumination a return to the former condition would involve so complete a subversion of our established customs as to be almost impossible; and this will be evident when we briefly describe the existing sources of artificial light and the present condition of manufacture in respect to them.

Candles are still used to an enormous extent; fifty thousand tons' weight of tallow have been entered for home consumption in England each year during the last quarter of a century; but candles, originally made of tallow alone, although still manufactured of unpurified tallow, are to a great extent becoming replaced by those composed of a substance derived from various animal and vegetable oils. But while the consumption of tallow has remained nearly stationary, the population itself, and the quantity of artificial light of all kinds consumed by each family, have been increasing with great rapidity. Wax, like tallow, has continued to be imported, and is still used as before; and another curious substance—spermaceti—long since made into candles, has never been a common material. Unimproved lamps for burning common oils are also still in very extensive use; but, in addition to all these, many new sources of artificial light have been discovered; one of which, more than all others, has helped to turn night into day. We allude, of course, to the common coal gas, which is not only obtained at once by simple distillation from coal, but the manufacture of which has led to so many and such extraordinary results of other kinds, that it might well be regarded as one of the greatest and most useful discoveries of modern times.

The contrivances now commonly adopted for obtaining artificial light may be grouped under the following heads: *First*, There are tallow candles, which are still largely employed. *Secondly*, Stearine, or composite, and, more recently, paraffine candles, which will ultimately, no doubt, replace tallow in domestic use. *Thirdly*, Wax and spermaceti candles, scarcely altered from their old construction, and which continue to be used for certain purposes, although the consumption is not increasing. *Fourthly*, Animal and vegetable oils used in lamps, either of the old kind or of improved construction. *Fifthly*, Certain mineral oils, such as naphtha, paraffine, and other similar substances, used also in lamps, and replacing oil to some extent. *Sixthly*, Coal gas, obtained by the destructive distillation of all the varieties of coal; and oil gas, obtained by the distillation of oils. There are also two contrivances, one involving combustion in an oxygen atmosphere, and the other making use of the electric spark, which are both remarkable for the intensity of the light produced, but which are at present too costly and unmanageable to enter into general use.

Tallow candles have so unpleasant an odor, they are so apt to gutter or melt more rapidly than

the wick can consume the tallow, they so generally smother and choke the wick and require its constant removal by snuffers, and are so little economical in the most important sense of the term, that they will probably ultimately disappear from use. They are, however, sold at so low a price, and possess so many apparent conveniences, that among the lower classes they must long retain their hold.

The first improvement in the material used for candles dates as far back as 1799, when a person named William Bolts took out a patent, by which he proposed to squeeze the tallow after melting, and while in the act of cooling from a melted state. The result of this squeezing would be to separate the tallow in some measure into its component parts; for, although it was not then known, chemists have since discovered that most animal and vegetable fats and oils are composed of at least two distinct solid bodies, one liquid oily substance, and one solid substance. Of all these, one only of the solid bodies is that which is really valuable for illuminating purposes. It is called *stearine*, and is the really valuable material in the candle. The syrupy substance above alluded to is now familiarly known and extensively used under the name *glycerine*, and as the reader may easily satisfy himself, it gives hardly any light when burnt with a wick. The effect of squeezing melted tallow is to remove a large part of this peculiar substance. The same process was afterwards effected much more completely by chemical action, and is now managed by blowing steam at a high temperature through the melted fat or natural oil.

A series of brilliant experiments by two eminent French chemists, Chevreul and Gay-Lussac, had so long ago as in 1825 cleared up the whole subject of the composition of fatty matters, their relative value for illumination, and the various methods by which their decomposition could be effected on a large scale; but it is only within a very few years that it has been found possible to practise these methods economically, and separate the *stearine*, which is the material best adapted for making candles, from the other solid contents of tallow and from a peculiar thick oil, which is very valuable for lubricating machinery, and may also be used for burning.

Some of the vegetable oils, especially those from various species of the palm-tree, are now extensively used in the manufacture of composite candles. For this purpose the fatty acids of one kind of palm require to be mixed with stearine obtained from another kind of palm oil.

The annoyance of having to snuff candles has been removed by plaiting and twisting the wicks after dipping the cotton in a solution of borax. The way in which this contrivance acts is simple enough. It depends on the fact that flame is a mere shell. Owing to there being no supply of oxygen gas within, a charring of the wick there takes place, as a natural consequence of exposure to the heat, but the carbon remains. When, however, the cotton has been previously twisted, the tension of the threads obliges the wick to curl outwards towards the shell of flame, where it becomes completely burned, while the earthy impurities of the

cotton form a glass with the borax and are thus got rid of without mixing with the fatty acids, which are apt to splutter if not protected in this manner.

Candles made of the stearine of any common fat, whether animal or vegetable, can now be prepared so as to imitate and almost rival wax and spermaceti. The latter substance may ultimately be superseded altogether by chemical contrivances; but it is not likely that wax will ever be excluded from our drawing-rooms. The bleaching of wax and its preparation for use in candles have scarcely been altered or simplified, except by some trifling change introduced in the structure of the wick. The material which will ultimately take the place of wax is paraffine, already largely used, but not yet cheap enough to command the market.

Oil lamps have improved marvellously of late years. The ingenious contrivance bearing the name of its French inventor, M. Carcel, was a great step in the right direction. In this lamp the oil is raised by clock-work, so as continually to overflow at the bottom of the burning wick, which is thus never charred. The wick is circular, and the powerful draught of air is made to pass both within and without it by the use of a high glass chimney. Almost any kind of oil burns in it with great splendour, and for a long time, without altering the wick. In this, and a number of contrivances known by different names, the principle involved is that of producing as nearly perfect combustion as possible of the oil by carrying a column of air rapidly into the interior of a thin circular sheet of flame. In carrying out the principle thus enunciated, a great and important stride was made towards a good cheap light, and most of the modern alterations have been adaptations, applied with more or less ingenuity and taste.

(To be continued.)

*The Love of God.*—In brotherly love and heavenly fear, I do exhort you all, as dear children, to walk together in truth and love; exhorting one another, and building up one another in the holy faith, which works by love; that ye may be a family of love: for true love is a mark whereby ye are known to be children born from above, as Christ formerly said, "Hereby shall all men know that ye are my disciples if ye love one another."—This is the end and sum and substance of all that can be spoken or written. Love fulfils the law—it envies not, it thinks no evil; love doth not render evil for evil, but on the contrary love renders good for evil; love keeps the commandments of God; and if love be wanting, all preaching, praying, and all other duties and performances whatsoever are all in vain; and the services and sacrifices of such are not acceptable unto God, being ignorant of God; for that loves not, knoweth not God, for God is love. Love is a precious jewel, not to be valued with gold, nor any other earthly treasure; and where love dwells there needs few instructions; for love performs all things freely without compulsion: blessed are they who have the love of God dwelling in them.—*Alexander Parker.*

For "The Friend."

Will the Editors of "The Friend" find a place in its columns for the following extract from the Journal of John Woolman.

"After a few weeks it pleased the Lord to visit me with a pleurisy; and after I had lain a few days, and felt the disorder very grievous, I was thoughtful how it might end.

"I had of late, through various exercises, been much weaned from the pleasant things of this life; and I now thought it was the Lord's will to put an end to my labours, and graciously receive me

into the arms of his mercy, death would be acceptable to me; but if it was his will further to refine me under affliction, and make me in any degree useful in his church, I desired not to die. I may with thankfulness say, that in this case I felt singleness wrought in me, and had no inclination to send for a doctor; believing if it was the Lord's will, through outward means to raise me up, some sympathizing Friends would be sent to minister to me; who were accordingly. But though I was carefully attended, yet the disorder was at times so heavy, that I had no thoughts of recovery. One night in particular, my bodily distress was great; my feet grew cold, and cold increased up my legs toward my body, and at that time I had no inclination to ask my nurse to apply any thing warm to my feet, expecting my end was near. After I had lain nearly ten hours in this condition, I closed my eyes, thinking whether I might now be delivered out of the body; but in these awful moments my mind was lively opened to behold the church, and strong engagements were begotten in me, for the everlasting well-being of my fellow-creatures; and I felt in the spring of pure love, that I might remain some time longer in the body, in filling up according to my measure, that which remains of the afflictions of Christ, and in labouring for the good of the church. After this I requested my nurse to apply warmth to my feet, and I revived. The next night feeling a weighty exercise of spirit, and having a solid Friend sitting up with me, I requested him to write what I said; which he did, as follows:

"4th day of the first month, 1770, about five o'clock in the morning,—I have seen in the light of the Lord, that the day is approaching, when the sun that is the most wise in human policy, shall be the greatest fool; and the arm that is mightiest to suppress injustice, shall be broken to pieces. The enemies of righteousness shall make a terrible rout; and shall mightily torment one another; for He that is omnipotent is rising up to judgment; and will plead the cause of the oppressed; and he commanded me to open the vision."

"Near a week after this, feeling my mind lively opened, I sent for a neighbour, who at my request, wrote as follows:

"The place of prayer is a precious habitation; for I now saw that the prayers of the saints were precious incense; and a trumpet was given me, that I might sound forth this language, that the children might hear it, and be invited to gather to this precious habitation, where the prayers of the saint, as precious incense, arise up before the throne of God and the Lord. I saw this habitation to be safe; to be inwardly quiet, when there were great stirrings and commotions in the world."

"Prayer at this day, in pure resignation, is a precious place: the trumpet is sounded, the call goes forth to the church, that she gather to the place of pure inward prayer; and her habitation is safe."

*Modern Discoveries.*—Bayard Taylor, the celebrated traveller, thus sums up the results of modern discoveries:

"Within the last twenty-five years, all the principal features of the geography of our own vast interior regions have been accurately determined; the great fields of Central Asia have been traversed in various directions, from B-khara and Oxus to the Chinese wall; the half-known river systems of South America have been explored and surveyed; the icy continent around the Southern pole has been discovered; the Northwest Passage—the *ignis fatuus* of nearly two centuries—is at last found; the Dead Sea is stripped of its fabulous terrors;

the source of the Niger is no longer a myth, and the sublime secret of the Nile is almost wrested from his keeping; the Mountains of the Moon, sought for 2000 years, have been beheld by the Caucasian eye; an English steamer has ascended the Chabba to the frontiers of the kingdom of Bornoe; Leichardt and Stuart have penetrated the wilderness of Australia; the Russians have descended from Irkoutk to the mouth of the Amoor; the antiquated walls of Chinese prejudice have been cracked, and are at last tumbling down, and the canvass screens that surround Japan have been cut by the sharp edge of American enterprise. Such are the principal results of modern exploration. What quarter of a century since the form of the earth, and the boundaries of its land and water were known, can exhibit such a list of achievements?"

Selected for "The Friend."

Austerity doth not become us, either in doctrine, manner or dealing. We ourselves, live and are saved by grace, let us live like them that are gracious, that others may partake with us of grace.

No man need be afraid to allow Jesus Christ to be the chief in the world, and his wife, his church, to enjoy her purchased privileges; for these make no infringement upon any man's liberties, as they are without envy, and without covetousness.

God sends his love-tokens to his church in two ways; sometimes by her friends, sometimes by her enemies; sometimes roughly, sometimes smoothly. Pharaoh handed them roughly; the king of Babylon handed them roughly; but when they come by the Holy Ghost, they come sweetly and smoothly.

It is hard to have all things according to rule in the day of the church's affliction. But when the church has rest and quietness, praising God, she conceives and brings forth counsellors and good government and rule among her members. David, a man of blood, could not build the house to the Lord, which peaceable Solomon, that man of rest, afterwards did.

From the Leisure Hour.

Mahogany.

(Continued from page 273.)

The main road, like the first track of the huntsman, has to be cut through the underwood with the machete; it must be wide enough to admit of the passage of the timber-wain or truck; but it is done marvellously quick, a single hand making progress at the rate of a hundred yards a day. But when all the underwood is cut away and removed, the road is not half made: there still remain on the track a number of trees which are of no value in the market, and which, standing in the way have to be got rid of. Some of these are so hard as to turn the edge of the axe, and will succumb to nothing short of fire. If it be necessary to build a bridge—and sometimes many strong bridges are needed, either to cross brooks or chasms—this waste timber is available for the purpose. After the road has been cleared of the wood, it has finally to be levelled for the passage of the wains; and this labour is even more trying and wearisome than the clearing. Further, rarely or ever happens that a single road is sufficient; branch roads have generally to be made in different directions, and occasionally a mile or two will be levelled for the sake of a single track.

Supposing all the requisite road making to be finished by the middle of December, the captain of the gang will think himself well off. By this time the loppers have denuded the fallen trees of their waste, and the huge trunks and branches lie ready for further operations. There is still plenty

of work to be done before the logs are ready to be carried. As it would be impossible to transport them over such uneven ground in a round form, the extended road being the worst imaginable causeway, they have all first to be squared: this is done solely by the axe; and where the logs are numerous, it may be readily conceived that the work is long and tedious. We should state that before squaring they are cross-cut into lengths, not according to length, but according to weight: the log being, that each log or length should form a load for the wain, which is drawn by seven pairs of oxen. This cross-cutting, squaring, and trimming, with the final leveling of the road, occupies the gang up to the end of March. By this time, and not before, the ground has been dried by the sun to a sufficient degree of hardness for the transport, which generally begins the first week in April, this is by far the most exciting and the most picturesque part of the whole business. The gang is again divided into portions—the loaders, the drivers, and the men who cut food for the cattle. The loaders erect a cabin for their accommodation among the logs, and remain on the spot while the others are journeying backwards and forward. Owing to the fierce heat of the sun, the cattle cannot be got to work in the day-time, and the transport has consequently to be effected in the night.

About sundown the oxen are harnessed, and the teams set forth one after another; they may have from six to a dozen miles to travel, and they so time their departure that the first may arrive at the spot about an hour before midnight. The loaders, who have been sleeping since morning, are aroused by the shouts and whips of the drivers, and use all diligence in getting the logs on the inclined plane with levers. At this they are employed for some hours, the trucks setting forth on their downward journey in sufficient time to arrive at the river before the heat of the day begins. The chief part of the route towards the river has to be performed during the night, by the light of torches, and presents one of the most picturesque spectacles afforded by the industrial labours of man. The glare of the torches gleaming on the pale foliage and on the swart spectral forms of the half-naked men; or the crowd of struggling cattle, the cracking of long whips, the crashing of wheels through the withered bush, the clouds of dust and resinous smoke, amid which, under a quivering lurid light, men, oxen, and the huge unwieldy logs are hurrying and plunging forward with incessant shouts and cries—all together make up a picture whose parallel is hardly found elsewhere.

When the trucks or wains arrive at the river, the logs are severally marked with the owner's brand, and then are tumbled into the stream, which at this period is probably not deep enough to float them. The loading and carrying goes on until about the end of May, at which time, with a punctuality that rarely fails, down come the periodical rains, and in an hour or two the hard roads, transformed into deep sloughs of mud, are no longer practicable, and all the carrying throughout the forest ceases at once. The heavy flood continues to pour down without intermission until the middle of June or thereabouts, by which time this thirsty river has swollen to a prodigious volume, and the logs are afloat. When all is ready, they are loosed from their moorings, and the whole gang, getting on board canoes, accompany them down the stream, freeing them from any obstacles they may meet in their way, and guiding them to some convenient spot in the open water, where they are stopped by a boom stretched across the river. Here, perhaps, will be congregated in one broad

floating mass, the harvests of twenty different mahogany gangs, all mingled together. The work of separation is, however, easy, by reason of the distinctive brands; and, now each gang, collecting their own logs, bind them together in large rafts, and pilot them to the wharves of the several proprietors. Here they are craned out of the water on to the quays, and as they have suffered much in their violent passage down—by dashing against rocks and by collision with each other—they are again trimmed with the axe, and reduced to a proper shape for the market. The buyers are soon on the spot, and if the demand is brisk, the logs so lately the monarchs of the forest are confined in the hold of a ship, and on their way to Europe, where we need not follow them, as we all know their ultimate destiny.

It will be seen that the above species of industry must be necessarily speculative and expensive, and cannot be carried on without capital. It is calculated that the cost of a mahogany-cutting expedition amounts to about fourscore pounds per man employed, including all expenses of plant, cattle, &c. The profits, however, must be liberal, looking to the fact that there is generally a ready sale for the wood, and that the trees yield a large quantity. A single log has been known to weigh fifteen tons, and to yield over five thousand superficial feet. Lately the preference for walnut wood in articles of furniture has told injuriously on the value of the finer sorts of mahogany; this, however, is a mere freak of fashion, and like other fashions, may be destined to but a brief existence.

*Care of Cattle in Switzerland.*—If there is one thing in which the Argovian takes particular pride, and in which he particularly excels, it is in the care of his cattle. They are elephants in size, and their glossy hides betoken some peculiar art on the part of their masters. Not a particle of dust or straw is allowed to cling to them, and they are combed and washed as only horses are elsewhere, not with a *curry-comb*, but with old cards, which, being finer and softer, are more agreeable to the animal, and improve the fineness of the hair. This receives an additional lustre by being rubbed with old flannel. They actually shine; and the gentle creatures have an evident consciousness of their beauty, for they are careful not to soil their ashly gray and chestnut robes, by lying in the mud when allowed to take a walk. Animals can acquire, if they have not by nature, a fine sensibility, and when they have once experienced the pleasant sensation of cleanliness, learn to take care of themselves. Not only do they exercise this care for the person of the animal, but are at the pains of removing every feather and unpalatable substance from their food; and the water-troughs from which they drink are kept as clean as if human beings resorted to them. If any body doubts the efficacy of these means, let him come and see not only how large, but how intelligent these dumb animals look; how they watch every motion of those who talk to them, and listen to all they say. What an affectionate moan they will utter, to welcome the milkers, who are always men, as they say, "women tickle the cow, and never take all the milk from the udders, so that they give less and less." It is said of them that an Argovian will send for the doctor for his cow a great deal quicker than for his wife; but we did not see any evidence that he was not sufficiently attentive to both.—*Cottages of the Alps.*

*Why the Lord Afflicteth his Little Ones.*—The Lord hath given me an understanding, and hath let me see many years ago, but more especially of

late, why he afflicted his little ones. It is in order to drive them nearer home to himself; for the Lord is about to try his people. But dear Friends, be not discouraged; for though you may go through the fire, and through the water, the Lord's arm is underneath. My soul is a living witness of it, and I speak it for your encouragement, for Jesus carries his hands in his arms, and leads them along in the low valley, in green pastures of life, and to lie down as at noon-day where none shall make them afraid. The Lord is faithful to all those that trust in him. Therefore be you faithful and not wavering; for those that waver are like the waves of the sea. There is a day coming, and will come, that shall try the foundations of all, young and old; and those that are not established on the rock shall be blown away; but the Lord is raising up some that shall stand as iron pillars for his truth, and shall not value their lives unto the death.—*Richard Ransome.*

*The Light of Christ, and the end of His coming in the flesh.*—Blessed be the Lord, who hath revealed and bestowed on his sons and daughters, in these latter days, that light of his Holy Spirit, which searcheth the most inward parts, discovering everything that is of a contrary nature to itself, turning and separating the mind therefrom, and bringing the mind, heart, soul, and spirit under that which is a cross and yoke to it, and hath power from God to crucify and subdue it; that so life and immortality may be brought to light, and reign in the heart; and death and uncleanness be swallowed up in victory. For this is the intent of the gospel, and of Christ's appearance, even to destroy sin, and bring up the holy seal, and establish the laws of the new covenant, the law of love, the law of life, righteousness and holiness, in which the renewed should walk before the Lord all their days.

And God forbid, but that the gospel of our Lord Jesus Christ, (which is the power of God unto salvation,) should attain its end, and the will of God be fulfilled, which is the sanctification of his people in soul, body, and spirit; that they may be wholly leavened with the leaven of his kingdom, and become a new lump to him.

The Lord bring this to pass in the hearts of the children of men, bringing down all religions which have not the true virtue in them; and propagate and establish the religion more and more, which stands in the evidence, demonstration, virtue and power of his own Spirit, that men may be redeemed out of, and preserved from deceit in matters of religion, wherein the eternal condition of their souls is so deeply concerned.—*Isaac Penington. Penington's Works, vol. 2, p. 531.*

*Sprouting Sorghum Seed before Planting.*—A subscriber of the *Agriculturist* in Winnebago county, Illinois, writes that a neighbour, who is an experienced cultivator of the sorghum sugar cane, recommends to "soak the seed until it sprouts, before putting it in the ground. If this be done, it comes up quickly, and gets the start of weeds." [This, if properly done, may be a useful plan.] The sorghum seed, when over dry, starts rather slowly, and the young shoots, which resemble those of oats, make but a feeble growth for some time, and on this account, are more difficult to hoe and weed out than corn. If previously soaked, as above recommended, the seed should be kept only moist, and not in water. If not spread out somewhat thin, it would heat; and the sprouting should only be carried to the swelling of the seed, and just breaking of the shell, for there would be danger of injuring the germ in sowing; if a lowed to start out beyond the shell.]

For "The Friend.

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

ANN FOULKE.

Ann, a daughter of John Williams and Ann, his wife, was born in Pembrokeshire, in Wales, Eleventh month 6th, 1693. Her parents, who were under conviction of the principles of Friends, removed to Pennsylvania with their family in 1700, and settling within the verge of Gwynedd Meeting, were soon after received into membership amongst Friends. They gave each of their children a sober carefully guarded education, and Ann being religiously inclined, from early youth, profited thereby. In the year 1713, she was married to Hugh Foulke, a religious man, who in a few years became an acceptable minister of the Gospel, and with whom she lived in great fellowship for many years. They laboured to fulfil all their religious, domestic and social duties, and were especially concerned to bring up their children in the nurture and admonition of the Lord. Ann grew in grace, and became a useful member of the Church militant. In the year 1727, a gift in the ministry of the Gospel was conferred upon her, in which she endeavoured to be faithful, and her friends say "it was lively and edifying."

In the year 1730, Hugh Foulke removed with his family to Richland, of the meeting at which place Ann remained a serviceable member during her life. She was often weightily engaged with other Friends in the religious service of visiting families, and in works of charity and benevolence, she was eminently distinguished among her Friends and neighbours of every denomination, which rendered her generally esteemed and beloved.

She was a truly affectionate wife, a tender and careful mother, whose principal concern for her children was to train them up in the way of truth and godliness, and her chief pleasure, to see them walk in the paths of virtue and piety. Her religious concern on account of mankind generally, continued with fervent and unabated zeal to the close of her advanced life.

In the year 1760 she lost her beloved husband, and from this time to her close, she continued walking in the Heavenly way, filling up her measure of duty with alacrity, but looking forward earnestly and hopefully to the time of her release from her earthly cares and exercises. Before her end came, she wrote a paper to leave behind her, in which she recounts the tender dealings and merciful dispensations of God to herself through her long life, and then, after a tribute of thanksgiving to the Lord her God, for the unmerited love and goodness he had shown her, she thus addresses her children.

"Now my dear children, my earnest desire is, that you seek the Lord God of your parents, and fear and love him above all things. When you make mention of his Holy name, let it be with awful reverence. Breathe to him that he may give you his Holy Spirit to be your leader in the way of uprightness. Blessed be the name of our most merciful God, he takes care of his depending children, who have no might of their own, but trust in Him who never fails those who love and are willing to serve him according to the ability received. I earnestly desire that you may be quick to come up in the way of your duty before God, and as good examples to your children. This is your incumbent duty. I pray the God of Heaven, if he be his blessed will, so to enable you to answer the end of your creation, and to honour and glorify his great and worthy name forever."

She was religiously concerned to attend meet-

ings for worship and discipline, and found it her place to encourage others to that commendable practice and necessary duty, but during the last year of her life she was mostly confined at home, through weakness of body. She patiently awaited her change, being fully sensible of its near approach. The pains and weaknesses attending her dissolution she bore "with remarkable patience, resignation and meekness, and in a lamb-like frame of spirit she departed this life on the tenth day of the Ninth month, 1773, in the eightieth year of her age."

RACHEL CATHRALL.

Rachel Hearon was born at Shields, New Castle upon Tyne, in England, of honest parents, professing Truth, about the beginning of the last century. She came to Pennsylvania when about twenty-two years of age. After a time she applied for a certificate of membership to New Castle Monthly Meeting, who in granting it, certify that her conduct had been inoffensive among them, and conclude with "her preservation we much desire, and your care over her will be very acceptable."

She was preserved in much consistency of behaviour, manifesting that the grace of God is sufficient to uphold the trusting, obedient christian, through every temptation. In the Twelfth month, 1730, she was married in Philadelphia to Edward Cathrall, a young man of an exemplary religious character, to whom she proved a faithful wife, of a meek and loving disposition. With the increase of her family, cares multiplied upon her, but "she was careful not to suffer them to prevent her from attending on the several duties of a truly christian life, particularly that of attending meetings for religious worship and for discipline," she was punctual to the hour appointed, and often advised her children to go to the week-day meeting, telling them that a blessing had, and ever would accompany such a practice. She frequently devoted the close of the day for retirement, which she found of advantage to her spiritual progress. In all things she was conscientiously concerned to stand faithful to her duty, although she was naturally diffident, and much afraid of appearing more in show than she was in substance.

In the year 1756, Edward Cathrall removed with his family to Burlington. In the Monthly Meeting held at that place she was an acceptable overseer, and an elder for several years. She was an affectionate wife, ministering as she could to her husband's comfort, a tender mother, exercising parental authority with love and gentleness. She was a sympathizing friend, a very kind neighbour, and attentive at all times to minister to the wants of the necessitous, and to the comfort of the afflicted. She delighted to visit such. Her innocent cheerfulness and many virtues caused her to be much beloved, and her example shed a beneficial influence on those around her.

On the 24th of the Eighth month, 1773, she was taken ill. The disease increased upon her until the 5th of the Ninth month, on which day declining to take some medicine offered, she said, "I have thought that medicine would avail very little, yet in compliance with your desire, I have submitted to take it. I have believed for sometime my stay here would be very short." By the sweetness of spirit she manifested, it seemed as though she was permitted to have a foretaste of that rest which is glorious. She often fervently petitioned that she might be preserved in patience through her trying disorder. She frequently said, "my pain is very sharp." Her understanding continued clear to the last. On the evening before her death, her daughter inquired if there was any thing particular on her mind to say to her, she re-

plied "not to night." Her daughter then said another day might not be granted her, she then said with great apparent composure, "If I die, I die in the Lord! Happy will my change be." Her last intelligible utterance was, "Oh, thou preserver of men, keep me through this hour of temptation." Her decease took place Ninth month 12th, 1773.

THOMAS BUZYBY.

Thomas, the son of Nicholas and Mary Buzby, was born in the province of Pennsylvania, in or about the year 1698. When he was quite young, his parents removed to New Jersey, and settled within the limits of Rancoees Meeting, a branch of Burlington Monthly Meeting. He appears to have submitted early in life to the visitations of Grace, and his friends say "when he attained to riper years, and came to have the care of a family, his steady conduct and circumspect walking, occasioned him to be esteemed by most who knew him." He was both overseer and elder in the Church, "and was truly useful in both stations." He appears to have been diligent in filling up his measure of duty, in religious and civil society, so that he passed along through life, useful amongst all with whom he was brought into connection, loving and beloved by those with whom he was intimately known. In a quiet frame of mind, he departed this life, Tenth month 23rd, 1773, being about seventy-five years of age.

*A Living Frog found in Coal.*—The following, says the Worcestershire (England) Chronicle, is an extract from a letter received on a recent Wednesday in this city, by John Russell, Esq., from the manager of his Tyr Nicholas Colliery, Cwm Tybery, near Newport:—"Our men in the heading in the rock vein coal yesterday, (March 10), in a fall of coal in the face of the heading, found in a hole in the pricking, in the top of the coal, and in the nine inch bed of coal, a live frog. The hole was not more than three and a half inches in diameter, and this found in the soft boling. It began moving about as soon as it was released, but seems larger and more lively to-day. Now, this is two hundred yards below the surface where this little thing was found, and I do not suppose any one can form an idea how long it must have been there." John Russell is going to send to the great exhibition a block of coal, between seven and eight feet long, selecting the piece in which the frog was found, the *locus in quo* being exactly in the centre, and the block will be so cut out that the frog and its strange domicile will be clearly shown in front.

The Lady and The Robber.

In a large, lone house, situated in the south of England, there once lived a lady and her two maid-servants. They were away from any human habitation, but they seemed to have felt no fear, and to have dwelt there peacefully and happily. It was the lady's custom to go round the house with her maids every evening, to see that all the windows and doors were properly secured.

One night she had accompanied them as usual, and ascertained that all was safe. They left her in the passage, close to her room, and then went to their own, which was quite at the other side of the house. As the lady opened her door she distinctly saw a man underneath her bed. What could she do? Her servants were far away, and could not help her if she screamed for help; and even if they had come to her assistance, those three weak women were no match for a desperate house-breaker. How, then, did she act? She trusted in God. Quietly she closed the door, and locked it on the inside,

which she was always in the habit of doing. She then leisurely brushed her hair, and putting on her gown, she took her Bible and sat down to read. She read aloud, and chose a chapter which had special reference to God's watchfulness over us, and constant care of us by night and by day, (probably the ninety-first Psalm.) When it was finished, she knelt and prayed at great length, still uttering her words aloud, particularly commending herself and servants to God's protection, and dwelling upon their utter helplessness and dependence upon him to preserve them from all dangers.

At last she rose from her knees, put out her candle, and went to bed; but she did not sleep. After a few minutes she was conscious the man was standing by her bedside. He addressed her, and told her not to be alarmed.

"I came here," said he, "to rob you; but after the words you have read, and the prayer you have uttered, no power on earth could induce me to hurt you, or touch a thing in your house. But you must remain perfectly quiet, and not attempt to interfere with me. I shall now give a signal to my companions, which they will understand, and then they will go away, and you may sleep in peace, for I give you my solemn word that no one shall harm you, and not the smallest thing belonging to you shall be disturbed."

He then went to the window, opened it, and whistled softly. Returning to the lady's bedside, who had not spoken or moved, he said:—

"Now I am going. Your prayer has been heard, and no harm will befall you."

He left the room, and soon all was quiet, and the lady fell asleep, still upheld by that calm and beautiful faith and trust.

When the morning dawned and she awoke, we may feel sure that she poured out her thanksgiving and praise to Him who had "defended" her under "his wings," and "kept" her "safe under his feathers," so that she was not afraid of any terror by night.

The man proved true to his word, and not a thing in her house was taken. Oh shall we not hope that his heart was changed from that day forth, and that he forsook his evil courses, and cried to that Saviour "who came to seek and to save that which was lost," and, even on the cross, did not reject the penitent thief!

From this true story let us learn to put our whole trust and confidence in God. This lady's courage was indeed wonderful, but "the Lord was her defence upon her right hand," and with him all things were possible.—*Monthly Packet for October.*

We have received an extract from a letter fully corroborating the remarkable anecdote of "The Lady and the Robber," in our October number, and adding some facts that enhance the wonder and mystery of her escape. We quote the words of the letter:—

"In the first place, the robber told her if she had given the slightest alarm and token of resistance, he was fully determined to murder her; so that it was really God's guidance that told her to follow the course she did. Then, before he went away, he said, 'I never heard such words before; I must have the book you read out of; and carried off the Bible, willingly enough given, you may be sure. This happened many years ago, and only comparatively recently did the lady hear any more of him. She was attending a religious meeting in Yorkshire, where, after several noted clergymen and others had spoken, a man arose, stating that he was employed as one of the book-bawlers of the Society, and told the story of the midnight adventure, as a testimony to the wonderful power of the Word of God. He concluded with, 'I am that

man.' The lady arose from her seat in the hall, and said quietly, 'It is all quite true; I am the lady,' and sat down again."—*Monthly Packet for December.*

From "The British Friend."

Early Friends and What They Were.

To the Editor of The British Friend.

Dear Friend,—It may not be inappropriate at this present to renew an acquaintance with the views and practice of our early Friends, as illustrated by their writings and character; and in asking thee to permit me to occupy a portion of *The British Friend* from time to time in reference thereto, I may, in the first place, observe, that my remarks on the "Peculiarities of Friends," as they are called, were mostly written in the intervals of business, or in the course of the evening, when the labours of the day had closed, and were consequent on a train of thought and reflection on the present state of our society, and being committed to paper, that which was the employment of leisure hours only, assumed a form, which, with thy permission, I shall presume to place before thy readers.

The more closely we consider the doctrines and practice of early Friends as a religious body, the more we shall perceive their beauty and simplicity, and their entire accordance with the truth as it is in Jesus. They are principles which have now stood the test of time and of critical examination; they have been subjected to attacks as fierce as the greatest bigot could desire; and even within our own borders, have been assailed in a manner that has shook the society to its centre, yet being based on the immutable Rock of ages, have they come out of the ordeal clear and full of vigour, impervious alike to the onslaught of open foes, or the more insidious attacks of concealed enemies.

In thus endeavouring to place before the readers of *The British Friend* the results of my own research into the character and practice of our early Friends, I am far from intending to draw any contrast between the then state of the society and its present. My sole object is to let our ancient Friends speak for themselves, and to leave the result. No one can fail to perceive that the principles which they enunciated are now extensively diffused in the world, and largely incorporated into the constituent character of other religious bodies, and that these principles are steadily gaining ground. Still and silent in their effects, they are rolling on like a deep and mighty stream—majestic and noble in its course—noiseless, it may be, yet assuredly as its waters wind their resistless way to the vast and fathomless ocean, and bear before them all which oppose their course, so sure do I believe that the spirituality of the gospel, as upheld by the Society of Friends in all its pristine dignity, will proceed and bear down before it all systems and creeds, until in the beauty of its simplicity, the grandeur of its originality, in the fulness of its spirituality, it shall stand triumphant alone, and the language of our Divine Redeemer be acknowledged and fulfilled, that "God is a spirit; and they that worship him, must worship him in spirit and in truth;" "for whether there be prophecies, they shall fail; whether there be tongues, they shall cease; whether there be knowledge, it shall vanish away; for we know in part, and we prophesy in part; but when that which is perfect is come, then that which is in part shall be done away." Yes! systems and ceremonies shall be obliterated, and man shall bow before the Most High in silent adoration. That the principles of the society have taken deep root beyond our own borders, is almost everywhere evident, and that

they will more and more develop themselves is, I believe, equally true: everywhere are witnesses to the truth of this continually springing up; we constantly see public acknowledgment made in the legislature and the courts of justice in regard to oaths and ecclesiastical demands; in the various meetings and gatherings of men in reference to war, peace, the inviolability of human life, and the spirituality of the gospel, &c.; in private life as to ordinances, the pomp and parade of funerals, mourning habits, and the like. I would not lay too much stress on these evidences, but as surely as the opening bud bursts into bloom by the cheering rays of heat and light, so sure are these the precursors of that day, when man shall no longer teach his fellow-man, saying, "Know thou the Lord," for all shall know him for themselves; when the fulfilment of that prophecy shall be seen, "all thy children shall be taught of the Lord, and great shall be the peace of thy children." How careful should we then be to do nothing which shall tend to lower that standard of pure unmingled Christianity which our forefathers in a degenerate age, amid privations unexampled, cruelties unsurpassed, and faithfulness and constancy unequalled, planted. Much has been said of late of the numerical decrease of the society in this country, more I believe than is warranted by facts, yet it must be admitted that there has not been that onward progress which the Truth, and that inherent value of the principles of the society under the Divine blessing, would have produced, which, as a religious body, should have been the case, and which the rapid progress of the society in its rise would have led us to expect. Painful as is this belief, and lenient as we may wish to be in our remarks upon it, it is too self-evident that there is something wanting in the vitality of the body. Of late years many remedies have been suggested. The reading more extensively of the writings of Friends, the critical study of the Scriptures, the relaxation in the rules of discipline, the more intimate mingling with those of other religious denominations, &c. All these, however, have failed to meet the required want—all have come short of the needful remedy. It is not, I am persuaded, to the reading of Friends' books alone, good as they are as collateral evidence (and I am not of the number of those who, because the language of two centuries ago is not so pure in its diction, so elegant in expression, or so classical in its composition, would deery and undervalue them, nor am I one of those who seek to modernize these writings in a dress more mild, and language more pleasant to ears polite, though not half so clear, or healthy in tone); neither is it to the categorical acquisition of Scripture knowledge, so loudly put forth in the present day, desirable as such knowledge is, that we can expect our young Friends to reach the standard of their more energetic and zealous forefathers. Deeper far must the foundation be laid, and well will it be if, amid all our ease and refinement, and intellectual culture, we do not overlook it. It is to the simplicity as it is in Jesus, that we must individually come, if ever we become a living people, a vigorous branch of the living vine—to the acknowledgment of His power and life within us, and obedience to the motions of His spirit, to "watch over the opening minds of our children," and the expansion of our own, and to submit to the governing, regulating principle of the spirit of Truth, the only true source of all vital religion, in all its restraining and constraining efforts. However learned we may become in scriptural historical knowledge—however intimately acquainted with the important and deeply interesting truths contained in the sa-

ered writings—however familiar with the writings of early Friends, their experiences, practice, and sufferings—all will be head-learning and nothing more, so long as the heart itself is not subjected to the will of Christ, and is unwilling to become obedient to that which is known of God in the secret of the soul. The beautiful germ of real piety will only be smothered under a pile of erudition, and instead of the "little seed of the kingdom" becoming a great tree in which the fowls of the air can lodge, it will produce no fruit, and perish uncares for, and unknown.

The religious is unquestionably an eventful period in the present world. Multiplied effort, and the ingenuity of man are at work to effect a great moral and religious improvement in the character and pursuits of men, and this movement has extended to our own beloved community. May it please the All-wise disposer of events to bless it to us. Let us not, however, forget the home work—the inculcation of right principles in our daily conversations and duties of private life—the training, too, of the minds of our children. It is with the first beginnings of intelligence we must commence when the mind is beginning to expand, and when inquiry is rife—when the heart, as a blank and spotless leaf, is prepared to receive an impression which after years shall not be able to efface: 'tis then that the first principles must be instilled, and as our children ripen into more mature life, again and again must the lesson be repeated, until that wonderful and incomprehensible thing called mind shall have learned that first great lesson, to know and obey the Lord; until it shall have become aware of the important fact of His and its own existence—its connection with the future—its entire dependence on the will of Him who created it—its full capacity through Divine love and mercy to comprehend the teachings of the Holy Spirit—and shall feel and know that this spirit is an emanation of the Deity to guide us to an eternity of bliss through Him who did as that we might live. If I am free in stating those opinions, it is because my own mind has long been introduced into feeling on this subject, and I trust that the sentiments enunciated will not be found at variance with those of early Friends, or of the Society of which I am a member. Years have now elapsed since I became attached to the principles of Friends. Conviction of their rectitude, and strict accordance with scriptural truth, was the moving cause, produced, as I believe, by the operation of the self-same spirit which gave forth the scriptures themselves; and now, in later years, I am but the more persuaded with one formerly, that "that which drew me in early life to hold to this people was truth and no lie." With these preliminary remarks, too lengthy to allow me to do more than to allude to the theme of my next, that of "Dress," I shall conclude; and am thy friend, &c.

Sixth Month, 1861.

J. B. B.

*The still small voice, and the quiet habitation.*  
—I lament the separation of some promising ones; their being driven by strange voices and tumults from attention to the still small voice of the Good Shepherd. Oh! my heart pities, and when enabled, breathes the secret prayer for the sheep scattered from the true fold—the quiet habitation. Never, my dear relatives, did I more appreciate the privilege of being joined to a Christian people, to the society to which I am favoured to be united by increasing conviction at this day, of its pure, unsophisticated gospel principles. The Shepherd of the sheep is indeed good. Oh! how gently He leads the simple, as the flock and the children can bear it.—*Mary Copper, F. L., vol. 12th, p. 131.*

### TOO BUSY TO FREEZE.

Selected.

How swiftly the glittering brook runs by  
Pursuing its busy career;  
Reflecting the beams of the cheerful sun,  
In waters transparent and clear;  
Kissing the reeds and the lowly flowers;  
Refreshes the roots of the trees;  
All summer to humber to ripple a song;  
In winter too busy to freeze.

Onward it glides, whether sunshine or storm  
Await on its vigorous way,  
And prattles of hope and sustaining love,  
Whether clonely or bright the day,  
Cold water around may lit t'rop'ring ring,  
And on lazier waters seize,  
But the nimble brook is too much for him,  
Being far too busy to freeze.

May we like the brook in our path through life,  
As active and steady pursue  
The course in which real utility lies—  
Which is lovely and useful too;  
Still nourish the needy, refresh the sad,  
And desisting indulgent ease,  
Adorn life's current with generous work,  
With love that's too busy to freeze.

Yes, while there's a brother to warn from sin,  
A sister to save from despair;  
A penitent heart to be meekly taught  
To utter the prodigal's prayer;  
An outcast child to be turned to God;  
A toe to be brought to his knees;  
And heaven yet to be sought and taught;  
We must be too busy to freeze.—  
*Jus. Instructor.*

### MYSTERY OF CHASTISEMENT.

Selected.

We glory in tribulations also.—Rom. v. 3.  
Within this life, to every eye  
So little worth, doth hidden lie  
Most rare and subtle fragraney.

Would'st thou its secret strength unbind?  
Crush it, and thou shalt perfume find  
Sweet as Arabian's spicy wind.

In this dull stone, so poor and bare  
Of shape or lustre, patient care  
Will find for thee a jewel rare.

But first must skillful hands essay,  
With file and flint, to clear away  
The flint which hides its fire from day.

This leaf? this stone? Is it thy heart?  
It must be crushed by pain and smart,  
It must be cleansed by sorrow's art,

Ere it will yield a fragrance sweet,  
Ere it will shine a jewel meet  
To lay before thy dear Lord's feet.  
—*Hymns of the Ages.*

*The attendance of Meetings.*—That those days which are appointed to meet publicly to worship God upon, none on any pretence, (being in health, and not unavoidably engaged to the contrary,) neglect going to such meetings;—but that they constantly and timely attend and frequent the same, as becometh a family fearing the Lord, and that is zealous for his living Truth.—*One of the rules for the government of his family by William Penn, F. L., vol. 11th, p. 448.*

## THE FRIEND.

FIFTH MONTH 3, 1862.

YEARLY MEETING.

Philadelphia Yearly Meeting convened at ten o'clock on the morning of Second-day, the 21st of

the Fourth month; the meeting of Ministers and Elders having met on the Seventh-day preceding, and adjourned until the 23d, at eight o'clock, A. M.

The meeting was large—the women's apartment being unusually full, the number present in it at most of the sittings being about twelve hundred. There were four ministers in attendance with minutes from other Yearly Meetings, two of them from Indiana, and two from New York.

All the representatives responded at the calling of their names but three,—prevented from attending by indisposition. After the usual reports from the respective Quarterly Meetings had been read, the clerk informed the meeting, that two epistles—one from the men's and one from the women's Yearly Meeting of New York—had been received; that addressed to the women's meeting had been placed in the hands of its clerk, and the other was on the table for the meeting to dispose of. The consideration of this matter was thereupon entered into, and several Friends expressed their desire that the epistle should be read; others said they were quite willing to hear it, while others who said they thought that the reading of it would be an infringement of the conclusion deliberately come to some years since, to suspend epistolary intercourse with all other Yearly Meetings, objected to that decision being hastily disregarded, especially as it might throw the meeting into difficulty at some future time, should an epistle be received from a body which some might not be prepared to recognize as a Yearly Meeting. After some time spent in hearing the different views which were presented, it finally appeared to be the prevailing sense of the meeting that the epistle should not be read; the clerk stating that it was short and expressive of Christian love and interest felt by New York Yearly Meeting towards this. The whole discussion of the subject was marked by calmness and becoming solemnity, Friends appearing to pay due respect to the feelings and conscientious opinions of each other; and the hope was expressed that the time was not far distant, when all the meetings of Friends, whether smaller bodies or large, may be brought into religious fellowship, and the obstructions to epistolary intercourses, now existing, be removed. Throughout the sitting, we believe, the assembly felt, as was expressed by several, that it was mercifully favoured with the overshadowing presence of the Head of the church, begetting a harmonious travail for the more universal prevalence of true unity throughout the society, that it may be renewedly strengthened to build up the members and the various meetings, on our most holy faith; and tendering and encouraging many of the young men present with the hope, that a brighter day was at hand, when as a united body, Friends would be prepared to uphold the doctrines and testimonies committed to them to maintain and promulgate in the world.

The clerk having made a minute expressive of the feeling and concern that had obtained in the meeting, and another directing the representatives to meet together, consider of and propose a suitable Friend to serve the meeting as clerk and one to assist him, the meeting adjourned until 4 o'clock, P. M.

*Afternoon.*—After the reading of the opening minute, report was made that the representatives had united in proposing Joel Evans to serve the meeting as clerk the present year, and Samuel Hilles to assist him, which being approved by the meeting, they were appointed to the respective stations.

The proceedings of the Meeting for Sufferings during the past year were laid before the meeting by the reading of its minutes, and its care and la-

bour were approved. These minutes contained an address to the members, setting forth the testimony of the society against all war, and encouraging them to a faithful support of it in all its bearings.

The report of the Book Committee also contained on these minutes, while presenting a favourable contrast between the facilities for procuring and spreading Friends' books at the present day, and a period not long passed by, called forth the expression of desire that the members generally would avail themselves of the opportunity now afforded to supply themselves, at a small cost, of the approved writings of Friends, for the use of themselves and their families, and also to hand to others. Then adjourned to ten o'clock, to-morrow morning.

*Third-day morning, the 22d.*—The meeting entered upon the consideration of the state of its subordinate branches and their members, as represented by the answers to the Queries sent up from the Quarters; and proceeded as far as the sixth Query, inclusive.

During the deliberation on the various subjects thus presented, a religious exercise prevailed and was expressed, for the removal of the deficiencies apparent, for the encouragement of the fearful and bating, and the strengthening of the hands of the honest-hearted in a faithful performance of the duties devolving on them. The departures from an uncompromising support of our testimony against war, and likewise of that against a hireling ministry, gave rise to much concern, as did also the neglect on the part of so many members, to bring up those under their care in plainness of speech, behaviour and apparel. The youth were warned against being caught by the vain sophistry employed to lay waste the testimony and long-continued practice of the society in relation to a plain dress, plain manners, and the plain language; and were entreated to be willing to take the cross of Christ upon them, and show, in their every-day conduct and conversation, that they are not ashamed to let the world see they are true Quakers, and they would find it a hedge about them. Then adjourned to four o'clock, P. M.

*Afternoon.*—Directly after the opening of the meeting, it proceeded with the consideration of the remaining Queries. The list of deaths of ministers and elders within the past year, struck us as being larger than usual. Several of those reported as having finished their course, had attained to a good old age.

A committee was appointed to examine and settle the account of the treasurer of the Yearly Meeting, and to report the sum necessary to be raised for its use during the coming year.

A highly interesting report from the committee, having charge of the civilization and improvement of that portion of the Indian tribes, which has long received the care and assistance of this Yearly Meeting, was read. It referred to some of the historical facts connected with the origin and prosecution of the concern, and gave a succinct account of the labours of the committee during the past year, together with reference to evidences of the beneficial effects resulting to the objects of their care. The stated comparatively small diminution in the number of the aborigines within the States where these reservations are located, between the period when Friends commenced their labours among them, and the present time, was unexpected and very gratifying. The boarding-school for the children of the natives, continues to be successfully carried on, and the farm, &c., remains under the charge of the same Friends who were reported last year. A strong interest in the welfare of this poor people, and in the concern of the Yearly

Meeting for their help and improvement was manifested by the meeting, and the committee was encouraged to persevere in their efforts to promote their advancement in civilization and religious culture, by all the means placed in their power. Then adjourned to eleven o'clock, to-morrow morning.

[We intend publishing the Indian Report in a future number.]

*Fourth-day Morning, the 23rd.*—Soon after the opening of the meeting, the propriety of publishing the Book of Discipline for supplying all the members who may wish to have a copy, was brought before it, and the whole sitting was occupied in its consideration and discussion. The objections which had operated many years ago, when the discipline was more likely to be changed or added to, were thought to be now removed, and that it was desirable to make its important rules and advices readily accessible to all who are amenable to them. It was therefore, with much unanimity, concluded to authorize the Meeting for Sufferings to have published an edition large enough to supply all the members, and to place it in the Book Store for sale. Then adjourned to 4 o'clock.

*Afternoon.*—The meeting entered upon the consideration of the reports from the Quarters relative to the subject of education. From them it appeared there were 1296 children within their limits, of an age suitable for them to attend school; of whom 157 were in select schools under the care of Monthly or Preparative Meetings, 172 at West-town Boarding School, 363 at schools taught by members, 128 at family schools, 13 at Haverford, 114 at schools not taught by members, 289 at Public District Schools, 32 temporarily absent, and 26 as not having attended any school in the past year.

During the discussion called forth by this important subject, the obligation resting upon parents and guardians to use all proper efforts to secure a guarded and liberal education for those under their charge, in schools where the teachers are consistent Friends, was dwelt upon, and urged upon the attention of all. The impropriety and danger of allowing the children of Friends to attend at the District Schools, or at other seminaries where purity of morals and consistency in manners and habits, are greatly imperilled, was clearly brought to view. The intimate connection between the proper training, and guarded scholastic instruction of the children and the well-being of the society, was referred to, and the judgment expressed that where Friends could not avail themselves of such a public school as was safe and suitable to send their offspring to, it was better to rely upon a family school.

In connection with the subject of education, the First-day schools for the study and teaching of the scriptures, now so much in vogue in some places, were feelingly referred to, and a prevailing fear and belief was expressed, that the superficial, head knowledge imparted and acquired in these schools, is not calculated to promote the growth of vital religion, or to increase that practical experience of the transforming power of the Holy Spirit, by which alone the members can be prepared for usefulness in the Church of Christ. Parents were affectionately advised not to attempt to shift on to others, the responsibility resting upon them, to train up their children in a knowledge of the things pertaining to salvation; but to keep their tender offspring near to and about them, especially on the First day of the week, and to seek for a qualification to lead them to their merciful Redeemer; while by example as well as by precept, they enforce the value of the lessons they thus teach them.

The Quarterly Meetings reported sixty-two members, who, within the past year, have used ardent spirits as a drink; the greater part of them only occasionally; and that ten of this number had likewise furnished it to others for the same purpose. They also informed that labour had been extended to these delinquents, in order to dissuade them from future tampering with alcoholic stimulants of any kind, and that there was ground to believe that in some instances it would be availing. In view of the importance of the subject, and the desirableness of entirely clearing the society of participating in the unnecessary use of the pernicious article, the subject was again referred to the care of the subordinate meetings, and they were desired to make close inquiry among their members, and extend timely and affectionate labour, in order to convince any of them who may be found still partaking—though but occasionally—of ardent spirits, of the deplorable consequences to which it may lead, and to persuade them wholly to abandon it: to report their labour, and the number who have been the objects of their care, to the Yearly Meeting, next year.

Meetings for Divine worship were directed to be held to-morrow morning, at the four meeting-places in this city.

Then adjourned to 4 o'clock to-morrow afternoon.

*Fifth-day Afternoon, the 24th.*—After the opening minute, the clerk read the report of the Representatives to the Yearly Meeting last year, to whom was then referred the consideration of the reading in the Yearly Meeting, of the certificates or minutes of ministers or others from other Yearly Meetings attending this, so that if any course appeared to them calculated to relieve the meeting of the embarrassment which had arisen therefrom, and to produce greater harmony among the members, they might report it for the judgment of this meeting; and also to take the same course in relation to the granting of certificates of removal to members of this Yearly Meeting, who may take up their residence within the limits of other Yearly Meetings.

The report stated, that in reference to the latter subject—the granting of certificates of removal—the Representatives had no proposition to make; and in reference to the former—the reading of certificates or minutes in the Yearly Meeting—it was the "prevailing sense" to propose that the discipline be so altered as to require that no such certificate or minute be read in the Yearly Meeting, unless it had first been read in the Meeting of Ministers and Elders.

The consideration of this proposition occupied the meeting a considerable length of time, and the whole subject, in its various bearings, was fully opened. There was a diversity of opinion expressed in relation to the effect that would follow the adoption of the proposed change, both as regarded the promotion of harmony and order in the Yearly Meeting, and the restoration of brotherly intercourse between it and other co-ordinate bodies. The manner in which its adoption would affect the relative position of the Yearly Meeting and the Meeting of Ministers and Elders—rendering the former in some respect subordinate to the latter—was also adverted to. Though several of the Friends who differed in their views, were earnest in the advocacy of their feelings and sentiments, yet the whole discussion was conducted with dignity and calmness, and the final judgment to which the meeting arrived, viz., that way did not open to make any change in the discipline, was apparently acquiesced in by nearly all.

In the course of the deliberation, a proposition was made that, without altering the discipline on

the subject, as it now stands, the meeting should agree to suspend the reading of such certificates or minutes, as it had suspended the epistolary correspondence with our Yearly Meetings; provided such suspension should not interfere with the religious services of the Friends in attendance with such certificates or minutes, or prevent these being read in the subordinate meetings. Several Friends expressed their belief that this would be the best course to take; but it became evident that the meeting was not prepared to adopt it, and the above mentioned decision was minuted by the Clerk.

The report of the Committee having the oversight of the Boarding School at West-town was read, giving a satisfactory view of the condition of that interesting seminary, and its efficiency in carrying out the concern of the Yearly Meeting, to bestow upon the scholars placed at it, a guarded religious education, as well as liberal literary instruction.

[We shall hereafter give this report in full.]

The report of the committee appointed to settle the Treasurer's account, &c., was read and approved, and the Quarterly Meetings were desired to act in accordance therewith.

The Clerk having been requested, at a previous sitting, to prepare a minute setting forth the exercise of the meeting while engaged in considering the state of the meetings and members as represented by the answers to the Queries, now produced and read the essay made, which, with some little omission, was approved.

The concluding minute having been read, after a short time passed in solemn silence, the meeting adjourned, to meet again at the usual time next year.

We believe the feeling was pretty general among those who attended the meeting throughout, that while there was no room for boasting, there was cause for humble thankfulness, in that that Divine goodness which is both ancient and new, was felt to be, at seasons, mercifully extended over the assembly, uniting the hearts of many in a fervent and honest concern for the removal of those weaknesses and defects which have so much hindered the prevalence of christian fellowship throughout the Society; that so it may be renewedly strengthened, and enabled to support all its principles and testimonies in their purity and integrity.

#### SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 13th ult. The steamer for Bombay took out \$156,000 in specie for the purchase of cotton. In consequence of the insufficient supply of cotton, caused by the American war, preparations have been made in England and Scotland to sow ten times the breadth of flax that was ever sown before. It is said that Ireland will have almost one acre of its surface covered with flax this year. The crops in England are represented as highly promising. The wheat appears to be nearly a month earlier than last year. The House of Commons had debated Italian affairs. Lord Palmerston believed that sooner or later, the utility of Italy would be completed by the possession of Rome.

Serious disturbances continued in Greece.

In consequence of the incessant hostilities carried on by the Montenegro's, all the great powers, except France, have consented to the invasion of Montenegro by the Turks, in order to bring about submission to the Sultan's authority.

The Liverpool market for bread stuffs was former. Flour had advanced 6d. a sh. The quotations for cotton were unchanged.

News Cruz advises state that after an unsatisfactory conference between the allied commanders, the French General had decided to march his division against the city of Mexico, taking upon himself the responsibility. The English and Spanish Plenipotentiaries thereupon decided to withdraw their troops. It is stated that the Junta Government had consented to give every satisfaction to the Allies in the matter of claims, but refused to listen to the idea of establishing a monarchy, and

that in case the Allies advanced to the Capitol, they would retire from it.

**Year Days Letter.**—The Manchester advices were favourable. The market for cotton goods and yarns was active. The stock of cotton at Liverpool consisted of 350,000 bales, of which 126,000 were American. Fair Orleans, 141 Fair Mobile, 183 American flour 20s. a bushel, and corn were advancing.

Despatches from Bombay to Third month 27th, announced that Lord Elgin was installed viceroy of India on the 13th. Mogul Bey had been hanged in front of the palace of Delhi. A wide spread Malabar conspiracy had been discovered and suppressed at Hyderabad, in the Deccan.

Messages had reached the government of Greece at Athens, announcing that a great number of insurgent officers and soldiers had surrendered.

**LYONS.**—See *The Revue* and *Customs*.—The receipts at the New York Custom House, for the quarter ending Fourth month last, were over \$11,500,000, and the receipts for the same period of time, at the three other principal ports, were \$14,000,000.

**Capture of New Orleans.**—A despatch from Mobile, dated the 24th, was published in the Petersburg Express of the 26th. The despatch states that the Federal fleet passed Fort Jackson, seventy miles below New Orleans, at 4 o'clock a. m., the previous day. When the news reached New Orleans, the excitement was boundless. Martial law was proclaimed, and all business suspended. All the cotton and steamboats, excepting such as were needed to transport coin, ammunition, &c., were destroyed. The Richmond Examiner of the 26th, announces that New Orleans had been taken by the Union forces, and that there had been great destruction of property, cotton and merchandise. The goods which were received through rebel sources, were to the effect that Fort Jackson had been bombarded by the U. S. flotilla, but had sustained little injury.

**The War in the South West.**—Gen. Mitchell's division of the U. S. forces, has arrived at Tuscumbia, Ala. He had under his command 2,000 men, and the Mobile and Charleston railway. Tuscumbia is one mile south of the Tennessee river, and opposite to Florence, which is on the north bank of the river. In high stages of water, such as now exist, steamboats ascend to Tuscumbia, and Gen. Mitchell is thus placed in immediate communication with the main army at Halleck, at Pittsburg Landing. The great rebel army remained near Corinth, Miss., within a few miles of the outposts of the northern troops. According to the reports of deserters, Gen. Beauregard has withdrawn a portion of his forces from Corinth, and has moved to Memphis. Confederate wounded received at the capture of Fort Hury, has asked to be relieved from the command of the Western fleet, and General Pope's command having been ordered to Pittsburg Landing, the operations against Fort Pillow or Wright, are for the present, partially suspended. Gen. Bragg has transferred the command of Fort Pillow to Gen. Price. The rebels have cut the levee at Fort Pillow, flooding all the plantations and the houses along the river in that vicinity, and causing great distress among the inhabitants. The rebels have fourteen gun boats on the fort to aid in its defence.

**North Carolina.**—No further movements of importance are reported. In an engagement at Elizabeth city, about 120 men were killed and wounded on both sides. The siege of Fort Macon at Yorktown.

**Virginia.**—Affairs at Yorktown remained nearly as last week. The rebel army has advanced to within a few miles of Pampanauk to Fredericksburg, and captured a number of small vessels. Gen. McDowell's army remained opposite Fredericksburg, completely commanding it. The inhabitants were entirely free in their usual business pursuits, there being no rebel troops in the vicinity. Gen. Knott's division had advanced to within a short distance of Stanton. The rebel army under Jackson, was on the east side of the Shenandoah, about sixteen miles from the Federal army. Skirmishes between scouting parties were of frequent occurrence.

**Richmond.**—The French Minister at Washington recently made a visit to Richmond on official business. He called on the President and Secretary of State after his return, and had a conference with them. He declined saying any thing about the condition or appearance of military matters, but says that the rebel leaders express a strong confidence in their ultimate success, and the most stubborn determination to adhere to their cause.

The Richmond Dispatch notices the occupation of Fredericksburg by the U. S. forces, but considers it an event of little importance, as it was anticipated when the army of Manassas was withdrawn. Before the rebel troops withdrew from Fredericksburg, they had burned the bridges across the river, and also burned three steam-

boats and twenty-two small vessels loaded with 100,000 bushels of corn and 100 bales of cotton.

The rebel congress had adjourned. A bill was passed by it, prohibiting the sale of cotton, sugar or tobacco to citizens of the United States.

The Atlanta, Georgia, Confederacy, considers that the advance of Gen. Mitchell into Alabama, has put matters in that quarter in a very critical situation. There is nothing to prevent an advance upon other exposed and important points.

**Recognition of Hayti and Liberia.**—The U. S. Senate has passed a resolution for the recognition of Hayti and Liberia, by a vote of 32 to 7.

**The Slave Trade.**—The U. S. Senate, by a unanimous vote, has ratified a treaty negotiated in Washington between the British Minister and the United States Secretary of State, for the suppression of the African slave trade. The main points of this important treaty are a mutual right of search, without regard to the number of vessels to be employed, and the summary trial and punishment of those engaged in the nefarious traffic. The hope is expressed that under the operation of this treaty, the African slave trade will ere long be effectually suppressed.

**New York.**—Mortality last week, 377.

**Philadelphia.**—Mortality last week, 278.

**Utah and its Institutions.**—The U. S. House of Representatives has passed a bill to punish and prevent the practice of polygamy, and amend certain acts of the Territory of Utah, establishing the same.

**The Markets.**—The money market in New York is well supplied, and rates easy. On the 28th, loans on call were freely met at 4 to 5 per cent. The specie reserves of the New York Banks continue increasing. By the last weekly report, the coin in their vaults is stated at \$35,257,914. Gold 1 1/2 premium. Spring wheat on the 28th was quoted a \$1.17 a \$1.20; white Michigan, \$1.40 a \$1.44; Oats 29 a 40 cts.; mixed corn, 57 a 58.

#### RECEIPTS.

Received from Lewis Forsythe, Pa. \$2 to 23, vol 30; from Lydia Miller, O., \$2 to 27, vol 30; from Abel Gardner, N. Y., \$1 to 17, vol 36.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)  
Physician and Superintendent,—JOSUAH H. WORTHINGTON, M. D.

Applications for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

#### WEST-TOWN BOARDING SCHOOL.

The Summer Session will commence on Second-day, the 12th of this month. Pupils who have been regularly entered, and who go by the cars from Philadelphia, will be furnished with tickets by the ticket agent at the depot of the West Chester and Philadelphia Rail Road, north-east corner of Eighteenth and Market Streets. Conveyances will be at the Street Road Station, on Second and Third days, on the arrival of the trains that leave Philadelphia, at five minutes past eight, half-past ten, and two o'clock. During the Session, small packages for the pupils, if left at Friends' Book Store, No. 304 Arch Street, on Sixth days before twelve o'clock, will be forwarded; and the stage will meet the first train from the West-town city on the Street Road Station, every day except First days.

#### WEST-TOWN BOARDING-SCHOOL.

The Summer Session of Friends' Boarding-school at West-Town, will commence on Second-day, the 12th of Fifth month next. Parents and others intending to send their children as pupils, will please make early application to DEBBE KIGHT, Superintendent, at the School, or to CHARLES J. ALLEN, Treasurer, No. 304 Arch Street, Philadelphia.

#### HAVERFORD SCHOOL ASSOCIATION.

The Stated Annual Meeting of the Haverford School Association, will be held at the Committee Room, Arch Street, on Second-day afternoon, Fifth month 12th, 1862, at 4 o'clock.

W. S. HILLES, Secretary.

Phila., Fourth mo. 26th, 1862.

P. L. & M'ELROY, PRINTERS,

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, FIFTH MONTH 10, 1862.

NO. 36.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From "The British Friend."

## Early Friends and What They Were.

(Continued from page 278.)

In resuming my pen, I would now select for the subject of my first exposition—*Dress*. The present is an age in which there is a tendency to call in question the wisdom and practice of our ancestors, and in none more than in our own beloved society. Everything that is ancient, and everything that squares not with our modern notions, seem likely to be condemned and swept away as ill calculated for our purpose, and as not sufficiently advanced for the present state of christianity.

But I fear there hardly appears enough of calm deliberation amongst us, more especially as regards those things which seem to come between us and the world at large, and which, in greater or less degree, appear to fetter our freedom and render us conspicuous; and perhaps of all the vexed questions now afloat within our borders, there is not one that has caused more general discussion or occasioned more severe comment than that of dress. The very agitation of this subject has called forth more questioning and more censure than it deserves; and whilst one class has striven hard to maintain the negative, the other has equally contended for the affirmative, and but in few instances has it received that dispassionate consideration which would place it on a basis that should prove satisfactory to every unprejudiced mind. The ventilation of the subject cannot but do good, if undertaken in a christian spirit; for if there be any foundation on which to build our opinions, be they modern or handed down from father to son, be truth will ever bear investigation, and must come out of the scrutiny pure and unscathed. Therefore there need be no dread on our part, that "pure religion and undefiled" can or will suffer by the examination of this question; and so it is in the spirit of strict and impartial inquiry that I propose to show that the dress of the Society of Friends is not that illusive and unimportant thing which some would make it: neither is it of that vast importance which some, in their earnest and mistaken zeal to uphold what they take to be one of the "peculiarities of the society," would imply, and which, with all sincerity, they try to engrain upon its religious adherers.

In the present day, there are many who seek to alter all that is ancient and venerable, and their only motive the love of innovation—restless spirits,

who would be as ready to innovate on their own decisions as on those of others; yet these I apprehend form but a small portion of the objectors to the present dress of Friends. By far the larger part, I fear, are those whose love of ease would free them from peculiarity, and whose mingling with the world renders the support of christian consistency irksome. Seeking more liberty, disliking singularity, and dreading ridicule, they would free themselves from everything which brings into antagonism their profession as Friends, and their practice as men of the world. With these there is an attempt to reconcile the two, and as it ever has been, and ever will be, the two are irreconcilable, and all such attempts only serve to prove the truth and fulness of that assertion of the Redeemer of men—"No man can serve two masters; ye cannot serve both God and mammon." Were this confined to our younger Friends, it would not be difficult to throw the mantle of charity around it, but to speak honestly, it too much pervades all classes among us. It is prevalent in our wealthy circles; it is prominent in our business ones; it is openly taught in our families. Almost everywhere do we find this inconsistency of profession and practice prevail.

There are, it is true, some who view these things differently, but even among the good and consistent there is sometimes evinced a want of that thorough acquaintance with the subject which carries conviction to the understanding of others; and hence, in the minds of the young, they fail to establish a principle on which to build a true and substantial reason for our peculiarity in this thing. It is of no use for our younger Friends, in mooted this subject in our Monthly and Quarterly Meetings as they occasionally do, and evidently with an inquiring spirit and with christian gentleness and moderation, to be met by an attempt to impose silence upon them. It is a subject in which they have a right to be informed, and one which the sooner it is discussed in freedom and calmness the sooner will it be set at rest. There must ever be something wrong where authority is substituted for argument, and where blind submission is required. It was the title of a book by one of our early Friends, "Truth with her Open Face." Truth's face requires no concealment, and there is no reason why the subject of dress should be a deviation from this rule.

By a long course of circumstances we, as a body, have led the public mind into a great mistake on this question, and it is due from the society that its real and sound views on this point should be more clearly developed; and hence I propose to show what were the views of early Friends, and what their practice respecting it.

Dress has been called one of our "peculiarities." Why it should be appropriated by Friends as a christian body, I know not. If by peculiarity we mean some outward sign by which we may be known as Friends, then it will not be difficult to show that we have no right to appropriate it. "Peculiarities" for their own sake are very undesirable, and they should ever be grounded on right principles; for unless they are so, and rightly understood too,

they are only hindrances to religion, and stumbling-blocks to the truly seeking mind. If peculiarity in dress is in strict union with our profession and practice as christians, it certainly has this advantage, that it pointedly addresses itself to those around us, and is very like saying to the worldly portion—"We don't belong to you;" but even this has its disadvantages, and in a vast number of instances would have a repulsive rather than an attractive tendency. Now, though we may object to the term "peculiarities," as used by Friends, and especially as applied to dress, it may be well to inquire if the Society of Friends has no testimony to bear in reference to it? whether, considering its high profession of spirituality, it has not, in common with other denominations, a truly christian testimony to uphold in this very particular? I think it cannot be denied that it has; but not to any peculiar form, or colour, or texture—to no mode or fashion. The testimony will be to simplicity only. Simplicity in Dress is enjoined in scripture, and it is this very scriptural simplicity which indicates the people of God. It was on this principle as we shall by-and-by see, that our early Friends acted, and the principle on which the disciple of Jesus, be he a member of the Society of Friends or not, must ever act. An adhesion to simplicity is unquestionably an adhesion to a great scriptural principle, and it is not too much to say, that "it is upon the simplicity of the Truth as it is in Jesus, whose whole life was one of contradiction to the grandeur and glory of this world, and on the heart-changing nature of the religion which he introduced, that our testimony to plainness and moderation rests."<sup>1</sup>

It has been said, and the sentiment is common, that "there is no religion in Dress;" but this is a mistake; abstractedly it may be so; but there are many instances on record, and many more in existence now, where the teaching of the Holy Spirit has extended even to dress; and its Divine requirements, both in wearing and forbearing to wear, have been plain and unmistakable; and surely it will be admitted that none are truly followers of Christ who are disobedient to His requirements, even in this particular. It is, however, to the practice and views of early Friends I wish to address myself, and in doing this it will be needful to glance at the state of society in general, when the Society of Friends first took its rise.

At this distant date, and in our altered circumstances with the present refinement and increased knowledge, it is not easy to form an adequate idea of the manners and customs of that age. A reference to the costume of that day, shows us an amount of folly in dress that has, I believe, no parallel, and can only serve to amaze us. It had spread almost entirely over the land; and when we are told that man in his appetite for dress and fashion submitted to be painted, gilded, feathered, and decked himself out with ribbons, lace, ruffles, gowns of gay colours, wigs, swords and ornaments—that to his back, his elbows, knees and shoes, &c., he attached

<sup>1</sup>Epistle of Caution and Counsel addressed to its members by Philadelphia Yearly Meeting.

lunches of gay ribbons, we can hardly withhold our feelings of contempt for the littleness of mind which could centre in such frivolities; and we seem to rejoice that, amidst such a mass of pomp and worldly vanity, the religious people of the then middle-class of life, did not thus comport themselves; that, as in all previous ages, there were some even then whose aim was to walk as becometh the gospel, and whose dress was plain and simple. Accordingly we find, that when the Society of Friends first became a united body, they made no alteration in their dress on account of their new religion—they met in religious unity in their simple clothes. George Fox himself wore the plain gray coat of the serious people of the day, with achey buttons, and a plain leather girdle round his waist. Neither must we overlook the circumstance, that the Society in its first formation consisted of no birthright members, nor of children or young people, but of grown-up persons—such as had been more or less "convinced of the truth," whose minds had become spiritually exercised, and their spiritual eye opened. All such questions as that of dress presented themselves only as their evil nature and effects became apparent. That this was the case is proved by several anecdotal instances, where the importance of consistency had not at the time occurred to the parties, until the contrary became characteristically apparent to the audience that surrounded them. But the time arrived when the external condition of the Society became altered. After a while it no longer consisted of upgrown persons only—persons whose earnest zeal and piety, and whose simplicity both of manners and apparel, rendered unnecessary any caution as regarded dress. Many of those who had joined the Society had families, and as a consequence, they became in some measure incorporated with it, and many were born after their parents had so united themselves. In the midst of the general tendency to an useless and extravagant display of dress, it need not surprise us that a necessity should seem to have arisen for caution on this head, for be it remembered also, that many of the younger people to whom I have alluded, were Friends by name, even before they were Friends in spirit. Accordingly we find the founder of our Society alive to the need of guarding the infant community, which he had been the means of gathering, against all indulgence and excess in apparel. And it is instructive to see how lucid and clear is the distinction which he draws between costume and simplicity. As in all that he undertook, so in this also he was forcible, truthful, and simple; and his language stands out in lines so distinct and unmistakable that the very truth of them comes full upon the mind.

It was clearly George Fox's opinion that religion, though it prescribed no particular form of apparel, did still apply itself to the general subject of dress. In this opinion he was followed by Barelay, Penn, and Claridge, and indeed by all the leaders of the then rising Society of Friends, but on scriptural grounds only.

The counsels and admonitions which from time to time were extended to the vastly increasing body of Friends on this subject, had the natural tendency to induce parents to be watchful over their families, and thus the Society became accustomed to look upon dress as a subject closely allied itself with the profession and practice of a Christian, and the excessive indulgence in it as injurious to the moral character and healthiness of mind; and thus too the subject became incorporated in the discipline of the Society. It is observable, however, that even whilst the Society thought it right annually to institute an inquiry as to the

practice of the body in this particular, and evinced an earnestness of desire that its members should walk consistently with their profession, it ever recommended only simplicity and plainness; it prescribed no standard; it dictated no form; it selected no colour for the apparel of its members; on the contrary, it denied all singularity. And it is worthy of remark, too, that at no period of the Society was the dress of individuals always alike; nor to the present period has it continued the same as that of early Friends.

It is evident, therefore, that the received and common opinion of the world on the subject of the dress of Friends is erroneous; for it seems to think that the Society has a prescribed outward form, by which all its members should be known in their intercourse with the world. This is an evil, and has thrown an *onus* upon the body which has not been beneficial to it. The inquiry then naturally arises, What is our testimony in this one particular? The language of the apostle furnishes the most ample reply—"Be not conformed to this world, but be ye transformed by the renewing of your minds." There cannot be a doubt that in this, as in our other "peculiarities," we have an inheritance of privileges for which our early Friends underwent much suffering, and it is right that we should uphold them in all their integrity and fullness. The people of God must ever be a peculiar people; it has been so throughout all ages of the world. It is not possible to unite two things so opposite as pure religion and the love of the world—the lip of Truth hath declared this. The love of the world will ever be found to eat out of the heart of man the love of God. We cannot, therefore, as some would fain make themselves believe, hold the principles of Friends without carrying out their "peculiarities;" it is impossible to separate principles from peculiarities and remain Friends. Health may require an alteration in our dress; simplicity may induce us to adopt some other; wealth, taste and temperament may have much to do with our apparel, but to the honest-hearted and devoted christian, through all and over all, christian plainness and simplicity will prevail; and I am constrained to believe that were the Society only now to take its rise, christian truthfulness would so predominate, that it were impossible but that its members should select the simplest garb in use, and caution and admonition as hitherto would arise against all indulgence in excess and extravagance in dress; and thus would spring up a religious peculiarity of attire, which time alone would mark as singularly as that which is now found so much fault with in the present organized body of Friends. The practical result of this principle then is, to a great extent, to retain one form of dress, and to deviate where convenience or greater simplicity is obtained; and on this principle it would seem the Society has ever acted, if we may judge by the few changes it has made from time to time.

I should not like this question to rest on the ground of expediency, however much might be urged in its favour. Doubtless the Dress of Friends is a great shield and protection, but the true and honest-hearted Friend, young or old, needs no such paucity; he can maintain his position by true Christian bearing among his fellow men, because he acts with sincerity and as in the sight of God; and he would rather be known for his consistency of character as a Christian, than from any outward mark of his profession. It was thus with early Friends—they affected no singularity, they contemplated no hedge or co-tune to distinguish them from those around them; and from their writings it is clear that they would have rejected such a proposition. No such distinction was needed to

point them out as the followers of a risen Lord; the gravity of their character distinguished them, and their genuine Christian deportment spoke louder than any outward distinction could.

Now to the proof of what I have ventured to assert. So early as 1654, we find George Fox issuing the following Epistle:—"Do not wear apparel to gratify the proud mind; neither eat nor drink to make yourselves wanton; for it was created for the health and not for the lust, to be as servants to us, and we servants to God, and so to be used and spent. Do not make profession to be seen outwardly, for Christ was condemned by the world and the formal professors, and all His followers are as venders to the world."

Again, in 1656—"All Friends everywhere, do not delight in apparel; do not delight in the creature more than in the Creator." And in the following year we have two Epistles, thus—"All Friends, keep out of the vain fashions of the world in your apparel, and run not after every new fashion that the world increaseth and setteth up; keep in your plain fashion, that ye may judge the world's vanity and its spirit in its vain fashions, and show a constant spirit in Truth and plainness."

Again—"Mind that which is sober and modest, and keep your fashions therein, that you may judge the world, whose mind and eyes are in this, what they shall eat and put on; and Friends that see the world so often alter fashions, and follow them, they cannot judge the world, but the world will judge them; keep all in plainness and simplicity, and be circumspect, for they that follow these things the world's spirit invents they cannot be solid, and many fashions might be instanced, both of hats and clothes of men and women, that daily are invented, which they that run into are near unto the world's spirit that run into the lust of the eye and pride of life; and the rest of your time live to the will of God, taking no thought what ye shall eat or put on."

Four years later, in a letter addressed "to all that have known the way of Truth," &c., we find him pleading with all the earnestness and tenderness of an elder in the following words:—"Friends, all ye that have known the way of Truth, and tasted of the power of the same, and now turn back into the world's fashions and customs, ye stop them that are coming out of the world, ye make them to stumble at the Truth, ye make them to question the way of the Lord, which is out of the world, and its ways, and ye grieve the righteous and sadden the hearts of the upright and simple."

Again, in 1667, does he lift up his voice in language forcible and strong, against the prevailing indulgence in dress, concluding with these impressive words:—"Therefore take heed of the world's fashions, lest ye be moulded up into their spirit, and that will bring you to slight Truth and lift up the wrong eye, and wrong mind, and wrong spirit, and hurt the Holy Spirit; and by such foolish toys and fashions, and fading things, you may lose your conditions."

In 1683, when drawing towards the close of his useful life, we find him giving utterance to the exercise of his spirit on behalf of the Church, in terms very descriptive:—"And now, Friends, concerning putting on apparel: the apostle, in the spirit and power of Christ, had a care in the Church of God, that they should adorn themselves as becometh the gospel, with chaste lives and conversations; and with the hidden man of the heart, in that which is not corruptible, even the ornament of a meek and quiet spirit, which in the sight of God is of great price. This is that which arrays and beautifies God's Church, and not the out-

ward adorning and plaiting of the hair, and every new fashion that comes up in the world."

(To be continued.)

### Artificial Light.

(Continued from page 274.)

The *moderator* is another form of lamp now in very common use. It involves two or three important principles, one consisting of a powerful spring, whose force is equal to from fifteen to twenty pounds, which presses on a disk and forces the oil up a tube, whence it flows over the burning wick, which is thus always saturated, as in the Carcel lamp. To prevent the oil, however, from flowing over too rapidly, there is placed in the tube an ingenious regulator, or *moderator*, of a tapering shape, which is so contrived as to check and diminish the flow of oil in proportion as the pressure is increased, always allowing sufficient oil to pass to feed the lamp when burning. The oil, being thus supplied with perfect regularity, just saturates a hollow circular wick, through the middle of which a current of air is constantly drawn by means of a glass chimney. A number of small contrivances introduced by Argand, the inventor of the circular burner, have brought it to a state of extreme perfection.

Common vegetable oils can be burned with advantage in lamps where the current of air is strong and where care is taken that the top of the wick is kept smooth; but all these oils are costly, and the quantity of smoke that arises from the unconsumed fuel is extremely disagreeable. Animal oils are not generally used, owing to the smell they emit when burning.

Mineral oils are now entering into large consumption, and of these the recently introduced *paraffine oil* is one of the most remarkable. It will be necessary to consider a little the nature and preparation of this curious substance, if we would fully understand the very great change that has taken place of late years with regard to the methods of obtaining artificial light.

Paraffine, though only recently manufactured in sufficient quantity to be used practically, has been long since known as one of the products derived from a peculiar destructive distillation of vegetable matter, whether in the state of wood, peat or coal. Various bituminous shales and other mineral deposits that abound in some parts of the world, also yield the same substance. It is obtained by carrying on the distillation in a retort kept at a low red-heat, the products being received and condensed at a temperature of about 55° Fahr. in a very carefully contrived apparatus. A light oil is the principal result of this operation, and this oil, after being purified and redistilled, is found to be a fluid compound, containing a certain proportion of paraffine oil, which greatly resembles clear transparent naphtha, a somewhat heavier oil, also used for burning, a lubricating oil, and solid paraffine. The light oils yield an intense white light, admirably adapted for general use.

In order to obtain a clear smokeless flame from paraffine oil, it is necessary to take some precautions. Owing to the capillary action of the cotton used as a wick, the fluid oil may be kept at some distance from the flame, so that only the vapour in a heated state is ignited. What actually burns is thus a gas obtained from the paraffine oil by the application of moderate heat.

Many other naphthas (camphene among the number) have from time to time been introduced and tried in lamps; but it is only lately that any satisfactory result has been obtained. A dis-

agreeable odor, not belonging to paraffine itself, and probably not essential to the oil, still characterizes the naphthas commonly prepared and sold; but this can be removed by certain processes of purification, and it may be expected that the consumption of paraffine oil will greatly increase. The paraffine oils have this great advantage over turpentine, and other light oils obtained in a similar way, that they do not burn when exposed directly to flame, and they do not soil linen or adhere to the fingers.

Pure paraffine is itself a soft light solid, without taste or odor, melting at a temperature little above that of the blood, (112° Fahr.) and burning with a clear white flame, without smoke or ash. It has already been made into very beautiful candles; but the manufacture at present has not attained great importance, although as much as three hundred tons were employed in this way two years ago. The cost of obtaining pure paraffine is the present cause of this delay in the progress of the manufacture.

The minerals which yield paraffine oil on exposure to a low heat in a retort will yield to destructive distillation at a higher temperature a very large quantity of gas, (chiefly carburetted hydrogen,) which takes fire readily on exposure to flame; but those best adapted for the one purpose are least fitted for the other. Bituminous shales are best for paraffine oil, and coal for the manufacture of gas. The gas thus obtained, when freed from certain impurities, burns with an intense and nearly pure light, and is the common gas supplied for burning.

So long ago as in the year 1659, and again about eighty years afterwards, gas of this kind, issuing naturally from the ground in the neighbourhood of coal-mines, had been the subject of experiments of a scientific nature, which were communicated to the Royal Society, but no practical result was obtained till in 1792. — Murdoch lighted his own house with a similar gas, and was shortly afterwards successful in lighting in the same way the factory of Messrs. Boulton and Watt at Soho. It was not till 1813, that any important step in lighting towns on a large scale was made, but from that period to the present day the consumption of gas for purposes of illumination has been increasing with such enormous strides that scarcely a town in the civilized world is now unsupplied with this admirable and useful means of turning night into day.

Coal is by no means the only, though it is certainly the principal, material from which gas is obtained. Bituminous shales, oil, resin, peat and wood, are all capable of yielding a certain supply; and some of these substances, badly adapted for fuel, are extremely valuable for illuminating purposes, owing to the large quantity of light carburetted hydrogen gas that may be obtained from them. The presence of this gas in the actual pores of coal, whence it is given off in large quantities, is often intimated under ground by a peculiar singing noise, and in some mines a naked light applied to freshly cut coal will actually produce a flame from numerous small jets. This is probably owing to the great pressure brought to bear upon the remainder, when part of the coal is removed. A very much larger quantity of the same gas is obtained afterwards, by exposing the coal to intense heat in a retort, arranged so that the products of distillation shall be received in convenient vessels for the purification of the gas, and afterwards transmitting it by pipes to the place where it is required for burning.

Although, however, the process of obtaining gas that can be rendered useful for illumination is so

simple, that every schoolboy has made the experiment in the bowl of a tobacco pipe, the mechanical difficulties of applying it on a large scale were at first exceedingly great, and have only lately been overcome in a satisfactory way. All the gaseous substances that are obtained from the combustion of the coal are by no means fit for burning, as they include, besides the gas we use in our streets and houses, several other gases, more or less noxious and useless, and many vapours which require to be separated. Besides these, there are fluid, semi-fluid, and solid products either carried over or left behind. Even the illuminating gases themselves are many in number, and vary in their properties, some having a disagreeable odor, some being unwholesome and therefore objectionable for general use, and others exceedingly valuable as giving pure white light without adding to the heat of the mixture during combustion. The essential ingredients of illuminating gas are carbon and hydrogen; but all true coal contains, besides these, both oxygen and nitrogen gas and sulphur. These elements, either alone or in various new combinations, are obtained after rapid distillation at high temperatures, so that watery vapour, ammonia, sulphuretted hydrogen, carbonate of ammonia, and a variety of compounds, of which paraffine and benzole are the best known, come off with the illuminating gas, and may be collected. They are present in quantities that vary according to the nature of the coal, the temperature employed in distilling, and the length of time occupied in the manufacture.

Not only, therefore, is there left behind in the retort a certain quantity of coke, consisting of the carbon that has not combined with oxygen and hydrogen, mixed with the earthly impurities of the coal; but by various processes several liquid and solid substances, of more or less utility, become condensed on the other side, before the gases are entirely set free. The gases intended for burning require to be purified, so as to get rid more especially of the sulphur compounds and carbonic acid, an operation in which slaked lime is especially useful, as it absorbs large quantities of the most objectionable substances.

The gas being set free in a tolerably pure state, yields, within certain definite limits, a quantity of light greater in proportion to the carbon it contains. For this purpose, the poor and rich gases require to be mixed, the pure light carburetted hydrogen giving very little light at the ordinary temperature at which combustion is effected, and gases with too much carbon giving off smoke while burning. The mixture being made, the maximum light is obtained by a nice arrangement of the quantity of gas allowed to escape, and the draught of air admitted or forced to pass through the flame.

It is unnecessary to describe the ordinary contrivances used as gas-burners, although some of them are much more ingenious than others, and better adapted to give light. On a large scale, however, and in public buildings, the method of lighting that is adopted has such enormous influence on the health and comfort of those exposed to the atmosphere of the place, that it becomes a matter of the most serious consideration.

(To be continued.)

*The Lord's covenant with this people not to be broken.*—Thus the living God of heaven and earth said: The sun shall leave its shining brightness, and cease to give light to the world, and the moon shall be altogether darkness and give no light to the night, the stars shall cease to know their office or place, my covenant with day and night, times and seasons, shall sooner come to an end,

than the covenant I have made with this people, into which they are entered with me, shall end or be broken, and my word is unchangeable. Yea, though the powers of darkness and hell combine against them, and the jaws of death open its mouth, yet I will deliver them and lead them through all. I will confound their enemies as I did in Jacob, and scatter them as I did in Israel in the days of old. I will take their enemies, and will hurl them hither and thither from me, even as stones are hurled out of a sling; and the memorial of this nation which is holy unto me, shall never be rooted out, but shall live through ages as a cloud of witnesses in generations to come. I have brought them to the birth; I have brought them forth; I have swaddled them, and they are mine. I will nourish them and carry them as an eagle's wings; and though clouds gather against them, I will make my way through them; and though darkness gather together on a heap, and tempests gather, I will scatter them as with an east wind, and nations shall know that I am the living God, who will plead their cause with all that rise up in opposition against them. These words are holy, faithful, good and true. Blessed are they that hear and believe unto the end. And because their no strength was left in me for a while; but at last my heart was filled with joy, even as when the ark of God was brought from the house of Obed Edom, when David danced before for his gladness, and Israel shouted for joy.—*Francis Hoagland.*

#### BIOGRAPHICAL SKETCHES

For "The Friend."

OF Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

##### REBECCA EVANS.

Rebecca Evans, of Evesham, New Jersey, was born about the beginning of the year 1701. She was educated in the way of Truth, and through the seasoning virtue of the visitations of the Holy Spirit she was inclined to virtue and sobriety in the days of her childhood. As she advanced in life, through her obedience to the manifestations of Truth on her mind, she gradually became more and more acquainted therewith, and by the humbling baptisms of the Holy Ghost and fire, became fitted for usefulness in the church. She was appointed an elder, in which station she was preserved in reputation to the close of her life. Diligent in the attendance of meetings, her humble, awful sitting therein was exemplary and instructive. She was often in a private capacity enabled to give seasonable advice and counsel to her children and others, and although her admonitions were sometimes very close to those who walked disorderly, yet, being given in the authority of Divine love, she was well esteemed by most. She was much afflicted in body for several years before her decease, yet she was enabled to bear all her pains and privations with patience, often expressing her resignation to the Divine Will. Her death took place Twelfth month 20th, 1773, being nearly 73 years of age.

WILLIAM WALMSLEY, an elder of Byberry, deceased in 1773, aged 64 years. JOSEPH NOBLE, an elder of Burlington, deceased in the Tenth month, 1773. ANN PAXSON, an elder of Middletown, Bucks county, deceased Fifth month 1st, 1773. MARY KIRK, a minister of Fairfax, deceased in 1773. Of these four Friends no information of importance has been found.

##### THESE ELY.

Phebe Canby, a daughter of Thomas and Sarah Canby, was born at Abington, in Philadelphia county, in the year 1699. Her parents, whilst she was in her minority, removed into the limits of Buckingham Monthly Meeting, of which

meeting she continued a member through life. Her parents were worthy Friends, anxiously concerned to bring up their children, of which they had a large family, in the order of Truth, exemplary in plainness, sobriety and industry. Their labours were greatly blessed, and several of their children became eminent labourers in the Gospel of Christ, and others of them servicable in the Church in other stations.

Phebe became one of the Lord's children through the washing of regeneration, and the in-dwelling of that spirit of Sonship whereby she was enabled in sincerity to say "Abba, Father." She was married to Robert Smith, in whom, she found one prepared to walk with her in the way everlasting, and to assist her in bearing the trials which came upon her in her christian pilgrimage. They were true helps to each other, seeking first the kingdom of God and his righteousness, also attentive to their outward business, labouring therein with industry, and practising proper economy. She was brought forward in the ministry, and her gift was much to the comfort and edification of the church.

After the death of her husband, Robert Smith, she, with the unity of Friends, paid a visit to Friends in the Island of Tortola, having in this journey for a companion, Mary Evans of Gwynedd. They laboured faithfully and returned from thence in peace. Some years afterwards, in the summer of 1753, she was married to Hugh Ely, a faithful, honest-hearted Friend. Phebe was often employed in the weighty service of visiting the families of Friends, and being of a tender spirit, her honest labours were acceptable and profitable. Continuing faithful to the openings of Truth, she grew in her gift, until she attained to the growth of a mother in the church.

Towards the close of her life she was for a number of years confined to her house. Her strength was much prostrated and her power of speech much impaired, yet her memory was good and her understanding sound. She was remarkably favoured with patience and resignation, and was preserved in a sweet tender frame of mind. The visits of her friends were very comfortable to her, and at seasons she was enabled to praise the Lord in a fresh sense of his loving kindness to her, and to his whole human family. At times she signified her desire of being released from the body, yet resignation was always the clothing of her spirit. In the Lord's time she was graciously taken to her eternal rest, leaving a very sweet saviour behind her. Her death took place First month 20th, 1774.

##### WILLIAM LAWRIE.

William Lawrie was born at Upper Freehold, in the county of Monmouth, New Jersey, in the Third month, 1708. His parents although not in membership amongst Friends, were honest and reputable, and very much attached to the principles of Truth. William grew up sober and respectable, and having yielded to the visitations of Grace, he became fully convinced of the doctrines of the gospel as held by Friends, and was in the year 1746, received into membership by Chesterfield Monthly Meeting. He was appointed an elder, Fifth month 25th, 1754, in which station he was useful. His memorial speaks of him as having a service "in composing matters of controversy in the neighbourhood where he lived," and adds, he was "a kind friend, and a good neighbour." His death took place Second month 19th, 1774, being nearly 66 years old.

##### ROBERT LARGE.

Robert Large was born about the year 1716. He was from his youth of a peaceable and quiet spirit,

one who sincerely loved the Truth and its faithful followers. He was for many years concerned to live near to, and under the influences of the blessed Principle of life and salvation, professed by the Society of Friends, and thereby was brought into great heavenly-mindedness. In meetings for worship and discipline, he was a patient, humble waiter for the arisings of Divine Life, witnessing thereby his strength renewed from time to time. He was an approved elder in the church, and being enabled to lead an honest, circumspect life, and maintaining our christian testimonies in their primitive simplicity and fulness, he was of great use in his day. His friends of Kingwood Monthly Meeting, of which he was a member, say, "Although he had not a public testimony to bear, yet we esteemed him a preacher of righteousness in life and conversation."

As a husband, father and neighbour, he was a good example, and very charitable to the poor. He departed this life, Fourth month 27th, 1774, in his 58th year.

##### JOHN RIDGWAY.

John Ridgway, son of Thomas and Phebe Ridgway, was born in Burlington county, West New Jersey, in the year 1705. Soon after his birth his parents removed to Little Egg Harbour, of which meeting he continued a member throughout his life. His parents were valuable Friends, his father an elder, and his mother a minister in the Religious Society of Friends, who laboured to educate him in a manner consistent with their religious profession. His friends express the belief that a good effect resulted from the religiously guarded education he had received, and that he was assisted thereby in yielding obedience to the visitations of Divine Grace. These visitations, as he submitted himself to them, weaned him from many of the vanities of the world, and caused his life and conversation to be marked by sobriety and decorum.

He was diligent when it was possible for him to be at them, in the attendance of religious meetings, and though he believed it necessary for a time for the maintenance of his family to follow the sea-faring profession, yet through watchful attention to the operations of Divine Grace, he was preserved from any conduct inconsistent with the Truth. He was early in life appointed an elder in the church, the duties of which station he filled with reputation. Of a benevolent spirit, his heart and house were open to entertain Friends and others, and he with great cheerfulness and liberality, in many ways ministered to the necessities of the poor. In his extensive commerce and conversation amongst men of different rank, he conducted himself with a propriety and gravity of demeanor, which rendered him worthy of the esteem in which he was held by them. He was anxious to furnish his children with a good, sober, guarded education, and concerned that the children of others might partake of a like benefit.

He bore the sufferings which attended his last illness with great patience, expressing his earnest desire "to be contented in the Divine Will." He quietly departed this life Fifth month 21st, 1774, aged nearly 70 years.

*Right support of the Discipline.*—I believe if the discipline is rightly supported, it must be by the influence of the same Power that moves to every duty; and I have been sorry to observe in some, a disposition to be active therein, without waiting long enough at wisdom's gate: these have misled the weak, and hurt the pure cause.—*Mary Lagger, F. L., vol. 7, p. 434.*

## AN EXTRACT.

In the still watches of the solemn night,  
While chilly dews are falling thick and damp,  
And countless stars send forth their feeble light,  
The silent mourner trims her cheerless lamp.

Alone she watches through the midnight hour  
Alone she breathes the melancholy sigh,  
Alone she droops like some neglected flower,  
Unseen the tears that dim her sleepless eye.

Alone! there is no loneliness with God,  
No darkness that he cannot turn to light,  
No flinty rock from whence his gracious rod  
May not bring forth fresh waters, pure and bright.

There is no wilderness whose desert caves  
Are hid from His all-penetrating eye,  
Nor rolls that ocean whose tumultuous waves  
May not be silenced when the Lord is nigh.

There is no bark upon the trackless main,  
No pilgrim lone whose path he cannot see;  
Peace! then, poor mourner, trim thy lamp again,  
The eye that knows no slumber watches thee.

## THE MOTHER'S GRIEF.

To mark the sufferings of the babe,  
That cannot speak its woe;  
To see the infant tears gush forth,  
Yet know not why they flow,  
To meet the calm uplifted eye,  
That fain would ask relief,  
Yet cannot tell its agony.—  
This is a mother's grief.

Through dreary days and darker nights,  
To trace the march of death,  
To hear the faint and frequent sigh,  
That quick and sudden breath,  
To watch the last dread strife draw near,  
And pray that struggle brief,  
Though all is ended with its close.—  
This is a mother's grief.

To see in one short hour, decayed,  
The hope of future years;  
To feel how vain a father's prayer,  
How vain a mother's tears;  
To think the cold grave now must close  
O'er what was once the chief  
Of all the treasures joys of earth.—  
This is a mother's grief.

Yet when the first wild throbb is passed  
Of anguish and despair,  
To lift the eye of faith to Heaven,  
And think, "my child is there!"  
This best can dry the gushing tears,  
This yields the heart relief,  
Until the Christian's pious hope  
O'ercomes the mother's grief.—*Dale.*

For "The Friend."

After persons have in good measure believed in and obeyed the manifestation of Grace, they are not at once out of danger. Satan finding them determined to renounce the works of the flesh, may transform himself into an angel of light, and by his deceptive power lead them into great activity, under the form of religious zeal, and cause them to judge and condemn those, who are daily waiting at wisdom's gate, to be taught of the Lord, and know him to east up a way for them to walk in safety. This delusion is no evidence that divine guidance is not certain, but it proves the frailty of man and the need of guarding against presuming upon spiritual attainments, or of being suddenly caught by newly pretended discoveries. Richard Davies was a remarkably sincere man, and often divinely favoured; yet not waiting patiently in the light in which he would have been preserved, he was caught by John Perot's pretended superior spirituality over George Fox, of which he says, "About the year 1663 or 1664, I went to London, and found

some there separated from that love and unity, which I formerly saw them in; joining in that spirit with John Perot, who was newly come from prison at Rome to London, as it was said, with much seeming humility and lowliness of mind. A considerable company joined together with him, where they had me among them for a little time. The tendency of that spirit was to speak evil of Friends that bore the burden and heat of the day, and so to try out against Friends as dead and formal. They expected a more glorious dispensation than had been yet known among Friends; and they kept on their hats in time of prayer. I was but a little while among them, till a veil of darkness came over me, and under that veil, I came to have a light esteem for my dear and ancient friend George Fox, and some others, who had been near and dear to me. But it pleased the Lord to rend that veil of darkness, and cause the light of his countenance to shine again upon me; whereby I came to see the doleful place I was led into, by a spirit that tended to nothing else but self-exaltation, and (under a pretence of humility and self-denial,) breach of that unity, love, and fellowship, that formerly we had together, and the good esteem we had of one another in the Lord. Children we are of one Father, esteeming one another above ourselves in the Lord. There was no jar or contentions among us then, but all dwelt together in love and unity, and in the fellowship of that blessed gospel of peace, life and salvation. \* \* \* \* \*

"I was but a little time at home, ere John Whitehouse, a follower of John Perot, came and had a meeting at my house at Welch-Pool. I happened not to be at the beginning of the meeting, but came before it was concluded, and found he had sown an evil seed, and that some of our Friends had received it; who soon after joined with that corrupt spirit, which led them to have a light esteem of their brethren, which was a great exercise to many honest Friends, and especially to my wife and me; and we were ready to say, hath the Lord sent us here, to be instrumental for the gathering of a people in this country, and hath he suffered the enemy to scatter them in their imaginations. But sometime after, the Lord satisfied me, that those who were simple-hearted among them, should be restored again into a more settled condition than they had formerly known; and I believed in the word of the Lord. And in time the Lord broke in among them, and opened the understandings of some of them, and they began to reason among themselves, and saw that they were in darkness; so that most of them were restored again into their first love, and lived and died faithful to Truth, except Cadwalader Edwards, who continued in stubbornness and hardness of heart, and endeavoured to hurt such who were simple-hearted. I was moved to give forth a paper against him and all his vain imaginations. The following paper was likewise sent to him from Friends:

"We, whose names are hereunder written, are those that thou hast been seeking to insinuate thy corrupt principles into: and also are those that testify against that seducing spirit that thou art gone into: and most of us do know the terror and judgment of the Lord, for receiving that spirit; and we do exhort all, that they touch not, nor taste of it, lest they be separated from the Lord and his people, and so come under the judgment of the Lord, as we have done; and we have all seen the hurtful effects of that spirit, and in the fear of the Lord we do deny the same, and them that be joined to it.

[Signed,] Charles Lloyd, Richard Evans, &amp;c.

"This being read in our Monthly Meeting for

worship, the Lord was pleased to afford his sweet presence, and his power melted, tendered and mollified our hearts, and caused us to praise the Lord, for his great goodness and mercy to us, in bringing us out of the darkness that came over us by giving heed unto the seducing spirit of John Perot, John Whitehouse and Cadwalader Edwards. And now the Lord having restored us again, we did praise his holy name for the same; and Friends were careful afterwards of receiving any spirit that might tend to the breach of love and unity among us."

*Washington's Views on Slavery.*—Washington was not unacquainted in regard to the welfare of his country. Especially he manifested his true patriotism, as well as his unrestricted philanthropy, by his solicitude for that unhappy class whose wrongs and woes a retributive Providence sooner or later must avenge, if not redress. At this crisis in our country's life, it is gratifying indeed to find that Washington was no friend to slavery. He thus expresses himself on this subject in a letter to Lafayette, who, inspired with the true principles of liberty, had made arrangements to emancipate the slaves on an estate in one of the French colonies:—"The benevolence of your heart," he says, "my dear Marquis, is so conspicuous on all occasions, that I never wonder at fresh proofs of it; but your late purchase of an estate in the colony of Cayenne, with a view of emancipating the slaves, is a generous and noble proof of your humanity. *Would to God a like spirit might diffuse itself generally in the minds of the people of this country.*" At another time he says to Robert Morris:—"I hope it will not be conceived that it is my wish to hold the unhappy people who are the subject of this letter in slavery. *I can only say there is not a man living who wishes more seriously than I do, to see a plan adopted for the abolition of it.*" In a letter to General Mercer, he says:—"It is among my first wishes to see some plan adopted by which slavery in this country may be abolished by law." In his will he provides for the emancipation of all the slaves whom he held in his own right.—*Dr. Wylie.*

## THE FRIEND.

FIFTH MONTH 10, 1862.

## PHILADELPHIA YEARLY MEETING.

We complete our account of the late session of the Yearly Meeting by the following reports and minute.

*To the Yearly Meeting.*—The committee appointed to promote the civilization of the Indians, report,—

"That they apprehend it may be useful, as well as interesting, especially to some of our young Friends, to advert to the leading circumstances connected with the origin of the Indian committee, hoping by so doing, to awaken a more lively sympathy towards a poor, and deeply injured people. It is on the younger members that this long-cherished concern must soon devolve; as of those appointed by the Yearly Meeting, in 1840, to take charge of the subject, nearly two-thirds have been removed from works to rewards; and the survivors are impressed with the conviction that, from their advanced age, the work entrusted to them must shortly pass into other hands.

In connection with this view of the subject, we would call the attention of the Yearly Meeting to the critical condition of the Indians, in consequence of the great encroachments of the white population

on their lands. This may be in part explained, by the opening of several railroads through the reservations, and the leasing of large portions of their land for depots, stations, &c. Hence, at various points, thriving villages may now be seen, and others, it is supposed, will soon appear, to be occupied by a class of persons not friendly to the improvement of the natives, and whose presence, we fear, will hasten the day of their expulsion from the home of their forefathers.

In the year 1794, the Meeting for Sufferings, of Philadelphia Yearly Meeting, was informed that a treaty was to be held at Canandaigua, in the state of New York, between commissioners on the part of the United States, and the chiefs of the Six Nations, who were particularly desirous that Friends should attend it—the Government also expressing a similar wish. Four valuable Friends offering themselves for the service, were approved by the Meeting, and accordingly attended. It was on this important occasion, that Sagarissa, (or the sword carrier), a chief of the Tuscaroras, expressed a desire that some of our young men should come among them as teachers. This suggestion fell with great force on the benevolent heart of our worthy friend William Savery, (one of the four Friends in attendance), who remarks in his diary, "Perhaps this intimation may be so made use of in a future day, that great good may accrue to the poor Indians, if some religious young men of our Society could, from a sense of duty, be induced to spend some time among them, either as school-masters or mechanics."

Not only were the four Friends who attended the treaty moved by this suggestion, but it met with a deep and cordial response throughout the Yearly Meeting. On the first opportunity that presented, that Meeting entered into a consideration of the subject, which resulted in the appointment of forty-three Friends, to give it more fully, the weighty attention which its importance called for. In their report to the succeeding meeting, they feelingly allude to the sad changes that had overtaken the natives of our country; and say there are loud calls for benevolent exertion to promote among them the principles of the Christian religion, as well as to turn their attention to school-learning, agriculture and useful mechanical employments.

The report was fully united with, and a Committee of twenty-nine Friends appointed for the gradual improvement, and real welfare of the Indian natives. When the Committee first commenced its labours, nearly all of the vast and fertile territory lying west and north of the Ohio River, was in the possession of numerous tribes of aborigines, who have since been entirely dispossessed of their fair inheritance; and in their retreat before the strong hand of power, have carried no inconsiderable share of their primitive rudeness along with them.

If we revert to the New York Indians, we shall find, that although their territorial possessions have been reduced from 4,300,000 acres, to about 100,000, yet the population has by no means suffered in the same proportion. For, notwithstanding all the hardships they have passed through, if the estimates are correct, the Indians in that State now number within 700 of as many as they did sixty-eight years ago. The Alleghany and Cattaraugus reservations contain more than one-half of their remaining possessions, and much more than that proportion of their population; and it is to the Indians on these reservations, that the efforts of the society have been almost exclusively directed.

Although their future prospects are far from encouraging, yet we believe it is no time to relax our

Christian labours to promote the welfare of this people; believing it is not too much to say, that had it not been for the persevering efforts of Friends, both among the Indians, and with the General Government, the Senecas, in all probability, would have been without a home at this day, either in the State of Pennsylvania or in New York.

We believe they still continue to regard the Quakers as their true and faithful friends; for, when overtaken by perplexity or calamity, their eye is invariably turned towards Philadelphia; and it is, indeed, a most pleasing reflection, that from the days of its humane founder, they have not looked in vain.

In offering an account of their proceedings, and of the state of the Institution, during the past year, the Committee may inform the Yearly Meeting, that the following changes have taken place since their last report:—

Abel H. Blackburne, who, for some years past has been acceptably employed in teaching the school, and his wife Caroline, in assisting in the house, having been released at their own request, left Tusnessass on the 23d of First mo., last.

Our friend Thomazine Valentine, having her mind again drawn to spend some time at Tusnessass, and its neighbourhood, for the purpose of instructing the native women in house-keeping, and other domestic duties, returned thither in the Fifth month last, having the entire concurrence and unity of the Committee. Catherine Lee having offered her services, as teacher of the school, has been accepted, and she entered on the duties pertaining thereto, in the First month.

Catherine Battin being willing to aid in the family, and having, on a prior occasion, been acceptably engaged there, her offer has, likewise, been accepted, and she returned to Tusnessass in the First month. Our friend Abner Woolman, remains in charge of the farm and family, and with his daughter Abigail, is usefully employed. From the Friends residing at the school, as well as from two of our number who have recently visited it, we have received encouraging accounts of its increasing usefulness. The number of children in attendance was 19, to wit: 15 girls, and 4 boys, whose progress in learning, and their general deportment, are reported as satisfactory.

The interest manifested by the pupils in their studies, and the cheerfulness with which they engage in the household services required of them, are truly encouraging, and furnish good ground to hope that our labours for the improvement of the rising generation will not be lost.

Although the Indians met with some loss in their corn and potato crops, by a freshet in the Alleghany river, which occurred last fall, yet their condition appears to be quite as favourable as usual, if not better than it generally is at this season of the year.

Meetings for Divine worship have been regularly held on 1st and 5th days, and the Friends who last visited the settlement say they were comforted in attending them. They also attended a general council held at Jamesstown; and the Indians were advised and encouraged to educate their children, to clear up and cultivate their land, to refrain from intoxicating drink, and to remove the white people from their reservation. The advice was well received, and one of their number, in replying, acknowledged the many kindnesses they had received, and the improvement they had made, since Friends commenced their labours among them.

By an examination of our Treasurer's account, it appears there is a cash balance in his hands of \$50 19, and securities amounting to \$15,700.

Signed on behalf and by direction of the Committee. THOMAS EVANS, Clerk.

Philadelphia, Fourth month 17th, 1862.

To the Yearly Meeting.—The Committee who have charge of the Boarding School at West-town, report,—

That during the winter session, 1860-61, there were 184 pupils, viz., 100 boys and 84 girls; of this number 38 boys and 27 girls were new admissions. During the summer session there were 115 pupils, viz., 49 boys and 66 girls, of whom 11 boys and 17 girls were new scholars. The whole number of new admissions for the year was 96, viz., 52 boys and 44 girls. The average number in attendance, for the same period, was 149, viz., 74 boys and 75 girls, which is eight less than the preceding year. The disbursements for family expenses were \$9,213 90; for salaries and wages \$9,072 66; for incidental expenses \$344 02; for repairs and improvements \$1,110 27, together \$20,340 85. The charges for board and tuition were \$13,338 51; for rents of tenements, saw and grist-mills, and profits on merchandise \$826 48; income of fund for general purposes \$3,476 59; income of fund for paying salaries of teachers, \$866 12, and the balance in favour of the farm, was \$2,083 56, which, with the Yearly Meeting appropriation of \$800, make together \$21,391 25, and show a balance in favour of the Institution, for the year, of \$1,050 40. In this statement it will be observed the deficiencies of former years are not included, and that the credit given for board, tuition, and merchandise are the whole amounts charged, without any allowance for losses on collections, of which a small amount occurs every year. Upon a recent examination of the accounts which have been outstanding for a number of years, it was believed about \$400 of the amount would not be collected, which, if deducted from the apparent balance of this year, would materially reduce it.

It is cause of thankfulness that the health of the family has been generally good, very few cases of serious indisposition having occurred during the year. Meetings for Divine worship have been regularly held on First and Fifth days, in which the department of the children has been generally becoming. The alteration in the mode of conducting the examinations, alluded to in the last report, has been made. The more frequent attendance of the Visiting Committee, which is required by this change, will, it is hoped, prove advantageous, both in encouraging the teachers and care-takers in the performance of their arduous duties, as well as in other respects.

The course of studies, and the number of teachers employed are the same as last year. As heretofore, at stated periods, portions of the Holy Scriptures, Barley's Catechism or Bevan's View, are committed to memory by the pupils; and the Bible and other religious books are frequently read to them when assembled in the collecting rooms. A thorough knowledge of those branches of an English education, which are of daily practical utility, being very important, particular care is taken to give instruction in them, with, probably, as much success as at any other school. Lectures have been delivered the past session on Natural Philosophy, Chemistry and Natural History; and 50 boys and 12 girls have studied Latin, and 15 boys have given some attention to Greek.

While the advancement of the pupils varies according to the attention they individually bestow upon their studies, their general progress has been as satisfactory as usual, manifesting the care of their teachers, who, we believe, endeavour to perform their duties in this respect with diligence.

The number of applicants for the benefit of the gratuitous funds under the care of the Committee, continues to be more than can be immediately accommodated. The board and tuition of 32 pupils have been defrayed out of the income of them for the year ending Tenth mo. 16th, 1861. Several of these design qualifying themselves for teachers. Friends applying for the admission of children, to be paid for in this way, should be particular to give the age of the child, and the name of the Monthly Meeting he is a member of, to the Treasurer or Superintendent, and acquaint one of them, or some member of the Committee, with the circumstances of the applicant, in order that the Friends appointed to make such admissions may be able to judge understandingly, in the case.

Our friends David and Rachel H. Roberts having expressed a desire to be released from the stations of Superintendent and Matron, Dubré and Jane Knight were appointed to succeed them, who entered upon their respective services at the opening of the last summer session.

The annual cost of medical attendance on the pupils being considerable, in addition to the expenses appertaining to the nurseries, the propriety of making a small charge to each pupil, in order to defray it, has several times claimed the consideration of the Committee. Believing that the Institution ought to be relieved, at least from part of the expenses alluded to, they suggest that hereafter a charge of fifty cents per session be made to each scholar, in order to cover this outlay.

Owing to the small number of scholars in attendance during the summer session, the Committee believed it proper to issue an address, calling the attention of Friends to the advantages conferred by the school, and encouraging them more generally to avail themselves of its benefits, which, it is hoped, had a useful effect.

The Committee are desirous, and they do not doubt Friends generally are, that this important Institution should be conducted so as to confirm and increase the attachment of the pupils to all our religious principles and testimonies, and that it may always bear unmistakable evidence of being a Friends' School, not only in the consistent appearance of the scholars, but in all other respects. They are very sensible that this can only be obtained through the Divine blessing on the faithful labours of those entrusted with its management, and the cordial co-operation of those who send children there. Impressed with these views it is very painful to the Committee to find it necessary so frequently to allude to the want of attention, on the part of some who send children to the school, to the regulations respecting the clothing to be worn by the pupils. These regulations, we believe, are important to the proper conducting of the Institution, but notwithstanding the concern and anxiety manifested by the Yearly Meeting, that our christian testimony to plainness of dress should be strictly maintained, and the frequent allusion to the subject by the Committee, articles of clothing continue to be furnished to the pupils every session, so unsuitable in colour, as well as in form, as to require to be either entirely rejected, or greatly altered. The alterations necessary to be made are often very trying to the child, as well as very troublesome to the care-takers. The Committee are very desirous that they should be relieved from the burthen thus imposed; and they would, therefore, again affectionately, but earnestly request parents to comply with the regulations, and thus save their children from much discomfort, and the care-takers and Committee from the unpleasant duty which devolves upon them when the rules are disregarded. The Minute adopted in the Twelfth

month, 1857, and appended to the report of 1858, is again subjoined, and commended to the attention of all who propose sending children to the school.

This Summary had its origin, we believe, in a religious concern for the welfare of the rising generation. It has been sustained, we trust under similar feelings, for upwards of sixty years, during which about 8700 children have partaken of its advantages. A large number of the present members of the Yearly Meeting, having been pupils at the school, it is hoped their interest and confidence in it will not abate. It is to them, mainly, we must look for a continuance of the patronage and support it has so long received. The facilities for imparting instruction, and for the comfortable accommodation of the pupils were, probably, never greater than they now are, and the price of board and tuition is acknowledged to be very low. In consideration of these advantages, and the endeavours used to inculcate correct principles, and promote good habits, it is cause of regret that more children are not permitted to receive the benefits it is capable of conferring, especially on those who yield a cheerful compliance to its discipline and rules. While, therefore, we would impress upon Friends the importance of sustaining an Institution where our beloved youth may receive literary instruction, sheltered from many evil influences, we would also remind parents, and others who have the care of children, that it is very essential to the successful working of such an establishment, that the guarded education of those placed in it should be commenced at home. If the instruction and discipline have been conducted there, under religious exercise and concern for the eternal well-being of the child, the labours of conscientious teachers, and others, will be much lessened, and much more likely to be effectual when such children are deprived of parental control.

Signed on behalf and by direction of the Committee.

THOMAS KIMBER,

*Clerk for the day.*

Philadelphia, Fourth mo. 4th, 1862.

The Minute of 1857 is as follows, viz:

*At a Stated Meeting of the Committee to Superintend the Boarding School at West-town, held Twelfth month 9th, 1857:*

It has been cause for painful concern to the Committee to learn, that notwithstanding the repeated advice issued by the Yearly Meeting, printed copies of which are furnished to those who propose sending children to the Institution, there is an increasing departure from our christian testimony to plainness and simplicity in the colour and make of many of the articles of clothing brought to the school by the pupils.

On renewed consideration of the subject it is concluded, that in order to check this tendency, and promote a closer observance of the regulations, all such garments as do not conform therewith, if they cannot conveniently be altered, are to be forthwith returned by the Superintendent to the parents or guardian at their expense.

Any articles of apparel sent to the pupils during the session, must be submitted to the Superintendent or Matron for examination, and if not approved, or if worn without being so submitted, are to be returned in the same manner.

Some of the boys having brought with them dress frock coats, double-breasted vests, with rolling or falling collars, and also caps, it is deemed proper to state explicitly, that such articles are not admissible, and that the boys will be required to wear hats, plain vests, plain coats, made in the usual form, or plain roundabouts.

The foregoing Minute is directed to be printed, and a copy furnished to each person applying for the admission of a scholar.

Extracted from the Minutes.

DAVID ROBERTS, *Clerk.*

In the several sittings of this meeting, the minds of Friends have been brought under religious concern for the welfare of the members, and their growth and establishment in the blessed Truth. It is the duty of the servants of Christ to watch over one another for good; and, where any neglect their religious duties, to warn and persuade them in the love of Christ, to resist the love of the world, and, through his help, to follow him faithfully. We believe the extension of affectionate entreaty to those who absent themselves from our meetings for Divine worship, would often be beneficial to them, and to the rightly concerned brother thus engaged. How can any fulfil the Divine law, "Thou shalt love the Lord thy God with all thy heart, and soul, and strength," if they suffer the love of worldly things to deter them from the public acknowledgment of his right to rule over them, and thus absent themselves from meetings for Divine worship! May all remember their accountability to Almighty God, and the weightiness of their salvation; and, surrendering all that He calls for, take up the cross, and follow the Lord Jesus in the path of holiness and self-denial; in which he would enable them to work out their salvation with fear and trembling. Hereby they would be prepared to receive gifts, to be occupied in His church to His praise, and for the building up of one another on our most holy faith. They would then feel bound to maintain all our religious testimonies, and to bring up their children in the observance of them. The use of the Scripture language of thou and thee to one, and keeping to the plain garb which has distinguished faithful Friends, would contribute to their defence against corrupting associations, and the many snares which evil persons devise to entrap the unwary.

The right education of children and young persons at home, under the care of parents and others, who are concerned to bring them up in the nurture and admonition of the Lord, and restraining them from wrong things, is of great importance to their present and future welfare. It has been the concern of this meeting to encourage the frequent reading of the Holy Scriptures and the writings of Friends, in private and in the family collections; the practice being often productive of serious impressions that may strengthen them to choose the good, and refuse the evil; and it is found that correct habits and sentiments thus formed, contribute much to aid school teachers in the management of such children.

We have felt much sympathy for the rising generation, and desire that they may give heed to the convictions of the Holy Spirit in their hearts; and that neither the influence nor the department of parents or other Friends may, in any way, divert them from a steadfast adherence to its requirements, but that by example and precept they may endeavour to lead the youth into the love of their Saviour, and of the doctrines and practices of our religious Society.

Having been favoured to transact the business of the meeting in a degree of harmony, and brotherly regard and condescension, under feelings of thankfulness for the favour, and a desire for each other's preservation in the Truth, the meeting concludes to meet at the usual time next year, if consistent with the Divine will.

Extract from the Minutes. JOEL EVANS,  
*Clerk to the Meeting this Year.*

## SUMMARY OF EVENTS.

EUROPE.—News from England to the 20th ult. The London Morning Herald intimates that if the United States government does not consent to a peace, the great powers of Europe should peremptorily interfere in behalf of the general well-being of mankind. "That this has not been done before, is owing to the generosity of England, as France was ready, but it is now time that England should cease to stand between her own people and the rest of the world, and that she should let London Times expatiate on the importance of the struggle for New Orleans, and thinks its loss would be fatal to the rebel cause.

The distress in Belgium, owing to the failure of the cotton supply, is stated to be terrible. In the city of Ghent more than 4,000 workmen are literally on the street, without resources, and about 4,000 more can just drag along their existence by working three days in the week. Other cities are in nearly equal distress, and the government is seriously embarrassed at the wide spread misery that prevails.

The Russian Minister of the Interior, has made two imperial propositions—one for accelerating the liberation of the serfs, and the other for creating a system of Parliamentary representation. The propositions have been referred to the Emperor, and he is expected to sign them. It will now be reported, withdraw her troops from Mexico. They will stay till the satisfaction demanded is obtained.

It is rumored that the French police have arrested 12000 workmen on the charge of sedition.

Great thanks and thanks are tendered to the British House of Commons.

The Austrian Government has sent two Naval Engineers to America to inspect the Monitor and Merrimac, and the new coast fortifications.

There is great delight in all parts of Italy at the recent language of Lord Palmerston, in the Italian debate in the British House of Commons.

The pirate Sumner, being unable to leave Gibraltar on account of the presence of the U. S. Steamer Tuscarora, the crew have been paid off and the vessel will be sold.

Captain Semmes, of the Sumner, and his officers, had arrived at Southampton on the 17th inst. for a little change.

The Austrian Government has sent two Naval Engineers to America to inspect the Monitor and Merrimac, and the new coast fortifications.

UNITED STATES.—Trade with the South.—It is understood that trade with the rebel States is to be in general prohibited, until the ports in the South are fairly and freely opened by the new United States Collectors. By recent orders of the President, the ports of New Orleans, Boston to New Orleans. Charles L. Lathrop, has been confirmed by the U. S. Senate as collector of customs for the district of New Orleans, Louisiana. The U. S. Secretary of State, in a circular addressed to the foreign ministers says, "I have the honor to inform you, for the information of your Government, that a collector has been appointed by the President for the port of New Orleans, and that the necessary preparations are being made to modify the blockade so far as to permit limited shipments to be made to and from that and one or more other ports which are now closed by blockade, at times and upon conditions which will be made known by proclamation."

The Prospects of the Struggle.—Although the leaders of the rebellion seem to be as determined in their purposes as ever, the events of the last few months have plainly shown their inability to successfully employ the military power of the Government. Their forces have of late, at all points, retreated upon the advance of the Federal armies, or if resistance has been attempted, it has been followed generally, by capture or defeat. The cutting off of the rail communication east and north of Corinth, and the recent capture of New Orleans, giving possession of the lower Mississippi to the Union fleet, are serious disasters to the rebel cause, and must tend to hasten the termination of a conflict, which, however it may be protracted, can now scarcely fail to end finally in the re-establishment of the authority of the United States throughout the whole revolted region.

Virginia.—The great rebel army which was fortified upon the peninsula, formed by James and York rivers, hastily evacuated its position towards the close of last week, but it is now once more closing in upon the rear approach of McClellan's siege works, and the conviction that the impending attack must result in a disastrous defeat. The rebel army consisted, it is believed, of about 160,000 men, with 400 pieces of field artillery, but it is now supposed to consist of a demoralized condition, and many of them undisciplined. General McClellan captured nearly 150 guns in position at Yorktown and Gloucester, some of them heavy rifled guns of the best description. The rebels also left large quantities of ammunition, tents and supplies of various kinds, which they were unable to take with them in their flight

They were pursued by the Federal forces, and the rebel rear guard was overtaken on the 4th inst., near Williamsburg. The rebels, in consequence of the close contact of the Union forces on both sides, and the capture of a number of the fugitives. Refugees from Norfolk, say that there are several hundred avowed Union men in Norfolk, and many others who keep quiet, including a part of the soldiers. Three companies in Portsmouth mutinied and sailed for England, and recently a party of 100, as a part of Gen. Magruder's force was in a mutinous condition. There were between 6,000 and 7,000 rebel troops at Norfolk, under Gen. Huger.

North Carolina.—The Dismal Swamp Canal has been closed up by a detachment of Gen. Sumner's forces. The bombardment of Fort Macon was kept up until the fort became untenable, when the garrison surrendered. Fifty guns, 20,000 pounds of powder, and a quantity of shot, shell, &c., were taken, together with about 400 prisoners, who were subsequently released on parole. The loss of life on either side was not great. The fort was immediately garrisoned by Union troops. The Governor of North Carolina, has it is alleged, become convinced of the hopelessness of the rebellion, and is desirous that the State should withdraw from it and return to its allegiance to the United States. According to a report from the Governor, the rebels have been expelled and placed in confinement by order of Jefferson Davis.

Louisiana.—No official accounts had been received of the capture of New Orleans, but the fact is fully verified by the reports received from various quarters. The city was first fired by a battalion of marines, and subsequently Gen. Butler's army arrived. The rebels fled, and took possession of it. The rebels had destroyed much property, but it is stated a large amount of cotton had been discovered and seized by Gen. Butler. The Union citizens of New Orleans had been meeting, which was largely attended, and with enthusiasm manifested. The iron gun boats passed up the river from New Orleans, and took possession of Baton Rouge without opposition, the small rebel force there retreating on the approach of the boats. A complete panic seems to have overtaken the rebels as soon as the fact of the capture of New Orleans was known. The fortifications on Lake Pontchartrain and other places in the vicinity, were hastily abandoned. All the river towns below Vicksburg, Miss., were at once deserted by the greater part of the inhabitants, who fled into the interior.

Mississippi.—On the 29th ult., Gen. Mitchell captured the rebel force at Corinth, routing them with a loss of 68 men killed, and a large number wounded; 300 prisoners and two pieces of artillery were taken. An expedition from Bridgeport, crossed the river on the 1st inst., advanced towards Chattanooga, and captured the rebel works and destroyed a saltpetre manufactory. Gen. Mitchell's army now occupies Huntsville in perfect security. At the latest dates, the army of Gen. Halleck was pressing forward upon that of Beauregard, and daily skirmishes were taking place. The policy of the rebels appeared to be to make a dash for Chattanooga and the fall back. A detachment of 400 Germans from a Louisiana regiment, who had been sent out from the rebel camp on guard duty, came into the Union line in a body, with white flags, and gave themselves up as deserters. It was the U. S. Army, Gen. Beauregard was moving many of his troops southward, and that he would make no stand at Corinth.

Tennessee.—The Memphis papers of the 29th ult., say a meeting was held there on the previous night, at which it was concluded to bring the city in line with the approach of the U. S. fleet. The papers recently call on the people to reinforce Gen. Price at Memphis, as the only means of saving the city from destruction. Com. Foote's fleet remained near Fort Wright, active operations being nearly suspended. The rebel continued very high. On the 2nd inst. it was higher at Cairo than it was a little more than a week previously. The Nashville Union of the 24th ult., says "persons who have hitherto been disloyal are coming in every day and taking the oath of allegiance to the United States government." The official reports of the losses of the Federal army in the battle of Pea Ridge at which or Pittsburg Landing, have been published. The rebels were wounded and missing, is 13,763. The loss of the rebel is not known with any certainty, but is supposed to be even greater. Between 2500 and 3000 rebel soldiers were left dead on the field, and were buried by the Union army.

Missouri.—Rebel incursions still occasionally take place. On the 26th ult., a rebel band of 600 Indians, commanded by Col. Coffee, was attacked at Neosho, by 146 of the Missouri volunteers and routed, with the loss of 62 prisoners and a number killed and wounded.

New Mexico.—The rebels have been defeated in recent battles with the U. S. forces. They have abandoned Santa Fe and were retreating from the Territory into Texas.

Southern Items.—A Charleston, S. C., dispatch of the 1st inst., says that the U. S. forces have captured a small battery of two guns near White Point, only twenty-two miles from Charleston.

Gen. Prentiss, and 700 United States prisoners, had arrived at Selma, Ala. The officers were to be sent to Talladega, and the privates to Montgomery.

At a late convention of cotton planters, held in Selma, Ala., it was unanimously resolved to restrict the production of cotton to 500 pounds for each hand employed, and to advise an increased cultivation of breadstuffs.

According to reliable information received from Richmond, Va., the planters have determined to raise no tobacco this season. All the stock now on hand has been seized by the military, to prevent its falling into the hands of the Union army. The Richmond Examiner says, "If the Confederate Government is to raise a rash, it will defend Richmond to the last, for the leaving of it, though it will give up to ruin many thousands of its citizens, it is not less fatal to the Government itself."

New York.—Mortality last week, 401. The money market continues easy, the rate on call being from 3 1/2 to 5 per cent. Gold 2 1/2, 3 per cent premium. Since the capture of New Orleans, cotton has declined largely in price. On the 5th inst., sales were made at 22 1/2 a 23 cts. for middling uplands.

The *Blackbird* has become so effective that but few vessels now escape from the Southern ports. Within a short time, numerous and important captures have been made by the U. S. cruisers.

## RECEIPTS.

Received from Marshall Fell, Pa., \$2, 50; 35; from Charles Lippincott, N. J., \$4, 100, 34 and 35.

## FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

## WEST-TOWN BOARDING SCHOOL.

The Summer Session will commence on Second-day, the 12th of the Fifth month. Pupils who have been regularly entered, and who go by the cars from Philadelphia, will be furnished with tickets by the ticket agent at the depot of the West Chester and Philadelphia Railroad Road, north-east corner of Eighteenth and Market Streets. Excursions will be held at the Street Road Station, on Second and Third days, on the arrival of the trains that leave Philadelphia, at five minutes past eight, half-past two, and two o'clock. During the Session, small packages for the pupils, if left at Friends' Book Store, No. 304 Arch Street, on Sixth days before twelve o'clock, will be forwarded to the depot to meet the first train of cars from the city, on its arrival at the Street Road Station, every day except First days.

## WEST-TOWN BOARDING-SCHOOL.

The Summer Session of Friends' Boarding-school at West-Town, will commence on Second-day, the 12th of Fifth month next. Parents and others intending to send their children as pupils, will please make early application to DEBBE KNIGHT, Superintendent, at the School, or to CHARLES J. ALLEN, Treasurer, No. 304 Arch Street, Philadelphia.

## HAVERFORD SCHOOL ASSOCIATION.

The Stated Annual Meeting of the Haverford School Association, will be held at the Committee Building, Arch Street, on Second-day afternoon, Fifth month 12th, 1862, at 4 o'clock.

W. S. HILLES, Secretary.

Phila., Fourth mo. 26th, 1862.

MARRIED, on Fourth day the 9th of Fourth month, at Friends' meeting, Greenwch, N. J., GEORGE W. THOMP, of Frankford, Pa., to SARAH R., daughter of Benjamin and Mary R. Sheppard, of the former place.

## PILE &amp; M'ELROY, PRINTERS.

Lodge street, opposite the Pennsylvania Bank.

From "The British Friend."

Early Friends and What They Were.

(Concluded from page 283.)

I have already ventured to remark, in contradiction to the oft-repeated assertion, "there is no religion in Dress," that there have been, and are to the present day, many that can testify, that you in dress there is religion, and that it has at times been laid upon them as from the Lord, to come out from among the world's fashions, and to adopt a plain and simple attire. Thomas Ellwood, John Grattan, and many others of our early friends, are practical examples of this; and I dare appeal to the hearts and consciences of many up and down in the Society in the present day, if they have not known the pointing of the Divine and calling them out of the vain fashions and practices of the world, and in the obedience to which their very peace of mind was concerned.

In 1668, the women Friends of this country send an Epistle, showing to that there might be unity, &c., in the outward adorning, though not to the extreme of gear. It runs thus:—"The world says the Quakers are now like us, they want gay lace and ribbons. Our end is not to upbraid, but to remind you how our religious profession is upbraided; for with the light you will see there is superfluity in habit, though no lace or ribbons."

Penn's address to Protestants, issued about his period, is a severe stricture on the times, as regards the sinful indulgence in dress; and his book, entitled *No Cross no Crown*, goes strongly to show the obstruction offered to the Christian's path by fondness for dress. Of the argument there, as now advanced, the indifference of such things, he says—"But should these things be as indifferent as they are proved perniciously unlawful, (for never heard any advance their plea beyond the bounds of indifference) yet so great is their abuse, a universal the sad effects thereof, like to an infection, that they therefore ought to be rejected of all, especially those whose sobriety has preserved them on this side of that excess, or whose judgments, though they themselves be guilty, suggest the folly of such intemperance." For what is an indifferent habit but that which may be done or let undone? Granting, I say, this were the case, yet doth both reason and religion teach, that when they are used with such an especial appetite as to leave them would be a cross to their desires, they have exceeded the bounds of mere indifference. Which

being a violation of the things themselves, a perfect abuse enters, and consequently they are no longer to be considered in the rank of things simply indifferent, but unlawful."

In 1680, we have some very striking and instructive remarks from the pen of Joseph Pike to the following effect:—"However, notwithstanding religion does not consist in bodily conformity, or plainness of apparel, but is in and from the heart, as also, on the other hand, that pride is in the heart and not in the outward clothing, yet true religion leads into simplicity in all outward things. For though there is a form of godliness without the power, yet the power of Truth leads into a godly form and order in outward things; and this is abundantly proved from the Holy Scriptures, and among the rest even in outward clothing."

In 1688, the Yearly Meeting issued its advice to its members on this very particular of dress. Still more strongly in 1691 does the Half-yearly Meeting of Dublin express itself, and extend its counsel more minutely; and William Penn's *Reflections and Maxims*, published that year, contain the following counsel:—"Excess in apparel is another costly folly. The very trimming of the vain world would clothe all the naked one."

"Choose thy clothes by thine own eyes, not another's. The more plain and simple they are the better. Neither unshapely nor tawastical; and for use and decency, and not for pride.

"If thou art clean and warm it is sufficient; for more doth but rob the poor and please the wanton."

Whether about this period there might have arisen any controversy in the Society as at the present day, as to what constituted "plainness of apparel," I have not been able to trace; but in 1694, William Penn, in his *Rise and Progress*, gives a clear definition of the "peculiarities" of Friends, their origin, &c., and in language so adapted to the present day, that I may be excused for transcribing it. He says:—"For these and such like practices of Friends were not the result of humor or for civil distinction, as some have fancied, but a fruit of inward sense, which God, through His holy fear, had begotten in them. They did not consider how to contradict the world; or distinguish themselves as a party from others; it being none of their business, as it was not their interest. No, it was not the result of consultation, or a framed design by which to declare schism or novelty. But God having given them a sight of themselves, they saw the whole world in the same glass of truth; and sensibly discerned the affections and passions of men and the rise and tendency of things, the lust of the eye, and the pride of the world, which are not of the Father, but of the world." The third thing to be treated of is the vanity and superfluity of apparel, in which first two things are to be considered—the condition of the person, and the country he lives in. We shall not say that all persons are to be dressed alike, because it will perhaps not suit their bodies nor their estates. And if a man be clothed soberly without superfluity, though the thing may be finer than that which his servant is clothed with, we

shall not blame him for it. The abstaining from superfluities, which his education and condition may have accustomed him to, may be in him a greater act of mortification than the abstaining from fine clothes in the servant, who never was accustomed to them. As to the country, what it naturally produces may be no vanity to the inhabitants to use, or what it commonly imported to them in exchange, seeing it is without doubt that the creation is for the use of man. So where silk abounds it may be worn, as well as wool; and were we in those countries or near to them, where gold and silver were as common as brass, the one might be used as well as the other. The iniquity lies then here. First, when from a lust of vanity and desire to adorn themselves, men and women, not content with what their condition can bear, or their country easily affords, do stretch to have things, that, from their variety, and the price that is put upon them, seem to be precious, and so feed their lust the more; and thus all sober men of all sorts will readily grant to be an evil."

"21. When men are not content to make a true use of the creation, whether the things be fine or coarse, and do not satisfy themselves with what need and convenience calls for, but add thereto things merely superfluous, such as in the use of ribbons and lace, and much more of this kind of stuff, as painting the face, plaiting the hair, &c., which are the frays of the fallen and corrupt nature, and not of the New Creation, as all will acknowledge. And though sober men among all sorts will say, that it were better these things were not, yet will they not reckon them unlawful, and therefore do admit the use of them among their church members. But we do account them altogether unlawful and unsuitable to Christians.

"3d. The scriptures severely reprove such practices, both commending and commanding the contrary, as Isa. iii."

Thus reasons William Penn, and while aiming only at establishing Christian simplicity, it strikes at all attempt at costume or singularity for its own sake alone. In truthfulness it is perfect; in reasoning it is sound; and in application to the present, it is apposite.

Six years later we find Richard Claridge, a man of most liberal education, once a clergyman, and who had given up much, and endured more, in embracing the principles of our then greatly persecuted Society, thus stating the question of dress, and touching upon the very identical subject of costume. He says:—"We do not affect singularity in our garments; for we distinguish between use and affectation, between plain attire and monastic order. We are at liberty in our apparel, provided all vanity and superfluity is avoided; no man or woman is tied to any one form or fashion, but that of modesty and moderation, and such as becomes the followers of Jesus.

"For though we would have all Friends go plain in their clothes, yet it is not in any plainness that is for a characteristic in religion, or mark of holiness, or distinction of order or society; for many ill men and women may go very plain in their habit; but such a plainness as is opposed to super-

fluity and slovenliness. Nor have we any injunction for an universal coarseness in our apparel; but we have respect to our several states and conditions, and to the nation or country where we live; and do believe that we may wear either coarse or fine clothing, according to our several abilities, if we are careful to keep a due distance from all pride, vanity and superfluity. And as we observe these rules in our apparel, we are satisfied of our conformity to the Holy Scriptures, and so value not the accusation of singularity.

Our Friends never placed holiness in clothes, nor in any outward thing whatsoever; holiness is an essential attribute of God, originally in Him, and derived truly from Him in the souls of the faithful," &c.

And in writing during the same year an *Exhortation to faithfulness and Obedience*, he remarks:—"I can give my testimony, as one that hath obtained mercy to be faithful, that Truth, as it is minded and obeyed, leads out of sin, out of all false doctrine and worship, and out of all the vain customs, usages, and fashions that are in the world. When we come to love it, first for its own sake and next for the work and operation of it in and upon our hearts, O, what a tenderness will be in us! what a care of acting in all things according to it, and what a fear of doing anything that is repugnant thereto! We shall not plead for our own wills, or pleasures, or imaginations; or say, This is a small matter, religion doth not lie in dresses, habits, or fashions: this is a strictness beyond what Truth requires; or it is a peevish humor of some rigid spirits, that would bring all into conformity to their fancies. But we shall deny our own wills, pleasures, and imaginations, and be resigned up to the will of God, desiring that that may be done on earth as in heaven. This will be our travail that we may be always found in the well-doing, and taking up our daily cross to all that which may present itself under any shape or likeness, to draw away our minds from the purity and simplicity of the Gospel of Christ."

In 1700, we have an Epistle on the same subject from George Whitehead. Nor was the Yearly Meeting un mindful of its duty in this respect, for in 1688 and 1691, plainness and simplicity are truthfully enjoined. The years 1703 and 1754, among other counsels intermediately extended, are peculiarly significant of the exercise and care of the Church in this particular. And in 1701, the whole ground on which the question rests is briefly again gone over in the following words:—"And here we find it our concern, to revive a truth which is worthy of general remembrance: that no affectation of singularity was the cause of a demaour, both civil and religious, in our forefathers, (or in the faithful of this day, different in many respects from the conduct of those among whom we dwell,) their beholding the vanity, unprofitableness, and insincerity of the salutations, customs, and fashions of this world; observing the examples of our blessed Saviour and his followers, with the frequent testimonies recorded in holy writ, to the necessity of a self-denying life and conversation, together with the law and the testimony revealed in their hearts, retained in view the injunction of the apostle, not to be conformed to this world, but to be transformed by the renewing of the mind, that we may prove what is that good, acceptable, and perfect will of God. . . . May an uprightness of heart, as in the sight of God, ever attend the simplicity of appearance; that none, by a conduct inconsistent therewith, may furnish occasion for the testimony to be evil spoken of or despised."

In 1710, we have John Griffith pathily rep'ying to those who contend that there is little in dress.

And at the risk of giving offence, I cannot but recommend it to the attention of the many members of our society who plead so earnestly for greater liberty in these things:—"The flesh saith there is little in dress; religion does not consist in apparel; there is little in language; there is little in paying tithes, &c., to the priests; there is little in carrying guns in our ships to defend ourselves in case we are attacked by an enemy. To which I think it may be safely added, there is little or nothing in people, who plead as hinted, pretending to be of our society; for if they can easily let fall the before-mentioned branches of our christian testimony, I am fully persuaded they will maintain the other no longer than it will suit with their temporal interest. I have often wondered that such continue to profess with us at all. They are not really of us, who are not concerned to maintain those principles and testimonies the Lord hath given us to bear."

Ten years later we have a striking exposition from the pen of that justly valued servant of the Lord, John Woolman, of the mode in which the worldly spirit operates in the heart. It is written with that beautiful simplicity which characterized the man, and which always commends itself to the simple-hearted of every class and of every age:—"Though the change from day to night, is by a motion so gradual as scarcely to be perceived, yet when night is come we behold it very different from the day; and thus as people become wise in their own eyes, and prudent in their own sight, customs arise up from the spirit of this world, and spread by little and little, till a departure from the simplicity that there is in Christ becomes distinguished as light from darkness, to such as are crucified to the world."

As it is not my intention at any time to introduce the opinions or practices of Friends of the present century, but to confine myself as strictly as may be to what was the example and what the practice of early Friends, as illustrated by their lives, I shall conclude by quoting from the writings of that deeply tried and eminent servant of the Most High, Job Scott:—"It hath come to pass, that there is scarcely a new fashion come up, or a fantastical cut invented, but some one or other that professes Truth is ready with the foremost to run into it. Ah! Friends, the world sees this, and suiles, and points the finger at it. And this is both a hurt to the particular, and a reproach to the general. Therefore, O let the lot be cast; let search be made by every one, and let every one examine himself, that this Achan, with his Babylonish garment may be found and cast out, for indeed he is a troubler of Israel."

"And all Friends who upon true search shall find yourselves concerned in this particular, I warn and exhort you all, return to that which first convinced you; to that keep close, in that abide, that thereby ye may know, as at the first, not only a bridle to the tongue, but a curb to the roving mind, a restraint to the wandering desire. For assuredly, Friends, if Truth be kept to, none will need to learn of the world what to wear, what to put on, or how to shape and fashion their garments. But Truth will teach all how best to answer the end of clothing, both for useful service and modest decency. And the cross of Christ will be a yoke to the unruly will, and a restraint upon the wanton mind; and will crucify that nature that delights in finery and bravery of apparel, in which the true adorning doth not stand, but which true adorning stands in the hidden man of the heart, in that which is not corruptible, even a meek and quiet spirit."

"And the grace of God which hath appeared

to all, and which hath brought salvation to many will not only teach to deny ungodliness and worldly lusts, and to live soberly, righteously, and godly in this present world, but will also lead those that obey it out of all excess, and out of all superfluities and worldly vanities, and will teach them to order their conversation aright. Therefore, to this heavenly grace let every mind be turned, and therein stayed; that thereby all who profess the Truth may be kept in the holy limits of it; that in their whole conversation and course of life—in eating, in drinking, in putting on apparel, and whatsoever else we do, or take in hand, all may be done to the glory of God, that our moderation in all things may appear unto all men.

"And let not any deceive and hurt themselves with a false plea, saying, 'I will be left to my liberty; I have freedom to do, go, or wear so and so; and religion stands not in clothes, &c.' for that liberty which the worldly spirit leads into is not indeed the true liberty, but is a false and feigned liberty, which leads into true and real bondage. And though religion stands not simply in clothes yet true religion stands in that which sets a bound and limit to the mind with respect to clothes as well as other things. So that when there is a running out into excess and vanity in apparel, that is a certain indication and token, that the mind is got loose, and hath cast off the yoke, and is broken away from its due subjection to that Divine power in which true religion stands."

I trust that in thus endeavouring after an elucidation of the true grounds of our peculiarity, as applied to dress, it will be found that I have not deviated from the true principles of the society, or misrepresented the views of early Friends; and that in freeing this question from the false reasoning of those who contend for a peculiar form, and from the latitudinarian ideas of those who contend against all form, it has been shown that the true basis of all simplicity in apparel rests on our right appreciation of our christian duties—the allegiance we owe to Almighty God, and a faithful obedience to those manifestations of his will, which being made known in the secret of the heart, require as faithful a compliance with as any of our more openly manifested duties. If then we be found walking in the Light as He is in the Light who hath called us, it will never be left to us to choose our own path, but walking in the fear of the Lord and looking only to his approval, we shall be found adorning the gospel of God our Saviour in all things.—I am, &c.

J. B. B.

P.S.—In the consideration of the subject above mentioned, it is too common to lose sight of the real cause of what it might be well to avoid, if we consistently could—viz., peculiarity. It ought ever to be borne in mind that this is not what the principle of Friends in regard to dress inculcates, considered at least abstractly, but it is caused mainly, if not solely, by the continual fluctuations of others. Originally, Friends were like the truly serious professors from among whom they arose. But Friends being restrained by scriptural principle from following the fashions of the times, as unbecoming the profession of a disciple of Christ, were forced into singularity by other professors not supposing themselves under any such restraint. These changes, hence the singularity of Friends; and precisely the same result would ever follow were the Society to become extinct for a time and be again revived; the adoption of its principles would take place among the "most straitest" of Christ's disciples, and fidelity to Him would reproduce the same effect as formerly, if other professors reasoned as they did in George Fox's day, and as many do in our own.

From The Popular Science Review.  
Artificial Light.

(Continued from page 283.)

There cannot be a doubt that a large proportion of the headaches, sleepiness, and general discomfort felt in public buildings lighted with gas, were no special means are adopted for removing the products of combustion, are due to the accumulation of carbonic acid and other poisonous gases given off during combustion. While gas is burning, it removes from the atmosphere a large quantity of oxygen; and as this is also the result of breathing, the effect is soon felt where a large number of human beings are together. There is but one way of removing this great evil, but fortunately that method is fully adequate. It consists in the use of a ventilating burner, either resembling in its principles of action the burner originally contrived by Faraday, or of a still more simple arrangement, the whole of the jets being connected with an air-chamber and chimney, so placed that the draught carries off at once into the open air every particle of matter produced during combustion. Faraday's burner is an ordinary Argand burner, of large size, with a chimney, surrounded by a wider and taller chimney, closed at the top, and opening at the bottom into another tube that carries away the products of combustion. The tar method of illumination involves the use of numerous groups of small jets arranged concentrically, each group being arranged in the form of a star, and the whole forming a brilliant and steady volume of light. This latter is, beyond all comparison, the most pleasant and the brightest light that has yet been obtained artificially. It requires, however, a chamber and large chimney communicating directly with the outer air, and must be placed at the ceiling or roof of the room to be lighted. It is comparatively expensive, consuming a large quantity of gas compared with the available light yielded, and is thus little adapted for general use where economy is considered.

The quantity of good illuminating gas procured from a ton of coal varies greatly according to the nature of the coal and the method of manufacture. By the old process, the yield of gas rarely exceeds ten thousand cubic feet per ton of coal, except from some Cannel coals, especially rich in hydrogen; whereas, by what is called White's process, as much as thirty thousand cubic feet have been obtained from ordinary kinds, and fifty thousand from Boghead coal. The illuminating power of the gas made has also been increased by modern improvements, the increase amounting to from twelve upwards of a hundred per cent. on the old method, according to the nature of the coal.

To give an idea of the value of the improvement in artificial light, by the introduction of gas, we must enter into some small calculations. Taking perm candles as the unit, (each candle burning six hours, at the rate of one hundred and twenty grains per hour, and the value being about 4*d.*.) the quantity of ordinary coal required to produce light equal to one thousand such candles (value £16 13*s.* 4*d.*) according to the old method of making gas, varied from four to seven hundred-weight; while, if Cannel coal were used, about half that weight would be needed. At present, however, the consumption of coal for this quantity of gas would not exceed from three hundred and fifty to four hundred pounds of ordinary kinds, and of Cannel, from one hundred and five to one hundred and sixty. With this quantity of coal (value about three shillings in London,) from two or three thousand cubic feet of gas are manufactured, so that, under any circumstances, the cost of gas-light, compared with that of sperm candles,

is not more than one-fiftieth part. In point of fact, however, with the methods of manufacture now adopted, and the increased illuminating power of the gas, it is estimated that the actual cost of one thousand feet of gas of the best quality is little more than one shilling; so that artificial light really costs not more than one hundredth part the price that it did fifty years ago.

In countries where coal is scarce and dear, wood, peat, and brown-coal all yield, on distillation at very high temperatures, certain illuminating gases which can be purified for burning, and thus rendered available for general use. It is only very lately that a method of doing this has been adopted with success; but it is said that wood and peat gas are already used with great advantage in many German and Swiss towns.

In addition to the contrivances adopted for obtaining artificial light already alluded to, and in common use throughout the civilized world, there are two others occasionally employed, although not yet produced on such a scale and at such a cost as to be economically important. One of these is merely a modification of ordinary gas-light, involving the use of pure oxygen gas, instead of atmospheric air, as the agent of combustion, and introducing a solid incandescent body, such as lime, to increase the intensity of the illuminating power. The other is the electric light, obtained by bringing into close proximity, without actual contact, two pencils of charcoal, and passing between them a powerful voltaic current. Great difficulty has been experienced in rendering light thus obtained sufficiently steady for any practical purposes, and these difficulties are not yet fully overcome, although a partial success has been obtained in Paris, by methods more simple and less costly than those before used.

And now, in bringing to a close this account of Modern Illumination, let us consider for a moment how far and in what way we are benefited by artificial light, rendered cheap and abundant by so many ingenious contrivances.

Half a century ago, all the great capitals of Europe, although then not half their present size, were dangerous residences to their honest inhabitants, and unmanageable in regard to police supervision, owing to the difficulty of obtaining sufficient artificial light during the long dark nights of winter. The growth of population that has since taken place, and the development of the resources of our own and other countries, would probably have been impossible, without the discovery and rapid introduction of some means of economically and effectually lighting the streets and alleys, which had long served as the haunts of thieves and dangerous characters of all kinds. It is not too much to say that, in this matter alone, the introduction of artificial light has been the main agent employed in effecting a social improvement, compared with which all others are secondary. The millions of cubic feet of gas now burnt nightly in our streets are, beyond comparison, the best, the most permanent, and the least expensive source of security that could have been introduced, and have served, more than anything else, to check those deeds of wrong and violence that darkness cannot fail to shelter, and invariably fosters.

Nor are we less indebted to gas for lighting our public buildings of all kinds. Here, again, the necessity for increased light has enforced a consumption of material which, as far as we can see, no natural supply of oil and tallow could ever have satisfied. Of all these matters, the supply, however large, is limited and costly, the cost increasing rapidly as the consumption becomes greater. The gradual but steady improvement in

the quality and purity, and the great reduction in the cost of gas has been met by a corresponding increase in the quantity used.

When so much better and cleaner a light than candles or oil lamps was first introduced and found so useful, it became almost inevitable, that the old sources of artificial light should also be improved. Thus candles, as we have said, are now of greatly improved quality; they are made from various materials, formerly thought altogether inapplicable; the best of the present day are hardly more expensive than the worst of half a century ago; while in all important respects, the very materials that rendered the tallow candles of former times a nuisance to every body, being now separated and applied to their proper uses, are found to possess a value positively greater than that of the combustible material itself, which they at one time interfered with and injured.

The scientific principles of consuming fuel so as to obtain light being also now better understood, there is far less waste than before in our lamps, and some of them are models of mechanical art, obtaining the most perfect result at the smallest expenditure of material. In all these matters the mechanical improvements and the application of chemical principles have gone hand in hand.

It is altogether impossible to exaggerate the value and importance of light; and it is certain that everything done to facilitate the means of obtaining and distributing artificial light cannot fail to be of general benefit to mankind. And, if looking to the glorious orb of day, and remembering all its life-giving properties, we exclaim with the poet,—

—“Hail! holy light—offspring of heaven first born.”

we may, with equal propriety, regard in artificial light, however obtained, a younger, but hardly less useful and important creation, always at hand, requiring a certain development of human intelligence to render it available, but rewarding us by communicating a means of moral and intellectual light, as well as that physical illumination that is so useful and so indispensable.

From “Youthful Piety.”

Some Account of Lydia S. Rogers.

Lydia S. Rogers, daughter of John and Elizabeth Jones, of the city of Philadelphia, was born the 16th of Sixth month, 1810.

Her disposition was amiable, and being naturally of a cheerful and lively temper, she was drawn by the temptations of the enemy into lightness and frivolity, and to take much delight in gaily of apparel, which deviations from the christian path were causes of condemnation and sorrow to her mind when the awful period of dissolution was approaching.

She was attacked with bleeding from the lungs in the Eighth month, 1833, but after a confinement of two weeks she nearly recovered her usual state of health, although some symptoms of pulmonary disease still remained.

In the Third month, 1834, she was married to Samuel Rogers, and was able to attend to her domestic concerns until the Eleventh month following, when she became seriously indisposed. The prospect of separation from those she loved, the fear of death and a sense of her own unworthiness to meet its solemn summons produced great conflict of mind. She was frequently occupied in reading the Holy Scriptures, and the society of serious and religious people became peculiarly pleasant to her. She was evidently aware of the danger of her situation, and on being asked about this time what she thought respecting it, observed, “Perhaps I may

last until Spring, but I do not expect to get well, nor do I wish it."

Under the exercises which she passed through during this period, there is cause to believe that the Holy Spirit, who is a reviver for sin as well as a comforter for well doing, and whose operations are compared to a refiner's fire and fuller's soap, was secretly at work in her heart, setting her sins in order before her, and producing that godly sorrow which worketh unfeigned repentance. Many times her spirit was much contrited, and she would entreat her friends to pray for her; mourning over her mispent time and her multiplied transgressions, saying, "I fear my sins are too many ever to be forgiven."

During this time the enemy was permitted to buffet her with his suggestions, which induced her to exclaim, "O, what an unwarmed adversary! how he tempts me!" and to her sister she remarked, "Can it be that I shall be forgiven my many sins?" But although thus tried with doubts and fears, Her whose mercy is over all his works, was pleased in his own time to grant her an evidence of pardon and reconciliation, and to animate her drooping spirit with the humble hope that she should at last be received into the kingdom of heaven. One day, after some hours of quiet retirement she broke forth in this manner—"Now I feel as I never felt [before]—I shall be received—I am perfectly resigned to live or die—I am very happy—O my dears, do not weep for me, I can truly say this is the happiest evening of my life—Praise the Lord, O my soul—bless his holy name." Afterward she observed, "I want nothing worldly to divert me from the great work."

In looking back over her past life, and her indifference and neglect respecting the great duties of religion, she seemed almost ready to question whether the evidence of forgiveness could be real, and on the 14th of First month, 1835, again asked her sister if she thought it possible her sins were forgiven; adding, "I have been so neglectful when I had strength, will the Lord receive me at this late hour?" After a time of solemn silence she desired to be helped to a kneeling posture, and then feebly petitioned the Most High for the aid of his grace, and that she might be thoroughly washed and purified. A female minister of the gospel calling to visit her, spoke encouragingly to her state, and was also engaged in fervent supplication on her behalf. These religious exercises afforded her much comfort; her mind was peaceful, and appeared to overflow with gratitude and love.

Continuing in this inward frame of mind, and steadily abiding under the refining baptisms of the Holy Spirit, she experienced sweet peace to flow in her heart, and a grateful sense of the Lord's mercies to her. On the 15th she seemed full of comfort, and several times remarked, "How little I suffer, and how much the dear Master suffered. O! how kind he is to me." And again, "O, the sweet peace—I cannot be mis-taken; it is all the heavenly Father's work." She often mentioned what a comfort the bible was to her, and what a blessing it was that she could now understand it, and take hold of the promises it contained, after having neglected it so much.

She expressed deep concern on account of such as do not believe in the divinity of our Lord Jesus Christ, saying, "What can they have in an hour like this to rest their hopes upon?" and mentioned her desire, that such might be brought to feel the efficacy of the Redeemer's love; adding, "He gave his precious life for us."

On the 16th, she expressed great love for all her friends, many of whom she named, and remarked,

"I would be glad to do something for the blessed cause: I feel that I have espoused it, and if it will do any one good to see me here entirely changed, I should be glad some of my thoughtless friends should see me."

On the 17th she was under much inward conflict and trial, but in the evening observed, "It comes sweetly into my mind that we need not be dwelling so much on our past sins, but just lay them all open before our blessed Father—he can see them all at one glance, and as quickly forgive them."

Being now brought in good degree to the blessed teaching of the spirit of Christ in her own heart, she found it to be indeed a light to her mind, unfolding the mysteries of redemption and giving her to see clearly the true meaning, as well as the precious value of the Holy Scriptures. She spent much time in reading these, particularly the New Testament—and one morning, after having been so employed, she looked up with a joyful countenance and exclaimed, "This has been a sealed book to me, but now what beauty and consistency I see in it. Oh! what can they have to rest upon, who do not believe in the Saviour! I would not exchange my belief for a thousand, thousand worlds."

In the ordering of Him whose dealings with his ransomed children are all in perfect wisdom and goodness, though past our finding out, she was permitted on the 20th, to experience a season of great tossing and distress; and when, through mercy, a degree of calmness was restored, she remarked, "I feel better now—but what an agonizing time has my poor mind had. I fear I have taken hold of promises that do not belong to me. Oh! I have been such a sinner!" This painful dispensation gradually passed away, and on the morning of the 22nd she could say, "All is peace and comfort, though I am very weak. There are some clouds through the day, but my nights are all joyous. The Father is very near me this morning."

Soon after this she was thought to be dying, and her connexions being called she took an affectionate leave of them saying, "I am going home," and seemed filled with holy joy. In the afternoon she faintly articulated, as though replying to a query respecting her removal, "not yet—not yet—stay a little longer;" and when still further recovered from the state of great exhaustion, in which she had been lying she remarked, "I believe my time is to be prolonged." From this period until her decease, her mind was more engaged on behalf of others than during the previous part of her illness, and many opportunities occurred in which she imparted impressive admonition to her friends.

(To be concluded.)

*The will of God Leadeth wholly out of Conformity to this World.*—"It is not every one that saith unto me, Lord, Lord," said Christ, "that shall enter into the kingdom, but he that doeth the will of my Father which is in heaven." Therefore, whilst we labour after humility and resignation of mind in sincerity, to say, "not my will but thine be done,"—let us at the same time be earnestly desirous to ascertain what is the Lord's will concerning us. But this can never be done in the noise and mixture of the world; it must be sought for in retirement, in the silence of all flesh, and that more frequently than the returning morning, and in the night watches also. We cannot reasonably expect to be entrusted with a knowledge of the Divine will, if we conform to the world and its practices. "Be not conformed to this world, but be ye transformed by the renewing of your mind: that ye may prove what is that good and acceptable and perfect will of God."—*Daniel Wheeler, F. L. vol. 7, p. 287.*

### Insects: Their Breathing Organs.

Essentially, breathing is the same function whether it occurs; and it does occur, doubtless, in all animals under some form or other. It is the absorption of oxygen from without to the fluids within to repair the waste constantly produced by vital energy. But it may be obtained from different sources, and imbibed in various modes.

All insects in the perfect state are air-breathers—that is, they procure their oxygen from the air we do; and most of them are so in their larval stages. Even in exceptional cases, viz., such larvae or pupae as are provided with what represent gills and appear to be dependent on the water for their respiration, the exception is rather apparent than real, for the function is performed in air-vessel still. Now these air-vessels shall afford us some interesting microscopical observations.

This brown fly, which is buzzing and hovering, on invisible wings over the flowers in the garden you perhaps take for a bee. No; it has but two wings; for I have caught it, and you may ascertain the fact for yourself; it belongs to the genus *Staphis*. Having caught it, I deprive it of life by means of the very organs I am going to examine for I turn a tumbler over it and insert under the edge a lighted lucifer match. In a few seconds it is dead,—suffocated; for phosphoric and sulphuric acids introduced into the breathing tubes quickly destroy life. I presently take it out, and put it into a dissecting-rough under a lens, cut up the abdomen with a pair of fine pointed scissors.

Well, you see little else but the polished brown walls of the body and a number of fine white threads. It is those threads that we want. With a small camel's hair pencil I move them to and fro in the water, and soon perceive that they are like little trees with comparatively thick trunks, sending off many branches, and gradually becoming excessively slender. Here and there short thion branches break out on two opposite sides, and on each side are connected with the wall of the abdomen. Here then with the fine scissors I slip them across, and lift up a portion with the hair pencil into a drop of water which I have already put into the live-box. The cover now flattens the drop spreads the white threads,—and the object is ready for our eye.

We have before us a considerable portion of the tracheal system of the fly. And though, owing to the involution of the parts and the injury our rudimentary anatomy has done, we cannot trace the beautiful regularity which exists in life, we may see the principle on which they are arranged, and mud of the perfection with which they are constructed.

Here then is a system of pipes,—some large—some small; the smaller branching forth from the large, and themselves sending off yet smaller branches, which in their turn divide and subdivide until the final ramifications are excessively attenuated. Besides these, we see here and there ovate or barrel-shaped reservoirs, having the same appearance and intimate structure as the pipes, but of much larger calibre and connected with them by a branch.

This, I say, is the breathing system, or a large portion of it. These pipes receive the air from without through trap-doors, which we will examine presently, and convey it to the most distant part of the body. In our selves the air is inhaled into a great central reservoir, the lungs, and the blood dispersed through every part is brought to this reservoir to be oxygenated. In insects it is the blood that is collected into a great central reservoir, and the air is distributed by a minutely divided system of vessels over the blood-reservoir.

The *tracheæ* or air-pipes have a silvery white appearance by reflected light; but if we use transmitted light and put on high power, we discern a wonderful structure, which I will describe in the eloquent language of Professor Rymer Jones, and you shall estimate its truth as you examine the object:—

"There is one elegant arrangement connected with the breathing-tubes of an insect specially worthy of admiration; and perhaps in the whole range of animal mechanics it would be difficult to point out an example of more exquisite mechanism, whether we consider the object of the contrivance or the remarkable beauty of the structure employed. The air-tubes themselves are necessarily extremely thin and delicate; so that on the slightest pressure their sides would inevitably collapse and thus completely put a stop to the passage of air through them, producing, of course, the speedy suffocation of the insect, had not some means been adopted to keep them always permeable; and yet to do so, and at the same time to preserve their softness and perfect flexibility, might seem a problem not easily solved. The plan adopted, however, fully combines both these requisites. Between the two thin layers of membrane which form the walls of every air-tube, a delicate elastic thread (a wire of exquisite tenuity) has been interposed, which, winding round and round in close spirals, forms by its revolutions a cylindrical pipe of sufficient firmness to preserve the air-vessels in a permeable condition, whilst at the same time it does not at all interfere with their flexibility; this fine coil is continued through every division of the *tracheæ*, even to their most minute ramifications a character whereby these vessels are readily distinguishable when examined under the microscope.

Man has imitated this exquisite contrivance in the spiral wire spring which lines flexible gas-pipes; but his wire does not pass between two coats of membrane. One of the most interesting points of the contrivance is the way in which the branches (so to speak) inserted in the trunk, the two wires uniting without leaving a blank. It is difficult to describe how this is done; but by tracing home one of the ramifications you may see that it is performed most accurately—the circumvolutions of the trunk-wire being crowded and bent round above and below the insertion, (like the grain of timber around a knot), and the lowest turns of the branch-wire being suitably dilated to fill up the hiatus.

You must not suppose, however, that the whole of one tube is forced out of a single wire. Just as in a piece of human wire-work the structure is made out of a certain number of pieces of limited length, and joinings or interlacings occur where new lengths are introduced, so, strange to say, it seems to be here. It is strange, I say, that it should be so, when there can be no limit to the resources, either of material, or skill to use it; but so it is, as you may see in this specimen, which has been dissected out of the body of a silkworm. The spiral is much looser here than in the air-tube of the fly, the turns of the wire being wider apart; and hence its structure is much more easily traced. Here you see in many places the introduction of a new wire, always commencing with the most fine-drawn point, but pre-ently taking its place with the rest so as to be undistinguishable from them. In some cases certainly, (perhaps this may be the explanation of the phenomenon in all,) the wire so introduced may be found to terminate with the like attention before it has made a single volution, and seems to be inserted when the permanent curvature of the pipe would leave the wires on the outer side of the curve too far apart, half a turn,

or even much less, then being inserted of supernumerary wire.

I told you that the air enters these tubes through certain "trap-doors." This is not the term which the physiologist employs, certainly; he calls them spiracles. In our own bodies the air enters only at one spiracle, a curiously defended orifice opening just in front of the gullet at the back of the mouth. But in the class of animals we are now considering there are a good many such breathing orifices. You may see them to great advantage in any large caterpillar, the silkworm for example, where all along the sides of the pearl-grey body you perceive a row of dots, which with a lens you discover to be little oval disks sunken into little pits, of a bluish blue with a white centre, through which is a very slender slit. There are nine of these organs on each side, a pair to each segment or division of the body, with the exception of the first, which is the head, and of the third and fourth, which are destined to bear the wings; these are destitute of spiracles.

Essentially, these organs, under whatever modifications of form and position they may appear, have the same structure. They are narrow orifices, with two lips capable of being opened at the will of the animal, or accurately closed; and in many soft-kinned insects, such as the silkworm, and most larvae, they are set in a horny ring, by which means they are prevented from collapsing, through the unresisting character of the general integument. The opening and shutting of them is performed by an internal apparatus of muscles, which is sometimes strengthened by being attached to two horny plates, which project inwardly.

But the most curious thing to be noted in the structure of these spiracles is the contrivance which induced me to call them trap-doors. Small as are their openings, they are still large enough to admit wavy floating particles, of dust, soot, and other extraneous matters, which would tend to clog up the delicate air-passages, and to impede the right performance of their important functions. Hence they need to be guarded with some sort of sieve or filter, which, while admitting the air, shall exclude the dust.

Various and beautiful are the modes in which this common purpose is effected, but I can show you only two or three. This is one of the breathing orifices of the common house-fly, in which as you see, minute processes grow from the margin all round, which extend partly across the open area, branching and ramifying again and again, and spreading and interlacing with those of the opposite side, so as to form a perfect sieve, which the finest atoms of dust cannot penetrate.

The same end is attained, in another way, in the dirty cylindrical grub, which is found so abundantly at the roots of grass in pasture lands, and which country folk call, from the toughness of its skin, "leather-coat." It is the larva of the crane-fly (*Tipula decorata*), so familiar to us under the sobriquet of daddy long-legs. I can easily procure one of these, for, unfortunately, they are but too ubiquitous. Here is one, who shall have the honour of being martyred for the benefit of science. Before we assassinate him, however, just look here, at the hinder extremity of his body, where there is an area, surrounded and protected by several points, and in this area, two black spots.

With the dissecting-scissors I have carefully cut out one of these specks, and now I put it under the lichenkahn, for illumination on the stage of the microscope. There is, first of all, a dark horny ring of an oval figure, a little way within which there is an opaque, dark plate of the same figure, but smaller, occupying the central portion of the

area. The space between the margin of the plate and the bounding ring is occupied by a series of slender filaments, placed side by side, proceeding from one to the other, through the interstices of which the air is filtered. The central plate seems to be quite impermeable.

The fat, thick-bodied grubs of those beetles called chafer, exhibit, in their spiracles, a modification of this structure, rendered still more elaborate. In the case of the larva of the common cockchafer (*Melolontha vulgaris*), for example, the central plate is a projection from one side of the margin of the spiracle—to use a geographical simile, we may say that, instead of being an island in the midst of a lake, it is a promontory. Thus, the breathing space is a crescent-shaped band, which is crossed in every part by bars passing from the margin to the projecting plate. But, as if the interstices left by these bars would be too coarse for the purpose, they are further sublimated by a membrane, which is stretched across them, and which is perforated with a number of excessively minute round holes, through which alone the air is admitted.

(To be continued.)

#### MORNING-GLORIES.

Selected.

They said don't plant them, mother, they're so common and so poor;

But of seeds I had no other, so I dropped them by the door;

And they soon were brightly growing in the rich and teeming soil,

Stretching upward, upward, upward, to reward me for my toil.

They grew all o'er the casement, and they wreathed around the door;

All about the chamber windows, upward, upward, evermore;

And each dawn, in glowing beauty, glistening with early dew,

Is the house all wreathed in splendor, every morning bright and new.

What if they close at mid-day, 'tis because their work is done,

And they shut their crimson petals from the kisses of the sun.

Teaching every day their lesson to my weary, panting soul,

To be faithful in well doing, stretching upward for the goal.

Sending out the climbing tendrils, trusting God for strength and power,

To support, and aid, and comfort, in the trying day and hour;

Never spurn the thing that's common, nor glory call these home flowers poor,

For each bath a holy mission, like my *Glory* o'er the door.

F. P. Gage.

*The dear children.*—Often do I desire that our little ones may be deeply impressed with a sense of the necessity of having the heart tendered: the living, eternal word, inwardly revealed as a hammer, to break the rock in pieces; that so, in early life, the stony heart being removed, and a heart of flesh given, they may manifest a susceptibility as to the best feelings, and be so wrought upon as evidently to become what they are, by the grace of God. This is superior to all that can possibly be done by human efforts, in cultivating the rational powers, and in storing the mind with outward knowledge and literature, however good in its place, all this may be.—*Sarah [Lynes] Grubb.*

It is utterly impossible that any thing should bring to the saving knowledge of the will of God, but the light and spirit of Christ, by an inward manifestation.

From the Annual of Scientific Discovery for 1862.

### The Atlantic and Pacific Overland Telegraph.

One of the most important events in the scientific or commercial history of the past year, has been the completion and successful operation of a line of telegraphs across the North American continent, between the Atlantic and Pacific States. The inception of this enterprise dates from 1859, when the project was brought before a convention of representatives of the various telegraphic companies of the United States, and application to Congress for assistance in completing the work agreed on. Such application was duly made, and in June, 1860, Congress passed a bill authorizing and directing the Secretary of the Treasury to advertise for proposals to carry a line of telegraph to California, across the continent, within two years from the 31st, 1860, securing certain privileges to the government and to the proprietors of the line.

Mr. Cobb, who was then Secretary of the Treasury, did not favour the project; and the telegraph companies seem to have been averse to entering the field, or risking money on the enterprise. In August, 1860, after the law had passed, a meeting of the directors of the various telegraph companies in the country was held in New York; and, after some deliberation, a resolution to unite and co-operate for the construction of a Pacific telegraph was rejected, and another passed instead, declaring it inexpedient to embark in the enterprise, but consenting that any of the parties who chose might do so.

When the notice for proposals was advertised by Secretary Cobb, Mr. Hiram Sibley, President of the Western Union Telegraph Co., who was really the proposer and author of the whole enterprise, put the question to the directors of his company, whether they would authorize proposals to be sent in; and so formidable and unpropitious did the undertaking appear, that it was favourably carried only by a single vote.

After long and tedious delays on the part of Secretary Cobb, the contract to build the line was awarded, on the 20th of September, 1860, to Mr. Sibley, the President and representative of the Western Union Company. Here we may add that this company at once assumed the contract, and furnished all the money expended on the line east of Salt Lake.

They at once despatched one of their number, J. H. Wade, of Cleveland, to California, to confer with parties on that side, and persons who had travelled the various routes, and determine where and how to build the line, as also to make such arrangements with the companies on the Pacific, or such of them as might agree, either for a business connection at the then terminus of their lines, or to induce them to extend this way. After various discussions, the route was at last settled on; the California companies consented to assume the construction of the line to Salt Lake with all despatch, and if possible, as soon as the eastern section should be completed to that point—an undertaking which they honourably performed, reaching Salt Lake but a few days later than the Western Union party.

It was not an easy matter to determine the route, and there were even different opinions as to the kind of line to be built. Some favoured underground wires, some the usual pole line. The troublesome aspect of affairs South induced the company at first to determine on a line to run by way of Fort Kearney, Fort Laramie, Fort Bridger, crossing the Rocky Mountains at the South Pass, thence to Salt Lake City, thence, via Fort Crittenden, by the Simpson route to Fort Churchill, Car-

son Valley, thence, over the Sierra Nevada Mountains, to Placerville and San Francisco—being substantially the same route as that over which the present overland mail is carried.

Mr. Edward Creighton was appointed superintendent of construction in the eastern part of the line, and the California State Telegraph Company got ready to commence operations on their end. From the known imperfection of underground lines, so far as they have been tried in Europe, it was decided to put the lines to the Pacific on posts, notwithstanding the deep snow on the mountains in the winter, the scarcity and expense of getting timber, its liability to be burnt with the grass on the plains, run down by buffaloes, or be stolen for timber and fuel.

Mr. Creighton had already surveyed the proposed route, and was convinced the poles could be maintained. The manner of his survey is curious, and shows how much genuine enterprise was brought to bear on the construction. He started on the overland route alone, in November, 1860; travelled most of the way on mule-back, with such company as he could pick up on the road—journeying most of the way entirely alone. His object was to examine the route thoroughly, and if possible, to see the Indians, and learn from them more of the country and its features and resources than could be gathered from a more rapid journey. He started at a time when the Indians are most dangerous to travellers, because they are suffering for food; but instead of avoiding them, he took pains to go out of his way to meet them. He got from them much valuable information as to the different routes, depth of snow on each, the kinds and quality of timber, and where to find it, &c. He came to the conclusion that, with the exception of a few lawless, thieving Indians, that disgrace every tribe, they are quite as harmless, when properly treated, as many of the whites that go among them. He afterwards employed some of them to accompany the train while building the line, to herd and look after the stock, for which the most trusty of them are the best help for the purpose he could get.

Mr. Creighton reached San Francisco on March 1st, and immediately returned to New York, by steamer, with Mr. Wade. The outbreak of the Southern insurrection made the speedy construction of the line of greater importance, and no time was to be lost in getting together the material. Accordingly the directors met at Rochester, and organized the company, April 17th, by electing J. H. Wade, President; H. Sibley, Vice-President; and E. Creighton, Superintendent, after which nearly all the material had to be made.

The wire to be used in the line was No. 9, galvanized iron wire. The insulators, wire, and tools were taken to Omaha, Kansas, at which place all the material of the expedition was gathered to start westward.

With a remembrance of the manner of constructing telegraph lines in his mind, the reader will be able to judge of the labour required to set up two thousand miles of telegraph, through a wilderness inhabited only by Indians and wild beasts, and parts of which are a dreary desert. Of the force employed on the Pacific side we have no knowledge; but Mr. Creighton, for the line from Omaha to Salt Lake, had four hundred men, fitted out with tents, tools, and outfit for a hard season's campaign, including rifles and navy revolvers for each man, with the necessary provisions, including one hundred head of fat cattle for beef. These were driven with the train, and killed as they were needed.

For transportation of material for the line, and

provisions for the little army of workers, five hundred head of oxen and mules, with over one hundred wagons, were purchased by the company, and this not proving sufficient, other transportation was hired, making the total number of beasts of burden up to seven hundred oxen, and one hundred pair of mules. When all was ready, the party started from Omaha, and set their first pole on the 4th of July. The line was completed to Salt Lake on the 18th of October, and the California party reached Salt Lake six days later, on the 24th.

They advanced at the rate of about ten miles per day. The whole line is on poles, it being thought best to cross rivers in this manner rather than lay submarine cables. The wire used weighs three hundred and fifty pounds to the mile, which would make for the line, from Brownsville, Mo., to San Francisco, seven hundred thousand pounds of wire. The posts are good size, thirty to the mile, and more than half of them red cedar, the balance mostly of pine.

(To be continued.)

For "The Friend,"

Guesses at Truth.

This work contains much that is instructive and entertaining, though there is also no little evidence of the influence exercised over the author, by want of correct information. Some of his remarks on Friends are very erroneous.

We give a few extracts for the readers of "The Friend" who may not have met with the work.

For the motive of a man's actions, hear his friend; for their prudence and propriety, his enemy. In our every-day judgments we are apt to jumble the two together; if we see an action is unwise, accusing it of being ill-intentioned; and, if we know it to be well-intentioned, persuading ourselves it must be wise; both foolishly; the first the most so.

Abuse I would use, were there use in abusing; But now 'tis a nuisance, you 'll lose by not losing. So reproof, were it proof, I'd approve your reproving; But, until it improves, you should rather love loving.

How few christians have imbibed the spirit of their Master's beautiful and most merciful parable of the tares, which the servants are forbidden to pluck up, lest they should root up the wheat along with them! Never have men been wanting, who come, like the servants, and give notice of the tares, and ask leave to go and gather them up. Alas, too! even in that church, which professes to follow Jesus, and calls itself after his sacred name, the ruling principle has often been to destroy the tares! lest what will come of the wheat; nay, sometimes to destroy the wheat, lest a tare should perchance be left standing.

We find *how* in many of the noblest speeches on record, the last words of great and good men to the executioner on the scaffold; and in legal murders of the great and good, notwithstanding the boasted excellence of our laws and courts of justice, the history of England is richer than that of any other country. It does one good to read such words: so I will quote a few examples. For instance, those of Sir Thomas More: *Pluck up thy spirits, man, and be not afraid to do thine office; my neck is very short; 'tis here ahead, therefore, thou strike not awry, for saving of thine honesty.* Those of Fisher, the pious Bishop of Rochester, when the executioner knelt down to him and besought his forgiveness: *I forgive thee with all my heart; and I trust thou shalt see me overcome this storm lustily.* Those of the Duke of Suffolk on the same occasion: *God forgive thee! and I do; and when thou dost thine office, I pray thee do it*

well, and bring me out of this world quickly; and God have mercy on thee! When Raleigh was led to the scaffold, a bald-headed old man pressed through the crowd, and prayed that God would support him. I thank thee my good friend, said Raleigh to him, and am sorry I am in no case to return thee anything for thy good will. But here (observing his bald head,) take this nightcap; thou hast more need of it now than I. Shortly after he bade the executioner show him the axe: I prithee let me see it. Dost thou think I am afraid of it? And after he had laid his head on the block, the blow being delayed, he lifted himself up and said: What dost thou fear? strike, man.

It is perhaps a singular phenomenon in a cultivated language, that scarcely a writer seems to know when he ought to use such words as *thou*, *you*, and *ye*.

Even the Quakers, at least of late years, as they have been gradually paring away the other tokens of their sect, their coats and hats and bonnets, generally soften the full-mouthed *thou* into *thee*; whereby moreover they gain the advantage of a two-fold offense against grammar. For this seems to be one of the ways in which an Englishman delights to display his love of freedom,—by riding over grammatical rules. A Quaker will now say, *Do thee wish for this? Will thee come to me?* thus getting rid of what in our language is felt to be such an ineumbence, one of our few remaining grammatical inflexions.

This substitution of the plural *you* for the singular *thou* is only one among many devices which have been adopted for the sake of veiling over the plain-speaking familiarity of the latter.

When you see an action in itself noble, to suspect the soundness of its motive is like supposing everything high, mountains among the rest, to be hollow. Yet how many unbelieving believers pride themselves on this uncharitable folly! These are your silly vulgar-wise, your shallow men of penetration, who measure all things by their own littleness, and who, by professing to know nothing else, seem to fancy they earn an exclusive right to know human nature. Let none such be trusted in their judgments upon any one, not even on themselves always.

Desultory reading is indeed very mischievous, by fostering habits of loose, discontinuous thought, by turning the memory into a common sewer for rubbish of all sorts to float through, and by relaxing the power of attention, which of all our faculties most needs care, and is most improved by it. But a well-regulated course of study will no more weaken the mind, than hard exercise will weaken the body; nor will a strong understanding be weighed down by its knowledge, any more than an oak is by its leaves, or than Samson was by his locks. He whose sinews are drained by his hair, must already be a weakling.

There are instances, a physician has told me, of persons who, having been crowded with others in prisons so ill ventilated as to breed an infectious fever, have yet escaped it, from the gradual adoption of their constitutions to the noxious atmosphere they had generated. This avoids the inference so often drawn, as to the harmlessness of mischievous doctrines, from the innocent lives of the men with whom they originated. To form a correct judgment concerning the tendency of any doctrine, we should rather look at the fruit it bears in the disciples, than in the teacher. For he only made it; they are made by it.

Every age has a language of its own; and the difference in the words is often far greater than in the thoughts. The main employment of authors, in their collective capacity, is to translate the thoughts of other ages into the language of their own. Nor is this a useless or unimportant task; for it is the only way of making knowledge either fruitful or powerful.

A Christian is the Almighty's gentleman: a gentleman, in the vulgar, superficial way of understanding the word, is the Devil's Christian. But to throw aside these polished and too current counterfeits for something valuable and sterling, the real gentleman should be gentle in everything, at least in everything that depends on himself,—in carriage, temper, constructions, aids, desires. He ought therefore to be mild, calm, quiet, even, temperate,—not hasty in judgment, not exorbitant in ambition, not overbearing, not proud, not rapacious, not oppressive; for these things are contrary to gentleness. Many such gentlemen are to be found, I trust; and many more would be, were the true meaning of the name borne in mind and duly inculcated. But alas! we are misled by etymology; and because a gentleman was originally *homo gentilis*, people seem to fancy they shall lose caste, unless they act as Gentiles.

(To be continued.)

*Stand in the power of God.*—Be not ye shaken in mind, nor tossed to and fro with men's doctrines, which are changeable; but all dwell and abide in the unchangeable light, and let your faith stand in the power of God: and then ye will stand sure and steadfast, upon the sure foundation of God, which he hath laid, and not man; and as ye are staid there, nothing can move you, nor harm you, nor make you afraid. The word of God is high you, even in your hearts, and in your mouths, to obey it;—Oh; let it dwell and abide in you, and it will keep you from corruption, and from all evil that abounds in the world.—Alexander Parker.

## THE FRIEND.

FIFTH MONTH 17, 1862.

The horrors of the civil war in our country do not abate, though the success of the troops supporting the authority of the government, and the evidently enfeebled condition of the rebels, give reason to hope, that the unnatural and cruel struggle will not continue much longer; at least that the military conflicts cannot be maintained hereafter on the same gigantic scale, as they have been hitherto. The Federal forces are represented to have fairly surrounded the insurgents, and to be gradually forcing them within more and more narrow limits, having cut them off from the ocean, destroyed nearly all their defences on the Mississippi, and captured their great metropolis at its mouth.

The descriptions given by writers for the newspapers, who are, or have been in those parts of our widely extended country, where the war is raging, — though often flippant and apparently heartless—convey a most mournful impression of the complicated suffering inflicted upon the deceived and misguided people of the South; and lead us to fear that famine and pestilence may follow in the rear of carnage and incendiaria, to complete the devastation and misery that have been visited upon that portion of our country.

The actual warfare has been exclusively confined to the Slave States; no hostile army having set its foot upon the soil of the free and loyal

States. But death has been busy on the battle-field, in the camp, and the hospital, sending woe and wailing into thousand of homes throughout the borders of those States, by consigning their props and protectors to untimely graves. The general stagnation of trade, except that which is created by or contributes to the carrying on of the war, has so curtailed the means of subsistence for very many, as to bring them into much present difficulty, and great anxiety for the future. This is more especially the case among shopmen and mechanics; so many of the operatives and ordinary day-laborers having entered the army, as to keep up a pretty constant demand for the services of those staying at home, who obtain fair remunerative wages, and thus, with their families, escape the distressing pressure of poverty.

Compared with the Slave States, the material losses and physical sufferings inseparable from war, have been but lightly felt in the North and West; and we are sometimes ready to fear, that in the feeling of their supposed strength, and the excitement of triumphant success, the people would entirely forget the cause there is for humiliation and amendment, and may thus provoke the infliction of still greater calamities, until they learn to recognize the design of the Almighty in their chastisement, and more earnestly seek to put away those things which are offensive in his holy eyesight.

The changes which have been effected since the war broke out, in regard to slavery, are extraordinary, and calculated to promote important beneficial results in the system, wherever it exists within the jurisdiction of the United States. It is evident, that the course of congressional action upon this difficult and perplexing subject, is shaping towards freeing the General Government from any participation in slavery; except in providing some kind of "fugitive slave law," and contributing, so far as may be in its power, to its gradual extinction, by rendering pecuniary aid to those States which are desiring to commence a system of emancipation. The course recommended by the President relative to the last mentioned action on the part of the United States, was promptly adopted by the Senate and House of Representatives, by large majorities. By the same authority, slavery has been abolished within the District of Columbia; a stipulated sum being paid for each slave therein at the time of the passage of the act, to those claiming ownership, proving their legal claim thereto, and taking an oath or affirmation that they have not in anywise participated in any rebellious act against the government. All such claims, setting forth the names, ages and personal descriptions of the persons claimed, and the manner by and source from which the title was acquired, must be registered within ninety days from the passage of the act; which period will expire on the fifteenth of the Seventh month next. The needed legislation is also in progress for appropriating a certain percentage of the taxes collected on property owned by colored persons residing in the District, for the education of their children; and also to do away with the disgraceful "black code" of laws, and to subject the colored population to the same laws as those enacted for the protection or punishment of the white citizens.

The act for establishing a territorial government for Arizona, contains a clause prohibiting slavery or involuntary servitude within its limits, and another, declaring that slavery is forever prohibited in all territory now held, or hereafter acquired by the United States. This act, we believe, requires only the signature of the President to make it the law of the land.

At length the governments of Liberia and Hayti have been formally recognized by the United States, and diplomatic relations will ere long be established between them.

The Senate has ratified a new treaty with Great Britain, having for its object the more effectual suppression of the African slave trade, whereby the United States consents to a mutual right of search, within certain specified limits bordering on the coasts of Africa and the Spanish West Indian Islands.

A resolution has been introduced into the House of Representatives, declaring it unlawful for any slave to be employed or held to service, in any fort, arsenal, navy-yard, or any other place, wherever situated, over which the United States has exclusive control; and it is probable that it may finally become the law of the land.

The consummation of these several acts will entirely disserve the General Government from any connection with slavery, and so shape its policy, as to throw the weight of its influence against the iniquitous system; while it must create and foster in the Slave States themselves, especially those of them designated as the border States, a feeling and a party in favour of emancipation.

Beside the large number of negroes virtually set free by the various divisions of the Union army, there is reason to believe that thousands of slaves have escaped into the free States, who probably will never be reclaimed by their former masters; and the unsettled condition of the Slave States, and the disposition on the part of the northern troops now within their borders, to encourage the escape of the poor bondmen, renders it almost certain that the number of fugitives will go on increasing; very many of them are said to have gone into Kansas.

What or when the end will be, of this unparalleled rebellion, it is impossible for human wisdom to demonstrate or foresee; but our trust should be firmly fixed upon the merciful controlling interference of the Almighty, alone, and striving to keep the feelings from being hurried away with the popular excitement of the hour, watch narrowly over ourselves lest we be betrayed into a spirit opposed to that which breathes peace on earth, good will to men.

#### SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 1st inst. The Paris correspondent of the London Herald, says that a strong feeling has arisen in France in favour of intervention in America, and that it is believed overtures have been made by the French government to that of England, with a view to joint action in order to put an end to the War in the United States. The great Industrial Exhibition was to be formally opened on the 1st inst.

Russia and Russia had formally protested against the invasion of Montenegro by the Turks. The frontier was consequently not to be crossed.

A new Russian loan of ten millions sterling, had been introduced in London by the Rothschilds.

A battle between the Turks and insurgents had taken place in Albania. The Turks lost 500 men and four cannon.

The Austrian army is to be reduced by 8000 cavalry and 30,000 infantry.

The Liverpool cotton market was dull, with unchanged quotations. Bread and provisions were rising.

**UNITED STATES.—The South West.**—The official reports of the capture of New Orleans, state that forts Jackson, Saint Philip, Livingston and Pike, and the batteries below and above the city had all been taken, and the rebel gunboats, steamboats, &c., intended to aid in its defence had been destroyed. There was a severe struggle at the lower forts, in which some of the federal gun boats suffered considerably. The loss of the Union forces is stated to be 36 men killed and 123 wounded. That of the rebels is estimated at more than 1000. The garrison of the forts was encircled, and was released on parole. The rebels had destroyed cotton

and shipping to the estimated value of from eight to ten millions of dollars. In a recent engagement, the rebel army of New Orleans to Natchez. All along the Mississippi, from Memphis down, there has been the most reckless and wasteful destruction of property, in anticipation of the advance of the Union forces. The residences of the river towns are, it is said, containing in their walls, and deriving cotton and other property of value along all the southern tributaries of the Mississippi. The rebel army under Gen. Lovell, at the latest advices, was at Patachabo, fifty miles north of New Orleans.

**Mobile and Pensacola** were still held by the rebels on the 30th inst. At the latter place there was a rebel army of about 12,000 men. It was the expectation that these cities would soon be attacked by the Federal gun boats.

**Mississippi.**—On the 10th inst., the army of Gen. Halleck was slowly moving southward in the direction of that of Gen. Beauregard. Its progress had been impeded by heavy rains, and the almost impassable condition of the roads. The general health of the army was reported to be good. Despatches report that great dissatisfaction prevails in the rebel army, both among the officers and men. In a recent engagement, the Federal forces killed 1000 rebels. Reinforcements for Gen. Beauregard continued to arrive from Texas and Arkansas. Beauregard has issued a proclamation, stating that the Union forces virtually had possession of the Mississippi, and ordering all the scattered rebel forces to join with him, and that the forts and batteries along the river should be destroyed. The latest advices are to the effect that Beauregard had been largely reinforced, and would not abandon his position near Corinth. His defences had been strengthened, and preparations made for a desperate struggle. Gen. Pope's operations on the river have been successful.

**Tennessee.**—On the 10th inst., the rebel fleet near Fort Pillow, consisting of eight iron-clad gun boats, under command of Com. Hollis, made a desperate attack upon the western flotilla at the same place. In the engagement, two of the rebel gunboats were blown up, and all the crews, with all the boats, when the remaining five retreated under the walls of the fort. The Federal boats sustained but little injury. It is believed that the chief part of the land force has been withdrawn from Fort Pillow (or Wright), barely enough having been left to work the guns. Its early evacuation was looked for.

**North Carolina.**—It is stated that large numbers of Union men have voluntarily declared their allegiance to the United States, preparatory to being armed and equipped by Gen. Burnside for the purpose of defending North Carolina from the rebel forces. The Carolina Carlinians had been organized. According to a report from Norfolk, Gen. Burnside with a strong force was within a few miles of Weldon.

**Virginia.**—The downward progress of the rebel cause had of late been very rapid in this State. When the evacuation of Yorktown was decided upon, the rebel generals appear to have exerted themselves to the utmost to withdraw their immense army, with its supplies of all kinds, safely and in good order. The Federal forces were thrown forward in pursuit as rapidly as possible, and the rebel retreat was retarded. On the 10th inst., in the battle which ensued, about 300 hundred of the Federal troops were killed and 700 wounded, the rebels left about 700 killed and 1000 wounded men upon the field. Several hundred prisoners were also taken by Gen. McClellan. The rebels continued their retreat towards Richmond, and afterwards were again attacked and defeated with great slaughter near West Point, at the head of navigation on York river, to which point large bodies of the U. S. troops had been conveyed by water, thus cutting off the rebel retreat, and compelling them to take a more southern route. On the 10th inst., a part of McClellan's army of only twenty-seven miles from Richmond. It was expected the rebels would make another stand at Bottom Bridge, fifteen miles from Richmond. Gen. McDowell's army took formal possession of Fredericksburg on the 10th inst. The early capture of this place was not considered almost certain. An expedition of 5,000 men which left Fort Monroe on the 10th, took possession of Norfolk, Portsmouth and Gosport, without opposition. The retreating rebels burnt the U. S. Navy yard at Gosport, together with a number of vessels lying in Elizabeth River, and destroyed the arsenal at that place, which was destroyed by them. She was fired, and subsequent blew up and sunk. The iron clad steamer Galena, which with other U. S. vessels, was entered James river, encountered the rebel steamers, Yorktown and Jamestown. The Galena was fired and sunk, and the other vessels were captured. The rebels have now no armed vessels on any of the

waters flowing into the Chesapeake. The harbour of Norfolk is one of the best in the United States, and the port is the most important in Virginia. It is believed that a large part of the inhabitants are loyal in their sentiments, and rejoice at the departure of the rebels. Gen. Wool, on taking possession of Norfolk and appointing a military Governor, directed that all citizens should be carefully protected in their rights and civil privileges, and that strict order should be observed. About 200 cannon were left by the rebels, together with large quantities of shot and shell and other articles of value.

**New York.**—Mortality last week, 413.

**Philadelphia.**—Mortality last week, 270.

**Troy, New York.**—On the 10th inst., between 500 and 600 houses in this city were destroyed by fire. The conflagration raged over a space of fifty acres; the total loss about \$3,000,000.

**The Homestead Bill.**—A bill granting homesteads to actual settlers on the public lands, has passed the U. S. Senate by a vote of 33 to 7.

**The Pacific Rail Road.**—The House of Representatives has passed a bill by a vote of 79 to 49, incorporating a company for the purpose of making a railroad from the terminus of the Great Northern Pacific Railroad, to the Central Pacific Railroad, at the 102d meridian of longitude, through the Territories of the United States, to the western boundary of Nevada, where it is to connect with the line of the Central Pacific Railroad. The company is to be aided by donations of lands along the route of the road, and also by a direct issue of government bonds.

**Arizona.**—The House of Representatives has passed a bill organizing this Territory. One of its sections prohibits slavery in the Territory, and also abolishes and forever prohibits it in all the other territorial jurisdiction of the United States.

**Act of settlement of disputes.**—The bill to establish a Department of Agriculture passed the Senate by a vote of 25 to 13.

**Grain at Buffalo.**—There were recently 210 vessels at Buffalo, loaded with bread stuffs from the lake country. They brought about 2,000,000 bushels of grain, and also a large amount of government bonds.

**Arizona.**—On the 10th inst., the premium for gold in New York was 32 1/2. The specie in the banks had decreased \$3,035,000, during the previous week. The amount on hand is stated to be \$32,138,968. The money market easy and rates low. Cotton had advanced to 27 1/2 to 28 cts., in consequence of the extension of delivery of the staple at the South. Sales of spring wheat at \$1.11 a \$1.13; white Michigan, \$1.37 a \$1.40; rye 80 a 81 cts.; oats, 40 a 42 cts.; western corn mixed, 51 a 53 cts.; southern yellow, 52 a 54 cts. **Philadelphia.**—Good red wheat, \$1.28 a \$1.30; white, \$1.28 a \$1.40; rye, 73 a 75 cts.; corn, 53 cts.; oats 36 a 38 cts.; clover seed, \$4.50 a \$4.62.

#### RECEIPTS.

Received from Abm. Cowell, Act., do., for Aaron Frazer, \$4, to 27, vol. 35, for Michael King, \$2, vol. 34.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSUAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

#### NOTICE.

A special meeting of the Female Society of Philadelphia for the relief and employment of the poor, will be held at the House of Industry, No. 112 N. Seventh Street, on Fourth day afternoon, the 21st inst., at 9 o'clock.

JULIANA RANDOLPH, Clerk.

MARRIED, on Fifth day the 1st of Fifth mo., at Evening, N. J., EDWARD DANBELL, to ESTHER, daughter of William and Mary R. Jessop, all of that place.

DIED, at the residence of her brother-in-law, Robert Knowles, at SUNNYVALE, N. Y., on the 27th of Second mo., 1862, ANN T. POWELL, a member of Western Monthly Meeting, in the fortieth year of her age. She walked as became her profession, and was enabled to bear great affliction of body with patience and resignation to the Divine will.

FILE & MELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, FIFTH MONTH 24, 1862.

NO. 38.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From "The British Friend."

## Early Friends and What They Were.

"Hold fast the form of sound words," was the exhortation of the apostle Paul, and perhaps there is no one of the "peculiarities" of the Society of Friends that is felt to be more difficult at this day to comply with, than that of using what is technically termed "the plain language." Like the subject of "Apparel," it is built upon the simplicity and sincerity of the Christian character, but it claims a more extensive and additional important ground for its use—that of strict truthfulness. Indeed, this is the ground which Early Friends took respecting it, not only as expressive of truth in its simple abstract form, but as the absolute expression of truth in its highest and holiest form.

It is not necessary to enter on any preliminary discussion relative to it, because the language, arguments, and example of Early Friends, so thoroughly meet the whole question, as to render such a step on my part unnecessary, and therefore I shall content myself with little more than the illustrations drawn therefrom in the order in which they arise, feeling satisfied that those who candidly and honestly weigh the subject, must and will, if true to themselves, not only see the forcible reasoning of Early Friends, but be convinced that it is the duty, as well the privilege, of the truly consistent Friend, to be in the steady and regular use of the "plain language" in all their conversation, and in all the relations of life."

It has long been an opinion of mine, that if the Society of Friends had been more careful on this subject of "Plainness of Speech," there would have been far more advantage to the body in the truthfulness of its members than now exists; for is it not notorious, that the evasion of this testimony is of every-day occurrence, and the result an unmistakable tendency to lower the high standard of our profession, whilst it goes far to destroy that fine sensibility, as regards truthfulness, which should ever distinguish the christian character? Of late years the plain language, as it is called, has come to be looked upon as a conventional thing—a notion that is convenient to hold, but an idea greatly at variance with the view taken of it by Early Friends, as we shall presently see.

The adoption of this mode of speech commenced with the very earliest labours of the founder of the Society. With the simple view which he took of religion, apart from all creeds—rites, ceremonies,

and observances—were associated those of purity, simplicity, and sincerity of speech, and thus so early as 1648, we find George Fox giving utterance to his convictions on this head; and it is in conjunction with the first ministrations of the gospel which he believed laid upon him by the Lord, that he thus speaks—"Moreover, when the Lord sent me into the world, I was required to *thee* and *thou* all men and women, without any respect to rich or poor, great or small." There is a fulness in this sentence which strikes us at once as we read it. There is the firm belief in the call, and in the requirement, and in its universal application. There was no conferring with flesh and blood. There was the instant and prompt compliance with it; and accordingly we find that it brought forth abundantly of those things which are ever the lot of the true servants of God—tribulations.

From this time George Fox was constant in reference to the subject, and the acceptance of this view, in respect to language, led to its embodiment in the new Society in its code of testimonies. In 1659, Thomas Ellwood, Milton's friend and secretary, thus expresses himself—"The corrupt and unsound form of speaking in the plural number to a single person, *you* to one instead of *thou*, contrary to the pure, plain, and simple language of truth, *thou* to one, or *you* to more than one, which had always been used by God to men, and men to God, as well as one to another, from the oldest record of time, till corrupt men, for corrupt ends, in later and corrupt times, to flatter, fawn, and work upon the corrupt nature in men, brought in that false and senseless way of speaking you to one; which hath since corrupted the modern language, and hath greatly debased the spirits, and depraved the manners of men. This evil custom I had been as forward in as others, and this *I* was now called out of and required to cease (from.)" And as a kind of apology, or rather exposition for the usage, he adds—"We lay not the stress of our religion upon words; yet we know there is a form of sound words, and we desire to keep to it."

In the best of time and with the best of men, *thou* and *thee*, to a single person, was good and inoffensive language. But as times grew bad, and men worse, pride and flattery first put inferiors upon paying a plural respect to the single person of every superior; and superiors upon receiving it and at last requiring it." That Thomas Ellwood had his share of suffering for his testimony to this practice, his memoirs abundantly show.

In 1660, George Fox addressed a letter to the infant churches which he had been instrumental in gathering; and that its universality might be understood, added the following post-script:—"Let this be sent abroad that all may read it over." Nor is it less applicable at this day: its universality still applies, and amid the truckling to the world's customs, and the tampering with the world's pride, and the desire for gain, the strictures which this letter of George Fox contains, are as deserving our attention now, if not more so, than at the period they were issued. It is refreshing to see with what clearness he views every thing approaching to insincerity and untruthfulness, and how dis-

tinctly he condemns all temporizing and expediency. That he calls things by their right names, though, perhaps, not quite so handsly as we do now, might be looked for; and true to his convictions, we are left in no doubt of his meaning when he says—"All Friends everywhere that are convinced with Truth and profess it, and own it, keep to the single language; the good Spirit, the light of Jesus Christ leads to it; and that which goes from that (good spirit) which doth not live in it is to be judged; and then if man or woman seek to get gain, by speaking the improper, untrue, and flattering language of the word, which is the confusion, the Lord may take that gain away from them. For plural and singular was the language of God, and of Christ, and of all good men, and of the prophets and apostles; but the confused world, that lies in confusion, cannot endure it, who live not in the fear of God, neither follow the example of good men, but are in the double tongue, quenching the Spirit, and hating the light of Jesus Christ, which is single. And so all Friends, train up your children in the same singular and plural language; it is not for you to bring them out of it, neither to force nor command them otherwise, to please your customers, nor to please men."

And so do not lose that testimony, which slays the world's honour, and do not go into the world's fashions and commands, nor force others from that which is the language of God, and Christ, and all good men and women, into that which is contrary to God, and Christ, and all good men and women: for there must be, and always was, a distinction between one and many. . . . And therefore keep to the proper, sound, simple language. For indeed, I did hear (of) some that were troubled at their apprentices and servants, for saying *thou* and *thee* to one, and because they would not say the word *you*; and because they have known that selfish, man-pleasing childhood. And therefore that put down with the Spirit, daubing spirit must be put down with the Spirit, and condemned with the world, and to all frequently be ridiculous to the world, and to all men, and they will say, 'Ye are not so as ye were men, and so follow the customs of the world at the beginning;' and so follow the customs of all world, and not the practice of Christ and of all good men. And so this is written, that all may follow the Lord; and (that) they who do so no more; loved the customs of the world may not go into and that others may be warned and not go into such things; but mind the Truth and Spirit of God, the Light of Christ Jesus, and none of the world, may lose their true language, and half of the people half the world's language, and half of the people half of God. For to say to Friends *thee* and *thou*, and therefore to the world you, that is hypocrisy; and dissembling for all hypocrites, and hypocrisy, is dissembling to be kept under judgment, for that is dissembling with the witness of God. For ye see, the outward in Jews, when they went from the law of God, in process of time spake half Hebrew and half Ashdod. And therefore to prevent dissembling and hypocrisy, keep to the Spirit of God, and Light of Christ Jesus, that the Jews inward may not have a mixed language. . . . And so let

the Truth have its passage in all things, and speak true words and not false, with the Light ye will see: who act contrary to it will be condemned by it. So let Friends be distinct from all the world in their language, in their ways, in love, and in their conversations."

Doubtless George Fox and his brethren in the Early Friends—for all appear to be very well read in the Scriptures—had before them in this matter, the counsel of the apostle Paul to Titus—"In all things showing thyself a pattern of good works; in doctrine showing uncorruptness, gravity, sincerity, sound speech that cannot be censured; that he that is of the contrary part may be ashamed, having no evil thing to say of you."

During the same year we have William Smith, in "A Short Testimony on behalf of Truth's Innocency," taking the same ground as George Fox, for the use of the plain language, viz., simplicity and truthfulness: and so strongly do Early Friends appear to have been impressed with the soundness of the views they had adopted, that it became with them a matter of conscience rigidly to carry them out. Hence William Smith asserts—"We dare not speak any other language but that to a single person, knowing it is the Spirit's language, and hath been from the beginning, and the scripture declares no other." In his work, "The True Light now shining in England," he repeats this assertion, and adds, "that which cannot receive it is proud flesh; which we cannot satisfy, but speak truth to every man, without any respect to his person."

We cannot but admire the conscientiousness of men thus taking up an idea, evidently so offensive to the pride of man, and so at variance with the usages of the worldly part of the community, and maintaining their views with such persistency, amid suffering, imprisonment, and scorn: such firmness and faithfulness command our respect, and we at once feel convinced that nothing but a high sense of duty towards God, and the desire to stand approved in the Divine sight, could have sustained them.

In the present day it is no real trial to the true Friend to use the plain language—it is expected of him—the world considers it as synonymous with his profession, and when he does not use it, looks upon him either as a lukewarm religionist, or as altogether ashamed of his belief, and justly so; but in the days of Early Friends, the very use of such a form of speech was considered an insult, though, strange to say, it was frequently used in reply by those very individuals, who considered themselves insulted by its use on the part of Friends. In the year 1660, Samuel Fisher, an excellent classical scholar, and who had been educated at the University of Cambridge, and had held "a living" in the law established church of this country, put forth his views on the subject of the "plain language." "Little," says he, "as the Quakers do *ultra linguam vernaculam sapere*, and as little *Latin* as they understand, yet they both keep and keep to the proper idiom of the English language, in using that of thee and thou, when they speak to whatever single person, without respect; but in Hebrew, Greek, and Latin, there is not such a gross perversion of the second person plural, as through slavish fear and flattery, and fawning pride, and men-pleasing ambition, and affectation, of the honour from beneath, and respect to the persons of men, hath been brought into our English nation.

Let such as snuff at thou and thee, from us, put out the words thou and thee in their Bibles, and put in you or ye. . . . And in that place where Paul saith to Agrippa, 'Dost thou believe, O King Agrippa?' ye, I know thou believest,' to read 'Dost ye believe, O King Agrippa?'

yea, I know you believest; and they will see what a palpable piece of nonsense it will amount to, like to which yet they utter and sound forth in their ordinary locution, but feel it not. And last of all, if *thou* and *thee* be not to be used to a single person only, it hath no place nor use at all in the English tongue, for it cannot properly be used when we speak to more."

During the following year, 1661, came out the work called the *Battle-dore*; and perhaps I cannot better describe its character than in the words of George Fox himself:—"While I was prisoner in Lancaster Castle, the book called the *Battle-dore* came forth, which was written to show that in all languages *thou* and *thee* is the proper and usual form of speech to a single person, and *you* to more than one. This was set forth in examples or instances taken out of the scriptures, and out of books of instruction in about thirty different languages: John Stubbs and Benjamin Furley took great pains in compiling it, which I set them upon; and some things I added to it. And when it was finished, some of them were presented to the king and his council, to the bishops of Canterbury and London, to the universities one a-piece; and many bought them. The king said, 'it was the proper language of all nations.' The bishop of Canterbury being asked what he thought of it, was so at a stand that he could not tell what to say of it. For it did so inform and convince people that few afterwards were so rugged towards us for saying *thou* and *thee* to a single person, which before they were exceeding fierce against us for. So *thou* and *thee* was a sore cut to proud flesh, and to them that sought self-honour; who though they would say it to God and Christ, would not endure to have it said to themselves, so that we were often beat and bruised, and sometimes in danger of our lives, for using those words to some proud men."

In 1663, William Smith, in an essay entitled *The Work of God's Power in Man*, again reiterates his assertion that you to one is not truthful, and this he repeats in another essay called *The Child's Question*. In 1665, George Fox, then incarcerated in Scarborough Castle, and the subject of much interest there, being visited by many people of rank and station, thus speaks—"There come to me another time the widow of old Lord Fairfax, and with her a great company, one of whom was a priest. The priest asked me why we said *thee* and *thou* to people? for he counted us but fools and idiots for speaking so. I asked him whether those who translated the scriptures so, and made the grammar and accidence, were fools and idiots, seeing they translated the scriptures so, *thou* to one, and *you* to more than one, and left it so to us? If they were such fools and idiots, why had not he, and such as he, who looked upon themselves as wise men, and could not bear *thee* and *thou* to a singular, altered the grammar, accidence, and bible, and put the plural instead of singular? But if they were wise men who so translated the bible, and made the grammar and accidence so, I wished him to consider whether they were not fools and idiots themselves, that did not speak as their grammar and bible taught them; but were offended with us, and called us fools and idiots for speaking so." So much was the ground of this manner of speech uppermost in the mind of this worthy elder, and so important does he seem to have considered truthfulness in its very minutest form, that in 1668 he again refers to the subject, and issues an epistle full of tender counsel respecting it. And now another Friend enters the arena, a Friend well educated in the literature of the age, above the class, as regards this world, from whence sprang George Fox and his compeers—one

who deserves to, and will, be recorded throughout generations yet to come, as one of the noblest defenders of the civil and religious liberties of Englishmen—bold for the Truth, scrupulously faithful to his convictions, and unflinching in the avowal of his belief. Though skilful in argument, with the simplicity of a child he takes up this question, and in 1668 sends forth from the press a work worthy of his name—a work at this day highly appreciated, and which will continue to be an interesting and attractive volume of literature—William Penn's *No Cross no Crown*. In it the subject of the plain language is thus dealt with—"There is another piece of nonconformity to the world, that renders us very clowish to the breeding of it, and that is *thou* for *you*, and that without difference or respect to persons; a thing that to some looks so rude, it cannot well go down without censure or wrath. . . . Words of themselves are but so many marks set and employed for necessary and intelligible mediums or means, whereby mankind may understandingly express their minds and conceptions to each other, from whence comes conversation. Now, though the world be divided into many nations, each of which, for the most part, have a peculiar language, speech, or dialect, yet have they ever concurred in the same numbers and persons, as much of the ground of right speech. . . . If it be improper or uncivil speech, how comes it that the Hebrew, Greek, and Roman authors, used in schools and universities, have no other? Why should they not be a rule in that, as well as in other things? . . . but it is neither improper nor uncivil, but much otherwise; because it is used in all languages, speeches and dialects, and that throughout all ages. This is very plain, for instance it was God's language when he first spoke to Adam. It is also the Assyrian, Chaldean, Grecian, Latin speech, &c. . . . But supposing *you* to be proper to a prince, it will not follow that it is so to a common person. For his edict runs—'We will and require, because, perhaps, in conjunction with his council; and therefore *you* to a private person is an abuse of the word. . . . But some will tell us, custom should rule us, and that is against us. But it is easily answered, and more truly, that although in things reasonable or indifferent, custom is obliging or harmless, yet in things unreasonable or unlawful, she has no authority. For custom can no more change numbers than genders, nor yoke *one* and *you* together, than make man into woman, or one into a thousand. But if custom be to conclude us, 'tis for us; for as custom is nothing else but *ancient usage*, I appeal to the practice of mankind, from the beginning of the world, through all nations, against the novelty of this confusion, *viz., you to one person*. Let custom, which is ancient practice and fact, issue this question. Mistake me not: I know words are nothing, but as men give them a value or force by use; but then if you will discharge *thou*, and *that you* must succeed in its place, let us have a distinguishing word in the room of *you*, to be used in speaking to many. But to use the same word to *one* and *many*, when there are two, and that only to please a proud and haughty humour in man, is not reasonable in our sense, which we hope is christian. But if *thou* to a single person be improper and uncivil, God himself, all the holy fathers and prophets, Christ Jesus, and his apostles, the primitive saints, all languages throughout the world, and our own law proceedings, are all guilty, which, with submission, were great presumption to imagine.

. . . . Art thou, O man, greater than He that made thee? Canst thou approach the God

of thy breath, and great Judge of thy life, with *thou and thee*, and when thou risest off thy knees, scorn a Christian for giving to these, poor mushroom of the earth, no better language than thou hast given to God just before? — Wherefore, reader, whether thou art a night-walking Nicodemus or a suffering scribe, one that would visit the blessed Messiah, but in the dark corners of the world, that thou mightest pass undiscerned, for fear of bearing his reproachful cross; or else a favourer of Haman's pride, and countest this testimony but a foolish singularity, I must say, Divine love enjoins me to be a messenger of Truth to thee, and a faithful witness against the evil of this degenerate world, as in other, so in these things; in which the spirit of vanity and of lies hath got so great a head and lived so long uncontrolled, that it hath impudence enough to term its darkness light, and to call its evil offspring by the names due to a better nature, the more easily to deceive people into the practice of them.

I do once more entreat my readers, that they would seriously weigh in themselves, whether it be the spirit of the world, or of the Father, that is so angry with our honest, plain and harmless *thou and thee*; that so every plant that God our heavenly Father hath not planted in the sons and daughters of men may be rooted up."

(To be continued.)

From the *Annals of Scientific Discovery* for 1902.

### The Atlantic and Pacific Overland Telegraph.

(Continued from page 294.)

The country is destitute of timber most of the way; but the longest distance that posts had to be hauled in any one stretch was two hundred and forty miles. As before stated, no submarine cables were used at river crossings; but the wire was carried over sometimes on high masts, where common poles did not give sufficient height. On the high mountains, where the snow accumulates to such fabulous depths, the posts are extra large, and so high as to keep the wire above the deepest snow, and so near together that the wire will not break by the snow and sleet that will load upon it.

Extra mule teams were kept along with the train for carrying the men and to haul the works, for hauling water for the men and animals on the deserts, and other necessary running about, and the line was completed as the train moved westward.

The line is worked by Morse's instruments. The cost of the line will average about \$250 per mile, the whole cost not exceeding \$300,000. Towards this the United States Government pays \$100,000 in ten yearly instalments, and the State of California pays \$60,000.

The section on the California side was built by — Street of California, and at about the same rate of progress, ten miles per day, as this side.

The charge on the Pacific telegraph for a message of ten words, from Brownsville, Missouri, to San Francisco, is three dollars. The charge for ten words from New York to San Francisco being now about six dollars, (\$5.95), with the addition of forty-eight cents for every additional word, the public are already availing themselves of the line to a considerable extent. The average number of messages per day sent over so far is about sixty, exclusive of news reports and government dispatches, the latter amounting to an average of four messages a day.

The danger to the line from Indian hostility, does not seem so great as has been feared. The Indians have been conciliated, and some were employed to aid the regular force of workmen. One tribe has now the care of the stock which was used for transportation.

The whole continuous stretch of telegraph wire

across this continent, between Cape Race on the east and San Francisco on the west, is about five thousand miles.

Its extremities comprise seventy degrees of longitude, making a difference in time of more than four and a half hours. The agents at Cape Race might send a dispatch forward at set of sun, and the news reach San Francisco while that luminary was still above the horizon. If a telegram were instantaneously sent over the whole line, it would reach San Francisco, at a time, according to the clocks of that city, about three hours and fifteen minutes before the time at which it left New York, according to the clocks there.

There is now in operation in California, about two thousand miles of line, extending south from San Francisco to Los Angeles, and north about the same distance to Yreka, connecting every town of importance in the State. The line will probably be extended within a year as far north as Vancouver, and from thence — Collins proposes to carry it along the north-western coast of America, and over to the eastern shore of Asia.

In this proposed extension, the Russian government has expressed a great interest, and is ready to offer assistance and facilities. It has, moreover, already made considerable strides in the establishment of a system of telegraphs across the Asiatic continent, a line of telegraphs being in the process of construction across the Ural Mountains to Omsk, which connecting Europe with Asia, will be extended in 1863 to Irkutsk, and will connect the Russian ports through the sea of Japan and the Amoor.

In the following year, it is expected that an uninterrupted telegraphic communication will exist between St. Petersburg and the Pacific. So far, assuming that the projects of the Russian government will be realized, no difficulties seem to lie in the way of sending telegraphic messages with requisite dispatch from Europe to the shores of the Pacific Ocean. The Pacific Ocean as it passes northward gradually narrows itself till it terminates in the channel which separates the Asiatic and American continents. This channel, known by the name of Bering's Straits, is at its narrowest point about fifty miles broad. Regarding solely from a submarine point of view the proposed line of telegraphic communication, this would seem the most favourable point at which to connect the continents.

The adjacent countries, however, elid in perpetual ice, are uninhabitable, and the establishment of telegraph stations, or aerial lines, (wires supported on poles,) across them would be impracticable. It is out of the question, therefore, to go so far north. At a point further south, however, though the distance between the opposite coasts is as great as that between Ireland and Newfoundland, opportunities are presented eminently favourable for the establishment of telegraphic communication. A range of islands, called the Aleutian Islands, are scattered over the intervening space. A telegraphic cable, it is contended, might with ease be laid down between those islands and the main land on either side. Two modes presents themselves of accomplishing this object. The one by making each island as it is in turn traversed, available for the establishment of aerial lines, and adopting the submarine system only where absolutely necessary, namely, in connecting the several islands with each other, and the group with the main land. The other consists in adopting the submarine system throughout, and carrying the cable along the coasts of the islands, instead of across them. The former plan is condemned as impracticable, and the latter proposed as the safest, though most expensive mode of proceeding. From this rapid glance, therefore, it will be seen that the idea of telegraphic

communication with the old world is in a fair way to be realized in the course of a few years.

From "Youthful Piety."

### Some Account of Lydia S. Rogers.

(Continued from page 292.)

On the evening of the 24th, she had an attack of suffocation which rendered it doubtful whether she would survive the night, in allusion to which, she sweetly remarked, "If I do not there need be no bustle—I believe all is done, every thing is ready."

Next morning the state of her mind was very peaceful and heavenly, and she observed, "This is a sweet morning to me,—Praise the Lord, O my soul." Although her weakness was great, and much suffering consequent on the disease, yet her mind was so absorbed in the contemplation of heavenly things, as scarcely to have any sense of suffering. At her request the family were collected, and after a time of solemn waiting in silence, she addressed them in earnest entreaty to close in with the offers of divine mercy and not put off the period of submission, testifying from her own experience, that the Lord is not an hard master, requiring more than he enables to perform.

On the 26th, her mind appeared much exercised, and often engaged in prayer. She remarked that she could not communicate anything to those around her, unless her dear Father gave it to her; adding, "Remember Joshua's army compassed the city seven times before they were commanded to shoot. If I dared to speak of myself I should say a great deal, for I am earnest for your help." The next day she saw many of her friends: great was the exercise she underwent on their account, and deep her sense of the exceeding sinfulness of sin, under which impressions her mouth was opened in a wonderful and affecting manner to speak to the states of those who came into her room.

A few days previous to her dissolution her sufferings became extreme, and though mercifully strengthened to endure them with much patience and resignation, she said, "I hope my patience will hold out—I fear I do not bear trial as I ought—it is not my wish to be relieved from suffering, but to bear it to the honour of my Lord: if he saw meet he could relieve me—I only desire what will tend most to his glory." She seemed afraid that her friends paid too much attention to her wants, often saying, "You are all taken up with me—I wish some poor neglected one could have part of what I receive;" and on one of her visitors remarking that she was comfortably situated, she answered, "Yes—I have every earthly comfort, but that will not satisfy the soul."

One of her dresses which had ruffles on the sleeves being put upon her, the sight of them seemed to afflict her; she desired a pair of scissors to be brought, and had them cut off, saying, "O; these ruffles lily become dying hands." She also requested to have some ornamental articles of her dress burnt, observing, "They will be useful to no one—fiery is indeed a great burden."

On the evening of the 10th of second month, she had the fourteenth chapter of John read to her, which had been her daily practice for some time previous. Her weakness rapidly increased; it was evident that the solemn change was near, and the family were collected around her dying bed. To her husband she said, "The dear Saviour is the way—he is the door—knock and it shall be opened—all that will come may come." She took a most affectionate and impressive leave of her family, saying, "Farewell, farewell—love to all. The horses are come, the chariot of Israel to carry me home. Take me to myself, if thou

hast purified me. Happy—happy—happy! O, praise him—he is a God of love. These light afflictions which are but for a moment, will work out for us a far more exceeding and eternal weight of glory."

She called one in the room to her, and gave her sweet counsel, exhorting upon her to let the Lord have the first place in her afflictions, saying, "Love him first—him last—and through all—then all will go well." Presently after, as if all the energies of her dying frame were summoned to the effort, she broke forth in a loud voice, urging on those present the necessity of bowing to the cross of Christ: "Thee, dear Saviour," said she, "I hung nailed to the tree, bleeding for us—for our sins; and afterwards, "It is hard work to die—but the sting of death is gone—thanks be to God—he hath given me the victory—O, help me to praise the Lord."

Thus, with an hymn of praise on her expiring lips, this dear young woman ceased to breathe on the morning of the 11th of Second month, 1835, in the twenty-fifth year of her age. Her ransomed spirit, we joyfully believe, was received into the mansion prepared for it by Him who had so narrowly redeemed her unto Himself, and is now one of that happy company who surround the throne of God and the Lamb, with the unceasing anthem of "Salvation, and glory, and honour, to Him that sitteth on the throne, and unto the Lamb forever."

May this memorable instance of the uncertainty of life and of all temporal enjoyments; of the adorable mercy of God in Christ Jesus to the sincere penitent; and of the power of his blessed spirit in purifying the soul, weaning it from earthly attachments, filling it with the pure and precious consolations of the gospel, and conferring on it a hope full of immortality and eternal life, encourage others to yield in unreserved obedience to the early visitations of heavenly love; that thus living in the fear and love of God, they may experience preservation from the snares which beset the paths of youth; know the light of Christ Jesus to be their safe guide through the trials and temptations of the present changed life, and in the awful close have a well-grounded hope of admission into the mansions of eternal glory.

#### DIVERSITY OF TASTE.

The diversity prevailing in different nations, in reference to articles of food, seems to confirm in its literal sense the proverbial saying, that "One man's meat is another man's poison." Many an article of food, which is in high esteem in one country, is regarded in others with abhorrence, which even famine can hardly surmount.

One of our foreign exchanges contains an interesting article on this subject, a part of which we condense for our readers:

In the Shetland Islands it is said that crabs and lobsters abound, which the people catch for the London market, but refuse to eat even when half starved.

Eels, which are abundant and of good quality in Cumberland and Westmoreland, and also in Scotland, are regarded by the people there with as much disgust as snakes.

Scallops, which are reckoned a dainty in Ireland, are hardly ever eaten in England; and although they are abundant on many of the coasts, few of the English have any idea that they are eatable.

Cockchafers are candied, and served up without other confectionery by the Italians.

The hedge-hog no one thinks of eating in England, except the gypsies, and some who have joined them, and who report that it is better than rabbit.

The sailors in the English and Dutch whaleships do not eat the flesh of the whale; but those in the French whalers (with their well-known skill in cookery,) are said to make a palatable dish of it.

By almost all the lower classes in England, venison and game of all kinds are held in abhorrence, and so are fresh figs.

By the Australian savages, frogs, snakes, large moths and grubs, picked out from the wood—all of which the English settlers turn from with disgust—are esteemed as dainties; but they are shocked at our eating oysters.

Milk, as an article of food, (except for sucking babies,) is loathed by the South Sea Islanders. Goats have been introduced into several of the islands; but the people deride the settlers with using their milk, and ask them why they do not milk their sows. On the other side, dogs and rats are favourite articles of food with them.

These last, as is well known, are often eaten by the Chinese; who also eat salted earth-worms and a kind of sea-lug, which most Europeans will turn from with disgust.

In the narrative of Anson's voyage is a full account of the prejudice of the South Americans, (both Creoles and Indians,) against turtle as poisonous. The prisoners captured on the prize ship warned the sailors against eating it, and for some time lived on bad ship-beef; but seeing our men thrive on the turtle, they began to eat it—at first sparingly, and at length heartily. And when set ashore and liberated, they declared they blest the day of their capture which had introduced to them a plentiful supply of wholesome and delicious food.

Horseflesh, which most Europeans would refuse to eat, except in great extremity, is preferred by the Tartars to all other; and the flesh of a wild ass's colt was greatly esteemed by the Romans.

As for pork, it is on religious grounds that Jews and Mohammedans abstain from it, as the Hindoos do from beef. But the Christians of the East seem to have nearly an equal aversion to it; and the like prevailed till lately in Scotland.

The large shell snail, called escargot, was a favourite dainty with the ancient Romans, and still is so in a great part of the south of Europe, though most Englishmen would be half starved before they would eat it.

In Vienna, the large wood-ants are served up and eaten alive.

Small land crabs are eaten alive in China.

The iguana, a large species of lizard, is reckoned a great dainty in some of the West India Islands. The monkey and alligator are eaten both in Africa and South America; and some travellers, who have overcome their prejudices, pronounce them to be very good eating. A large crocodile, or alligator, is said to have a strong musky flavour, but a young one tastes much like a skate.

Even when the same substances are eaten in different countries, there is often a strange difference in the mode of preparing them. Both we and the Islanders use butter, but they store it up without salt till it is rancid and sour.

Maize, (the Indian corn of this country,) has been introduced into New Zealand by the missionaries, and the people cultivate and highly esteem it. But their mode of preparing it is to Europeans most disgusting. They steep it in water till it is putrid, and then make it into a kind of a porridge, which emits a most intolerable stench.—*Late Paper.*

*Perfect Sanctification.*—When the mind thinks nothing, when the soul ceases nothing, and the body eateth nothing that is contrary to the will of God, this is perfect sanctification.

"*They Say.*"—We shall not attempt, for we could hardly expect to succeed, to portray the deformities of a character so repulsive as the "They Say" society. The reputations of men and women, good and bad, old and young, are alike withered by its blighting influence. "They say" is a convenient mask for the slanderer, from behind which to emit the foulest libels, the most scandalous rumors, and vile insinuations. It is astonishing how many thoughtless persons there are to seize the petty scandal or malicious insinuation, and give it currency, without pausing to consider its probability or the consequences of promoting its circulation. "They say" is a demon who spreads a moral malaria that invades every circle, destroys the peace of families, blasts reputation, sows discord, engenders strife and heart-burnings, withers friendship, poisons the fountain of love, and even desecrates the altar. The habit of repeating its utterances grows apace with the least indulgence, and produces results of the most painful character.

How many feelings and affections are sorely lacerated, and that not for the time only; but how often do the slanders thus germinated lie injure the good name and fame of many for years after. Who has escaped its baneful influence? How many can trace their most poignant sorrow to some heartless utterance, exaggerated by repetition, and to be traced in its origin only to the ubiquitous "They say." This fiend is ever busy scarring the reputation, magnifying the frailties, and torturing the most innocent conduct and actions of men. Private reputation is a priceless jewel, and we envy no man's or woman's heart who will lightly trifle with it by heeding or giving currency to "They say" rumors, affecting the character of a neighbour. How much more wicked is it when it assails the absent, who cannot meet its accusations, but must suffer without the opportunity to repel it, it may be, until too late to avert the evil it has entailed. It is a very safe rule, when you have nothing good to say about your neighbour to keep your mouth shut. Above all, let the "unruly member" be stilled against the utterance of "They say" rumors.

*The Liberty that Leads into Bondage.*—Let not any deceive and hurt themselves with a false plea, saying, I will be left to my liberty, I have freedom to do, go, or wear, so and so, and religion stands not in clothes, &c., for that liberty which the worldly spirit leads into is not indeed the true liberty, but is a false and feigned liberty, which leads into true and real bondage. And though religion stands not simply in clothes, yet true religion stands in that which sets a bound and limit to the mind with respect to clothes as well as other things. So that when there is a running out into excess and vanity in apparel, that is a certain indication and token, that the mind is got loose, and hath cast off the yoke, and is broken away from its due subjection to that Divine power, in which true religion stands.—*Job Scat.*

*Keep in the Cross.*—Dwell in the pure wisdom, and it will teach you what to do in all things. Walk in the light and there will be no occasion of stumbling and falling; but being disobedient to the light, then there is stumbling and falling down. Every one mind your own condition and your growth daily: press forward in the straight way, and so be kept in the cross, that keeps humble and lowly;—and being kept in the cross, it will bring you to lay aside every weight and burden, and to run with patience the race that is set before you; that you may so run as to obtain the crown.—*Richard Furnsworth.*

From *Evenings at the Microscope.*

## Insects: Their Feet.

(Continued from page 265.)

I have here inclosed a small window-fly in the i-box of the microscope, that you may examine the structure of its feet as it presses them against the glass cover; and thus not only get a glimpse of an exquisitely formed structure, but acquire some correct ideas on the question of how a fly is enabled to defy all the laws of physics, and to walk jauntily about on the under surface of polished bodies, such as glass, without falling, or apparently the fear of falling. And a personal examination is the more desirable because of the hasty and erroneous notions that have been promulgated on the matter, and that are constantly disseminated by a herd of popular compilers, who profess to teach science by gathering up and retailing the opinions of others, often without the slightest knowledge whether what they are reporting is true or false.

The customary explanation has been that given by Derham in his "Physico-theology;" that "divers flies and other insects, besides their sharp-hooked nails, have also skinny palms to their feet, to enable them to stick to glass and other smooth bodies, by means of the pressure of the atmosphere, after the manner as I have seen boys carry heavy stones, with only a wet piece of leather clapped on the top of a stone." Bagley, citing this opinion, adds that they are able easily to overcome the pressure of the air "in warm weather, when they are brisk and alert; but towards the end of the year this resistance becomes too mighty for their diminished strength; and we see flies labouring along, and lugging their feet on windows as if they stuck fast to the glass; and it is with the utmost difficulty they can draw one foot after another, and disengage their hollow cups from the slippery surface."

But long ago another solution was proposed: for Hooke, one of the earliest of microscopic observers, described the two palms, pattens, or soles (as he calls the *pulvilli*), as "beset underneath with small bristles or tenters, like the wire teeth of a card for working wool, which, having a contrary direction to the claws, and both pulling different ways, if there be any irregularity or yielding in the surface of a body, enable the fly to suspend itself very firmly." He supposed that the most perfectly polished glass presented such irregularities, and that it was moreover always covered with a "smoky tarnish," into which the hairs of the foot penetrated.

The "smoky tarnish" is altogether gratuitous, and Blackwall has exploded the idea of atmospheric pressure, for he found that flies could walk up the interior of the exhausted receiver of an air-pump. He had explained their ability to climb up vertical polished bodies by the mechanical action of the minute hairs of the inferior surface of the palms: but further experiments having showed him that flies cannot walk up glass which is made moist by breathing on it, or which is thinly coated with oil or flour, he was led to the conclusion that these hairs are in fact tubular, and excrete a viscid fluid, by means of which they adhere to dry polished surfaces; and on close inspection with an adequate magnifying power, he was always able to discover traces of this adhesive material on the track on glass, both of flies and various other insects furnished with *pulvilli*, and of those spiders which possess a similar faculty.

In the earlier editions of Kirby and Spence's "Introduction to Entomology," Kirby had adopted the suctional hypothesis. But in a late one he made an allusion to Blackwall's opinion, and added the following interesting note:—

"On repeating Blackwall's experiments, I found, just as he states, that when a pane of glass of a window was slightly moistened by breathing on it, or dusted with flour, blow-flies, the common house-flies, and the common bee-fly (*Eristalis tenax*) all slipped down again the instant they attempted to walk upon these portions of the glass; and I moreover remarked that each time after thus slipping down, they immediately began to rub first the two fore tarsi, and then the two hind tarsi, together, as flies are so often seen to do, and continued this operation for some moments before they attempted again to walk. This last fact struck me very forcibly, as appearing to give an importance to these habitual procedures of flies that has not hitherto, as far as I am aware, been attached to them. These movements I had always regarded as meant to remove any particle of dust from the legs, but simply as an affair of instinctive cleanliness, like that of the cat when she licks herself, and not as serving any more important object; and such entomological friends as I have had an opportunity of consulting tell me that their view of the matter was precisely the same; nor does Blackwall appear to have seen it in a different light, since, though so strongly bearing on his explanation of the way in which flies mount smooth vertical surfaces, he never at all refers to it. Yet, from the absolute necessity which the flies on which I experimented appeared to feel of cleaning their *pulvilli* immediately after being wetted or clogged with flour, however frequently this occurred, there certainly seems ground for supposing that their usual and frequent operation for effecting this by rubbing their tarsi together is by no means one of mere cleanliness or amusement, but a very important part of their economy, essentially necessary, for keeping their *pulvilli* in a fit state for climbing up smooth vertical substances by constantly removing from them all moisture, and still more, all dust which they are perpetually liable to collect. In this operation the two fore and two hind tarsi are respectively rubbed together for their whole length, whence it might be inferred that the intention is to remove impurities from the entire tarsi; but this I am persuaded is not usually the object, which is simply that of cleaning the under side of the *pulvilli* by rubbing them backward and forward along the whole surface of the hairs with which the tarsi are clothed, and which seem intended to serve as a brush for this particular purpose. Sometimes, indeed, when the hairs of the tarsi are filled with dust throughout, the operation of rubbing them together is intended to cleanse these hairs; because, without these brushes were themselves clean, they could not act upon the hairs of the under side of the *pulvilli*. Of this I witnessed an interesting instance in an *Eristalis tenax*, which by walking on a surface dusted with flour had the hairs of the whole length of the tarsi, as well as the *pulvilli*, thus clogged with it. After slipping down from the painted surface of the window-frame, which she in vain attempted to climb, she seemed sensible that before the *pulvilli* could be brushed it was requisite that the brushes themselves should be clean, and full two minutes were employed to make them so by stretching out her trunk, and passing them repeatedly along its sides, apparently for the sake of moistening the flour and causing its grains to adhere; for after this operation, on rubbing her tarsi together, which she next proceeded to do, I saw distinct little pellets of flour fall down. A process almost exactly similar I have always seen used by blow-flies and common-house flies which had their tarsi clogged with flour by walking over it, or by having it dusted over them; but these manoeuvres are

required for an especial purpose, and on ordinary occasions, as before observed, the object in rubbing the tarsi together is not to clean them, but the *pulvilli*, for which they serve as brushes. Besides rubbing the tarsi together, flies are often seen, while thus employed, to pass the two fore tarsi and tibiae with sudden jerks over the back of the head and eyes, and the two hind tarsi and tibiae over and under the wings, and especially over their outer margins, and occasionally also over the back of the abdomen. That one object of these operations is often to clean these parts from dust, I have no doubt, as on powdering the flies with flour they thus employ themselves, sometimes for ten minutes, in detaching every part of it from their eyes, wings and abdomen; but I am also inclined to believe that, in general, when this passing of the legs over the back of the head and outer margin of the wings takes place in connection with the ordinary rubbing of the tarsi together, as it usually does, that the object is rather for the purpose of completing the entire cleaning of the tarsal brushes (for which the row of strong hairs visible under a lense on the exterior margin of the wings seems well adapted), so that they may act more perfectly on the *pulvilli*. Here, too, it should be noticed, in proof of the importance of all the *pulvilli* being kept clean, that as the tarsi of the two middle legs cannot be applied to each other, flies are constantly in the habit of rubbing one of these tarsi and its *pulvilli*, sometimes between the two fore tarsi, and at other times between the two hind ones.

"Though the above observations, hastily made on the spur of the occasion since beginning this note, seem to prove that it is necessary the *pulvilli* of flies and of some other insects should be kept free from moisture and dust to enable them to ascend vertical polished surfaces, they cannot be considered as wholly settling the question as to the precise way in which these *pulvilli*, and those of insects generally, act in affecting a similar mode of progression; and my main reason for here giving these slight hints is the hope of directing the attention of entomological and microscopical observers to a field evidently, as yet, so imperfectly explored."

In the foot of the fly under our own observation you may see how well the joints of the tarsus are covered with hairs, or rather stiff pointed spines, of various dimensions and distances apart, and hence how suitable these are for acting the part of combs to cleanse the palms. But these last are the organs that most claim and deserve our examination. In the specimen of the little *Musca* animated that I have imprisoned, the last tarsal joint is terminated by two strong divergent hooks which are minutely well clothed with spines, and by two membranous flaps or palms beneath them. These are nearly oval in outline, though in some species they are nearly square, or triangular, and in some of a very irregular shape. They are thin, membranous, and transparent.

The inferior surface of the palm, on which we are now looking, is divided into a vast number of lozenge-shaped areas, which appear to be scales overlapping each other, or they may be divided merely by depressed lines. From the centre of each area proceeds a very slender, soft, and flexible pellicid filament, which reaches downwards to the surface on which the fly is walking; and is there slightly hooked and enlarged into a minute fleshy bulb. Those from the areas near and at the margins of the palms more and more arch outwards, so that the space covered by the bulbs of the filaments is considerably greater than that of the palm itself.

Now it is evident that the bulbous extremities of

those soft filaments are the organs of adhesion. We notice how they drag and hold, as the fly draws its foot from its place, and it seems almost certain that the adhesion is effected by means of a glutinous secretion poured out in minute quantities from these fleshy tips. When the foot is suddenly removed, we may often see a number of tiny particles of fluid left on the glass where the filaments had been in contact with it: but I do not build conclusively on this appearance, because the fly, having been confined for some quarter of an hour in this nearly tight glass cell, has doubtless exhaled some moisture, which has condensed on the glass; and the specks we see may possibly be due to the filaments of the palpi having become wet by repeatedly brushing the moist surface. — Heworth, however, asserts that a fluid is poured out from these filaments, and is deposited on the glass, when the fly is vigorous, with great regularity. He says that "when in a partially dormant state, the insect does not appear to be able to give out this secretion, though it can still attach itself: indeed, this fluid is not essential for that purpose." It is asserted that the speckled pattern of fluid left on the glass by the fly's footsteps remains (if breathed on,) when the moisture is evaporated; and hence it is presumed to be of an oily nature.

In some beetles the joints of the foot are furnished with similar appendages. I shall now show you the fore-foot of a well-known insect, called by children the Bloody-necked Beetle (*Zinnia tenebriosa*), a heavy bodied fellow, of a blue-black colour, abundant in spring and summer on hedge banks. You have doubtless often observed it, and have been amused, perhaps, at seeing the drop of clear scarlet fluid which exudes from its mouth when touched.

The feet in this species are broad and well developed. You may see with the naked eye, on turning it up, that its dilated joints are covered on the under surface with a velvety cushion of a rusty-brown colour; and here, under a low power of the microscope with the Lieberkuhn, you can resolve the nature of the velvet.

The foot, or *tarsus* as it is technically called, is composed of four very distinct pieces; of which the first is semicircular, the second crescent-shaped, the third heart-shaped, and the fourth nearly oval. The last is rounded on all sides, has no cushioned sole, and carries two stout hooks. The first three are flat or even, hollowed beneath into slots, something like the hoof of a horse, and the whole interior bristles with close-set minute points, the tips of which terminate at the same level and form a velvety surface. Now these points are the whitish bulbous extremities exactly answerable to those of the palpi of the fly, and doubtless they answer the very same purpose. Only here they are set in far closer array and are a hundred times more numerous; whence we may reasonably presume a higher power of adhesion to be possessed by the beetle. The structure is best seen in the male, which may be distinguished by its smaller dimensions, and by its broader feet.

(To be continued.)

For "The Friend."

#### Trust in the Lord.

Trust in the Lord with all thine heart; and lean not to thine own understanding.

In all thy ways acknowledge him, and he shall direct thy paths. Prov. 3 chap., 5 & 6 ver.

Trust in him at all times; ye people, pour out your heart before him: God is a refuge for us. Ps. lxxi. 8.

Here is a place of refuge for all the Lord's children, however tried and tribulated their path may be. There is safety in committing our cause to Him who was never foiled in battle, humbly

trusting to his government and guidance, and pouring out the heart before him. The psalmist knew from experience that it was good to trust in him at all times; and Solomon with all his great wisdom simply recommends to trust in the Lord with the whole heart, and to lean not to the human understanding.

When the wisdom of man is laid low, and the Lord is trusted in with the whole heart, then will he manifest his great power for the help of his people, and the government will be felt to rest upon his shoulders. "And his name shall be called Wonderful, Counsellor, the mighty God, the everlasting Father, the Prince of Peace. Of the increase of his government and peace there shall be no end; upon the throne of David, to order it, and to establish it with judgment and with justice, from henceforth even forever. The zeal of the Lord of hosts will perform this." Isa. ix. 6, 7.

We have many encouraging instances in the history of our religious Society, of the immediate assistance and manifestation of Divine Power to enable its faithful members to support the Lord's cause through great opposition. There were those brought into the society in its early days, who were the wise and learned of the age; but they found they must lay all their attainments at the foot of the cross, and become fools that they might be made truly wise. Many instances we have recorded of the unlettered and unlearned, who being taught in the school of Christ, were able to refute all the arguments of their learned opponents, to maintain their Master's cause in the face of their opposers, and to come off victorious from those battles. And why? seeing they were of the unlearned as to human acquirements;—because their Captain whom they followed, was never foiled in battle, and the weapons of their warfare were not the carnal weapons of human wisdom, but spiritual; mighty through God to the pulling down of the strongholds of sin and Satan. These are the weapons of the christian's warfare, now as then. May the Lord increase the number at this day of those who wield them.

The wrath of man worketh not the righteousness of God; neither will the heat and excitement of the creature, as experience proves most sadly, but rather tends to confusion, and the withdrawal of the sensible evidences of the heavenly Father's love. He who was with our forefathers in the Truth, and with his people in all generations, sustaining them of his mercy and upholding them by his power, because they trusted in him, is alone able to preserve us at this day to his glory, and in the end to present us faultless before his throne with exceeding great joy. "In Christ Jesus neither circumcision availeth anything, nor uncircumcision, but a new creature. And as many as walk according to this rule, peace be on them, and upon the Israel of God." Gal. 6 chap., 15 and 16.

The Lord's cause is dear to him, and he will not give his glory to another or his praise to graven images. If we are under a proper sense of our weakness, as finite beings, we shall feel the necessity of crying unto him for help in this day of trouble. But have we been yet sufficiently humbled under the chastening hand, to make us feel our own helpless condition, and to acknowledge it before him in humble faith that he would be pleased to arise for our help and to renew our trust in him. Oh the want of faith to trust in him at all times, and especially when conducting the weighty affairs of the church! His prerogative it is to rule, and we profess to believe in his power; but are we willing to wait for its arising, or are we too much like Saul, disposed to force an offering? Under the plea

"That the people were scattered, I therefore forced myself and offered a burnt offering." But no fig leaf covering will do for any when the voice of the Lord is heard as in the cool of the day, saying, "Adam, where art thou?"

We are all of us fast passing away from this scene of probation; happy is it for those whose trust is in the Lord, whose place of defence is the munition of rocks, who are faithfully occupying the talents intrusted to them, seeking the welfare of the church, according to our measure; feeling the evidence within ourselves that we have passed from death unto life, "Because we love the brethren. Oh for more of an evidence of this change from death unto life, evinced by our love towards one another. But is there not yet strong of an evidence of the first nature being yet strong in us? "The first man is of the earth, earthy. The second man is the Lord from heaven." By our fruits shall we be known. "Do men gather grapes of thorns or figs of thistles?" The present is truly a time of deep discouragement, particularly to the rising generation; no doubt they often think within themselves, "Who shall show us any good?" But let not the peculiar trials of the day lessen your esteem for the ever blessed Truth, for that is the same that it ever was; and as there is a keeping under the preparing hand, the youth may witness a qualification to come up in the Lord's time, "To the help of the Lord against the mighty." The Lord hath not forgotten his people, but when he hath shaken all that may be shaken, that which cannot be shaken may remain, he will assuredly manifest his power for the help of the contrite ones, whose trust is in him, and who lean not to their own understanding. Let the humble, contrite ones take courage, for unto these will he look, even unto him who is poor and of a contrite spirit, and trembleth at his word. The Lord who is rich in mercy and plenteous in redemption toward all those who trust in him, will preserve his depending children wherever they are, though they may be as one of a family and two of a tribe. He who heareth the young ravens when they cry, will hear the feeble petition of his little ones, and when he has sufficiently tried them, even as silver is tried, he will give them the victory through faith. "He that endureth unto the end, the same shall be saved." Oh the preciousness of the love of God shed abroad in the heart; but the mind is so filled, in this day of commotion, with other guests, there is scarce room to be found for the birth of the Babe Immortal. There is great necessity for us to become more and more retired from the excitements of the day, and to seek preservation in quiet retirement of spirit before the Lord, that we may be able to say with the Psalmist, "I will say of the Lord, he is my God, my rock, and my fortress, in him alone will I trust."

Chester County, 1862.

For "The Friend."

We have received the Forty-fifth Annual Report of the Asylum for the Relief of Persons Deprived of the Use of their Reason, from which we make the following extracts.

"Originating at a time when no institution existed in this country, that could serve as a model for its plan of construction, the founders of the Asylum showed, by the quantity of land purchased, and by the amount of space allotted to each patient, in the construction and general plan of the building, a degree of liberality which has probably not since been surpassed. How far the Asylum may have been successful in other respects in keeping pace with the progress of improvement, or how far the means employed in it, as compared with other institutions, may have contributed to the relief and

restoration of the insane, is not for us to judge. It will be sufficient to say that during the past, as in previous years, we have felt the responsibility resting on us of diligently employing, for the benefit of our patients, every means within our reach, which the general experience has proved to be of real utility.

The plan adopted for the organization and government of the Asylum, consisting of a Board of Managers, whose only compensation is the amount of good the Institution can accomplish, and a superintendent appointed by them, and acting under their general direction and oversight, and invested with full authority to carry out all plans that may be deemed necessary for the welfare of the patients; the regular weekly visitation of the former, and their not infrequent visits at other times, for the purpose of inspecting the condition of the Asylum, are the best guarantees that the welfare of the patients will in no respect be lost sight of.

The objects of its founders, besides furnishing medical aid, and suitable moral and religious restraint, mingled with judicious kindness and sympathy, for the restoration of the insane to the inestimable gift of reason, were also to provide an Asylum for the relief of those whose disease was such as to leave no hope of recovery; where they might enjoy the comforts of home so far as they were capable of appreciating them, accompanied with every liberty consistent with their welfare and safety. These objects, it is believed, have been kept steadily in view, and it has been found, by constantly increasing experience, that the amount of personal restraint on the movements of the insane, deemed necessary for their own, and the safety of others, has regularly diminished down to the present time. We have not in any case for several years past, considered it needful to apply mechanical restraint for the prevention of acts of violence and destruction, and we have only resorted to it in any form in cases where severe bodily disease or debility has rendered a recumbent position indispensable to the safety of the patient's life.

In the general good order which has prevailed throughout the establishment; in the exemption from casualties of all kinds, and from unusual and alarming sickness among our inmates during the prevalence of increased mortality in the community generally, and in the prosperity of the Institution at a period of great financial distress and embarrassment, we recognize with heartfelt gratitude, the protecting care of a superintending Providence.

At the time of the last Annual Report, there were sixty-one patients resident in the Asylum, and fifteen have been received since, making a total of seventy-six, who have shared the benefits of the Institution during the year. The highest number at any time under care was sixty-three; the lowest sixty; and the average monthly number was sixty-one and three-twelfths.

Of the seventy-six patients under care during the year, four have died, and ten have been discharged, leaving sixty-two, of whom twenty-six are men, and thirty-six are women, in the Asylum at the present time.

Of the ten patients discharged, six, viz., three of each sex, were restored; one man was much improved; and one man and two women were stationary. Of those who were discharged restored, one was under care for a less time than three months; three for more than three and less than six months, and two for more than six months; and the average duration of treatment for the whole number discharged restored, was one hundred and forty-two days.

Twenty-four patients have been under special medical and moral treatment during the year, of whom seventeen were recent, and seven chronic cases of insanity. Of the recent cases, eight have been discharged, of whom six were restored, and two were stationary; two died, and seven remain, three of whom are restored, and four are improved. Of the seven chronic cases only one has been discharged who was much improved, and six remain, of whom one is restored, three are improved, and two are stationary. In addition to the six patients discharged restored, one is considered well, and is absent on a probationary visit to her friends; another is restored, and remains in the Institution in consequence of the difficulty of reaching his home in a Southern state, in the present disturbed condition of the country.

**General Health.**—The patients have generally enjoyed good bodily health during the year. There has been no sickness of an unusual character among them, and indeed, very little serious indisposition of any kind, except the cerebral disorder, which frequently accompanies the early stages of insanity, and which has been brought into the Asylum by patients recently admitted. Of the four deaths recorded during the year, two were of this description, in one of which a female 64 years of age, recently attacked with severe cerebral disease of a congestive character, accompanied with complete deprivation of reason, died in the course of a few weeks after her admission. In the second case, though the progress of the cerebral disorder seemed to be arrested, the vital energies remained in a condition of such extreme depression that the patient, a female 35 years of age, rapidly sank under an attack of pneumonia of a few days duration. Another case was that of a male 47 years of age, who had resided in the Institution nearly eight months, during which time he presented all the strongly marked symptoms of general paralysis, under which his mental and physical powers continued to decline until death ensued. The fourth was that of a female 84 years of age, who had been an inmate of the Asylum for about four months, and who died from the effects of chronic bronchitis.

It appears to be a common belief that insanity is attended with but little danger to life, and that many cases will even recover spontaneously, with but little medical interference. On any other supposition it is difficult to account for the unwillingness frequently manifested by the friends of persons recently attacked with insanity, to resort to the means which daily experience has proved to be beyond all others the most effectual in removing it. But when it is known that so high a proportion, as from twenty to thirty per cent. of recent cases, even though placed under the most favourable circumstances for recovery, either die in a comparatively short time from the commencement of the attack, or linger for a longer period in a condition of hopeless insanity, as is shown by all Asylum statistics, the error of such a belief, and of delaying a resort to the aid of an Asylum, at once becomes manifest. It is probably to the belief, still too general, that insanity is only a disorder of the intellect, unaccompanied by any bodily disease that can either be dangerous to life or be reached by the skill of the physician, that the hesitation so often witnessed in resorting to suitable treatment is in a great measure due. No one can so well appreciate the severity of the physical disorder often accompanying the early stages of insanity, or the difficulty frequently experienced, in consequence of the opposition of the patient in applying the necessary remedies, (sometimes taxing to the utmost all the resources of the physician,) or the happy re-

sults often obtained in cases which, in all human probability, would perish under other circumstances, as those most familiar with the disease as witnessed in Asylums and Hospitals for the insane.

While all advertising on the unwillingness frequently manifested to resort to hospital treatment, we acknowledge with satisfaction, the persistent efforts which have sometimes been made by the friends of patients under circumstances of pecuniary distress and embarrassment, to continue them under treatment when once it has been commenced. The disposition to remove patients after the sacrifice has been made of separating them from their families, before sufficient time has been allowed for them to receive the full benefit of the treatment, appears to be much less than it formerly was. It is but seldom that we have to regret the removal of a patient so long as a reasonable hope can be entertained of recovery; while such perseverance has been rewarded by a restoration of the patient, in some instances, in which there scarcely seemed room for hope."

(To be concluded.)

For "The Friend."

#### Cornplanter Indians.

As anything relating to the Indian has a peculiar interest, perhaps the short notice below will not be unacceptable to the readers of "The Friend."

Our State made an appropriation for the instruction of the youth of this small remnant, who reside in Warren County, Penna., which the State Superintendent of Common Schools says "has been judiciously applied."

W. F. Dalrymple, County Superintendent of Warren County, in his recent report says:—

"The school established in our county for the benefit of the remnant of this tribe, is meeting the reasonable expectations of its projectors and friends. The school during the present year has been under the charge of Ellen Overton \* \* \* Her report shows forty-two scholars, many of whom exhibit quite a regular attendance. She taught six months."—*Pennsylvania School Report, 1861.*

## THE FRIEND.

FIFTH MONTH 24, 1862.

It is one of the striking signs of the present eventful times, that the minds of a very large proportion of the inhabitants of this country—in a part of which slavery has so long existed in its most abject form, and been defended and contended for as a system of society consonant with Divine intention and approbation,—are awakening to deeper consideration of the magnitude of the evil, both moral and political, inseparable from it; and that the conviction appears to be gradually assuming the force of a popular demand, that so far as it obstructs the recognition and jurisdiction of the General Government, it is necessary to have it swept away.

General Hunter, who is in command of an army on the Southern coast, having issued a general order, in which he declares all the slaves in Georgia, South Carolina and Florida to be free, and to remain so forever; the President of the United States has deemed it advisable to put forth a proclamation repudiating this gigantic act of abolition; but while so doing, and expressly reserving to himself the right and power to abolish the *legal* rights of slaveholders to their slaves—if that right and power can be constitutionally exercised—if at any time, in any case, it shall become a necessity indispensable to the maintenance of the Government to exercise such a supposed power," he uses the following language:

"On the 6th day of March last, by a special message, I recommended to Congress the adoption of a joint resolution, to be substantially as follows:

"Resolved, That the United States ought to co-operate with any State which may desire the abolition of slavery, or give to such State pecuniary aid, to be used by such State, in its discretion, to compensate for the inconveniences, public and private, produced by such a change of system."

"The resolution, in the language above quoted, was adopted by large majorities in both branches of Congress, and now stands an authentic, definite and solemn promise of the Nation to the States and people most immediately interested in the subject matter.

"To the people of those States, I now earnestly appeal. I do not argue; I beseech you only. If you would, be blind to the signs of the times. I beg of you a calm and enlarged consideration of them, ranging, if it may be, far above personal and partisan politics. This proposal makes common cause for a common object, casting no reproaches upon any. It is not the Pharisee of the Heaven—not rending or wrecking anything. Will you not embrace it? So much good has not been done by one effort in all past time as, in the Providence of God, it is now your high privilege to do. Let the future not be so lamented that it has been neglected."

The deplorable condition into which our country is being brought by the tremendous civil strife going on within it, and the determination manifested on both sides to maintain and enforce the position they have respectively assumed; would seem to indicate the near approach of some still more mighty and murderous convulsion than has yet been suffered to overtake it, and we think ought to renew the interest of all who are truly concerned for the extension of the kingdom of the Messiah, to the more earnest watch over their own spirits, so that they may be enabled to put up availing petitions to the Father of mercies, that he will be pleased to stay the sword of the destroyer, and restore to our beloved country once more the blessing of peace.

#### SUMMARY OF EVENTS.

FOREIGN.—The steamer *Great Eastern*, arrived at New York on the 17th. from Milford, which port she left on the afternoon of the 7th inst. She experienced heavy gales from the westward, almost throughout the passage. The great Indian Exhibition, which was opened on the 1st inst., was an object of great interest to the number of visitors on the first day was 33,000, all being holders of season tickets. The second day the price of admission was one guinea, and the number of visitors was 32,596. The London papers still intimate the necessity of great England and France, being united in order to end the war in this country. The Morning Herald says France and England suffer more than neutrals ever suffered in any contest, and both begin to regard the war as interminable and atrocious.

It is stated that further movements of troops and war material were about being sent from France to Spain. The British government has withdrawn its share in the military part of the enterprise.

Victor Emmanuel, the King of Italy, has recently visited the southern part of his dominions. In a letter addressed to the "Congress of Europe," thanking him for his sympathy for the Italian cause, the King says, "the order which reigns in the Southern provinces, and the earnest marks of affection which I every where receive, triumphantly reply to the calumnies of our enemies. We also convince Europe that the idea of unity rests on a solid basis, and is thoroughly grasped by the hearts of all Italians." In regard to Rome, the King said in replying to an address presented at Naples:—"The public safety is not yet re-established, because Rome is the centre of conspiracies, but believe me, when I say that as much as the Italians wish to be united, they wish to be quick as much to terminate the occupation of it."

It is believed in Paris that Rome will soon be occupied by the Sardinian troops.

At Genoa a most daring robbery had been perpetrated. Sixteen robbers, armed with pistols, had entered and garroted the officers, and carried off 800,000 francs.

A Bombay letter of late date, says the cotton crop of India is shorter, and the quality worse than last year.

UNITED STATES.—*The Southern Ports.*—The President has issued a proclamation, declaring that the blockade of Beaufort, Port Royal and New Orleans, shall so far

cease and determine, from and after the first day of next month, that commercial intercourse with those ports, except as to persons and things and information, connected with war, shall be free from this time until further notice to the laws of the United States, and to the regulations prescribed by the Secretary of the Treasury.

*Fugitive Slaves.*—Great numbers of slaves in the border States, have taken advantage of the prevailing unsettlement to escape from their masters. It is estimated that there are about 100,000 slaves, principally from the country adjacent. It is said that within a week about 200 of them escaped north in vessels sailing from the Potomac. An attempt has been made to enforce the Fugitive Slave Law, and some have been returned to their masters.

*Proclamation by Marshal Lee.* Gen. Hunter has issued a proclamation, declaring freedom to the slaves of Georgia, Florida and South Carolina. The proclamation had been published in Charleston, S. C., and a negro insurrection there was greatly feared. This proceeding upon any such basis, has caused the President, as the President last year, distinctly declared to Gen. Fremont that a military officer had no authority to issue a proclamation of emancipation, and promptly disapproved of his conduct in declaring the slaves of rebels free.

*Waste of Property in the South.*—A number of property holders in Georgia have issued a circular relative to the destruction of their goods. They object decidedly to the wanton destruction which has been proposed, and say that they know no such destruction but require that they should be allowed to protect themselves.

*New Mexico.* The latest advices are, very full, all at which time the Texan rebels appeared to be in full retreat from the Territory.

*Florida.*—The rebels evacuated Pensacola on the 9th inst., having previously destroyed the Navy Yard and forts by fire. The Federal forces from Fort Pickens, then took possession of the place.

*Arkansas.*—The Federal army on the 8th inst., crossed the White river near Batesville, and took the road to Little Rock, the Capital of the State. It is stated that the sentiment of the people was rapidly becoming more loyal, and 500 persons were sworn into the militia, to take the oath of allegiance, including many of the most influential citizens. The governor of Arkansas had issued a proclamation, calling on the State militia to repair to the capital to repel the invaders.

On the 10th inst., the firing at Fort Wright had been suspended on both sides. The first attack on the naval encampment near the fort were incorrect. Some of the rebel gunboats were seriously injured, but none of them were destroyed. The losses on each side were probably about equal. A Union command of 100 men, which had been sent to the fort, to have been very largely attended, every part of the State being represented in it. The speakers all denounced the doctrine of secession, as destructive to good government. A committee was appointed to prepare an address to the people of the State, and the rigorous policy of the Johnson was cordially approved. The Convention resolved, "That the social, political and material interests of the people of Tennessee, and the safety and welfare of our friends and relatives now in the rebel army, imperiously demand the restoration of the State to her former relations with the Federal Union."

*Mississippi.*—The armies of Gen. Halleck and Gen. Beauregard, on the 17th inst., were in close proximity and skirmishes were of frequent occurrence. They are supposed to be of about equal strength, each numbering about 50,000 men. It seems to be an unwillingness on the part of both commanders, to strike the first blow in a battle on which such momentous issues depend. Deserters report that there is great dissatisfaction in the rebel camp. The troops from Kentucky and Tennessee, unwillingly desire to leave what they regard as a hopeless cause.

*Georgia.*—The intelligence from Savannah, is that the U. S. troops were within four miles of the city, and had placed batteries of heavy Parrott guns nearly surrounding it, ready for bombardment. There was a large rebel force, and all the indications pointed to a desperate defence.

*South Carolina.*—Late dates from Port Royal, state that no recent movements of the troops had taken place, except the removal of the encampments of some of them to a more elevated ground in the vicinity. The weather was very warm, but the health of the troops continued comparatively good. Gen. Hunter was about organizing a negro brigade, to be commanded by white officers. The rebel armed steamer *Plunter*, was brought out of Charleston harbor by her pilot, Robert Small, a colored

man and a slave, and delivered up to the blockading squadron. A number of slaves and their families escaped on the *Plunter*.

*Richmond.*—Five of the Federal iron-clad gun boats including the Monitor and Nagatuck, which ascended the James river to within eight miles of Richmond, were repulsed on the 16th by a rebel fortification on the river bluff, which they were unable to pass. An expedition which was sent to capture the fort, on the 17th, was defeated by a stream twenty-five miles, to Russell's Landing, where they found two steamers and fifteen schooners laden with corn, in flames. They had been fired by the rebels on the approach of the expedition.

On the 18th, the advance of Gen. McClellan's army was checked at the Chickahominy river, fifteen miles from Richmond. The bridge had been destroyed, and the crossing would be difficult, as the country is low and swampy on both sides of the river. The great rebel army lay between the Chickahominy and Richmond, A perfect panic is understood to prevail at Richmond, and the necessities of life were extremely scarce and dear. All the most important government property had been sent to South Carolina. The Confederate money was generally refused by vendors. The Secretary of War has ordered that Gen. Wool will hereafter make his head-quarters at Norfolk instead of Fortress Monroe.

*Southern Issues.*—The Memphis *Atlas*, says the Provost Marshal at Memphis, has received instructions from the military authorities, to require the banks at Memphis to take Confederate notes as currency, and to arrest as disloyal, all persons who refuse to receive them in business transactions. Flour is quoted at Richmond, \$22 per barrel. The Memphis Appeal speaks of the growing disposition on the part of the people to refuse Confederate notes, and brands those who do so as traitors.

The Richmond Dispatch has an article on the evacuation of Norfolk, and in connection with it, the general issue, says by abandoning detached posts which it is impossible to defend, the Confederacy will be enabled to concentrate powerful forces upon all essential points, and to baffie the enemy in every attack of vital importance.

A despatch from Mobile of the 8th, announces the arrival of part of Com. Porter's mortar fleet.

The Memphis papers state that great distress prevails in New Orleans. Food of all kinds is extremely scarce, and flour is not to be had at any price. Seven U. S. regiments had been landed on the 7th inst. The river is said to be full of Union gun boats, mortar vessels and transports. All the newspapers in New Orleans are still published, but are subjected to a rigid censorship.

*Philadelphia.*—Mortality last week, 264.

#### RECEIPTS.

Received from JHU FAWCETT, Agt., O., for Eliza Kirk, Martha Whinery, Eliza Cooper, Sam. Hollingsworth, Wm. Leach and Benj. Harrison, \$2 each, vol. 35; for Danl. Fourness, vol. 34, for H. W. Harris, \$2 vol. 36, for E. Cobb, \$4, vol. 34 and 35, for Mark Bonnell, \$4, vol. 34 and 35, for Thos. Heald, \$1, vol. 35 and 36, for Jesse Hall, Agt., O., for D. Bians, and Christian Kirk, \$2, each, vol. 35.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)  
Physician and Superintendent.—JOSHUA H. WORTHINGTON.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELIUS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

#### WEST-TOWN BOARDING SCHOOL.

An ASSISTANT TEACHER is wanted in the Girls' Mathematical School. Apply to Dabre Knight, Superintendent, at the School, to Charles J. Allen, Treasurer, No. 304 Arch Street, Elizabeth Peirson, No. 448 North Fifth Street, Phila., or Abigail W. Hall, Warren Tavern Post Office, Chester Co., Pa.

#### NOTICE.

The Annual Meeting of the Institute for Colored Youth will be held at the Committee room on Arch St., on Third day afternoon the 27th inst., at three o'clock. M. C. CORE, Secretary.

Fifth month, 1862.

From the Am. Jour. of Science and Arts.

Ascent of Monte Rosa in Switzerland.

September 4th 1861. By *Kinsley Twining*.  
(Extract from a private letter furnished by request to the Editors of this Journal.)

But you are wondering, I presume, how we, who were lately on the other side of the mountains, have come into Italy. Our last was from Visp, where we were waiting for the cooler hours of the afternoon, and expecting then to go to St. Niklaus and thence to Zermatt. We carried out our plan successfully, and reached the inn on the Riffelberg, Tuesday afternoon about 3 P. M. On the way we were joined by a young American from Boston who has travelled very largely. He had a desire equally strong with my own of climbing that terror of the Alps, Monte Rosa. Several ascents had been made this summer before we arrived. At Zermatt we saw three London young men who had made the attempt and gave it up only eight hundred or one thousand feet short of the summit, and we thought, after looking them over pretty carefully, that we were good for one thousand feet more than they. At the inn on the Riffelberg we met a young man who had achieved the ascent, and who told us so much about it that we determined to make the attempt the very next day if the weather should permit. We were fortunate in getting three of the very best Zermatt guides, and went to rest with our arrangements made and waiting to see what solution of the problem of the kies the morning would give.

Without describing what took place in those hours of delay, I still wish to interrupt my narrative at this point with an episode about Monte Rosa. The great Italian mountain, in the estimate of most persons, is Mont Blanc of course. But Lord Byron never saw Monte Rosa, and though it is only a few feet lower than its great rival of Chamouni it never had any hymn sung in its praise all a few years ago. Indeed it had never been ascended to the very summit until the year 1855. I have read in some of the books on Monte Rosa that when De Saussure, that intrepid explorer of the Alps, was at Zermatt, he was unable to persuade the guide to ascend the last two peaks of his mountain and was compelled to abandon the attempt. The way up was at last found, (as I think has been true in the case of nearly all the more difficult Alpine summits,) not by a guide, but by a company of English travellers. I say the

way was found by them, but this is not quite correct: for many persons before them had stood at the bottom of the Zumstein Spitze, eight hundred feet below the summit, and seen a way up which they had not the courage to attempt; and after having myself passed up that tremendous pathway of ice, I am perfectly convinced that, were the way untrod, and could not the traveller be assured by knowing that others had found it practicable, he would turn away content at having surveyed the steps which lead to the inaccessible summit. This at least was the fate of every one who went alone to that spot and attempted to get higher,—and the Hoehste Spitze, as it is called, was never made until six or seven persons, Englishmen and their guides, went to work together, and (tied together with a rope so that if one fell the others could save him,) pushed along slowly and bravely to the very top. There they saw a grander view than Mont Blanc affords; and, though none of the difficulties of the ascent have been removed, a number of persons have followed them, each succeeding year, to the same grand height.

Murray, in comparing this with Mont Blanc, says there is no difficulty in the latter, and, comparing it with the ascent of Rigi—a mountain as difficult as Mount Washington—all the latter a pleasant prospect. It may be so in the comparison, (and I think it is) but in fact I can say, after walking up it, that to go up Rigi, even, is quite a trying thing in a hot day. But, difficult as Monte Rosa is, all who have made the ascent have agreed that the world has no other point of view to equal it. I will not now describe the scene which there opens to the eye, but merely say—that more than one Englishman has said to me after having ascended both Mont Blanc and Monte Rosa—"there is nothing to be seen from Mont Rosa and it is foolish to make the ascent when Monte Rosa is practicable."

To return from this digression: we were to start at 3 A. M. if the morning promised good weather. But at three the skies were doubtful, and we did not get off till a quarter of five. An Englishman who had himself made the ascent, walked with us to the Gornier glacier to enjoy the sunrise over Monte Rosa and the Lys Kamn,—which was indeed indescribably beautiful. The soft tint of morning light upon the spotless snow and lay there till brightened into the splendor of day. Behind us, at the end of the valley which contains the Gornier glacier, and closing the view in that direction, rose the colossal snow pyramid of Monte Cervino, so steep that no snow adheres to its sides. Its inaccessible summit, four thousand feet above the snow from which it seems to rise, and nearly fifteen thousand feet above the sea, caught also the first rays of morning and stood up in its many-colored magnificence, the only remnant among its snowy sisters of a world not covered with the glacier. One hour and ten minutes from the hotel brought us to the ice of the Gornier glacier; forty minutes more took us across to the moraine on the other side, where the guides laid away a bottle of wine for the descent, and permitted us to take a drink of cold water. One hour more, up an icy hill about as steep as the lawn in front of the Hill-

house place, with deep crevasses opening on every side, brought us to our breakfast ground—a mass of broken rock, rising out of the glacier, and named "Auf der Platte." Here the guides brought out their stores of hard boiled eggs, bread, cheese, meat and wine. When these were eaten, or rather when as much was done in that direction as Kronig (the Grand Mogul of Monte Rosa) thought fit, the bags were shut, we were placed in line, and the rope (that signal that the time for hard work had come) was got out and all hands tied together in a line. King Kronig went first with his ice axe, to cut steps and hold on with the beak on the back of the axe; I next, three feet behind him; next Anton Rytz, a famous guide, with his face in a mask of checked cotton, who shouted "vorwärts!" whenever Kronig cried "courage;" next came my friend —, and last of all Franz Blatter, who sang "Ranzdes vaches" all the way up, and who, if not strong enough to lift Monte Rosa itself, was abundantly able to carry any ordinary man to the top of it. Thus arranged we soon began to climb up the glacier, already quite steep, (about 12°)—up, up, and ever up, and ever up, and ever slowly and looking sharp where we stepped. First the surface was much like any ice that has been snowed upon and frozen again. Then we came into loose snow, three or four inches deep, which in its nature was a sort of compromise between hail and crystals. The path would round from one ascent to another like a great serpent trailing between rounded hills of snow; what at one moment seemed like the crest of the ascent soon turned out the base of another, and where we discovered a level plain we were not permitted to go.

At first we walked a half hour together and then stopped for breath; but before long Kronig complained that we stopped every fifteen minutes; and after a while he declared that if we had our own way it would be fifteen minutes walking and fifteen minutes on our backs on the snow—and then it would be all up to the Hoehste Spitze. In the midst of these dismal forebodings I heard a heavy fall and the call of the guides behind, "at-tow-ah!" I looked around. Blatter was rushing furiously down hill—for what, did not appear. But I soon saw that — had fallen down exhausted and let his alpenstock go where he himself would have gone had not the strong arms of Tony Rytz been on him, and a good twist of the rope around him. His face was pale, his lips blue, and Kronig whispered to me in German, that it was impossible for him to reach the summit. However he rallied and went on very well. After four hours of such painful drudgery we reached the foot of the Signal Kupps, where the guides took off their knapsacks—all hands had some new refreshment for the last great labour—the rope was doubled around us—and then Kronig set out ahead, cutting zig-zags in the fearful dome of ice we had to climb. In the earlier part of the morning I had looked around a good deal on the scenery; but as we went higher and the labour became greater, I could not afford to throw away strength enough to look around; and now in this spot my horizon was restricted to the three feet square which lay

under my eyes. After a long time of zigzagging up and back, around a dome of ice so steep that it would be impossible to stand on it anywhere without having places cut for the feet, we surmounted the Signal Kuppe dome, and stood at the base of the peak of terror—the Zumstein—where, even now, fully one-half of the few who come to it turn back. Here we looked back upon the ice wall we had edged around, step by step, putting our toes in holes cut in the ice, and saw that though it was at an angle of nearly forty-five degrees it was nothing in comparison to the eight hundred feet which remained. There were still two peaks above us which rose like crests one behind the other and in the same line—sharp, like a hatchet, and accessible only over what may be called the *blade of ice* which formed the ridge. It is a fact that the path here was a scant foot in width,—on the right was an abrupt precipice three or four thousand feet in depth,—on the left an almost equally steep declivity. Up this comb of ice König cut steps and shouted "courage" with striding drum-like voice, while Blatter, every few minutes, sang "Ranz des vaches" for our amusement. The excitement of such an ascent and of the scene around and before was so great that I felt no fatigue, and marched up as easily as if it were over a stairway. After proceeding thus some twenty minutes, I learned by accident the meaning of something which had been unintelligible to me in descriptions I had heard of this part of the ascent. It happened that, in striking my alpenstock into the ice for a good hold, it seemed once to go through; and when I drew it up to see what was the matter, there was a little round hole punched through the ice under my feet, through which I could look down several thousand feet along the face of a greenish-blue icy precipice. If I did not comprehend at the moment the full meaning of this observation, I did an instant later, when I came upon a larger hole through which I could see at leisure how the mountain was constructed, and in particular what sort of support our path had. The case, as I understand it, is that this ice has filled in the hollow between one peak and the other, and while it is banked out in a steep declivity toward the north, on the south it is built up straight above the precipitous rocks, and even overhangs them, as is often the case in a drift of snow. Hence it happens that the only place possible for an ascent is the icy path overhanging the tremendous gulf I have described. We went up without any slip against a boisterous wind, and after a hard struggle with the rocks reached the bottom of the Höchste Spitze. On reaching the summit of the Zumstein we rested on the warm side of the rocks, then worked our way down a hard descent of fifty feet, and there found ourselves at the bottom of the Höchste Spitze. It is more steep than the Zumstein, but not as dangerous; for the path lies back two or three feet from the edge of the snow and ice. When this crest was surmounted we stood on the Höchste Spitze, but not on its highest point. These mountains are a kind of slate which breaks up easily into large and small blocks; and where the summit is a thin blade of stone, like Monte Rosa, it is not one piece of rock, but more like a wall loosely put together and broken down. I fancy that once this whole peak was one narrow wall of rock, eight or ten rods long, running east and west, and highest toward the east. The action of frost and weather and other natural forces broke it up into blocks, and in the process of time cut a breach through the middle, leaving it as we found it, a double or forked peak with the shorter one first, or toward the west.

(To be continued.)

### Guesses at Truth.

(Concluded from page 215.)

What a proof it is that the carnal heart is enmity, to find that almost all our prejudices are against others! so much so indeed, that this has become an integral part of the word: whatever is to a man's prejudice, is to his hurt. Nay, I have sometimes found it hard to convince a person, that it is possible to have a prejudice in favour of another. It is only christian love, that can believe all things, and hope all things, even of our fellow-creatures.

But is there not a strange contradiction here? The carnal heart, which thinks so basely of its neighbours, thinks haughtily of itself: while the Christian, who knows and feels the evil of his own nature, can yet look for good in his neighbours. How is this to be solved?

Why, it is only when blinded by self-love, that we can think proudly of our nature. Take away that blind; and in our judgments of others we are quicksighted enough to see there is very little in that nature to rely on. Whereas, the Christian can hope all things; because he grounds his hope, not on man, but on God, and trusts that the same power which has wrought good in him, will also work good in his neighbour.

Children always turn toward the light. O that grown-up people in this world become like little children.

Not a few writers seem to look upon their predecessors as Egyptians, whom they have full licence to spoil of their jewels; a permission, by the by, which, the Jews must have thought, was not confined to a particular occasion and people, but went along with them whithersoever they went, and has never quite expired. And as the jewels taken from the Egyptians were employed in making the golden calf, which the Israelites worshipped as their god, in like manner has it sometimes happened, that the poetical plagiary has been so dazzled by his own patchwork, as to forget whereof it was made, and to set it up as an idol in the temple of his self-love.

When we read that the Israelites, at the sight of the calf, which they had seen molten in the wilderness, and the materials for which they had themselves supplied, cried out, *These are they gods, O Israel, they brought thee up out of the land of Egypt*—we can hardly repress our indignation at such reckless folly. Yet how many are there fully entitled to wear the same triple cap! I do not mean misers merely: these are not the sole idolaters of the golden calf nowadays. All who worship means, of whatsoever kind, material or intellectual,—all, for instance, who think that it was wholly by the strength and discipline of our armies, and by the skill of our general, that we overthrew the imperial despotism of France,—all who forget that it is still the Lord of Hosts, who breaketh the bow, and knapeth the spear in sunder, and burneth the chariots in the fire,—all who take no account of that moral power, without which intellectual ability dwindles into petty cunning, and the mightiest armies, as history has often shown, become like those armed figures in romance, which look formidable at a distance, but which fall to pieces at a blow, and display their hollowness,—all who conceive that the wellbeing of a people depends upon its wealth,—all the doaters on steam-engines, and cotton-mills, and spinning-jennies, and railroads, on exports and imports, on commerce and manufactures,—all who dream that mankind may be ennobled and regenerated by being taught

to read,—all these, and millions more, who are besotted by analogous delusions in the lesser circles of society, and who fancy that happiness may be attained by riches, or by luxury, or by fame, or by learning, or by science,—one and all may be numbered among the idolaters of the golden calf: one and all cry to their idol, *Thou art my God! Thou hast brought us out of the Egypt of darkness and misery: thou wilt lead us to the Canaan of light and joy.* Verily, I would as soon fall down before the golden calf itself, as worship thy great idol of the day, the great public instructor as it is called, the newspaper press. The calf could not even low a lie: and only when the words of the wise are written upon it, can paper be worth more than gold.

And how is it with those who flatter themselves that their own good deeds have brought them out of Egypt? those good deeds which God has commanded them to wrest as spoils from the land of sin. How is it with those who blindly trust that their good deeds will go before them, and lead them to heaven? Are they not also to be reckoned among the worshippers of the golden calf? of an idol, which their own hands have wrought and set up; of an idol, the very materials of which would never have been theirs, except through God's command, and the strength his command brings with it. Surely, whether it be for the past, or the future, we need a better leader than any we can either manufacture or manufacture for ourselves.

I have often thought that the beautiful passage, in which our Saviour compares himself to a hen gathering her chickens under her wings,—and the sublime one in Deuteronomy, where Jehovah's care and guardianship of the Jewish nation is likened to an eagle stirring up her nest, fluttering over her young, spreading abroad her wings, bearing them on her wings, and making them ride on the high places of the earth,—may be regarded as symbolical of the peculiar character of the two dispensations. The earlier was the manifestation of the power of God, and shows him forth in his kingly majesty: the latter is the revelation of the love of God, full of all gentleness, and household tenderness, and more than fatherly or motherly kindness.

It has been deemed a great paradox in christianity, that it makes humility the avenue to glory, yet what other avenue is there to wisdom? or even to knowledge? Would you pick up precious truths you must bend down and look for them. Every-where the pearl of great price lies bedded in a shell which has no form or comeliness.

When will talkers refrain from evil-speaking? When listeners refrain from evil-hearing. At present there are many so credulous of evil, they will receive suspicious and impressions against persons whom they don't know, from a person whom they do know . . . in authority to be good for nothing.

We look to our last sickness for repentance, unmindful that it is during a recovery men repent, not during a sickness. For sickness, by the time we feel it to be such, has its own trials, its own selflessness: and to bear the one, and overcome the other, is at such a season occupation more than enough for any who have not been trained to it by previous discipline and practice.

The same may be said of old age,—perhaps with still more justice, since old age has no beginning.

Never put much confidence in such as put no

confidence in others. A man prone to suspect evil is mostly looking in his neighbour for what he sees in himself. As to the pure all things are pure, even so to the impure all things are impure.

How deeply rooted most unbelief be in our hearts, when we are surprised to find our prayers answered! Instead of feeling sure that they will be so, if they are only offered up in faith, and are in accord with the will of God.

**The Workmanship of Ivory.**—None of our manufacturers have yet reached the co-ordinate skill of the Chinese artists in the workmanship of ivory, chiefly remarkable in their concentric balls, their chess pieces and models. Yet the adaptation to useful purposes of this valuable substance is fully understood by those who do not undertake to rival the exquisite minuteness of Eastern art. The manufacturers of surgical instruments are in the habit of rendering ivory flexible for use as tubes, probes, &c., by acting on the well-known fact, that when bones are subjected to the action of hydrochloric acid, the phosphate of lime, which forms one of their component parts, is extracted, and thus bones retain their original form, and acquire great flexibility. After giving the pieces of ivory their required form and polish they are steeped in acid, either pure or diluted, until they become supple and elastic, and of a slightly yellow colour. In the course of drying, the ivory returns to its original hardness, but its flexibility can be easily restored by surrounding it with linen. It is now ascertained that the decay of articles in ivory can be effectually checked, even when its progress has advanced so far as to cause the specimens to crumble away under the hands. Some of the works in ivory forwarded by Layard, from Nineveh, were found on their arrival in England, to be in a state of rapid decomposition. Professor Owen was consulted on the subject, and he suggested a remedy, which on trial, proved to be in the highest degree successful. Concluding that the decay was owing to the loss of gelatine in the ivory, he recommended that the articles should be boiled in a solution of gelatine; thus treated, they became firm and solid.

What a disposition there appears to be in the female world to vie with one another, not only in the extremity, but the immodesty of the fashion.

#### Friends' Asylum Report.

(Continued from page 505.)

**Occupation and Recreation.**—We have continued to make use of the various means for affording employment and entertainment to our patients, which have been already so fully described in the reports of the Institution; and if these reports were only addressed to the managers, it would be superfluous at present, to say anything on the subject. But as they are also intended for the information of some whose attention may never before have been called to the subject, it seems necessary to give a brief statement of the means employed for this purpose. There is nothing better calculated to answer all the ends for which occupation is designed, especially for that class of our patients who have been accustomed to reside in the country, than moderate manual labour in the cultivation of the farm and garden. The value of out-door occupation consists as much in the change and variety it gives from the monotony of in-door Asylum life, and the mental recreation thus afforded, as in the mere physical effects of muscular exercise. Without regard to the interest that

may be excited in the mind of the patient by the work he performs, there is danger that the latter, by becoming toilsome, may even prove injurious. Care is taken to avoid such a consequence by endeavouring to interest the patient in his employment, and by limiting the time spent in labour to two or three hours in the early part of each day. In the appropriate seasons the preparation of the soil, the planting and gathering of crops, and at other times the care of the grounds, the opening of new walks, and the repairing and keeping in order of those already made, afford an endless variety of employment which can scarcely fail to interest and benefit the mind, as well as conduce to the health and strength of the body. For those who have been unaccustomed to agricultural labour, other means of furnishing physical exercise, combined with healthy mental excitement, are resorted to. Such patients spend a portion of each day in the open air, either in walking on the premises or in the vicinity of the Asylum, or are engaged in the games of quoits, cricket, or foot-ball. The latter have only been in use during the last two years, and have proved a highly valuable addition to the means formerly employed for affording exercise to this class of our patients.

The importance of providing suitable employment for filling up agreeably the portion of time necessarily passed within doors, especially during the winter season, has not been lost sight of. The female patients, with the assistance of the matrons, are easily furnished with employment for the needle. Besides a large amount of plain sewing that has been done, they have spent a portion of their time in making a number of useful fancy articles, which have been placed in a neat case provided for the purpose, in one of the parlours or sitting rooms, where they are exposed for sale. It is intended to apply the proceeds of such sales, when they amount to a sufficient sum, to the purchase of articles calculated to give an air of increased comfort and cheerfulness to the apartment. Books, newspapers, periodicals, drawing materials, games, puzzles, &c., are freely provided for the use of all classes of patients. A beautiful collection of stuffed birds, in a handsome case, and other objects calculated to attract their attention, and excite their interest, such as engravings on the wall, and plants and flowers placed where they can have free access to them, have been provided during the past year, in addition to those previously in use, and have been productive of manifest benefit. The patients are encouraged to follow their own taste and inclinations in their in-door employments. Some of them became quite expert at a particular game, such as chess or backgammon; one patient draws and paints, and has produced a number of pictures, both in oil and water colors, which have been framed and hung on the walls. Another employed himself very successfully during a portion of the summer, in preparing the skeletons of leaves and other portions of plants; and another, who is so debilitated as to be almost incapable of any other employment, has become very proficient in the game of battledore.

By the above described means we endeavour to furnish each patient with occupation suited to his capacity, and thus to give them the best opportunity for the full and free exercise of their remaining mental and physical energies. By such exercise their health of body and mind is best promoted, and they are permitted to enjoy the satisfaction arising from a consciousness that their existence is not entirely without an aim or object, and are thus rendered more contented and comfortable than they could be made under any other circumstances.

The lectures and exhibitions for affording mental occupation and entertainment during the long evenings of winter, have been continued as in former years. The improvement in this department, referred to in last year's report, has been in use during the winter and has added greatly to the beauty and interest of the exhibitions. It consists of a reservoir for oxygen, of the capacity of thirty gallons, situated in the apothecary's shop, adjoining the lecture room, and connected with the pipes supplying the house with water. When the apparatus is in use, the water from these pipes is turned into the reservoir, and displaces the gas with the pressure of a perpendicular column of water, eighteen feet in height, and forces it through a flexible gutta-percha tube to the lantern placed in the lecture room, at a distance of twenty feet. The gas passes to each lantern used, for producing the dissolving views by means of a stop-cock, so contrived as to furnish the light to one lantern while shutting it off from the other, in such a way that a blended picture, consisting of two distinct views, may be thrown upon the wall at the same time, or either one may be gradually and almost imperceptibly changed into the other, at pleasure. The stock of photographic views has been largely increased during the year, and now affords the means of producing exact representations of many remarkable localities, and objects of interest in our own and foreign countries. The chemical apparatus is also increased from time to time by the addition of new articles, and the lectures delivered on an evening of each week, during the winter season, are listened to, and the experiments witnessed with much interest, by a large proportion of the patients.

**Library and Reading room.**—The library has been resorted to daily, except in stormy weather, at different hours of the day, by different classes of the patients of both sexes. Some additions have been made to the cabinet of Natural History, and a large glass case has been provided, four by eight feet in length, and two feet in height, and filled with a collection of mosses and ferns, and a number of the rare and beautiful leaf plants recently introduced, which, by their rich foliage and luxuriant growth have imparted an additional cheerfulness to the place, and have been highly appreciated by the patients. The aquarium has also been kept up during the winter, and being well stocked with fish, and a variety of aquatic plants and animals, has afforded much pleasure and satisfaction.

**Farm, Garden and Grounds.**—The advantages afforded by the location of the Asylum on its farm of sixty-two acres, have been fully manifested during the year, in giving healthy and interesting employment to the patients, not only in the labour of the farm and garden, but also in the improvement and decoration of the grounds set apart for the use of the patients in their daily walking exercise. The physical exertion required in the light labour performed by some of them, is not more beneficial in its effects on the general bodily health, than the interest excited by the various objects constantly presented to their notice while they are thus engaged, is adapted to promote their mental welfare. The land, now universally established as an indispensable portion of every residence for the insane, is not valuable, as of yore, merely for the facilities it affords for labour and exercise, but is equally so for the succession of interesting and agreeable objects which it may be the means of furnishing for the mental entertainment of the insane. The benefit to be derived from it, will consequently depend, in some measure, on the care with which it is cultivated, and the neatness and good order in

which it is kept. Its improvement is therefore apart from any pecuniary advantages, a legitimate object of asylum management, and has received attention during the past year.

*The Patience and Stillness of Jesus.*—About half an hour before he died, he was raised up in his bed, and said to some friends, "What need have we to centre down in the night season, to feel blessed Jesus, sweet Jesus, heavenly Jesus, to commune with us: for when he comes he puts an end to all ravings and hurries which are in the world, with many trials, tribulations, and afflictions, which rise not out of the dust. But dear friends, Israel's God will not leave his afflicted ones, for he will prosper his work which he hath begun, and ye shall see it as you are faithful; and here you shall be made witnesses that one hour in the presence of the Lord is better than a thousand elsewhere. For in the world are trouble, strife, animosities, and contentions, as you may see; but all this will come to an end, as we keep in the patience and stillness of Jesus; for that will conduct us safely to our desired rest, where all sorrows will cease, and tears be wiped away; and that you may be preserved in true faithfulness, is the desire of my soul."—From the dying sayings of Richard Ransome.—*Pity Promoted.*

#### A Difficulty in David's History Explained.

Here, too, we had an opportunity of witnessing, more than once, incidents of a kind that forcibly reminded us of scenes in the scripture history of David, by which readers ignorant of the country in which they happened, may have been often not a little perplexed. When David was hiding in the wilderness of Ziph, an opportunity presented itself of slaying King Saul as he lay asleep in the night, unconscious of any danger being near. Too generous to avail himself of the advantage that had come so unexpectedly and so temptingly in his way, David, nevertheless, resolved to show how completely his persecutor had been in his power. Stealing noiselessly into Saul's camp, accompanied by a single follower, and passing unobserved through the midst of the drowsy guards, David "took the spear and the cruse of water from Saul's bolster; and they got them away, and no man saw it, nor knew it, neither awaked: for they were all asleep." (1 Sam. xxvi. 12.) Having performed this daring exploit, he and his attendant, Abishai, "went over to the other side, and stood on the top of an hill afar off, a great space being between them." Having got to this safe distance from his reluctant enemy, David is represented in the sacred history as proceeding to address Abner, the leader of Saul's host, and to taunt him with his unsoldier-like want of vigilance in leaving his royal master exposed to the hazard of being slain in the very midst of his own camp.

What is apt to appear strange in this narrative is the fact, that these hostile parties should have been near enough to carry on the conversation which the narrative describes, and yet that all the while the one should have been entirely beyond the reach of the other. That all this, however, was both possible and easy, was verified in our presence. As we were riding cautiously along the face of the hill, our attention was suddenly arrested by the voice of a shepherd, who was evidently calling to some one whom we could not see but whose answer was distinctly heard. The dialogue went on. Another and another sentence was slowly and sonorously uttered by the shepherd near us, and as often the response was distinctly given. At length, guided by the sound we decried far up the confronting hill, the source of the second voice

in the person of another shepherd; and learned from our Arab attendants that they were talking to each other about their flocks. Between these two men was a deep crevasse formed by the valley of the Kedron, walled in by lofty precipices, which no human foot could scale. It would probably have taken a full hour for one, even as fleet and as strong-winded as an Asahel, to pass from the standing-place of the one speaker to that of the other; and yet they were exchanging words with perfect ease. The mystery of the dramatic scene in the wilderness of Ziph was at an end; and we were reminded at the same time of an important truth, that in dealing with the sacred Scriptures, ignorance often makes difficulties which a larger knowledge and a deeper intelligence would at once remove. As we moved along the hill-face, dialogues of the same kind once and again attracted our notice showing plainly that these trans-valleine colloquies are of common occurrence. The facility of hearing was no doubt increased by the extreme stillness of the air, and by the voice being at once confined and thrown back by the steep sides of the hills.—*Buchanan's Clerical Furlough.*

*The Fruit of Carnal Reasoning, and Disobedience to Heavenly Convictions; with an Exhortation to Parents to be Faithful in Restraint.*—Through the teachings of the holy Spirit, I soon became sensible of the influence of heavenly love on my heart; and had I wisely kept near the all-sufficient gift of grace, I might, in early years, have magnified the Lord's power, by becoming a preacher of righteousness in life and conversation. But, for want of dwelling with this blessed gift, and maintaining a constant watch, the enemy of all good gained ascendancy over my convinced judgment, and I was miserably beguiled into an apprehension, that I might indulge myself for a few years in the gratification of some worldly pleasures, and afterwards submit to the cross and become a religious character. This carnal reasoning brought death and darkness over my awakened understanding, and I much lost the sense of those "endearing impressions, which had been mercifully experienced in the day of early visitation. But thanks be to a gracious God, who kept me, in this season of revolt from all gross evil, and often followed with close conviction when indulging the vain mind, in adorning the frail body with apparel inconsistent with the Simplicity of the Truth. A fondness for dress and music was one of my greatest foibles; and I am bound in gratitude to acknowledge, that had it not been for parental care, advice, and prudent restraint, I might have gone great lengths in these gratifications. Then, in the love of the gospel, I would most earnestly and most affectionately recommend all religious parents to be faithful in the discharge of their important duties, remembering they are delegated as care-takers over a very important trust: and happy will it be for those parents, who, in the day of righteous inquisition, may stand acquitted in the Divine sight, having done all they could to preserve their off-pring in true simplicity, and in the fear of the Lord."—*Ann Crockett, F. L., vol. 7th, p. 162.*

From "The British Friend."

#### Early Friends and What They Were.

(Continued from page 293.)

The Society having now incorporated the use of the plain language into its system as one of the testimonies Friends had to bear, we arrive at a period when it began to be a matter of regular inquiry, whether the members of it were faithful in doing so; and thus in 1699 we find George Fox issuing an epistle, urging that, "in all the Monthly

Meetings there be an inquiry whether any that profess Truth are out of the pure language, *that to every one*, whether they keep up God and Christ's language that the holy prophets used." During the same year he reiterated this advice by another epistle. The subject, as it was evidently one of much anxiety, and that he viewed it as a question of truthful allegiance to the Divine Being. It was no low standard that he took—all conventionality was laid aside as truckling to the worldly spirit, and at variance with the heavenly; and resting on this high ground, that all men and women should in all things be as like as might be to the heavenly pattern, he deemed it his duty to urge on Monthly Meetings a regular inquiry as to the faithfulness of Friends in this respect; and looking carefully at this matter, as I have often done, and listening attentively to the *pros* and *cons*, as has often been my portion—while mourning greatly the unfaithfulness prevailing in respect of it—I am free to confess that my early judgment, after identifying myself with the Society of Friends, had only been confirmed, that if the body had kept faithfully to the "plain language," its early testimony, though it would have sorely tested many up and down, nevertheless the Society itself would have been sounder at the core, more consistent in its profession and practice, and numerically greater than it now is, whilst its influence would have been extended beyond its present, many fold.

From Evenings at the Microscope.

#### Insects: Their Feet.

(Continued from page 302.)

A still better example of a sucking foot is that of the *Dytiscus marginalis*. It is the great flat oval beetle, which is fond of coming up to the surface of ponds, and hanging there by the tail with its pair of hind legs stuck out on each side at right angles; the redoubtable monster which little boys who bathe hold in such salutary awe under the name of Toe-biter. We have turned the tables upon the warrior, and have bitten his toe—off, and here it is. This is the tarsus of one of the fore limbs.

The peculiarity that first strikes us is that the first three joints are as it were fused into one, and dilated so as to make a large roundish plate. The under surface of this broad plate is covered with a remarkable array of sucking disks, of which one is very large, occupying about a fourth part of the whole area. It is circular, and its face is strongly marked with numerous fibres radiating from the centre. Near this you perceive two others of similar form and structure, but not more than one tenth part of its size; one of these, moreover, is smaller than the other. Indeed, the size and number of these organs differ in different individuals of the same species.

The greater number of the suckers are comparatively minute; but they are proportionally multitudinous and crowded. Each consists of a club-shaped shaft, with a circular disk of radiating fibres attached to its end. The whole apparatus constitutes a very effective instrument of adhesion.

There is a somewhat similar dilatation of the first joints of the tarsus, but for a very different object, in the Honey-bee; and it is particularly worthy to be observed, not only for the interesting part which it plays in the economy of the insect, but for the example it affords us of the adaptation of one and the same organ to widely different uses, by a slight modification of its structure.

It is the hind foot of the Bee that we are now to examine. The first joint is, as you see, enlarged into a wide, long, and somewhat ovate form, constituting a flattish plate, slightly convex on both

surfaces. The upper face presents nothing remarkable, but the under side is set with about nine stiff combs, the teeth of which are horny straight spines, set in close array, and arranged in transverse rows across the joint, nearly on a level with its plane, but a little projecting, and so ordered that the tips of one comb slightly overlap the bases of the next. We see them in this example very distinct, because their colour, a clear reddish-brown, contrasts with a multitude of tiny globules of a pale yellow hue, like minute eggs, which are entangled in the combs.

Now these globules serve to illustrate the object of this apparatus. They are grains of pollen; the dust that is discharged from the anthers of flowers, which being kneaded up with honey forms the food of the infant bees, and is, therefore, collected with great perseverance by those industrious insects; and the way in which they collect it is, by raking or combing it from the anthers, by means of these effective instruments on their hind feet.

You see that in this specimen the combs are loaded with the grains, which lie thickly in the furrows between one comb and another. But how do they discharge their gatherings? Do they return to the hive, as soon as they have accumulated a quantity such as this, which one would suppose they could gather in two or three scrapes of the foot? No; they carry a pair of panniers, or collecting baskets, which they gradually fill from the combs, and then return to deposit the results of their collecting.

One of these baskets I can show you; and, indeed, we should be unpardonable to overlook it, for it is the companion structure to the former. I make the stage forceps to revolve on its axis, and thus bring into focus the joint (*tibia*) immediately above that of the combs, and so that we shall look at its opposite surface; that is, the outer. We notice at once two or three peculiarities, which distinguish the joint in this instance from other parts of the same limb, and from the corresponding part in the same limb of other insects.

First, the surface is decidedly concave, whereas it is ordinarily convex. Secondly, this concave surface is smooth and polished, (except that it is covered with a minute network of crossed lines,) not a single hair, even the most minute, can be discerned in any part; whereas the corresponding surface of the next joints, both above and below, is studded with fine hairs, as is the exterior of insects generally. Thirdly, the edges of this hollowed basin are bevelled with long, slender, acute spines, which pursue the same curve as the bottom and sides, expanding widely, and arching upward.

Here, then, we have a capital collecting-basket. Its concavity of course fits it to contain the pollen. Then its freedom from hairs is important: hairs would get out of place in the concavity. Thirdly, the marginal spines greatly increase the capacity of the vessel to receive the load, on the principle of the sloping stakes which the farmer plants along the sides of his wagon when he is going to carry a load of hay or corn.

But, you ask, how can the bee manage to transfer the pollen from the combs to the basket? Can she bend up the tarsus to the tibia? or, if she can, surely she could only reach the inner, not the outer surface of the latter. How is this managed?

A very shrewd question. Truth to say, the basket you have been looking at never received a single grain from the combs of the joint below it. But the bee has a pair of baskets and a pair of comb-joints. It is the right set of combs that fills the left basket, and vice versa. She can easily cross her hind-legs, and thus bring the tarsus of one into contact with the tibia of the other; and if

you will pay a moment's more attention to the matter, you will discover some further points of interest in this beautiful series of contrivances still. If you look at this living bee, you notice that, from the position of the joints, when the insect would bring one hind-foot across to the other, the under surface of the tarsus would naturally scrape the edge of the opposite tibia in a direction from the bases of the combs towards their tips; and, further, that the edge of the tibia so scraped would be the *hinder* edge, as the leg is ordinarily carried in the act of walking.

Now, if you take another glance at the basket-joint in the forceps of the microscope, you will see—what, perhaps, you have already noticed—that the marginal spines have not exactly the same curvature on the two opposite edges, but that those of the one edge are nearly straight, or at most but slightly bowed, whereas those of the opposite edge are strongly curved, the arc in many of them reaching even to a semicircle, so that their points, after performing the outward arch, return to a position perpendicularly over the medial line of the basket.

It is the outer or hinder edge of the joint that carries the comparatively straight spines. These receive the grains from the combs, which, then falling into the basket, are received into the wide concavity formed partly by its bottom and sides, but principally by the arching spines of the opposite edge. Their curving form would have been less suitable than the straighter one to pass through the interstices of the combs, because it would be much more difficult to get at their points: while, on the other hand, the straight lines of these would have been far less effective as a receiver for the burden. The thickness of the spines is just that which enables them to pass freely through the interstices of the comb-teeth, and *no more*.

On the whole, this combination of contrivances reads us as instructive a lesson of the wisdom of God displayed in creation as any that we have had brought under our observation.

The end to be attained by all this apparatus is worthy of the wondrous skill displayed in its construction; for it is connected with the feeding of the stock, and whatever diminishes the labour of the individual bee enables a larger number to be supported. But valuable as is the honey-bee to man, there are other important purposes to be accomplished, which are more or less dependent, collaterally, on this series of contrivances.

"In many instances it is only by the bees travelling from flower to flower that the pollen and farina is carried from the male to the female flowers, without which they could not fructify. One species of bee would not be sufficient to fructify all the various sorts of flowers, were the bees of that species ever so numerous; for it requires species of different sizes and different constructions. M. Sprengel found that not only are insects indispensable in fructifying different species of *Lis*, but some of them, as *I. xiphium*, require the agency of the larger humble-bees, which alone are strong enough to force their way beneath the style-flag; and hence, as these insects are not so common as many others, this *Lis* is often barren, or bears imperfect seeds."

The legs and feet of caterpillars are constructed on a very different plan from those of perfect insects, as you may see in this living silkworm. The first three segments of the body, reckoning from the head, are furnished each with a pair of short, curved limbs set close together on the under side. These represent the true legs of the future moth, and show, notwithstanding their shortness, four distinct joints, of which the last is a little pointed

horny claw. The whole limb resembles a short stout hook. Then two segments occur which are quite smooth beneath, and destitute of limbs; and then on the sixth we begin to find another series, which goes on regularly, a pair on each segment, to the eleventh and final one, with the single exception of the tenth segment, which is again deprived of limbs.

But these organs are of a very peculiar character. They have no representatives in the mature insect, but disappear with the larva state, and they are not considered limbs—proper at all, but were accessory developments of the skin to serve a special purpose. They are sometimes called claspers, sometimes false-legs, but more commonly pro-legs.

Each consists of a fleshy wart, which is capable to some extent of being turned inside out, like the finger of a glove. Partly around the blunt and truncate extremity are set two rows of minute hooks, occupying the side next the middle line of the caterpillar in a semicircle along the margin. These hooks arch outward as regards the axis of the pro-leg, though the majority of them point towards the medial line of the body. The double row is somewhat interrupted at its middle point; and just there, in each pro-leg, a clear vesicle or fleshy bladder protrudes from the sole, which may perhaps serve as a very delicate organ of touch, or may exude a viscid secretion helpful to progress on smooth bodies. The hooks seen adapted to catch and hold the fine threads of silk, which most caterpillars spin as a carpet for their steps.

In some cases the circle of hooks is complete, as in this example, which I find in one of the slides of my drawer, marked "Pro-leg of a Caterpillar." It is some large species, probably a Sphinx, for the hooks are very large, of a clear orange-brown hue, and set in a long oval ring—single as to their bases, but double as to their points—completely around the extremity of the foot. These hooks are simply cutaneous, as may be well seen in this prepared specimen,—doubtless mounted in Canada balsam;—for their origins are mere blunt points, set most superficially in the thin skin without any enlargement or appendage bulb.

(To be continued.)

For "The Friend."

#### BIOGRAPHICAL SKETCHES

OF Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

JONATHAN GREAVE.

Jonathan Greave was born in the year 1712, of parents professing the Truth. Of his early life we have no record, but he was exemplary in maturity and for very many years was an elder of Kennet Monthly Meeting, residing in the limits of Centre Preparative Meeting. He appears to have been well esteemed, and to have fulfilled his religious and social duties. As he drew near the close of his life, he bore the pain and weakness which attended his declining health with great patience, manifesting a composed frame of mind and a desire for quiet. A friend who visited him, at this time expressed the hope that when the time of change came, it would be no surprise to him. He readily expressed a similar hope, adding, "I have settled my outward affairs to my mind, and inwardly I see nothing in my way. I desire to be so favoured as to wait patiently till the right time comes, and then to pass away quietly."

His request was granted, and he departed without sigh or groan; his memorial says, "we believe in peace with God and unity with faithful Friends." His death took place Sixth month 3rd, 1774, he being about 62 years old.

HANNAH HARRISON, a very aged minister belonging to Philadelphia Monthly Meeting for the Northern District, deceased Seventh month 20th, 1774. She was a daughter of Isaac Norris, and a grand-daughter of that noted minister, Thomas Lloyd. Her labours had been mostly confined to meetings about home.

GEORGE MASON, a minister of the gospel of New Garden, Chester County, much esteemed in his day, deceased Tenth month 24th, 1774.

## JOHN VAIL.

John Vail was born in West Chester County in the province of New York, about the year 1685. Whilst young in years, he was visited by Divine Grace, and submitting thereto, he was enabled to take up the cross, became sober and consistent in his life and conversation, and grew in religious experience. He removed whilst still young to Woodbridge in New Jersey, where he married.

As he continued in faithful obedience to the Lord's requirements, his usefulness in the church increased, and at last a gift in the ministry of the gospel was committed to him. Dwelling in humility and watchfulness, he increased in his gift, and his ministry tended to the edification of the church. Waiting for the proper putting forth and preparation, he was qualified to reprove, exhort, strengthen and encourage his hearers to walk in the way of Truth and uprightness. Sweetly he was led at times to comfort those who mourned for the pride and abominations of the times. He often felt called upon to mention the plainness and simplicity which characterized our forefathers, and to point out how sorrowfully deficient many of his day were in those respects. These were slighting the good examples of their ancestors, by indulging in things those worthies bore a faithful testimony against. He was diligent in the attendance of religious meetings, even to old age, and was often concerned to incite Friends to this duty, not as formalists, but as those who saw the necessity of a reverent gathering to wait for a proper qualification for worshipping the Lord Almighty, the giver of every good gift. He was one of the poor of this world, ever diligent in labouring for the subsistence of himself and family.

On his death bed he manifested his resignation, nay, satisfaction in the Lord's will concerning him. Quoting the passage "If our hearts condemn us, God is greater," he added, "but my heart condemns me not, for I have walked in innocency from my youth up." He frequently expressed his readiness to leave the world, and desired his friends not to desire his recovery. His friends say of him, that he walked in righteousness and humility, and that increasing in Divine experience, his lamp shown brighter and brighter to the last. He deceased Eleventh month 29th, 1774, in the 89th year of his age.

## MARY SPEAKMAN.

Mary Griffith, a daughter of John Griffith of Bromly, Radnorshire, Wales, was born in the year 1718. In the year 1734 she came over to Pennsylvania, bringing a good certificate with her, showing that even in her early days she had walked in the Truth. Her residence was within the limits of Concord Monthly Meeting, and by consent at that meeting she was married Fourth month 22nd, 1752, to Micajah Speakman. Her friends say, "she was a woman who from her young years loved the way of Truth, and endeavoured to live agreeably to the dictates thereof in her own heart. By her circumspect walking and steady adherence to the manifestations of light and life inwardly re-

vealed, she became very servicable in the affairs of the church, being careful for the maintenance of the discipline thereof."

In the year 1756 she was appointed an elder, which station she filled to satisfaction, and often was enabled to administer a word of comfort for the feeble-minded and afflicted, with whom she had great sympathy. She was concerned to advise against undue liberties being allowed to children, and carefully watched over their conduct, that they might not be fouled by their conduct to weaken her influence with others. She was remarkable for the solidity and weightiness of her spirit in meetings, in which she was closely united to the faithful labourers, who found her company and inward exercise truly servicable. She was a lover of all honest-hearted Friends, and truly hospitable to them. She was a watchful mother over her children, tender and firm, a loving wife and a good neighbour. She deceased after a short illness, Eleventh month 28th, 1774, in the 57th year of her age, leaving a good report behind her.

## JOHN JONES.

John Jones was born in Merion, near Philadelphia, about the year 1687, of religiously concerned parents, who educated him in conformity with the principles of our religious society. He was early brought under the directing influence of Divine Grace, which made him of a sober, orderly behaviour, and of good report amongst the lovers of the Truth. He settled early in life in Gwynedd, of which meeting he remained a member to the close of his days.

In the Second month, 1718, he was married at Chester, Pennsylvania, to Margaret Hillborn, a religiously minded young widow, who was a valuable minister of the gospel, and for twenty-five years his faithful and loving companion. John was much attached to faithful Friends, and as he walked consistently with his profession, and exercised the gifts bestowed upon him by the Head of the church in honest simplicity, he was much beloved and esteemed by the spiritually discerning. He was very servicable in the church, wise and faithful as an elder, and being blessed with an excellent understanding, his counsel and advice were often of benefit to others. He devoted much time to settling differences amongst his neighbours, and in serving the widow and fatherless. He appears to have been very exemplary in filling up his social, moral and religious duties, and whilst of bodily ability was ever anxious to be with his friends when they met for religious worship. A fall from a horse so injured him, that he was towards the close of life confined at home; yet he bore the pain and privation with patience, thankfully rejoicing that such an accident had not been apportioned him in earlier life. His love to the Truth and the friends of it continued unabated, and he spent much of his time in reading the scriptures and other religious books. As he was of an affable, cheerful disposition, his sick chamber was a pleasant spot to himself, and an agreeable, instructive one to those who visited him.

When the time came for his release from suffering, his sickness was short. During its continuance he expressed great satisfaction in remembering that he had been enabled to live in much love with his family and friends, adding, "The time is near at hand which I have long looked for, and I hope I am ready. As I have been blessed many ways, I shall live without excuse." Before he could finish the counsel he wished to leave with his children, his speech failed, and so taking an affectionate parting with them, he departed this life Twelfth month 30th, 1774, in the 87th year of his age.

From the Annual of Scientific Discovery, 1902.  
Insect and Grain-Eating Birds.

Tourists in Europe will, if they are but commonly observant, notice one peculiar feature in continental scenery, and especially in the scenery of France. The landscapes may be beautiful and diversified by every possible charm, but in one particular respect they will be found almost utterly devoid of life. Eye and ear are struck to gether by the absence of familiar sights and familiar sounds. There is no chirping in the hedgerows, no twittering among the trees, no congregation of sparrows in the roads or linnets in the fields. It is useless to look about for the rarer species of birds, as even the commonest sorts are absent, and the traveller is perplexed to think what can have become of the little creatures which he is accustomed to associate with rural scenes. The truth is very soon told. The French eat them. They pursue them unremittently for the sake of their morsels of flesh, and a small bird seen in a garden would be chased as eagerly as a rabbit in a hare. Traps are systematically set for them on every entrance, and snares on every hedge. There is an idea, too, that birds destroy fruit, and economists will not submit to any such speculation; but the first is the principal motive, combined, perhaps with an instinctive passion for the chase, which in France admits of little better gratification.

Little birds, however, are not sent into the world for nothing. Under the mission of Providence they, like all other creatures, contribute their part towards the harmony of creation, and when that contribution is intercepted, the effects become visible in a derangement of balance. Birds devour insects, worms, and grubs. Where there are no birds, grubs, worms, and insects multiply to a prodigious extent, and where this unnatural multiplication takes place, the crops suffer.

During the past year, (1801,) the harvest of France has given an unusually poor return, and this deficiency is attributed in a great degree to the ravages of certain insects, which it is the function of certain birds to destroy. The subject has even attracted the attention of the French government, and, at the instance of the minister of agriculture, a commission was appointed to enquire into the matter, and report what legislation is expedient.

From a preliminary report emanating from this committee, it appears that their inquiries have been conducted with an elaborated accuracy characteristic of French legislation, and that the most experienced naturalists in France have lent the aid of their experience in the investigations. Insects and birds have been carefully classed according to their several species; their habits of feeding have been closely observed, and the results ascertained and computed. It has been concluded that by no agency save that of little birds can the ravages of insects be kept down. There are some birds which live exclusively upon insects and grubs, and the quantity which they destroy is enormous. There are others which live partly on grubs, and partly on grain, doing some damage, but providing an abundant compensation.

A third class, the birds of prey, are exempted from the category of benefactors, and are pronounced—to precipitately, we think—to be noxious, inasmuch as they live mostly upon the smaller birds.

If the arrangements of nature were left undisturbed, the result would be a wholesome equilibrium of destruction. The birds would kill so many insects, that the insects could not kill so many plants. One class is a match for the other. A certain insect was found to lay 2000 eggs, but a single tomtit was found to eat 2000 eggs a year.

A swallow devours about 543 insects a day, eggs and all. A sparrow's nest in the city of Paris was found to contain 700 pairs of the upper wings of cockchafers, though of course, in such a place food of other kinds was procurable in abundance. It will easily be seen, therefore, what an excess of insect life is produced when a counterpoise like this is withdrawn; and the statistics collected show clearly to what an extent the balance of nature has been disturbed. Thus the value of the wheat destroyed in a single season, in one department of the east of France, by the locusts, had been established at four millions of francs.

The French vines, olives, and even the forest trees, are also reported as suffering severely from the superabundance of insect vermin; so that, in consequence of the alarm occasioned, birds are likely to be hereafter protected in France without much legislation, and, indeed, their rise in estimation has been signally rapid. Some philosopher has declared, and the report quotes the saying as a profound one, that, the "bird can live without man, but man cannot live without the bird."

This is a splendid confession of past error; but what is to be done, seeing that the convictions of philosophers have not yet descended to the peasantry? Are sparrow-catching and bird's-nesting to be made punishable? Must there be a new system of game laws for the protection of sparrows and linnets? The question is really pressing. Yet the commissioners, though they distinctly call for "prompt and energetic remedies," and point to the great detriment which agriculture is receiving, are evidently doubtful as to the course to be pursued. They suggest however, that persuasion should be tried before coercion, and that school-masters and clergy should endeavour to put the question in its proper light before the people. The commission in their report present some curious statistics respecting the extent to which this destruction of birds in France has been of late years carried. They state that there are great numbers of professional butchers who are accustomed to kill from 100 to 200 birds daily. A single child, also, has been known to come home at night with 100 birds' eggs, and it is calculated and reported that the number of birds' eggs destroyed annually in France is between 80,000,000 and 100,000,000. The result is, as might have been expected, that little birds in that country are actually dying out; some species have already disappeared while others are rapidly diminishing.

**Mental Excitement.**—Bad news weakens the action of the heart, oppresses the lungs, destroys the appetite, stops digestion, and partially suspends all the functions of the system. An emotion of shame flushes the face; tear blanches it, and an instant thrill electrifies a million of nerves. Surprise spurs the pulse into a gallop. Delirium infuses great energy. Volition commands, and hundreds of muscles spring to execute. Powerful emotion often kills the body at a stroke. Eminent public speakers have died in the midst of an impassioned burst of eloquence, or when the deep emotion that produced it suddenly subsided. Larraive, the young Parisian, died when he heard that the musical prize, for which he had competed, was adjudged to another.

## THE FRIEND.

FIFTH MONTH 31, 1862.

Notwithstanding the lauded reforms and revivals said to have taken place within the pale of our

religious Society, there can be little doubt in the mind of any serious, consistent Friend, that this is a day of much weakness and degeneracy among the members; a day wherein there is great need for all to rally to first principles, and for the rightly appointed to seek for ability availing to petition for the outstretching of the Arm of Divine Power, to rescue and to save from reproach, the successors of that faithful, single-hearted band which He raised up in its beginning. Nevertheless, the many privileges enjoyed within the Society, and the many safeguards it has thrown around its members, give a value to the right of membership therein, which there is reason to fear very many possessing it rarely reflect on, and perhaps still more, too lightly esteem.

The Society, having granted a birthright to these valuable privileges, has always felt a deep concern for the early, correct training of the children thus connected with it, and great labour and expense have been cheerfully incurred by it, in order to provide within its immediate care and jurisdiction, ample means for conferring a liberal scholastic education upon every such child, whether rich or poor. Not satisfied with this, it earnestly and continuously seeks to guard its susceptible, impulsive and ingenuous youth, while pupils at its seminaries, as far as practicable, from contamination by the evil abroad in the world, and to shield them from betrayal into vice and its attendant distress, by labouring to imbue their minds with the self-denying principles and precepts of the Gospel, as laid down in the Holy Scriptures; and by directing them to a knowledge of, and close adherence to the manifestations within them of the Grace of God, or Light of Christ, mercifully granted unto all men, to lead them out of error and into truth.

Recognizing the powerful influence of parental character on the habits and modes of thought of the children, the Society does not fail to manifest a religious concern—brought to mind periodically by close, but affectionate queries—to encourage and counsel those who are parents or guardians, to keep alive to the awful responsibilities of their position; and while striving to be good examples themselves, to seek for a true qualification to bring up those entrusted to their charge in innocence, as accountable in life and conversation for the blessings bestowed upon them, and bound to refrain from the corrupt customs and fashions of the world, which lead their votaries into a harassing bondage.

It is true that this religious concern, as well as that which prompts the Body to watch over all the members for good, and to labour to incite and to aid them to lead consistent and godly lives, is often disregarded by many who might profit by it, and is lightly reflected on by others; nevertheless, it exerts an unacknowledged influence in restraining from much that is hurtful, and in cherishing a respect and regard for that which is right, that is not generally sufficiently estimated; but which, more or less provokes all classes among the members; often secretly checking indulgence in things calculated to wound the conscience, and as frequently stimulating to renewed endeavours to come up towards "the mark for the prize" conspicuously set forth; thus impressing the domestic and social circle of nearly all, with a measure of the restraining, preserving power of Truth.

The high standard of christian morality maintained by the Society, and the unaffected interest constantly manifested by it for the conduct of all connected with it to correspond with this standard, its care for their safe and consistent walk through the world, has made, and still makes an impress upon the character of its members, which has re-

markably enforced the sanctity of marriage, and maintained its indissoluble tie with all its obligations and divine blessings; requires indispensable to domestic happiness and virtue.

The main dependence of the children of Friends upon home associations for enjoyment, rather than upon extraneous and popular amusements, likewise leads to the fullest development of family affection, gives increased durability to the ties of consanguinity, and spreads a nameless charm over the family circle, that draws its members to a common centre, and in measure regulates and inspires their movements; while the feeling of individual duty and personal responsibility habitually inculcated, gives clearer views of the true objects of life and sources of happiness, and incites to seek for the necessary qualification to pursue and obtain them, as well as to bear with patience and equanimity the various trials which are inseparable from life's chequered scenes. The high toned feeling of religious accountability called forth by the principles and practices of the Society, and the cultivated susceptibility to the sorrowful consequences resulting from persistent disregard of the divine law, administer a silent rebuke for the indulgence of any wrong affection, and thus assist in restraining from many of the temptations and entanglements that produce so much confusion and distress in the world.

We now say nothing in exposition of the pure doctrines of the gospel most surely believed in and promulgated by the Society, or of the various testimonies against the vain fashions, corrupt customs, and evil practices of the world, consonant with and springing from those doctrines, which it calls on its members to support; and whereby their peace and happiness may be greatly preserved and augmented; nor yet of the absence of any privileged order or hierarchical domination in the Society, and also the freedom from the imposition of profitless forms and ceremonies, gendering bondage to the beggarly elements; we wish on the present occasion more particularly to bring before the view of our readers, especially our young Friends, the peculiar privileges they enjoy—the fruit indeed of this practical christianity—in the system of home and general scholastic education provided or cherished by the religious Society to which they belong, the domestic and social habits growing out of the prevailing economy, and exerting a marked influence in purifying and hallowing the atmosphere of family life; the individual and associated religious exercise cultivated, and enjoyed upon all; which, while it develops the free agency of man, and gives proper liberty and scope to intellect and thought, yet brings a wholesome restraint upon the corrupt impulses of our fallen nature, at the same time that it woos and stimulates to aspire after the most elevated standard of spiritual life.

The privileges of membership in a society which, amid its weakness and trials, still evinces such true religious concern for all connected with it, in their various stations and duties of life; which throws wide its doors, invites and entertains all its members to enter, not only its meetings for worship, where all may exercise the spiritual gifts bestowed upon them, but its meetings for discipline also, to learn what is enjoined upon, and what is expected of them; to open their hearts to the travail of the church for their spiritual growth and well-being, and to join in religious concern and labour for themselves, for one another, and for the promotion of the cause of Truth and righteousness in the earth; these privileges, we say, as far transcend the liberty too commonly conceded in other religious denominations to indulge in the gaieties and frivolities of the world, and to acquire its outside

polish and accomplishments, as pure gold exceeds in value glittering but worthless tin.

But in this, as in other relations of life, our difficulties and trials make a more deep and lasting impression, than the blessings liberally and uniformly bestowed upon us; and while harassed with the troubles that press upon us, and anxious about those which we anticipate, we too often overlook the benefits which are daily received, and forget that we owe a debt of gratitude for opportunities and privileges, which, if rightly improved, would ensure the enjoyment of content and peace, and crown our life with the approbation and loving kindness of the Omnipotent.

#### SUMMARY OF EVENTS.

**Foresaw.**—Liverpool dates to the 16th. The news of the capture of New Orleans had been received, and was the occasion of much surprise. The cotton market had, in consequence, suffered a decline of  $\frac{3}{4}$  a  $\frac{1}{2}$  per pound. The Times considers this a hard blow for the South, but intimates that the rebels will be completely conquered. Parliamentary proceedings were unimportant. The distress in Lancashire was debated in the House of Lords without reference to American affairs. The decline in breadstuffs continued. American Flour, 24s. a 50s. per barrel. Red Western wheat 9s. 11d. a 10s. 6d. Red Southern, 10s. 10d. a 11s. white wheat, 12s. a 12s. 6d. per 100 pounds. The House of Commons had passed a resolution, by a small majority, declaring it to be unjust and inexpedient to abolish the Church rates until some provision was made to supply their place.

There were reports of a military conspiracy in St. Petersburg in favour of Poland.

**UNITED STATES.—The War.**—On the 25th inst. the President issued an order, taking military possession of all the railroads in the United States, from and after that date, until he should direct that the same be returned to the railroad companies, their officers and servants shall hold themselves in readiness for the transportation of troops and munitions of war, to the exclusion of all other business. The President has also issued a pressing requisition, on Messrs. Adams, for a number of carriages, for more troops to proceed to the north to Washington. On the 24th, a bill was introduced into the U. S. Senate, and referred to the Committee on Military Affairs, which authorises the President to accept the services of 200,000 volunteers, in addition to the number authorized by the act of Gen. Banks last week.

**Virginia.**—Serious disasters have befallen Gen. Bank's army in the valley of the Shenandoah. On the 24th, a portion of his forces stationed at Front Royal, twenty miles south of Winchester, was attacked by the rebels, and driven out, and the next day the main army was defeated at Winchester, so that, which Gen. Banks had retreated, by a superior force, under the command of Generals Jackson and Ewell. The U. S. Army was defeated, with a heavy loss in killed, wounded and prisoners. Gen. Banks, with the remainder of his forces, was compelled to retreat to Potomac, crossing the river at Williamsport. The forces under Gen. Fremont, in Western Virginia, have been able to keep the rebels in check, but without making any important progress recently.

On the 23d, a detachment at Lewisburg, was attacked by the rebels, they were repulsed after a sharp contest, in which the latter lost 100 prisoners, 200 stand of arms, and four cannon. Gen. McDowell's army remained near Fredericksburg. This city was visited by the President and Secretary of War on the 24th. The President was greeted by many of the citizens with great enthusiasm. On the 25th, Gen. McClellan's army was in the immediate neighbourhood of Richmond, a portion of the forces being within five miles of the city. A number of skirmishes had taken place, in some of which the rebels suffered severely. An immense army has now collected by the rebels in and around Richmond. According to the reports of deserters, from the rebels, there is great scarcity of provisions for the army, and the men had been put on half-rations.

The Mayor and City Councils of Norfolk refuse to take the oath of allegiance to the United States. The city still governed by the rebels. It is prohibited to take course with other places in prohibited, in consequence of the general disloyalty of the people.

Jeff. Davis in a recent letter to the Legislature of Virginia, says that he does not entertain the thought of withdrawing the Southern army from Virginia, even though Richmond should be taken.

John B. Floyd has been appointed Major General of the Virginia rebel forces, with the authority to raise 20,000 men, and to take possession of North Carolina. **North Carolina.**—It is said there are increasing indications of returning loyalty in this State. Edward Stanley has been commissioned as military Governor, and has repaired to North Carolina to exercise his functions as far as practicable. He is invested with the power to suspend the writ of *habeas corpus* during the pleasure of the President, or until the loyal inhabitants shall organize a State government in accordance with the Constitution of the United States. His powers are exactly similar to those with which Governor Johnson of Tennessee is invested.

**Tennessee.**—The reported evacuation of Fort Wrigold was incorrect. The place is still held by the rebels.

**Mississippi.**—The Memphis Appeal states that the first detachment of Farragut, had arrived at Vicksburg. The Mayor had been requested by the Federal commander to have all the women and children removed within twenty-four hours. The Mayor had asked an extension for another day. The armies of Gen. Halleck and Gen. Beauregard remained in close proximity. Skirmishes continued with more or less violence, of almost daily occurrence. A general engagement might occur at any time when either commander should so order.

**New Orleans.**—The U. S. authorities at New Orleans taken possession of the New Orleans and Jackson railroads, the New Orleans and Great Western railroad. All the approaches to the City have been cut off. Gen. Phelps occupies Carrollton, twenty-five miles up the river. As an act of humanity to the suffering inhabitants, boats and railroads are allowed to bring supplies to the City. The suggestion that the *habeas corpus* writ is forbidden, but other species of currency in circulation is allowed. Algiers was occupied by the U. S. forces, and Forts Jackson and St. Philip had been garrisoned by troops from Ship Island. Gen. Butler had established his head quarters at the U. S. Custom House. Port under Commodore Farragut, had arrived at Mobile, had returned to Ship Island. Business was slowly reviving in New Orleans.

**Florida.**—Advices from Pensacola, state that the rebels besides burning the Navy Yard, burned all the steam saw mills, thus destroying the only means of supplying the army with lumber. The U. S. Blockading squadron had captured the British iron steamer *Circassian*, with a cargo of tea, coffee, munitions of war, &c., while attempting to run the blockade. The ship and cargo were valued at a million of dollars.

**Arkansas.**—A dispatch from the Federal camp near Batesville, states that the rebels have burned all the bridges on the adjacent streams, and 10,000 bales of cotton had been consumed on the Arkansas river, by order of Gen. Beauregard. In an engagement near the Little Rock river, a rebel force of 600 men, had little Rock, states that most of the U. S. troops had moved in the direction of St. Louis, only about 7,000 remaining at Batesville. It was not believed they would approach nearer the capital.

**Estimated Expenditures.**—A dispatch from Washington on the 25th inst. says, "It has been ascertained from an authentic source, that the expenditures of the Government, from April, 1861, to the present time, had not averaged \$1,000,000 per day. This may be considered a refutation of the exaggerated reports upon the subject."

**Confiscation of Rebel Property.**—After a protracted and tedious debate, the U. S. House of Representatives passed a bill on the 26th inst., providing that all the estate, property and moneys, stock, credits and effects of every class of persons engaged in the rebellion, shall be confiscated to the United States, and be lawful subjects of seizure and capture wherever found. Another bill, declaring freedom to the slaves of persons engaged in the rebellion, was defeated by a vote of 73 yeas and 78 nays.

**Market.**—Liverpool, 25th inst. last week, 404. The following were the quotations on the 26th inst. White Western wheat, 92 cts.; red winter wheat, 91 1/2 cts. 11 1/2 cts. spring wheat, 91 1/2 cts. \$1.08; new corn, 46 cts. 48 cts. 48 cts., old 48 cts. a 50 cts. cts.; oats, 40 cts. a 43 cts. Uplands cotton, 29 cts. a 29 1/2 cts.

**Philadelphia.**—Mortality last week, 257. The grain market on the 26th was very dull. Sales of prime red wheat were made at \$1.20, and white at \$1.28 a \$1.35; rye 67 cts. a 70 cts.; yellow corn, 53 cts. a 54 cts.; oats, 34 cts. a 37 cts.

#### RECEIPTS.

Received from Rachel James, lo. per Thos. Penrose, \$3 to No. 17, vol. 33; from Buring Hallock, N. Y., \$2 to No. 10, vol. 35.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)  
Physician and Superintendent, —JOSUAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES EGLES, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

#### WEST-TOWN BOARDING SCHOOL.

An ASSISTANT TEACHER is wanted in the Girls' Mathematical School. Apply to Dubré Knight, Superintendent, at the School, to Charles J. Allen, Treasurer, No. 204 Arch Street, Elizabeth Peirson, No. 448 North First Street, Philadelphia, or to J. Magill W. Hall, Warren Tavern Post Office, Chester Co., Pa.

DIED, at his residence in Westmoreland, Onida Co., N. Y., 18th of Third month, 1862, SAMUEL PECKHAM, in the fifty-sixth year of his age. A beloved member of Westmoreland Preparative and New Hartford Monthly Meetings. He had submitted to the renovating power of Divine grace, he was favoured to experience the corrupt propensities of our fallen nature brought into a good degree of subjection, and being attached by sincere conviction to the doctrines and testimonies of our religious society, he endeavoured to maintain them in a circumstantial manner, to the last. He was a diligent follower of his Saviour. He was a diligent attendant of meetings, both for worship and discipline, and was, it is believed, concerned to be made a true partaker of the benefits thereof. Though his decline was gradual, he was spared much actual suffering, and resigned himself to the Lord, with a peace which no man can weighly express during his illness. At one time, in regard to the state of his mind, he said, "I have craved mercy, the prayer of my heart has been that the Lord would be merciful, I have given up all that is near and dear, and am waiting the Lord's time. 'Tis a great thing to be prepared to enter that everlasting Kingdom of our Lord and Saviour Jesus Christ; nothing unclean can enter there; we must be made pure, made holy, we must be sanctified. Oh, how precious is his love, how precious!" Thus he continued, often speaking of the Lord's love and goodness to his soul. While he prayed for patience to wait the Lord's time, he longed to depart and be at rest in the dear Redeemer's Kingdom, where, his beloved friends have the consoling truth, he has, through mercy, been admitted.

He resided in Paris, Onida Co., N. Y., 12th of Twelfth month, 1831, and was the wife of John Grandy, in the sixty-third year of her age, an esteemed member and elder of New Hartford Monthly Meeting. Through the greater part of her life she appeared to be concerned to be found in the way of her duty and in a state of acceptance with her dear Redeemer. Though sudden removed from works to rewards, her friends have the consoling belief, that, through watchfulness and prayer, having in view the uncertainty of life, she was prepared for the solemn change, and that through the mercies of a holy Redeemer, she was admitted among the spirits of the just made perfect.

She was born on the 23d of Second month, 1802, in the twenty-ninth year of his age, at his residence in Westmoreland, Onida Co., N. Y., HENRY J. HAKES, son of Avia H. Grandy, above mentioned, and a consistent member of our religious society. He bore his varied afflictions with great patience and resignation. He said the change would be a happy one to him; not long before his departure he said "Jesus comes," and his friends have the consoling belief that he fell asleep in Jesus.

First of Fourth month, 1862, at her residence in Plympton, Onida Co., N. Y., ESTHER, relict of the late John W. Knowles, in the thirty-sixth year of her age, a member of Smyrna Monthly and Particular Meeting. Of an innocent life and conversation, her end was peaceful.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SIXTH MONTH 7, 1862.

NO. 40.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Advertisements and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; any part of the United States, for three months, if paid in advance, six and a half cents.

From the *Am. Jour. of Science and Arts.*  
Ascent of Monte Rosa in Switzerland.

(Continued from page 306.)

September 4th 1861. By *Kinsley Twining.*  
(Extract from a private letter furnished by request to the Editors of this Journal.)

To give some idea of the difficulty of crossing his little gap and actually getting upon the opposite and highest point, I will say that, although it is not thirty feet deep nor twenty feet broad, still the two German brothers Schlagintweit, who were certainly brave men and most intrepid explorers, and who had nerve enough to mount, first of all who have attempted it, on to the lower time of the summit, gave up the other. It was not the muscular exertion which deterred them, nor the time likely to be occupied in crossing the gap; for I passed straight through it at a burst, and was on the topmost point in two or three minutes afterwards. But it must have been the dreadful unknown task of venturing out over that airy walk and on to that apparently unsupported summit, where no previous foot had been, and whose accessibility they could not prove beforehand and could scarcely believe when looking upon it. It was a far different thing for us to do. I knew that the path was firm and that we could all sit on the summit, though only one at a time could mount the sharp point which caps it. I knew that there was no great labour in the undertaking, and no danger if my head was steady and my courage good. All this made it a perfectly easy thing for me to do, and I so forgot both difficulty and danger and the descent, that the hour we spent on that stony point, 15,223 feet above the sea, was one of the most delightful in all my life. Around us on every side were great mountains sunk down beneath their snows, like abashed virgins drooping in reverence; north, east and west, a panorama of majestic mountains lay around us. The dark needle of the Finster Aarhorn rose out of the snows of the great glacier of the Aar,—Schreckhorn, Wetterhorn, Titlis, the Eiger, and the Sidelhorn stood around it like an ancient brotherhood of giants. The Bernese Alps drew out their line in equal beauty and majesty from the Angelhorn and the Wetterhorn till it seemed to run up into the skies from the Silberhorn and the Jungfrau. Nearly due west lay the immense mass of Mont Blanc, white and glistening,—the one summit over which the eye could not range. The space between

was filled with whatever of lake or mountain, of valley, field or barren moor, there is in Switzerland—lonely snowy points rising one above the other—dark black-ribbed glaciers rolling into the valleys—here a dome of snow capping the mountain with a biscuit-like cover of the purest white—while, all around the broken edges, blue avalanches were ready to drop into the gray and hazy depths beneath them. Southward, the eye looked through a bright blue sky into Italy,—first over the Pennine Alps, resting for a moment with admiration upon that most grand and pleasing object, the Becca di Nona; then in swift flight it passed from the thousand peaks and vales of Piedmont to Lago Como and Maggiore,—and thence ran straight out into the plains of Lombardy and Venetia. How can I ever describe what my eyes saw in this view. I stood there drinking it in with delight—I knew not how long. I bade myself remember this and remember that; but, now, what can I recall. Becca di Nona is a distinct form in my mind, but beside this all is a formless procession of beautiful images—a delightful memory of evanescent things whose shape I do not know that I ever saw, and with respect to which I am certainly unable to say at this moment of what they consist. I remember a light falling down upon Italy, blue, soft, and yet so distinct and clear that all I saw against the sky had an edge—but it was an edge of velvet. I remember how my eye, accustomed to the altitudes of the Alps, at first refused to rest upon the blue plains of Italy, but adjusted itself to them as clouds in the air, till at length after something like a struggle it took the right focus, and falling down to the level of the sea, made me conscious of my own great elevation.

It is impossible to describe the light which illuminated the Italian view. It was a substance—as it seemed—and a colour: and yet it was soft and clear. It glowed without being hazy, and gave everything with great distinctness without letting the eye into the deformities of the country, or displaying the formless and less pleasing secrets of the landscape, as the midday sun of Switzerland does. The guides said that in perfect weather the spires of the cathedral at Milan are visible, and that the eye can reach nearly as far as Venice. There were clouds on our horizon, and some of the valleys were filled with their billowy masses. The wind tossed them about like balloons, and as they rose and fell and tumbled about on the unstable support of the air (as it seemed to be), and as at times they dissolved or broke apart, we had lovely views of the country below.

My companion reached the summit a few minutes after I did, but immediately fell asleep and could not be roused till a few minutes before we left the top. I really did not observe how he came up the Zumstein or the crest of the H6chste Spitze, but I well remember seeing him lying flat on the lower time of the summit, whence the guides staid and lifted him up till he was on the top; when he did precisely what Albert Smith did on Mont Blanc, i. e., went to sleep. I made a number of observations upon myself, and could not see that the great altitude changed my bodily condition in

any way. I was not sick at the stomach at all—my breath was neither shorter nor deeper as I could perceive—my head was not at all inflamed. Hearing was equally good, as I can testify after having been bothered with Blatter's incessant "4 sans des vaches." The air filled my lungs as it does elsewhere, and from observing myself I could detect none of those signs of a great altitude which other persons have felt on the summits of such high mountains. On Paulhorn, and at other times when I have been on high mountains, I have noticed the darkness of the sky, and was prepared to find the vault of a deep and almost blackish blue on Rossa. But in this I was disappointed; and I do not know to what I am to attribute its ordinary appearance unless to the slight haze which, as I ever, detained the eye in an illuminated atmosphere, and prevented it from looking into the thin, clear and rayless space which so many observers have described as the dark vault seen from the summits of high mountains. I have an indistinct recollection of having felt cold, and am certain that the guides said they were, and that it would not do to remain longer in such a wind. What the temperature was I do not know, although there was a minimum thermometer there which had been placed by the Alpine Club. But I could not make out anything from it because the indicating fluid was perfectly colourless and seemed to have faded out, so that it was impossible to see where the column stood. At last we commenced the descent, at 1 o'clock p. m.; but first I went up the pinnacle once more and waved my adieus from it to the silent world of majesty and beauty which in an hour of time had given me so much pleasure. In the silence of those solitudes my voice was lost,—nothing that we could do seemed able to disturb it. The wind, which blew in tremendous gusts and then subsided, was the only sound which filled those spaces except when the avalanche (of which there were many during our ascent) added its thunder to the roar of the tempest, or sliding down amid the silent snows grew into a sound which waved through the air and made the mountains tremble.

But this is not the descent. I confess I was more nervous about going down than I had been at any time in going up. One hour was consumed in the first eight hundred feet—then soon after we came to the dome up which our zigzags ran and which we had climbed so slowly in the morning with our faces to the wall and our toes in holes in the ice—edging our way along, a step at a time. Soon we saw, below, the knapsacks of the guides where they left them, with the bottle of champagne and other refreshments they had brought up and deposited there where the labour and danger of the ascent both begin and end,—to celebrate with them our victory, when we had come once more into safe places. Four hundred or five hundred feet above this spot the leading guide, John Kronig, sat down on the snow; and while I was wondering what was to happen, he was not into place behind him, his feet put forward under the guide's arms,—then the second guide followed. Instinctively took my place, supposing it would be quite

right, but rather hoping we were not going to slide down that tremendous declivity at the risk of our pantaloons. However, the sun, which was cold on the top, was warmer here, and the loose snow was soft to a depth of three or four inches, and the guides meant to improve it; so when all was ready Blatter sat down behind me, and off went the five like a kind of human sled. The guides' alpenstocks, managed by their strong and skilful arms, kept us in line, and, I suppose, lessened the speed somewhat. But they had, after all, so little power against the force of gravity that we shot down like an arrow and ploughed into the snow opposite our camp—all wanting to laugh and shout, but utterly without the breath required in such exercises.

When we were on our feet again the lurch came out and we had a merry time in consuming it. The guides danced and rolled about on the snow, and sang rattling French songs with a perfect abandon, as if delighted to have come down Monte Rosa once more alive. We were still a great way from the hotel—not less than eighteen miles. The guides said it could not be done in less than three hours, and we made up our minds to see if we could accomplish it in that time. The rope which had been taken off at lunch came out again, and we were all tied together once more in a line—and now the problem was to slide down in one hour the glacier which had cost us five in the morning. We stood up straight, and steered with our alpenstocks; the strong arms of the guides served for rudders, stays and breaks; and down we went at a tremendous speed. Do not think, however, it was mere sport. My legs would now and then tremble under the exertion to keep them in place, my breath would give out, and after fifteen minutes of such rapid descent we would have to lie down and get ready to try it again. The steep places were passed sled-wise. The ladies had gone up to the top of Gornier Grat about 1 o'clock, P. M., to watch our progress, and there, beside having one of the finest views in Switzerland to enjoy, had the full sight of our novel method of descent. Some gentlemen were with them who had made the ascent themselves and were able to show them where to point their glass in order to find the exceedingly small black specks they were looking for. At last these were discovered refreshing themselves at the bottom of the dangerous peaks, and then sliding down hill at an unheard of rate; and finally they disappeared among the rocks in the moraine of the glacier, when they were lost for the time, and not again seen till they appeared at the hotel, some two hours from the place.—I believe the distance up and down is rated at forty miles. We were absent from the hotel thirteen hours and a quarter; of which three hours and a half were consumed in the halt on the summit and those for breakfast and the other lunches up and down.

For "The Friend."

An apology has sometimes been made for war, and an attempt to prove its compatibility with the Gospel, by citing the cases of warriors who have otherwise manifested, in life and conversation, a susceptibility to its spirit and power, and, by teaching and example, striven to lead others into obedience to its precepts, so far as they have themselves comprehended them; but who appeared to practice war: legally murdering their fellow-beings who had done them no harm. How far such fighting professors of the name of Christ may be in the condition in which his gracious observation to his prejudiced disciples formerly, "I have yet many things to say unto you but ye cannot hear them now" is applicable, we may not under-

take to decide, but we do know, that the pure and peaceable nature of the religion of Jesus cannot be changed by the course pursued by any of its partially enlightened though fervent confessors, and that war is the fruit of the tree, to the root of which the gospel axe is designed to be laid.

Having met with a short review of the memoirs of the late Captain Hedley Vickers, in which this subject is treated on, it appears to me that parts of it would be suitable for the pages of "The Friend."

"Gladly, however, as we acknowledge the rare excellence and beauty of Captain Vicer's character, we cannot for one instant admit the inference which some good people are disposed to draw from it, that the war-system is consistent with christianity, or that the military profession is one which a christian ought to pursue. The principle upon which such inference rests, is fundamentally false, and of extremely dangerous tendency; for it assumes to determine what christianity is,—what it forbids, and what it enjoins,—not by its own authoritative canon and the obvious and prevailing spirit which pervades it, but by the practices, always imperfect and often grievously inconsistent, of its erring disciples. This is an exact reversal of the rule we ought to apply. Human conduct is to be tested by christian principle, not christian principle by human conduct. The form, probably, in which the argument from the example of Captain Vickers and others will be put, is this: 'If war be, as you affirm, so opposed to the spirit of christianity, how is it possible that one whom you admit to be a truly christian man, could have taken part in it?' Unhappily, the history of the church in every age proves that it is possible for good men, whose christian sincerity no one can question, under the blinding influence of educational prejudice, to lend their sanction to practices, which are at the time felt by some, and afterwards acknowledged by all, to be utterly at variance with the religion they profess. It would be easy to cite many instances in illustration of this remark. Few, we presume, will doubt that persecution for conscience' sake—subjecting men and women to imprisonment, cruel torture and death in the name of Christ—is as gross an outrage upon the spirit of the gospel as can well be imagined. And yet, no one can deny that many whose names stand conspicuous in the roll of ancient piety were persecutors in heart, and some of them in positive act. Sir Thomas More, John Knox, John Calvin, Cotton Mather, and many others, stand as examples of this inconsistency. But no one, surely, would now dream of saying, that persecution cannot be unchristian, or such good men as these would never have persecuted.

"But there is another example at hand, if possible still more striking, of this extraordinary blindness to the clearest requirements of christian obligation with which good men are sometimes smitten. And we rather dwell upon it, as the individual to whom it refers is held in great veneration by the very class of persons who are most likely to find in the character and memory of Captain Vickers a justification for war.

"There are not many who will now hesitate to acknowledge, that if ever there was a calling wholly inconsistent with christianity, if ever there was a calling in itself inherently and irredeemably wicked, it was that of the man engaged in the African slave-trade a hundred years ago. On the other hand, if ever there lived a man whose conversion was genuine, whose whole life was an attestation of the reality of the spiritual change wrought in his life and character, that man was John Newton. And yet it is notorious that for some years after he became a christian, John Newton was engaged in

the slave-trade, not merely as an accessory but as a principal, without having the slightest feeling of remorse or suspicion as to the unlawfulness of his calling. Nay more, (and here we have some remarkable coincidences between his experience and that of Captain Vickers,) he declares that never did he pass hours of such spiritual elevation and devout enjoyment as when he was in command of a vessel freighted with a mass of manacled and suffocating negroes on the coast of Guinea. 'I know not any calling,' he says, 'that seems more favourable, or affords greater advantages to an awakened mind, for promoting the life of God in the soul, especially to a person who has the command of a ship, than a seafaring life in African voyages. . . . I never knew sweeter or more frequent hours of divine communion than in my two last voyages to Guinea, when I was either almost secluded from society on ship-board, or when on shore among the natives.'

"Sir James Stephen, in his remarkable essay on the 'evangelical succession,' which appeared some years ago in the *Edinburgh Review*, thus describes the scene which presents itself to the imagination during that period of Newton's life. 'Old Ocean probably never before or since floated such another slave-ship. On board of her, indeed, were to be seen all the ordinary phenomena. Packed together like herrings, stifled, sick, and broken-hearted, the negroes in that aquatic pandemonium died after making futile attempts at insurrection. But separated by a single plank from his victims, the voice of their gaoler might be heard, day by day, conducting the prayers of his ship's company, singing a devout imitation of his own of the verses of Propertius, and, as he assures us, experiencing sweeter and more frequent hours of divine communion than he had ever elsewhere known.' And what is more singular still, when Newton had forsaken this life, not from any compunctious visitings of conscience (for he never had the slightest uneasiness on that score,) but from sudden ill-health, and when he was writing his autobiography ten years afterwards, though he indulged in language of self-condemnation in regard to other parts of his past life, which, but for our knowledge of the manly sincerity and unaffectedness of his character, would seem to be the very extravagance of humility, yet, as Sir James Stephen remarks, 'he publicly commemorated his pursuit of this traffic without one word of apology or self-reproach on that account.' But will anybody say that because the sainted John Newton could follow the occupation of a slave-trader without any consciousness of wrong, that this diabolical trade must therefore be lawful for a christian?

"The problem to be solved is usually put in this form. 'Is it possible for any one to be a true christian who lives in the habitual and conscious disregard of any important part of Christ's will? We do not see how we can avoid giving a negative answer to this question when it is thus expressed. But the solution, as it appears to us, depends upon the presence or absence of one word in the above proposition, and that word is 'conscious.' Eliminate that, and we do not hesitate to reply in the affirmative. For our own part we believe, to a certain extent, and in a certain sense, in the doctrine of development. That is, we believe that it is only gradually that the full glory and perfection of the christian system dawns upon the christian world. We are convinced that there never has been an era in the history of christianity, when the Saviour, if he had appeared among his people, might not, in regard to some important points of truth and duty, have said to them as he did to Philip, 'I have been so long time with you, and

yet have you not known me? In proportion as the church advances in knowledge and wisdom, will it discover new excellencies in the teachings of Christ which had been previously veiled from its eyes. Illustrations of this are not wanting even within a very late period. The doctrine which inculcates charity to the errors of others, and teaches as that the only means of promulgation and defence which christianity owns are the weapons of truth and love—in meekness *instructing* those that oppose themselves—is as old as the gospel. And yet it is only quite recently that this has been discerned by christians. It was the received and all but universal conviction among good men, for we know not how many centuries, that in subjecting heretics to legal coercion and bodily suffering they were doing God an acceptable service. So for generations, in regard to slavery and the slave trade, individuals, or a small minority might have discovered and denounced the unchristian character of that infamous traffic. But it is notorious that the christian world generally had no sense whatever of its wickedness. And so it is at this moment in regard to war and other practices.

How do we apply these remarks in our judgment of individual characters? Why thus. That in estimating the sincerity of a man's obedience to the will of Christ, we must, in charity, test him, not by the abstract and perfect criterion of that will revealed in the gospel, and at a later time perhaps discovered by the church, but by the received and acknowledged *understanding* of that will which prevails among those by whom he has been instructed. It is the *conscious* violation of duty that incurs guilt and depraves character. There may be, no doubt, a measure of guilt attached to our ignorance or misconception of what is revealed, even though we share that in common with the generality of christians. But such guilt is very different in character and in turpitude from that of the man who *knew* his Lord's will and did it not.

In further illustration of this principle, we borrow the admirable remarks of Sir James Stephen—no latitudinarian, we may be assured, in matters pertaining to the slave-trade—in his vindication of, or rather in his apology for, John Newton. 'In the court of posterity,' he says, 'it is a well-settled point of law, that in mitigation, if not in bar, of any penal sentence, the defendant may plead, that the generation to which he belonged did not regard as culpable or as scandalous the conduct imputed to him as a crime by many a later age; but that, on the contrary, it was sanctioned by the prevalent opinions, and countenanced by the general practice of his contemporaries. This apology may be justly alleged on behalf of Newton.' In his early days the current of public sentiment in favour of the slave-trade ran too strongly to be stemmed, except by the most powerful understanding, guided by the most healthful conscience. There can be no reason to distrust the accuracy of the following statement, in which he adverts to his own participation in it:—'During the time I was engaged in the slave-trade, I never had the least scruple as to its lawfulness. I was, upon the whole, satisfied with it, as the appointment Providence had marked out for me.' Such is the dominion of the social over the individual conscience! Such the control which the immoral maxims of his associates may obtain, even over a devout student of Holy Scripture.

'Let us apply these remarks to the case of Captain Vickers. We have stated that to our minds there is something inexpressibly painful in the contrast between his christian character, full as he was of the meekness and gentleness of Christ, and distinguished by the depth and fer-

our of his love towards God and man, and the bloody work—the work of vindictiveness, cruelty and death, in which he was employed. He describes his own feelings in the camp almost in the same words as John Newton in the slave-ship. 'It is six months since I have been within reach of a house of prayer, or have had the opportunity of receiving the sacrament; yet, never have I enjoyed more frequent or precious communion with my Saviour than I have found in the trenches or my tent.' To our feeling, we must admit, Captain Vickers going forth to 'precious communion with his Saviour,' to bayonet poor Russian peasants, or pour infernal fire upon the devoted town of Sebastopol, is as violent and revolting a contradiction, as that of John Newton, combining a similar exercise with the man-stealing and man-stealing of the African slave-trade. But we must remember that this excellent officer had been brought up in the atmosphere of that military christianity, which is unhappily the prevailing religion of England, at this day; and especially in the circle in which he moved.

(To be continued.)

From *Evenings at the Microscope.*

### Insects: their Stings and Ovipositors.

(Continued from page 309.)

Probably at some period of your life you have been stung by a bee or wasp. I shall take it for granted that you have, and that having tested the potency of these warlike insects' weapons with oneself, you have a curiosity to examine them with another. The microscope shall aid your vision to investigate the morbid implement.

This is the sting of the honey-bee, which I have this morning extracted. It consists of a dark brown, horny sheath, bulbous at the base, but suddenly diminishing, and then tapering to a fine point. This sheath is split entirely along the inferior edge, and by pressure with a needle I have been enabled to project the two lancets, which commonly lie within the sheath. These are two slender filaments of the like brown horny substance, of which the centre is tubular, and carries a fluid, in which bubbles are visible. The extremity of each displays a beautiful mechanism, for it is thinned away into two thin blade-edges, of which one remains keen and knife-like, while the opposite edge is cut into several saw-teeth pointing backwards.

The lancets do not appear to be united with the sheath in any part, but simply to lie in its groove; their basal portions pass out into the body behind the sheath, where you see a number of muscle-bands crowded around them: these, acting in various directions, and being inserted into the lancets at various points, exercise a complete control over their movements, projecting or retracting them at their will. But each lancet has a singular projection from its back, which appears to act in some way as a guide to its motion, probably preventing it from slipping aside when darted forth, for the bulbous part of the sheath, in which these projections work, seems formed expressly to receive them.

Thus we see an apparatus beautifully contrived to enter the flesh of an enemy: the two spears finely pointed, sharp-edged, and saw-toothed, adapted for piercing, cutting, and tearing; the reversed direction of the teeth gives the weapon a hold in the flesh, and prevents it from being readily drawn out. Here is an elaborate store of power for the junction of the javelins, in the numerous muscle-bands; here is a provision made

for the precision of the impulse; and finally, here is a polished sheath for the reception of the weapons and their preservation when not in actual use. All this is perfect; but something still was wanting to render the weapons effective, and that something your experience has proved to be supplied.

The mere intrusion of these points, incomparably finer and sharper than the finest needle that was ever polished in a Sheffield workshop, would produce no result appreciable to our feelings; and most surely would not be followed by the distressing agony attendant on the sting of a bee. We must look for something more than we have seen. We need not be long in finding it. For, here, at the base of the sheath, into which it enters by a narrow neck, lies a transparent pear-shaped bag, its surface covered all over, but especially towards the neck, with small glands set transversely. It is rounded behind, where it is entered by a very long and slender membranous tube, which after many turns and windings, gradually thickening and becoming more evidently glandular, terminates in a blind end.

This is the apparatus for preparing and ejecting a powerful poison. The glandular end of the slender tube is the secreting organ: here the venom is prepared; the remainder of the tube is a duct for conveying it to the bag, a reservoir in which it is stored for the moment of use. By means of the neck it is thrown into the groove at the moment the sting is projected, the same muscles, probably, that dart forward the weapon compressing the poison-bag and causing it to pour forth its contents into the groove whence it passes on between the two spears into the wound which they have made.

A modification of this apparatus is found throughout a very extensive order of insects,—the *Hymenoptera*; but in the majority of cases it is not connected with purposes of warfare. Wherever it occurs it is always confined to the female sex, or (as in the case of some social insects) to the workers, which are undeveloped females. When it is not accompanied by a poison-reservoir it is ancillary to the deposition of the eggs, and is hence called an *ovipositor*, though in many cases it performs a part much more extensive than the mere placing of the *ova*.

In the large tribe of cuckoo-flies, (*Elaeonomidae*), which spend their egg and larva states in the living bodies of other insects, this ovipositor is often of great length; even many times longer than the rest of their bodies; for the larva which have to be pierced by it require to be reached at the bottom of deep holes and other recesses in which the providence of the parent had placed them for security. The structure of the organ may be seen in this little species, not more than one-sixth of an inch in entire length, of which the ovipositor projects about a line. Under the microscope you see that this projection consists of two black fleshy filaments, rounded without and flattened on their inner faces, which are placed together,—and of the true implement for boring, in the form of a perfectly straight awl, of a clear amber hue, very slender and brought to an abrupt oblique point, where there are a few exceedingly fine reverted teeth. It is probably doubtless, though it refuses to open under the pressure which I bring to bear upon it. At the base may be seen within the semipellucid abdomen the slender horns, on which the muscles act in projecting the little berries

You are doubtless aware that the little berries which look like bunches of green currants often seen growing on the oak, are not the proper fruit of the tree, but diseased developments produced by a tiny insect, for the protection and support of

\* *Par d'enter* was the phrase constantly employed by the Russians to describe the fire of the allies in bombarding Sebastopol.

her young. But perhaps you have never paid any special attention to the living ant whose work-mechanism they are, and are not familiar with the singular mechanism by which she works. I have not had an opportunity of seeing it myself, and therefore cannot show it to you; but as gall-flies are by no means rare, and you may easily rear a brood of flies from the galls, you may have a chance of meeting with it. I will therefore quote to you what Kennie says about it.

"There can be no doubt, that the mother gall-fly makes a hole in the plant for the purpose of depositing her eggs. She is furnished with an admirable ovipositor for that express purpose, and Swammerdam actually saw a gall-fly thus depositing her eggs, and we have recently witnessed the same in several instances. In some of these insects the ovipositor is conspicuously long, even when the insect is at rest; but in others, not above a line or two of it is visible, till the belly of the insect be gently pressed. When this is done to the fly that produces the currant-gall of the oak, the ovipositor may be seen issuing from a sheath in form of a small curved needle, of a chestnut-brown colour, and of a horny substance, and three times as long as it first appeared.

"What is most remarkable in this ovipositor is, that it is much longer than the whole body of the insect, in whose belly it is lodged in a sheath, and, from its horny nature, it cannot be either shortened or lengthened. It is on this account that it is bent into the same curve as the body of the insect. The mechanism by which this is effected is similar to that of the tongue of the woodpecker (*Picidae*), which, though rather short, can be darted out far beyond the beak by means of a forked bone at the root of the tongue, which is thin and rolled up like the spring of a watch. The base of the ovipositor of the gall-fly is, in a similar way, placed near the anus, runs along the curvature of the back, makes a turn at the breast, and then, following the curve of the belly, appears again near where it originates.

"With this instrument the mother gall-fly pierces the part of a plant which she selects, and, according to our older naturalists, 'ejects into the cavity a drop of her corroding liquor, and immediately lays an egg or more there; the circulation of the sap being thus interrupted, and thrown, by the poison, into a fermentation that burns the contiguous parts and changes the natural colour. The sap, turned from its proper channel, extravasates and flows round the eggs, while its surface is dried by the external air, and hardens into a vaulted form.' Kirby and Spence tell us, that the parent-fly introduces her egg 'into a puncture made by her curious spiral steg, and in a few hours it becomes surrounded with a fleshy chamber. M. Viery says, the gall-tubercle is produced by irritation, in the same way as an inflamed tumour in an animal body, by the swelling of the cellular tissue, and the flow of liquid matter, which changes the organization, and alters the natural external form.'

For the Children.

#### Which Fear is the Best?

A new scholar arrived after the beginning of the term of the academy; a well-dressed, fine looking lad, whose appearance all the boys liked.

There was a set of fellows who immediately surrounded and invited him to join their carousals. They had frolics, and I suppose the boys know pretty well what that means. They used to spend their money in eating and drinking and amusements, and often ran up large bills, which friends found it hard to pay. They wanted the new

scholar to join them; and they always contrived, by laughing at him, or reproaching him, to get almost any boy they wanted into their meshes. The new boys were afraid not to yield to them. This new scholar refused their invitations. They called him mean and stingy—a charge boys are particularly sore at hearing. "Mean!" he answered: "and where is the generosity of spending money which is not my own, and which is to be supplied again with no sacrifice on my part? Stung! where is the stinginess of not choosing to beg money of my friends in order to spend it in a way which those friends would disapprove of? for after all, our money must come from them—we cannot earn it ourselves. No, boys, I do not mean to spend one farthing in a way that I should be ashamed to account of to my father and mother if they should ask me."

"Eh, not out of you leading-strings, then. 'Fraid of your father; 'fraid of his whipping you; 'fraid of your mother! Won't she give you a sugar plum," they cried in mocking tones. "And yet you are trying to make me afraid of you!" said the new scholar boldly. "You want me to be afraid of not doing as you say. But which, I should like you to tell me, is the best sort of fear—the fear of some of my school-fellows, which is likely to lead me into everything low, weak and contemptible; or fear of my parents—which will inspire me to things manly and noble: Which fear is the best?"

The boys felt there was no headway to be made against such a new scholar. All they said hurt themselves more than him, and they liked better to be out of his way than in it—all the bad boys I mean. The others gathered around him, and never did they work or play with greater relish, than while he was their companion and friend. "They study better and play better where he is," said the principal. "Hunt is a choice fellow, and carries more influence than any boy in the school. You can't put him down. Everything mean and had sneaks out of his way."

*A Living Worship.*—Dear Friends, keep your meetings in the fear and name of the living God; and be very diligent in waiting upon him in his gifts: give not leave for your minds to wander, and none to give way to drowsiness and sleeping in meetings; for surely it is even a shame to us that this thing, to wit, sleeping in the assemblies of the saints, should be found among any of us; truly Friends, this very thing oftentimes greatly burdens the seed of God in the hearts of many of his children:—wherefore, watch and war against it, and wait to feel life in yourselves, to quicken both soul and body, in the work, worship and service of the living God; that a living sacrifice from his own spirit we may offer unto him. For his worship is a living worship, and performed in and by his living spirit; in which let us wait diligently upon the Lord, and a preparation we shall witness thereby; and feel and enjoy his presence, and be edified, enlivened and warmed thereby, though no words be heard amongst us.—*William Bennet.*

From the London Quarterly Review.

#### West India Emancipation.

##### AGRICULTURAL PROSPERITY.

One of the results of emancipation in Jamaica is the formation of a large middle class, who are cultivating land on their own account, and who are rapidly advancing in intelligence and the habits of civilized life. The intelligent Governor of Jamaica, in the last Blue Book relative to the West Indies, says of the emancipated negroes:

"The proportion of those who are settling them-

selves industriously on their own holdings, and rapidly rising in the social scale, while commanding the respect of all classes of the community, and some of whom are, to a limited extent, themselves the employers of hired labour, paid for either in money or in kind, is, I am happy to think, not only steadily increasing, but at the present moment is far more extensive than was anticipated by those who are cognizant of all that took place in this colony in the earlier day of negro freedom. There can be no doubt, in fact, that a worthy, independent, respectable, and, I believe, trust-worthy middle class is rapidly forming."

Bankrupt Jamaica is rising from the ruin for which she is indebted to slavery. The late census shows an increase in population of sixty thousand since 1851, and the average revenue for the last four years is upward of twenty-six thousand pounds in advance of the closing year of slavery. Her emancipated population are becoming to a large extent, growers of various articles for exportation, which will be trebled and quadrupled as they learn to economize their labour and turn it to the best account; and, if the island can command the capital necessary to carry into effect an act to which, after many unsuccessful attempts, they have obtained the assent of the crown, sanctioning the introduction of Coolie immigrants, under similar regulations to those which have operated so beneficially in Trinidad and British Guiana, there is every reason to believe that agricultural and commercial prosperity will result to Jamaica, such as she never realized at any former period of her history.

##### BRITISH GUIANA AND TRINIDAD.

No cry of ruin is heard here. The colonists after the prostration following the equalization of the sugar duties in 1846, set themselves, with becoming energy, to apply a remedy, and make the best of the circumstances. A large number of free labourers from India have been introduced, under laws and regulations which insure their kind and equitable treatment: and all classes are living in wealth and comfort never dreamed of under the curse of slavery. This government occupies a proud pre-eminence above all the other local governments of the British West Indies with regard to the interest it has manifested in the intellectual and moral elevation of the labouring classes; and more is done by the authorities here for the education of the people than in all the other emancipated colonies together. The revenue, imports and exports, all show a large advance upon the most prosperous times of slavery. The sugar crop of 1857 was the largest ever made in the colony. That was exceeded in 1858, and that again by the crops of 1859, 1860, and 1861. It is not without reason that the inhabitants so proudly speak of it as "the magnificent province." It is not easy to overestimate the benefits which emancipation has conferred upon British Guiana.

Trinidad presents another remarkable illustration of the advantages arising from the substitution of free for slave labour. Here, also the colonists, instead of folding their hands in indolence, and crouching the cuckoo-note of ruin, as the planters in Jamaica did, have set themselves manfully to face and overcome their difficulties; and the consequence is a degree of prosperity to the island far beyond anything known in its former history. To develop the resources of this rich and beautiful country, Coolie immigration, as in British Guiana, has been resorted to with the best results. While the immigrants themselves, under the vigilant protection of the home government, are placed in circumstances of comfort and advantage beyond anything they could attain in their own country,

their labours, with that of the Creole population, as given a powerful impulse to agriculture and commerce. A greatly enlarged revenue, imports considerably more than doubled, the exports of sugar and molasses increased about a hundred per cent., and cocoa fifty per cent., are among the proofs that emancipation has been a blessing to Trinidad, and opened for her a career of prosperity and profit which it would be difficult to assign limits; as immense tracts of virgin soil, of the richest character only await the necessary labour to make them productive of golden harvests.

Barbadoes has received no immigrants, and had no labour except that of the emancipated negroes; but the condition of the colony furnishes a complete illustration of the advantages which have resulted from emancipation to all parties concerned. In every part of this lovely isle the visitor finds himself surrounded by evidences of the industry of a numerous and thriving population, and sees before him a country in the highest state of cultivation, only to be paralleled by the richest portions of the agricultural districts of England. Here the annual revenue is more than quadrupled since the abolition of slavery, the imports doubled, and the annual crop of sugar advanced above a hundred per cent. upon the palmiest days of the old slave system. Because of the labour which is available and is very dear—about one hundred pounds an acre; and it is not an uncommon thing for a sugar plantation now to sell for considerably more than it was worth, with all its slaves attached to it, before emancipation. Hincks, the governor, justly observes: "In this island there can be no doubt whatever that emancipation has been a boon to all classes."

In St. Vincent the decline in sugar cultivation is balanced by the increase in the export of arrow-root which has advanced under freedom from 60,000 lbs. to 1,352,250 lbs., and the exportation of cocoanuts is also large.

Concerning Grenada, Sewall says: "In 1832, two years prior to emancipation, the value of Grenadian exports was £153,175, considerably less than it is now. The fact is that sugar is the only article of export in which the island can be said to have suffered a decline. I do not for a moment deny the importance or significance of that decline; but it should be remembered that, in minor articles, such as cocoa, the island is producing double now what it produced twenty-five years ago. The imports of Grenada also show that its coloured population are not in a worse condition than they were at any period in their past history. In 1857 the imports, of which over one-third were provisions from the United States, amounted to £109,000, against 478,000, 473,000, and 477,000, during the three years immediately preceding emancipation."

Tobago, like most of the other islands, has exhibited decided signs of revival during the last few years; while in St. Lucia, the export of sugar has been doubled with free labour, and that of cocoa nearly trebled; the imports having advanced a hundred per cent. since the year of emancipation.

Besides Antigua, the head of the Leeward government, there are included in it the islands of Dominica, Nevis, Montserrat, St. Kitts, and the Virgin Islands, the latter of which produce little or no sugar. They are not largely productive, but they compare favourably now with the exports during the slavery system. The sugar exportation, for ten years prior to 1832, averaged 43,420,000 lbs. In 1855, since which they have been steadily increasing, they exported 45,145,000 lbs. The average of imports, during the same ten years prior to 1832, was £298,000. In 1858 the im-

ports amounted to £514,835, showing an excess of sugar production with free labour of 2,725,000 lbs., and an excess of imports with free labour of £216,855 and over.

#### SUPERIOR ECONOMY OF FREE LABOUR.

Experience demonstrates the superior economy of free over slave labour. — Sewall gives the following illustration, furnished by — Hincks, the Governor of Barbadoes, who has the credit, both with his friends and political opponents, of possessing a more than ordinary degree of talent and acuteness as a financier and as a man of business:

"As to the relative cost of slave and free labour in this colony, I can supply facts on which the most implicit reliance can be placed. They have been furnished to me by the proprietor of an estate containing three hundred acres of land, and situated at a distance of about twelve miles from the shipping port. The estate referred to produced, during slavery, an annual average of 140 hills, of sugar of the present weight, and required 230 slaves. It is now worked by ninety free labourers—sixty adults, and thirty under sixteen years of age. Its average product during the last seven years (1858) has been 194 hills. The total cost of labour has been £770 16s. or £3 19s. 2d. per hhd. of 1,700 lbs. The average of pounds of sugar to each labourer during slavery was 1,043 lbs., and during freedom 3,660 lbs. To estimate the cost of slave labour, the value of 230 slaves must be ascertained; and I place them at what would have been a low average—£50 sterling each—which would make the entire stock amount to £11,500. This, at six per cent. interest, which, in such property, is much too low an estimate, would give £690. Cost of food, clothing, and medical attendance I estimate at £3 10s., making £805. Total cost, £1,495, or £10 12s. per hhd., while the cost of free labour on the same estate is under £1."

Utterly groundless are the assertions which have been indulged that emancipation has failed, and that it has brought ruin upon the proprietary and peasantry of the West Indies.

If insolvent planters, ruined by slavery and their own extravagance, have failed to carry on an extensive sugar and coffee cultivation without capital, and have consequently been compelled to relinquish their estates; if others have not succeeded in the attempt to make free men work without wages, and have thereby injured their own or their employers' interest by driving the labourers from the plantations; and if the British government, by suddenly depriving the colonists of the monopoly of the British market, threw them into competition with other producers, for which they were not prepared, thus bringing to a crisis the ruin which had been in progress for more than half a century—none of these can, with truth, be classed with the results of emancipation. They have retarded the success of the great experiment, but it has been successful notwithstanding, even in that economical point of view in which its opponents have been so eager to pronounce emancipation a failure. The triumphant results which it has already wrought out in nearly the whole of the colonies, and which it is rapidly producing in all the others, prove that it is always wise and safe to do right, and leave the consequences to the all-wise Dispenser of events. The predictions of alarmists have been completely falsified. It would be difficult to conceive a wider contrast between the condition of things as the planters imagined they would be—the idleness and debauchery, the ruin and desolation they were sure would follow the emancipation of the slaves—and those features of rural industry and domes-

tic comfort, improving agriculture and growing opulence, awakening intelligence and moral progress, which are exhibited in the emancipated colonies. Slavery was the destroyer; emancipation is the restorer. The one tended invariably through its whole history to impoverishment and ruin; the other has awakened industry and confidence, and laid broad and deep the foundations of lasting prosperity and wealth.

None but dreaming enthusiasts could expect that emancipation would all at once, as if by miracle, restore the wasted substance of the planters, and advance the down-trodden negroes—debased and imbruted by life-long slavery, and excluded from mental and moral culture—to a high degree of intelligence, civilization, and virtue, such as can be found only among those who have been favoured through life with educational advantages, and civil and religious liberty. All that could be reasonably hoped for has been realized. The nation has been freed from the sin and shame of sanctioning and perpetuating what the conscience of the people felt to be a system of oppression and crime, which reflected dark dishonour upon a Christian people and government. The dread of insurrection and servile war, which day and night haunted the colonists while slavery existed, has given place to a sense of perfect security; so that, instead of a considerable military force, supported by a formidable and expensive militia embodiment, to keep the slaves in awe, a few native police, appointed chiefly from among the peasantry themselves, are found sufficient for the maintenance of peace and good order. The progress of depopulation under slavery, which threatened to leave the islands without inhabitants, has been checked, and the native crocres are rapidly increasing in number. An improved cultivation has been adopted, and machinery introduced to an extent never dreamed of under the old system, which, while it gives profit to the grower, enables him to supply the British public with sugar at about half the price it bore under slavery and protection. The practical atheism with which slavery overspread the colonies has given place to the benign and hallowing influences and institutions of religion. The Bible, to the slave a sealed book, is now open and free to the emancipated negro; the Sabbath, of which he was plundered, and which, throughout the slave islands, was desecrated as the marketplace, has been restored, and is now kept holy; while the divine institution of marriage, then disregarded and superseded by universal concubinage, is now generally honoured. The revenues of all the islands have been nearly doubled. A more profitable market has been opened for the employment of British shipping, and the consumption of British manufactures; while hordes of wretched, discontented slaves, robbed of all human rights, ground to the dust by oppression and cruelty, and rapidly wasting away, have been transformed into a satisfied, industrious, and improving peasantry; acquiring property for themselves, and grateful for the advantages which the philanthropy and the religion of the nation have conferred upon them.

For "The Friend."

Though the early history of Friends shows that had trials from a self-contented spirit, opposed to the government of the church, yet there was preserved on the immutable foundation a body of living, humble-minded members, who kept the faith, and who loved one another as children of our heavenly Father, and sought one another's real welfare in the Truth. They were tender of the conclusions which the Society came to for its preservation in the comely order of the gospel, and for each others

growth from stature to stature, until they became men and women in Christ Jesus. Some remarks made by John Banks, who had his share of the trials of the day, present a cheering picture of the love and harmony which the lam-like spirit of the Redeemer produces in those who entirely give up to its sanctifying power, and live and walk after its teachings and leadings. He says:

"The Lord our God, even the true and living God, hath promised that he will never break his covenant with his people, nor alter the word that is gone out of his mouth. This covenant which he has made with, and renewed unto his people, is an everlasting covenant of life and peace, even the sure mercies of David, of which he daily makes those witnesses, who break not covenant with him, but retain their first love and zeal for his name and truth. His name is above every name, his truth is as precious as in the beginning, and his glory shines over all in this day; endless praises unto him! He hath gathered many into his unchangeable covenant, and made them nigh unto himself, who are his true-born sons and daughters; children of the promise, quickened and raised up from a state of death, to serve him in newness of life. The work is his own, and the praise and glory belong unto him forever.

"Herein are the sure mercies known, the durable riches, and the living substance fed upon. He nourished us by the virtue of his Word of life, when we were young and tender, which made us grow up before him in stature and in strength, with our hearts filled with love to him, our Father, and in love and unity one with another. All our life long, to this day, hath he been ready to hand forth a suitable supply to our conditions, as we in faithfulness waited upon him. His word is made good and his promise fulfilled, I will never leave thee, nor forsake thee, worm Jacob, *who art little and low in thine own eyes, that dwellest in the low valley, abiding in thy tent, and dost not look abroad upon the mountains of imagination.* The promise is yea and amen, forever to the seed of Abraham, Isaac and Jacob. The blessing that makes rich is obtained and partaken of, in the seed and covenant of life, Christ Jesus. I will give thee for a covenant unto the people, and for a light unto the Gentiles, that thou mayest be my salvation unto the ends of the earth. This is he whom God hath given unto us, and we have believed on, and received him, so that he has become our light, life and everlasting salvation; the High Priest of our profession; our Redeemer and Restorer; our everlasting Shepherd; who by his mighty power, hath brought us unto his fold of rest, where true peace is; magnified by his name forever.

"Dear Friends everywhere, whom God hath quickened, and raised from death to life, by the effectual working of his power, be ye all stirred up in a holy zeal and true tenderness, to consider what manner of persons you ought to be; being mindful what the Lord hath done for you, ever since you were a people; whom he hath made to be his people, who were not his people—I say let your consideration be serious in this matter, that so every one of you, in this day of his power, may bear a faithful testimony for the living God, and the sufficiency of his power and Holy Spirit, against the old enemy and adversary, the devil, and his dark power and spirit. For truly, good is the Lord, and faithful in all his promises to them who wait upon him, as you yourselves are witnesses. Although our travels in times past, were under great exercise and deep affliction, with weeping and mourning, with our hands upon our loins; and although many have been our trials both within and without, the Lord by the all-sufficiency of his

power, hath wrought our deliverance, as we relied upon the same, so that sorrow and sighing are fled away, and everlasting joy is sprung up; yea, endless joy is known here, endless comfort and satisfaction; where we can praise the Lord together in the beauty of holiness, being arrayed with the clothing of his spirit, which makes us all comely before God, even the Spirit of Truth, the Comforter. Our unity and fellowship stands in the spirit and in the truth that comes from the God of Truth, who is light, and in him is no darkness at all; in which, as we live and dwell, we have unity one with another, and all the powers of hell and unclean are not able to break us asunder, nor an unclean spirit to hurt us; for we have salvation for walls and bulwarks, and there is no destroying in all God's holy mountain. For the destroying, wasting, and dividing spirit, and cunning deceit, is upon Esau's mountain and in Cain's field; out from the life and power, the true light and fear of the living God; who is a God of order, and preserves all his children and people in a comely order, living a godly life and holy conversation in all their undertakings; to the end that they may honour and glorify him in their day, by bringing forth much fruit, faithfully waiting upon, and worshipping and serving him.

"Oh! the love of our God unto us; the great care and tenderness he hath had over us, ever since we were a people, that we might be faithful labourers in his vineyard. Did he call us to be idle? Surely nay. Did he give a gift unto male and female, that we should hide it in the earth, and not improve it to do his glory? Oh! nay. Hath he done so much for us that we should always be as children, and neither speak nor act as men? Surely nay; but that we should grow up in stature and strength before him, as perfect men and women in Christ Jesus our holy Head, that we might all work together, as a body fitly framed in holy order, in his heavenly power and spirit, which leads into purity and holiness, love and true unity, which stand in the spirit, where no rent is, and where no strife nor separation can enter.

"Through the blessed working of his all-sufficient power, the Lord in his love brought us together and made us a people, and hath preserved us so, to his praise and our eternal comfort. And it is the work of the devil, by his evil power and dark spirit, and wicked instruments actuated thereby, to divide and scatter us asunder. But my testimony for God, to you my friends, which still lives in my heart, is to the all-sufficiency of his power. Keep close to that which first gathered you near to the Lord and one unto another, who hath placed his name amongst you; and neither call all the powers of hell and death, or any unclean spirit, shall be able to separate, or hurt, or break you asunder, for the power of God is your foundation. Settle upon this, for it stands sure and is of God's own laying; be ye as weighty stones of his building, and then you cannot be moved by all the strength of man's reasoning, nor by all the cunning of the fallen wisdom of Satan; but as your dwelling is in the pure light, and as you retain the feeling sense of the divine life, and keep close to the power, you will be enabled to say, the Lord our God is the true and living God, and besides him there is not another; and therefore we will trust in him and rely upon his power and Holy Spirit, which is all-sufficient forever."

The foundation of the Church of Christ remains the same and stands sure. Happy is it for all those who are built upon it, and who by humble watchfulness and obedience to the Holy Spirit are preserved steadfast, immovable, abounding in the love and work of the Lord. Where any have

slidden from this alone sure foundation, and lose the tenderness of spirit which they once possessed and their love and unity with the brethren, their future peace and happiness will depend upon returning to their first love, in which they followed their Lord and Master through suffering and rejoicing, and were instrumental in building other up in the faith and love of the gospel. The enemy is busy with various snares to deceive and entrap the superficial professor, notwithstanding all his learning and appended acquirements. Our only means of preservation is to be found in lowliness of mind, in the fear of the Lord, waiting upon and faithfully following him in the work which he assigns for us to do. To realize this beautiful and prosperous condition described by J. Banks, we must humble ourselves under the Lord's mighty hand and let him make us vessels of honour for his house and use, and then he will enable us to glorify him, and spread his testimonies in the earth, in their primitive purity and brightness.

Comparatively, she esteemed praise much more excellent than prayer; not only as it is more like the employment of the holy angels, and the spirit of just men made perfect; but as it is less selfish, and hath a more immediate aspect upon God. Our own necessities constrain us to cry to God for relief; and the worst men will pray,—yea, and make vows—when they are in fear; but only good men will return to pay their acknowledgements, when their turn is served. All the ten lepers cried for mercy; but where were the nine? There was but one of them found to render thanks!—*Life of Elizabeth Walker.*

## THE FRIEND.

SIXTH MONTH 7, 1862.

In our last number we took occasion to call the attention of our readers, particularly those in the earlier walks of life, to the many privileges connected with membership in the religious Society of Friends; specifying some of those which contribute largely to the enjoyment of social and domestic life; and endeavouring to bring home to all, the obligation to prize the various benefits thus conferred, in proportion to the good they may be made the means of effecting, if rightly estimated and improved. The subject is one well worthy of frequent and serious reflection.

It is one of the beautiful characteristics in the economy of the church of Christ, that, in the most important sense, all its members stand upon equal ground, and are united together in bonds of true fraternity: "One is your master, even Christ, and all ye are brethren." There is diversity of gifts, and differences of attainment, but no distinction conferring superiority or authority of one over another, except it be that growth in grace, accompanying long continued obedience, whereby experience in the mysteries of the gospel, and knowledge in the administration of the affairs of the church, have been attained to. Such as these are worthy of and should receive double honour, but they ever bear in mind the saying of their Master, "he that is greatest among you shall be your servant." Let the gifts dispensed be what they may, they are each and all derived from the same Holy Head; and the recipients of those gifts, however dissimilar in natural understanding or acquired knowledge, are baptised by the one Spirit into one body; and no one member, no particular class of members, be their position in the body what it may, if they keep in their proper places, can presume to arrogate the functions of the whole body, or to lightly esteem

set at naught the gifts and services of any members, however humble such members may be. For God hath set the members, every one of them, in its body as it has pleased him," and no one of these members can say to another, I have no need of thee; that thus, "there should be no sechim in the body; but that the members should have the same care one for another."

Ecclesiastical history, since the days of the Apostles and their immediate successors, is very much a record of the evils resulting in the professing church from a departure from this divinely instituted polity in the progress of declension and priestly usurpation which took place during the darkness that succeeded the effulgence of the light shed upon the primitive believers, a class of men, set apart by human ordination for the offices in the church, and assuming the title of clergy, in contradiction to the great body of professors, whom they termed the laity, claimed the right to dictate and to govern in all matters pertaining to religion: and although, as the gradual progress of light and knowledge, the manifold evils resulting from this anti-christian system have been measurably curtailed, it still more or less oppresses the various religious denominations, except Friends; fettering their members; barring them from a full participation in the services and privileges belonging to the true believers; and obstructing and delaying the spread of the simple, spiritual and unadulterated truths of the gospel. That the evils inseparable from a state of things so contrary to that provided for in the constitution of the Church of Christ, are seen and felt by very many of those suffering from them, we cannot doubt; and well will it be for the cause of true christianity, when all other religious bodies, like Friends, have freed themselves from this hierarchical thralldom.

A modern English writer, depicting some of the awful consequences attendant upon this unauthorized distinction, makes use of the following language. "No less general, and far more mischievous, is another delusion by which the same word, *ministry*, is confounded with the church. He who enters into the ministry of the church is said to go into the church, as though he were not in it before: the body of the ministers too, the *clergy*, are commonly called the church, and, by a very unfortunate but inevitable consequence, are frequently looked upon as forming, not merely a part, but the whole of the church. \* \* \* Hence too, in ordinary life, the still greater evil, that the more peculiar duties of the christian profession, as distinct from those enjoined by human ethics, are held to be incumbent on the clergy alone, whereby their labours are deprived of help which they might otherwise receive, and which they greatly need. Indeed, they themselves are far too ready to monopolize their office, and to regard all interference of the laity, in spiritual or ecclesiastical matters, as an impertinent intrusion. On the other hand, the laity, instead of being invited and encouraged to deem themselves integral members of the church, and sharers in all the blessed duties of christian fellowship, are led to fancy that these are things in which they have no concern, and that all they have to do with the church, is to go on a Sunday to the building which bears its name, and that if they only bring themselves to listen, they may leave it to the preacher to follow his own exertions."

How strongly such a state of things contrasts with the rights and privileges enjoyed by the members of the religious Society of Friends. The same Divine Hand which brought our forefathers out from the observance of the cumbersome and useless forms and ceremonies that have so generally ob-

tained among professing christians, freed them from this yoke of bondage; and those principles of christian liberty and church government laid down by the Apostle in his epistle to the Corinthians, were incorporated into the discipline and usages of the Society in its earliest days, to be applied according to the varying times and circumstances of its future existence.

Christ's headship in the church; his right to dispense his gifts to whomsoever he may see fit, whether man or woman; the free exercise of those gifts when and where He may qualify therefor; and the equal rights of all the members, acting in his Spirit and for his honour, to take part in administering the affairs of the church are severally acknowledged, and all the members, individually and collectively, are authorized and enjoined to give their aid in carrying them into effect.

It is a great privilege to be freed from the prescribed and studied ministrations of a man, however versed he may be in the divinity of the schools, who being regularly employed for the purpose, and monopolizing the right to preach and publicly pray for the congregation that engages him, must, as regularly, perform "the service" for his audience; no one of whom, however clearly "anything [may] be revealed to him," or to her, is allowed to deliver it, although the apostle tells the believers in his day, "Ye may all prophesy [or preach] one by one, that all may learn and all be comforted." And it is no less a privilege, enjoyed by Friends exclusively, that in our own meetings for Divine worship, each individual member may engage in that worship which is in spirit and in truth, independent of bearing or doing, and in reverent silent waiting, experience a secret sense of that heart-changing Power which contrites the spirit before the Lord and prepares an acceptable sacrifice, whether of prayer or praise, though no minister be there and no vocal sound be uttered.

When contemplating these various privileges enjoyed by the members of our religious Society, the query naturally arises in the mind, to what cause are we to attribute the adoption by its founders, of a faith so simple, so comprehensive, so scriptural? a faith, which, while agreeing with the fundamental doctrines held by other orthodox religious denominations, is expurgated of the many hurtful or needless rites and ceremonies, so generally incorporated with their profession of christianity; and which, when carried out to its legitimate fruits, obliged them to bear testimony, singly and unitedly, against the many evils in the world which were not only indulged in by men of the world, but sanctioned or tolerated by the teachings of the professing church; while at the same time they secured to every true convert to this faith, all the rights and privileges designed to be enjoyed by the disciples of Christ, while in a militant state. How was it, that amid the bigotry and intolerance that surrounded them, they were enabled to see the right of man, as an accountable being, to liberty of conscience, and to contend for it, by grievous suffering, until they had obtained it for all; to see and to declare the opposition of christianity to all war and bloodshed, and to meekly maintain their testimony amid the convulsions of a nation struggling to secure, by arms, its liberties from the aggressions of a tyrant, when all parties believed it right to appeal to the sword, and resorted to the scriptures to justify the bloody abridgment; to proclaim liberty to the captive, though all christian maritime nations were competing in the slave trade; to insist that the gospel must be preached without money and without price, while they devoted their lives to promulgating it throughout the length and breadth of the land, leaving their homes to be ravaged by

exactng priests, or joyfully entering noisome prisons rather than admit their unchristian claims; to maintain the incompatibility of an oath with the command of Christ, though at the cost of liberty and life, exacted by the straightest professors; and in the midst of persecution and contempt, to establish a system of internal government which had for its objects the promotion of the spiritual and temporal well being of the members individually, and the edification of the church, alone? In a word, how was it, that, two hundred years ago, that band of noble protestants and martyrs, founded and left for their successors a religious association, combining in its acknowledged principles, all that pertains to a pure christian church, and by its usages and discipline conferring on its members the many blessed privileges we enjoy to this day?

Was it the study of the scriptures that gave them the remarkable clearness of vision, and clothed them with the necessary wisdom and strength to carry into practice the glorious truths they thus discovered? They highly valued and loved the scriptures, believing them to be "given by inspiration of God" and not doubting that they were "able to make wise unto salvation, through faith that is in Christ Jesus." But other religious professors set the scriptures higher than they did; believed that in them they had eternal life; contended for the absolute necessity of a knowledge of their contents to salvation; studied them in their original languages in their schools, and elaborated learned commentaries on them in their colleges; and accused Friends of being heretics, because they would not admit them to be the primary rule of faith and practice. And yet these zealous and expert scripturians had failed to discover many of the simple truths promulgated by George Fox and his coadjutors,—truths, which, since that day, have been acknowledged as such, by nearly every religious denomination,—and they scoffed at the spiritual views and self-denying obligations of the religion of Jesus, to uphold which those undaunted confessors gladly suffered bitter persecution. Then, as now, these things were hidden from the wise and prudent, and revealed unto babes.

Was it the talents and learning they brought to bear upon this most important of all subjects; seizing upon truth by the force of genius, and untolding the mysteries of the heavenly kingdom by the subtleties of logical reasoning? Undoubtedly there were men of strong intellectual power, and well-taught in the schools, among them, but George Fox, though evidently a man of good understanding, had comparatively little literary education, and the most of the converts to the faith he preached, were men and women, in this respect like himself, so that of them, as of the primitive believers, it might be said, "Ye see your calling brethren, how that not many wise men after the flesh, not many mighty, not many noble are called."

They bore conclusive testimony themselves that it was neither by studying the scriptures; the powers of the natural mind; nor the assistance of learning and worldly wisdom, that they were what they were, and did what they did. But they united in ascribing all these things to giving heed to the glorious day-spring from on high, until the day dawned and the day-star arose in their hearts; by the light of which their spiritual eyes were open to see the truth as it is in Jesus, and being redeemed from the power of sin and the prejudices of education, they came to realize the fullness of the blessing of the gospel of Christ, and were made preachers of righteousness and peace to others.

William Penn, speaking of the efficacy of the preaching of George Fox, gives this brief but

comprehensive exhibit of the grand cause which brought forth the blessed effects to which we have been alluding. "For as it reached the conscience and broke the heart, and brought many to a sense and search, so that which people had been vainly seeking without, with much pains and cost, they, by this ministry, found within, where it was they wanted what they sought for, viz, the right way to peace with God. For they were directed to the light of Jesus Christ within them, as the seed and leaven of the kingdom of God; near all, because in all, and God's talent in all—a faithful and true witness, and just monitor in every bosom—the gift and grace of God to life and salvation, that appears to all, though few regard it." "This," says in another place, "the Light of Christ within, as God's gift for man's salvation," was their "fundamental principle, which is the corner stone of their fabric," and "was the root of the goody tree of doctrines that grew and branched out from it."

Two centuries have passed away since George Fox entered upon his divinely authorized mission, and our religious Society was gathered to republish primitive christianity to the world. Notwithstanding the changes and trials occurring in those lengthened out years, in proportion as it has adhered to the doctrines and testimonies promulgated by its founders, allowing them to govern in the church, and in the lives and manners of the members, it has enjoyed internal peace, vital religion has been known to flourish in its various branches by its heavenly fruits; and though comparatively small, it has stood as a city set upon a hill which cannot be hid. In the weakness that now prevails throughout its borders, and the efforts making by many, under profession of restoring it to its primitive brightness, it is well to ponder whether any good can be gained, by resort to means which have failed to confer on others, the many blessings and privileges Friends have heretofore so richly enjoyed.

#### SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 22nd ult. The English Journals continue to expatiate on the rebel retreat from Yorktown and the capture of New Orleans. The Times speaks of the retreat from Yorktown as a great reverse to the rebels, and enlarges on the difficulties that must arise in governing the South when the United States have brought the rebels within their power. The Morning Post thinks the present position of affairs eminently favourable for effecting a compromise between the North and the South, but admits that there can be no city that would require the aid of both. The Daily News appears to exult in the continued successes of the Federal arms, and defends the financial policy of the United States. The Liverpool Post regards the war as already virtually at an end.

The Paris correspondence of the London Post gives a brilliant account of the Richmond Expedition, and draws their troops from Mexico as soon as possible, but there is nothing to confirm this. The Liverpool cotton market had advanced  $\frac{1}{2}$ . The market for bread stuffs and provisions was dull, prices nominal. Consols 92  $\frac{1}{2}$ . The minimum rate of interest of the Bank of England had been advanced to 3 per cent.

**UNITED STATES.**—Virginia.—The valley of the Shenandoah is again occupied by Federal troops. On the 30th, the rebel forces at Front Royal, were driven out by a brigade of U. S. troops, and a considerable number of prisoners were captured. Gen. Jackson and his army were understood to be in rapid retreat towards their mountain fastnesses. The loss of stores at Winchester, and along the line of Gen. Bank's hurried retreat, will be a brigade of 1000 men. According to the latest account published in the Richmond Examiner, about 4,000 of Bank's men were taken prisoners. The entire loss of the rebel army in the attack and pursuit is said to have been only 100 men. Great efforts were made by Gen. Fremont to throw a portion of the troops under his command, into the Valley, in time to cut off the retreat of the rebel army. With this object, Fremont,

with a strong column crossed the mountain ranges by rapid and forced marches over difficult roads, and with small masses of transportation. After a march of nearly 100 miles, he met Jackson's army on the 1st inst. in full retreat from Winchester. A skirmish ensued and a few prisoners were taken, but the rebels continued their retreat. On the 27th, an engagement took place at Hanover Court House, fifteen miles north of Richmond, in which the rebels were defeated with a loss of about 1000 men killed and wounded and 542 prisoners. The Federal troops lost 379 in killed and wounded. On the 1st inst. at noon, Gen. McClellan telegraphed to Washington, that a desperate battle had occurred near Richmond on the 26th previous, in which the rebels on the right flank of the U. S. army was attacked by the rebels, who in the early stages of the battle, inflicted heavy losses on the Federal troops. Later in the day the rebels were driven back at the point of the bayonet. They attempted to renew the conflict on the morning of the 27th, but were repulsed. Gen. McClellan says, "We have taken many prisoners, among whom are Gen. Pettigrew and Col. Long. Our loss is heavy, but that of the enemy must be enormous." During the battle, Prof. Low's balloon was overlooking the terrific scene, for about 2000 feet above the ground, and his communication from the balloon to Gen. McClellan was kept up, and he was thus instantly informed of every important movement upon the field. The fighting was not renewed on the 2nd inst., and Gen. McClellan's forces occupied a position in advance of that held by them on the 26th previous. The Federal army is said to be more decided and important than was at first supposed. The early occupation of Richmond is anticipated. Gen. Wool has been relieved from his charge at Fortress Monroe and Norfolk. He has been succeeded by Major Gen. Dix. The Union feeling is believed to be reviving. Large meetings have been held in Norfolk and Portsmouth, at which patriotic speeches were made, and much enthusiasm manifested.

**North Carolina.**—The inland water communications between the great seaports of this State and the City of New York, have been opened to steam navigation by the efforts of light draught. There were two from Newburn or other points. The Newburn Progress states that the North Carolina convention in session at Raleigh, has passed an ordinance, directing Governor Clark to discharge all volunteers in the Confederate army over thirty years of age.

**Arkansas.**—It is understood that the Federal forces under Gen. Curtis, had reached Little Rock, and occupied the capital. Many of the inhabitants had fled, leaving only those who were loyal to the Union. The Governor and members of the Legislature fled on the approach of the U. S. army. The Governor took refuge in Mississippi.

**Mississippi.**—Vicksburg has surrendered to the U. S. fleet. Gen. Halleck continued his gradual approach upon the rebel entrenchments at Corinth, and on the 22nd inst. he drove them from heavy batteries. It was supposed that the rebel army had abandoned their stronghold and retreated southwards. The rebels pursued, and about 2000 were taken prisoners. Possession of Corinth was taken without opposition. The rebels had removed every gun, it was subsequently found that the rebels had been on the march for a week previous to the final event, and had been on the march was despatched by Gen. Halleck to Booneville on the Mobile and Ohio Railroad, for the purpose of cutting off the rebel communications by that route. Col. Caldwell destroyed the track in many places, blew up a culvert, burned the depot and locomotives, and a train of six cars with army supplies. He also destroyed 10,000 stands of small arms, and took 2000 prisoners, whom he paroled, as he could not take them with the cavalry, without a long and tedious march. He found 2500 sick and wounded rebels at Booneville.

**Tennessee.**—Memphis has been abandoned by most of its inhabitants. Refugees report that all the newspapers have been removed to Grandis, Miss. Fort Wright is held by the rebels, but in consequence of the scarcity of coal, most of the troops have been abandoned, and the guns taken to Fulton and Fort Randolph. A battery has been constructed by the rebels near Fort Wright, over which a retreat, whenever it becomes necessary, can be made. The Nashville Union of the 24th, says that the rebels are in possession of all the railroads, and are on the interior, and that cotton is being carried to the river.

**Louisiana.**—The New Orleans dates are to the 22nd ult. General Shepley has assumed the duties of Mayor. Major Bell of the Recorder of the City, and Captain James French has been appointed Chief of Police. These

functionaries will take charge of the city until some local citizens shall be elected to fill these offices. The rebel Government has suspended the mails, and commenced business, refusing the rebel currency. Gen. Butler had distributed a thousand barrels of flour and beef among the suffering poor of the city, and in other modes was endeavouring to promote their comfort. The number of Union troops in or near New Orleans, is not far from 10,000. Their health was quite good. There was no cotton of consequence remaining at New Orleans, and what little there was, is claimed as the property of foreigners, who hold it for shipment as soon as the port is officially declared open. In the Red river district there has been no cotton of moment planted this season. Gen. Butler had ordered the circulation of Confederate notes and bills to cease after the 27th ult. Some cotton had arrived from Plaquemine, and considerable provisions from the interior. Gen. Butler appears to hold the reins with a strong hand, and this is, perhaps, the only way in which order can be maintained, and the property of the city restored. One hundred and sixty kegs of specie, containing \$5000 each, had been seized and taken from the custody of the Consul of the Netherlands, who stated that it belonged to Hope & Co. of Amsterdam. It was the belief of Gen. Butler that it was the property of the rebels, and that it rightfully belonged to the United States.

**New York.**—Mortality last week, 340. The amount of specie in the New York banks on the 31st inst., is reported to be \$21,365,230. The premium for gold,  $\frac{1}{2}$  per cent. The following were the quotations in the grain market on the 2nd inst. Chicago spring wheat, 85 cts, a 89 cts.; Milwaukee elah, 90 cts. a 102; white Michigan, \$1.20 a \$1.27; western rye, 60 cts. a 62 cts.; State, 70 cts. a 72. Oats, 44 cts. a 46 cts.; western corn, 45 cts. a 47 cts. for red, and 50 cts. a 52 for yellow. Gen. Butler had. Mortality last week, 289. The market for breadstuffs dull. Sales on the 2nd, of prime red wheat, \$1.17 a \$1.20; white, \$1.25 a \$1.30; rye, 65 cts.; yellow corn, 51 cts. a 54 cts.; oats, 21 cts. a 23 cts.

**The Blockade.**—The recent captures by the blockading squadron have been numerous and valuable. The aggregate value of fourteen steamers and sailing vessels, while attempting to run the blockade, is estimated at over \$5,000,000. Several of the most valuable of the prizes were British steamers.

**Norman Emigrants.**—These excluded people still resort to the coast, and were seen on the 20th inst. at Newport, arrived at New York, with 696 Norman passengers.

**Missouri.**—The State Convention has been called together by Governor Gamble. The convention has legislative powers, and its acts will be as binding as though the laws were passed by a Senate and Assembly.

#### RECEIPTS.

Received from Wm. Llewellyn, O., per E. Hollingsworth, \$2, vol. 25; from A. Cowgill, 10; from Rachel J. Burdett, \$2, vol. 34; from Ellwood Comfort, Mich., \$3.51 on 29, vol. 36.

#### WEST-TOWN BOARDING SCHOOL.

A Stated Meeting of the Committee who have charge of the Boarding School at West-Town will be held on Thursday, the 18th of the Sixth month, at 10 o'clock, A. M. The Committee on Admissions, meet at 8 o'clock the same morning, and that on Instruction at 7 o'clock the preceding evening. The Visiting Committee attend at the School on Seventh day the 14th of the month.

JOEL EVANS, Clerk.

Sixth month 4th, 1862.

For the accommodation of the Committee, a conveyance will be at the Street Road Station on Seventh and Third day afternoons, the 14th and 17th inst., to meet the trains that leave the city at 2 and 4  $\frac{1}{2}$  o'clock.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSIAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

PYLE & MELROY, PRINTERS,  
Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SIXTH MONTH 14, 1862.

NO. 41.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From Evenings at the Microscope.

Insects: Their Mouths.

(Continued from page 316.)

Here you may see the implement with which the bug performs its much-dreaded operation of blood-sucking; for though this is not the head of the bed-bug, but of one of the winged species that are found so abundantly on plants, and which I have just obtained by beating the hedge at the bottom of my garden,—yet the structure of the mouth is so exactly alike in all the members of this immense family, that one example will serve for all others.

From the front of the head, which owing to the manner in which this part is carried, is the *lower* part, proceeds a fine thread, about four times as long as the head itself, which passes along between the fore legs, close to the body, beneath the breast. It is, however, at the pleasure of the animal, capable of being brought up so as to point directly forward, and even projected in front of the head, and in the same plane as the body; a fact which once came under my own observation. I found a plant-bug (*Pentatoma*) which had plunged this thread like sucker of his into the body of a caterpillar, and was walking about with his prey, as if it were of no weight at all; carrying it out at the end of his sucker, which was held straight out from the head and a little elevated. He fiercely refused to allow the poor victim to be taken away, being doubtless engaged in sucking its vital juices; just as the bed-abominable victimises the unfortunates who have to sleep at some village inn.

Well, we put this head with its sucker between the plates of the compressium, upon the microscope-stage. The thread is an organ composed of four lengthened slender joints, beset with scattered bristles, and terminating in a point on which are placed a number of excessively minute radiating warts,—probably the seat of some sensation,—perhaps taste. This jointed organ is the under lip; it is slit all down one surface, so that it forms an imperfect tube, or furrow, within which lies the real weapon, a wire of far greater tenacity, which by pressure I can force out of its sheath. It is so slender that its average diameter is not more than  $\frac{1}{120}$  of an inch, and it ends in the most acute point; yet this is not a single body, but consists of four distinct wires, lying within one another, and representing the maxillæ and the mandibles. These can be separated by the insect, and will sometimes

open when under examination; but no instrument that I can apply to them is sufficiently delicate to effect their separation at my pleasure. Just at the very tip, however, under this high power, we can see, by the semi-transparency of the amber-coloured chitine of which the organ is composed, that there is another tip a little shorter, and as it were contained within the other. This inner point is cut along its edges into saw-teeth pointing backward. Such exquisite mechanism is bestowed upon the structure, and such elaborate contrivance is displayed for the comfort of an obscure insect, by Him who has not disdained to exercise his skill and wisdom in its creation!

You know the stout flies which are denominated horse-flies or whale-flies (*Tabanus*), which are so numerous in the latter part of summer, flying around horses, and men too, if we intrude upon their domains. They are continually alighting on the objects of their attentions, and though driven away, returning with annoying pertinacity to the attack. You may always recognize them by the brilliant metallic hues—reds, yellows, and greens,—with which their large eyes are painted, often in stripes or bands. These are voracious blood-suckers; and, as might be supposed from their propensities, they are well furnished with lancets for their surgery. Here you may see their case of instruments, which are so effective, that Réaumur tells us, that having compelled one to disgorge the blood it had swallowed, the quantity appeared to him greater than the whole body of the insect could have been supposed capable of containing.

All the parts here are formed of the common amber-coloured chitine, brilliantly clear and translucent. The upper lip forms a sort of straight sheath, in which all the other parts are lodged when not in use. The *mandibles* are narrow lancets; of which one edge near the tip is beset with reverted saw-teeth, and the opposite edge with excessively sharp points standing out at right angles, while the surface is roughened with lozenge-shaped knobs set in regular rows. Below these are the *maxillæ*, which are the principal cutting instruments; these are shaped like a carving-knife with a broad blade, strengthened at the basal part of the back by a thick ridge, but brought to a double edge near the tip. The back-edge is perfectly fine and smooth, so that the highest powers of the microscope can only just define its outline; while the other edge is notched into teeth so delicate, that twelve of them are cut in the length of a ten-thousandth part of an inch; and yet they are quite regular and symmetrical in length, height and form! I know of no structure of the kind which equals this. These teeth are continued throughout the inner edge of the blade from the tip to the base, and are about eight hundred in number; though the length of the entire blade is only such that upwards of a hundred and fifty of them, if laid end to end, would not reach to the extent of an inch!

The office of these wonderful instruments is doubtless to cut and enlarge the wound within, and thus promote the flow of blood. The whole apparatus is plunged into the flesh of the victim—

horse or man; then the *maxillæ* expand, cutting as they go, and doubtless working to and fro as well as laterally, so as to saw the minute blood-vessels. At the same time the *mandibles*, with their saw-teeth on one side, and pricking points on the other, work in like manner, but seem to have a wider range. Finally, there is an exceedingly delicate piece beneath all, which seems to represent the *labium* or under lip.

In the active and cunning little flea, that makes his attacks upon us beneath the shelter of the blankets and under cover of night, the piercing and cutting blades are very minute, and have a peculiar armature. They remind me (only in miniature of course) of those formidable flat weapons which we often see in museums, the *costæ* of the huge saw-fishes (*Pristis*); a great plate of bone covered with grey skin, and set along each side with a row of serrated teeth. Here the blades are similar in form, being long, straight, narrow laminae of traoparent chitine, set along each edge with a double row of glassy points, which project from the surface, and are then hooked backwards. These are the *mandibles*, and they closely fold together, inclosing another narrower blade, the upper lip, which has its two edges studded with similar points, but in a single row.

In general, as we have seen, the *maxillæ* are the specially armed weapons, the *mandibles* acting a secondary part, often serving as mere sheaths,—a those insects which pierce other animals with the mouth. But in this case the *mandibles* are the favoured parts, the *maxillæ* being developed into broad leaf-shaped convex sheaths, inclosing the *mandibles*.

There are, however, two cutting blades besides,—the *labial palpi*, which have their upper edge thick, divided into four distinct joints, and set with bristles,—thus retaining the proper palpal character, while their under edge is thinned away to a fine keen blade, in which there is no sign of jointing. Then there are the *maxillary palpi*, of which the joints are furnished at their tips with tiny projecting warts, doubtless the seats of a delicate perception, and hollowed into a double series of chambers, which are filled with a dark coloured fluid.

All this is very interesting to behold, and is calculated to exalt our ideas of the wonderful and inexhaustible resources of Omnipotence, as well as to humble us, when we reflect on how little we certainly understand even of what we see.

Once more. Let us submit to examination the complex case of instruments wherewith the great performer her unwelcome yet skillful surgery. I say "her," because among the gnats, as among most of these puncturing insects, it is the females only who attain skill in the phlebotomic art, the males being innocent of any share in it, and being indeed unprovided with the needful implements.

Here is a large specimen, resting with elevated hind-legs on the ceiling, and now in alarm off with shrill humming flight to the window. I decapitate her without compunction, as it is but a fair penalty for her murderous deeds; and, as of old the executioner held up "the head of a traitor" to the public

gaze, so I lay this head on the glass of the compressor for your contemplation.

And before I apply pressure to the glass-plate, devote a moment's attention to the *toot ensemble*. First, the head itself is a hemisphere, almost wholly occupied with the two compound eyes, which present the beautiful appearance of a globe of black velvet, studded with gold buttons arranged in lines crossing each other at right angles. The summit of the head, where the two compound eyes unite, bears a sort of rounded pedestal, the area of which forms the sole part of the head not covered by the organs of vision. On this are placed, side by side, the two antennæ, springing from rounded bulbous bases; they consist of twelve (exclusive of the basal bulb) cylindrical joints, which are beset on all sides with short arched hairs, but have besides a whorl of radiating long hairs surrounding the bottom of each joint. The effect of this is exceedingly light and elegant.

Between these projects a long cylinder, which represents the lower lip (*labium*.) it slightly swells towards the tip, where it forms a round, nut-like knob, covered with exceedingly minute papillæ, and no doubt constituting a highly sensitive organ of touch. For the greatest part of its length it is covered with lined scales, and with short arched hairs, like the antennæ, while each side of its base is guarded by a labial palp of three joints.

On applying a graduated pressure, slowly increased to actual contact of the plates (or as near an approximation to it as we can effect), we see first that the nut-like tip of the *labium* expands into two concave leaves, like the bracts of a bud, and displays two pairs of more delicate leaves within them. Then from a groove along the upper side of the *labium*, spring out several filaments of great elasticity and of the most delicate tenacity. One pair of these represent the mandibles; they consist each of a very narrow blade with a stronger back like that of a scythe. Their tip is brought to a most acute point, and the edge is immediate proximity to this is cut into out and nine teeth pointing backward: the rest of the edge is smooth, but the whole blade is crossed by a multitude of oblique lines of great delicacy, which may be intended to keep the edge constantly keen.

Next come the *nozzles*, or lower jaws, horny filaments as long as the former, but still more delicate, constituting simple cutting lancets, with a back and a keen blade, a little widening at the tip.

Besides these there is the *tongue*, consisting of a central rod which is distinctly tubular, and of a thin blade on each side, fine-edged and drawn to an acute point. And also the *labrum* or upper lip, an organ having the same general form, but constituting an imperfect tube; a tube that is, so far from which about a third of the periphery is cut away, so as to serve as a sheath for the tongue, which ordinarily lies within its concavity.

I scarcely know whether this apparatus is not more wonderfully delicate than any we have examined—even than that of the flea. And how effective it is you doubtless well know; for when the array of lancets is introduced into the flesh, you are aware that a tumour is left, which by its smart, itching, and inflammation, causes much distress, and lasts many hours. This effect is probably produced partly by the deep penetration of the instruments,—for they are fully one-sixth of an inch in length, and they are inserted to their very base,—and partly by the injection of a poisonous fluid, intended, as has been conjecturally suggested, to dilute the blood and make it more readily flow up the capillary tubes. The channel through which this fluid is injected is probably the tongue, which you see to be permeated by a tube containing a fluid;

and the same channel may afford ingress to the diluted blood.

The *labium* does not enter the wound. If you have ever had the philosophic patience to watch a gnat while puncturing your hand, you have observed that the knob at the end of the proboscis is applied to the skin, and that then the organ bends with an angle more and more acute, until at length it forms a double line, being folded on itself, so that the base is brought in close proximity to the skin. Meanwhile the lancets have all been plunged in, and are now sunk into your flesh to their very bottom, while the *labium*, which formed merely the sheath for the whole, is bent up upon itself, ready again to assume its straight form, as soon as the disengaged lancets require its protection.

For "The Friend."

#### Soldiership and Christianity.

(Concluded from page 315.)

"We now proceed to point out, briefly, certain features in the military calling and life, which seem to us absolutely incompatible with a perfect obedience to the will of Christ.

"And first of all we must refer to the condition,—the essential, invariable, inevitable condition—on which all military service is and must ever be assumed, namely, the total surrender of individual assent to the control and authority of another. We presume that no one competent to have a judgment on such a subject,—certainly not the admirers of Captain Hedley Vicars' character and memoirs,—will deny that the characteristic mark of a genuine christian profession is cheerful and universal submission to the will of the Saviour, 'bringing into captivity every thought to the obedience of Christ.' For the christian, at any rate, the supreme master of conscience is Christ. To this rule there is absolutely no exception, not even a regard to father, or mother, or wife, or children, or brethren, or sisters, or life itself. That the command of the civil magistrate forms no exception, is proved by the example of prophets, apostles, and martyrs, in all ages, who have not deemed it right in the sight of God to obey man rather than God. But what is the law of the soldier's life?

"We give the answer in the language of Sir Charles J. Napier, the hero of Scinde, from a work which he published on Military Law some years ago.

"After stating that the duties of a citizen may be divided into three parts, namely, his duty to God, to the laws of his country, and to mankind at large, Charles adds:—

"But the soldier has nothing to do with these three duties; that is to say, he has nothing to do with them in his character of a soldier. It is true that, as a man of his rank, he is being responsible to his Creator, both for his religion and morals. But as a soldier, OBEDIENCE is the *Lex and the Prophets*. His religion, law, and morals, are in the 'orderly back.' If that says, 'spare,' he spares. If that says, 'destroy,' he destroys. I do not speak of a Russian slave in military habit; I speak of a British soldier. He is the representative of a good soldier is in the keeping of his general; who has the whole responsibility, before God and man, for what the soldiers do in obedience to his orders."

"Take another authority. Count Alfred de Vigny, who was an officer in the French army for fourteen years, thus describes the position of a soldier:—

"—Those alone who have been soldiers know what servitude is. To the soldier slave is obedience, passive and active, the law of his life,—the law of every day and of every moment; obedience not stopping at sacrifice, nor even at crime. In him alone is the abnegation of his self-will, of his

liberty of independent action, absolute and unreserved; the grand distinction of humanity, the responsibility of a moral agent, being made over once for all to a superior authority. — *Quoted in Marshall's Military Miscellany*, p. 117.

"Now, we strenuously and confidently deny that a christian can put himself in a position where he must act as a mere machine. We maintain that under no circumstances, and for no consideration whatever, is he at liberty to become the blind instrument for the performance of acts having a moral character, without consulting the voice of conscience, or paying the slightest heed to the will of his master. If there be some special act of indulgence or absolution promulgated by the great Lawgiver of Zion, for the behoof of military men, releasing them, in their professional capacity, from observing his laws, let it be produced. For ourselves, we must plead entire ignorance of its existence."

"Now, let it be remarked, that our reasoning as to the incompatibility of a soldier's life with a christian profession does not proceed on the assumption of the absolute unlawfulness of war. We have no right to assume that in our present argument, and we do not assume it. We only assume what none will be bold enough to deny, that a government, or a general, or whoever has the command of an army, may undertake enterprises or order sets to be performed that are unjust and unchristian. And surely, of all other men, those who control armies have the least right to affect the possession of moral infallibility. Well, then, if an army may be commanded to do what is wrong—if, as all history testifies, all armies, (most assuredly not excepting the British army,) have, under superior command, committed horrible wrongs and cruelties—how can a christian man put himself in a position, where, *by the very conditions upon which he enters there*, he binds himself, without hesitation, to a course of conduct, to perform acts which he may feel to be plainly condemned by the dictates even of his natural conscience, much more by the authoritative will of Christ. We observe that Captain Vicars tries to comfort himself on one occasion by saying, 'I engaged in a doubt that it is a just war we are engaged in.' We mean no disrespect to him when we say that, he was probably little qualified by position or intimate knowledge of the facts to form an impartial judgment of its justice or injustice. We have no doubt that if he had been going to fight with the Russians, instead of against them, (for which a very plausible case certainly might have been made out, especially as certain Protestants who knew in what restless efforts for Oriental aggrandizement on the part of the Catholic church the war had originated,) he would have pronounced for its justice with no less hesitation. Be that as it may, the question is, what right had Captain Vicars to import into the account any considerations whatever of the justice or injustice of the war? He was sworn to obey his Queen and his superior officers in whatever they prescribed him to do, be it just or unjust. And we say it again, with the utmost emphasis we can give to words, that this is a position which no christian can consistently occupy."

"But we remark further, that the work which a soldier has to do is utterly, deeply, revoltingly at variance with the sentiments and dispositions which a christian ought habitually to cultivate. We are willing to believe, may, indeed we have no doubt of it, that much of the talk in this volume, about longing to be 'let loose' upon and 'have a brush' with the Russians, and to die fighting for his colours, &c., is what we must be permitted to

ball, without meaning any offence, mere professional cant.

"Still, with all this allowance and mitigation, there is something to us altogether inexplicable in the fact, that a man holding such views as he did, and holding them so devout and passionate an ardour, could bring himself to take share in such scenes as are described (not in this volume, but elsewhere) to have been enacted before Staspolop. We will take only one out of many aspects of the case that occur to us.

"Captain Viers professed, and his whole conduct proved, beyond all suspicion, with what intense sincerity he professed, to feel the deepest concern for the salvation of others. Profoundly impressed with the infinite worth of the soul, and the incalculable peril involved in men's dying and going into the presence of God unprepared, he laboured, in season and out of season, to bring those within his reach into a state of salvation. 'Oh! it is enough,' he exclaims, 'to make one's heart bleed to see, in one hospital after another, men dying without any kind friend or faithful minister to direct their hearts to the words of heavenly mercy, to point them to Jesus, and to refresh their souls with the water of life.' Again, 'Although I have often cause to grieve for my backwardness and slothfulness in the cause of Christ, yet my heart yearns over the souls of those who have not fled to the cleansing fountain of His blood for pardon and peace; and often, on rising from my knees, I have felt so powerfully drawn by the love of Christ, that I have been almost on the point of going out through the camp, to endeavour to impart to others the ground of my own peace and happiness.' Now, will anybody explain to us how a man entertaining such views and feelings as these as to the inexpressible value and importance of salvation, could nevertheless behold, and act himself an instrument in hurling scores and hundreds of immortal spirits into eternity, in what he, at any time, must have considered an unusual condition? 'He was acting in obedience to his sovereign,' we shall be told. But in the name of all that is solem, has obedience to an earthly sovereign no limit? Is that warrant enough to lull to rest the conscience of a christian man in the perpetration and performance of deeds involving the production of immortal souls?

"The warfare to which christianity summons its disciples, is against pride, avarice, ambition, malice, revenge, and other spiritual evils, many of which find their highest excitement and encouragement in wars waged by men and nations against each other. Its testimony in regard to these, is that they come of men's lusts that war in their members. And yet we constantly find in this *Life of Captain Viers*, and similar works, such expressions as 'the soldier of the cross,' 'a good soldier of Jesus Christ,' 'the great Captain of our salvation,' and others of kindred import, employed in, at least, a most equivocal sense, so as to leave us in doubt whether the writers do not confound the spiritual conflict, which the christian is called upon to wage, by means of 'the weapons that are not carnal,' with that coarse literal warfare which is carried on by material steel swords and bayonets,—by cannons, and howitzers and bomb-shells, and the object of which is the wholesale slaughter of human beings, by stabbing, cutting, shooting, drowning, and blowing them limb from limb with gunpowder. If we were not quite sure of the entire absence of any irrelevant intention, such perversion of scriptural terms would appear to us almost profane. If a racer or pugilist were to take the metaphors of the New Testament, and apply them to his own calling, we certainly should

feel shocked, even though it were done seriously, and we cannot, we confess, hold it any more justifiable in the case of a soldier.

"Some years ago there was another life published, which had almost as great a run as that of Captain Viers, which was in every respect as beautiful and instructive a piece of biography. It was entitled *A Christian Philosopher's Triumph over Death: a Narrative of the Closing Scenes of the Life of the Late Dr. Gordon, of Hull*, by the Rev. Newman Hall. We cannot resist the temptation of quoting the following fragment, most *appropos* to the subject before us:

"'He (Dr. Gordon) had been, for a considerable time deeply impressed with the conviction, that all warfare was anti-christian and inhuman, and often expressed his astonishment that any good man could fight, as the precepts of Christ seemed to him so decidedly to condemn the practice. The subject now presented itself to his mind with peculiar force. He said, 'How wonderful that man can go to war! How could I die now, hoping God would forgive me, if I would not forgive them, but sought to kill them in battle? How different is dying in my circumstances to death in a battle field!'

"'Striking indeed the contrast! In one case, calm, quietness, the presence of dear friends, the voice of affection, the accents of prayer and praise. In the other, tumult, the roar of cannon, the thunder of the captain, the fury of the combatants, the execrations and groans of the dying, rage, revenge, laughter! Whatever may be said of the glory of dying on the field of battle, surely it is an awful thing for a man to be hurried, from the excitement and din of conflict, into the presence of his Judge, fresh from the slaughter of his fellow-men, and accompanied, perhaps, by the souls of those whom he has just slain! Are the combatants christians? Then they whose mutual relation to their command Lord binds them to a special love towards one another, appear before Him, their last act on earth having been one of hostility even to the death. But if they are not christians, then the blow which sent them into eternity was one which for ever cut them off from the hope of salvation, which suete the soul as well as the body, and consigned it to eternal death. To slay a christian is to smite Christ himself; to slay an unbeliever is to plunge a fellow-being into hell. Terrible alternative! Yet all who fight, not only strike such a blow, but expose themselves to the risk of dying in the very act of striking it. May all christians soon acknowledge the universal obligation of the command, 'Love your enemies, and do good to them that hate you!'

"Without waiting for others, may they at least, by obeying the precepts, fulfil the predictions of the sacred book, and 'beat their swords into ploughshares, and their spears into pruning-hooks,' thus manifesting that christianity is indeed, as the angels heralded it, 'Peace on earth, and good-will to men!'

"For our own part, we have the fullest conviction, that had Captain Viers' life been spared, he could not have failed, as his knowledge of the christian system became more intimate and profound, to have been forced upon him the conviction, that the profession of a christian and a soldier could not possibly be reconciled. He was but a young convert, and his intercourse had evidently been with those whose minds were unappreciably warped on this point by educational prejudice and military associations. But with the New Testament in the hand of a man of so much simplicity and godly sincerity, we believe the final result would not have been doubtful. Indeed, it seems

to us pretty clear, that as it was, he had a lurking mis-giving as to the lawfulness of his calling. For in one place he says, with great emphasis, that if he had known Christ, who he would be seventy years of age, *well satisfied* he would never have entered the army. But why not? If the military profession is perfectly in harmony with the mind of the Saviour, and if, as is repeatedly affirmed in this volume, it affords special opportunities for serving him, and making known his truth and grace, why should Captain Viers say he would certainly never have entered upon it, had he been converted so early? This incidental revelation of what was working in his mind, seems to us pregnant with significance."

From the London Quarterly.

In the Fourth month number of the London Quarterly is an interesting article on the Eastern Archipelago, from which we offer some extracts, which we think will be acceptable to the readers of "The Friend."

"The Eastern Archipelago extends over a space of more than 8000 miles, and consists of an immense labyrinth of islands, among which are at least twenty countries of considerable size, and one which nearly equals Europe in extent. This cluster of islands and islets, scattered in irregular profusion over the Southern Ocean, is supposed by some geologists to consist of the fragments of a vast continent which has been broken up by some mighty convulsion of nature in ages far beyond the historical era; but whether it is composed of the *brisers* of a former continent, or whether a multitude of islands have arisen slowly from the deep, is a problem which no one has yet satisfactorily solved. Commencing at the further extremity of the Bay of Bengal, this wonderful archipelago stretches eastward far into the Pacific, through 50 degrees of longitude, while in breadth it extends through 81 degrees of latitude. It comprises islands, and groups of islands, inhabited by races differing widely in character. It is not exposed to the extremes of heat. The air is cooled by constant currents; and the monsoons, in their regular recurrence, purify the atmosphere, and disperse the pestiferous miasma generated by a fierce sun in forests and swamps which remain in a state of primitive nature. Abundant rains fertilize the soils, and produce a magnificence of vegetation which no country but Brazil can rival; and it has been, and still is to some extent continues, the theatre of prodigious volcanic action, to which it owes much of its unrivalled beauty and fertility; for ashes and scoria, if they blast and destroy for a time the luxuriant tropical flora, afterwards constitute the basis, and become the cause, of a most exuberant vegetation. In Java there are forty-six volcanic peaks, twenty of which still occasionally emit vapour and flame. The whole archipelago, indeed, forms part of a great volcanic area extending into the very centre of Asia. These eruptive forces must have operated in remote ages with inconceivable violence, detaching masses of land from the continent, shattering islands into fragments, and throwing the whole into disorder. Of the fearful energy with which these subterranean forces have manifested themselves, even in modern times, we have many examples. In the island there, the great eruption of Tomboro, in the island there, about 200 miles from the eastern extremity of Java, is a notable example. In 1815 this volcano, which had been for some time in a state of smouldering activity, burst forth with the most tremendous violence in the month of April, and did not cease to eject lava until July. The sound of the incessant explosions was heard in Sumatra, distant 970 geographical miles in a di-

rect line; and at Ternate, in the opposite direction, at a distance of 720 miles. Out of a population of 12,000 in the province of Tomboe, only twenty-six individuals survived. On the side of Java, the ashes were carried to a distance of 300 miles, and 217 towards Celebes; and the floating cinders to the westward of Sumatra formed a mass two feet thick, and several miles in extent, through which ships with difficulty forced their way. The finest particles were transported to the islands of Amboyna and Banda, 800 miles east from the site of the volcano; and the area over which the volcanic effects extended was 1000 English miles in circumference, including the whole of the Molucca Islands, Java, and a considerable portion of Celebes, Sumatra, and Borneo.

"The intercourse between continental Asia and the islands of the archipelago dates from a very remote period. Their rare products were in request in China and India long before they were heard of in Europe. Camphor and spices, two of the most esteemed productions of these islands, were used by the Chinese two thousand years ago; the one for diffusing an aromatic fragrance through their temples, the other as indispensable condiments in their feasts. A Hindu empire long flourished in Java, where many magnificent ruins still attest its duration and greatness. The Arabs subsequently gained a footing there, as well as in the other islands of the archipelago, and gradually supplanted the religion and governments of India. The Malays are now the dominant race, and they have reduced, where it was possible, the aboriginal population to slavery. The Malay Kingdoms have generally perished; but the Malay people remain, and constitute the most energetic portion of the inhabitants, possessing virtues which, developed by a firm and beneficent government, might raise them high in the scale of civilization.

"Although the piratical system has received a severe check, and may be considered as destroyed in some of its former haunts, it is still in full operation elsewhere. On the northwest coast of Borneo, the Dayaks have been reduced to order, but the Malays in other parts of the archipelago still carry on their depredations: much, therefore, remains to be done before the seas are completely cleared of these lawless freebooters.

"To a needy and energetic people, with no higher law than force, and no recognized standard of morals, the temptation to piracy must be irresistible. The wealth of the world daily passes along their shores. Ships freighted with the commodities and luxuries of Europe and Asia are often becalmed in lagoons, or entangled in a labyrinth of shoals and islands, from which they can discover no escape. The natural character of the Malay adds force to other strong inducements to rob. Piracy is not merely a habit; it is a passion. The organization of a community for this purpose is as formidable as it is complete. High up the stream of some beautiful river, presenting the most enchanting scenery, the banks exhibiting pictures of Arcadian simplicity and primitive innocence, are moored fleets of boats, waiting for the well-known signal to put to sea. The vessels are built to subservise the exact purpose for which they are intended: the largest are 100 feet in length, with a proportionate beam, carry a gun in the bow, swirl on each broadside, and are propelled by sixty or eighty sails; others, drawing only a few inches of water, are designed to approach as swiftly as the swoop of a hawk, and to board some unsuspecting ship before her crew can make any preparation. The platforms of the larger prahus are crowded with men who, at the prospect of a fight, generally deck themselves in scarlet; and the

spectacle is said then to be eminently military and imposing: the brass guns glitter on the bows, spears and double-handed swords, gleam in the sun; the fighting men often appear resplendent in steel armor, and their courage is animated by the beating of drums and gongs. A defenceless trader has little hope of escape from such formidable enemies.

"It is not the mere hope of plunder that inspires the Dayak of Borneo in his expeditions, but a singular passion has long prevailed for the possession of human heads. A Dayak is not considered an eligible suitor until he has presented his mistress with one; and the possessor of several is said to be readily distinguishable by his proud and lofty bearing. Heads are displayed in the most conspicuous parts of the houses, and night at first is supposed to be those of a long line of ancestors. One house, belonging to a Dayak chief, was found to be a perfect Golgotha, containing 500 human skulls, which had descended as heir-looms for generations. The origin of this singular passion is a belief that the persons whose heads are thus obtained will be the slaves of their possessor in a future state; they have become even articles of commerce, prized in proportion to the dignity of their former owners; but the heads of women and children are as eagerly sought as those of men. Whole families are slaughtered for the human spoil; and such is the ferocious character that this horrible passion has impressed on some of the tribes, that a chief has been heard to declare that if any one of his people met his own father in a head-hunting expedition he would undoubtedly kill him.

"That portion of the archipelago which has been the most vigilantly watched by the cruisers of civilized governments has been nearly cleared of piratical prahus; but among the multitude of small islands, and in several rivers, they still swarm, and inflict serious injury on commerce. As the crews are generally massacred, nothing is ever heard of these vessels, and their loss is probably often attributed to shipwreck when they have been pillaged and burned by the pirates of the Eastern Seas.

(To be continued.)

*Let the Enemy as a transformed angel lead into the wilderness of mere notional religion.*—When it pleased an unutterably merciful power to pluck my feet out of the midst of mire and filth, and clearly to show me what I was, and what I should be,—then there sprang in me living desires to know the way to the kingdom,—then it was that the enemy, as a transformed angel, took me into the wilderness of notional religion, and set me upon examining different systems of religious belief, in my own will, as well as upon judging of them by my own wisdom: and I compared doctrine with doctrine, text with text, and became by diligent study, wise in notions, though trutless in themselves; and the enemy made me strong in argument, and potent in scripture. But how shall I speak of His goddess, who broke the net in which I was entangled, and delivered me from the snare; and who introduced me in measure into the saving knowledge of Himself, even that which is revealed as in the cool of the day, by the still small voice. Oh! how plainly did I then see, that all which I had learned, read, held, and believed in my own will, was to be given up; how clearly did I see, that all knowledge, faith, obedience, but that which the Father was pleased to beget and raise in me in his own season, was good for nothing, and must be cast out as salt that hath no savour—as manna not fit for present use. . . . but find myself constrained to wait upon the Lord day by day,

that so, as much strength, as much knowledge, as much satisfaction in regard to religious matters, as is best for me in my religious condition, may be handed to me. And in truth, this is the surest way, saith my very soul from daily experience; for things have never been cleared up to my certain satisfaction in such a wonderful manner, as since I have been under this discipline of the cross to all selfish wisdom. Oh! the sweetness of being under the tuition of Him, who verily teacheth as never man taught.—John Barclay.

Selected.

"Oh! that I had wings like a dove,  
For then would I fly away and be at rest." Ps. 55-6.  
When shall I be at rest? my trembling heart  
Grows weary of its burden; sickening still  
With hope deferred. Oh! that it were Thy will  
To loose my bonds, and take me where thou art!

When shall I be at rest? My eyes grow dim  
With straining through the gloom. I scarce can see  
The way—marks that my Saviour left for me:  
Would it were morn, and I were safe with Him.

When shall I be at rest? Hand over hand  
I grasp, and climb an ever steeper hill  
A rougher path. Oh! that it were thy will  
My tired feet might tread the promised land!

Oh that I were at rest! A thousand fears  
Come thronging o'er me; lest I fall at last.  
Would I were safe; all joy and danger past,  
And thine own hand might wipe away my tears.

Oh that I were at rest, like some I loved,  
Whose last fond looks drew half my life away;  
Seeming to plead that, either they might stay  
With me on earth, or I with them above.

But why these murmurings? Thou didst never shrink  
From any toil, or weariness, for me;  
Not even from that last deep agony—  
Shall I beneath my little trials sink?

No, Lord! for when I am indeed at rest;  
One taste of that deep bliss, will quite effice  
The sternest memories of my earthly race,  
Save but to swell the sense of being blest.

Then, lay on me whatever cross I need  
To bring me there. I know thou canst not be  
Unkind, unfaithful, or untrue, to me!  
Shall I not toil for thee, when thou for me didst bleed?

*Materials for Paper.*—Flax holds the first place among fibres, which, from their strength, flexibility, and other practical qualities, are fittest for the manufacture of paper. Flax has hitherto been grown in India in large quantities, but almost entirely for the sake of the seed. Various means have from time to time been used, to extend the cultivation of this useful plant in India, and it has been produced in the Punjab, of a quality equal to that of the best kinds received from Russia. The plant which stands next to flax for the quality of its fibre is the rhea, of Assam, and other parts of India. This plant grows to a height of from three to four feet, and being a perennial, the expense of cultivation is less than that of most plants. It will bear cutting down three times in a season; the first crop yielding coarse, the second and third fine fibres. Probably about ten per cent. of useful fibre may be extracted from the stems of this plant. The Neighgher nettle, the madar, the well-known jute of commerce, the salet bariala, the ambarce, the hemp, the sunn, the jetes, the pine apple, the agave Americana, the fourcuya gigantea, the plantain, the yucca gloriosa, the potherium tenax, or New Zealand Flax, &c., may also be employed for the same purpose. All of these, except the last enumerated, are indigenous to India, and contain fibres which may be more or less usefully applied to the manufacture of paper, and to textile fabrics.—Lute Paper.

## The Anglo-Indian Cotton Trade.

The severe depression under which the English manufacturers have been labouring for the last twelve months has been considerably alleviated by the prospects of the cotton trade with India. The anticipations formed of the probable magnitude of that trade in years to come are, indeed, of the grandest, and not without reason, for the capabilities of the magnificent empire of Hindostan are in the merest infancy of development, yet have already yielded results that have far surpassed expectation. Until very recently India had been a burden to her conquerors. Deficiency of income and increase of debt were the staples of Indian finance for more than twenty years, especially from the time the charter of the East India Company expired, and its privileges were resumed by the British government, down to the close of the administration of Lord Canning. But within the last three years a change has come over the spirit of the dream, mainly owing to the exertions of — Laing to introduce a better system of finance. It was to the unequal taxation that prevailed under former administrations, and to the injudicious interference of the government with the tenure of land, that we must ascribe the fact that so much disaffection existed in India, and that the Sepoy mutiny broke out. In spite of these arbitrary measures for the extorting of revenue, the Indian government found itself getting deeper and deeper into debt, and was obliged to apply to the Imperial Parliament for loans to keep itself on its legs. But even with this assistance increased taxation was still the order of the day. In 1859 a duty of ten per cent. was placed on all cotton piece goods imported into India; and in the following year the duty on cotton yarns and twist was raised to the same amount. The Manchester manufacturers looked with alarm on this bold step, which bid fair to cripple their trade with the Hindoos; but they reflected upon it, and came to the conclusion that until the Indian administration could be extricated from its difficulties there could be no reasonable expectation of a steady demand for their goods. Like sensible men, who had experience enough of such things in England, they perceived that the only measures that would permanently relieve them were the cutting down of the extravagant expenditure of the administration, the reduction of the army, the removal of all taxes upon transfers of land, and of all interference with the rights of the ryots. They accordingly bent their energies to the abrogation of these evils, and pressed on the home government the necessity for commissioning some financial dictator to go out to India and set matters to rights. Their prayers were listened to, and — Laing was sent out. The remarkable tact and abilities of this gentleman inspired the Indian government with fresh vigour, and being cordially supported by the Governor General, Lord Canning, he set vigorously to work at retrenchment. What he has accomplished in so short a time will be best appreciated by statistical results.

According to — Laing's financial statement, last year, the deficit for 1860 exceeded \$25,000,000, while according to the statement of the present year (just received,) there will be a surplus of \$7,500,000. This remarkable result has been produced without the imposition of a single new tax, and is due, in the first place, to reduction of expenditure, and, in the second, to a slight increase of the stamp duties and of the duties on salt. Of course the reduction of expenditure has been the principal agent in improving the condition of affairs, the army having been reduced from 150,000

to 80,000 men. On the strength of the anticipated surplus of \$7,500,000, — Laing has reduced the duties on cotton piece goods to five per cent., and the duties on cotton yarns and twists, (which were lowered last year from ten to five per cent.) to three and a half per cent. This will give great impetus to the English manufactures, causing a corresponding falling off in the Indian home manufactures. It is well known that when the ten per cent. duty was laid upon imported cotton goods, the native manufactures, not being subjected to a corresponding tax, rose rapidly in importance, and bid fair to drive Manchester out of the field. But local circumstances also greatly contributed to this threatened result. First of all, the Sepoy mutiny of 1857 disordered the fabric of society, and caused a sudden depression of trade. Hardly had that terrible rebellion been suppressed when it became evident that famine was inevitable in the northern provinces. The price of grain rose at once enormously. The profits to be realized by supplying that article rose accordingly. All available capital flowed into the trade, and, consequently, speculation in foreign goods fell off. Moreover, the impoverishment of the consuming classes by the mutiny and the famine combined, diminished their means of purchasing English cotton fabrics. Hence the depression in the Manchester cotton trade. The Indian government deemed the matter of so much importance that it deputed an officer, (the late Col. Baird Smith,) to inquire into the cause. The result of Col. Smith's investigations was the opening of the eyes of the British government to the necessity of providing means of internal transport; and so clearly did he show the absolute need of this, that the Indian authorities lost no time in opening new roads, and instituting more lines of land and water communication. India is just now the paradise of engineers. Railways, canals, bridges, roads, tunnels, &c., are the order of the day; and the problem there to be solved is, how quickly can cotton be transported from the interior to the coast, and thence to England, to be there manufactured into piece-goods, and retransmitted to India for consumption by the native population? We cannot fail to be struck with the anomaly which such a state of things presents. The natural order is reversed, but this will not always be, for the natives are skilful, patient and industrious, and having the advantage of being on the spot, can, to a certain extent, compete with the British manufacturers who live six or seven thousand miles off, unless the latter resort to their favourite policy of removing all obstructions to trade, and then flooding the markets with goods at such low prices as to kill off the native manufactures. But the English have, in their steam machinery, an immense advantage over the Hindoos, which will long render them masters of the situation, notwithstanding their distance from it. Colonel Baird Smith made some interesting inquiries as to the relative proportions in which English goods and native manufactures were used by the people. The districts which he examined with this view were favourably situated as regards means of communication, and in those he found that Manchester cottons were already in more extensive use than the native goods, and were, in fact, gradually superseding them. In other districts more remote from the great rivers, and to which, therefore, the cost of carriage is very heavy, Manchester goods are not in use at all among the poorer classes of the people. The question of the distribution of English goods in India is entirely one of means of communication, and, therefore, it is to this that the attention of the government is now directed. Not merely are great trunk lines

being laid out, but smaller lines throughout the land connecting adjacent towns have been projected; and a few years will probably see India covered with a network of railways and high-roads.

In view of the probable cessation of the cotton trade with this country, England does wisely in making the most of her Indian possessions. Whether she is wise in trusting so exclusively to one article and its manufacture for the maintenance of that squalid class of artisans which her cotton-mills have called into existence is another question, into which we cannot enter just now. Among possible contingencies is the imposition by our government of heavy duties on all foreign imports. This would close the door to our custom. Another is that, even without such duties, the quantity of cotton raised in the southern States will, all probability, be much less for some time to come than has hitherto been grown, and hence its price will run up, or else the greater portion of it will be required for our own manufactures. In either case the English manufacturers will be obliged to resort elsewhere for cotton. It would not surprise us to find them establishing factories in India, the recent discovery of coal mines in the Himalaya mountains being the very thing for the purpose. Were the cotton manufacturing population of England transferred to India, their productions would soon obtain command of all the markets in Asia. From the valley of the Ganges unlimited supplies of cotton fabrics would be poured into China and Tibet, while the Persian Gulf would be the channel for the supply of Persia and Turkey. Such an arrangement would revolutionize Asia; it would also greatly relieve England, for half of the artisans of Lancashire are paupers, and liable at any time to be thrown entirely upon charity by war or a deficient supply of cotton. This fact constitutes a very serious danger to the British government, for it would be almost impossible to control four millions of starving people should the contingency ever arise, as it has very nearly done now. The subject has long been under anxious consideration, though little is said about it publicly. — *N. American.*

*Writing in the Light for direction and guidance preserves from the quicksands of Creatively activity.* . . . . The enemy took advantage of my weakness to mislead me. For whereas I ought to have waited in the light, for direction and guidance into and in the way of well-doing, and not to have moved till the divine Spirit, (a manifestation of which the Lord had been pleased to give me, to profit with,) the enemy transforming himself into the appearance of an angel of light, offered himself in that appearance, to be my guide and leader into the performance of religious exercises. And I, not then knowing the wiles of Satan, and being eager to be doing some acceptable service to God, too readily yielding myself to the conduct of my enemy instead of my friend.

He, thereupon, humoring the warmth and zeal of my spirit, put me upon religious performances in my own will, in my own time, and in my own strength; which in themselves were good, and would have been profitable to me, and acceptable to the Lord, if they had been performed in his will, his time, and in the ability which he gives. But being wrought in the will of man, and at the prompting of the evil one, no wonder that it did me hurt instead of good. — *From the early experience of Theosis E'leosa. F. L. vol. 7th. p. 354.*

*A low time.* — There are some nursing mothers, many toward instructors, but too few fathers in the church. — *John Churchman.*

From "Youthful Piety."  
Daniel Bowly, Jr.

Daniel Bowly, Jr., son of Daniel and Sarah Bowly, of Cirencester, England, was a young man of good understanding and amiable disposition; the pliability of which, together with an employment which exposed him to many temptations, promoted a wide deviation in his conduct from the religious principles in which he had been educated. Of this deviation he became painfully sensible during the course of a long illness, which he acknowledged to be a mercy from that Divine Providence whose fatherly care had many times preserved him from sudden death while unprepared.

In the commencement of his sickness, his mind seemed to be deeply affected with the danger of his situation, though he expressed but little. As the disorder increased, he remarked how exceedingly awful the prospect of the final change appeared, earnestly desiring that he might be prepared for eternity, and experience the Divine presence to be near, when the time came. He now saw that his past conduct had been very erroneous, which caused him much sorrow, but he observed that his supplications for forgiveness, during his illness, had been attended with such sweet refreshment as to induce the hope that they would be availing. Yet at other seasons, his sins appeared so great that he could hardly entertain a hope it would be well with him. "What can be expected," said he, "from a death-bed repentance? That is a time when all would gladly be saved. There will not, probably, be an opportunity given me of proving my sincerity by an amendment of life, so that men may doubt it; but the omniscient Being knoweth how far I am sincere, and I hope, if it really be so, it will be accepted by Him. Yet there is nothing equal to a proper dedication of time [while] in health."

At another time he said, "I hope the Almighty will forgive my sins. It is mercy alone that can save me, who have devoted so much of my time to business and the amusements of this world—pleasure, as it is generally called; but it is a strange sort of pleasure. It is pain, I feel it [to be] pain." Again, "What I have to deliver, is from a prospect of the awfulness of death, which in a short time will be my lot. Mankind in general are certainly under strong delusions; yet how kindly the Almighty condescends, from time to time, to give a degree of his light and help! But man may outlive this day of grace, which, through the merciful mediation of my dear Saviour, is now extended to me."

On another occasion he observed, "I long that my friends would begin the work of religion in the life of it; for if the first off-ers are slighted, oh! how does the visitation deaden on the mind!" "How comfortable would it be to meet my relations in that state of happiness, where I believe a residence to be preparing for my soul. I believe the Almighty detains me here as an example of his great mercy, and as a warning to some; but I earnestly entreat that none will depend upon the same singular act of mercy." "All the friendships of this world must be given up—and if the mind be not illuminated with an immediate proof of the presence of our dear Saviour, yet it should be resigned, and prepare for the reception thereof, by a surrender of every thing which does not appear consistent with a state of preparation."

At one time he remarked, "In the forepart of my illness, a few times, I asked for recovery if consistent with the Divine will, with desires to be strengthened to lead a different life from my past, and serve that good Master whose doctrines I have, as it were, trampled under foot; but I have

since seen the favour it may be to me, to be taken from such a trial." "What a favour it is to be members of our society! Its rules forbid nothing that is good for us. How earnestly do I wish that my near connexions in particular may keep to the truth. Though the path may appear hard at first, yet as they follow their Leader with a single eye, it will become more easy. There may be times of withdrawing of the Divine presence, and then the enemy will seek to enter; but by earnest supplication, preservation will be granted, and at times, a comforting foretaste of future happiness—the prospect of getting every day nearer to such an inexpressible reward, is a favour beyond expression."

"How little satisfaction results from a life of pleasure; attending places of diversion, &c. Ah! the disappointments such meet with! I believe alms, bitter portions are often their lot." Observing also, that he had been struck with the conviction, when at those places of amusement, that he was far more blameable than his companions, who had not had so guarded an education, and however innocently some of them might go, it was not so with him.

One morning, inquiring if to-morrow would not be meeting day, and being answered in the affirmative, he said, "I almost long to go. How pleasant is the thought of being retired there from the height of its engagements. How foolish and unwise are men who are bartering their souls for gold,—paltry gold! The too eager pursuit of it, is a great bait to some of our society. If I were to recover, and found business stood in my way to but little and live accordingly. What signifies grandeur or curious food? The taste goes no further than the mouth, and then it is over. If some heard me talk thus, they would think me foolish, but in this I am wise and know what I say."

Several friends being in his chamber one evening, he spoke of the gift of the Holy Spirit which is dispensed to all mankind through our Lord Jesus Christ, and earnestly recommended an immediate compliance with his sacred discoveries, "for," said he, "since these illuminations are not at our command, it is very unsafe to trifle with them, by giving way to the suggestions of the enemy; but rather [let us] resign whatever may be called for,"—adding, "I will not return a part to Him who gave me the whole? What if it deprive us of a few luxuries? We can have but food and raiment, which only differ a little in kind between rich and poor."

"Our profession," said he, "is a very exalted one, and if we keep to it, would make us as lights in the world. Our religion teaches us to believe in immediate communication with God, through his beloved Son, which is an unspeakable privilege to all who attend to it; and wonderful condescension, that He who is Lord of all, should thus notice poor man, and time after time, by visiting [us] with the off-ers of his mercy, to insure our happiness. [These] visitations we should be very careful not to reject, as being a common favour, and think we will accept them at some future time; for though the Almighty is long-forebearing and delighteth in mercy, we know not when may be the last offer of his grace to assist us in the work of salvation. What a dreadful thing would it be to withstand the last."

Speaking of the evidence he had of his future peace, he said, "I have a clear view that I shall be received into the kingdom of rest and peace. I see the gates of heaven standing open to receive me, and thousands of the just waiting to embrace me. I desire but just to get within the pales of

safety, to be in the presence of the Lord, and to behold his glorious countenance. O death, where is thy sting? O grave, where is thy victory? Christ taketh away the sting of death. My dear Saviour is reconciled to me—I know he is. His mercy is very great. I cannot speak enough of his mercy."

(To be concluded.)

From "Silliman's Journal."

### Colorado River of the West.

For a number of years prior to the commencement of the present war in which our country is so unhappily involved, an annual appropriation of from 50,000 to 100,000 dollars has been made by congress, for explorations and surveys in unknown regions west of the Mississippi, to be expended under the direction of the Topographical Bureau. Expeditions were therefore sent out to various parts of the West, with specific instructions as to the unexplored district to be examined, and a party organized, composed of topographers, meteorological observers, geologists, artists, &c., and placed under the command of an officer of the U. S. Topographical Corps. With an appropriation of 25,000 dollars, Lieut. Ives was ordered in the spring of 1857, to examine the unexplored region bordering upon the great Colorado of the West and to ascertain the navigability of that river. How well Lieut. I. and his assistants performed the duty entrusted to them the volume before us bears ample testimony. We regard it as one of the most important and most finished reports yet published by the U. S. government in regard to the West, and so far as the labours of the authors are concerned, it is in the highest degree creditable to them. While thus examining the report before us with real pleasure we cannot but feel the profoundest regret that so able and accomplished an officer as Lieut. Ives, a native of New York City, but reared in New England, should at this time be found fighting in the ranks of the enemies of our country, lost to science and the world, at war not more with the government which has educated and advanced him than with his own convictions of right and duty.

We quote that portion of the introduction which relates to the history of Colorado explorations and the organization of the expedition.

"The Colorado of the West is the largest stream, with one exception, that flows from our territory into the Pacific Ocean. It has its sources in the southern portions of Nebraska and Oregon, and in its course to the Gulf of California drains two-thirds of the Territory of New Mexico, and large portions of Utah and California, an area of more than 300,000 square miles.

Very little has been known concerning this river. Two streams, Green and Grand rivers, which flow through Utah in a southerly direction, have been supposed to unite somewhere near the southern boundary of that territory and form the Colorado, but the point of junction has never been visited nor determined. For hundreds of miles below this point the stream has not been seen, till recently, by white men, excepting at one spot, and few Indians, for centuries past, have been near its banks. Notwithstanding this, some portions of the river were among the earliest parts of America to be explored. In less than fifty years after the landing of Columbus, Spanish missionaries and soldiers were travelling upon the Colorado, following its course for a long way from the mouth, and even attaining one of the most distant and inaccessible points of its upper waters. More information was gained concerning it at that time than was acquired during the three subsequent centuries.

In the year 1540 the viceroy of New Spain, interested in the accounts derived from a Franciscan monk of the latter's travels in the Territory now called New Mexico, sent an exploring expedition into that region under the command of Vasquez Coronado. A detachment of twenty-five men, led by one Diaz, left Coronado's party and travelled westward. They discovered the Colorado and followed it to its mouth. Their description of the river and of the tribes they met upon it is not at all inapplicable to the condition of things at the present day, though the statements concerning the prodigious size of one community of Indians that they encountered are a little exaggerated. The Mojaves, to whom, doubtless, they refer, are perhaps as fine a race of men, physically, as can anywhere be found, but they do not quite come up, in stature and strength, to the descriptions of the Spaniards.

About the same time Captain Fernando Alarcon, by order of the viceroy, sailed up the Gulf of California and ascended the Colorado in boats for a long distance. The account of what he saw agrees with that of his cotemporary explorer.

Another of Coronado's captains, named Cardinas, with a party of twelve men, reached the pueblos of Moquis, and repaired from them, with Indian guides, to a portion of the Colorado, far distant from that seen by the others. The history states that after twenty days' march, over a desert, they arrived at a river, the banks of which were so high that they seemed to be three or four leagues in the air. The most active of the party attempted to descend, but came back in the evening, saying that they had met difficulties which prevented them from reaching the bottom; that they had accomplished one-third of the descent, and from that point the river looked very large. They averred that some rocks, which appeared from above to be the height of a man, were higher than the tower of the cathedral of Seville. This was the first description of the famous Big Cañon of the Colorado.

Several times during the succeeding two centuries, the lower part of the river was visited by Catholic priests. In 1744 a Jesuit missionary, named Jacob Sedelmayer, went thither, following the course of the Gila, and travelled extensively in both New Mexico and Sonora, and about thirty years afterwards the Jesuits established missions among the Yuma Indians, who live at the junction of the Gila and Colorado. The priests were subsequently massacred by the fierce tribe among whom they had located themselves.

In 1776 another Catholic missionary, Father Esalante, travelled from Santa Fe to Utah, and having explored the region south of the Great Salt Lake, pursued a southwesterly course, towards the sources of the Virgin, and then crossed to the Colorado, which he reached at a point that appears to have been almost identical with that attained from the opposite direction by Cardinas, more than two centuries before.

From this time the river was scarcely approached, excepting by an occasional trapper, or some overland party crossing the lower portion en route to California. A considerable part of the emigration, induced by the gold discoveries in that region, passed through New Mexico, by way of the Gila, and the travellers were subjected to molestation from the Yumas. In 1850 a detachment of troops was sent to the mouth of the Gila to keep these Indians under control, and not long afterwards a military post, called Fort Yuma, was regularly established.

The difficulty of furnishing supplies to the garrison, across the desert, was such that, in the win-

ter of 1850 and 1851, General Smith, commanding the Pacific division, sent a schooner from San Francisco to the head of the Gulf of California, and directed Lieutenant Derby, topographical engineers, to make a reconnaissance, with a view of establishing a route of supply to Fort Yuma, via the Gulf and the Colorado. The result of the reconnaissance was successful, and the route was at once put in operation. The freight, carried in sailing vessels to the mouth of the river, was transported to the fort—the distance to which, by the river, is one hundred and fifty miles—at first in lighters, and afterwards in steamboats.

In 1851, Captain Sitgreaves, U. S. topographical engineers, with a party of fifty individuals, made an exploration from Zuni westward. He struck the Colorado at a point about 160 miles above Fort Yuma, and followed the east side of the river, keeping as near to the bank as possible, to the fort. He encountered the Mojaves, and found their appearance and customs generally to agree with the description of the early explorers. The descent was accompanied with hardship and danger. Both the Mojaves and Yumas were hostile, and the difficulty of travelling near the river was extreme, owing to the chains of rugged and precipitous mountains that crossed the valley. The summer heats had parched and withered the face of the country; the stream was low, and what was seen of it did not create a favourable opinion regarding its navigability.

In the spring of 1854, Lieutenant Whipple, topographical engineers, in command of an expedition for the exploration and survey of a railroad route near the 35th parallel, reached the Colorado, at the mouth of Bill Williams's Fork, and ascended the river about fifty miles, leaving it at a point not far below where Captain Sitgreaves had first touched it. The expedition was composed of nearly a hundred persons, including the escort. The Mojaves were friendly, furnishing provisions to the party, whose supply was nearly exhausted, and sending guides to conduct them by the best route across the desert westward. The river was probably higher than when seen by Captain Sitgreaves, and it was the opinion of Lieutenant Whipple that it would be navigable for steamers of light draught. The course of the Colorado northward could be followed with the eye for only a short distance, on account of mountain spurs that crossed the valley and intercepted the view. A high distant range, through which the river apparently broke, was supposed to be at the mouth of the 'Big Cañon,' which the Spaniards, in 1540, had visited at a place far above.

The marvellous story of Cardinas, that had formed for so long a time the only record concerning this rather mythical locality, was rather magnified than detracted from by the accounts of one or two trappers, who professed to have seen the cañon, and propagated among their prairie companions incredible accounts of the stupendous character of the formation. It therefore became a matter of interest to have this region explored, and to lay down the positions of the Colorado and its tributaries along the unknown belt of our country north of the 35th parallel. The establishment of new military posts in New Mexico and Utah made it also desirable to ascertain how far the river was navigable, and whether it might not prove an avenue for the economical transportation of supplies to the newly occupied stations."

(To be continued.)

"For a Christian habitually to wear melancholy looks, and to speak in saddening tones and depressing terms, is to be like the Hebrew spies, who

'brought up an evil report' of the good land; and few there are, surely, of this world's thoughtless children, who would be tempted to leave their own apparently gay and flowery path, to follow in a track so mournful-seeming and repellent! But a rejoicing Christian is a happy sight! his cheerful loving voice, may speak the most startling truths, and breathe the loftiest hopes; while many will be encouraged by him to seek the land whence come such golden fruits, and the spring whence flow such waters of comfort."

## THE FRIEND.

SIXTH MONTH 14, 1862.

It is but little that we have been able to learn respecting the situation of Friends in Virginia and North Carolina, since the commencement of the war now being waged between the North and the South. Intelligence however, has occasionally been obtained, indirectly, indicating that the sad effects of the contest have pressed upon them in many ways, and that they are likely to suffer no little from the general conscription of all able-bodied men to fill the ranks of the Confederate army, which has been ordered.

Among other items extracted from Southern newspapers, recently given in the N. Y. Herald, is one stated to be taken from the Raleigh, N. C., Standard, of the 26th of Fourth month last. It gives "A memorial laid before the State Convention, by the Yearly Meeting of Friends, on the subject of bearing arms."

We see no reason to doubt the correctness of the statement, unless it be the very erroneous estimate of the number of the members of the Society, both in the Slave and the Free States; which may be attributable to the want of correct information on the part of Friends in North Carolina. We give the memorial as we find it, and doubt not our readers, while sympathizing with our fellow members under the trying circumstances in which they are placed, and will be glad to find their ere and religious concern to uphold the peaceable principles of the gospel, as ever maintained by our religious Society.

The memorial appears to have been prepared and presented by the Meeting for Sufferings:

"At a Stated Meeting for Sufferings, representing North Carolina Yearly Meeting of Friends, held at Deep River, the 14th of Fourth month, 1862, the subject of our present sufferings, on account of our conscientious scruples against bearing arms, claiming the deliberate consideration of the meetings, and believing it right to embrace our privilege to petition those in power, we therefore adopt the following:—

*To the Convention of North Carolina, in Convention Assembled:—*

Your petitioners respectfully show, that it is one of our fundamental religious principles to bear a faithful testimony against all wars and fightings, and that in consequence we cannot aid in carrying on any carnal war.

This is no new principle of our Society, but one which was adopted at its rise, as the doctrine taught by our Saviour, and followed by his disciples, for more than two hundred years, and has ever been and is now held as one of our fundamental and vital principles, and one that we cannot yield or compromise in any degree whatever.

We would further show that the whole number of our members in the Confederate States is less than ten thousand, while in the United States the number probably exceeds two hundred thousand, and bear the same testimony against all wars and

fightings; and that in every nation and clime where our society exists, it is at this day, as heretofore, maintaining this precious principle of peace, and that we everywhere in this respect speak the same language and mind the same thing.

We may further show, that, according to the best information we can obtain, until the present time, Friends of North Carolina have not been called on to aid in the battle field or military camp; but now our peaceful principles are in a measure disregarded, and many of our members are drafted to take part in the conflicting armies, while we understand that our brethren in the United States are not.

We have enlisted under the banner of the Captain of our soul's salvation, Jesus Christ, the Prince of Peace; therefore, in obedience to his express command, we cannot fight, or aid directly or indirectly in any carnal wars. But your petitioners would represent to you that we believe it to be our moral and religious duty to submit to the government under which we live, and to the laws and powers that be, or suffer patiently their penalties.

We love our homes and our country much, but at the same time we love our religious principles more; therefore your petitioners would most respectfully ask that you grant us the enjoyment of this important religious principle.

We own no gun, but the God of love, truth, peace, mercy and judgment, whose blessings we invoke, and whose wisdom we implore to be with you in your legislative deliberations.

Signed on behalf and by direction of the meeting,  
NATHAN F. SPENCER, Clerk.\*

#### SUMMARY OF EVENTS.

**FOREIGN.**—News from Europe to the 29th ult. The London Times, in an editorial on the surrender of Norfolk and the destruction of the Merrimac, says that the conquest of the South, as far as the water is concerned, seems almost complete. On land, however, the Times says it is premature to say that the confederate power is altogether broken, and it sees no signs of the end, and no indications as to what that end will be. The Great Exhibition does not attract such crowds as flocked to that of 1851. The number of visitors, during the first half of the month, shows a falling off of more than one half as compared with the same period in that year.

The Paris Patrie denies the rumour that France intends to withdraw the Mexican expedition. It defends the cause of France, and reproaches Spain, and in moderate terms, England.

The Austrian Government in reply to the Committee of Finance, says that it has been engaged by diplomatic means, in providing for a settlement of Italian affairs, and has reason to hope that its efforts will be successful. It considers the danger of war in Italy averted for a long period, and was about to effect the reduction of the army on a general basis.

The Liverpool cotton market was active, with a further advance of  $\frac{1}{4}$ . The Manchester advices were favourable. The stock of cotton in port consisted of 378,590 bales, of which 109,920 were American. At sea from India, 100,000 bales. Bread stuffs dull. Flour, 29s. a barrel; red western wheat, 2s. 6d. a 60s. 6d.; white, 11s. a 112.

The allied intervention in the affairs of Mexico appears to have been unsatisfactory to all the parties interested. Great Britain first withdrew, and subsequently Spain. Late advices from Mexico state the French forces had been completely defeated by the Mexicans, when on their route to the capital, and had been compelled to make a hasty retreat to Vera Cruz.

**THE ARMY.**—According to the latest official returns, casualties have been suffered. From this it cannot be deducted the number killed and wounded in battle, and disabled by sickness, which may reduce it to about 500,000 effective men.

**The Slave Trade.**—The new treaty in regard to the African slave trade has been concluded by the British government, which has formally acknowledged its former service rendered by the United States Secretary of State to both countries, and to the cause of humanity, by his agency in that transaction.

**The Capture of Ships at New Orleans** by Gen. Butler, having caused a difficulty with the foreign consuls at that port, a commissioner has been deputed to proceed from Washington to New Orleans, for the purpose of taking the necessary proofs for a final determination of the matter, which has already been the subject of an amicable correspondence between the Secretary of State and the Minister of the Netherlands.

**The Tax Bill**, after being greatly modified in the Senate, finally passed that body with only a single negative vote.

**Recognition of Hayti and Liberia.**—The Senate bill for the recognition and appointment of ministers to Hayti and Liberia, passed the House of Representatives by a vote of 86 to 37.

**The National Debt** on the 29th ult., amounted to a total of \$491,445,984. This sum includes \$145,880,000 of notes issued in currency, on which no interest is paid. On the balance the rate of interest ranges from 4 to 7-10 per cent.

**Arkansas.**—A body of rebel troops were captured a few days since near Gasville. Scouting parties of the Federal troops are engaged in breaking up the guerrilla bands, and in some portions of the State. The Hon. General Curtis has received the appointment of Military Governor of Arkansas.

**North Carolina.**—The newly appointed military Governor, Stanley, is thought by some to be anxious to conclude the war, and to discontinue the State. He has issued an order prohibiting further instruction in the schools at Newbern, established for the benefit of the loyal colored refugees there, because such instruction is forbidden by the laws of North Carolina.

**South Carolina.**—Despatches from Com. Dupont, state that the U. S. gunboats have taken possession of Santee, near Charleston. The line of railroad between Charleston and Savannah, has been visited by a detachment of U. S. troops, and a portion of the track destroyed.

**Florida.**—Gen. Arnold and his troops occupy Pensacola. The poor are very destitute, and depend upon Gen. Arnold for their daily food. The rebels effected the complete destruction of the U. S. Navy yard, and other public property. Many deserters from the rebels continued to arrive.

**Tennessee.**—The Union troops captured at the battle of Pittsburg Landing, have been generally paroled and sent to the rear, where they are being supplied with food. They report that discontent was almost universal in the rebel army. The Nashville Union continues to notice the arrival in that city of officers and soldiers, who had become disgusted with the cause, and repaired there to take the oath of allegiance to the United States. The Hon. Mr. Fort Wright was renewed last week, when the rebels finding the position no longer tenable, abandoned it. Com. Davis, with his fleet, then proceeded down the river, meeting with no resistance at Fort Randolph. He arrived opposite Memphis on the evening of the 5th, and next morning a desperate engagement took place with the rebel fleet of gun boats and steam rams, resulting in the capture or destruction of the entire fleet, except a single steamer, which escaped in consequence of her superior speed. So soon as the battle terminated, the rebels abandoned the city, and it is now occupied by the U. S. forces.

**Alabama.**—An expedition from the army of Gen. Mitchell, under command of Gen. Nagley, has defeated and utterly routed a rebel army under Gen. Adams. The rebels were held by the U. S. forces, and still more important results are anticipated. At the Fort Jones, the U. S. mortar fleet had passed the lower batteries, and was opposite Fort Morgan, near Mobile.

**Mississippi.**—The retreat from Corinth has been as disastrous to the rebel cause as a defeat, having been attended by a total annihilation of a portion of the army. The fugitives were rigorously pursued, and at the Fort Gene Halleck telegraphed as follows: "General Pope, with 40,000 men, is thirty miles south of Corinth, pushing the enemy hard. He already reports 10,000 prisoners and 15,000 stand of arms captured. About 20,000 of the enemy are throwing away their arms. The result is all I could possibly desire." It is, however, not doubted that order and discipline are preserved with a large portion of the rebel army, and it is even surmised that Gen. Beauregard and Gen. Johnston have taken the road to the southwest, to aid in the great struggle at Richmond, Va. It is believed that 20,000 deserters have abandoned the rebels since the fall of Corinth.

**Tribune.**—Pursuant to orders from the War Department, the 10th regt. of Maine, commanded at Fortress Monroe. One of his first acts has been the suspension of the restrictive trade with Norfolk. Provisions of

all kinds may now be taken to Norfolk and Portsmouth much to the relief of the citizens. All the Baltimore and Ohio railroad bridges injured by Jackson's reb army during its late forage, have been effectually repaired, and travel on the road has been resumed. The prisoners taken by the rebels during Gen. Bank's retreat, have been paroled and exchanged. General Banks in his official report, denies that his forces were routed and fled. He states also that the losses of his army have been greatly exaggerated. He gives the entire number of killed, wounded and missing, during the retreat as 2000 men. Gen. Fremont's army continued in pursuit of the rebels up to the 29th ult. It was engaged capturing many hundred prisoners, wagons and supplies. On the 6th inst. a sharp conflict took place near Harrisburg, between a portion of the U. S. Army and part of Jackson's retreating forces, in which both sides suffered considerable loss. Gen. McClellan reports the losses of his army in the battle on the 29th ult. as lost, before Richmond as follows, killed 800, wounded 3627, missing 1222, total 5739. The loss of the rebel army is not known. More than a square mile of ground was covered with the killed and wounded of both sides and letters from the army state that over 5000 rebel had been buried by the Federal troops. Deserters from Richmond, report the total loss of the southern army about 10,000. Further military operations have been delayed by the necessary care of the wounded, and by heavy rains, which have greatly swollen all the water courses, and rendered it very difficult to march. It has been swollen in some places to a breadth of twelve miles. There seemed to be no prospect that Richmond would be given up without another battle.

**Virginia States.**—The Delegate from Union, in the House of Representatives, has presented a memorial, asking the recognition of Utah into the Union on an equal footing with the original States, and one of the Representative from Virginia has presented a similar memorial on behalf of the State of Western Virginia. The proposed constitutions for the new States were presented with the memorial, and referred to the Committee on Territories.

**Disastrous Freshet.**—The heavy rains of last week, especially a great rise in the streams in many places, especially in mountainous regions. The waters of the Lehigh and Schuylkill rivers, and their tributaries, were so swollen, as to overflow the banks of the main stream, destroying bridges, dams, &c., to a very large amount. The whole town of Weissport, near Mauch Chunk, was washed away, but three houses being left out of three hundred. A fearful loss of life occurred at this and many other points in the Lehigh valley.

**West-Point.**—The City is being again a healthy one this present season. Mortality last week, 315.

**Philadelphia.**—Mortality last week, 246.

**DIED,** on the 11th of Fifth mo., 1862, ROSSAMONT KESTER, wife of George Kester, in the forty-third year of her age, a member of the Society of Friends, a zealous Particular Meeting. Her friends have the consoling belief that her loss is her eternal gain.

#### WEST-TOWN BOARDING SCHOOL.

A Stated Meeting of the Committee who have charge of the Boarding School at West-Town, will be held there on Fourth day, the 18th of the Sixth month, at 10 o'clock, A. M. The Committee on Admissions, meet at 8 o'clock, P. M. The City is being again a healthy one at 7 o'clock the preceding evening. The Visiting Committee attend at the School on Seventh day the 14th of the month.

Sixth month 4th, 1862.

JOEL EVANS, Clerk.

For the accommodation of the Committee, a conveyance will be at the Street Road Station on Seventh and 8 o'clock, P. M. on the 17th inst., to meet the trains that leave the city at 2 and 4 o'clock.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSUAH H. WORTHINGTON, D. D.

Applications for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

From the London Quarterly  
Eastern Archipelago.

(Continued from page 324.)

In commercial importance, although not in size the island of JAVA ranks first in the Oriental Archipelago. The country to which it bears the nearest resemblance in beauty of aspect is perhaps Italy, and it must always possess an interest for England, as she ruled it for six years. It received from her an improved revenue system; and an impulse was communicated to industry, which was beginning to produce great results, when, by the arrangements of the peace of 1815, the island was restored to Holland. The name of Sir Stamford Raffles, its Governor, is still pronounced with reverence in Java by many who knew him in their youth. The area of Java is rather less than that of England and Wales, and its length is somewhat greater than that of England and Scotland. Its breadth varies from 56 to 136 miles, therefore no part of its interior is very distant from the sea. The population is rapidly increasing, and has doubled itself in twenty years. It is irregularly distributed, and more than half of the cultivable surface is uninhabited. The faith of the entire people is now Mahomedan.

Java is traversed from east to west by a chain of mountains, which are nearest to its southern shore. The island is probably of volcanic origin, the great Asiatic chain which extends down the Malay Peninsula terminating there. It possesses like other volcanic countries, neither iron nor gold. The fertility of its soil is extraordinary; the island is therefore eminently an agricultural one. The heat of the coasts is great, but frost is not uncommon on the mountains. The capital is unfavourably situated in the midst of a pestilential swamp; but the mortality, which is inevitable from its position, is probably compensated, in the opinion of the Dutch Government, by the difficulty of the approach and by its security. The flora of Java is varied and magnificent; but as few of the plants are deciduous, the country presents always nearly the same appearance, being clothed with a brilliant and unchanging verdure. The vegetation struck Sir Stamford Raffles when he first visited the island as 'fearful.' Mountains 10,000 feet high are cultivated half way to their summits. On the coasts palms and bananas conceal the marshes and jungles from which they

spring. Rising gradually, the country then assumes a more varied surface, and at the height of 1000 feet, ferns preponderate with a thick growth of bamboo. To these succeed forests of tall and spreading fig-trees; ferns then increase in size; orchioidous plants of rare beauty are intermingled with the exuberant vegetation, and fig-trees are succeeded by the oak and the laurel. In the region above, the trees are dwarfed, their tropical character disappears, and heaths and conifers, with cryptogamous plants, abound. The ferns then become diminutive, and mosses and lichens denote an almost alpine temperature. With a range of climate between the tropical and the temperate zones, Java produces all the fruits and cereals of Europe and Asia. The vegetable wealth of the island is therefore immense. Six zones exist, each of which yields in rich abundance its peculiar productions. Rice, maize, cotton, coffee, sugar, tobacco, indigo, pepper, the cocoa-nut, bread-fruit, sago, wheat, the potato, and almost every other European vegetable thrive luxuriantly. Fruits of exquisite flavour abound, and flowers of unimagined beauty load the atmosphere with perfumes.

Whatever fruits in different climes are found,  
That proudly rise or humbly court the ground;  
Whatever blooms in torrid zones appear,  
Whose bright succession decks the varied year;  
Whatever sweets salute the northern sky,  
With vernal fires that blossom but to die;  
These, hers departing, own the kindred soil,  
Nor ask luxuriance from the planter's toil;  
While sea-borne gales their gentle wings expand,  
To scatter fragrance round the smiling land.

The Dutch first formed a settlement in Java in 1611. The progress of their ascendancy has resembled that of other nations placed under similar circumstances. European influence was at first opposed, then gradually and firmly established, and native kingdoms were ultimately converted into subordinate and dependent states. The native government was an hereditary despotism, and the sovereign was addressed in the highest style of Oriental flattery. He became, under the rule of the old Netherlands East India Company, as mere a shadow of royalty as the Great Mogul. The court of the nominal prince was permitted to retain its national customs; and the royal palace, although lying immediately under the guns of a small Dutch fort, was denominated the habitation of the Sun.

The Dutch East Indies were for two hundred years administered by a company of merchants, subject to the control of the States-General. There was therefore a considerable resemblance between the Dutch and English East India Companies in their constitution and privileges.

When Holland succumbed to the yoke of revolutionary France, Java necessarily fell with it. Napoleon probably attached little value to the acquisition, regarding it at first only as a dilapidated possession of an old spendthrift corporation. In one point of view, however, it appeared to him of great importance. It might be made a base of operations for his meditated conquest of the British possessions in the east. These intentions were anticipated by the capture of the island in 1811, and Java, for two hundred years the seat of Dutch

empire in the Eastern Archipelago, became a British dependency.

The Dutch shook off the French yoke, and became again a nation. The Netherlands were reconstituted as a limited monarchy; and by the Treaty of London in 1814, all the transmarine possessions of Holland which had been captured by England were restored, except the Cape of Good Hope.

Holland, as a state of any European consequence, now depends upon the maintenance of its empire in the Eastern Archipelago. The system on which it relies for augmenting its revenue has been very carefully described in the work of ———— M.ney. It certainly presents a remarkable picture of successful administration, wherein the Dutch Government fills the several characters of a land-owner, cultivator, trader, and ruler. By means of these offices combined it has made Java the chief source of the present financial prosperity of the Netherlands, and has derived from it the means for paying off a large portion of the national debt, providing compensation to the holders of slaves in the West Indies, and expending ten millions of florins annually upon railroads. On the re-estab-

lishment of Java to its old masters, trade had flowed into new channels, and the land-tax was the only existing substitute for the old Dutch monopolies. The government is considered the supreme lord and absolute proprietor of the soil. The ancient and one-fifth of the labour of the occupier of the soil. A fifth of the labour of the occupier of the soil was introduced into the old plan of forced deliveries of agricultural produce, combined with compulsory labour. Under this arrangement a portion of the land-tax is remitted, and some of the best land, together with the labour of its peasantry, is appropriated to the cultivation of produce deemed profitable for the European market. The profits are divided between the grower, the manufacturer, and the government. Into the complicated details of this system, it is impossible here to enter. It rests upon the supposed sovereign right of disposing of the labour of the natives, and upon their obligation to cede one-fifth of the produce of their occupied land to the government. The labour of the people, although compulsory, is not, however, entirely without remuneration. Sugar, indigo, cochineal, tea, tobacco, coffee, cinnamon and pepper, are raised by native labour, with or without the intervention of a European contractor. The government thus receives from the crown-lands from 60,000 to 70,000 tons of coffee, with large quantities of other valuable produce; the whole of which is consigned to Holland for sale.

The financial result of this system is highly satisfactory to the government of the Netherlands. The gross revenue from Java has risen from a former average of 24,000,000 of florins to 115,000,000. In 1859 it amounted to nearly 10,000,000 sterling, and has been and is still steadily on the increase. The sum annually expended by the government in works of reproductive industry aver-

ges about 2,000,000/, and is analogous to the judicious outlay of a landlord upon his estates. Whether this mode of "managing a colony" is consistent with the higher functions of government may be questioned, although the material interests of the people have been considerably benefited by it. The government believes that Java presents a field of almost indefinite financial prosperity, and is destined to restore to an old and decayed state a portion of its former commercial and political greatness. But although it may have conferred present prosperity on Java, and so far benefited its people, the avowed policy of the Dutch Government is not to elevate the native race, but to keep them in a state of moral and intellectual bondage as a cheap and easy method of maintaining its supremacy.

Java is the entrepôt of the commerce of the Netherlands in India. Private trade between Holland and Java is now unrestricted. The Netherlands Trading Company is employed only as the agent of government, and possesses the exclusive privilege of carrying the produce of the crownlands to Europe. The merely mercantile aspect in which alone Holland regards her fine dependency is certainly not consistent with our notions of government; and it may be doubted whether, if the State were to give up to private industry the vast estate which it now manages with so much skill and success, and apply itself to its more legitimate functions, even the financial success would not ultimately be as great as any that has hitherto been realized by an opposite system.

The Dutch administration of Java has its favourable aspects; but to make a distant people a source of mercantile profit by a system of forced labour and a studied disregard of their moral interests, is but a modification of slavery and a persistence in the nineteenth century in that exploded system which valued colonies only as subservient to the commercial aggrandisement of nations. The government of Java is carried on by native chiefs, termed Regents; but European officers, denominated Residents, have a controlling authority, and constitute, in effect, so many local centres of administration. The native aristocracy has thus been transformed into the salaried officers of government. The system is said to give satisfaction; the allowances of the native rulers being higher than those of the European residents.

(To be continued.)

From "Youthful Piety."

Daniel Bowly, Jr.  
(Continued from page 326.)

At another time he said, "Be religious, and then you will have our Saviour's arm to lean upon. Oh! he is a merciful Saviour! I have found him such; an easy Master, a kind Friend. Ah! how I regret that I neglected serving him for some years. Think what a superior education we have had, to most; what a nice institution is ours—the peculiar institution of God, and I believe it is not to die away, although some of our society have gone from it, for whom I am sorry."

"I believe great advantage may arise from frequently comparing time with eternity; an awful eternity! It appears to me exceedingly awful! Heaven and hell are placed before us. We have our choice; and we know what wretches hell is composed of—foul minds, full of remorse forever, for their worm never dieth. On the other hand, in heaven there is great harmony. Oh! I have had beautiful prospects! I have seen the innumerable company of angels, and the spirits of good men. But how is it? We are ashamed of not complying with man, and not ashamed of doing so to God. We can apologize to men, and say we are

sorry we did not do so or so, and we can directly commit neglect before God, and feel no sorrow for it. Oh! what mercy there is! In great wisdom and unpeakable kindness is the good Mediator given, to reconcile us and work redemption in us. Do not let us fear man; what is he? Look upon me and see a poor weak thing that can hardly speak."

After this he was much exhausted, and desiring to be put to bed, uttered the following short ejaculation: "O Lord God Almighty, be thou pleased to look upon God, and be with us." It was with difficulty he got to bed, and for some hours his symptoms seemed to threaten dissolution, but after having slept some time he revived.

Cautioning some of his friends to beware of the incumbrances and fatigues of business, he observed, "It will not do for those who have been all the week in the hurry of business, to go to meeting and appear before the Lord in form only. A man whose time is wholly engrossed in business in common, [although] he goes to meeting pretty commonly, and sits there two hours, yet if it be stated his thoughts will be engaged, yet that which takes up the greater part of his time; and if it be so, it is great mockery of God. Never will it do, to go in an outward show of dress and address, if it be not true worshippers of the Lord in spirit and in truth. They must daily give up their minds to him; daily retire to worship him. I know a man ought to provide for his family and carry on a proper business, which I believe to be right, but should by no means be the first object, for riches will bring nothing in the end. What would I give now for all the world? Nothing at all."

The 12th of the Eighth month he said to one of his sisters, "How many times have I been preserved from death! times more than I can remember. Ah! how often, sister, have I come to be bereaved, as it were, from death. We should often think of it, and how we have answered the kind intention. It may not be so again. The next may be the last time. Then do let us begin to prepare and do everything that is required of us. I believe plainness of dress is. We are indeed a chosen people, and what may not be wrong in others is so in us. Plainness of dress is an hedge about us. The world is not then seeking our company. Do remember what our Saviour said, 'Whosoever denieth me before men, him will I also deny before my Father who is in heaven.'" After this he impressively said, "The enemy is still very busy with his insinuations, and would persuade me that all is done, and so lead to neglect, but I must watch and pray to the end, and be very earnest with the Almighty to continue his favours and that he will support me through all."

He was preserved in a state of humble, patient waiting, and expressed but little for some days, but the sweetness and solidity of his deportment evinced that his spirit was centred to the source of Divine life. On the 1st of Ninth month he remarked, "The state I expect to enter is that of calmness and peace; divine peace; the purest spirituality. I hope to live in the presence of God and to feel constant support from him, and I do not wish to know more." The following day he was very weak, and left his chamber with reluctance. Soon after, he was seized with so violent a fit of coughing, that the hour of his dissolution seemed near at hand. In a short respite from the prooxysms, he triumphantly said, "I am happy—I am happy—If I never speak more, give my dear love in Christ Jesus to all my friends." After getting into bed he remarked, "but I have full faith in my foundation."

At another time, "I believe my dear Saviour is ready to receive me into purity, and that is what

all good minds desire to enter into." In the evening, some one remarking how hard it rained, he said, "I like to hear it—the sound of it is solemn—it is the work of the Almighty. The withdrawing of the sun, and darkness, is like what good souls experience in the work of redemption, when Divine light is withdrawn from them. In these seasons, what strange ideas is the mind tried with, such as are very apt to cast down the mind—but there is a sweet support sustains, though at such times not sensibly felt." On the 3rd, he seemed anxious to be gone, and prayed thus: "O Lord God Almighty! have pity upon me. It was thou who created both soul and body." Some time after, he said to a near friend, "I believe the enemy has now almost done with me."

On the 4th he was very weak, but calm and composed, remarking that he was going to the Father and the Son, and bade his Friends farewell. About twelve o'clock he took an affectionate leave of two cousins who waited on him, and his voice became so weak that little said could be heard: the last sentence which was distinctly understood, proved as a seal to the foregoing truths, viz. "I have the satisfaction to say that I have been washed in Jordan." He laid off mortality in the manner for which he had often prayed, without a groan or even a sigh, aged twenty-five years and eight months.

*A Natural Curiosity.*—A singular instance of the foresight of a field-mouse has just been brought under our cognizance. A person clearing the garden ground of Thomas Thomson, Dalkeith, Scotland, came upon a growing turp, which he pulled up by the root. Guess his astonishment, when he found that the turp was completely hollowed out, as neatly as if it had been done by the chisel of a carpenter, and the interior filled with large garden beans. The work, from the size of the hole whence the inside of the turp had been extracted, was manifestly that of a mouse, and the object, no doubt, of filling the interior with beans, was to provide against hunger in the barren winter weather. Near the place where the turp was growing, there were several stalks of beans, upon which some pods had been left, and it is supposed that the cute mouse had helped itself to these. We counted the beans in the turp—a small one—and found that they amounted to no less than six dozen and two.—*Scottish Farmer.*

From "Stillman's Journal."

Colorado River of the West.

(Continued from page 327.)

"There was no appropriation that would enable the War Department to accomplish this service until the summer of 1857, when the present Secretary of War, having the disposition of a certain amount to be expended in field examinations, set apart a portion of it for the exploration of the Colorado, and directed me to organize an expedition for that object."

To ascertain how far the river was navigable for steamboats being the point of primary importance, it was necessary first to make provision for this portion of the work. The company employed in carrying freight from the head of the Gulf to Fort Yuma were unable to spare a boat for the use of the expedition, excepting for a compensation beyond the limits of the appropriation. A boat of suitable construction had, therefore, to be built on the Atlantic coast and transported to San Francisco, and thence to the mouth of the river. In order that the survey should be made at the worst and lowest stage of the water, I had been directed to commence operations at the mouth of the Colo-

ado on the first of December. This left little time for preparation, considering that it was necessary to build a steamer and carry the parts to so great a distance.

In the latter part of June, I ordered of Reaney, Neafe & Co., of Philadelphia, an iron steamer, fifty feet long, to be built in sections, and the parts to be so arranged that they could be transported by railroad, as the shortness of time required that it should be sent to California, *viz* the Isthmus of Panama. About the middle of August the boat was finished, tried upon the Delaware, and found satisfactory, subject to a few alterations only. It was then taken apart, sent to New York, and shipped on board of the California steamer which sailed on the 20th of August for Aspinwall. A. J. Carroll, of Philadelphia, who had engaged to accompany the expedition as steamboat engineer, went out in charge of the boat.

The transportation of the steamer was, to the parties concerned, a source of more trouble than profit, but the kind offices of the agents of the Panama Railroad Company, and of the captains of the steamships on both the Atlantic and Pacific coasts, united to the careful supervision of Carroll, enabled the awkward mass of freight to reach San Francisco by the first of October.

Dr. J. S. Newberry was appointed physician to the expedition, and also to take charge of the natural history department. This gentleman had previously made extensive geological surveys in California and Oregon while attached to the party of Lieutenant Williamson, topographical engineer, in charge of the Pacific railroad surveys in those regions.

The Journal of Lieut. Ives is full of interesting descriptions of incidents of the trip, accounts of numerous tribes of Indians, scarcely known prior to his visit, as the Moquis, Mojaves, &c. An important hydrographic report of 14 pages is also appended. We have room only for the vivid description of that remarkable passage in nature, the Black Cañon, given on pages 85, 86, and 87.

*Camp 59, head of Black Cañon, March 10.*—The skiff having been put in tolerable order, a bucket full of corn and beans, three pairs of blankets, a compass, and a sextant, and a chronometer were stowed away in it, and a little before sunrise the captain, mate, and myself commenced the exploration of the cañon. My companions each pulled a pair of sculls, and with considerable vigour; but as the current has a flow of three miles an hour we could not make rapid progress. We had proceeded a quarter of a mile, and had just rounded the first bend, when one of the sculls snapped, reducing by half our motive power. There was, fortunately, a current of air drawing in the right direction through the narrow gorge, and, with the odd scull and a blanket, an apology for a sail was rigged, which, at intervals, rendered great assistance.

In a few minutes, having passed what may be called the outworks of the range, we fairly entered its gigantic precincts, and commenced to thread the mazes of a cañon, far exceeding in vastness any that had been yet traversed. The walls were perpendicular, and more than double the height of those in the Mojave mountains, rising in many places, sheer from the water, for over a thousand feet. The naked rocks presented, in lieu of the brilliant tints that had illuminated the sides of the lower passes, a uniform sombre hue, that added much to the solemn and impressive sublimity of the place. The river was narrow and devious, and each turn disclosed new combinations of colossal and fantastic forms, dimly seen in the dizzy heights overhead, or through the sunless depths of

the vista beyond. With every mile the view became more picturesque and imposing, exhibiting the same romantic effects and varied transformations that were displayed in the Mojave cañon, but on an enlarged and grander scale.

Rapids were of frequent occurrence, and at every one we were obliged to get out of the skiff and haul it over. Eight miles from the mouth of the cañon, a loud sullen roaring betokened that something unusual was ahead, and a rapid appeared which was undoubtedly the same that had been described by Iretaba. Masses of rock filled up the sides of the channel. In the centre, at the foot of the rapid, and rising four or five feet above the surface of the water, was a pyramidal rock, against which the billows dashed as they plunged down from above, and glanced upwards like a water spout.

The torrent was swifter than at any place below, but a steamboat, entirely emptied of its cargo, which could be deposited upon the rocks along side of the rapid, could, if provided with long and stout lines, be hauled up. During a higher stage of the river the difficulty of the place would be much diminished. With our nearly worn out ropes it would be very hazardous to attempt the ascent.

Several rapids followed at short distances, all of which would be troublesome to pass at the present depth of water. The constant getting out of the boat, and the labour of dragging it through these difficult places, made our progress for some miles exceedingly tedious and fatiguing. As sunset was approaching we came to a nook in the side of the cañon, four miles above the roaring rapid, where a patch of gravel and a few pieces of drift wood, lodged upon the rocks, offered a tolerable camping place, and we hauled the skiff upon the shingle and stopped for the night. There was no need of keeping a watch, with two grim lines of sentinels, a thousand feet high, guarding the camp. Even though we could have been seen from the verge of the cliff above, our position was totally inaccessible.

Darkness supervened with surprising suddenness. Pall after pall of shade fell, as it were in clouds, upon the deep recesses about us. The line of light, through the opening above, at last became blurred and indistinct, and save the dull red glare of the camp-fire, all was enveloped in a murky gloom. Soon the narrow belt again brightened, as the rays of the moon reached the summits of the mountains. Gazing far upward upon the edges of the overhanging walls we witnessed the gradual illumination. A few isolated turrets and pinnacles first appeared in strong relief upon the blue band of the heavens. As the silvery light descended, and fell upon the opposite crest of the abyss, strange and uncouth shapes seemed to start out, all sparkling and blinking in the light, and to be peering over at us as we lay watching them from the bottom of the profound chasm. The contrast between the vivid glow above, and the black obscurity beneath formed one of the most striking points in the singular picture. Of the subsequent appearance of things, when the moon rose higher, I do not think any one of our weary party took particular notice.

This morning, as soon as the light permitted, we were again upon the way. The ascent of the river was attended with as much labour as it had been the day before; for though none of the rapids were of so violent a character, they were of constant occurrence. The wind still held to the south, and the blanket sail was again set to great advantage.

The cañon continued increasing in size and magnificence. No description can convey an idea

of the varied and majestic grandeur of this peerless water-way. Wherever the river makes a turn the entire panorama changes, and one startling novelty after another appears and disappears with bewildering rapidity. Stately fagades, rugged extrudals, amphitheatres, rotundas, castellated walls, and rows of time-stained ruins, surmounted by every form of tower, minaret, dome, and spire, have been moulded from the egyptian masses of rock that form the mighty scabbles.

The solitude, the stillness, the subdued light, and the vastness of every surrounding object, produce an impression of awe that ultimately becomes almost painful. As hour after hour passed we began to look anxiously ahead for some sign of an outlet from the range, but the declining day brought only fresh piles of mountains, higher apparently, than any before seen. We had made up our minds to pass another night in the cañon, and were searching for a spot large enough to serve as a resting place, when we came into a narrow passage, between two mammoth peaks, that seemed to be leading to each other across the stream, and unexpectedly found, at the upper end, the termination of the Black cañon.

Low hills of gravel intercepted the view, and prevented us from seeing far into the unknown region beyond. A mile above the cañon the river swept the base of a high hill, with silient angles, like the bastions of a fort. At the base was a little ravine, which offered a camping place that would be sheltered from observation, and we drew the skiff out of the water, determining not to proceed any further until tomorrow. Leaving the mate to take charge of the boat, the captain and myself ascended the hill which is over a thousand feet high. A scene of barren and desolate confusion was spread before us. We seemed to have reached the focus or culminating point of the volcanic disturbances that have left the traces over the whole region south. In almost every direction were hills and mountains heaped together without any apparent system or order. A small open area intervened between camp and a range to the north, and we could trace the course of the river as it wound towards the east, forming the Great Bend. In the direction of the Mormon road to Utah, which is but twenty miles distant, the country looked less broken, and it was evident that there would be no difficulty in opening a wagon communication between the road and the river. We tried to discover the valley of the Virgin, but could see no indication of any stream coming in from the north-west. The view in that direction was partially obstructed by another summit of Fortification rock.

Not a trace of vegetation could be discovered, but the glaring monotony of the rocks was somewhat relieved by grotesque and fanciful varieties of colouring. The great towers that formed the northern gateway of the cañon were striped with crimson and yellow bands; the gravel bluffs bordering the river exhibited brilliant alternations of the same hues, and not far to the east mingled with the gray summits, were two or three hills, altogether of a blood-red colour, that imparted a purely ghastly air to the scene.

(To be concluded.)

*A Useful Dog.*—Schneck, at the Farms, has a dog which goes out near the railroad track every night, a few minutes before it is time for the cars, and waits until they pass, then picks up the paper which is thrown off by the expressman, and carries it to his master. He is always on hand at the regular time, and never fails to bring the paper when it is there. On Monday night he came back without it, and so confident was Schneck that

it had not been thrown off, that he walked to Rockport, and there learned that another person had been on the route that day, instead of the regular expressman, and had forgotten to throw it off. This same dog used to get the paper by the stage coach, before the cars commenced running, and never missed being at his post when the stage came along.—*Cape Ann Advertiser.*

For "The Friend."

### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

#### ELIZABETH LEVIS.

Elizabeth Reed was born about the year 1694. We have no account of her very early life or the instruction then given her. Whatever the religious instruction she may have received from her earthly parents, it is evident that she was largely cared for in this respect by her Heavenly Father, who, through the visitations of his grace, opened her understanding into the mysteries of his Heavenly Kingdom. She was at the time of her coming to maturity, a member of Kennett Meeting, in Chester County, where in the Tenth month, 1720, she was married to William Levis, a valuable Friend.

Soon after her marriage, she began to be much employed in the service of the church, and in 1734 was appointed an overseer. In the year 1736, a gift in the ministry of the gospel was committed to her, which she exercised to the edification and comfort of the church. She was often engaged in religious labours at home and abroad, and was frequently concerned in visits to the families of Friends, sometimes to all the members of her monthly meeting, sometimes to those only who were negligent in the attendance of religious meetings. In these services she was often joined with her husband's sister, Elizabeth Shipley, who, as Elizabeth Levis had travelled extensively with Jane Penn, in the work of the ministry. Of some of these family visits they could report, they "found satisfaction" in their labours, "and encouragement" to pursue them.

Elizabeth Levis found her mind much exercised on account of the free use of spirituous liquors, particularly in the time of harvest. She saw so much injury resulting from this practice, that she was constrained to open her mouth, and to employ her pen in opposition to its continuance. Whilst labouring under this concern, she asked her particular friend, Susanna Blundel, what she thought of Friends trading in and using spirituous liquors? Susanna said it had been a burden to her many years. She seemed much affected in consideration of the subject, and added "what can we women do? The men uphold it." This fellow labourer of Elizabeth Levis, died soon after, and leaving this concern as a heavy burden resting on her mind. When Elizabeth heard of her death, she says, "It took hold of my mind with sorrow, at parting with so near a friend, and one concerned for the honour of God. While my mind was thus affected concerning our dear friend, there seemed this voice sounded in my inward ear, 'there is no cause of sorrow, she has done her day's work and has gone to rest.'"

Elizabeth Levis, soon after this, prepared the following essay. "Some friendly advice and cautions, recommended to the serious consideration of the professors of the holy Truth."

"Dear Friends, brethren and sisters:—Feeling the flowing of that love which wishes well to the whole family of mankind, with earnest desires that all may come to the knowledge of the Truth, and be saved, I cannot well omit giving some account of the great exercise which hath fallen to my lot.

I have been in deep distress of mind for many days, inasmuch that, in the night season, sleep departed from my eyes, until it pleased the Lord to visit my soul in his love, and bring me to see the cause of my exercises. I was then made to say in the secret of my heart, O Lord, require of me what thou wilt—I will obey thee as thou art pleased to enable me. As I thus became resigned to the will of God, he in great mercy redeemed my soul.

"Dear Friends, I have never found any other way to be favoured with true peace, than by submitting to the cross of Christ, and I can say, the Lord never requires any thing of his people, but he gives ability to perform it; 'blessed be his holy name forever.' He is not a hard master, but a rich rewarder of all who faithfully wait upon him and patiently abide under his refining hand in the time of trial. Oh! that the professors of the holy Truth were willing to come to Jesus Christ, who is the Truth and the Life, that he, by the fan of his power might separate the pure from the impure; not only from those gross evils which are accounted scandalous amongst men, but from everything which would obstruct the life of Truth in the heart.

"Dear Friends, there are many snares and hindering things in the concerns of this world; and without due watchfulness, these will be as the little foxes that nip off the tender buddings of truth. Sometimes the Lord, by the light of his Holy Spirit, gives us to see the uncertainty of temporal things, and that our greatest concern ought to be, the well-being of our immortal souls. If we take heed to the pure gift, the heart becomes tender, but it is to be feared that for want of watchfulness, many overlook the visitations, [of Grace,] and thus in them the pure buddings of the Divine life is kept under. It is the work of the enemy to fascinate the mind with the enjoyments of this world, by which he has gained many to the great sorrow of the true mourners in Zion. This comes by neglecting to give heed to the gift of God in the heart, which hath light and power in it, to enable us to discover and avoid the snares of the enemy, and also to see how he works to captivate and enslave our minds with the things of this life, which are so uncertain to us. Because of these things, many exercised minds go bowed down and heavily burdened on their way, often crying to the Lord in the secret of their hearts, that if consistent with his will, he would work by his Holy Spirit, and arouse the careless ones to flee from the wrath to come.

"There is a call in my heart to you, my dear Friends and fellow creatures, that you carefully mind the visitations of the love of God to your souls. I warn the earthly minded that they give due heed to the witness for God in the heart. As this pure gift is attended to, it will remove the clouds of the earth, which have too long obstructed the growth of the seed which God hath sown there. For want of this [attention,] it is to be feared some have become so benumbed, as to a right sense of the great end of their creation, that that which ought to be their chief concern, the promotion of the honour of God and the welfare of their immortal souls, has but little place in their minds.

"It is in fear and reverence that I am thus concerned to express myself to all mankind; and in that love which wishes well to all mankind, I am enabled to bear the censure of those whose hearts are not seasoned by the virtue of Truth. I am concerned to call on the professors of Truth, that we may be still and wait upon God, so that by virtue of the holy gift in the heart, we may be sensible what our works are, and what foundation we are

building upon. If, upon a narrow search, we find we are building upon that foundation, of which our Blessed Saviour spoke to Peter,—the Revelation of the will of God, on which the Church of Christ is built, then the Holy Spirit will be to our comfort and consolation. The Lord may try the faith of these, for the fitting them for service in his church, but those who are resting in a mere profession, will certainly suffer loss. My desire is, that none may slight the day of their visitation, until it be over, lest when too late, they may have to say, 'the harvest is past, the summer is ended, and we are not saved.'"

(To be continued.)

#### Airing the Soil.

Subsoil drainage has for many years been practised by the best agriculturists. It was first introduced solely with the intent of drying wet lands; and for this purpose only, with but few exceptions, it is still used in the United States. But other benefits have been found to follow the introduction of this system. Rain-water possesses fertilizing properties. If it can be induced to filter through, instead of running off over the surface, as in times of heavy rain, the soil is proportionally benefitted and the surface waste checked. Sub-drainage promotes filtration. Another effect, eminently serviceable, takes place—the aeration of the soil. Currents of air flow with the currents of water through the drains, and the whole soil, above the drain-pipes, is, to a greater or less degree, permeated with air. In England, the upper extremity of a line of drain-pipe is often brought to the surface and left open, to allow the air to enter freely. So obvious have been the advantages of this aeration that, of latter times, in some places, pipes have been laid specially to promote this subterranean circulation of atmospheric air. The following notice of this system is taken from a recent number of Dr. Lindley's Agricultural Gazette.

"D. Hoobrick, near Vienna, announced, in 1859, a new system of culture, stated to insure a more vigorous growth than can be induced by other means. This consists in placing in the earth, pipes or air-channels, pierced with holes which permit the air to penetrate throughout the mass of soil traversed by the roots. According to the inventor of this system, its advantages are numerous and important; he points out the following:—

1. The strongest clay soils, under the influence of currents of air transmitted through the pipes, are divided by thousands of small fissures and the rendered friable, so that roots can easily penetrate them. The depth at which the pipes should be laid depends on the nature and consistency of the soil.

2. After the soil has been aerated by means of the air-pipes, the vegetation of plants growing in it becomes more active, especially in the case of grain crops and vegetables. The roots finding the soil in a finely divided state, penetrate deeper than usual, and are consequently safe from the vicissitudes of temperature which take place near the surface.

3. The looseness produced by the circulation of air in the soil causes a rapid absorption of rain-water, and prevents caking of the surface. On the other hand, during long continued drought, the roots, owing to the great depth to which they have penetrated, are not exposed to the drying effects of the external air, and are enabled to obtain a supply of moisture which they could not do near the surface.

4. The air-pipes passing through sour soil causes the sourness to disappear, so that where only bad herbage previously grew, the finer grasses can be produced. These good effects are more particu-

arly observed in swampy or marshy ground which may thus be changed into fertile soil.

5. The soil being always kept porous by the circulation of the air, can be more easily worked; and from its openness preventing the accumulation of water, cultivation can be commenced earlier in spring.

6. Plants grown on soil thus improved produce a great mass of roots, and consequently being very strong, they require more space. There is therefore no need to sow so thickly as usual; and hence a considerable saving of seed is effected.

7. Mannures are much more energetic in their action in soil which is aerated in this way than that in which has not been so treated; the reason of this being, according to Hooibrenk, that the aerated soil is more uniformly moist throughout its thickness, and that being the case, the decomposition of the fertilizing substance is more rapid and uniform."

In short, the inventor of this system states, that double and even triple the produce may be obtained from land so treated. This increase soon repays the expense of laying the air-pipes. He also states that in the culture of the vine, the ripening of the fruit is greatly accelerated and the quality improved. Such assertions could not fail to be received with doubt by many. Careful experiments were therefore made to test their truth, by Fichtner and Son.

The field in which these experiments were conducted, consists of a bed of loam or sandy clay, from 13 to 16 inches deep, resting on a subsoil of rounded pebble-stones, like those in an adjoining brook. On the other side of the field is another brook about six and a half feet lower. This difference of level, taken in connection with the stony subsoil, made it doubtful at first whether the beneficial action of the air-pipes would not be owing to the acting as drains in carrying off surplus water. The field contained more than one and a half acre, and had been in cultivation since 1852, but yielded only indifferent returns, at most, about six for one of seed. The Fichtners placed four air-pipes, at the depth of three feet, across the field. Their internal diameter was nearly two and a half inches. The field thus prepared was divided into a number of beds at right angles to the direction of the air-pipes, and extending to the portion of ground not furnished with the apparatus. Of the four pipes first laid down, two were joined by a communication pipe, and the mouth of one of them opened into the ash pit of a furnace, whilst the other extremity terminated in an air-tank, the sides of which were of masonry. The surface of the ground furnished with air-drainage was one half acre and 22 poles. The furnace at the end of the pipe was intended to show that the atmospheric air could reach the fire by passing through the soil. To prove this, the opening at the further extremity of the pipe was completely closed, and also the furnace and ash-pit doors, in such way that no air could reach the fire to support combustion except by passing through the soil, under which the pipe leading to the furnace was buried. The fire however, burned perfectly well throughout the day. To burn ten pounds of wood in 2½ hours, would require 8000 cubic feet of air, and this would have to traverse 108,000 pounds of soil, before it could reach the furnace. A similar circulation, though less active, must take place wherever there is a difference in the temperature of the air in the drains and that of the atmosphere, and from observations that have been made, it has been found that a difference of this kind takes place at least once in twenty four hours. Mr. Jaeger remarks, that wherever a furnace exists, its fire may be use-

fully employed in fertilizing, by means of air-tubes, the adjoining ground; and that gardeners might thus make good use of their hot-house furnaces for improving borders and other parts of their gardens.

The advantageous action of the atmospheric air in passing through the soil is due to the fact of its losing a portion of its oxygen, and thus giving rise to the formation of a larger portion of carbonic acid. To determine the changes effected in these respects, the Fichtners have analysed the air contained in the tubes. [The atmospheric air contained 21 per cent. of oxygen and 12.80 of carbonic acid;] the air from the tubes 20.09 of oxygen and 35.73 of carbonic acid.

The produce of the aerated soil, even taking into account the effect due to the working of the soil in laying the pipes, was considerably increased during the first and only year in which the results are known; a particular increase was observed in the yield of sugar beet. On the estate of Totis, in Hungary, where similar experiments have been made, very encouraging results have been obtained. — *Abridged from the Journal of the Horticultural Society, Paris, 1862.*

[It will be seen that these experiments in themselves, prove little more than the conviction which exists, in the minds of European cultivators, of the importance of aerating the soil. This conviction is founded on many years experience, derived from the double action of ordinary subsoil drainage; which introduces atmospheric air into the soil, while it is carrying water away.]

For "The Friend."

#### A TRIBUTE TO DEPARTED WORTH.

Thoughts during Philadelphia Yearly Meeting for 1862.

Once more to the old gathering place we come,  
A band of sisters to our solemn feast;  
Our swelling ranks in reverent silence wait  
No pleasing ordinance, no rite of priest.

The church and her best interests, are the themes,  
That claim the outward ear, the inward eye  
Of many a bowed and suppliant soul, it turned,  
For holy help, to Him, who ruleth them on high.

The mothers of our Israel, in their place,  
Give us such counsel as permeneth most  
To our best interests; but one face is gone,  
The dear familiar face of her the loved and lost.

By the swift mandate of its God recalled,  
The noble soul that laboured for our weal,  
No longer now for Zion pleads and prays;  
That voice in its rich cadences is still.

Heers was no eloquent and rounded phrase;  
No flowery language, pleasing to the ear;  
But Truhy's directness, glistering many an eye  
Stony and cold, with flesh unbidden tear.

So forcible, that strong ones bowed and shook  
Beneath the terrors of her gospel hand,  
So calm and deep and earnest in its strength,  
Yet simple, that a child might understand.

And wielded by a woman's feeble arm,  
The spirit's sword cleft the shadows of sin;  
Making an opening for the holy law  
Of truth and righteousness, to enter in.

To many a darkened, hapless couch of pain,  
She was the instrument of hope and peace;  
Said by her Master, in His holy power  
To minister unto the mind's disease.

And there are those aroused to better things,  
And rescued from their course in ruin's way,  
Who, humbly waiting in the light of Christ,  
Still live to bless that favoured woman's day.

While to the timid, trembling child of hope,  
Longing for way-marks on the desert drear,  
Like the fresh breezes, from a land of flowers,  
A strength in weakness, came her words of cheer.

She asked no blessing from those drying lips,  
She shrunk from praise that grateful hearts bestow,  
But ever sought the glory of her Lord,  
His call to answer, and His will to know.

So moved she in her true appointed sphere,  
Ereing her burdens patiently and well—  
The angel of deliverance came at length.  
\* \* \* \* \*

My mother! at the right hand of thy God,  
Dying with laurels, like a tower of strength,  
The richest guardian of thy labours won  
Thy Saviour's blessing on thy latter days!

My mother! thou hast welcomed to thy home  
Of the redeemed in Christ, the honored dead,  
My second mother; on whose good breast  
I, child-like, oft refreshed my fainting head.

Aye more, she was the first to wake my soul,  
From its deep slumbers, in the courts of death,  
Where in a false and treacherous case I lay,  
All idly wasting its immortal breath.

O mothers! in your holy home of light,  
Where not the semblance of a shadow lies,  
My errors and temptations cannot range,  
And the dear Saviour grace sufficient gives.

My heart rejoices in your high estate,  
But mourns the loss of friends so good and true;  
Its greenest memories of departed worth,  
Its holiest aspirations live with you.

Chester Co., Pa.

From the Leisure Hour.

1st.

Civilized man has long since become, all over the world, a writing animal. The ancient Greeks and Romans penned their ideas on tablets of wax or brass, or else on films prepared from the Egyptian water-weed papyrus. The Cingalese of today remind us of what the Greeks and Romans did long ago—scratching their fantastic but elegant characters on the silicious covering of palm leaves, or, when more than ordinarily luxurious, on thin plates of metal—silver or gold, for instance—as many examples to be found in the Museum of the Royal Asiatic Society amply testify. Now, it stands to reason that engraved writing, as one may term it, must needs be a tedious affair. Having once seen a copper or steel plate engraver at work, the reader will not doubt what we say. Engraved writing might have done very well for a Roman poet of the Augustan age, especially such a poet as Horace, who advised candidates for poetic approbation to keep their man-*scripts* seven years before trying to find a publisher! and, what is more important as regards the matter we are dealing with, he enjoined the precept *scpe vertere styliam*, whilst composing the MS. Now, the expression *scpe vertere styliam*, translated, literally, means to turn the stylus or writing instrument about frequently. Understood as Horace meant the sentence to be understood, it simply means obliteration, erasure; the fact being, that the stylus, or classic writing-tool, was sharp at one end, and armed with a sort of cutting edge at the other. If, then, what an author had written on wax or metal chanced to dissatisfy him, he had only to turn his stylus about—*vertere styliam*—and the words might presently be erased and obliterated; whence also the expression of *tabula rasa*, a deleted table or writing surface.

The Cingalese and some other Asiatic people are in the habit of adopting a peculiar sort of book-binding, one well adapted to meet the case of books written by the engraved process. The similitude of a Venetian blind will readily convey to the reader an idea of the sort of bookbinding to which allusion is made. In the British Museum, and more particularly in the Museum of the Asiatic Society,

books of this sort may be noted, the material in most cases being palm leaf, not infrequently, however, metal. The Greeks and Romans do not appear to have adopted this style of book-binding. Tablets amongst them were usually reserved either for first compositions—just after the fashion of slates at the present time—or else, as is our custom at present, for inscriptions designed to be permanent, such as votive tablets, epitaphs, and the like. For book-work, the ancient Greeks and Romans either used papyrus rolls, or else sheets of vellum; as for paper, though it would appear to have been manufactured in China from time immemorial, the Saracens are believed to have first made it known in Europe. Whether of papyrus, or vellum, or paper, the material no longer lends itself to the engraved style of writing; ink becomes a necessity, and black has ever been recognised as the most desirable colour for ink.

Now comes a very important question. What is the best black material out of which to manufacture ink—the best, that is to say, in every respect? Firstly, what black is that which can best resist atmospheric influences, which is most ungenial to roquetry, and which can neither be erased nor expunged, nor chemically obliterated? Now, there can be no question whatever but that, if no other point were arrived at than the ones just detailed, carbon or charcoal, in some form or other, would be the most desirable little out of which to make black ink. Indian ink is little else than finely powdered charcoal, mingled with gum; and printers' and engravers' ink each owes its blackness to animal charcoal, called ivory black, mingled with thick oil. Now, every librarian knows that printers' ink is proof against every chemical influence; acids will not touch it, neither will alkalis. Printed ink marks may be erased, of course, but that process does not involve destruction of ink, so much as of paper. The stains of writing ink may be usually removed again and again, when distributed over printed matter, leaving the latter untouched. If writing ink contain charcoal in any form, this remark, however, does not hold good. Public librarians know the indelible nature of charcoal ink so well, that they studiously avoid it. The ink, for example, supplied to readers in the British Museum Library is prepared with special reference to its easy extraction by chemical means, if, as often happens, a book should get blotted; hence, it would be highly impolitic for a lawyer to pen any important document in the Library of the British Museum with ink there supplied.

Inks, considered in reference to the mere liquid part of them, or "vehicle," as chemists say, may be divided into oil inks and water inks. He who would like to see with his own eyes what oil ink resembles, may study the appearance of printers' ink, or, failing that, of ordinary black house-paint. Ink of this sort works well enough from the point of a brush, and it is not very intractable when a blunt pointed reed pen is in question; but with quill pens it is very difficult to use, and with metallic pens impossible.

All writing inks now used are waterinks, because of their ready flowing quality. As the world grows older, writers somehow grow more impetuous. Fancy a Greek or Roman sub-editor tranquilly preparing his copy with oily ink and a camel's hair brush! Nevertheless, had there existed editors and sub-editors in the time of Demosthenes, they would have had to work in that fashion—if, indeed, the modern literary use of paste and scissors had not been invented. Heruleanum—that strange witness which has solved so many doubts besought to us by classic antiquity—Heruleanum has settled affirmatively whether the ancients used

oil writing inks. Out of the subterranean vaults of that lava-flooded city came forth to light one day, an inkstand having a small quantity of ink in it, which on examination proved merely a rich oil mingled with lamp black. The lamp black was ground up with oil, as is the custom now followed in making black paint; by remembering which, one can understand the meaning of Demosthenes when he taunts his great rival, Eschines, for having been compelled in his youth, through poverty, to sweep the school, sponge the benches, and grind the ink.

A sort of reflection appears to be cast on the boasted progress of mankind in the operative arts, when the fact is brought prominently before us, that manuscripts written before the tenth century have for the most part retained the original blackness of their ink, whilst documents written since that period for the most part show indubitable signs of perishing or perishableness, so far as relates to their ink. Many, doubtless, who peruse this need not go beyond their own family records for proof of that here stated. Many a letter penned not more than ten years ago shows unmistakable signs of perishableness as to its ink. Why is this? How comes it that ancient and medieval people could manufacture permanent inks, whilst we, with all our boasted chemical resources, so often fail? The answer is plain enough. Fast writing is a desideratum as well as permanence of writing. Now, fast writing involves easy flowing, and easy flowing demands a thin ink. Charcoal may be powdered very fine, and it may be suspended for a time in gum water, or thick material similarly mucilaginous, but it cannot be dissolved; and herein lie at once the difficulties of using it, and the permanence of it when used. The liquid modern inks are in point of fact dye-stuffs, and the processes of dyeing were very little understood previously to the tenth century.

It would be an endless task to set about describing the composition of writing inks as at present used: a few general indications must therefore suffice. Japan inks, as they are called, one and all contain charcoal in some form or other. To keep the charcoal in suspension, gum, or other glutinous matter, is present of necessity; whence arises the glazy surface produced by Japan ink. Since the dawn of the steel pen era, Japan inks have been gradually falling into disuse. Almost without exception the freely flowing inks, suitable for steel pens, are mere dye-stuffs. To flow freely is a great boon always; but permanence in some cases is even more indispensable. When permanence is required, let the writer beware of easy flowing inks.

As regards the tribe of fancy inks, the ancients had theirs, as we have ours. The *sacrum encaustum*, for example, was a purple ink, the composition of which was kept a profound secret, and which was only employed by the Roman emperors for signing documents. Death was the penalty for obtaining this ink, or even endeavouring to obtain it, from the vigilant officers in whose custody it was preserved. This edict remained in force from A. D. 1470 to 1452; except that in the twelfth century the privilege of using it was extended to members of the imperial family, and in some cases to the great officers of state. Doubtless this ink was no other than the celebrated Tyrian purple extracted from a shell-fish. Green ink was especially reserved for signatures of the guardians of the Greek emperors whilst their wards were minors.

And now a small word or two, and they shall be practical. If ink writing have faded from any cause whatever, let not the possessor despair, even though the writing be totally illegible. Chemical

art can frequently restore that faded black by application of proper treatment. No mere routine direction will suffice; the treatment suitable in the case of one faded ink, would be fatal in the case of another. The chemist alone can decide, and to him the full responsibility should be given.

From Observations on the Microscopy.

Insects: Their Feet and Eyes.

A very wide field of observation, and one especially cultivated, is presented by the organs of sense in the insect race, and in particular by those curious jointed threads which proceed from the front or sides of the head, and which are technically called *antennae*. These may sometimes be confounded with the *pilae*, examples of which organs we have been lately looking at; but in a carnivorous beetle, for instance, both *pilae* and *antennae* are formed of a number of oblong, polished hard joints, set end to end, like beads on a necklace. And it is probable there may be as much community in the function as in the form of these two sets of appendages, that both are the seats of some very delicate perceptive faculty allied to touch, but of which we cannot, from ignorance, speak very definitely. It is likely, indeed, that sensations of a very variable character are perceived by them, according to their form, the degree of their development, and the habits of the species.

It is not impossible, judging from the very great diversity which we find in the form and structure of these and similar organs in this immense class of beings, compared with the uniformity that prevails in the organs of sense bestowed on ourselves and other vertebrate animals,—that a far wider sphere of perception is open to them than to us. Perhaps conditions that are appreciable to us only by the aid of the most delicate instruments of modern science may be appreciable to their acute faculties, and may govern their instincts and actions. Among such we may mention, conjecturally, the comparative moisture or dryness of the atmosphere, delicate changes in its temperature, in its density, the presence of gaseous exhalations, the proximity of solid bodies, indicated by subtle vibrations of the air, the height above the earth at which light is performed, measured barometrically, the various electrical conditions of the atmosphere, and perhaps many other physical diversities which cannot be classed under sight, sound, smell, taste, or touch, and which may be altogether unappreciable, and therefore altogether inconceivable by us. It is probable, however, that the *antennae* are the organs in which the sense of hearing is specially seated; a conclusion which has long been conjecturally held, and which is confirmed by some observations recently made on the analogous organs in the *crustacea*, which I will allude to more particularly presently.

You may see a considerable diversity of figure and of aspect generally in this tiny weevil, which may be accepted as a representative of a great family of beetles, the *curculionidae*. The manner of their insertion strikes us at first sight as peculiar, as is in fact the aspect of the whole head. Instead of a thick substantial solid front, with powerful, widely-gaping jaws, such as we saw in the *carabus*, here projects from between the eyes a long rod-like proboscis, as long as the whole animal besides, curving downwards, and carrying at its very extremity a minute mouth, with all the proper apparatus of lips, jaws, and palpi. Moreover, the *antennae* are planted on the two sides of this beak, about its mid-length; and they are curiously elbowed, each projecting horizontally at a right angle to the beak for a considerable distance, and then with a sharp angle becoming parallel to it for the remainder of their length. So that supposing the

terminal half of the beak to be broken off just behind the insertion of the *antennae*, the whole would compose the letter T. Now, the first bend of this angle is composed of a single joint, the *capus*, which is in this family, greatly lengthened; and then the two or three final joints are much thicker than all the others, and are as it were used together into a large oval knob, called the *club*.

Now, a word or two in explanation of this very singular form of head and head-organs. The larva or grub stage of these insects is destined to be passed in the interior of fruits and seeds; the individual which we have been examining (*Dalmanus nucum*) was born one morning in August in the interior of a hazel-nut. Its parent had broken a suitable nut, just then when it is set for fruit, and as yet green and soft; and had with her rostrum, or rather with her jaws at its tip, as with a gimlet, bored a tiny hole through the yielding bell into the very interior; then turning round and inserting the extremity of her abdomen with its visipositor, she had shot an egg into this dark cavity. The juices poured forth at the wound soon sealed the orifice; the nut grew; and presently the egg became a little white grub. He then rioted in plenty; prolonged his darkling feast.

"From night to morn, from morn to dewy eve?"—"was all 'dewy eve' to him, by the way, for no ray of light saw he, till that prosperous condition of existence was done. No wonder he grew fat; and fat those rogues of nut-weevils always are, as you well know. Well, when the nut fell, in October, the kernel was all gone, completely devoured, and our little highway-robber was ready for his winter sleep: he gnawed a fresh hole through the now hard shell, made his way out, and immediately burrowed into the earth, where he lay till June; he became a pupa, and emerged just what you see him, a long-snouted beetle like his mother, in the beginning of August.

Such is his "short eventful history;" and you now see that the long beak is formed entirely with reference to this economy; it is an organ fitted to bore holes into shell-fruits through their envelopes, for the reception of eggs.

In the tribe of two-winged insects, which we term, *par excellence*, flies (*muscade*), the antennae are of peculiar structure. The common house-fly shall give us a good example. Here, in front of the head, is a shell-like concavity, divided into two by a central ridge. Just at the summit of this projection are the two antennae, originating close together, and diverging as they proceed. Each antenna consists of three joints, of which the first is very minute, the second is a reversed cone, and the third, which is large, thick, and ovate, is bent abruptly downwards immediately in front of the concavity. From the upper part of this third joint projects obliquely a stiff bristle or style, which tapers to a fine point. It is densely hairy throughout; and is more beset with longer hairs, on two opposite sides, which decrease regularly in length from the base, making a wide and pointed plume.

Such are a few examples of what are presumed to be the *ears* of insects; let us now turn our attention to their *eyes*. And we can scarcely select a more brilliant, or a larger example, than is presented by this fine dragon-fly (*Zelina*), which I just now caught as it was hawking to and fro in my garden. How gorgeously beautiful are these two great hemispheres that almost compose the head, each shining with a soft satiny lustre of azure blue, surrounded by olive-green, and marked with undefined black spots, which change their place as you move the insect round!

Each of these hemispheres is a compound eye. I put the insect in the stage-forceps, and bring a

low power to bear upon it with reflected light. You see an infinite number of hexagons, of the most accurate symmetry and regularity of arrangement. Into those which are in the centre of the field of view, the eye can penetrate far down, and you perceive that they are tubes; of those which recede from the centre, you discern more and more of the sides; while, by delicate adjustment of the focus, you can see that each tube is not open, but is covered with a convex arch, of some glassy medium polished and transparent as crystal. There are, according to the computations of accurate naturalists, not fewer than 24,000 of these convex lenses in the two eyes of such a large species of dragon-fly as this.

Every one of these 24,000 bodies represents a perfect eye; every one is furnished with all the apparatus and combinations requisite for distinct vision; and there is no doubt that the dragon-fly looks through them all. In order to explain this, I must enter into a little technical explanation of the anatomy of the organs as they have been demonstrated by careful dissection.

The glassy convex plate or facet in front of each hexagon is a *cornea*, or *cornuole*, as it has been called. Behind each cornea, instead of a *crystalline lens*, there descends a slender transparent pyramid, whose base is the *cornea*, and whose apex points towards the interior, where it is received and embraced by a translucent cup, answering to the *vitreous humour*. This, in its turn, is surrounded by another cup, formed by the expansion of a nervous filament arising from the ganglion on the extremity of the optic nerve, a short distance from the brain. Each lens-like pyramid, with its vitreous cup and nervous filament, is completely surrounded and isolated by a coat (the *choroid*) of dark pigment, except that there is a minute orifice or *pupil* behind the *cornea*, where the rays of light enter the pyramid, and one at the apex of the latter, where they reach the fibres of the optic nerve.

Each *cornea* is a lens with a perfect magnifying power, as has been proved by separating the entire compound eye by maceration, and then drying it, flattened out by pressure, on a slip of glass. When this preparation was placed under the microscope, on any small object, as the points of a forceps, being interposed between the mirror and the stage, its image was distinctly seen, on a proper adjustment of the focus of the microscope, in every one of the lenses whose line of axis admitted of it. The focus of each cornea has been ascertained by similar experiments to be exactly equal to the length of the pyramid behind it, so that the image produced by the rays of light proceeding from any external object, and refracted by the convex cornea, will fall accurately upon the sensitive termination of the optic-nerve filament there placed to receive it.

The rays which pass through the several pyramids are prevented from mingling with each other by the isolating sheath of dark pigment; and no rays, except those which pass along the axis of each pyramid, can reach the optic nerve; all the rest being absorbed in the pigment of the sides. Hence it is evident, that as no two corneae on the rounded surface of the compound eye can have the same axis, no two can transmit a ray of light from the very same point of any object looked at; while, as each of the composite eyes is immovable, except as the whole head moves, the combined action of the whole 24,000 lenses can present to the sensorium but the idea of a single, undistorted, unconfused object, probably on somewhat of the same principle by which the convergence of the rays of light entering our two eyes gives us but a single stereoscopic picture.

The soft blue colour of this dragon-fly's eyes—as also the rich golden reflections seen on the eyes of other insects, as the whetflies, and many other *diptera*—is not produced by the pigment which I have alluded to, but is a prismatic reflection from the *cornea*.

You would suppose that, having 24,000 eyes, the dragon-fly was pretty well furnished with organs of vision, and surely would need no more; but you would be mistaken. It has three other eyes of quite another character.

If you look at the commissure or line of junction of the two compound eyes on the summit of the head, you will see, just in front of the point where they separate and their front outlines diverge, a minute crescent-shaped cushion of a pale-green colour, at each angle of which is a minute *antenna*. Close to the base of each *antenna* there is set in the black skin of the head that divides the green crescent from the compound eyes, a globose, polished knob of crystal-like substance, much like the "bull's-eyes" or hemispheres of solid glass that are set in a ship's deck to enlighten the side-cabins. On the front side of the crescentic cushion there is a third similar glassy-sphere, but much larger than the two lateral ones. What are these three spherules?

They are eyes, in no important respect differing from the individuals which compose the compound masses, except that they are isolated. The shining glassy hemisphere is a cornea of hard transparent substance, behind which is situated a spherical lens, lodged in a kind of cup formed by an expansion of the optic nerve, and which is surrounded by a coloured pigment-layer.

You may study these simple eyes, or *stemma*, as they are called, in many other insects, though they are not so universally present as the compound eyes. On the forehead of the honey-bee they are well seen, as three black shining globules, placed, as in the dragon-fly, in a triangle.

*Importance of Swallows.*—As a proof of the valuable services rendered by swallows, it is estimated that one of these birds will devour 900 insects in a day; and when it is considered that some insects produce as many as nine generations in a summer, the state of the air but for these birds may be readily conceived. One kind of insect alone might produce 560,970,489,000,000 of its race in a single year.

*Plant an Apple Orchard.*—The old ones are fast dying out all through the older States. They were planted a hundred years ago, or more, have done good service, and ought to have their day. When apples are \$3 a barrel and upward, there is not an adequate supply in the country. They can be grown at a dollar a barrel with profit. The apple crop in a single small county in this State was worth half a million of dollars last year. Other counties, in the older parts of the Eastern States, were under the necessity of paying out a hundred thousand dollars for this fruit, because they had not the article at home. Peaches and plums we may be able to get along without, but apples we must have—for sauce, for pies, for the desert, and for the dinner-basket of little boys and girls who cannot come home from school to dine. We say, then, to every farmer, plant an orchard of at least a hundred trees. The trees are all ready for you in the nursery, well grown, and grafted two or three years from the bud. Get thrifty trees of varieties that you know will flourish in your locality, and in four years you will be eating fruit from them. Do not fail to plant an orchard.—*Am. Ag.*

## THE FRIEND.

SIXTH MONTH 21, 1862.

It is long since we have again had any thing to our readers relative to the aid they might give towards rendering the columns of "The Friend" attractive and instructive. The season of the year now invites many from their homes in the city to others in the country, and the absence of city associations and habits, affords more time for reading and writing, and a corresponding opportunity for preparing essays and making selections. There are many of our country friends who have occasionally favoured us with original and valuable communications, but who allow such contributions to be too few and far between, to meet our wishes, or satisfy the desires of our readers. To both classes referred to, we would extend a word of encouragement, if we may not prefer a *claim*, to make use of this journal as the means for disseminating their views and feelings, or imparting to others such portions of what they read, as they think particularly worthy of note. We believe there are many who feel a strong interest in the welfare of our religious Society, and who sometimes think they would be willing to do or to suffer much to promote its welfare, and increase the faithfulness and stability of its members; and perhaps, if some great things were required of them, they would engage in it with alacrity; but are they sufficiently diligent to embrace the opportunities that do present, for employing the time and talents bestowed upon them to the best advantage, and to avail themselves of the opportunities presented, in which they might do something, if it be only a little, for the benefit of their fellow members and the promotion of the great and good cause of truth and righteousness? This query seems naturally to arise in connection with the consideration of means for diffusing a knowledge of the doctrines and testimonies of our society, pointing out their application to the events of the day, and assaying to preserve or establish the members in an upright maintenance of them. One of these means is a periodical like *The Friend*, which is weekly welcomed in so many families connected with the society, where its contents, it may be presumed, are perused with attention and interest. It is not necessary to say much upon this subject, our wish being only to remind our readers of the opportunity thus afforded for the useful employment of part of their time, and of the welcome we would give to all contributions, whether original or selected, which would assist in making our journal the religious and literary miscellany it is designed to be.

## SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 7th inst. The British Government, at the request of the Atlantic Telegraph Company, have ordered two steamers to be got ready for the purpose of making a further survey on both sides of the Atlantic. A general assembly has commenced in East Lancashire, to induce the government to remove all duties from cotton goods imported to India, and thereby relieve the distress of the manufacturing districts. A large district out door meeting has been called to discuss the question. A vessel has arrived at Liverpool from Charleston, S. C., with a cargo of resin and turpentine. The ship *Antoinette* will left Liverpool for New Orleans with a cargo of salt. Other vessels were soon to follow. The stock of cotton in the Liverpool market was much reduced, and prices had further advanced. Breadstuffs dull.

The Paris *Monitor* publishes an imperial decision reducing the French army in Rome to a single division, under the command of Gen. Montebello. Accounts from the manufacturing districts of France are more favourable, and the silk and other crops promising. The Mexican ports of Tampico and Alvarado have been declared under blockade.

The Turks have obtained important advantages in the war with the Mohammedan number of whom had been killed in battle, and several of their villages destroyed by fire.

The latest news from China states that the rebels had been twice defeated with great loss.

The news from Mexico is to the last inst., and confirms the report of the French by the Mexicans. Five hundred of the former were killed, and 900 taken prisoners, but the latter were released, as the victors had not food for them. The Mexicans were actively fortifying the capital, and the French will march against it when they arrive.

**UNITED STATES.—Virginia.**—There has been little information during the past week, respecting the movements of the hostile armies near Richmond. On the one hand, it is asserted that McClellan's army is gaining steadily in position and strength each day, and that the capture of Richmond is merely a question of time, while on the other hand, the rebels represent everything as progressing favourably for their cause, and express the utmost confidence that the Federal army will be signally foiled in the attempt. On the 14th, large bodies of the rebel troops were observed to be moving towards the late battle field, as if for the purpose of making another attack. Frequent skirmishes, attended with loss of life, were occurring between the two armies. Several severe engagements have taken place in the Shenandoah valley, between the rebel forces commanded by Gen. Robert E. Lee, and the Federal troops. On the 10th inst. one which occurred on the 8th inst. near Harrisonburg, Rockingham County, the rebels appear to have been defeated, and continued their retreat southward. On the next day another battle occurred at Port Republic, in the capture of which forces were engaged, and a number of killed and wounded on both sides is understood to be quite large. It is reported that Jackson's forces have been reinforced, and that he will now be able to assume the offensive. Trade in Norfolk is reviving, and the Union feeling, which had been at a low ebb, is understood to be gradually reviving.

**North Carolina.**—There is but little news in this department. Gen. Burnside recently visited Washington, for the purpose of giving information and receiving instructions. He came through the Albemarle and Chesapeake Canal, in the gun boat *Port Royal*.

**South Carolina.**—The Federal Government have taken possession of Stono Island, having captured all the batteries upon it, and advanced within five miles of Charleston. The rebel army at Charleston has been greatly augmented. Deserters say that 30,000 men from Beauregard's army are now in the preparation of marching upon the city with a stubborn detence. Com. Dupont did not think the attack could be successfully made with his present force.

**Missouri.**—Governor Gamble, by a special message to the State Convention, has called the attention of the members to the fact that the President of the United States, in a message sent to Congress during the present session, had proposed the adoption of a joint resolution declaring the willingness of Congress to furnish aid to such of the Slave States as may think proper to adopt a measure of emancipation, and that such a resolution had been adopted by both Houses of Congress. The Governor, in his reply to the message, proposed a liberal one, and suggests that it is entitled to a respectful answer in express language. The Governor's message was referred to a special committee.

**Tennessee.**—The inhabitants of Memphis have submitted assent to the rule of the United States authorities. Applications had been made for the shipment of 6,000 bales of cotton. About 30,000 bales were burned there before the surrender. Many of the citizens who fled on the approach of the Federal fleet, have returned to their homes. A special Military Convention has been convened in harmony with the military rule. No military operations are reported since the capture of Memphis and Chattanooga.

**Mississippi.**—The health of Gen. Halleck's army is said to be good, notwithstanding the oppressive heat of the summer. A large force is at work repairing the railroad and the bridges between Memphis and Corinth, and as soon as this is done the latter place will be made the base of operations for the U. S. army of the south-west. Gen. Beauregard remained with the rebel army at Corinth, where he has dispatched Gen. Pope back advanced as far southward as Okolona, seventy miles from Corinth, the rebels continuing their retreat. The latest despatches from Gen. Halleck, state that Beauregard's army was still in the vicinity of Okolona, Overton and Columbus, Miss. Deserters from the rebel army represent it to be greatly disorganized, and portions of it mutinous. The rebel army has stripped of food the whole country south of Corinth, leaving many of the in-

habitants in a starving condition. The reported surrender of Vicksburg was premature. Com. Farragut's fleet had passed the city, but was compelled to fall down the river on account of the low water.

**Louisiana.**—The health of New Orleans was generally good up to the 1st inst. The cane plantations below the city look exceedingly well, and their proprietors are not paying much heed to the suggestions of the rebel leaders. The pilots and tow boats had resumed their former vocations at the Southwest Pass. Provisions, which were greatly needed, appear to be coming in pretty freely up the river. The *New Orleans papers* indicates a steady increase of loyalty to the Union. The *Delta* has changed its editors, and is now a strong Union paper; the *Picayune* and *True Delta*, after neither loyal nor disloyal sentiments, but counsel peaceful submission. Recruiting for the U. S. army was progressing in New Orleans with tolerable success, though all the impediments that could safely be thrown in the way were resorted to.

**New York.**—Mortality last week, 335; 151 adults and 184 children. The money market continues easy, at 3 1/2 a 4 per cent. on call, and 4 1/2 a 5 per cent. for discounts on ordinary paper. Flour, 6 1/2 a 6 3/4 per cent. premium; gold bars, 7 1/4 a 7 1/2 premium.

**Philadelphia.**—Mortality last week, 207. The following were the quotations in the grain market on the 16th inst. Fair and prime red wheat, \$1.24 a \$1.28; white wheat, \$1.32 a \$1.35; rye, 67 cts; prime yellow corn, 52 cts; 53 cts.; Pennsylvania corn, 52 a 53 cts.

**The Freed Slaves.**—The Danish Government has made a formal proposition, through its Minister, to take all the negroes who have escaped from their masters, and remove them to St. Croix free of charge. It then proposes that there should be an apprenticeship of three years; permitting them to receive regular wages, and the expiration of their apprenticeship, it is proposed to free them unconditionally. The U. S. Secretary of State has submitted copies of the correspondence to the chairman of the Judiciary Committee in each House of Congress. Another copy of the correspondence was sent for Hayti, making in all about 500, during the past month to that country. Gen. Hunter's coloured regiment at Beaufort, S. C., is now uniformed, and numbers 1600 men.

**A Suez Canal.**—The annual meeting of the shareholders of the Suez Canal Company, assembled in Paris, and the report contains several interesting facts. The chief engineer entertains no doubt but that the waters of the Red Sea will be united with the Mediterranean in the course of about eight months. There are at present 26,000 Arabs employed on the works.

**Commerce with Liberia.**—The bark *Justina* sailed recently from Baltimore with goods and emigrants for Liberia, and the bark *Ocean Eagle* from New York, with a cargo valued at \$40,000. The latter vessel took out four sugar mills, ordered by the Liberian authorities. These movements show the importance of the bill lately passed by Congress, for the establishment of diplomatic relations with the young African Republic. An emigrant to Liberia, is not only taken out by the Colonization Society free of expense, but is provided with a year's maintenance, and a contract of six months, or until he can prepare his land, which is given him by government.

## FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)  
Physician and Superintendent, —JOSUAH H. WORTHINGTON.

An application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

## NOTICE.

An active young man, a member of our Society, wants a situation in a wholesale store; he has some knowledge of book-keeping, and is a good penman. Inquire at the office of "The Friend."

DIED, on the 18th of Fifth month, 1862, at his residence, near Moorestown, N. J., aged sixty-one years, GEORGE W. ALLEN, of the village of Hester, which he bore with much patience and resignation, until the 15th inst. For the last year a member of Chester Monthly Meeting of Friends, N. J., but formerly a member of Frankford Monthly Meeting, Pennsylvania.

PYLE & MELROY, PRINTERS,

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SIXTH MONTH 28, 1862.

NO. 43.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the London Quarterly.  
**Eastern Archipelago.**  
(Continued from page 206.)

The great island of SUMATRA is, with the exception of Borneo, less known than any island in the Eastern Archipelago. A chain of mountains, in Java, divides it longitudinally, running nearest to the western coast. It contains five active volcanoes. Three-fourths of the island, especially towards the south and east, are covered with impenetrable woods. Fifteen nations, speaking as many different languages, inhabit it, and six have made considerable progress in civilization. The Malays are here also, as in Java, the dominant race. The island, although three times the size, contains only one-fifteenth of the population of Java. There are plains and mountains of volcanic origin that rival in fertility the richest portions of Java; but many of the raised valleys of the country present a very different aspect. A recent Dutch writer has given a description of two of the most elevated plains or table-lands, which present uniform scenes of sterility, a horizon without one of rank grass destitute of animal life and arid only by a few stunted trees; a scorching indigo blows over them without intermission for months, and spontaneous fires wrap the country in a dull canopy of smoke through which the rays of the sun can scarcely penetrate. An area of 42,000 square miles on the eastern side is covered with a stupendous forest, probably older than the race of men that inhabit or wander through it. Little, in truth, is known of the interior. The inhabitants chiefly live on extensive plains. Sumatra possesses European commercial settlements on its coast, but its chief interest consists in its having been for some time the seat of government for the British settlements in the archipelago. Sir Stamford Raffles, when Java was given up, was directed to make Bencoolen, on the south-western coast, his official residence; and those who are acquainted with the record of his useful and honourable life will remember the picture of happiness which has been drawn of his brief rule in Sumatra. No European had ever ventured beyond the range of the mountains of the fort; but Sir Stamford Raffles fixed a gun's station, twelve miles from the fort, and named it the Mountain of Mist. One of the richest districts in the world lay below, and at a short distance the waves of the Indian Ocean were

heard perpetually beating upon the rugged coast. He built a country-house, established himself in it with his family, and was surrounded by wild beasts, and by natives almost equally wild. In three years he had obtained a complete ascendancy over the people, and was able to penetrate further into the interior than any European had ever before attempted. An ardent lover of natural history, he revelled in the abundance of the new flora and fauna with which he was surrounded. Three hundred years of European intercourse with the coasts of Sumatra have yielded but little knowledge of its interior, or of the character of its native races. That it abounds in the elements of wealth is certain, and many of its native manufactures are considerably advanced. The British settlement of Bencoolen was one of the first establishments formed by the East India Company in the archipelago. It was selected solely for the purpose of growing pepper. The expenses of the establishment were enormous, and the returns only a few tens yearly, obtained by compulsory labour. The British establishment in Sumatra was withdrawn in 1824, and the place relinquished to the Dutch in exchange for Malacca and the Straits settlements. Nothing shows more clearly the advanced state of native civilization in portions of Sumatra than the development of manufacturing industry, the products of which have long been known in commerce. The workmanship in iron and steel is unsurpassed, and the kris or dagger-blades are famous throughout the archipelago. China silk is worked up into excellent fabrics, and the manufacture of cotton cloth was once extensive, but has been destroyed by the introduction of British goods from Singapore. The aversion of the native chiefs to the re-establishment of the Dutch power is said to have been very decidedly displayed; and so strong was the feeling of one of the principal native rulers, that he offered his territory to the British Government if one-half of its revenue was reserved to him. England, by yielding the whole of Sumatra, undoubtedly sacrificed important interests, and resigned a prospect of service to civilization in a country which might then have had a great career. The Dutch have entered on a course of systematic territorial conquest, and claim a sovereignty over the whole. The financial prospects are said to be the reverse of satisfactory.

There is something which strongly excites the imagination when the island of BORNEO, divided into two nearly equal parts by the equator, is contemplated, with its vast area and almost unknown people dwelling in a land of fertility unsurpassed probably in any other region of the earth, supplied with most of the useful and valuable metals, and provided with a hundred navigable rivers to transport the varied produce of their magnificent country to the sea. The interior is still hidden in almost impenetrable mystery. The existence of lofty ranges of mountains in the centre is undoubted; and in the northwest, as far as the country was penetrated by Spencer St. John, his first and only European explorer, in 1855, the whole was found to be mountainous, each range becoming more lofty as he approached the interior, but presenting

one uniform aspect of jungle covering hill and valley. From the summit of the great mountain Kina Balu, in the northeast of Borneo, 13,000 feet high, and when looking towards the interior in a southerly direction, St. John obtained a distant view of a mountain peak which he supposes to be very considerably higher than the one on which he stood, and to be situated very nearly in the centre of the island. The land on all sides gradually slopes towards the coast. Borneo may be said to bear the same relation to Eastern India that the continent of America has borne to Europe, being a region in which tribes inhabiting the remotest east have occasionally found a refuge from religious persecution and from the pressure of a superabundant population. Brazilian images, ruins of temples, and other remains of Hindoo civilization are still to be seen on the southern coast. The shores are inhabited by nations totally unconnected with each other. The west is occupied by Malays and Chinese, the north-west by the half-caste descendants of the Moors of Western India, the north by the Cochinchinese, the north-east by the Sulus, and the east and south coasts by the Bugis tribes of Celebes. There are besides numerous tribes who live in prahus among the islands near the coast. The Dutch claim a territory exceeding 200,000 square miles; but all beyond a mere fringe of the coast was, until the recent exploration of a portion of the interior, absolutely unknown.

Balambangan, at the north-east side of Borneo, was once a possession of England, and from the extreme richness of that portion of the island it might have proved a settlement of great value, but it was relinquished to Holland in 1827. The west coast possessed a considerable commerce before the arrival of the Dutch in the archipelago, and fifteen large junks arrived annually from China laden with cloth and porcelain, and returned freighted with gold, diamonds, camphor, beeswax, edible bird-nests, ebony and fragrant woods. The trade must have been highly remunerative, for the passion for European and Asiatic manufactures now continues general: thus two China jars of no remarkable workmanship have been known to be exchanged by an American trader for produce worth 2000 sterling; and six cakes of beeswax, each a foot thick and three feet in diameter, were commonly given for a musket, which, like the powder supplied to the pirates from the United States, may be presumed to have been of a very harmless character. The Borneo gold is very pure, and is worked with considerable profit by the Chinese. Antimony ore abounds, and is obtained with facility. This mineral forms one of the chief sources of the revenue of the English Rajah of Sarawak. The diamonds of Borneo are small, but of a brilliant water: they have been hitherto chiefly found in districts occupied by the Chinese, but will probably be discovered in other localities. The equatorial position of Borneo and the character of its alluvion detritus afford a strong presumption that it is a country rich in gems. There is a tradition that a great diamond is in the possession of a petty chief, and that it is worth by weight 270,000. St. John heard something of this wonderful diamond during his recent

explorations, and was gravely informed that the prince who owned it would gladly bestow it on him if he would kill for him a rival chief and assist in a projected war. Few courts in Europe, Sir Stamford Raffles states, could boast of more brilliant diamonds than were displayed by the ladies of Batavia in its prosperous days. They were obtained doubtless at a small cost from Borneo.

The prevailing warmth and moisture of Borneo, acting upon its rich soil, have covered it with forest; but it is nevertheless a country which, if brought under cultivation like Java, would even exceed it in the abundance and variety of its productions. The planters of Java are so well aware of this, that they have desired to form settlements for sugar plantations, for which the soil is known to be better adapted than in Java; but the want of labour has been an insuperable obstacle, no Chinese being permitted to enter the country. It is believed to be capable of supporting at least a hundred millions of people, and possessed of every requisite for the sustenance of civilized man. Nine-tenths of it are as yet an untrodden wilderness, and the remainder is subject to petty chiefs, under whose barbarous rule neither commerce nor agriculture can make any progress, and the exuberant riches of nature are as useless to themselves as to the world.

The Sultan of Brunei, who claims the sovereignty over the independent portion of Borneo, is a mere shadow of royalty. His government is weak and corrupt, and seemingly incapable of improvement. It can neither dispense justice nor compel obedience, and a general lawlessness prevails. There is a system in the interior called the *sera* or forced trade. Any noble who may think proper goes to a tribe with cloth or some other commodity, and calling upon the chief orders him to divide it among his people. He then demands as its price a sum enormously exceeding its value, and delts thus unavoidably incurred enable him to exercise a fearful oppression for years, and under the pretence of their liquidation to carry off children into slavery. This nominal sovereign draws from his kingdom a revenue of 25000 a year. The city of Brunei, the capital, with its 25,000 inhabitants, presents an aspect of the most squalid poverty. The Sultan's palace is a rude barn. He and his nobles are said to deplore the condition of their country, but do not comprehend that it is the consequence of their own rapacity. There is no regular system of taxation, and the aborigines suffer so severely from exactions that in de-pair they cultivate less and less every year, and look to the jungle instead of to their fields for a subsistence. The late Sultan offered, in consideration of a pension, to resign the sovereignty of the whole of his country to Great Britain.

(To be continued.)

For "The Friend."

#### Religious Instruction.

Much has been said respecting the benefit of religious instruction for the young, and not a little zeal and activity have of late years been manifested among Friends, in many places, in the establishment, and support of First-day schools for this special purpose. It is undeniably a solemn obligation on the part of parents and others having the care of children, to endeavour, by precept and example, to lead them to the dear Redeemer, and, as ability is afforded, to train them up in his nurture and admonition. The fear of the Lord is declared to be the beginning of wisdom, and the knowledge of the Holy to be understanding, and nothing surely can be compared with the value and blessedness of such knowledge, and of a firm es-

tablishment in the unchangeable Truth. Let us however, remember, that the Lord Jesus Christ is himself the great Teacher and Instructor of his children, and that those who would obtain that knowledge which is indeed life eternal, must come to Him in simplicity and dedication of heart, and take his yoke upon them. All who truly take up the cross of Christ, seeking to be conformed to his holy will, looking singly to and waiting upon him, he condescends to instruct by his grace and good Spirit, leading them safely in the path of humility and self-abasement, and supplying such knowledge of spiritual things as is adapted to their several needs, and will most certainly promote their everlasting good.

This is indeed a cardinal principle of true Quakerism, and most lamentable will be, if we should, from any cause, insensibly slide from this foundation, and fancy that such a knowledge of scripture truths as may be imparted in First-day schools, will make our children disciples of Christ, or real Friends. The views of the late John Barclay on this very important subject are well deserving our careful consideration. The letters from which the annexed extracts are taken have perhaps already appeared in "The Friend," but the writer believes that many of our readers will again peruse them with renewed interest and instruction. In a letter written in the year 1818, he expressed his lively concern that a mere formal knowledge of scripture on the part of young persons might not take the place of a spiritual nurture in the Lord, and an inward growth in grace. On this subject he thus expressed himself:

"Bear with me, who am but a younger brother, if in a little of that love, which is ever ready to esteem another better than one's self, I should be bold to express to thee my opinion, that any contrivances to store and stock the memories of young persons with a literal knowledge respecting religious matters, cannot of themselves, be productive of that true and living faith, which we as a people profess to seek an establishment in. I am in the full belief that scripture doctrines, cannot be really, rightly, and savingly known and held by any, if they come not to have them written in their hearts; so that, though they may be ever so well initiated in something which looks like a perfect knowledge of these things,—though they may be able, by the exercise of their natural understanding, and by dint of their memory, skillfully and readily to reply to those who may make inquiry of them,—though they may be wise as Apollos, in the words of Scripture, and seem competent to explain and support our religious principles,—yet all this will avail nothing, if the wrong wisdom be uppermost in them, and sit as an angel of light, and rule and reign in their hearts; while the babe, the seed, the very Truth in them, is crushed and crucified. I desire, therefore, that I myself and all others, might be engaged in patiently waiting upon the Lord, in the silence and subjection of the fleshly wisdom, that so, that disposition which would be setting us upon manufacturing for ourselves something to believe in, or to profess a belief in, might be starved and tired out: thus should we, in the Lord's own time, be led into a true and saving knowledge of those truths which are needful for us to understand. I well remember what Robert Barclay's experience was, as described in that part of his *Apology* which treats of wor-ship. He says, that he did not come to receive the Truth by strength of argument, or by a particular disquisition of each doctrine, and by conviction of his understanding thereby; but by being secretly reached by the life:—"for" says he, "when I came into the silent assemblies of God's people, I felt a secret power among them,

which touched my heart; and as I gave way unto it, I found the evil weakening in me, and the good raised up; and so I became knit and united to them, hanguering more and more after the increase of this power and life, whereby I might feel myself perfectly redeemed. And indeed, this is the surest way to become a Christian; to whom afterwards, the knowledge and understanding of principles will not be wanting, but will grow up so much as is needful, as the natural fruit of this good root; and such a knowledge will not be barren nor unfruitful. After this manner, we desire therefore, all that come among us to be proselyted, knowing that, though thousands should be convinced in their understandings, of all the truths we maintain, yet if they were not sensible of this inward life, and their souls not changed from unrighteousness to righteousness, they could add nothing to us."

It seems a very truth with me, that though for good reasons we, as a people, account our children to be our members, yet no one can be rightly and truly our member, who comes into the fold by any other way than by the *door*, Christ Jesus; and that although we may do all for our dear youth, which our wisdom is competent to do, in the way of religious instruction, yet nothing will supply the place of that earnest travail, that patient exercise of spirit on their account, which is indeed availing with our Heavenly Father, and which is much wanted among teachers and guardians amongst us. So that the line of our labour seems to me to be more in endeavouring to direct them to the fear of the Lord,—to engage them to self-examination,—to show them the place of true waiting,—to point out to them where the Fountain is, where the treasures lie,—and to prevail with them to come, taste and see the goodness of the Lord, and what he hath in store for them that love and wait upon him.

Some may be disposed to lament over the little acquaintance which young persons in our Society appear to have, with the reasons or grounds of our peculiar religious profession. No one, I am ready to think, laments it more than myself: but if such think to patch up a remedy by the adoption of those creeds, catechisms, and confessions of faith, which the worldly professors adopt, and have adopted, (as I believe,) ever since the apostasy, and out of which Truth led our forefathers,—I lament this remedy, still more than the disease. Because then we stand in danger of having a set of young formalists rise about us; whose hearts are likely to be more filled with notions, than with that nothingness of self, which is as truly the introduction to all right knowledge on these subjects, as the other is a snare and stumbling-block in the way of it. I apprehend that the principal cause of the ignorance above adverted to, of our religious principles, and of the reasons that may be rendered in support of them, is not so much the want of having examined such books as have been written on these subjects, as of a serious seeking unto Him, "in whom are hid all the treasures of wisdom and knowledge," who said, "Seek, and ye shall find,"—and whose promise of finding was, and is, only to the wrestling seed of Jacob, who, doing the will of the Father, knew of the doctrine of the Son, and to whom it is given in the very hour of need, what they shall answer, and what they shall say in defence of the Truth.

In another letter upon the same subject, this truly wise man expressed himself as follows:—"As to religious instruction, it consists, if I mistake not, in bringing up children in that nurture and admonition which is of the Lord, as saith the scripture. Now, how can any bring up children in the Lord's nurture and admonition—in the Lord's

ordering, in his counsel, direction and teaching.— I say how can he be rightly and effectually done, except the parent or teacher stand in this counsel himself, and abide himself under this best direction? How can he be instrumental to instruction? How can he be instrumental to instruction, help, and lead forward, if he be himself out of this counsel, if he be not under the ordering of that which is rock and lowly in the heart, of that pure principle, which is said to lead into all truth, as it is needed, waited on, and submitted unto, in its simple, silent instructions? How needful it is for a master or a parent to be brought to see that that which is to be known of God is manifested in man; and that there is no really knowing in the things of God, but by his light and spirit in the heart,—as said in eminent minister and messenger of the gospel, George Fox,—"no knowing the Son, nor the Father, but by the revelation of the Holy Spirit; no knowing the Scriptures but by the same Holy Ghost that moved the holy men to give them forth; no seeing Jesus, Lord, but by the same Holy Ghost; no true wisdom, but from above; no true receiving it, but in the fear of the Lord; no true understanding of spiritual things, but what Christ gives; and no true love to God, but what he sheds forth abroad in the heart."

I firmly believe, that as the deficiency complained of in our children, chiefly arises from a want of true living christian concern in the minds of parents and masters for their religious welfare, so they ought not to be put upon, or to put themselves upon any contrivances, which best Wisdom does not lead them into, and which alone can quicken and raise up in them a living concern for the religious welfare of their charges; and they should yield themselves as obedient children to its teachings. Thus will they come to know something of an establishment in the Truth, and a growth in living experience and substantial knowledge of the principles and precepts of the gospel, which is the power of God.

From "Silliman's Journal."

#### Colorado River of the West.

(Continued from page 231.)

"The approach of darkness stopped further observations, and we descended to camp, having first taken a good look in every direction, for the smoke of Indian camp fires, but without discovering any. In making the sixteen miles from last night's bivouac, we have had to labour hard for thirteen hours, stemming the strong current, and crossing the numerous rapids, and being thoroughly exhausted, depend for security to-night more upon our ceaseless position than upon any vigilance that is likely to be exhibited."

The greater portion of Lieut. Kent's report is in the form of a journal, noting the current events of each day, in a style clear and attractive. His descriptions of the numerous canons along the Colorado are exceedingly graphic and beautiful. On page 101 we have the following description of the side canons of the Colorado.

"A few of the Hualpais paid us a visit, but their intelligence is of so low an order that it is impossible to glean information from them, and their filthiness makes them objectionable. Our new guides seemed to think we should have difficulty in ascending to the portion of the plateau which they traverse on the way to higher points upon the river. The route they ordinarily pursue follows the canon of Diamond creek, but this they pronounced impracticable for mules, and said that we must retrace our course for several miles in order to strike a more circuitous, but easier trail, that ascended one of the branch canons.

Following their advice and guidance, yesterday morning we toiled up the rough road by which we had come, for six miles, when they struck off into a side ravine that led toward the southeast, about a mile from the mouth, the Hualpais told Iretcha that our camping place was just ahead, and scrambling over the summit of a hill, in a minute were both out of sight. For a mile we kept on, every few minutes coming to a fork, where the selection of the right road was left to chance. There was a network of canons, and the probabilities were that one out of ten would lead to an impassable precipice. The ascent became so rough that it was already almost impracticable for the mules, and at last the Mojaves stopped, declaring that they had lost their way, and had no idea how to find the camping place or the water, and that the Hualpais were a very bad set. This opinion no one was inclined just then to dispute. I however asked one of the Indians to go back and endeavour to find the deserters or some other member of their tribe. We waited impatiently for half an hour, and then the order was given to counter-march, for I intended to search for the route by which we had come; but before going far, the little Hualpais came back. He seemed amused that we should not have been able to find the water, and again took his place at the head of the column. He conducted for two miles through a difficult and intricate maze of ravines, and then climbed a side hill, and in a most unexpected place pointed out a little spring. There was a sufficiency of water, and tolerable grass near by. The second Hualpais came back during the evening, and seemed also to be astonished that we should have had trouble in finding what to him was so familiar. They both professed a determination to accompany the train, and Iretcha told me that it was time for himself and companions to rest."

In comparing the services of Dr. Newberry as Geologist and Naturalist of the expedition, the Department was fortunate—his well known ability in these branches of science, as well as his previous experiences in connection with other expeditions in the far west, peculiarly fitting him for the task. His report is ably drawn up and contains lucid descriptions of the geological and physical features of the country along the line of exploration. The numerous great gorges and profound canons cut by the cross and son of water, through thousands of feet of strata, in a district where the rocks have, for the most part, suffered little or no disturbance, since their deposition, afforded him a fine opportunity to study its geological structure. Probably in no other part of the world can so great a thickness of strata be seen and examined such by inch in one continued section as here. These tremendous chasms cleaving the beds, as they do almost vertically—sometimes to the astonishing depth of from three to six thousand feet, reveal every bed and layer of rock from top to base, as clearly and distinctly as they can be seen in the artificial excavations along our rail-roads.

In the great canon of the Colorado, on a high mesa, west of the Little Colorado, Dr. N. saw at a single exposure in regular succession the following formations:

1st. Upper Carboniferous limestone surmounting beds of cross-stratified sandstones, and red calcareous sandstones with gypsum, altogether, 1200 feet.

2d. Lower Carboniferous limestone, 1000 feet.

3d. A great thickness of limestone shales, and grits, apparently of Devonian age, resting upon heavy deposits of limestone, mud rocks, and sandstones, apparently of Silurian age, with a sandstone at the base, probably representing the Pots-

dam sandstone of New York: the whole not less than 2300 feet.

Beneath all these stratified rocks the gorges excavated so as to expose 1000 feet of granite.

Of these rocks Dr. Newberry remarks that, "the Silurian and Devonian strata are entirely conformable among themselves, and with the Carboniferous rocks. They lie nearly horizontal upon the granite, forming a series of sandstones, limestones, and shales, about 2000 feet in thickness. The Carboniferous series consists of over 2000 feet of limestones and gypsum, apparently all massive, and often highly fossiliferous. The upper members of the latter series form the surface of the mesa of the Little Colorado, upon which the volcanic group of the San Francisco mountains rest as a base."

At other localities Dr. N. had opportunities to examine the succeeding formations above those just alluded to. One of these, at the crossing of the Little Colorado, where one side of the valley is formed by a third mesa wall, which with the slope of its base rises to an elevation of at least one thousand feet in height above the stream.

"This mesa," he says, "is composed of deep red sandstones, shales, and conglomerates, resting conformably on the Upper Carboniferous limestone, which is a series of variegated marls, with bands of magnesian limestone." The latter series forms the surface of the mesa for many miles towards the northeast, and has an aggregate thickness of perhaps 1500 feet.

The variegated marls and the underlying red sandstones are all regarded as Triassic by Marcou; but the marls exhibit a remarkable lithological identity from top to bottom, and the upper portion contains plants of Jurassic affinities. Without more fossils from those formations; it seems to be at least doubtful whether we can draw the lines of classification as sharply as he has done; and it would even be a little surprising if there should ever be found good paleontological evidence for the identification of all the European subdivisions of the Permian, Triassic, Jurassic, and Chalk, of which he claims to have demonstrated the existence in this vicinity.

Upon the mesa of the variegated marls at the Moquis village rises still another, to the height of 800 or 900 feet, composed of coarse yellow sandstones, green shales, and beds of lignite—a group of strata which has been called Jurassic, but which contain impressions of dicotyledonous leaves, with *Ammonoites*, *Graptolite*, and *Doceramus* of Cretaceous species. These fossils leave no room for doubt in reference to the age of the strata which contain them, but prove them to be Lower Cretaceous."

The enormous thickness of strata is at places surmounted by another series of great thickness. This series is thus alluded to by Dr. N.

"Going north from the Moquis villages, on the Lower Carboniferous mesa, our progress was arrested by a want of water; the surface being everywhere cut by deep canons, by which it is drained to excess; every rain drop which falls finding its way immediately into the bottom of these ravines, where it is hurried off to the far deeper canons of the Colorado and its larger tributaries. Before we turned back, however, we had approached nearly to the base of a wall rising abruptly from the mesa in which we stood to the height of more than 1000 feet. This wall was as white as chalk, and reflected the sunlight like a bank of snow. It is evidently the edge of another and higher plateau, and apparently reaches to the Great Colorado, where it caps the 'high mesa,' forming part of the stupendous mural faces, presented toward the south and

west, which were distinctly visible when we had receded from them to the distance of a hundred miles.

What is the character of this upper mesa I had no means of determining at this time, and even now there may be some question about it; but I have scarcely a doubt that it is composed of the Upper Cretaceous strata, the equivalents of the 'white chalk' of Europe."

In regard to the causes which have produced the remarkable topographical features of this interesting region, Dr. Newberry shows that it is not due, as would probably be supposed by one not accustomed to the study of such phenomena, to volcanic or cruptive agencies, but solely to the erosive action of running water. Thus he continues: "The sketch which has been given of the tablelands of the upper Colorado, though brief, will perhaps suffice to convey an idea of the generalities of their structure and relations. But before returning to the details of the local geology of our route, I ought perhaps to refer briefly to two questions of general import, which would naturally suggest themselves to any geologist who should traverse the table-lands west of the Rocky mountains, or should receive an accurate description of them from others.

The first of these questions is: To what cause is due the peculiar topographical features of the surface of the table-lands—where the different formations succeed each other in a series of steps, which generally present abrupt and wall-like edges—the more recent strata occupying the highest portion of the plateau? The other has reference to the place and extent of the dry land, of which the erosion furnished the sediments now composing the table-lands.

The first of these questions belongs appropriately to the subject of surface geology, and will be referred to again. I may say here, however, that, like the great canons of the Colorado, the broad valleys bounded by high and perpendicular walls, belong to a vast system of erosion, and are wholly due to the action of water. Probably nowhere in the world has the action of this agent produced results so surprising, both as regards their magnitude and their peculiar character. It is not at all strange that a cause, which has given to what was once an immense plain, underlaid by thousands of feet of sedimentary rocks, conformable throughout, a topographical character more complicated than that of any mountain chain; which has made much of it absolutely impassable to man, or any animal but the winged bird, should be regarded as something out of the common course of nature. Hence the first and most plausible explanation of the striking surface features of this region will be to refer them to that embodiment of resistless power—the sword that cuts so many geological knots—volcanic force. The Great Canon of the Colorado would be considered a vast fissure or rent in the earth's crust, and the abrupt termination of the steps of the table-lands as marking lines of displacement. This theory though so plausible, and so entirely adequate to explain all the striking phenomena, lacks a single requisite to acceptance, and that is truth.

Aside from the slight local disturbance of the sedimentary rocks about the San Francisco mountain, from the spur of the Rocky mountains, near Fort Defiance, to those of the Cerbat and Aztec mountains on the west, the strata of the tablelands are as entirely unbroken, as when first deposited. Having this question constantly in mind, and examining with all possible care the structure of the great canons which we entered, I everywhere found evidence of the exclusive action of water in

their formation. The opposite sides of the deepest chasm showed perfect correspondence of stratification, conforming to the general dip, and nowhere displacement; and this bottom rock, so often dry and bare, was perhaps deeply eroded, but continuous from side to side, a portion of the yet undivided series lying below."

*The necessity of dying to ourselves, and of becoming fools that we may be truly wise.*—Oh! that men could die to themselves, even to their own wisdom and prudence, and not lean to their own understandings, nor idolize their own apprehensions and conceivings, but wait to receive understanding from God, who giveth liberally of the true wisdom to those that ask and wait aright! And how doth God give true wisdom and understanding? Is it not by the shining of his light in the heart? Oh! that men were turned inwardly thither and were inwardly dead to that wisdom and prudence from which God ever hid things, and ever will! He that will be truly wise, must first become a fool, that he may be wise; that is, he must not strive to learn in the comprehensive way of man's wisdom and prudence the things of God's kingdom, but feel the begettings of life in his heart, and in that receive somewhat of the new and heavenly understanding, and so die to the other, and know no more of the things of God after the flesh,—(that is, as a wise man, as a learned scribe, as a great disputant,—for where is the wise? Where is the scribe? Where is the disputer of this world? Can they find out the mystery of life, the mystery of God's kingdom in this age, any more than they could in former ages?)—but become a babe, a fool, and so receive and bow to that which his own wisdom will call foolishness, and account weakness; but the other birth, which is begotten and born of God, will know, and daily experience, to be the wisdom and power of God unto salvation.—Isaac Pennington. *I. P.'s works, vol. 2nd, p. 184.*

*Voices of Animals.*—There is a chapter in the *Natural History of Animals* that has hardly been touched upon as yet, and that will be especially interesting with reference to families. The voices of animals have a family character not to be mistaken. All the canine bark and howl; the fox, the wolf, the dog, have the same kind of utterance, though on a somewhat different pitch. All the bears growl from the white bear of the Arctic snows to the small black bear of the Andes. All the cats *miau*, from our quiet fireside companion to the lions, and tigers, and panthers of the forest and jungle. This last may seem a strange assertion; but to any one who has listened critically to their sounds and analyzed their voices, the roar of the lion is but a gigantic *miau*, bearing about the same proportion to that of a cat, as its stately and majestic form does to the smaller, softer, more peaceful aspect of the cat. Yet, notwithstanding the difference in their size, who can look at the lion, whether in his more sleepy mood, as he lies curled up in the corner of his cage, or in his fiercer moments of hunger or of rage, without being reminded of a cat? And this is not merely the resemblance of one carnivorous animal to another; for no one was ever reminded of a dog or wolf by a lion. Again, all the horses and donkeys neigh; for the bray of the donkey is only a harsher neigh, pitched on a different key, it is true, but a sound of the same character—as the donkey himself is but a clumsy and dwarfish horse. All the cows low, from the buffalo roaming the prairie, the musk-ox of the Arctic ice-fields, or the yak of Asia, to the cattle feeding in our pastures. Among the birds, this similarity of voice in families is still more

marked. We need only recall the harsh and noisy parrots, so similar in their peculiar utterance. Or take, as an example, the web-footed family; do not all the geese and the innumerable host of ducks quack? Does not every member of the crow family caw, whether it be the jackdaw, the jay, the magpie, the rook in some green rookery of the Old World, or the crow of our woods, with its long, melancholy caw, that seems to make the silence and solitude deeper? Compare all the sweet warblers of the songster family—the nightingales, the thrushes, the mocking-birds, the robins; they differ in the greater or less perfection of their note, but the same kind of voice runs through the whole group.—*Agassiz.*

#### Concerning Love.

BY ISAAC PENNINGTON.

Q: What is love?

Ans. What shall I say of it; or how shall I, in words, express its nature? It is the sweetness of life—it is the sweet, tender, melting nature of God, flowing up, through his Seed of life into the creature; and of all things, making the creature most like unto himself, both in nature and operation.

It fulfils the law, it fulfils the gospel—it wraps up all in one, and brings forth all in the oneness. It excludes all evil out of the heart; it perfects all good in the heart. A touch of love doth this in measure—perfect love doth this in fulness.

But how can I proceed to speak of it! Oh! that the souls of all that fear and wait on the Lord might feel its nature fully; and then would they not fail of its sweet, overcoming operations, both towards one another, and towards enemies. The great healing; the great conquest; the great salvation, is reserved for the full manifestation of the love of God. His judgments; his cuttings; his heavings by the word of his mouth; are but to prepare for, but not to do, the great work of raising up the sweet building of his life; which is to be done in love and in peace, and by the power thereof.

And this my soul waits for, and cries after; even the full springing up of eternal love in my heart; and the swallowing of me wholly into it; and the bringing of my soul wholly forth into it, that the life of God, in its own perfect sweetness, may fully run forth through this vessel; and not be at all tintured by the vessel, but perfectly tincture and change the vessel into its own nature; and then shall no fault be found in my soul before the Lord; but the spotless life be fully enjoyed by me, and become a perfectly pleasant sacrifice to my God.

Oh! how sweet is love! How pleasant is its nature! How takingly doth it behave itself in every condition, upon every occasion, to every person, and about every thing! How tenderly, how readily, doth it help and serve the meekest! How patiently, how meekly, doth it bear all things, either from God or man, how unexpectedly soever they come, or how hard soever they seem.

How doth it believe; how doth it hope,—how doth it excuse; how doth it cover even that which seemeth not to be excusable and not fit to be covered. How kind it is, even in its interpretations and charges concerning miscarriages! It never overcharges; it never gapes upon the spirit of him whom it reprehends; it never hardens, it never provokes; but carrieth a meltingness and power of conviction with it. This is the nature of God; this, in the vessel capacitated to receive and bring it forth in its glory; the power of emity is not able to stand against, but falls before, and is overcome by it.—*Works, vol. 2, p. 415-16. Edit.* 1784.

## THE FRIEND.

SIXTH MONTH 28, 1862.

## LONDON YEARLY MEETING.

From the account of the late London Yearly Meeting published in the British Friend of this month, we take the following extracts.

*Fourth-day Morning, 21st of Fifth month.*—Assembled at ten o'clock, presenting, as regards numbers, rather a smaller appearance than on some previous occasions.

The representatives' names were called over, and all responded except seven, most of whom assigned satisfactory reasons for their absence.

The reading of the epistles was then proceeded with, commencing with the one from Dublin Yearly Meeting, that from New York followed, with New England, Baltimore, Ohio, Indiana, and the Western Yearly Meeting. No epistle had been received from Philadelphia, for reasons already known to Friends; neither had North Carolina been able to communicate by epistle, on account of the distracted state of the country.

The epistle from Ohio adverted, as in some previous years, to the separation which had taken place among them, intimating the desire for a reunion, and that no action had been taken in the way of disowning those who had established separate meetings. As was to be expected, all the American epistles referred to the civil war now raging in their land, and acknowledged how grateful it had been to receive the sympathizing salutation from them last year by this meeting.

The consideration whether anything could be done in the way of assisting Friends of Ohio to a restoration of unity, as also to a re-opening of correspondence with Philadelphia, occupied the attention of the meeting for some time, but way did not appear then to open for any action in either case.

The epistle from Ireland contained the information that, in accordance with the recommendation of the conference appointed by their last Yearly Meeting, their queries and advice, their rules for relief of the poor, and in regard to marriage, had been assimilated to those of London Yearly Meeting.

On adjoining about one o'clock, the representatives met in committee as directed, to consider of suitable Friends for clerk and assistants, when they agreed to propose Edward Backhouse for the former office, with Joseph Crofield and William Thistlethwaite for the latter.

*Fourth-day afternoon.*—Met at four. The committee of representatives presented their report, in terms of their appointment, informing the meeting that they had agreed to propose the Friends above-named as clerk and assistants; and these being acceptable, were appointed accordingly.

In order to allow the committee of representatives to proceed with the business intrusted to it, this sitting was but short, and it was adjourned shortly after six, that committee being directed to meet in half-an-hour thereafter, which it did, and the nominated sub-committee to prepare answers to the various epistles that had been read in the forenoon.

Some time was occupied in discussing the extent to which Friends in America had been unfaithful to our testimony against war, and in considering how best to treat the subject of the critical position in which they are placed by the desolating strife now pervading the country. After much expression, the course which seemed the simple conveying, through the answers to their respective epistles, our sympathy towards our American

brethren, and of encouragement to faithfulness in the maintenance of our christian testimony against all war, without reference to any shortcoming of theirs in this respect.

*Fifth-day morning.*—Met at ten o'clock. After a Friend had offered supplication, the remainder of the Answers to the Queries were proceeded with and concluded at this sitting. The answer to the fifth Query, from Lancashire and Cheshire Quarterly Meeting, elicited somewhat of protracted remark, on account of an exception on a point which the Query did not seem to embrace, namely, the payment of seat-rents in other places of worship. One or two individuals appeared inclined to justify such a procedure, but it was generally considered to be a decided infraction of the Society's testimony, if not against "all ecclesiastical demands," at least against that to the freedom and spirituality of defensive and worship, and the Query was said to be defective in not embracing this particular.

Occasion was taken to advocate the discontinuance of the term "harding ministry," because of its seeming harshness, particularly in the case of many who were earnestly devoted to the winning of souls to Christ, and this often on but slender pecuniary remuneration. It was suggested that the word "paid" might now very properly be substituted for "harding ministry."

A condensed statement of distrusters for ecclesiastical purposes was also read, from which it appeared that the amount of sufferings in this account was £5155, 1s. The tabular statement as to number of Quarterly, Monthly, and Particular Meetings, number of members and attenders of meetings, births, burials, accessions by conviction, resignations, disownments, &c., as ordered by last Yearly Meeting, was also read, showing a diminution of eighteen in number, as compared with the preceding year. The statement showed the admissions by conviction to be much about the same as usual. The attenders in proportion to the members, varied in some places very considerably, preponderating most in Scotland and the northern English counties.

*Fifth-day afternoon.*—Met at four o'clock, and entered upon the consideration of the state of Society, the meeting having been put in possession of all the usual information necessary for the purpose.

[In the course of the consideration one Friend] referred to certain changes which had recently been adopted, but these were rather adaptations of principles to altered circumstances, and not changes of principles. The movement in this direction, he was aware, had been viewed with apprehension by many; with what may be called a godly jealousy, not to lay waste what ought to be cherished. He wished his friends of this class to cherish a hopeful mind, trusting that the great Head of the church will overrule even the errors of his people for their good. On the other hand,

\* In the tabular statement above referred to, the principal details are as follows, viz:—

Number of Monthly Meetings in England and Scotland, . . . . .	81
Number of Monthly Meetings with upwards of 500 members, . . . . .	6
Number of Monthly Meetings with less than 50 members, . . . . .	10
Number of Meetings for Worship, . . . . .	317
Number of men over-seers, . . . . .	355
Number of women over-seers, . . . . .	284
Number of male members, . . . . .	6403
Number of female members, . . . . .	7378
Number of habitual attenders, . . . . .	13,841
Number of births in the year, . . . . .	3,190
Number of deaths in the year, . . . . .	288
Number of burials in the year, . . . . .	268

Ireland is not included in the above returns.

he well knew there was a large class who rejoiced in what they looked upon as needful alterations. Not a few of them, he felt persuaded, loved their Lord. The effect of these alterations has been to throw a large individual responsibility upon us; and he appealed to his junior friends to look to themselves, seeing so much has been done by the church for them. Where, he would ask them, would they enjoy privileges so great as in the Society of Friends? No other church had the same amount of liberty. If there is any lack, it is in ourselves; we must therefore come back to the individual work, cherishing that self-control and readiness of mind, which distinguish the christian from the man of the world. All our meetings being maintained in their integrity, and in the power of God, they will be fountains of true refreshing.

Adjourned till four o'clock to-morrow afternoon. The committee of representatives came together soon after the adjournment, and separated a sub-committee to prepare the general epistle.

The propriety of addressing Philadelphia Yearly Meeting was brought under review at this sitting, and many Friends took part in the discussion, in which much affectionate feeling was manifested for that Yearly Meeting; indeed it may be said to have been the unanimous desire to re-open the correspondence, had it not been for the known determination on the part of Philadelphia Friends, neither to write, nor to receive epistles.

*Sixth-day afternoon.*—Met at four o'clock. The summary of Answers to the Queries, as already intimated, not having been all overtaken last evening, the remainder were now read, and the consideration of the state of the Society further entered upon.

The answer to the fifth Query was adverted to, and dwelt upon at very considerable length. To some Friends it was cause of regret, to find the exceptions in this matter on the increase; the Society's testimony herein being the most important of any that had been committed to it to hold. On the other hand, it was distinctly avowed that many Friends had no conscientious scruple against tithes, but simply refused the payment of them because it was the rule of the Society. The discussion of a question of such comprehensive bearing was, however, seen to be undesirable at this juncture; and the answer to the sixth Query came under review, and gave rise to considerable comment.

Taking into account the extraordinary excitement in regard to war, which had recently pervaded the country, some Friends considered it satisfactory to have so few exceptions on this head; while it could not but be deplored, that public sentiment had greatly retrograded within the last few years. Occasion was hence taken, to urge upon Friends greater diligence in the way of diffusing the pacific principle of the gospel, especially among other christian professors.

The answer in reference to the attendance of meetings for discipline, being thought to exhibit very extensive deficiency, several Friends were led to show of what importance was a due regard to our duty on this matter. In addition to what the three answers appeared particularly to call for in the way of animadversion, there was a free expression of sentiment in reference to the cause of our deficiencies in the general, which some ascribed to a forsaking of first principles, especially in regard to what was the distinctive feature in the profession of our worthy predecessors—a close adherence to the dictates of the Light or Spirit of Christ in the soul.

The summary of answers being thus disposed of, the tabular statement introduced at a previous

sitting was next read; the contents being considered fully as indicative of the state of the body as the answers to the Queries.

Isaac Brown spoke at great length, dwelling more particularly on the great number of small meetings, and on their being so many without even an overseer.

He also looked upon the statement as incorrect, inasmuch as it did not indicate how many meetings might also be without a minister. The circumstances of the Society in the present day, he observed, were widely different from what they were at its rise, when it chiefly consisted of the awakened, earnest, and converted; whereas now, the great majority are birth-right members. What he appeared to desire was increased instrumental instruction for the young, the ignorant, and unconverted, apart from meetings for worship. He recurred to what had been his position in early life, when sitting in a meeting for worship before some fifty or sixty children, when for probably five or six months not a word of ministry was ever heard among them. And again, to his position now in a meeting, where the children of many now present (several hundred in number) sat before him—on whose behalf, as well as on their above-mentioned, his sympathies seemed largely excited, in consideration of their want of instrumental help in the promotion of their religious welfare. He also referred to the practice of the first ministers among Friends in London, to meet together every week, and depute certain of their number, by two and two, to attend the various meetings in London, in order that there might be no meeting without a minister. Something of this sort he seemed to think to be now called for, though he explicitly admitted that he pleaded for no ministry of merely human appointment, nor for any other mode of worship than that which Friends have always followed.

Joseph Pease took a different view of the Society's condition, and spoke at great length and with much feeling, drawing a vivid picture of what the early Friends were by a living faith in Christ as the light of the world, quoting that text in 1 John, "This is his commandment, that we should believe on the name of his Son Jesus Christ, and love one another as he gave us commandment." And it was his assured conviction that it would be ours to realize the like blessed experience, had we but the like energizing faith in the name, which is the power of Jesus—there being none other name or power under heaven, given among men, whereby we can be saved.

Alfred Lucas, Joseph Arnfield, and some others, spoke as to the cause of the state of things revealed in the tabular returns, the last named Friend particularly expressing his conviction that the alterations recently adopted had not resulted beneficially, inasmuch as there was no evidence of increased attendance of meetings for worship, or of greater regard for the distinguishing testimonies of the Society, neither was there evidence of additional conviction and accession to our numbers.

John Bright spoke briefly, counselling to let the revelations contained in the tabular returns become subject of deliberate, serious reflection, with Friends individually, at their respective homes; trusting this might lead to the discovery of a remedy another year, his conviction being, that there must be something wrong, when a body professing a faith so sublime, so simple, and so scriptural, not only did not increase as it ought, but decreased and threatened to become altogether soon extinct.

Besides the Friends already named, several others took part in the discussion.

The meeting adjourned till eleven next morning.

*Seventh-day morning.*—Met at eleven o'clock. The principal business of this sitting was introduced by the reading of a minute of last Yearly Meeting, in reference to what was required at the hands of Friends towards the unenlightened in foreign countries, as well as the ignorant and depraved in our own land.

Edward Smith was the first to speak on the question, and while he could not but sympathize with what was being done by others in carrying the tidings of salvation to heathen countries, he considered it might be more appropriate for Friends to concentrate their attention on such of those around us as the minute described. He felt interested in what had been done in an agricultural district, as related by Francis Dix at a previous sitting; but the condition of many in our large cities and towns he considered more degraded, and called for more energetic action, their numbers being also incomparably greater. From carefully prepared statistics, the extent of vice and ignorance in a certain district of Lancashire, was shown to be greater than it was easy to believe. In a given population there was declared to be a large proportion who could neither read nor write; who could not even count one hundred, even among adults; who knew neither the name of the Saviour, nor that of the sovereign of our country; who could give no explanation of the common words, vice, virtue, righteousness; who never were within the walls of any place of worship, and who had not even clothing suitable for going there! Altogether, the picture of the abject, degraded, and depraved condition of so large a class in our very midst, was a truly appalling one, and made a deep impression on the minds of Friends. He disclaimed all intention of urging upon Friends any step in the least at variance with our religious principles, but he thought much could be done for the help of those in the deplorable condition which he had described, not only without compromising, but in strict accordance with those principles. The remedies which he suggested lay in the employment of scripture-readers, where Friends could not undertake that service themselves; and in having "Bible-women," who would go from house to house among this neglected class of our fellow-citizens.

At an early part of the sitting it was felt that it would be desirable to have the company of our women Friends, who would doubtless be deeply interested in the question. It was accordingly arranged to invite them to a meeting to be held on Third-day morning, at ten o'clock, Edward Smith, Samuel Bowley, and Samuel Fox, being requested to take charge of the proceedings.

Adjourned till Second-day morning.  
*Second-day morning, 29th of Fifth month.*—The Yearly Meeting convened at eleven o'clock.

The clerk introduced the business of the sitting by reading the minute of last Yearly Meeting, which referred to future consideration the subject of appointing a committee to pay a visit, in the love of the gospel, to the Quarterly, Monthly, and other meetings of Friends in Great Britain. The propriety of the proposed measure was assented to, it may be said with entire unanimity, very many Friends encouraging its adoption in the belief that the present was the right time. A large committee was accordingly appointed, consisting of about eighty or ninety Friends.

*Seventh-day afternoon.*—Met at four o'clock. A minute was presented by Sussex, Surrey, and Hants Quarterly Meeting; its object was to request that the Yearly Meeting would not order the preparation next year of a tabular statement similar to the one brought in this year. Joseph Crossfield, as one of the representatives from that

Quarterly Meeting, explained that there was no intention, in the minute which had been read, to find any blame with the action of the Yearly Meeting, but simply to signify that Friends of that Quarterly Meeting considered it inexpedient and prejudicial to make such a return annually.

Josiah Forster inclined to believe that the Yearly Meeting, in adopting the recommendation of the conference to order such a tabular statement for one year, was not committed to more, and he seemed to think that the request of the Quarterly Meeting might be complied with.

Henry Crossfield complained of the amount of labour thus imposed upon large Monthly and other meetings, especially as the information obtained was of little value, it being, in his opinion, of no importance to learn that there were so many members in this particular place and so many in that.

William Bennett stated that the Monthly Meeting in which the minute originated was nearly, if not quite unanimous, in deprecating the statistics in question, considering the engagement of preparing them as inimical to the best interests of the Society.

On the other hand, there was a very general and decided expression of desire for the production of the said returns, not only for another year, but also for its indefinite continuance.

In consequence of the meeting previously arranged to be held at ten o'clock to-morrow, of men and women Friends simultaneously, to consider the Yearly Meeting's minute of last year, in reference to the "ignorant and depraved in our own land," the adjournment was fixed for the afternoon at four o'clock.

*Third-day afternoon.*—The Yearly Meeting assembled at four o'clock, and proceeded with sundry selected minutes of the Meeting for Sufferings.

Some interesting yet painful information, respecting Friends at Pymont and Minden, chiefly on account of their refusal to bear arms [was given]. It appears that the exemption enjoyed by them for many years from personal service was likely to be withdrawn; and this had induced them to present a memorial to the king of Prussia, setting forth the grounds upon which Friends conscientiously decline to take any part in war; and intreating that they might continue to meet with the indulgence heretofore provided originally for them, through the goodness of the late king. It was stated by a Friend of Minden, that no answer had as yet been received to the memorial, which was beautiful specimen of simplicity in style, combined with becoming respect for royalty. Much sympathy was felt and expressed for those under our name in that country, and the close relationship now existing between it and our own was alluded to, as leading to the hope that influence might be used by Friends here in procuring relief in the direction sought by the memorial.

In the autumn of last year the Meeting for Sufferings had deputed some four or five Friends to visit, in gospel love, the meetings at Pymont and Minden. An interesting report of the service of these Friends was read, from which it appeared that a number of individuals, resident some distance from Minden, assembled for worship after the manner of Friends, their attachment to the Society having been the result of some tracts distributed among them. Four of these individuals have been since received into membership.

Robert Doeg gave further a pretty lengthened detail on this subject, informing the Yearly Meeting as to the number of their meetings and members. Taking into account the habitual and the casual attenders, he stated that those professing

with Friends in Norway amount to nearly 400; one half of these belong to Stavanger, the remainder being scattered over the country, and forming either eighteen meetings, many of these, of course, being very small. He also gave some information regarding the sufferings sustained by Friends in Norway on ecclesiastical accounts, and the efforts made to induce the young to go over to the Lutheran state church, which was a temptation, because of the secular advantages accruing from that connection. He mentioned a very trying case of a young man in Sweden, who, being convinced of Friends' principles, could not submit to be married by a priest, but accomplished his marriage after the manner of Friends, having given publicity to his intention by advertising in the public papers. He was fined for this offence against the law, and being unable to pay, was imprisoned. He was advised to emigrate in order to evade punishment, but this he declined. In this respect Friends in Norway are not molested. Other information of a general character respecting them was communicated by Robert Doeg, and was listened to with much interest.

The last minute embraced a correspondence with a few individuals at Calcutta, including M. D'Ortez and his wife, who were allowed to attend the Yearly Meeting. An epistle from this small company stated their being convinced of the principles held by Friends, and that they had formed themselves into a society under our name, meeting together on First-days for worship, after our manner. In their epistle they express a desire that a minister might be sent to them. The reply, in behalf of the Meeting for Sufferings, explained the views of Friends in relation to ministry. Some books appear to have been forwarded to them, especially the new edition of "Christian Doctrine, Practice, and Discipline," to which, in their epistle from Calcutta, allusion is made, and a copy requested—these friendly people there having learned from *The British Friend* that this work was in preparation.

Isaac Brown took occasion to explain his views as to ministry and worship, as he had reason to believe that what he expressed at a previous sitting had been misunderstood. He said he thought the church possessed the power to send forth its ministers; at the same time, he admitted they could not preach under any other than divine authority. He said he objected to the term *silent* worship, not because he disapproved of silence, which he held right ever to be the basis of that service; but the testimony of the Society was not to *silent*, but to *spiritual* worship; and he hoped the day would ever come, when silence would not occupy a portion, and that a large one, in our meetings. The value of silence he said was coming to be more understood and appreciated by other denominations; and even to a large extent by clergymen, of which he gave some striking instances. Notwithstanding this, he adhered to his previously expressed opinion in reference to preaching, quoting the text: "How shall they believe on him of whom they have not heard? How shall they hear without a preacher, and how shall they preach except they be sent? How beautiful on the mountains," &c., &c.

A Friend in the ministry related how he had been engaged last First-day evening in preaching to a large crowd waiting for admission at the doors of the Victoria Theatre, and in view of the neglected spiritual condition of many in this great metropolis, he was so anxious for his brethren in the ministry running to and fro, that he wished to hold a prayer-meeting, to prayerfully seek the Divine counsel in regard to their duty to the

masses, and that they might be enabled to offer themselves, saying, "Here am I, send me."

Richard Fry observed in reply, that he never could approve of the term "prayer-meetings;" all our meetings for worship being for prayer and praise; they were also for the purpose of listening to Divine counsel, so that we could not consistently appoint meetings for preconcerted purposes.

The meeting then adjourned till four o'clock to-morrow afternoon.

*Fourth-day afternoon.*—Met at four o'clock. Previous to entering on the regular business, the clerk stated that two or three Friends were desirous of briefly addressing the meeting, without intending to lead into any discussion.

Thomas Pease was then called on, and said he had witnessed with regret a departure from the well-known and long-established practice of the Society, by some of our members, in regard to mourning apparel; and he requested the clerk to read the advice on this subject in the book of Christian Doctrine and Practice, as conveying his sentiments better than he was competent to express them, and the request was complied with.

James Backhouse here referred to the case of a Friend whose family declined to put on mourning habits at his decease, because they knew he disapproved of that practice, although themselves unconnected with Friends. The pious regard for a parent in this case, J. B. thought, was an equally worthy of imitation by our younger members in similar circumstances.

Joseph Stickney Sewell followed, and mentioned that a concern had rested upon his mind during greater part of the previous sittings, to invite the company of his younger brethren, and also those of middle age, to a meeting for prayer, for imploring the Divine counsel in reference to our duty as individuals. An opportunity of this kind he thought would be embraced for giving expression to their feelings; it might be in silent or in vocal supplication by numbers who would shrink from doing so in this or in an ordinary meeting; and he requested the use of part of the Devonshire House premises for the proposed concern.

A few Friends readily, but apparently without due reflection, expressed their cordial concurrence in the request, and hoped it might be granted.

Josiah Forster was of the judgment that such a meeting was at variance with the views of Friends in reference to worship. All our meetings for worship, as had been stated at a previous sitting, are meetings for prayer, thanksgiving, &c. He desired not to be misunderstood; the spirit of supplication was what he coveted might more and more abound among us; but in consistency with our views, we could not appoint meetings with the preconcerted intention of praying for any specific object. A number of others coincided in the view so expressed, and it was concluded not to accede to J. S. Sewell's request.

Joseph S. Sewell seemed surprised at his having led the meeting into difficulty; or that there was any inconsistency with principle in his request, which he at once withdrew. Caleb R. Kemp, and some others, who had approved of the request, expressed satisfaction with the conclusion of the meeting, after the explanations which had been given.

Phillip D. Tuekett called attention to the condition of Friends in Norway. Some of the sufferings which they are sustaining, he ascribed to the teachings of the Society in this country, and the bonds thereby imposed upon them, especially in regard to ecclesiastical demands. He was, however, mistaken in this opinion; as it was explained by George Richardson, junr., and Robert Doeg, that the action of Friends in Norway was the re-

sult of their own individual enlightened conviction, independent entirely of foreign influence; many of them are strangers to our book of Christian Doctrine, Practice, and Discipline, as it is not translated into their native tongue.

The report of the General Meeting for Aekworth School was read, followed by the report of the Conference Committee on schools, which gave some interesting information. The number of children, members of our Society, in the various institutions is said to be about 500, with 230 not in membership, while there is room for a considerably larger number of both classes in nearly all the schools. The average cost, on the whole, is about £25; the sum received on behalf of each child averages £15, thus leaving a sum of £10 for each, or upwards of £7000 per annum, to be provided by the funds of the various institutions, supplemented by annual subscriptions and by donations.

The Friends entrusted with the management of the united meetings of men and women Friends, held yesterday in the men's and in the women's meeting-houses, presented a minute which they had prepared for adoption; and after some slight alterations, it was recorded. The minute simply states that those meetings had been held, and that a free exchange of sentiment had taken place on the question brought under notice, which commended the subject to the continued serious consideration of Friends.

*Fifth-day morning.*—The large committee came together at nine o'clock, to hear the drafts of the remaining epistles. The Yearly Meeting assembled at eleven o'clock, and was engaged with these epistles during the sitting. With very little alteration, they were adopted, and being signed by the clerk, were confided to the Meeting for Sufferings to forward.

After the epistles had all been signed, Thomas Bayes briefly and impressively addressed the meeting on the subject of silent meetings, giving his own experience respecting them, and with some instances of their remarkably beneficial results, especially in the case of an individual whom he had visited on his dying bed, and who at that solemn hour could not be supposed to speak anything but the truth.

William Thistlethwaite, in contemplating the close of the Yearly Meeting now approaching, said he desired to call the attention of Friends to a few words of Holy Scripture, descriptive of the condition of the christian church at the close of the first persecution, as now in his view inapplicable to our circumstances at the present time. "Then had the churches rest throughout all Judea, and Galilee, and Samaria, and were edified; and walking in the fear of the Lord, and the comfort of the Holy Ghost, were multiplied." He did not intend to convey the idea that this rest is to apply to our individual progress in the christian life, nor to that service which the church owes to those by whom it is surrounded. In this sense we may not rest. But there are other times when, after having rightly devoted much attention to external arrangements, our true strength may be best promoted by withdrawing from too exclusive a reliance on these? The church will ever acquire strength and be in safety in proportion as it depends in that inner life which is the source of all true service for ourselves or others.

A few others having briefly addressed the meeting in a similar strain to those who had preceded, adjournment took place till five o'clock this afternoon.

*Fifth-day afternoon.*—The concluding sitting of the Yearly Meeting was held at five o'clock. The minute from women Friends having been disposed of, Joseph Thorp was requested to read the general

# THE FRIEND.

From Evenings at the Microscope.  
Spiders and Mites.

Spiders, I am sure, are not favourites with you. With the exception of the poor prisoner in the Basle, who had succeeded in taming a Spider—the only creature besides himself that inhabited his prison—I do not think I have ever heard of any one who loved or admired Spiders, morally. Yet, physically, we may find much to admire in them, not a few naturalists have done before us; there are men who have devoted their lives to the study of this unamiable race, and who have discovered in them the same wondrous skill, and the same perfect adaptation of organ to function, of structure to habit, that mark all God's works, whether we think them pretty or ugly, amiable or repulsive.

I am going to show you some of these pieces of mechanism. Remember that the whole tribe is intent on the world to perform one business,—they are commissioned to keep down what would otherwise be a "plague of flies." They are fly-catchers by profession; and just as our beef and mutton-butchers have their slaughter-house, their tool, their knives, their pole-axe, their hooks, so these little slaughterers furnished with nets and raps, with caves, with fangs, and hooks, and poison-bags, ready for their constant work. They are, in fact, nothing else to do: their whole lives are spent in slaughtering—with the exception of caring fresh generations of slaughterers—and I suppose they think, and are intended to think, of nothing else.

"No one," says Professor Rymer Jones, "who looks at the armature of a Spider's jaws can mistake the intention with which this terrible apparatus was planned. 'Murder' is engraved lightly on every piece that enters into its composition. But surely the Professor is rather severe. I do not think this paragraph was written on an autumn morning, when the flies had driven him out of bed prematurely early, by incessantly alighting on his nose; nor on coming home from a summer evening's walk through the marsh, when clouds of singing and stinging gnats had been the only objects of cognisance to sight, hearing, and feeling. No, he would have been ready to pronounce 'killing no murder,' and have blessed the slaughtering Spiders as pursuing a most praiseworthy and useful occupation. Circumstances change opinions.

We will not then touch the moral question; but just look at this apparatus from the head of one of our common Spiders (*Clubiona atra*), a long-legged and swift species, that builds a compact cloth-like web in our out-houses, with a gallery open at each end for retreat in danger. The specimen is a part of the slough or cast skin, which you may always find in the neighbourhood of such a web; and it is particularly suitable for examination, because it is sloughed in the most perfect condition; every part, the fangs, the palps, the legs with all their joints, the cornea of the eyes, the entire skin with every hair,—all are here, and all *in situ*, with a cleanness and translucency which would require much skill in dissection to obtain, if we captured a living Spider for our purpose.

There are in front of the head two stout brown organs, which are the representatives of the antennae in insects; though very much modified both in form and function. They are here the effective weapons of attack. Each consists of two joints: the basal one, which forms the most conspicuous portion of the organ, and the terminal one, which is the fang. The former is a thick hollow case, somewhat cylindrical, but flattened sidewise, formed of stiff chitine, covered with minute transverse ridges on its whole surface, like the marks left on the sand by the rippling wavelets, and studded with stout coarse black hairs. Its extremity is cut off obliquely, and forms a furrow, the edges of which are beset with polished conical points resembling teeth.

To the upper end of this furrowed case is fixed by a hinge-joint the fang, which is a curved claw-like organ, formed of hard chitine, and consisting of two parts, a swollen oval base, which is highly polished, and a more slender tip, the surface of which has a silky lustre, from being covered with very fine and close-set longitudinal grooves. This whole organ falls into the furrow of the basal joint, when not in use, exactly as the blade of a clasp-knife shuts into the haft; but when the animal is excited, either to defend itself or to attack its prey, the fang becomes stiffly erected.

By turning the object on its axis, and examining the extreme tip of the fang, we see that it is not brought to a fine point, but that it has the appearance of having been cut off slant-wise just at the tip; and that it is tubular. Now this is a provision for the speedy infliction of death upon the victim; for, both the fang and the thick basal joint are permeated by a slender membranous tube which is the poison duct, and which terminates at the open extremity of the former, while at the other end it communicates with a lengthened oval sac, where the venom is secreted. This of course, we do not see here, for it is not sloughed with the cavities, but retained in the interior of the body; but in life it is a sac, extending into the *cephalothorax*—as that part of the body which carries the legs is called—and covered with spiral folds produced by the arrangement of the fibres of its contractile tissue.

When the Spider attacks a fly, it plunges into its victim the two fangs, the action of which is downwards, and not from right to left, like that of

the jaws of insects. At the same instant a drop of poison is secreted in each gland, which, oozing through the duct, escapes from the perforated end of the fang into the wound, and rapidly produces death. The fangs are then clasped down, carrying the prey, which they powerfully press against the toothed edges of the stout basal piece, by which means the nutritive fluids of the prey are pressed out, and taken into the mouth, when the dried and empty skin is rejected. The poison is of an acid nature, as experiments performed with irritated spiders prove; litmus-paper pierced with them becoming red as far around the perforations as the emitted fluid spreads.

In the slough, the upper surface of the cephalothorax is always detached as a thin plate, convex outwardly, concave inwardly. As it is upon the front portion of this division of the body that the eyes are situate, the slough displays these with great clearness and beauty beneath the microscope. Here you may see them. The whole slough from its thinness is semi-transparent, but the eyes transmit the light with brilliance, not however as if they were simple round holes, because you can discern very manifestly a hemispherical glassy coat, by which it is refracted.

It is, however, when we examine the forehead of a living or recently killed spider, that we see the eyes to advantage. In this example of the same species (*Clubiona atra*), you see them like polished globes of diamond, sunk into the solid skin of the head. Their form is unimpeachably perfect, and the reflection of light from their surface most brilliant.

The arrangement of these lustrous eyes is worthy of attention. They are generally eight in number in Spiders, but their relative position varies so much, as to afford good characters by which naturalists have grouped them in genera. In the *Clubiona* which we have been examining, they are placed in two nearly straight transverse rows on the forehead; but as this surface is convex, it follows that the axis of every eye points in a different direction from that of its fellows. In *Epeira*, on the other hand,—represented by our great Garden Spider so commonly seen in the centre of its perpendicular web, on shrubs and in corners of our gardens,—the four middle eyes form a square, and the two lateral ones on each side are placed in contact with each other.

It is interesting to remark that their arrangement is not arbitrary, but is ancillary to the varying instincts and wants of the different kinds. On this subject I will quote to you what Professor Owen says:—"The position of the four median eyes is the most constant; they generally indicate a square or trapezium, and may be compared with the median *ocelli* in hexapod insects. The two, or the two pairs of lateral *ocelli* may be compared with the compound eyes of insects; the anterior of these has usually a downward aspect, whilst the posterior looks backwards; the variety in the arrangements of the *ocelli* of Spiders always bears a constant relation to the general conformation and habits of the species. DuRoi has observed that those Spiders which hide in tubes or lurk in obscure

retreats, either underground or in the holes or fissures of walls or rocks, from which they only emerge to seize a passing prey, have their eyes aggregated in a close group in the middle of the forehead, as in the Bird-spider, the *Clotho*, &c. The Spiders which inhabit short tubes terminated by a large web exposed to the open air, have the eyes separated, and more spread upon the front of the cephalo-thorax. Those Spiders which rest in the centre of a free web, and along which they frequently traverse, have the eyes supported on slight prominences which permit a greater divergence of their axes; this structure is well marked in the genus *Thaonia*, the species of which lie in ambuscade in flowers. Lastly, the spiders called *Errantes*, or wanderers, have their eyes still more scattered, the lateral ones being placed at the margins of the cephalo-thorax."

The shining hemisphere (or nearly a sphere) is in each case covered with a thick cornea, a continuation of the skin, perfectly transparent, and throwing off its outer coats successively in the process of moulting, like that of the rest of the body. The centre of its inner surface is deeply excavated for the reception of a crystalline lens, which is globular in form, and which rests behind on the front surface of a hemispherical vitreous body, without sinking into it. The space between this body and the side of the lens forms a ring-like channel which is filled with an aqueous humour, and into this projects a circular process of the thick pigment-coat, which corresponds to the choroid, thus defocusing the pupil of the eye, and at the same time confining the lens to its proper situation. The margin of this pigment-ring may be considered as an iris, and is of various colours, as red, green, or brown in those species which are active by daylight, while it is black at the back of the eye. The nocturnal species have no dark pigments, but are furnished with a curtain, (*tapetum*), which reflects a brilliant metallic lustre, and makes the eyes of these Spiders glare in the twilight, like those of cats.

It will be interesting to compare with this range of eyes, the same organs in a kindred animal, the common Harvestman, (*Phalangium cornutum*). Here in the centre of the cephalo-thorax rises a conical pillar, which is crowned with two rows of conical points, with polished black tips. On each side of the pillar is a large black eye, hemispherical in form, and brilliantly glossy, exactly resembling, indeed, those which we just examined. There are, however, only this single pair which thus look out laterally, exactly like the eyes of Birds. There is, indeed, a speck on each side of the thorax, considerably removed from the eye-pillar, just above the origin of the first pair of legs, which has been mistaken for an eye; but it is truly a spiracle, or breathing hole.

There are many other points of interest about this Harvestman, such as the conical spines which stud the head, body, and limbs; the multitude of small bead-like joints into which the foot, (*tarsus*) is divided; and in particular the hammer-like form of the modified antennae, which bend abruptly downwards, and have pincer-tips. These are highly curious, and you may examine them at your leisure; but for the present we will return to our Spiders.

Ever since those mythic times when Arachne contended with Minerva for supremacy in needlework, and was changed, for her pains, into a spider, our little spinners have been famous, (*Spider* = *SPINNE*) for their matchless achievements in thread. And still their industrious art is plied everywhere around us—in our chambers, in our windows, in our ceilings, in our walls, in our gar-

dens, in waste and desert places, and even under water. But you shall hear what Professor Owen says on the degree and mode in which Spiders exercise their singular secreting faculty, which varies considerably in the different species. Some, as the *Cubiona*, line with silk a conical or cylindrical retreat, formed, perhaps, of a coiled-up leaf, and having an outlet at both extremities, from one of which may issue threads to entrap their prey. Others, as the *S-gestrica*, fabricate a silken burrow of five or six inches in length, in the cleft of an old wall. The *Mugale cemenitaria* lines a subterraneous burrow with the same substance, and manufactures a close-fitting trap-door of cemented earth lined with silk, and so attached to the entry of the burrow as to fall down and cover it by its own weight, and which the inmate can keep close shut by means of strong attached threads.

Selected.

#### The Origin of the Christian Discipline Established among Friends.

By the term discipline, it is to be understood all those arrangements and regulations which are instituted for the civil and religious benefit of a christian church. The meetings for discipline are, of course, for the purpose of carrying those objects into effect: their design was said by George Fox to be—the promotion of charity and piety.

It cannot be said that any system of discipline formed a part of the original compact of the Society. There was not indeed, to human appearance, anything systematic in its formation. It was an association of persons who were earnestly seeking after the saving knowledge of Divine Truth. They were men of prayer and diligent searchers of the Holy Scriptures. Unable to find true rest in the various opinions and systems which in that day divided the christian world, they believed that they found the Truth in a more full reception of Christ, not only as the living and ever-present Head of the Church in its aggregate capacity, but also as the light and life, the spiritual ruler, teacher, and friend of every individual member.

These views did not lead them to the abandonment of those doctrines which they had heretofore held, in regard to the manhood of Christ, his propitiatory sacrifice, mediation, and intercession. They did lead them, however, to much inward retirement and waiting upon God, that they might know his will, and become quick of understanding in the fear of the Lord; and they were very frequent in their meetings together for mutual edification and instruction, for the purpose of united worship in spirit and in truth, and for the exercise of their several gifts, as ability might be afforded by Him who has promised to be with the two or three disciples who are gathered together in his name.

From these meetings, in which the love of God was often largely shed abroad in the hearts of those who attended them, even when held in silence, most of those ministers went forth, who, in the earliest periods of the society, proclaimed to others the truth as they had found it, and called them from dependence on man to that individual knowledge of Christ and of his teachings, which the Holy Scriptures so clearly and abundantly declare to be the privilege of the Gospel times. As these views struck at the very root of that great corruption in the christian church, by which one man's performances on behalf of others had been made essential to public worship, and on which hung all the load of ecclesiastical domination and the trade in holy things; so it necessarily separated those who had, as they believed, found the liberty of the gospel, from those who still adhered to that

system which was upheld by the existing church of the land.

Being thus separated from others, and many being every day added to the church, there arose of course peculiar duties of the associated persons towards each other. Christianity has ever been a powerful, active, and beneficent principle. Those who truly receive it no more "live unto themselves;" and this feature and fruit of genuine christianity was strikingly exhibited in the conduct of the early Friends. No sooner were a few persons connected together in the new bond of religious fellowship, than they were engaged to admonish, encourage, and, in spiritual as well as temporal matters, to watch over and help one another in love.

The members who lived near to each other, and who met together for religious worship, immediately formed, from the very law of their union, a christian family or little church. Each member was at liberty to exercise the gift bestowed upon him, in that beautiful harmony and subjection which belong to the several parts of a living body, from the analogy to which the apostle Paul draws so striking a description of the true church; "Ye are the body of Christ and members in particular."

Of this right exercise of spiritual gifts, and thereby of an efficient discipline, many examples are afforded in the history of the earliest period of the Society: we shall select one which we believe may be considered as fairly illustrating the practice of early times. Stephen Crisp, in his Memoirs, speaking of his own state soon after his conviction, which was in 1665, and within a few years of the establishment of a meeting at Colchester, the place of his residence, thus expresses himself:—

"The more I came to feel and perceive the love of God and his goodness to me, the more was I humbled and bowed in my mind to serve him, and to serve the least of his people among whom I walked; and as the word of wisdom began to spring in me, and the knowledge of God grew, so I became a counsellor of those that were tempted in like manner as I had been; yet was kept so low, that I waited to receive counsel daily from God, and from those that were over me in the Lord, and were in Christ before me, against whom I never rebelled nor was stubborn; but the more I was kept in subjection myself, the more I was enabled to help the weak and feeble ones. And, as the church of God in those days increased, and my care daily increased, and the weight of things relating both to the outward and inward condition of poor Friends came upon me; and being called of God and his people to take the care of the poor, and to relieve their necessities as I did see occasion, I did it faithfully for divers years, with diligence and much tenderness, exhorting and reproving any that were slothful, and encouraging them that were diligent, putting a difference according to the wisdom given me of God, and still minding my own state and condition, and seeking the honour that cometh from God only."

Thus, then, we believe it may be safely asserted, there never was a period in the society, when those who agreed in religious principles were wholly independent of each other, or in which that order and subjection which may be said to constitute discipline did not exist. But as the numbers of members increased, those mutual helps and guards which had been, in great measure, spontaneously afforded, were found to require some regular arrangements for the preservation of order in the church.

The history of these proceedings affords no small evidence that the spirit of a sound mind in-

fluenced the body in its earliest periods. Counting, as they did, for so large a measure of individual spiritual liberty, and placing the authority of man, in religious matters, in a position so subordinate to that of the one Great Head of the Church, they nevertheless recognised the importance and necessity of arrangements and of human instrumentality, under the direction of the Spirit of Christ; and they were led to establish a system of order at once so simple and efficient, that, notwithstanding the varying circumstances of the Society, and the power of every annual meeting to alter it, it has been found in its main particulars, adapted to those changes, and it remains to this day essentially the same as it was within forty years of the rise of the society. Previously, however, to the establishment of that regular system of discipline, and of that mode of representation in the meetings for conducting it, which now exist, there had been many General Meetings held in different parts of the nation, for the purpose of providing for the various exigencies of the Society. George Fox mentions, in his journal, that some meetings for discipline were settled in the north of England so early as 1633. The first General Meeting of which we are aware that any records are extant, was held at Balby, near Doncaster, in Yorkshire, in the year 1656; and from this meeting a number of directions and advices were issued, addressed "To the Brethren in the North." This document refers to most of the points which now form the chief subjects of our discipline. It contains instructions as to the gospel order of proceeding with delinquents, and advices to husbands and wives, parents and children, masters and servants, as to the discharge of their relative duties, and also in regard to strict justice in trade, and a cheerful and faithful performance of civil offices in the commonwealth. George Fox mentions attending a General Meeting in Bedfordshire, in 1658, which lasted three days; at which, he says, "there were Friends present from most parts of the nation, and many thousands of persons were at it." He also mentions attending a meeting at Skipton in 1660, "for the affairs of the church, both in this nation and beyond the seas;" and he says that he had recommended the establishment of this meeting several years before, when he was in the north; "for many Friends suffered in divers parts of the nation; their goods were taken from them contrary to law, and they understood not how to help themselves, or where to seek redress." "This meeting," he adds, "had stood several years, and divers justices and captains had come to break it up; but when they understood the business Friends met about, and saw Friends' books, and accounts of collections for the use of the poor; how we took care one county to help another, and to help our friends beyond sea, and to provide for our poor, so that none should be chargeable to their parishes, the justices and officers confessed we did their work, and would pass away peaceably and lovingly."

Next to General Meetings we must notice the establishment of Quarterly Meetings, which were constituted of Friends deputed by the several meetings within a county. These meetings, in several of the counties at least, had existed prior to the establishment of Monthly Meetings, and they appear to have had much the same office in the body, as the Monthly Meetings now have amongst us. George Fox, in an epistle of an early date, writes thus respecting them: "In all the meetings in the county two or three may be appointed from them to go to the Quarterly Meetings, to give notice if there be any that walk not in the Truth, or have been convinced and gone

from the Truth, and so have dishonoured God; and likewise to see if any that profess the Truth follow pleasures, drunkenness, gaming, or are not faithful in their callings and dealings, nor honest, but run into debt, and so bring a scandal upon the Truth. Friends may give notice to the Quarterly Meetings (if there be any such), and some may be ordered to go and exhort them, and bring in their answers to the next Quarterly Meeting. And to admonish all them that be careless and slothful to diligence in the truth and service for God, and to bring forth heavenly fruits to God, and that they may mind the good works of God, and do them in believing on his Son, and showing it forth in their conversation, and to deny the devil and his bad works, and not to do them; and to seek them that be driven away from the truth into the devil's wilderness by his dark power; seek them again by the truth, and by the truth and power of God bring them to God again."

It appears to have been with our society as it had been with the primitive church, that the care and provision for its poor members was amongst the earliest occasions of disciplinary arrangements. The occasion for this provision was much increased by the cruel persecutions and robberies to which, on their first rise, the Friends were almost everywhere exposed. It was no rare occurrence, at that period, for the father of a family to be thrown into a dungeon, and for the house to be spoiled of the very children's beds and all their provisions. Nor was it uncommon to seek their entire proscription and ruin, by refusing to deal with them. Well may we say, with reverent thankfulness, in reference to those times, "If it had not been the Lord who was on our side, when men rose up against us, then they had swallowed us up quick, when their wrath was kindled against us."

The members of the persecuted society were far from opulent; but they proved themselves rich in charity, as well as in faith and hope; and the illustration of these virtues, by the sacrifices which they made for the relief of their more afflicted associates, and their unbroken constancy in the sufferings which they endured for the testimony of a good conscience, were doubtless amongst the practical arguments which at length extorted the commendation even of their enemies.

(To be concluded.)

From the London Quarterly.

#### Eastern Archipelago.

(Continued from page 235.)

The country of Sarawak is governed by Sir James Brooke, under a cession from the Sultan of Brunei. He has now ruled a territory containing a mixed population of a quarter of a million of souls, for ten years almost wholly by moral influence. Sarawak, including its dependencies, possesses a coast line of about 300 miles, and presents every variety of surface from the low fertile soil that skirts the river banks to the lofty mountains that rise in picturesque grandeur towards the interior. It is one of the best watered countries in the world, possessing rivers adapted for ships of considerable burthen. The exports consist at present chiefly of the produce of the forests and of metals. The capital now numbers 15,000 inhabitants, and the perfect order which prevails has given an extraordinary impetus to industry, and created an emulation under which in very few years Sarawak will become one of the most important trading countries of the Archipelago. A portion of the north-west of Borneo, which has been recently ceded to the Sultan of Brunei to Sir James Brooke, is a valuable addition to his state, and includes fine forest-covered plains, with navigable

rivers, and districts rich in mineral productions, including gold, antimony, coal in abundance, iron, copper, and lead, and possesses a more industrious and energetic population than most other parts of Borneo. The Dayaks of Sarawak have become exceedingly expert in commercial transactions, and many who formerly did not know the value of money are now active traders. A Dayak calculates on being cheated by a Chinaman once, but never a second time. A steam communication has been established by Sir James Brooke between Sarawak and Singapore, by which Chinese emigrants are granted a free passage to his state, which they are steadily cultivating by their industry; for in the present condition of the aborigines, although their progress is satisfactory, cultivation depends chiefly on Chinese labour. A Chinese population has its disadvantages, but in Sarawak it is gladly welcomed; and the people soon amalgamate with the native race; and that part of Borneo, like England, possesses a redundancy of females, the Dayak women, many of whom are pretty, are by no means unwilling to unite themselves with these sturdy immigrants. The Chinese, when prosperous, are found to be great consumers of English goods, and are excellent customers, as they live freely and are far from being parsimonious in their habits.

The principle of government which Sir James Brooke has applied with such remarkable success at Sarawak, is applicable to all countries in a similar state. That principle is to rule by and through the people, scrupulously abstaining from wounding their pride and hurting their self-respect. No people in the world are so sensitive to rudeness, arrogance, and self-assumption as the Malays. Sir James Brooke at once recognised the importance of this social feature, and his first and greatest difficulty was in exacting that habitual courtesy from his subordinates which was indispensable to the success of his scheme. The result has been that the innate gentleness of the natives has gradually softened and refined the rudest Europeans. The government is more popular than monarchical. Taxes are imposed and justice is administered by the assent and co-operation of the inhabitants. The ruler is strictly dependent on the country for support; and the population is consulted, and its consent required, before any new impost is created. The militia has recently given place to a small regular force, with the full concurrence of the people, who thus strongly display their confidence in the good intentions of their chief and the security of their freedom.

Of a population consisting of about 250,000 souls, the Malays number from 30,000 to 40,000, the Chinese 3000, miscellaneous tribes 15,000; and the remainder are the Dayaks or the aborigines of the country. Much remains to be accomplished before these people are trained to habits of regular industry; but the materials are promising, and a few more years of settled government and good example will probably effect a complete revolution in their character. Model gardens and farms will bring home to their understandings the practical results of well applied labour. They present a marked difference to the Malay element of the population in one very important respect. As Mahomedans the Malays are impervious to any impressions from the christian missionary. The Dayaks, on the contrary, are extremely susceptible of religious instruction. They have no stubborn prejudices, or fanatical priesthood. They hold a simple faith, although doubtless overlaid by many superstitious observances. They possess a clear idea of one Omnipotent Spirit who created and governs the world, and they believe in a

future life; holding that the spiritual part of man lives forever. They worship no graven images, nor do they practice any species of idolatry, but have a general sense of Providential government; and it is a common saying among them, "With God's blessing, we shall have a good harvest this year." The field is an inviting one for the christian missionary, but hitherto the labourers have been few. The elements of European civilization are presented in Sarawak in connection with a christian government—a combination not often seen in the regions of missionary enterprise, and which can scarcely fail to subserve the high purposes to which it is zealously, but prudently and cautiously directed.

CELEBES is a most remarkable island. In configuration it has been compared to a star-fish, from which the radiating limbs on one side have been removed; and this very singular form also distinguishes Gilolo, an island not far distant from it to the eastward. The bold and broken coasts possess several excellent harbours, but the principal interest which attaches to Celebes consists in the character of its population. Physical causes have doubtless operated to form a people essentially different from any other in the Archipelago. Its surface possesses more of an European than an Eastern character, presenting on the coast broad plains gradually rising into regions of forest. The inhabitants of Celebes are the most enterprising of the Eastern Archipelago. Although they bear some personal resemblance to the Malays, arising probably from a common origin, in every quality but courage they are essentially different. Exposed to the same temptations, and most useful and adventurous navigators, they have never adopted the occupation of piracy, but abhor and resist it, and defend themselves against the Malay prahus with the most heroic and desperate valour whenever they are attacked, proceeding, if overpowered, to blow up their vessels rather than submit. The poorest of these hardy islanders is as impatient of a blow as an European gentleman, and it is permitted to any one to avenge an affront by the death of the person who offers it. A more than Spartan training is bestowed on children. The males at the age of five or six are removed from their parents lest they should be made effeminate by indulgence, and they are not restored to their family until they are of an age to marry. They are the Phœnicians of the Indian Archipelago, and there is not a coast from the northern shores of the Australian continent to the Malay peninsula where their ships are not habitually seen. These adventurers leave their country in the beginning of the eastern monsoon on a trading voyage, and proceed westward until they reach Singapore. With vessels of peculiar build, of from forty to fifty tons burthen, they conduct almost the whole carrying trade of the Archipelago. They own at least 1000 ships, the outward cargoes consisting of cotton-cloths, gold dust, edible birds'-nests, tortoise-shell, trepan, or sea slugs for Chinese epicures, scented woads, coffee, and rice; and in spite of the jealous and restrictive policy of the Dutch, they have greatly contributed to diffuse British manufactures throughout the islands of the Eastern Seas. The political institutions of this energetic people bear some resemblance to a constitutional monarchy. Women also possess a status and an importance wholly unknown in savage communities; they take an active part in all the business of life, and are consulted in public affairs. The native governments in Celebes are not despotisms, such as were found in Java, but elective monarchies, somewhat resembling the old constitution of Poland. A woman or a minor may be raised to the throne, and in the latter case the constitution pro-

vides a regent. The honour in which women are held strongly contrasts with the Mahomedan faith, but political traditions have here proved too strong to be counteracted by religion.

The population of Celebes is estimated by—Crawford at 900,000; if it were as well peopled as Java, it would number 14,000,000 inhabitants.

(To be continued.)

#### THE GIFTED.

Selected.

The Gifted—How ye look on them with envy's jealous gaze,  
And grudge them in your narrow thoughts their lofty need of praise,  
How do ye strive to drag them down from fame's high summit proud,  
And place them in some nook obscure, amid the ignoble crowd!

The Gifted—How ye fawn on them with flattery's subtle arts,  
With hollow smiles and bowed lips, and envy in your hearts!  
Ye hang upon their lightest word, ye clamor round their way,  
Ye laud them to the very skies, yet mean not half ye say.

The Gifted—Ye should pray for them—ye know not of the snares,  
The tempter in his malice lays for spirits such as theirs,  
Ye see the towering pinnacle on whose steep height they stand,  
But not the shelving precipice that yawns on either hand.

The Gifted—Can ye look on them, nor think how much ye owe,  
To those exalted minds who teach your colder hearts to glow?  
Who die with living eloquence; who trace in words of light,  
The burning thoughts ye have not power to utter forth aright.

The Gifted—Marvel ye at these, if flattered and caressed,  
The seeds of pride take deepest root within the noblest breast?  
They are but dust and ashes, with passions like your own,  
And can ye wonder at the blaze whose spark your breath hath blown?

The Gifted—From my childhood's days this heart hath loved their names,  
With that deep reverence of the soul which greatness only claims.  
And with my childhood's earliest prayers, for them I learned to pray,  
That God would charge his angel-bands to keep their steps away.

The Gifted One—Oh! whenever'er the insidious shade  
Of pride, or envy, or ambition, comes before me,  
Still be it mine to plead his cause before an envious world:  
And let this young heart cease to beat, ere it shall cease to swell  
Responsive to the glorious thoughts in heaven-tuned minds that dwell.

Worcester, 1851.

For "The Friend."

#### The Responsibility of Parents.

There is surely no relative position in which parents are placed, involving greater responsibilities, than that in which they stand to their children and families. It seems as though they were designed to be a kind of under shepherds, in no small degree accountable for a very interesting and important stewardship, to the Great Shepherd of us all. Would that each of us who are thus circumstanced, were incited to increased diligence in watching, in the fear of the Lord, over our own hearts in the first place, and then with no less stirring application and sincerity, be engaged to build up against our own houses—our families, and especially the dear children. That so no neglect of

religious restraint; no want of living desires, as well as earnest effort to train them in the Lord's nurture and admonition; neither any lack in coming ourselves to that which alone is profitable to direct thereunto, may mar the work, or rob any of us of that precious peace here, as well as its fruition hereafter, which is designed for, and most surely awaits all those who are faithful in this, as in every other of their religious duties.

Should these lines meet the eye of some bowed down, mournful and almost discouraged fellow-pilgrim traveller, who, as a parent or head of a family, may feel encompassed with weakness, and much alone in striving faithfully to uphold the standard, and to keep to the testimonies given to us as a Society to maintain; may such be incited to fresh courage, in that arduous in doing a great work, the builders were "separated upon the wall, one far from another;" and that the Lord, the ever present helper and preserver of his people, knows our anxieties, fastings and fears, with our sorrows also, and sense of great weakness on this, and on every other account, and will strengthen as he is sought unto for every good word and work; and in his own time bless with the incomes of enriching peace. His is the power; who is as near to his tribulated, wrestling seed as ever he was. And how fraught with encouragement as well as consolation to the fainting soul, is the holy assurance: "My grace is sufficient for thee: for my strength is made perfect in [thy] weakness." May we then be earnestly engaged to keep near to the inexhaustible Fountain of all our sure mercies. Watching unto and waiting upon Him, even "as the eyes of the servants look unto the hand of their masters;" and as ability is from season to season vouchsafed, intercede for ourselves and our beloved offspring, that the Lord in his tender, though unmerited mercy, may give us our own lives for a prey, and also raise up of the dear children for prophets and for Nazarites (Amos, 11, 12), who shall not be turned aside by the wisdom, or other varied allurements of this perishing world, but in meekness and lowliness, from taking their dear Redeemer's yoke upon them, grow up in him in all things, *which is the head, even Christ.*

As this is the case, the Lord will assuredly show himself strong on the side of these, no matter what degree of loneliness, obscurity and weakness they may feel bowed under. For as truly as the house of Obad-odm, *he, and all that he had*, were blessed while the ark rested therein, so will it yet be with those parents and heads of families who, in humility and godly sincerity, are preserved watchful and faithful in the maintenance of the precious doctrines and testimonies committed to our section of the christian church to uphold.

A True Narrative.—J— relates the following very impressive history of a parishioner. Jane B— was a young lady of wealthy parentage, and had all the means of culture and enjoyment of the world that affluence and affection could furnish. She was also a child of many prayers. The power of "things seen and temporal" was upon her spirit like a spell; and her golden dreams were disturbed only by the still small voice of the Holy Ghost, which at times made her weep. She resolutely stifled her convictions. While at a boarding-school, completing her education, she was taken ill. No attention and medical skill were spared to save her from the embrace of the skeleton destroyer of all things terrene. When it was apparent that the effort was vain, the physician advised her removal home. She was borne to the bosom of domestic sympathies and care. As she crossed the threshold, and met her mother with

uch tears as she alone can shed, the invalid exclaimed: "Mother, I have come home to die; and I am lost! I am lost!"

She continued to wail away, often repeating the same words; and when only the faintest whisper could be heard, it was still "I am lost!" In Virginia, where she lived and died, the weather was intensely warm, which, with the nature of the disease, made it necessary to have the burial the same night. At nine o'clock in the evening, the procession moved to the cemetery. When in the coffin was lowered, and the light of the lanterns all into the gloom, the silence was broken by the sudden and convulsive starting of a sister of the dead, who, stepping forward to the margin of the grave, cried in tones of piercing agony, as she gazed into the narrow hole of the decaying body, "Jane is lost! Jane is lost!"

It is not strange that the good pastor should say, "those accents of woe ringing out upon the fill air of night, and over the place of graves, are still in my ear, and will be while I live." How rue of the impetuous are the words of the living races, "Madness is in their hearts, and after that they go to the dead!"—*Congregationalist*.

#### A Seasonable Epitaph.

BY ISAAC PENNINGTON.

Let all strive to excel in tenderness, and in long suffering; and to be kept out of hard and evil thoughts of one another; and from harsh interpretations concerning anything relating to one another.

Oh! this is unworthy to be found in an Israelite toward an Egyptian; but exceeding shameful and inexcusable to be found in one brother toward another. How many weaknesses do the Lord pass by in us! How ready is he to interpret everything well, concerning his disciples, that may bear a good interpretation! The spirit, saith he, is willing, but the flesh is weak. When they had been all scattered from him, upon his death, he did not afterwards upbraid them, but sweetly gathered them again.

Oh, dear friends, have we received the same life of sweetness? Let us bring forth the same sweet fruits: being ready to excuse, and to receive what may tend towards the excuse of another in any doubtful case; and where there is any evil manifest; wait, oh! wait to overcome it with good.

Oh! let us not spend the strength of our spirits crying out of one another, because of evil; but watch and wait where the mercy, and the healing virtue, will please to arise!

O Lord, my God, when thou hast shown the vaults of Israel, in any kind, sufficiently; whether in the particular, or in the general; bring forth the supply thereof from thy fulness; so ordering it, in thine eternal wisdom, that all may be ashamed and abased before thee, and thy name praised in adoration over all.—*Works, vol. 2, p. 471-2.*

#### Professor Voelcker on Milk.

The last meeting of the Royal Agricultural Society, England, called together a large number of distinguished men, (C. F. Adams, United States Minister, among others,) to listen to an essay on milk, from the eminent Professor Voelcker. We condense for our readers a portion of his interesting remarks:—"The fatty matter of milk is not contained in it in a free condition, but enclosed in a little cell consisting of the very identical substance which in a state of solution exists in milk, and which is precipitated when milk gets sour; in other words, the butter, or the fatty portion of the milk, is encased in curd. These

are milk globules. They are of different sizes in different animals, and even in animals of the same kind they vary from 1-2000th to the 1-1000th part of an inch. They are generally round, but sometimes they are slightly egg-shaped. Milk invariably contains a certain proportion of mineral matter, consisting essentially of the same material of which the incalculable part of bone is composed. Butter, curd, milk-sugar, and mineral substances are the normal constituents of milk. The red colour in madder, the blue in indigo, and the colour of the common weeds *Mercurialis annua* and *Poligonum aviculare*, likewise pass into milk and colour it. So also there are, no doubt, smelling substances which give a taste and flavour to the milk, and readily pass into it, and these peculiar flavoured substances are richly infused, they greatly affect the milk. Thus we know, for instance, that the turpentine flavour is imparted readily to milk. Milk appears white on account of the suspended milk globules. In the measure in which these globules separate in the shape of cream the milk becomes clearer, and acquires a peculiar bluish tint, which is a very good indication of the character of the milk. The less transparent milk is, the better; the more opaque it is, the more butter it contains. In autumn the quality of milk very greatly improves, and the quantity becomes smaller. While this is true generally, it is not so always; for if animals are stunted in food, they yield not only little, but also poor milk, and that at a time of the year when they ought to and generally do produce rich milk. Generally speaking, milk is richer in the fall, and poorer in the spring; but other circumstances may influence the character of the milk, so as to produce totally different results. The milk of carnivorous animals is very much richer than that of herbivorous animals, in all the various constituents, especially in casein or curd, and also in butter. It is so extremely rich that we have no other food which will at all compare with it. It is well known that an old cow does not yield such good milk, or as much milk as a young one. I have seen an analysis of a very poor milk, which was analyzed in Holland by Dr. Bambar. He mentions that it was the milk of a cow which has had ten calves. Nothing appears so unprofitable as to keep cows for so long a period. Generally speaking, as is well known to practical men, the milk becomes poorer after the fourth or fifth calf. Climate affects the quality of milk in a remarkable degree. In moist and temperate seasons and localities we obtain a larger quantity though generally a poorer description of milk, than in dry and warm countries. The quality of milk is thus affected by the temperature, and the amount of moisture in the atmosphere. Something, no doubt, is also due to the greater amount of water which in wet seasons is present in the produce. That the general state of health and condition of the animal has a marked influence on the quality of the milk, is so well known that it need hardly be mentioned. The time at which the milk is taken is said to have also an effect upon the quality. In most agricultural treatises you will find it stated that morning is generally richer than evening milk; but my results do not favour that general notion. Out of thirty-two samples of milk which I have analyzed, taken in the morning and the evening of the same day, I found in eight cases the morning poorer than the evening milk, in four cases I found it rather richer, and in four I found no perceptible difference between the quality of the morning and that of the evening milk. The time of day has not so much to do with the matter, as the quantity and quality of the food which is given some three or four hours

before milking. I have traced this distinctly. At one time I have found the milk of our dairy stock poor in the evening. The cows were then out at grass, and were not supplied with a sufficient quantity of grass. They received in the evening oil and rape-cake, and then they produced in the morning richer milk. This shows plainly the effect of the food upon the morning milk. At another time, in the winter, I found that when the cows were fed in the morning and in the middle of the day with barley meal and rape-cake, they produced richer evening milk. I believe, then, that the quality of the milk is affected by the food, and by the time at which food is given to cows. It certainly cannot be said that in a general way milk is richer in the morning than in the evening. It may be one way or the other, poorer or richer, as the case may be, or both may be perfectly alike. The race, and breed, and size of the animal, have also an important influence on the quality of the milk."

Selected.

#### Little Faults.

If some religious people keep their faults to the last, it is because they have all their life imagined that religion was not intended to interfere with "little things;" that is, with small points of manner and character. We get from our religious principles what we use them for, and no more. If the power of a renewed will is not brought to bear directly upon our little faults, they will increase even while the religious character deepens and improves. There is no fault so small that it will disappear of itself. I often wonder that believers should be content to carry with them to the grave the lesser evils of a fallen nature. If we shall one day be restored to the perfect likeness of our glorified Redeemer, shall we put a limit which God has not put to the degree in which, even in this world, the wonderful change shall be wrought upon us?

For "The Friend."

A letter has been addressed to the Treasurer of the Women's Aid Committee of Friends in Philadelphia, by Hannibal Hamlin, President of the National Freedman Relief Association of the District of Columbia, asking for aid in carrying out their truly benevolent objects.

It appears that a large number of the freed slaves have arrived, and continue to arrive in the District. They come in a very destitute condition, in great need of the absolute necessities of life. Many of them are sick, and the Government has provided two large rooms for hospitals. These must be furnished through private benevolence, and the resources of the Association are exhausted. The need is urgent, and they appeal in the letter for supplies of cotton sheet, pillow cases, and under garments, suitable for the warm season. Friends and others having these articles to spare, are earnestly desired to send them promptly to either of the following members of the Committee, or to their depository at the House of Industry, No. 112 North Seventh Street.—Sarah W. Cope, Treasurer, 1312 Filbert Street; Mary Huston, 1205 Arch Street; Elizabeth P. Fogg, 1510 Cherry Street; Hannah Kaighn, 716 Arch Street.

Contributions in money to purchase materials for the purpose, will be also very acceptable.

Extracts from the letter of Hannibal Hamlin.

"The sick have as yet, had no cotton sheets or clothing. The heat of the weather absolutely requires it, and our physicians say it must be supplied. We have already done something and are still doing. Among other articles, we need as soon as

possible 100 plain cotton sheets, 50 shirts for the sick, 50 pairs of drawers, 50 night-gowns for women, girls and children, 50 cotton pillow cases. The articles named are but a small part of what we need, but our benevolent friends in other cities are aiding us, and we ask you to join with them.

"I visited our hospital last evening and saw a poor man dying, whom his master had beaten nearly to death. Some good Samaritans found him, put him into a wagon and brought him to this city, and to our rooms. His flesh wounds were terrible, but he was injured internally about the chest, and congestion of the lungs resulted. He gasped and threw back his head in agony for breath. Three large windowed were wholly removed to give him fresh air, but without relief. I presume he died during the night."

#### Selected.

The truly holy soul ceases from all action, which has its origin in merely human impulse. It is characteristic of souls, which are in this state, that they move as they are moved upon by the Holy Ghost. "As many as are led by the Spirit of God, they are the sons of God." They move, therefore in God's order; neither falling behind by indolence, nor precipitated by impetuosity. They move in God's spirit, because they are sustained by faith; benevolent, just, immutable in their purpose, so far as immutability can be predicated of anything that is human, but always without violence. Such sometimes appear to be inactive, because their action is without noise. But they are God's workmen; the true builders in his great and silently rising temple; and they leave an impression, which although it is not always marked and observable at the time, is deep, operative and enduring. In this respect at least, I think we may say, that they are formed in the desired likeness. God is the great operator of the universe; but what he does is generally done in silence. The true Kingdom of God comes without observation.

#### Extracted.

Terrestrial authority has, it may be, its mitres, its acts of synods, and all the smothering weight of ecclesiastical canons; or it has, it may be, its elective chair, its salaried orations, and its necessary sceptre, with an usurpation of all ministerial life, and an assumption by one man of that which, if it really exists, should be open to all; and these things have their glory; but heavenly authority in the church, that which comes down with the gifts distributed to the saints, is the manifestation of superintending care in those whose hearts the Lord directs and enables to watch over the footsteps of the flock, and by counsel and character, by prayer and precept, by patience and forbearance, by gentle firmness, and by spiritual wisdom to keep aloof from the enclosures those things which would disturb communion, or prevent the beloved One from coming into his "garden and eating his pleasant fruits." Government is a distinct gift of the Holy Spirit, and it is not in the power of man, by election, or any other known process, to produce this blessing. It is indeed very easy to make an appointment to ecclesiastical rule, either by royal mandate, or patronal nomination, or popular suffrage; but wide is the difference between ecclesiastical and spiritual rule; man's law can give the outline and the shadow of spiritual rule, but the substance, the living and powerful reality, can be imparted only by Him who is the giver of every good and perfect gift, and with whom there is no variability, neither shadow of turning. Spiritual rule is neither for lucre nor for lordship, but it is a branch of service, of ministry, of diaconia; a

branch springing out of the true vine; a form of the life of Him, who, in making himself the servant of all, thereby made himself the Lord and Master of his disciples.

Government is the lowest and the highest service in the church; it is the lowest because he that is over the flock and has been called to this service by the Lord, must ever be washing the disciples feet. The basin and the towel are the badge of this government, and how low it calls upon those who are exercised in it to stoop down; how deep is the humiliation, how trying to faith and patience, how wearisome to flesh and blood, how closely surrounded with anxieties and solitudes, how signally acquainted with tears and prayers and sighs; how conversant with despondency, feebleness and weariness, none can tell or imagine who have looked at these things only through the medium of ecclesiastical custom, but have not tasted them in spiritual power. "And who is sufficient for these things?" Truly, we can reply only in the words of scripture, "Our sufficiency is of God, who hath fitted us to be servants of the New Testament." But in the service there is also a recompense, which though it be nothing less in the day of full payment than a crown of glory, is not in the mean time forgotten by the Chief Shepherd, who knows how to reward his servants even during the heat and burden of the day. Therefore we appear for government; and we know that when it pleads it strengthens the church, because it draws forth more love, suggests the service in all, and establishes that peace which Paul connects with the presidency of a few and the service of all. (1 Thess. v. 12 & 13.)

#### Management of the Gooseberry.

In the February number of your excellent magazine, in the monthly remarks on the "Fruit Garden," it is stated that pruning ruins the gooseberry. During the season of 1860, I sent to the Baltimore markets twenty-five bushels, and in 1861 nearly thirty bushels, for which I averaged from three to five dollars per bushel, the most part of which was sold green for pies and tarts. About five bushels I left to ripen, which were very fine. I have some few varieties of the English gooseberry, which do not mellow. My patch consists principally of the Cluster and some Houghtons. In part of my patch, the bushes are between eight and nine years old. They are very vigorous and productive. The other portion are about five years old, producing last year as fine a crop as I ever saw. In the spring of 1860, I planted out another bed of gooseberry plants; and in 1862 they bore a fair crop of fruit. My plants are planted in rows four and a half feet one way, and four the other, (but this I find is too close.) I cultivate them one way with a horse, and then hoe thoroughly.

And now I must say something with regard to pruning. I must say that mine are thoroughly pruned every year. I trim my gooseberry bushes any time during the months of January and February, cutting away anything in the shape of a sucker, and a portion of last year's growth. The ground that I have occupied with gooseberries is about one-eighth of an acre. My gooseberries are always fine, clear, and perfectly free from mildew. In passing through the marks, I can see at a glance which are my gooseberries, and which are not. Often would a country farmer come along and ask, "What makes your gooseberries so superior to mine?" Says I, "Do you prune and work your bushes?" "No." "Well, that is the cause."

A near neighbour of mine has some of the same

variety as I have. They are standing around the borders, surrounded with grass. They are unproductive, small, and scarcely worth picking.—*Gardener's Monthly.*

## THE FRIEND.

SEVENTH MONTH 5, 1862.

### DUBLIN YEARLY MEETING.

The following extracts are taken from the British Friend:—

The Yearly Meeting at large convened on Sunday, Fourth month, 28th, at ten A. M. The attendance was somewhat larger than for several years past.

The clerk proceeded by reading the opening minute, and called over the names of representatives from our three Quarterly Meetings, viz. Ulster, Leinster, Munster, nine of whom were absent their non-attendance being accounted for, except two. Minutes on behalf of ministering Friend from a distance, attending this Yearly Meeting, were read.

The report from the Yearly Meeting of Ministers and Elders did not exhibit any features different from former years. It stated that one elder was added to their number, while three Friend had been removed by death during the year. In connection with this report, a Friend from the south spoke very strongly about the London Yearly Meeting's new Book of Discipline not containing any direct explanation as to the duties of elders alluding to what the apostle Peter says they ought to be,—bishops, elders, overseers, being all one.

A minister from England said he thought it would not be right to let the remarks of the Friend that opened the discussion pass without explanation. He said that if the Book of Discipline was examined, it would be found to contain sufficient information about elders. It is true, he said, that our Society had, in early days, thought it right to divide the office of bishop, as described in Peter. This was one thing; and having done so, he did not see why elders might not do all the duties laid down in Scripture, and the overseers might also do the same, adding that we had to-day abundant evidences of such being the case.

The clerk introduced the queries, by reading a minute under that head in the Book of Discipline. The answers received from the Quarterly Meeting then followed. The first query had the usual exceptions as to the neglect of afternoon and mid-week meetings, also meetings for discipline. There seemed to be an unusual number of omissions in the holding of sundry small meetings belonging to the largest of the Quarterly Meetings. We are now getting accustomed to hear that some Friend never attend, others attend but rarely, while other make a practice of going to other places of worship. A Friend having asked how it was that some of our members never attended, it was explained that they attended the worship of other religious bodies.

A Friend said he looked on this as a very important query, that admonition ought to have been given, &c.; quoted Scripture, "If thy brother trespass against thee," &c. He thought this and the third query were both very important, but this was more so than the third, inasmuch as this spoke of a want of love to God, while the other only of love to man, and said that if we each endeavoured first to take the beam out of our own eye, we might then see clearly to take the mote

from our brother's eye. Another Friend said that the whole thing lay in not taking the beam out of our own eye. A minister from England spoke on the same subject.

The answers to the second query were the same as on former occasions. A few brief remarks were made on this and the third query.

The fourth query was answered as it has been on the last few years, with a note at its conclusion, signifying that there is an increased remission in the due performance of these important duties.

Fifth query. There were four exceptions of solvency, and one as to want of punctuality in payment. A clear answer was returned from Munster.

Sixth query. Two cases of excess in drinking, one of which was reported before; one case of attendance of a place of diversion. There were one exceptions as to field-sports and places of diversion, in two of the Quarterly Meetings.

A Dublin Friend regretted that Munster Friends had returned the case of excess in drinking. He was enlarged on the undesirability of returning these cases until everything was done that could be done by Monthly Meetings, in the way of trying to reclaim them.

A Friend proposed that an epistle should be read at the conclusion of each sitting. This met the probation of some Friends, but no decision was come to, except that the one from London should be read, which was accordingly done. After which, a Friend proposed that the same plan which has been adopted in London, for the last few years, should also be tried here—namely, to close the door five minutes past the appointed hour, and for the meeting to settle down in quietness for a few minutes until the clerk reads the opening minute; then the door to be again opened, so as to let those who may be late come in. This was agreed to, although it was opposed by a few; but it having been mentioned last year seemed to the representatives to have it tried this time. The representatives do to meet after the rise of this sitting, in accordance with a rule in the Book of Discipline, which the clerk read. The meeting separated at about half-past one.

Second-day.—Four P. M. A Friend informed the meeting that the representatives had met and agreed to propose that Thomas White Jacob be continued as clerk, and Jonathan Goodbody and James Nicholson Richardson assistants for this year also. This met the approval of the Yearly Meeting.

The answers to the queries were then resumed with the seventh. In Ulster, six cases of payment of the rentcharge had occurred. In Leinster, in the largest Monthly Meeting, twelve Friends were able, who all paid. The other Monthly Meeting reported the testimony, but in some only weakly. In Munster a few Friends paid rentcharge, but the rest were faithful.

Clear answers were returned to the ninth query. A Friend said we ought to be thankful to the Almighty for such a state of pro-perity amongst our members. In his Monthly Meeting only one Friend received relief; while a Friend from England observed that the state of society is more healthy here than is a mixture of rich and poor.

Tenth query. Ulster returned eight persons; nine in Leinster and Munster none had joined the Society, on the ground of conviction, since last year. A Friend asked to have the Ulster answer explained; he asked were those who joined on other religious bodies or not? A Belfast Friend said four had been educated at Friends' schools, and one was from without.

Twelfth query. A Friend thought it inconsistent for Friends to ask leave of the registrar, before going to be married in meeting.

Thirteenth query. In Ulster, three meetings have no overseers. In Leinster there are also three meetings without overseers; while in Munster there are one or more overseers in all the meetings.

Fourteenth, fifteenth, and sixteenth. Clear answers.

A Friend said that the Holy Scriptures are more read than before, and thought the fourth query ought to be divided, as it cannot now be answered as full as it might be. Another Friend spoke on the subject of convictions.

The clerk mentioned that the following epistles had been received, viz., from London, New York, New England, Ohio, Indiana, Western, and Baltimore Yearly Meetings. They were read, except London, which had been read in the morning. A Friend proposed that these epistles might be read to the Youths' Meetings.

The epistles were referred to the representatives, and other Friends who might incline to attend the committee, to prepare answers if ability were afforded, and produce drafts of the same to a future sitting. The Yearly Meeting's committee to meet at half-past seven P. M.

Third-day.—Ten A. M. The clerk asked if all the answers were to be read over, as the state of the Society in Ireland was now about to be considered. A Friend asked to have the first read; the other asked to have all read as far as the seventh; a few more agreed to this, but were seemed to think it best only to read the first answer, and such others as might press on the minds of Friends. The answer to the first was accordingly read; the Friend who proposed it then enlarged on its importance, and quoted several passages of Scripture in support of his views.

Third-day.—Four P. M. Consideration of the state of society continued. A provincial Friend admired the manner of the discussion, and the sweet quiet which had pervaded the morning sitting. A Friend at the table spoke on the same subject. Another adverted to the advantages to be derived by holding meetings for young persons, and for religious instruction, &c.; the more simple the better in the carrying out, &c.; He recommended country meetings to take up the subject; he then spoke of the want of ministers in our society in this land. A Friend spoke of youths' meetings, and the best means of carrying them into effect. Country meetings—they are very valuable and instructive. He thought the gift of teaching not sufficiently carried out in this society. Another Friend spoke on the same subjects.

An Irish Friend wished to encourage Friends' families, were two or three acres a neighbourhood, to meet together and read the scriptures; he gave an instance of a child being instrumental in producing a change of heart in a parent. Another Friend said, the more spontaneously such things were done the better, if sufficiently simple they would be productive of good. He had watched how the fears, which were at first entertained by some Friends, had been dispelled. He thought such meetings a legitimate carrying out of the fourth query. It is better for individual responsibility than society action, the more we feel this responsibility the greater will be the benefit of our efforts. A Friend from the south recommended, that for scripture reading meetings the chapter should be given out a month before, in order that there might be an opportunity for considering and studying it in private. Two Friends entertained some fears respecting too much activity; said it was better not for this meeting to take any

action, or even Monthly Meetings; rather that each meeting should do for itself, &c.

An elder of Ulster expressed his interest in such meetings, thought it best not to press the matter, but to leave it to take its course, as there are some against it. The clerk thought the subject had now had sufficient time allowed for its full consideration. He then read a short minute to the effect, that this and a preceding sitting had been taken up with the consideration of the state of society in this land, as brought to view in the answers received to the queries.

Fourth-day.—Four P. M. Reports from the three Quarterly Meetings on the care and oversight extended to children and young persons in profession, though not in membership, were now read, and a very full consideration given to this interesting subject: There are but a small number of this class in Munster; in Leinster a somewhat larger number, especially in Dublin, where there are over thirty of this class; the report from Ulster was very full, inasmuch as it stated the number of families and individuals residing within each Monthly Meeting. It appears that in Ulster province there are upwards of 112 who have extended to them by Friends religious care and oversight, and as they are chiefly of the poorer class, Friends have assisted them in educating their children, and in other ways. It appears that Brookfield Agricultural School was established for this class many years ago, and has been useful in this respect. The meeting has extended its concern to all attenders of meetings of every age, and issued directions to the Quarterly Meetings to produce the number of such in each meeting to next Yearly Meeting.

Fifth-day, 5th month, 1st.—A minute of last year was read respecting the appointment of a conference, to meet in Dublin in the course of the year, to revise the queries, advices, the rules respecting removals and settlements, and the relief of the poor, and to assimilate our marriage rules with those in England, so as to admit of persons in profession, though not in membership, to marry according to our mode in the meeting-houses, and for marriages where one is a member and one not. The report of this conference was read—it met in Dublin from the 25th to the 28th of Eleventh month last, and had agreed to propose to the Yearly Meeting that the changes which had taken place in England should with some small alterations be adopted for Ireland also. A few paragraphs in the report explained the nature of the changes contemplated. A minister expressed his desire that Divine assistance, &c., would be given in the consideration of this important subject.

The clerk then read our first query, afterwards the new one, and compared both, pointing out the difference, and when the matter left out was added to the advices, he read them also. A Friend remarked that those that had the opportunity of expressing themselves in the conference, might now make way for those who had not; another Friend agreed to this, but hoped that any Friend might be at liberty to make any remark which might press on his mind. A Friend remarked he did not think the first query, as altered, any improvement. Another remarked he was favourable to the report of the conference, while a minister said he had neither part nor lot in the matter, &c. A Friend wished very briefly to remark that he could come to no other conclusion but that the conference had come to the right decision on the matter.

A Friend here proposed that the matter should be put off till next year; a few others were of the same mind. A Friend made a remark about a growth in the truth, &c.; another Friend said his

mind would be comforted if the meeting would adopt the proposed changes; several spoke in rapid succession, most of whom were in favour of the changes; some willing to submit, while others wished to have the matter put off for another year; here again Friends rose after each other, so that a very full expression of opinion took place. A minister from England said he admired the manner in which the discussion of this morning was conducted. The meeting then adjourned.

Four P. M.—Resumed the consideration of the conference report. The queries for the women Friends were then compared, as the men's were in the morning, and agreed to; then the queries for ministers and elders—then advices to ministers and elders—then the general advices—then the arrangements for answering the same, and for reading unanswered queries. There was some diversity of opinion before these were passed, especially with regard to part of the advices to ministers and elders—it was, however, agreed to leave it as brought in by the conference. The clerk asked how the women's meeting was to be informed. It was settled that William J. Barcroft, clerk of the conference, Samuel Bewley, and Thomas W. Jacob, clerk of the Yearly Meeting, should go in and read and explain the new arrangements to women Friends on Seventh-day morning.

Sixth-day.—Ten A. M. Meeting for worship—full attendance. Sitting, four P. M. The clerk read minute of conference, then minute of last year's proceedings, then regulations of conference respecting the alterations proposed in the new marriage rules. The clerk was of opinion that it was best to consider the whole subject together, which was accordingly done, as near as could be, as over forty Friends spoke, and some a second time. It was proposed in this, as well as in the other matters, to put off till next year, but it was thought better to decide at once, as otherwise the society in Ireland would be kept in an unsettled and unsatisfactory state for a year, which would be very undesirable.

Seventh-day.—Half-past nine A. M. A minute of last year, and a paragraph of report from Yearly Meeting committee, were read respecting the collection for North Carolina Yearly Meeting school, which was deeply in debt. Total amount from Ireland, £432, 9s. The educational fund of the Yearly Meeting had three grants made from it to the amount of £29 odd, being a few pounds more than last year; the names of the six trustees were then read. The Book Depository under the care of the Yearly Meeting made sales in the year to the amount of £33, 14s, being somewhat less than last year. The distrains for the non-payment of ecclesiastical demands was from Ulster, about £105; Leinster, £130; Munster, £77; being a total of nearly £323. Some further minutes of last Yearly Meeting, and corresponding paragraphs in the report from the Yearly Meeting's committee, were read respecting ecclesiastical demands, tithes, rentcharge, capital punishment, (a petition which subject was presented to both houses of parliament since last year,) educational fund, and respecting Friends in foreign parts; these matters did not occupy much time. During this sitting the deputation went into the women's meeting, and remained there about an hour.

The epistles to the following Yearly Meetings were passed, viz. London, New York, New England, Ohio, Indiana, Western, Baltimore, and North Carolina. The meeting was delayed some time for the minute from the women's meeting, which, having at length come up, and our concluding minute being read, the meeting came to a satisfactory conclusion about 2 P. M.

## SUMMARY OF EVENTS.

FOREIGN.—The Liverpool cotton market continued to advance. Sales of the week, ending 14th ult., 84,000 bales, prices  $\frac{1}{2}$  q higher. *Wheat*, 2d, a 3d, higher.

The Paris *Presse* gives a rumor of approaching negotiations for a joint offer, by France and England, of mediation between the United States and the Southern Confederacy.

The London Times editorially approves of the mediation, and says that Europe ought not to look calmly on, and if the offer of mediation is delayed, a more important question, that of the recognition of the Confederates, may have to be considered. Lord John Russell stated in Parliament, that there had only been one communication from the French and British Governments, in relation to mediation in the war in America. He conceived that in the embittered state of feeling prevailing there, an overture of that kind would have no good results, and might retard the time for such an offering as would be made. Lord Russell also said that there was no intention at present to offer mediation. The steamer Columbia had left Plymouth for Nassau, with warlike stores, believed destined for the Southern Confederacy. Two other steamers, the Merrimack and Syph, had also arrived at Plymouth, believed to be destined for the same destination. The brig E. Fleming, from Charleston, had reached Liverpool, with a cargo of rosin and turpentine. She left Charleston in company with seven other small vessels.

UNITED STATES.—*Slave Emancipation*.—The bill from the House of Representatives, freeing the slaves of certain classes of persons engaged in the rebellion, was rejected by the U. S. Senate. Another bill, differing in some of its provisions, was passed by a vote of 23 to 13. *Philadelphia*.—Mortality last week, 361.

*New York*.—Mortality last week, 273. *Gold*.—The gold from New York continues to be a quite large, total shipments of coin and bars last week, amounted to \$3,056,562. The premium has advanced to 91 per cent. for gold coin.

The Pacific Railroad Bill, which has passed both Houses of Congress, gives alternate quarter sections of land to the owners of the rock Pacific Railroad Company, who are to organize and open subscriptions to the stock of the company within three months. All the land of this grant that is not sold in three years after the road is finished, is to be open to pre-emption, at the rate of \$1.25 per acre. The Government has agreed to add to the road a certain amount of \$16,000 per mile, to be issued, however, only whenever a section of forty miles is completed and equipped, and in running order; and afterwards for other like sections.

*Arkansas*.—The U. S. fleet, after the recent battle, proceeded up White river a considerable distance, but in consequence of the low water, was compelled to return. The rebel gun boat Van-Dorn is reported to be up the Arkansas, and also another called the Pontchartrain. It is understood that General Curtis is in a perilous condition in Arkansas. General Raines, having got in his rear with 15,000 men.

*Mississippi*.—A large rebel force is collected at Vicksburg, and the determination is expressed to defend the place to the last extremity. The U. S. forces do not appear to have moved far southward in this State. A rebel battery of 100 guns at the mouth of the Gulf of Vicksburg and Natchez, was destroyed on the 17th, thus opening the river, and clearing out the guerrilla bands between New Orleans and the latter port.

*Louisiana*.—In New Orleans, General Butler is making strenuous efforts to alleviate the condition of the poor; but as business generally is dull, his efforts are only partially successful. The high prices of provisions—consequent on their scarcity—add much to the sufferings of the people. The Union sentiment is gaining strength. The applicants for taking the oath of allegiance have been so numerous that the State Society has been obliged to extend the time of registering. Merchants advertise stocks of cottons, shirts, drawers, clothing of all description, mottos and other articles, just received from the North, and the produce dealers announce stocks of corn, rice, sugar and other articles, so that the people of New Orleans are no longer in danger of starving. Shipping announcements are also multiplying. The *Plymouth* of the 20th, contains advertisements of steamers and sailing vessels up for New York and Philadelphia; and the *Indiana Express* has resumed operations between New Orleans and New York. The Bank of America, in New Orleans, has resumed specie payment. Com. Porter's mortar fleet had been sent up the river to Vicksburg.

Tennessee.—A train on the Memphis and Ohio Rail-

road was captured on the 26th, when at a distance of fourteen miles from Memphis, by a rebel cavalry force. The rebels destroyed the locomotive, burned the cars, and captured the troops. Shipments of supplies and cotton in limited quantities continued to be made. Gen. Grant has assumed command of the district of West Tennessee. At Nashville, a number of Methodist and Baptist ministers have been sent to the penitentiary, on the charge of disloyalty. The attack upon the rebel batteries on James Island, near Charleston, is said to have been a lamentable blunder, and resulted most disastrously for the U. S. forces, who were repulsed and defeated with a heavy loss. Gen. Benham, who commanded the Federal troops, retreated to Fort Mifflin. He was ordered by his superior, Gen. Hunter. The Charleston papers give the loss of the Southern troops as 48 killed and 106 wounded. The loss of the U. S. troops is stated by the same accounts, to have been about 1130, including 130 prisoners. The British steamship *Memphis*, arrived in Charleston recently, with a valuable cargo of British goods.

Virginia.—No further engagements are reported in the Shenandoah Valley. The troops under Gen. Fremont's command had on the 25th ult., retreated to Strasburg. The crops of grain in this part of Virginia, are said to be very good, and are now ripe for the harvest, but there are few hands to gather them. Both white and black labour have fled the region—the whites to the Confederate army, and the negroes to the North. The houses of the farmers, with few exceptions, contain no adult men, women and children. The forces under Major Generals Fremont, Banks and McDowell, have been consolidated into one army, to be called the army of Virginia, and Gen. Pope has been especially assigned by the President to the chief command. This arrangement gave offence to Gen. Fremont, who was unwilling to serve in a subordinate position. He was consequently relieved from his command, and Gen. Rufus King appointed in his place. The military operations near Richmond during the last week were important. A series of sanguinary engagements between the two great hostile armies, appears to have resulted in a Federal retreat to better positions. Gen. McClellan's army, having, in consequence, been massed south of the Chickahominy, in nearer proximity to Richmond. His line of communication with the North by means of the Pamunkey river, has been abandoned to the rebels, and a new one, it is stated, is to be established by the route of James river to the rebel positions. Gen. McClellan occupied the ground heretofore held by McClellan's right wing. Their army is reported to be immensely large, and all their more noted military leaders are collected there, including Generals Beauregard, Price and Jackson. The apprehension is entertained by some that the U. S. army is in a critical position, while others think the defeat of the rebels and the occupation of Richmond is near at hand. The crisis of the long struggle is evidently approaching.

## RECEIPTS.

Received from David Naylor, O., \$2, vol. 35; from Mary Ann Baldwin, Pa., \$2, vol. 35.

## FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 72 Market Street, Philadelphia, or to any other Member of the Board.

## NOTICE.

An active young man, a member of our Society, want a situation in a wholesale store; he has some knowledge of book-keeping, and is a good penman. Inquire at the office of "The Friend."

## NOTICE.

A meeting of "The Philadelphia Association of Friends of the Instructed Poor Children," will be held at the usual place on Second day evening, Seventh month 7th, 1862, at 8 o'clock.

WM. SMEELEY, Jr., Clerk.

WM. H. PILLE, PRINTER,

Lodge street, opposite the PENNSYLVANIA BANK.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SEVENTH MONTH 12, 1862.

NO. 45.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; on any part of the United States, for three months, if paid in advance, six and a-half cents.

From Evenings at the Microscope.

Spiders and Mites.

"The arrangement of Spiders by M. Walckenaër into families, characterised by their habits, places the principal varieties of their webs in a very concise point of view.

"The *Cursors*, *Saltators*, and *Laterigrades*, make no webs: the first catch their prey by swift pursuit; the second spring upon their prey by invidious and agile leaps; the third run, crab-like, sideways or backwards, and occasionally throw out adhesive threads to entrap their prey. The *Laticraticula* hide in burrows in fissures, which they line with a web. The *Tubicolae* inclose themselves in a silken tube, strengthened externally by leaves or other foreign substances. The *Nidifera* weave a nest whence issue threads to entrap their prey. The *Filiatae* are remarkable for the long threads of silk which they spread about in the places where they prowl in quest of prey. The *Lapideae* spin great webs of a close texture, like hammocks, and wait for the insects that may be entangled therein. The *Orbitaleae* spread abroad webs of a regular and open texture, either circular or spiral, and remain in the middle, or on one side, in readiness to spring upon an entangled insect. The *Retiatae* spin webs of an open mesh-work and of an irregular form, and remain in the middle or on one side, to seize their prey. Lastly, the *Aquileae* spread their silken filaments under water, to entrap aquatic insects.

"The silken secretion of Spiders is not applied only to the formation of a warm and comfortable dwelling for themselves, or of a trap for their prey; it is often employed to master the struggles of a resisting insect, which is bound round by an extemporary filament, spun for the occasion, as by a strong cord. It forms the aeronautic filament of the young migratory brood. It serves to attach the moulting *Hydrachna* to an aquatic plant by the anterior part of the body, when it struggles to withdraw itself from its exuvium. Lastly, a softer and more silken kind of web is prepared for the purpose of receiving the eggs, and to serve as a nest for the young."

The silk with which these various fabrics are constructed is a thick, viscous, transparent liquid, much like a solution of gum arabic, which hardens quickly on exposure to the air, but can meanwhile be drawn out into thread. So far, it agrees with the silk of the silkworm and other caterpillars;

but the apparatus by which it is secreted, and that by which it is spun, are both far more complex and elaborate than those of the latter. Generally speaking, there are three pairs of spinnerets, or external organs, through which the threads are produced, but in some few cases there are only two pairs, and in others, as the Garden Spiders, (*Epeira*), the hindmost pair seem to be united into a single spinneret. These are always situated at the hinder extremity of the body, and I will show them to you presently. First, however, I will describe the internal apparatus—the source of the threads.

The glands which secrete the gummy fluid are placed in the midst of the abdominal viscera, and in some instances—as in the female of *Epeira fasciata*, a species which makes a remarkably large web—they occupy about a quarter of the whole bulk of the abdomen. About five different kinds of these glands may be distinguished, though they are not all present in every species. The *Epeira*, however, present them all.

In this genus there are:—1. Small, pear-shaped bags, associated in groups of hundreds, and leading off by short tubes, which are interlaced in a screw-like manner, and open in all of the spinnerets. 2. Six long twisted tubes, which gradually enlarge into as many pouches, and then are each protracted into a very long duct, which forms a double loop. 3. Three pairs of glandular tubes, similar to the preceding, but which open externally through short ducts. 4. Two groups of much branched sacs, whose long ducts run to the upper pair of spinnerets. 5. Two slightly branched blind-tubes, which terminate by two short ducts in the middle pair of spinnerets.

It is not very easy to examine the spinnerets with a microscope, so as to make out their structure. If we confine the Spider in a glass cell, it is so restless that the least shock or change of position will cause it to move and to fro; and, besides, when it does become quiescent, the spinnerets are closed in towards each other, so that we cannot see their extremities. By selecting a specimen, however, recently killed, such as this *Chlusiona*, we may discern sufficient to enable us to comprehend their construction.

Looking, then, at the abdomen from beneath, we see the three pairs of spinnerets clustered together close to the extremity. The pair most forward are shaped somewhat like barrels, whose free ends head over toward each other. They are covered with stiff black hairs, and just within the margin of what may be called the head of the barrel, (for it is cut off horizontally, with a sharp rim,) there is a circle of very close-set, stiff, whitish bristles, which arch inwards. The whole flat surface of the "head," within this circle of bristles, is beset with very minute horny tubes, standing erect, which are the outlets of the silk-ducts, that belong to this pair.

The minute horny tubes are themselves composed of two joints, the basal one thick, the terminal one very slender, and perforated with an orifice of excessive tenuity; through which the gummy threads are extruded, and pass on to the will of the animal, as an equally at-

tenuated thread. On our *Chlusiona*, the number of tubes in all the spinnerets is about three hundred; but in the Garden Spider, (*Epeira*), they exceed a thousand.

This remarkable multiplicity of the strands with which the apparently simple and certainly slender thread of the Spider is composed, has attracted the attention of those philosophers who seek to discover the reasons of the phenomena they see in nature. The explanation was first suggested, I believe, by Reaumur; but it has been amplified with much force by Professor Jones, in the following words:—

"A very obvious reflection will here naturally suggest itself, in connection with this beautiful machinery; why, in the case of the spider, it has been found necessary to provide a rope of such complex structure, when in so many insects a simple, undivided thread, drawn from the orifice of a single tube, like the thread of the silkworm, for instance, was sufficient for all required purposes. And here, as in every other case, it will be found, on consideration, that a complicated apparatus has been substituted for a simple one only to meet the requirements of strict necessity. The slow-moving caterpillar, as it leisurely produces its silken cord, gives time enough for the fluid of which it is formed to harden by degrees into a tenacious filament, as it is allowed to issue by instalments from the end of the labial pipe; but the habits of the Spider require a different mode of proceeding, as its line must be instantly converted from a fluid into a strong rope, or it would be of no use for the purposes it is intended to fulfil. Let a fly, for example, become entangled in the meshes of a Spider's web; no time is to be lost; the struggling victim, by every effort to escape, is tearing the meshes that entangle it, and would soon succeed in breaking loose did not its lurking destroyer at once rush out to complete the capture and save its net, spun with so much labour, from ruin. With the rapidity of thought, it darts upon its prey; and before the eye of the spectator can comprehend the manoeuvre, the poor fly is swathed in silken bands, until it is as incapable of moving as an Egyptian mummy."

To allow the Spider to perform such a feat as this, its thread must evidently be instantaneously placed at its disposal, which would have been impossible had it been a single cord, but being subdivided into numerous filaments, so attenuated as we have seen them to be, there is no time lost in the drying; from being fluid they are at once converted into a solid rope, ready for immediate service."

No doubt you have often admired the exquisite regularity of those Spiders' webs which are called geometric; that of our abundant Garden Spider, for instance. You have observed the cables which stretch from wall to wall, or from bush to bush, in various directions, to form the scaffolding, on which the net is afterwards to be woven; then you have marked the straight lines, like the spokes of a wheel, that radiate from the centre to various points of these network cables, and finally the spiral thread that circles again and again round the radii, till an exquisite net of many meshes is formed.

But possibly you are not aware that these lines are formed of two quite distinct sorts of silk. It has been shown that the cables and radii are perfectly unadhesive, while the concentric or spiral circles are extremely viscid. Now the microscope, or a powerful lens, will reveal the cause of this difference; the threads of the cables and radii are perfectly simple, while the spiral threads are closely studded with minute globules of fluid, like drops of dew, which, from the elasticity of the thread, are easily separated from each other. These are globules of viscid gum, as is easily proved by touching one or two with the finger, to which they will instantly adhere; or by throwing a little fine dust over the nest, when the spirals will be found clogged with dirt, while the cables and radii remain unsoiled. It is these viscid threads alone that have the power of detaining the vagrant flies which accidentally touch the net.

The diversity of the secreting organs already alluded to, as well as in the spinnerets, is no doubt connected with this difference in the character of the silk; and it is worthy of remark that this diversity is greatest in some Spiders, as the *Epeira*, which spin geometric nets.

Immense is the number of globules of viscosity that stud the spiral circles of one these nets. — Blackwall, the able and learned historian of the tribe, has estimated that as many as 87,360 such pearly drops occurred in a net of average dimensions, and 120,000 in a large net of fourteen or sixteen inches diameter; and yet a Spider will construct such a net, if uninterrupted, in less than three-quarters of an hour.

Scarcely less admirable is the ease and precision with which the little architect traverses her perpendicular or diagonal web of rope; a skill which leaves that of the mariner who leaps from shroud to backstay in a ship's rigging immeasurably behind. To understand it, however, in some measure, look at this last joint of one of the feet of our well-used *Chubina*. It is a cylindrical rod, ending in a rounded point; every part of its surface is studded with stiff, rather long, horny bristles, which, springing from the side, arch inward towards the point. Now this array of spines effectually prevents a false step, for if any part of the leg, which is sufficiently long, only strikes the thread, the latter is certain to slip in between the bristles, and thus to catch the leg. But more precision than this is requisite; especially when we observe with what delicacy of touch the hinder feet are often used to guide the thread as it issues from the spinnerets, and particularly with what lightning-like rapidity the larger net-weavers will, with the assistance of these feet, roll a dense web of silk around the body of a helpless fly, swathing it up, like an Egyptian mummy, in many folds of cloth, in an instant.

Look, then, at the extreme tip of the ultimate joint. Two stout hooked claws of dark horny texture are seen proceeding from it side by side, and a third of smaller size, and more delicate in appearance, is placed between them, and on a lower level. The former have their under or concave surface set with teeth, (eighteen on each in this example,) very regularly cut, like those of a comb, which are minute at the commencement of the series near the base of the claw, and gradually increase in length to the tip. These are doubtless sensible organs of touch, feeling and catching the thread; and they, moreover, act as combs, cleansing their limbs, and probably their webs, from the particles of dust and other extraneous matter which are continually cleaving to them.

The more we fear God, the less we shall fear man.

### The Origin of the Christian Discipline Established among Friends.

(Continued from page 347.)

A second, and perhaps contemporaneous, object of the meetings for the discipline of the society, was the obtaining of redress for those illegally prosecuted or imprisoned. Though so patient in suffering, they deemed it their duty to apprise magistrates, judges and the government, of illegal proceedings, and to use every legal and christian effort to obtain redress. Several friends in London devoted a large portion of time to this object, and regular statements of the most flagrant cases were sent to them, and were frequently laid by them before the king and government. Their constancy in suffering was hardly exceeded by their unwearied efforts to obtain relief for their suffering brethren, and for the alteration of the persecuting laws; and through these means the cause of religious liberty was essentially promoted.

A third object, which at a very early period of the society pressed upon its attention, was the proper registration of births and deaths, and the provision for due proceedings relative to marriage. Their principles led them at once to reject all priestly intervention on these occasions, and hence the necessity for their having distinct arrangements in regard to them. In some of the meetings of earliest establishment regular registers are preserved from the year 1650 to the present time. Great care was taken in regard to proceedings in marriage; investigation as to the clearness of the parties from other marriage engagements, full publicity of their intentions, and the consent of parents, appear to have been recommended in early times as preliminaries to the ratification of the agreement between the parties; and this act took place publicly in the religious meetings of the society. Marriage has always been regarded by Friends as a religious, not a mere civil compact.

The right education of the youth, the provision of suitable situations for them as apprentices or otherwise, and the settlement of differences without going to law one with another, were also among the early objects of the society's care.

The last object of the discipline, in early times, which we shall enumerate, was the exercise of spiritual care over the members. As the society advanced it was soon reminded of our Lord's declaration: "It must needs be that offences come." Evidencing, as the society did to a large extent, the fruits of the Spirit, there were those who fell away from their christian profession, and walked disorderly; and sound as was the body of Friends in christian doctrine, there were members who were betrayed into false doctrines and vain imaginations; and pure, and spiritual, and consistent with true order and christian subjection as were the principles of religious liberty advocated by the society, there were those who appear to have assumed them under the false expectation of an entire independence.

To all these cases the discipline was applied in very early times; yet the spirit of tenderness, which breathes through the writings of George Fox in regard to the treatment of delinquents, and which there is good reason to believe was practically illustrated, to a large extent, in the conduct of the Friends of those days, is worthy of special notice. From one of his epistles we make the following extracts: "Now concerning gospel order, though the doctrine of Jesus Christ requireth his people to admonish a brother or a sister twice, before they tell the church, yet that limiteth none, so as that they shall use no longer forbearance. And it is desired of all, before they publicly com-

Selected.

plain, that they wait to feel that there is no more required of them to their brother or sister, before they expose him or her to the church. Let this be weightily considered, and all such as behold their brother or sister in a transgression, go not in a rough, light, or upbraiding spirit, to reprove or admonish him or her; but in the power of the Lord and spirit of the Lamb, and in the wisdom and love of the Truth, which suffers thereby, to admonish such an offender. So may the soul of such a brother or sister be seasonably and effectually read into and overcome, and they may have cause to bless the name of the Lord on their behalf, and so a blessing may be rewarded into the bosom of that faithful and tender brother or sister who so admonished them. And so keep the church order of the gospel, according as the Lord Jesus Christ hath commanded; that is, "If thy brother shall trespass against thee, go and tell him his fault between thee and him alone; if he shall hear thee, thou hast gained thy brother: but if he will not hear thee, then take with thee one or two more, that if the mouth of two or three witnesses every word may be established; and if he shall neglect to hear them, tell it unto the church." "

We now proceed to notice the more regular and systematic establishment of Monthly and Quarterly Meetings, and of the Yearly Meeting. Though the history of those times bears ample testimony to the useful part which was taken in this important work by many faithful friends, yet it is clear that George Fox was the chief instrument in the arrangement and establishment of these meetings. There was doubtless much reference to his individual judgment, but it is worthy of notice how carefully he sought to keep the body from an improper dependence upon him. As in his preaching he directed his hearers to Christ for themselves, so in the discipline of the society he laboured diligently that the body might be strengthened to help itself.

Under the date of 1666, George Fox says in his Journal: "Whereas Friends had had only Quarterly Meetings, now Truth was spread and Friends were grown more numerous, I was moved to recommend the setting up of Monthly Meetings throughout the nation." In 1667 he laboured most diligently in this service, under much bodily weakness from his long confinements in cold and damp prisons. In 1668 he thus writes: "The men's Monthly Meetings were settled throughout the nation. The Quarterly Meetings were generally settled before. I wrote also into Ireland, Scotland, Holland, Barbadoes, and several parts of America, advising Friends to settle their men's Monthly Meetings in those countries, for they had their Quarterly Meetings before." These Monthly Meetings, so instituted, took a large share of the care which had heretofore devolved on the Quarterly Meetings, and were no doubt the means of bringing many more of the members into a large sphere of usefulness and the exercise of their respective gifts in the church, the free course for which he was so anxious to promote. With reference to the subject, he observes, in one of his epistles: "The least member in the church is serviceable, and a member have need one of another."

The Quarterly Meetings from this time received reports of the state of the society from the Monthly Meetings, and gave such advice and decisions as they thought right; but there was not, until some years after this period, a general Yearly Meeting, at which all the Quarterly Meetings were represented. Of the establishment of that meeting we come now to speak.

In the year 1672 a General Meeting of ministers was held at Devonshire House, London: among

proceedings we find the following minute, in which we trace the origin of the Yearly Meeting, instituted as it now is of representatives from various parts of the Kingdom. "It is concluded, greed, and assented unto, by Friends then present, that, for the better ordering, managing, and regulating of the public affairs of Friends relating to the truth and service thereof, there be a General Meeting of Friends held at London once a year, the week called Whitsun-week to consist of six Friends for the city of London, three for the city of Bristol, two for the town of Colchester, and one two from each of the counties of England and Wales respectively."

This representative Yearly Meeting met at the place proposed in 1673, and came to the conclusion, at the General Meeting, constituted as it then was, "be discontinued till Friends, in God's wisdom, shall see a further occasion;" and it was further agreed, that the General Meeting of Friends who labour in the work of the ministry, do continue as formerly appointed. This meeting of Friends in the ministry appears to have been regularly held annually from this time to the year 1677 inclusive.

In 1675 a series of important advices and instructions were agreed upon, and sent forth to the several meetings: they are contained in an epistle, and are thus introduced: "At a solemn General Meeting of many faithful Friends and brethren occurred in the public labour of the gospel and service of the church of Christ, from the most parts of the nation." This document is signed by eighty-one Friends, most of whom are well-known & conspicuous in the early history of the society; and the spirit of fervent piety and charity which breathes is well worthy of their character. In 1677, it was agreed again to convene the meeting of representatives in the ensuing year, and then to advise respecting its continuance. Accordingly in 1678 the representative Yearly Meeting assembled at London, and, after agreeing upon several matters, the substance of which was conveyed to the various meetings of Friends in the form of an epistle with much christian counsel, concluded to meet again the next year after the same manner; and these meetings have continued to assemble once a year in London, with unbroken regularity, to the present time.

When the General Meeting of ministers transferred much of its duties to the representative Yearly Meeting, of which they formed a part, there were some portions of the service of these meetings which more particularly belonged to the ministers. Although the power to approve and disapprove of ministers rested with the members of the church to which they respectively belonged, the capacity of a Monthly Meeting, yet it was deemed fitting that the ministers should have an especial oversight of each other, and that they should meet together for mutual consultation and advice in regard to those of their own station.

George Fox, in 1674, writes thus: "Let your general assemblies of the ministers [in London, or elsewhere,] examine, as it was at the first, whether all the ministers that go forth into the counties do talk as becomes the gospel; for that you know as one end of that meeting, to prevent and take away scandal, and to examine whether all who preached Christ Jesus, do keep in his government and in the order of the gospel, and to exhort them that do not." Meetings for these purposes, in which Friends in the station of elder are now united, continue to be regularly held.

All the meetings which have been hitherto described were conducted by men; but it was one of the earliest features of our religious economy

to elevate the character of the female sex, by recognizing them as helpers in spiritual, as well as in temporal things; holding in the former as well as in the latter a distinct place, and having duties which more peculiarly devolved on them. For this purpose meetings were established among them, with a special regard to the care and education of their own sex. The views of George Fox in regard to the establishment of these meetings are conveyed in the following passages: "Faithful women, called to a belief of the Truth, and made partakers of the same precious faith and heirs of the same everlasting gospel of life and salvation, as the men are, might in like manner come into the profession and practice of the gospel order, and therein be meet-helpers to the men in the service of truth, and the affairs in the church, as they are outwardly in civil and temporal things; that so all the family of God, women, as well as men, might know, possess and perform their offices and services in the house of God; whereby the poor might be better taken care of; the younger sort instructed, informed, and taught in the way of God; the disorderly reprov'd and admonish'd in the fear of the Lord; the clearness of persons proposing marriage more closely and strictly inquired into in the wisdom of God; and all the members of the spiritual body, the church, might watch over and be helpful to each other in love."

Thus was a system of order and government, in conformity with the spirit of christianity, established amongst us in early times; and thus a field was opened for the exercise of the various gifts, with which the church, the body of Christ, is edified.

#### Anecdotes of the Blind.

Those who have closely observed the conduct of the blind must, we imagine, have been sometimes startled with the precise knowledge they appear to possess of what is going on around them. It would seem as though some new sense had stepped in to supply the want of the faculty which they have lost, or have never possessed. We know that this is not the case, and that the ready powers of perception and appreciation which sometimes astonish us are the results of that finished education of the other senses, which is in a manner enforced upon those who live in perpetual darkness. We shall jot down a few instances which have come within our own observation and knowledge, and which, while interesting in themselves, will serve to illustrate the operation of what some writers, in alluding to this subject, have wrongly termed the sixth sense.

A poor blind pensioner, who travels London daily to call on his patrons for their contributions, and whose rounds are not much short of a hundred miles per week, on being asked how he finds his way about, tells us that, on starting from home he counts the turnings and crossings, however numerous they may be (perhaps over a five miles' route), until he arrives at the street or row of buildings which he wants. He then "sticks it," or counts the houses, by their entrances, with his stick, until he comes to the right dwelling. This, once certified, is never afterwards forgotten; for, should he should chance to miscount, he would be made sensible of his error by the differing shape of the bell-shaped, the knocker, the rattings, or some trifling peculiarity in the door-step, &c., which though they might escape the observation of ordinary persons, are obvious enough to the blind. He knows his friends as they approach him, by the sound of their footfall, and will not allow them to pass him without giving them the "good day." He can al-

ways tell when he is passing a house or houses of two, three, or four stories high, by the difference in the sound of his own step, or of the touch of his stick on the flags. He knows the trees by their odour. A grocer's shop, a chemist's shop, a leather-cutter's, or a butcher's, is as palpable to him as a milestone to a traveller or a lighthouse to the sailor. If he is ever put out of his reckoning, it is through meeting a friend and having a gossip until he forgets himself; in this case he has either to go back or forward, "sticking it," until he has recovered one of his landmarks. This poor fellow has perambulated London alone for twenty years, in all weathers, with no other guide than his stick, yet is never known to lose his way. If the reader will compare these facts with his own experience in the dark, or with the cases of persons who lose themselves in a London fog, in neighbourhoods with which they have long been well acquainted, he will see sufficient cause to marvel at the resources of the blind.

A friend of the writer, attending church on the Sunday morning in a village where he had arrived the day before, encountered a blind man groping at the principal door, which, for some cause, happened on that day to be closed. Our friend took him by the hand and led him in at a side door. After the service he led him out; but the blind man was quite non-plussed, and did not know in what direction to go. "Will you be so good as to put me where you found me first?" he said; and he was conducted back to the front door. Having certified himself of his position by a touch, he at once set off for his home, which lay at three miles distance—our friend accompanying him part of the way. When they had walked something more than a mile along the road, the blind man stopped. "Will you have the kindness," he said, "to put your hand behind that hurdle in the hedge, and lift out my walking-stick; it always leaves it there when I go to church." Now the man had been talking all the way from the village, and he could not have been counting his steps or his invisible landmarks, and there appeared to be nothing whatsoever in the hedge which could have indicated over to one stone blind the exact spot on which he stood. As our friend lifted out the stout cudgel, which certainly did not look at all like a church-going article, he asked him how he could tell so precisely where he was. "There is a tree in the hedge," said the blind man, "and that causes a hump in the air, because it stops the current; I always know when I come to the tree."

Not many months back, a traveller was riding on one of the bleak and stormy nights for which the past year will long be remembered, over a dreary district of hill, down and dale, in central Yorkshire. He had a weary way to go, and his whole route lay in the teeth of the wind and tempest, which threatened to sweep him from the road. As he struggled on, the night grew dark and the storm more furious. Not relishing the idea of being belated on that wild spot, he set spurs to his steed, and, trusting to the animal's instinct and sure-footedness, galloped through the darkness towards his destination. He had reason to repent of his precipitancy for the horse diverged from the track and became entangled in a clump of gorse and scrub, and he himself was thrown, but fortunately, without any serious injury. He was able to mount again, and to recover the path, and proceeding more cautiously, arrived at the village inn, where he intended to put up, about midnight. Here, on dismounting, he discovered that he had lost his watch, which had been severed from the ribbon that served as a guard, and had most likely fallen to the ground among the gorse where he had

been thrown. He grieved at the loss of a valuable time-piece, and bemoaned his misfortune with the landlord.

There was a poor blind man sitting in the bar who immediately rose and volunteered to go in search of the missing watch. The case appeared hopeless to the traveller, who could scarcely describe the spot where his misfortune had overtaken him, and who deemed the attempt to recover it on the part of a blind man as supremely ridiculous; and, indeed, he hinted as much. In spite of this discouragement, however, the blind man seized his staff and set forth in the midst of the wind and pouring rain. He knew the district better than the traveller did. He traversed the six miles of stormy heath and mountain, and, heedless of the driving sand, commenced his search. Having arrived at the spot, he set his ear to the ground, and groped through the gorse in all directions; the wind howled, and the long grass whistled around him, but amidst those wild and melancholy sounds he was able at length to identify the still small ticking of the watch, which he recovered, placed in his bosom, and brought back in triumph. Here is an exploit rivalling almost the fairy feats of Fine-ear himself; it is one, however, for the truth of which we can vouch, while it is one which it is most certain that no other than a blind man could have accomplished.

It is probable that, in most blind persons, that faculty of the mind which phreologists have supposed to be demonstrated by the organ of locality, must be exercised and perfected to an extraordinary degree. A blind workman, if he use a score or more of tools, always places his hand on the right one when it is wanted, and will tell in an instant, and even after a considerable lapse of time, whether his tool-box has been tampered with, or the arrangement of the implements altered. The perfection of this faculty is sometimes exhibited in blind chess-players, who generally attain to remarkable proficiency in the most complicated of all games. We have seen boys of tender age, and who were born blind, playing this difficult game in a masterly way, and generally checking their more mature antagonists. Their sole guide is their sense of touch; and it is astonishing to note with what rapidity they ascertain all they want to know by this means. By merely laying the palm of the hand and the finger-tips on the pieces as they stand, they master in a moment the position of the contending forces, and, without being informed of the adversary's moves, make the necessary disposition to defeat them.

Before the establishment of the Crèche in Paris, many poor women used to get their living by taking charge, during the day, of the infants of those of the poorer classes who had to be at work in the streets, when they should have been at home nursing their helpless offspring. The most noted of these general mothers was a certain blind and poverty-stricken dame, who went by the name of old Susanne, and who had her infant hostelry in the Rue Git le Cour, near the quay. It was remarkable that while all her rivals in the nursing trade were a nuisance in their neighbourhoods, owing to the crying and squalling of their unfortunate little clients, Susanne was as much noted for the unbroken tranquillity of her dwelling, where a cry or a complaining voice was never heard. It followed as a consequence that all the most unmanageable and refractory little brats were made over to her; and as surely as they came into her hands, they ceased their squalling, and either laughed, gambolled, or slept away the hours of absence from their mothers. If you entered Susanne's apartment, you found that all the noise that was made she made

herself, as she sat crooning a scarcely audible lullaby amidst her babies. Her system of management was expressed in very few words—"I sing to them softly," she would say, "and I handle them softly."

For "The Friend."

#### THE PRAYER OF THE SLAVE.

God! we are lowly, and our brothers, men,  
Look on us as the outcasts of the earth,  
Wilt thou not be a Father to us, then?

Ours are as theirs, souls of immortal birth.

Love, strong and deep, within our bosoms lies,  
And sympathies, that ask an answering tone,  
There sweet humanities, affection's ties,  
Vibrate with pulse as tender as their own.

What tho' thou gavest us under burning skies,  
A skin as dark as a night's ebony hue!  
Within our breasts, a fountain, welling lies,  
Of feelings, oft refreshed by heaven's dew.

Ours the hard lot of bitter scorn to bear,  
Of slavry's chain, and nature's rights refused,  
Grant us, Great God! a gracious Father's care,  
And in thy mercy aid the long abused.

We, too, are purchased, by that holy blood,  
A Saviour dying, shed upon the cross;  
We with that holy spirit are endued  
That purges from the soul its secret dross.

But oh! debased by hard oppression's sway,  
Our glowing souls with feeble wing aspire,  
Oh us, falls not the renovating ray  
That springs from liberty's ennobling fire.

God! in thy mercy touch the hearts of men;  
Guide them with wisdom in the path of right,  
Let Justice' equal scales prevail, and thee,  
Such nations wait as brothers in thy sight.

Haste thou the day, when Ethiope shall come  
With outspread arms to worship at thy shrine;  
Prepare the way, and lead the chosen on  
Who spread the knowledge of thy light divine.

Let the harsh tones of angry discord cease,  
From selfish views sublime the human heart,  
Then shall the brooding wing of heavenly peace,  
Its influence of purity impart.

L. D.

For "The Friend."

#### Good and Seasonable Advice.

The following epistle seems calculated to stir up the pure mind by way of remembrance. Should the Editor approve of its publication, we would commend it to the careful perusal of the readers of "The Friend."

*An epistle from the national half-year's meeting, held in Dublin, by adjournments, from the 3d day of the Fifth month, 1778, to the 7th of the same, inclusive.*

To the Monthly and Quarterly Meetings, and other Meetings of Disciple of Friends in Ireland:  
*Dear Friends and Brethren.*—We have, in this our general assembly, been deeply affected and humbled under the sorrowful view and feeling of the declined state of many in our society from the life and power of pure religion, and that humble, self-denying conversation which it leads into; and under this concern we have been afresh made feelingly sensible of this great loss and hurt that both individuals, and the society in general, have sustained by letting out the mind and affections after great things in this life; many of the professors of Truth, as it is in Jesus, departing from under the discipline of his holy cross, have let up an high and aspiring mind, that affects ostentation and show, and seeks after many superfluities, to gratify the vain and ambitious cravings of the unfortified part in them; the noble simplicity of

manners, habit, and deportment, which Truth led, and still leads into, hath been much departed from; the plainness of apparel which distinguished our religious profession is by too many despised, and the testimony which we have been called to bear against the unstable, foolish fashions of the world has been trampled as under foot; the mind, not limited by the girdle of Truth, hath coveted an evil covetousness, the wedge of gold and the Babylonish garment have been the objects of its inordinate desire. And one exempling another, and the lesser fondly copying after the greater, an evil emulation has gotten in, not provoking one another to love and good works, but vying with each other in the grandeur of their houses, the order and provision of their tables, the richness of their furniture, and the gaiety of their own dress, and that of their children, contrary to the self-denial, the humility and meekness prescribed by the gospel of Christ in which they profess to believe, and the constant tenor of the salutary advices of the society they profess themselves members of, from the beginning to this very day.

Every superfluous thing occasions a superfluity of expense; and superfluity of expense requires extensive, and frequently exorbitant and precarious engagements in trade, beyond the capital and abilities of the managers to support it. And when their own fails, many too frequently keep up this honourable state on the property of other men, till insolvency fatally ensues to the ruin of themselves and families, the loss and damage of their creditors the reproach of the Truth, and the great trouble of Friends, who are concerned to keep good order amongst us.

It is an undoubted truth, that the society which doth not frequently recur to its first principles will go to decay; if, then, we look back to our beginning, we shall find that from the beginning it was not so. In a postscript to an early epistle from the province-meeting at Castledermot, we have the lively description of the effect which Truth had at that day. "Then, (say they) great trade was a great burden, and great concourse a great trouble all needless things, fine houses, rich furniture gaudy apparel, were an eye-sore; our eye being single to the Lord, and the shining of his light in our hearts, which gave us the sight of the knowledge of the glory of God; this so affected our minds, that it stained the glory of all earthly things, and they bore no mastery with us." The Divine principle of Light and Grace remains still the same, and would work the same effect in us, if we were obedient thereto; would even introduce gradually, by the operation of its Divine power the new creation in Christ Jesus, whereby man, returning from the fall, would be placed in dominion over all the creatures.

We are, therefore, dear Friends, impressed with a zealous concern of mind, in this day of trial when "the judgments of the Lord are in the earth, that the inhabitants thereof may learn righteousness" (Isaiah xxv. 9.) as this is a time of danger, uncertainty, and distrust, we most earnestly desire that Friends may let their moderation in all things appear, that those who have launched out extensively in trade, with as little delay as possible, set about contracting their engagements therein into a moderate compass, and instead of risking the reputation of Truth, the peace of their own minds, and the welfare of their immortal souls, in grasping at things beyond their reach, in order to provide for superfluous expense reduce their wants and expenses within the limit and bounds of Truth, and then a little trade will frugality and industry will be found sufficient.

The love of money is a sore evil, "which, while

some have coveted after, they have erred from the faith, and pierced themselves through with many sorrows;" (1 Tim. vi. 10). Let the Truth itself, therefore, dear Friends, moderate and limit us in our pursuits: "A man's life consisteth not in the abundance of the things which he possesseth," (Luke xxii. 15). And the limitation and order prescribed by him who is the Truth, the Way, and the Life, is this:—"Sack ye first the kingdom of God and his righteousness, and all these things shall be added unto you." (Matt. vi. 33.) Many who have transgressed this holy boundary, and reversed this heavenly order, in giving the preference to the pursuit of earthly possessions, have in themselves, or their offspring, furnished a verifying proof of the declaration of the Almighty by his prophet, viz.—"Ye looked for much, and lo, it came to little; and when ye brought it home, I did blow upon it: Why? saith the Lord of hosts, because of mine house that is waste, and ye run every man to his own house." (Hag. i. 9.)

And let those, whom Divine evidence hath prospered and blessed with abundance of the good things of this life, ever bear in remembrance, that "the earth is the Lord's and the fulness thereof," (Psal. xiv. 1.) and that we are accountable stewards, each for his share, of the manifold mercies we receive at his hand. Let them, then, as good stewards, use the same, with a due regard to the pointings and limitations of Truth, not indulging themselves in anything wherein is excess; and thereby setting an evil example to others, whose abilities cannot well bear the expense, and yet from the depravity of human nature, may be tempted to copy after them. For those of the foremost rank in society, by the assistance of Divine Grace, may do much good; or neglecting it, by the influence of their example, occasion much evil therein. We therefore earnestly desire, that those who are thus favoured may seriously co-operate with our concerns in setting a good example; and we hope it will have a happy influence on others, who may be discouraged from aiming at expense unbecoming their circumstances, when they behold those who have it in their power, decline it through their regard to Truth, and for preserving inviolate the testimony of a good conscience toward God. The experienced apostle very pathetically, in his direction to Timothy, points out the particular duty of this class of christians:—"Charge them that are rich in this world, that they be not high minded, nor trust in uncertain riches, but in the living God, who giveth us richly all things to enjoy; that they do good, that they be rich in good works, ready to distribute, willing to communicate; laying up in store for themselves a good foundation against the time to come, that they may lay hold on eternal life." (1 Tim. vi. 17, 18, 19.)

Finally, brethren and sisters, as example must accompany precept, if we be sincere toward God, we desire especially that ministers, elders, overseers, and other active members in the society, may seriously, in the first place, set about this necessary work of retrenching and reformation where needful: that their nearest connections, their children and families, in regard to the point of view in which their partners in life and parents are placed, may lay to heart the evil consequences of their deviating from the simplicity of Truth, and the pernicious influence of their evil example: that those and the children the Lord hath given them, being as signs and good examples from the Lord of hosts, they may go forth strengthened by the cleansing of their own hands and those of their families, and so be enabled to say to the flock, "follow us as we follow Christ." And that parents, heads of families, and all Friends, each in their proper places,

may be engaged to wash their hands in innocency, and be qualified to encompass the Lord's holy altar, that the "offerings of Judah and Jerusalem may be pleasant to the Lord, as in days of old, and as in former years." (Mal. iii. 4.)

In the extending of that real affection, which desires your present and everlasting well-being, we salute you, and conclude,—Your friends and brethren.

Signed on behalf of our said meeting, by  
John Gouin, Clerk.

From the London Quarterly.  
Eastern Archipelago.

It would be difficult to fix on any regions on the earth's surface which have been more conspicuous for the display of human passion than the tenuous group of islands extending from the eastern coast of Celebes to the western coast of Papua or New Guinea, and known as the Moluccas, or Spice Islands. Before they were visited by Europeans, the Chinese had accidentally landed on them, and discovered the clove and the nutmeg; and a taste for these pungent spices was thus communicated to India, and soon extended to Persia and Europe. The Arabs, who then occupied almost all the commerce of the world, speedily sought out the country of these valued productions. The Portuguese followed, engaged the traffic, and took possession of the islands. The widest dreams of avarice were, they thought, about to be realised as soon as they had obtained possession of the countries in which grew the nutmeg and the clove. The tales which were told by navigators of the wonderful things they had seen in this remote region were generally listened with a smile of incredulity. Thus a distinguished geographer of the sixteenth century, with learned incredulity which is sometimes as difficult to overcome as popular ignorance, warns his readers to give no credit to such a "huge and monstrous lie" that there were in that sea stones which grew and increased like fish. The description given of the Moluccas by De Barros, one of the first Portuguese visitors, was not inviting. "The land of these famous islands," he says, "is ill-favoured and ungracious to look at, for the sun is always very near, and now going to the northern and now to the southern solstices; this, with the humidity of the climate, causes the land to be covered all over with trees and herbs. The air is loaded with vapours which always hang over the tops of the hills, that the trees are never without leaves. The soil for the most part is black, coarse, and soft, and so porous and thirsty, that, however much it rains, the water is drunk up; and if a river comes from the mountains, its waters are absorbed before they reach the sea." Four of the Moluccas are, in fact, more volcanic cones; the more northerly and important of them is still an active volcano, which has been the scene of more eruptions than any other in the archipelago. De Barros also gives an unfavourable character of the people, and says that the islands are "a warren of every evil, and contain nothing good but their clove-trees." The Portuguese had just been engaged in a stubborn contest with the natives, which sufficiently accounts for the dislike with which they were regarded. They held the island during eighty years of almost uninterrupted disorder. The Dutch drove out the Portuguese; but their government was ever more oppressive. The British and Dutch commercial interests then struggled for supremacy, and massacres that would have disgraced savage tribes characterized the intercourse between two civilized nations. To secure

a monopoly of the commodities for which the most extravagant prices were readily paid in Europe, the merchants roamed up the clove and nutmeg-trees from other islands on which they naturally grew, and restricted their cultivation to Amboyna and Banda; and the fabled dragon could not have guarded with more sleepless vigilance the golden apples in the garden of the Hesperides than did these grasping Dutch traders their groves of spice from the intrusion of other nations.

When it was known that the Portuguese navigator, Magalhães, had discovered the Spice Islands, the excitement in Europe was almost as great as that which had been created by the discovery of America. Vessels returned from the Eastern Seas laden with aromatics which diffused a ravishing fragrance and perfumed the neighbourhood of the warehouses which received the precious freight. A passion for spices took possession of Europe, and is one of the most singular of the manias which mankind seem to be periodically afflicted. It was the more remarkable since the inhabitants of the islands on which they grew never used them either as condiments or medicine. In Europe they became instantly and immoderately prized as both. They flavoured every dish, and were consumed in every form. The true elixir of life was believed to have been at length discovered; and the most wonderful properties were attributed to the oil which they were made to yield. The universal demand for these new products enhanced their price three thousand per cent. above their original cost; but there was doubtless quite as much of fashion as of taste in this craving for the new luxury.

The cultivation of spices is now permitted in all the possessions of the Dutch in the Eastern Seas; but from the extreme uncertainty of the crops, it has been found more profitable to grow other descriptions of Oriental produce. The area adapted for the production of nutmegs and cloves has been found to be larger than was formerly supposed. Thus the nutmeg now grows freely in Java; and in 1819 it was introduced at Singapore, where for a time it was largely cultivated; but although it produced abundant crops, and of a quality even superior to those of Banda, the soil had an injurious effect upon the trees, which perished in a few years, exhausted by their profuse bearing. The profits of the spice cultivation in the archipelago are now so small that, if left solely to free labour and private enterprise, it is thought that it would almost entirely cease. It is curious to note the revolutions of taste for these Eastern productions. The passion for the clove has subsided, while the consumption of black pepper in the United Kingdom is now twenty-fold greater than that of cloves. The importation of pepper, which, in 1615, was estimated at 450,000 lbs., had increased in 1853, to 3,200,000 lbs.; while that of nutmegs, which, in 1615 was estimated at 115,000 lbs., was not greater, in 1853, than 200,000 lbs.

(To be concluded.)

For "The Friend."

In addition to the notice taken some time since in "The Friend," of the decease of our late valued friend, Lydia Stokes, it may be truly said that she was not only a valued member and beloved elder of the church militant, but an upright and unflinching testimony-bearer to the truth and obligation of the principles and practices of Friends as a society, endeavouring by both example and precept to encourage others to "come, taste, and see that the Lord is good," and through faithfulness, in dedication to the service of Truth, to participate in the blessed enjoyment connected therewith. While thus encouraging her younger friends, she did not

withhold speaking a word in season where she saw delinquency, and a disposition to slide from the due support of our christian testimonies. With mothers and heads of families she often laboured, in the ability which was given her, to stimulate them to a faithful performance of their important duties, advising them, for their children's sake to "example well and pray for them;" and her counsel and encouragement have left sweet impressions on many minds. She outlived most of her generation in the meeting of which she was a member, but her concern for the welfare and growth of the members of that meeting, as well as for the prosperity of the church generally, appeared to increase, even after she was prevented by debility of body, from assembling with her friends for the purpose of worship. During a protracted sickness, when the natural faculties were failing, when in the company of her friends who visited her, she would often brighten up and enter freely into conversation. On such occasions, when the existing difficulties in the society were alluded to, she would frequently remark, "this will not do, it is not the right way; we must keep near to each other; we must build one another up; we must pray for each other, and each one must build over against his own house; there is no other way; I see it so." Her husband was truly testify of her, there was greenness in old age, and sweetness in the ripened fruit ready for the garner, which was gathered to the heavenly garner in due time, as a "shock of corn cometh in its season." Her decease took place in the eighty-fourth year of her age.

*The people shall dwell alone.*—In days that are past this scripture declaration was often quoted as applicable to our society, "The people shall dwell alone."—It was when Israel was abiding in his tent, separate from the surrounding nations, that the emphatic exclamation was uttered, "How goodly are thy tents, O Jacob, and thy tabernacles, O Israel! as the valleys are they spread forth, as gardens by the river side, and as cedar trees beside the waters." And of this favoured people it was declared on the same occasion, "the people shall dwell alone, and shall not be reckoned among the nations."—*Mary Hagger, F. L., vol. 7th, pp. 454-5.*

## THE FRIEND.

SEVENTH MONTH 12, 1862.

Some of our subscribers at a distance, to whom opportunities for obtaining information relative to the proceedings of the different Yearly meetings of Friends, are not frequent or satisfactory, being desirous to receive through "The Friend" some notice of such meetings as they occur, we shall endeavour to furnish such extracts from their printed minutes as we may deem of general interest.

EXTRACTS FROM THE PRINTED MINUTES OF NEW YORK YEARLY MEETING OF FRIENDS, 1862.

*At the Yearly Meeting of Friends held in New York, and opened on Sixth-day, the 30th of Fifth month, 1862:*

By the reports from the Quarterly Meetings it appears that the following Friends have been appointed Representatives to attend this Meeting, who were present with the exception of eight—for the absence of two of whom, reasons were assigned:—

Epistles from our dear brethren of London, Dublin, New England, Baltimore, Ohio, Indiana, and

Western Yearly Meetings have been received and read at this time, affording the comforting evidence that we still are one people, engaged in the same precious cause—even the promotion of the Redeemer's cause on earth, and the bringing of souls to Christ.

In response to these tokens of love, the following Friends were appointed, who were instructed to prepare essays and offer them to a future sitting:

In consequence, as is believed, of the distracted state of the southern part of our country, no epistle has been received from our brethren of North Carolina. A memorial, however, of the Meeting for Sufferings of that section, addressed to the convention of North Carolina now or recently in session, in relation to the sufferings to which our brethren are subjected, was read—bringing them very feelingly to our remembrance; and the Committee were instructed, if way opens for it, to prepare an epistle to our brethren of that Meeting, assuring them of our sympathy with them in their trials.

The representatives were requested to confer together in regard to the appointment of Clerks, and report to next sitting the names of the Friends they may agree upon for this service the present year.

Adjourned to 4 o'clock this afternoon.

*Afternoon.* Friends again met.—James Jordan on behalf of the representatives reported, that having taken the subject into consideration, they were united in proposing that William Wood be appointed clerk, and James Congdon, Assistant Clerk: these names having been separately considered, were united with, and the appointments made accordingly.

[A committee was] appointed to examine the accounts of the treasurer, and report to a future sitting the sum deemed necessary for defraying the expenses of the ensuing year.

The Minutes of the proceedings of the representative Meeting for the past year were read, giving satisfactory evidence of the attention of that meeting in the discharge of the duties devolving upon it.

The time for which the members of this Meeting were appointed having expired, the following Friends were appointed to take the subject into consideration, and propose to a future sitting the names of thirty Friends to attend to this service on behalf of this Meeting for the next three years:

Adjourned to 10 o'clock to-morrow morning.

*Seventh-day morning, 31st of the Month.*—Friends assembled.

[A] report was received from the Trustees of the Murray Fund, which was satisfactory; and the trustees were encouraged to persevere in the good work in which they are engaged.

Farmington Quarterly Meeting proposed, that in Tenth month that Meeting be held in future at Wheatland instead of at Hartland:

And Scipio Quarterly Meeting proposed, that hereafter that Meeting be held on the last Fourth-day in Third, Sixth, Ninth, and Twelfth months—At North Street in Third month, Union Springs in Sixth month, Hector in Ninth month, and Scipio in Twelfth month: the Meeting of Ministers and Elders the day previous, at 2 o'clock p. m., at Hector in Ninth month, and at North Street at other times.

These propositions were united with, and those meetings were left at liberty to make said changes.

There being some uneasiness felt in regard to the present times of holding the meetings for worship in this city, it was concluded that on First-

day there be a meeting at 10½ o'clock A. M., another at 3½ p. m., and a third at 7½ in the evening; and that the meeting on Fourth-day following be at 10½ o'clock—and that they be continued at these times in future, during the session of the Yearly Meeting.

The situation of our brethren in North Carolina was adverted to, in connection with the action of this meeting last year in raising funds for their relief, as detailed in the minutes of our proceedings at that time. The meeting was informed that the sum raised may be materially increased by an early remittance of it, the current rate of exchange being favourable thereto. Upon consideration it was concluded to refer the subject to the Representative Meeting, leaving it at liberty to act in the case as circumstances in its judgment may dictate; and the treasurer was instructed to pay said fund to the parties authorized to receive it, whenever the Representative Meeting may request him to do it.

Adjourned to 4 o'clock this afternoon.

*Afternoon.* the meeting convened.—The committee having charge of the Boarding School at Union Springs made the following report, affording satisfactory evidence of the attention bestowed on that Institution by the committee, and they were encouraged to renewed effort in sustaining it in accordance with the views of this meeting in the establishment of it.

"The committee having charge of the Yearly Meeting School at Union Springs, submit the following report:

"The school has continued since the report of last year, a change in the time of vacations having been made by means of a short autumn term of 13 weeks; the present arrangement consisting of 18 winter term of 22 weeks, and a summer term of 18 weeks, with spring and autumn vacations. The average number of pupils in attendance for the autumn and winter terms has been 85—about two-thirds of which were boarders, and of these three-fourths were the children of Friends.

"The receipts and expenses of the autumn term of 13 weeks were as follows:

Loss on autumn term, \$90 00

"After the close of the autumn term a new arrangement was made, by which the superintendents, Egbert and Martha Carey, were employed on a salary, with the following results:—

"Surplus for whole year, \$68 91

"The debt of \$720 reported last year has been reduced to \$138, chiefly by means of receipts from former sub-cribers and by donations, which amount to \$524. There remain unpaid on old subscriptions, from responsible persons, about \$600, besides \$180 that are regarded as unreliable or worthless. Some deficiencies in household furniture, &c., have been made up by other voluntary contributions for this purpose, amounting to \$57.

"The interest on the \$4,000 fund, belonging to the Yearly Meeting, and the \$100 received from the "Permanent Fund," have been expended in accordance with the purposes of those funds.

"The instruction has been very efficient, and the progress of the pupils has been satisfactory to the committee; and six of the pupils have graduated, after having pursued the entire prescribed course of study, and received the diploma of the school.

"The regulations reported last year for the moral and religious improvement of the pupils, consisting of two daily readings of the scriptures, scripture lessons recited the middle of the week by all the scholars, and First-day Bible classes, have been continued; and the good order which

has generally prevailed has been a source of much satisfaction to the committee.

"On behalf of the committee,  
"J. J. THOMAS, *Secretary.*"  
The treasurer of the Educational Fund made [a] report.

Reports from the committees having charge of the boarding schools in Adrian and West Lake Quarterly meetings were offered for the information of the meeting. The care of our Friends in those meetings in conducting these schools under the difficulties attending them, was very satisfactory—and the committees were urged to renewed efforts, and not to grow weary in well-doing. It is also hoped that the desire expressed by the committee, that those who are blessed with abundance, will remember these institutions in the disposition of their estates, and add to the fund commenced by our late brother David Sands.

The trustees of the Nine Partners Boarding School property made [a] report.

The committee appointed at a previous sitting to consider of and propose the names of thirty Friends to constitute the Representative Meeting, having attended to the service, offered the following list:

The Quarterly Meetings of Ferrisburg, Farmington, Butternuts, Saratoga, Scipio, Le Ray, Pelham, Adrian, Yonge Street, and West Lake were requested each to appoint a member said meeting to complete its organization, and forward information of said appointments to the clerk of the meeting.

Adjourned to 10 o'clock Second-day morning.

*Second-day morning, 2nd of Sixth month.*  
Friends again met, and entered into an examination of the state of society as exhibited in the Answers to the Queries, and having read the 1st and 2nd Queries with the answers thereto, adjourned to 4 o'clock this afternoon: about which time the meeting again convened, and continued the examination, and having proceeded as far as the seventh Query and Answer inclusive, adjourned to 11 o'clock to-morrow morning.

*Third-day morning, 3rd of Sixth month.*  
Friends assembled and resumed the consideration of the state of society, by reading the remaining Queries with the Answers thereto—and the following summary thereof was adopted:

"1. It appears by the reports, that Friends generally are careful to attend all our meetings for religious worship and discipline, while some are neglectful of this great duty. The hour is represented as being mostly observed; and all the accounts but one, acknowledge more or less unbecoming behaviour: several of them say that care has been taken in the deficiencies mentioned.

"2. All the reports but five are marked with some deficiency in respect to the preservation of love one towards another. When differences have arisen, it is said care has been taken to end them; but one account says 'without effect.' Tale-bearing and detraction appear to be generally avoided and discouraged, yet several of the accounts state, not so fully as is desirable; and one says there is 'quite a deficiency with some.'

"3. It appears that most Friends endeavour to train up their children, and those of other Friends under their care, in the principles of the christian religion as professed by us, and in the plainness and simplicity of dress and language which it enjoins; also, to be good examples in these respects themselves. We believe they endeavour to guard their children, and others under their care, against corrupt conversation and reading pernicious books; yet nearly all of the reports acknowledge there is much need with some of greater attention to the important particulars of this Query.

"4. It appears by the reports that most Friends are diligent in reading the Holy Scriptures in their families collectively; yet there is on the part of others a neglect of this duty.

"5. Five instances excepted, Friends appear to avoid the use of distilled spirituous liquors, except for purposes strictly medicinal, and are clear of frequenting taverns. Five of the reports say there are some instances of attending places of diversion. Care is said to have been taken in most of the cases of deficiency.

"6. The reports say that, with one exception, it is believed the circumstances of the poor, and of those who appeared likely to require assistance, have been duly inspected, and relief afforded when necessary; also, that they have been advised and assisted to suitable employments; and their children, and all others under our care are properly educated for the ordinary duties of life.

"7. Several instances of complying with military requisitions, by paying fines or enlisting in service, are reported, in most of which care is said to have been extended.

"8. Eight of the reports are marked with some deficiency in regard to punctuality in fulfilling contracts, or in conducting business in accordance with our religious profession; in most of which care has been extended.

"9. In dealing with offenders, most of the reports admit that it has not been done so seasonably as would have been best; and in administering the care enjoined by this Query, two of the reports are qualified by the phrase of "good measure," or "good degree," in performing it."

The deficiencies existing amongst us, as exhibited by these answers, have been cause of concern to the minds of exercised brethren, and counsel pertinent to the occasion has been imparted. We were feelingly exhorted to faithfulness in the discharge of our duty of publicly meeting for the worship of our Father in heaven; being admonished, that if that love of God which characterizes the christian, dwell fully in our hearts, we would not forsake the assembling of ourselves together for the performance of this interesting service.

Very closely allied to the love of God is love to the brethren; for, if we love not our brother whom we have seen, how can we love God whom we have not seen? We were admonished that the Lord will not accept an offering from us if we are at variance with a brother; that if we come to the altar, and there remember that our brother hath sought against us, we must first go, be reconciled to our brother, and then come and offer our gift.

We were counselled to be diligent in reading the Holy Scriptures—to gather our children around us, and teach them diligently the things pertaining to salvation—to talk of them when sitting in the house, when walking by the way, when lying down, and when rising up.

We were reminded, that if we feel too poor to teach these things, if we feel too great weakness for the discharge of this duty, as we seek for ability with prayerful hearts, unto Him who commanded to feed his lambs, we may rest assured his blessing will rest upon our efforts.

In regard to schools, the following information was received:

There are within our limits—

1361 children of suitable age to attend school.

118 " attend schools under care of meetings.

78 " attend schools taught by members.

932 " attend District schools.

77 " attend family schools.

139 children attend no school, but are mostly receiving instruction at home.

1 blind child and one partially blind are reported.

4 schools under care of meetings.

22 family schools.

42 First-day schools.

\$72.21 have been collected and paid to the Treasurer of the Educational Fund.

No report received from Le Ray.

The evidence thus afforded of the interest of Friends in this very important subject, more especially as manifested in the increased number of First-day schools established and sustained in the limits of the subordinate meetings, was of a cheering nature; and our brethren, both elder and younger, are encouraged to continue their labours in so good a cause.

In making returns of the number of children of suitable age to attend school, it is requested that all between 5 and 16 years of age be included.

It was concluded to continue the collection by voluntary subscription of the Educational Fund, and Friends are encouraged to contribute of their substance for this laudable purpose. The Quarterly Meetings of Adrian and West Lake are left at liberty to appropriate the funds collected there to educational purposes within their own limits, and report the amount collected to this meeting.

In the re-organization of the Representative Meeting, it appears that Stanford Quarterly Meeting is left without a representative therein. It was therefore concluded to add one to the number already appointed. The members of that Quarterly Meeting were requested to propose the name of a Friend for that purpose at the opening of the afternoon sitting.

Adjourned to 4 o'clock this afternoon. About which time Friends again met. A report of the proceedings of the "Tract Association for the past year" was presented and read. The propriety of adopting it and recognizing its labours was referred for consideration to next Yearly Meeting.

The committee appointed last year to visit Cornwall Quarterly Meeting, made the following report, which was satisfactory, and the committee released:

"The committee appointed to visit Cornwall Quarterly Meeting, report—

"That we have devoted considerable time to Cornwall Quarterly Meeting, and some of its subordinate meetings; and have at various times and places mingled with Friends there.

"The committee have always been received with kind attention by the members of that meeting, and every facility has been offered to enable us to fulfil the objects of our appointment.

"Whilst the committee may report that we have faithfully performed the duties required of us, and believe our labours are brought to a close, we have greatly desired on behalf of Friends everywhere, that we may be enabled to dwell in quietness and christian concord; so that when diversity of views may prevail, and our minds may be subjected to trial, or our sympathies excited on behalf of others, we may still be preserved in that charity, or brotherly love, which 'suffereth long and is kind.'

"JAMES CONDOX,

"On behalf of the Committee."

Adjourned to 3 o'clock to-morrow afternoon.

*Fourth-day afternoon, the meeting convened.*

A memorial prepared by Pickering Monthly Meeting, approved by Yonge Street Quarterly Meeting, and examined by the Representative

Meeting, respecting our late sister Bridget Haight was read, and being satisfactory, it was directed to be recorded.

There does not appear to have been any suffering in the support of our testimony against war; no reports however have been received from Furberburgh, Butterouts, Saratoga, Adrian, Yonge Street, or West Lake.

All of the Quarterly Meetings report their respective quotas of the fund directed by last Yearly Meeting to be raised for its use, have been forwarded to the treasury; and all but Nine Partners, Stanford, and Farmington, have also paid their portions of the fund to be raised for the relief of our friends of North Carolina: the three meetings named have paid a part of their quotas, and are requested to pay the balance to the treasurer.

The committee to examine the accounts of the treasurer made the following report, which was satisfactory, and the Quarterly Meetings are requested to raise their respective portions of seventeen hundred dollars, and pay the same to William Cromwell, treasurer.

The Representative Meeting having requested the Quarterly Meetings to furnish it with the number of members within their respective limits, and also of the number of copies of the London Epistle needed by them; returns have now been received from all the meetings, except Stanford, Farmington, Scipio, Pelham, and Adrian: these meetings are requested to forward the information asked for to the Representative Meeting.

Purchase Quarterly Meeting reported the appointment of Jesse H. Underhill, as correspondent for Shannappa Monthly Meeting, in place of Charles R. Underhill, deceased. Address, Shannappa, Westchester County, N. Y.

Also, William B. Collins, for Amawalk Monthly Meeting, in place of James Brown, deceased. Address, Peek-kill, Westchester County, N. Y.

Scipio Quarterly Meeting reported the appointment of Robert B. Howland as correspondent for Scipio Monthly Meeting, in place of Humphrey Howland, who requests to be released. Address, Union Springs, Cayuga County, N. Y.

West Lake Quarterly Meeting reported the appointment of Joseph Witte, correspondent of Leeds Monthly Meeting, in place of Philip Wing, deceased. Address, Farmerville, C. W.

All of which were approved.

Essays of epistles addressed to our brethren of London, Dublin, New England, Baltimore, North Carolina, Ohio, Indiana, and Western Yearly Meetings were presented and read, and with some slight alterations, approved.

The clerks were directed to transcribe them, sign them on behalf of the meeting, and forward them to the meetings to which they are respectively addressed.

And now, having finished the business for the transaction of which we have been permitted to assemble, we desire reverently to acknowledge that it has been through Holy help that we have been enabled harmoniously to work together for the promotion of the cause we have espoused, and in parting from each other, we would ascribe all praise unto the Great Head of the Church who has condescended to be with us.

WILLIAM WOOD, Clerk.

#### SUMMARY OF EVENTS.

FOREIGN.—News from England to the 29th ult. The weather has been unfavourable for the crops both in France and England. In Ireland there were serious apprehensions of a scarcity of food, in consequence of

the continued wet weather. Bread stuffs were advancing in price. Flour was 6d. a lb. higher. The Liverpool cotton market was excited. Sales of the week, 159,000 bales, including 70,000 to speculators; prices had advanced 1d. a lb. Orleans raw, was quoted at 75 cents, and the other grades at 75 to 75 1/2 cents. 75,000 were American. Prices are still advancing for goods and yarns at Manchester, but the sales are small. The bullion in the Bank of England had increased £241,000, Consols, 91 1/2. A meeting had been held in London, at the African slave trade, presided over by Lord Brougham.

Great activity prevails in France in sending reinforcements to Mexico. It is said that 12,000 troops would be sent immediately. Admiral Gravere is to take command of a strong concentration of French vessels in the Gulf of Mexico. The Federal cause in that portion is justified by what may arise out of the war in the United States and the affairs of Mexico. It is asserted that henceforth there is no question of establishing a monarchy in Mexico, or of supporting the candidature of Almonte in any other capacity for the presidency, but the expedition is simply for protecting the interests of Frenchmen.

Rumors had been prevalent of insurrection in St. Petersburg, but at the latest dates all was quiet. A large portion of the city had been destroyed by fire. Loss \$1,000,000.

UNITED STATES.—The War.—The prospect of an early termination of the war, by the suppression of the rebellion in the South, is regarded as much less favourable since the repulse of the Federal army before Richmond. The conscription has again filled the ranks of the rebel army, and enabled it to present so formidable a front in various quarters. Statements, apparently reliable, give the number of rebel troops in Virginia alone, at about 250,000. This altered aspect of affairs has induced the Governors of the loyal States to unite in a memorial to the President of the United States, respectfully requesting him to call upon the several States for such number of men as may be required to fill up all the military organizations now in the field, and add to the armies heretofore organized, such additional number of men as may be needed to crush the rebellion. In answer to this memorial, the President has issued a proclamation, calling into active service an additional force of three hundred thousand men, to be enrolled without delay.

Virginia.—The series of battles between the hostile armies near Richmond, began on the 25th ult., and continued until the first inst., a period of seven days, continued, during which, portions of the two armies were engaged. The change of front forced upon Gen. McClellan by the great superiority of numbers on the part of the rebel commanders, is said to have been effected in a masterly manner, and with no little loss as could have been expected under the circumstances. Since the movement has been consummated, and the new line established on James River, below Richmond, the U. S. army has been twice attacked by the Confederate forces, viz., on the 21st ult. and 1st inst., and each time the rebels were driven off with great slaughter. On the first of these days, a division of 14,000 southern troops, which was much exposed, lost, according to the Richmond Examiner, no less than 8,000 of its number. The total losses of the rebel army in killed, wounded, and captured, are estimated at from 30,000 to 40,000. Gen. McClellan's army of 100,000, is said to have been reduced by these battles, to about 75,000 effective men. The army is so disposed that the Federal gun boats, seven or eight in number, can afford assistance. Large reinforcements will, it is said, be required before another attempt is made upon the rebel capital.

The capture of Gen. McClellan's army, and the capture of Gen. McClellan himself, was wonderful and taking prisoner, and twenty-five pieces of cannon were captured by the rebels. The fighting on both sides was of the most desperate character. As part of the rebel forces were cut to pieces, other fresh troops were immediately marched forward to fill their places. The rebel commanders appearing wholly to disregard the lives of their men. On the 5th inst., a partial engagement took place, in which the rebels were defeated, with the loss of three small batteries, and 1000 prisoners. The line now occupied by Gen. McClellan, is but nine miles in extent. Some reinforcements had been sent on the morning of the 7th inst. The head quarters of the U. S. Army are now 22 miles from Richmond. Mississippi.—A despatch from New Madrid, of the

5th inst., announces the capture of Vicksburg. The news is probably correct. The city, which was vigorously defended by a rebel force of 16,000 men, had for some time previously been subjected to bombardment from the gun boats on an engagement near Boonville, negroes had been employed by the Federal commanders in cutting a canal across the point of land opposite Vicksburg. It was supposed that when the canal was opened the river would cut a wide channel during high water, and forever leave Vicksburg an inland town, from the gun boats an engagement near Boonville, between a detachment of his forces and some of the rebels, in which the latter were defeated. The rebel gun boats Van Dorn, Polk and Livingston, have been destroyed in Yazoo river by the rebels, to prevent their capture by an expedition from the U. S. fleet, which ascended the river to the capture of the city.

Alabama.—The fortifications around Mobile are understood to be completed. There is a large rebel force there, and the inhabitants are confident in the belief that the city cannot be taken. Gen. Bragg is in command at Tupelo, with 45,000 men.

Arkansas.—Advices from this State, are to the effect that General Hindman, who was erroneously reported to be captured at St. Charles, was in the immediate vicinity with an army of 5,000 men. The Federal forces had been compelled to abandon the fort, after spilling the blood of 1000 men. The situation of our army is said to be critical, he being unable to obtain supplies, and a large rebel force having cut off his communication with Missouri.

South Carolina and Georgia.—It appears that after Gen. Benham's defeat at James Island, General Hunter ordered all the troops back to Hilton Head. This order renders all the ground previously gained in the advance upon Charleston. It is understood that no further attempts will be made to capture either that city or Savannah for several months.

New York.—The New York Evening Post says that the Maine 11th Regiment, which passed through Broadway, eight months since, 850 men strong, nearly all young and sturdy lumbermen, has suffered so much, that when they went into the first of the battles near Richmond, they numbered but for duty, only 180 men. The accounts of the late sanguinary struggles show that various other regiments have been nearly annihilated.

Mormon Emigration.—The emigration to Utah the present season is very large. As many as six thousand wagons set out recently to cross the plains, a journey of about three weeks. The emigrants are chiefly from England and Scotland.

New York.—Mortality last week, 339. Philadelphia.—Mortality last week, 254. The Markets, &c.—The following were the quotations on the 7th inst. New York.—Uplands cotton, 40 cts. Chicago Spring wheat, \$1.00 a \$1.05; winter red wheat, \$1.20 a \$1.25; amber Michigan, \$1.25 a \$1.26; western mixed corn, 52 cts. a 53 cts. American gold 104 1/10 premium. California gold bars, 111 cent per ounce. Amount of specie in the New York Banks \$21,790,515. Exports of merchandise last week \$2,264,712. Imports, \$2,324,594. The weeks export of specie, amounted to \$2,641,460. Philadelphia.—Philadelphia red wheat, prime, \$1.24 a \$1.26; white \$1.20 a \$1.27; rye, 68c; yellow corn, 54 cts. a 55 cts. 40 cts. 40 cts. 5th inst. clover seed, \$5.00 a \$5.12. Beef cattle sold on the 7th inst. at from 55 cts to 9 cts. some inferior sold at 7 cts. per pound.

#### RECEIPTS.

Received from Moses Child, N. Y., per M. M. Child Del., \$8.00, vols. 32, 33, 34 and 35.

#### FRIENDS' ASYLUM FOR THE INSANE.

SEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent.—JOSEPH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

#### NOTICE.

By an accidental error, our last number was dated Fifth month 5th, instead of Seventh month 5th.

W. M. H. PILE, PRINTER.

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SEVENTH MONTH 19, 1862.

NO. 46.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-half cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

## Scenery on the Organ Mountains.

It is a comfortable day's ride from St. Alexio to onstantia, though the usual manner of procedure to start at mid-day from Rio in the steamer, arrive at Piedade at three o'clock, where mules and guides are awaiting those who have been put en route to announce by letter to the "Jolly team" their intention of spending a few days amid the Serra dos Orgões. A few hours across the lowlands, bring us through the town of Majé to Frechal, where the weary and the lazy often spend a night in a crowded inn. But for those who love a dashing ride up the mountains, on a mule, in some places paved as the old Roman highways,—those who wish to feel an evening atmosphere, which in coolness, reminds one of the temperate zone,—the Barriera will be the resting-place. Here is the toll-gate of this fine mountain path, which must have been built at an immense cost, as several miles are paved like the streets of a city. We zigzag up the steep sides of the Serρας, looking down upon the tops of majestic forest-trees, whose appearance is as curious as its structure and beautiful.

In the months of April and May, (October and November in Brazil,) only the autumnal tints of our gorgeous North American woods can compare with the variety of the forest of the Serra dos Orgões. In the various species of the Laurus are blooming, and the atmosphere is loaded with the rich perfume of their tiny snow white blossoms. The assias then put forth their millions of golden ovaries, while at the same time, huge trees, whose native names are more unintelligible, though less elastic, than their botanic terms of *Laslandra*, *Antonia*, and others of the *Melastoma* tribe, are in full bloom, and joining rich purple to the richest yellow, present, together with gorgeously-othed shrubs, "flowers of more mingled hue than his purple car can show." From time to time the silk-cotton tree, (the *Chorisia Speciosa*), roots up its lofty hemispherical top, covered with thousands of beautiful large rose-coloured blossoms, which gratefully contrast with the masses of vivid green, purple and yellow, that clothe the surrounding trees. Floral treasures are heaped upon every side. Wild vines, twisted into most fantastic forms, or hanging in graceful festoons; passion-flowers, trumpet-flowers and fuchsias in their native glory—tree-ferns, whose elegance of form is only surpassed by the tall, gently-curved

palmetto, which is the very embodiment of the line of beauty. Orchids, whose flowers are of as soft a tint as the blossom of the peach tree, or as brilliant as red spikes of fire; curious and eccentric epiphytes dripping naked rocks; or the decaying branches of old forest-monarchs; all form a scene enrapturing to the naturalist, and bewildering to the uninitiated, who still appreciate the beauty and the splendor that is scattered on every side by the Hand Divine. The overpowering sensation, which one experiences when entering an extensive conservatory filled with the choicest plants, exotics of the rarest description, and odor-laden flowers, is that (multiplied a thousand fold) which filled my mind, as I gazed for the first time upon the landscape, with its tiers of mountains robed in such drapery as that described above; and yet, there was such a feeling of liberty incompatible with the sensation, expressed by the word "overpowering," that it is impossible to define it. From a commanding point, as I once beheld this magnificent forest in bloom, the hills and undulating plains, stretching far away into the horizon, seemed to be enveloped in a fairy-mist of purple and gold.

The Barriera is situated in a spot of great wildness and sublimity; for the Organ peaks, that rise thousands of feet above, seem like the aiguilles, which start fantastically from the glaciers of Mont Blanc; and the rushing, leaping, thundering cascades are comparable to the five wild mountain-torrents, "I freely glad," that pour into the vale of Chauouony. We were there during a tropic storm, and the foaming, roaring rivers, which hurried down with fearful leap, from the very region of dread lightning and clouds, madly dashed against the huge masses of granite, as if they would have hurled them from their mighty fastenings, and tore their way into the deep valley beneath, with sounds that reverberated among the giant peaks above, giving me a new commentary on the sublime description in the Apocalypse: "And I heard a voice from heaven, as the voice of many waters and as the voice of a great thunder."

From the Barriera, we ascend by zigzags, to the uplands, where is situated the former fazenda of — March. Before reaching it, we climb along the very sides of one of the most precipitous of the Organ pipes, and enjoy a view of commanding extent, of mountain, plain, bay, and ocean,—embracing, it is said, a panorama of more than two hundred miles in circumference, in the midst of which, though distant, the capital of the Empire is seen gleaming amid its verdant and lofty environs. The point for beholding this landscape, is appropriately called *Bo Vista*, "beautiful view."

So enraptured was the Rev. Charles N. Stuart with the grandeur of this scene, that he doubts if, in its combination of mountain, valley, and water, it has a rival; and adds, that in his wide experience in various continents, he only remembers one other prospect that approximates it, viz:—the pass through the mountains of Granada, followed by the first view of the "Vega, with the city, the walls and the towers of the Alhambra, and the snow covered heights of the Nevada, above all, lighted by the glowing hues of the setting sun."

Here nearly all the European fruits and vegetables thrive, and as at Madeira and Tenerife, the apple and the orange, the pear and banana, the vine and the coffee plant, may be seen growing side by side.

The scenery becomes more tame as we leave *Boa Vista*, and we seem to be far removed from the climate of the plains; the palms, ferns, eacis, tillandsias, etc., tell us that we are not beyond the limits of Capricorn. Occasionally, howling monkeys hold a noisy caucus over your head, or a flock of bright parrots glide swiftly over the tall and gracefully bending bamboos, which are a distinctive feature in the landscape. This giant of the grass-tribe has frequently been found in these mountains, from eighty to one hundred feet in height, and eighteen inches in diameter. They do not, however, grow perpendicularly, nor often singly, but in vast groups shoot up fifty and sixty feet, and then curve gently downwards, forming most cool and beautiful domes. Few persons have ascended these mountains; Dr. Gardner made, probably, the most scientific exploration; and upon these heights, Heath has often pursued the clumsy tapir or the lithe jaguar.

These mountains have been estimated to possess an altitude, ranging from five thousand to eight thousand feet.—*Sketches from Brazil.*

*An exhortation to avoid controversy and argument, and to cultivate inward stillness.*—If my experience can avail anything for thy help and encouragement, I would say, fret not thyself at the present strife of words! It is nothing new. Controversies and strong voices have existed ever since the fall of man, disobedience having marred the divine image. Enduring mercy, in tender compassion, made a new covenant, in order to redeem mankind, according to the scriptures, which testify that the Son of God was manifested in the flesh,—a body prepared of the Father; this he laid down as a sacrifice for the sins of the world; suffering, the Just for the unjust, that he might bring us to God. And in his spiritual appearance, he is made known to the simple, obedient believer, who will not follow the voice of the stranger; for the voice of the stranger he knows not.

As sheep then of the Good Shepherd's fold, may we, my beloved young friend, press into this safe enclosure, and quietly leave all controversy to those whose food it is. Cultivate inward stillness, that thou mayest be favoured to know the secret teaching of the Holy Spirit. Meddle not with argument. What comes to thy ear, unsought, bear patiently; guard against excitement; wrestle in prayer, both for thyself and others, for strength, if in the right, still in the right to stay; if not, that heavenly wisdom may teach the better way.—*Mary Copper. F. L., vol. 12th, pp. 128, 129.*

*Fashionable Attire.*—It is a matter of surprise, that awakened persons of all denominations, do not see the necessity of bearing a faithful testimony against the great corruption of this age, in respect to expensive, gaudy, and fashionable attire. Where is our excuse or plea for it, or what sanction therefore can we obtain from the revealed will of our Lawgiver and King!

From the London Quarterly.

### Eastern Archipelago.

(Concluded from page 357.)

The use which Holland has made of these great possessions is indicated in her past history. In none of the islands, Java excepted, is any native machinery interposed between the European Government and the native population. The difficulties of administration are proportionably great, and much vigilance is required to repress native insubordination, and to prevent outbreaks. Although the commercial system has been somewhat relaxed, jealousy and suspicion still characterize the colonial policy of Holland. Thus she has endeavoured to bind the native princes of the archipelago never to cede any portion of their territories to another nation, and not to enter into any negotiations without the consent of the Government. She was strongly opposed to the recognition of Sarawak, and even protested against the cession of Labuan.

The nation which, next to the Dutch, has the largest possessions in the Eastern Archipelago is Spain; and the principles of her colonial government, although in some points similar to those of the Dutch, differ from them in one important particular. Spain has in all her conquests kept prominently before her the propagation of christianity in the form embodied in her church. The Philippines, therefore, present a spectacle which contrasts strongly with the Dutch dependencies in the East. Spain appears in the archipelago in her religious earnestness, her ecclesiastical assumption, and her gorgeous establishments. The natives of the Philippines have generally been converted and received into the Catholic Church. It is observed by Malte Brun, in his sketch of the inhabitants of the Philippines, that they are the only people in the Eastern Archipelago who have improved in civilization from an intercourse with Europe. A commercial monopoly formed no part of the Spanish policy in that quarter of the world. The islands of which she took possession produced neither spices nor gold; moderate taxation left industry free; no check was imposed on European colonization; liberal grants were made of unappropriated land; and, while deriving a considerable revenue from the Philippines, Spain has neither degraded nor oppressed them, for slavery has not been introduced or sanctioned in that part of her colonial empire. The Philippine Archipelago extends for 300 leagues from north to south, and 160 leagues from east to west. A range of irregularly-shaped mountains runs through the whole, but the bounties which nature has showered on these islands have often been neutralized by the terrible forces hidden under their beautiful exterior. They are often shaken by earthquakes, and volcanic explosions are so frequent as to be regarded almost as common occurrences. In no other part of the world are storms so terrific as those during the change of the monsoon. In his 'Geographical History of the Philippines,' M. Mallet remarks that, of all the colonies founded by Europeans these regions are perhaps the least known and the most worthy of being known. The number of the islands which constitute the archipelago, their extent and variety, their teeming population, their climate and wonderful fertility are all, (he says,) deserving of the highest admiration. M. Mallet, however, entertains a somewhat extravagant expectation of the future of the Philippines when he thinks that they may become the dominant power of the Eastern world. The Philippines will doubtless increase in value and importance, but they can scarcely aspire to so brilliant a position.

It would be unpracticable here to enter upon so wide a field as the ethnology of the Eastern Archi-

pelago. The aboriginal races are various, and their study is replete with interest. There is, however, one race in the Philippines which presents such remarkable peculiarities that we venture briefly to describe it, as it has been represented to us, although it is likely enough that the description would require modification on further acquaintance. In the mountainous regions of Mindanao, we are told, there exist human beings in so low a state of barbarism that they seem to bear a near resemblance to the Bushmen of Southern Africa. They are well formed, nearly black, with woolly hair, rarely exceed four feet six inches in height, live chiefly on roots and fruit, and occasionally on game; they wear no clothes and build no houses, but sleep among the branches of trees. They are without any form of government or religion; their voices resemble the cries of animals, and their language the chattering of apes or the chirping of birds; their weapons are a bamboo lance, and bows and poisoned arrows. The discovery and concoction of poisons seem to exclusively employ the little intellect which these savages possess. The least prick from one of their arrows is mortal, and produces an inextinguishable thirst, and the man or animal dies the moment he has gratified it. These Negroites ascend trees like monkeys, seizing the trunk with both hands and applying the soles of the feet, and their flight is as swift as that of the deer. Although these people seem scarcely human, they are not incapable of being civilized. One of the race, a boy who had been offered for sale as any wild animal might have been, was afterwards seen waiting at the table of the Governor of Tamboanga, and appeared sprightly and intelligent, watching every sign and mandate of his master. The people are said to bear some resemblance to the wild tribes of Madagascar.

This great region may be hereafter one of the most important that is occupied by the dispersed and diversified human family, and no long period may elapse before islands upon which Providence has showered some of its choicest blessings will exhibit a far higher social and political development than they at present seem to promise: Europe and America may hereafter even find rivals in countries which now occupy scarcely a moment of their thoughts; bays shaded by groves of palms may display forests of masts; and marbles hidden in the recesses of virgin woods and unexplored mountains may be wrought for the erection and adornment of temples and cities surpassing as much in their splendor any that have hitherto been erected in the archipelago as they will excel them in the religion to which they may be dedicated, and in the civilisation which they will represent.

*Difference in Results from Diamonds and Coffee.*—It is instructive to look at the widely different results of the mineral and vegetable riches of Brazil. After Mexico and Peru, (before the discovery of Australian and Californian treasure,) this empire furnished the largest quantum of hard currency to the commercial world. Here the diamond, the ruby, the topaz, and the rainbow-tinted opal, sparkle in their native splendour, and, yet, so much greater are the riches of its agricultural productions, that the annual sum received for the single article of coffee surpasses the results of eighty years' yield of the diamond mines. From 1740 to 1822, a period which was the most prosperous in diamond-mining, the number of karats obtained were two hundred and thirty two thousand, worth not quite three and a half million pounds sterling. The exports of coffee from Rio alone during the year 1851, amounted to £4,756,794!—*Sketches in Brazil.*

### The Street of Everlasting Prosperity.

Let us walk down "the Street of Everlasting Prosperity," the Regent Street of the north suburb of Tien-tsin. At its entrance is a crowd of Chinamen, which, constantly renewed from dawn to sunset, stand gazing through a gateway at the headquarters horses picketed in a large courtyard. Forcing our way through these unsavoury Celestials, we find ourselves in a small square, occupied by the "cel-pie" and "baked potato" men of the place. Your working man dines in the street, and this square is a favourite *à fresco restaurant*. Li, on our right, deals in meat pie. He has a small charcoal fire below his oven, and in a trice his *pié* is compounded and cooked before the public. Ho, by his side, supplies vegetable diet, turnips, onions, pumpkins, yucca, cut into small slices and served in the water wherein they are boiled. Here is a man with sweetstuff, pastry, and "tuck." There, another with fruit—grapes, peaches, lotus fruit, water-melons, apples, and pears. All tastes are supplied. But even in dining the ineradicable love of the Chinamen for gambling is evinced. Every one of these dealers has a box like a dice box, in which twenty small sticks are placed. Two of these sticks are prizes, the remainder blanks. Each portion of food is supposed to be worth ten cash, and on staking one cash every comer may try his luck. From morning to night is the rattle of these sticks to be heard in the square, as the dealers invite their customers.

From morning to night may the Chinaman be seen yielding to the invitation. Here is an old fellow, a "bargee" on the river. He has but two cash, which he stakes, and loses one after the other. His face is rueful, and his belly empty, so we give him ten cash, but, instead of buying his food, he recommences to gamble for it. One cashier after another is drawn from him, and when he loses his last he walks away dinnerness. The fishmonger is perambulating about. His fish, in a shallow round wooden bowl, lie gapping in three or four inches of water. Here are eels, brown and silver, large fat muddy carp, soles, and a fish speckled like a trout and of much the same flavour. At an open cook-shop, Chinese *artistes* are preparing the dinner of the day. The favourite dish is a stew composed of chopped pork, onions, seaweed, shrimps, and eggs. We taste, but its flavour is by no means agreeable to the western palate. And now, in a quiet secluded nook, is a good-humoured laughing crowd, enjoying the feats of a juggler. A wonderful man! He takes two pieces of sharp wire, a couple of feet long, inserts them in his nostril, and passes them thence down his throat. There is no deception, for he opens his mouth wide, and we see the wires down his gullet. Then he takes two leaden bullets, one the size of an ordinary musket ball, the other weighing twelve ounces. He swallows the little one first. With many contortions he brings them up again, and the small bullet is the first to reappear. He draws the wire back through his nose and spits blood. A shower of cash rewards his feat. Then he swallows a sword, crams pointed sticks into his ears and eyes, and performs a variety of tricks too numerous to be detailed. We enter a perfumer's shop, full of knock-knacks and necessities for my lady's toilet. Pearl powder is made up in neat little packages, and with rouge and paints of various hues. Lotions for the complexion, perfumes, dyes for the hair, and, in a corner, "thine incomparable oil, Macassar." A barber is plying his trade. He shaves the head combs and plait the tail, and extracts wax from the ears. The latter operation is evidently a favourite with the Celestials. Alas! false tails are

common here, as they are said to be in England. The shop is full of them, at a dollar the half-dozen. A distinguished officer of irregulars bought a few to make a plume for his helmet. A "curio" stall contains very ordinary china at very exorbitant prices. Among its prizes are a common English bottle, price half-a-dollar, and an English earthenware plate, with "Swiss scenes" painted thereon, for which double that amount is demanded. Here, also, are small boxes labelled "Superior Congress matches, without smell or sulphur." They would cost a halfpenny at home; but their price at Tien-tsin is 2½d. The crowd at our heels laugh as we enter a pawnbroker's shop. It is full of depositors, old clothes being the principal articles in pledge. We ask the head man to see the establishment. He would be delighted, but it is against rule. He deeply regrets that he must refuse our majesties, but his orders are explicit. After a little pressing he yields, and we are conducted through one court after another, the buildings containing all that man can imagine, from pocket-handkerchiefs to junk's anchors. The goods may be pledged for thirty moons, (two years and a half,) when they are sold, if unredeemed. The rate of interest is 12 per cent. per annum. Here is a large ichu, very open, very deep, very well drained. The ice is in blocks full two feet thick, and gives abundant evidence of a severe winter in this district. Returning home, we enter a tea-shop. The "chering" coverage is contained in a large brass kettle, a brass butterfly with extended wings on its spout. We drink, are refreshed, and bid adieu to "the Street of Everlasting Prosperity."—*Letter of a Booby, by the Times Correspondent in China.*

*The Faith of the Gospel.*—Let us not stop short, until we have obtained the like precious faith, once delivered to the saints;—the true faith of the gospel, which worketh by love, purifieth the heart, and giveth victory over sin, death, hell, and the grave. A historical or traditional faith, or one that admits of a continuance in sin, is dead and unavailing; but the faith of the gospel is a living, operative, principle—an impenetrable shield; it quengeth the fiery darts of the wicked; disarmeth sin, justifieth its happy possessor, and giveth peace with God, through our Lord Jesus Christ; from whom alone it must be obtained, and for it we must all come to Him, in the humility and simplicity of little children; of whom is the kingdom of heaven, though they be upon earth. "the poor in spirit." It is Jesus alone who imparts this heavenly treasure; faith; He is the blessed author and finisher of it, and from him we must receive the precious gift into our hearts.—*Daniel Wheeler. P. L., vol. 7th, p. 278.*

*The Honest Hour.*—She repeatedly expressed, in very satisfactory terms, her resignation and acquiescence with the will of the Almighty, often saying, "I am not afraid to die." At one time she spoke to her father thus: "Dear father, thou hast been a tender, aff-ec-tionate father to me. Have I not been a dutiful daughter to thee?" He answered fully in the affirmative; and she went on: "Oh, I would not have been otherwise for all the world!" There was at that time some little article of her apparel, which by some means had been introduced, and which her father thought not consistent. He gently remarked it to her; and she freely acknowledged it was wrong; saying, that it proceeded from pride, and that those who kept near to the principle, [the Spirit of Truth], would be preserved out of such things.—*From a Memorial of Ann Nash, in her fifteenth year. Pety Promoted.*

### Disappearance of a Nebula.

*Letter from the eminent Astronomer, J. R. Hind of London, announcing the disappearance of a Nebula.*—"Towards the close of the past year, it was announced by Prof. d'Arrest, of Copenhagen, that a nebula in the constellation Taurus, which was discovered at this observatory on the 11th of October, 1852, had totally vanished from its place in the heavens. That one of those objects, which the giant telescopes of the present day had taught us to regard as assemblages of stars in myriads at immense distances from the earth, should suddenly fade away, so as to be quite imperceptible in powerful instruments, must, I think, have been deemed a very improbable occurrence, even by many who are well acquainted with the care and experience of the observer by whom the statement was made. Within the last few days, however, M. LeVerrier has obtained so strong a confirmation of its accuracy, that there is no longer room for supposing it to have originated in one of those errors of observation which every practical astronomer knows will creep into his work in spite of all his precautions.

The nebula in question was situated in right ascension 4h 13' 54.6", and north declination 19° 11' 37", for the beginning of 1862. It was therefore about a degree and a half from the star Epsilon in Taurus, in the group commonly known as "the Hyades." Its diameter was about one minute of an arc, with a condensation of light in the centre; or its appearance was that of a distant globular cluster, when viewed in telescopes of insufficient power to resolve it into stars. From 1852 to 1856 a star of the 10th magnitude almost touched the edge of the nebula at its north-following edge; it was first remarked on the night the nebula was detected, having escaped notice on many occasions when its position had been under examination with the same telescope and powers. Hence I was induced to hint at its probable variability in a note upon the nebula published in No. 839 of the *Astronomische Nachrichten*. The suspicion is fully confirmed; the star has diminished to the twelfth magnitude, either simultaneously with, or soon after, the apparent extinction of the nebula.

The history of this object and the results of his observations on the night of January 26th, are appended by M. LeVerrier to his Meteorological Bulletin of the 29th. The sky being very clear at intervals, the Paris equatorial, which has an object-glass 12 French inches in diameter, was directed to the place of the nebula, but notwithstanding stars of an extremely faint class were visible in its immediate neighbourhood, not the slightest trace of it could be perceived either by M. LeVerrier or M. Chacornac. The star which Professor d'Arrest and I have repeatedly noted, of the tenth magnitude, and almost touching the nebula, had dwindled down to the twelfth; so that telescopes that would have shown it well between 1852 and 1856, would not at present afford a glimpse of it. From the fact that M. Chacornac saw the nebula in forming a chart of the stars in that region in 1824, and did not remark it while reconstructing the same in 1858 with a much more powerful instrument, there is reason to infer that the disappearance took place during 1856, or the following year.

How the variability of the nebula and a star closely adjacent is to be explained, it is not easy to say in the actual state of our knowledge of the constitution of the sidereal universe. A dense but invisible body of immense extent interposing between the earth and them might produce effects which would accord with those observed; yet it ap-

pears more natural to conclude that there is some intimate connexion between the star and the nebula, upon which alterations of visibility and invisibility of the latter may depend. If it be allowable to suppose that a nebula can shine by light reflected from a star, then the waning of the latter might account for apparent extinction of the former; but in this case it is hardly possible to conceive that the nebula can have a stellar constitution.

It is at least curious that several variable stars have been detected in the region of the great nebula in Orion; that in 1860 a star suddenly shone out in the middle of the well-known nebula, Messier 80 (about half way between Antares and Beta in Scorpio), which vanished in a few days; and that, as first remarked by Sir John Herschel, all the temporary stars, without exception, have been situated in or near to the borders of the Milky Way—the star-cluster or ring to which our system of sun and planets belongs. In the latter class are included the memorable star of B. C. 134, which led Hipparchus to form his catalogue of stars, and those which blazed forth in 1572 and 1604, in the times of Tycho Brahe and Kepler.

In concluding, I will venture to express the hope that some of the many amateur astronomers in this country who may have provided themselves with telescopes of first rate excellence, will keep a strict watch upon the remarkable pair of variables which I have briefly described in this communication. Continuity of observation is often most important, and can only be secured—and that not always in the uncertainty of weather—by a strong force of observers in different localities.

I am, Sir, your most obedient servant,

J. R. HIND.

Mr. Bishop's Observatory, Regent's Park, Feb. 3.

P. S. Since writing the above, I have received a letter from Professor Secchi, the able and energetic director of the Observatory of the Collegio Romano at Rome, by which it appears that in one of the proverbially clear skies of that city, and with the large telescope at his command, he was unable on the 37th ult to discern the least vestige of the nebula."

*Unhealthy Positions of the Body.*—Those persons engaged in occupations requiring the hands alone to move, while the lower limbs remain motionless, should bear in mind that without constantly raising the frame to an erect position, and a slight exercise to all parts of the body, such a practice will tend to destroy their health. They should, moreover, sit in an erect position as possible. With seamstresses there is always more or less stooping of the head and shoulders, tending to retard circulation, respiration, and digestion, and produce curvature of the spine. The head should be thrown back, to give the lungs full play. The frequent long-drawn breath of the seamstress evinces the cramping and confinement of the lungs. Health cannot be expected without free respiration. The life giving element is in the atmosphere, and without it in proportionate abundance, must disease intervene. Strength and robustness must come from exercise. Confined attitudes are in violation of correct theories of healthy physical development and the instinct of nature. Those accustomed to sit writing for hours, day after day, can form some idea of the exhausting nature of the toilsome and ill-paid labour of the poor seamstress.—*Late Paper.*

We should remember that the world in which we are placed, is but the road to another; and that happiness depends not upon the path, but the end.

## BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 352)

ELIZABETH LEVIS.

"I now mention that which hath lain as a burden on my mind, under the consideration of which I have often been distressed. It is the unnecessary and too frequent use of spirituous liquors in general, and particularly the custom of taking it into the harvest field. This is certainly a great evil, being a means of drawing those whose inclination is after it, into a snare, by which their minds become elevated and their spirits being raised above the pure witness for God, they are thereby put out of a capacity solidly to consider how thankful we ought to be in the time of gathering in the fruits of the earth, [which are bestowed upon us,] through the mercy and favour of God.

"It would be well to consider whether they are clear [of condemnation,] who put [ardent spirits] in the way of poor creatures, who by it are rendered unfit for proper labour; and who often disturb others who desire to be better disposed. Yea, some have been overcome thereby so that it has been their end. Such are the sorrowful effects of making too free with strong liquor.

"There may be some in the practice of using it, who are careful to keep things in the best order they can; but if those, whose desire is after it, come under their care, they will find it difficult to keep them in good order. This I have found by experience when we were in the practice of it. A fear hath seized my mind that some masters of fields, who even make profession of Truth, are too much drawn into the excessive use of strong spirits, and are thereby rendered very unfit to guide others. Which conduct [of theirs] is a reproach to the Truth they profess, and displeasing to God, the fountain of all our mercies.

"Another ease in which this custom is of pernicious consequence, I mention in fear before the Lord.—Boys and girls being trained up in the use of strong liquor, their desire after it may in time increase, and as they grow up instead of growing in grace and true religion, they may grow in drunkenness. A sorrowful consideration, that the children of any should be trained after this manner.

"I believe that I am not alone, but that others are burdened with this, and other prevailing excesses. I desire that those who see the evils, may bear a faithful testimony against them, by example, as well as precept. I have sometimes wondered, that trading in rum and other strong liquors, did not prove too heavy a burden for the professors of the holy Truth to bear, considering the destruction it brings on some, and the oppression on others. These things I desire may be considered in this day of trial, and great commotion,—a day of sifting indeed. It is likely that most of those who trade in spirits, account drunkenness an odious evil, and it may be well for them to consider, whether importing and selling such great quantities of that, which ought to be only taken as physic, is not encouragement to intoxication. Oh! the great consumption of spirits in the little time of harvest! The greatest part of which is used, I fear, to the hurt of both soul and body, and to the dishonour of God, the fountain of all our mercies. Harvest time ought to be a season of gratitude and humble thankfulness to the Almighty, that he may continue his blessings and favours to us.

"I desire, Friends, we may not forget the labour and exercises of our worthy elders, who had a testimony to bear against things that were dishonourable to God, and who thought nothing too near

to part with, to win Christ. They gave up life, and all they had, rather than displease the Lord, or in any way hinder the spreading of the Truth in the earth. Were this the general concern of the professors now, I believe that the Lord would yet favour us, and withhold his judgments, with which it seems to me, we have been threatened, and which I believe we may yet expect, unless there is a reformation in the land.

"It is in fear, as before the Lord, I mention these things, and press them on the consideration of the people. Let us not forget the shaking of the rod over us. It seemed to me very close threatening to withhold the produce of the land from us. If the Lord visit us in displeasure, what will become of those who have spent their time in forgetfulness of him? It has occurred to me if He shall send scarcity of bread among us, the aforementioned excesses may be one cause thereof, as thereby, that noble creature, man, is made lower than the beasts of the field.

"Let those concerned in distilling grain and fruit, to make a trade of, consider if they can be clear of encouraging the evil of drunkenness. Distillation, I believe is putting things to another use, than that intended by the Giver, and it is fixed in my mind as displeasing to him, and as one cause of the blast on our fruit. Oh! the need for all ranks of people to use the good things with moderation which the Lord bestows upon us, and to be humbled before him as were the Nuevites. I believe nothing but true repentance will stay the judgments which seem to hang over us. Remember! the day of account hastens, and to those who will not turn to the Lord in the day of his mercy, but pursue the gain, the pleasures or delights of this world, it will be a dreadful day.

"There is need for the elders to breathe to God that the camp may be searched, and the hidden things be brought to light, that hinder the prosperity of Truth. That being thoroughly washed and cleansed, pure charity, one towards another, may abound. Hereby we shall be as good way-marks to others, and if any thing should appear reproachful to Truth, a concern will arise to lay a hand on it, for a reformation. I believe there are faithful elders, who go mourning on their way, because of the evils which prevail, and there are many young ones, who lie hid from man, who are, nevertheless, further on their way heavenward, than some who make a greater appearance. These hidden ones, the Lord beholds, although they may say, 'how shall I get along, when some, who ought to have been way-marks to others, are falling on one hand and on the other!' My desire is that no tender, breathing babe may be discouraged. The Lord is on the side of those who walk in fear before him, of whatever age or station.

"I feel somewhat eased of that which has lain on my mind as a burden, and which at times has been as a fire in my bosom. When I saw that something after this manner was required of me, and looked at my own weakness, the cross seemed heavy to bear, and I reasoned thus: Oh! that the Lord would choose one better qualified, that the people may hear! Forgetting that he sometimes works by weak instruments, to the pulling down of that which is an abomination to him,—thus magnifying his own power. I reassured and struck from under the cross, until by his judgments he made me willing to give up to his requirements.

"I conclude with desiring that all who profess christianity, may search their own hearts, and see how far they follow Christ, and submit to his will in all things. If any receive benefit by these lines, let the praise be given to God, to whom it belongs,—the author of all good, worthy of all honour

and praise, with his dear Son, the Lamb, now and forever.

ELIZABETH LEVIS.

Kenet, Chester County, Fifth mo. 5th, 1761."

Two of the daughters of Elizabeth Levis, marrying, were settled with their husbands at Duck Creek, and after the death of her beloved husband, she was frequently drawn to that place, by natural affection as well as christian duty. It being in good measure her meat and drink to do her heavenly Father's will, she was careful even if her visits to her children, to feel after his permission. In one of her letters to her absent daughters, written about 1760, she says:—

"I have often longed to be in company with you but it is my duty to be resigned to the will of God: For this state, I find it necessary to labour daily that I may be given up in all things. The great enemy of souls ever strives to draw the mind from daily waiting upon God, to keep us, if he can, from receiving strength, to enable us to come up in our duty. He is a crafty enemy. Beware of him and let it be your chief concern to know the will of your heavenly Father concerning you. Be careful not to move, or do anything that you have not cause to believe the Lord owns you in. As we dwell under this concern he will favour us with his love, and that will unite our hearts to him, and one to another, and enable us to be true helps one to another.

"Dear children, let us wait for this love. It will sweeten all our bitter cups, as we receive them from the Fountain of Love. Blessed be our God he is a God of mercy, and a tender Father unto all those who are more concerned to witness his love in their hearts, than for anything in this transitory world. May such not be discouraged if they should meet with close trials, and these sometimes of the nearest or most afflicting kind. When we cannot feel the sweetness and comfort we desire, let us remember the words of the apostle, who said 'we have need of patience, that when we have done the will of God we may receive the promise.' The promise is life, and peace, and joy in the holy spirit."

(To be continued.)

*Anecdote of Rennie.*—Rennie, the distinguished architect, who by his talents raised himself to a distinguished position, was once travelling in Scotland in a stage-coach. The axle-tree broke near a blacksmith's, and the son of Vulcan being about Rennie himself lit the fire and welded the axle-tree in a masterly style. His fellow passengers who had been very communicative and friendly during the early part of the journey, now became very reserved, and the "respectables," especially held themselves aloof from the man who had so clearly revealed his calling by the manner in which he had mended the broken axle. Arrived at their journey's end for the day, the travellers separated,—Rennie proceeding onwards to Eglinton Castle. Next morning, when sitting at breakfast with his noble host, a servant entered to say that a person outside desired to have a word with the Earl. "Show him in." The person entered, and he proved to be one of Rennie's fellow-travellers, whose surprise and confusion at finding the "blacksmith" of the preceding day breakfasting with his lord, may be very easily imagined. The earl was much amused when Rennie narrated to him the incident of the broken axle.—*Late Paper.*

Scandal is the bane of the social and domestic circle, withering to the best impulses of our nature and hostile to the happiness of all who indulge in it.

## THE WANDERING WIND.

The wind, the wandering wind,  
Of the golden summer eve—  
Whence is the thrilling magic  
Of its tones among the leaves?  
Oh! is it from the waters,  
Or from the long, tall grass?  
Or is it from the hollow rocks  
Through which its breathings pass?

Or is it from the voices  
Of all to one combined,  
That it wins the tone of mystery?  
The wind, the wandering wind!  
No, no! the strange, sweet accents  
That with it come and go,  
They are not from the oaks,  
Nor the fir-trees whispering low.

They are not of the waters,  
Nor of the caverned hill;  
'Tis the human love within us  
That gives them power to thrill:  
They touch the links of memory  
Around our spirits twined,  
And we start, and weep, and tremble,  
To the wind, the wandering wind!

F. H. Mans.

From Evenings at the Microscope.

## Worms.

An examination of the diverse modes in which locomotion is performed among animals, and the various organs and modifications of organs that subserve this important purpose, would form no uninteresting chapter in natural history. You have two feet, your dog has four; in the bird, two of these are converted into wings, with which it rises into the air; in the fish all of them are become fins, with which it strikes the water. But it is in the invertebrate classes that we discover the strongest variations. The Polype "fops" awkwardly but vigorously along, by the alternate contractions and expansions of the web that unites its arms; the Snail glides evenly over the herbage by means of its muscular disk; the Scallop leaps about by puffs of water driven from its compressed lips; the Lobster shoots several yards in a second by the blow of its tail upon the water; the Gossamer Spider floats among the clouds upon a balloon that it has spun from its own body; the Centipede winds slowly along upon a hundred pairs of feet; the Beetle darts like an arrow upon three; and the Butterfly sails on the atmosphere with those painted fans which are properly "aerial gills." How elegantly does the *Planaria* swim by the undulation of its thin body, and the *Medusa* by the pumping forth of the water held within its umbrella! How wondrously does the *Echinus* glide along the side of the tank on its hundreds of sucking-disks! How beautiful, and at the same time how effective, are the ciliary wheels of the *Brachium*.

I am now going to show you some other examples of travelling machinery in an humble and despised, but far from uninteresting class of animals,—the Worms. Here is an Earth-worm upon the garden-border. With what rapidity it winds along, and now it pokes its sharp nose into the ground, and now it has disappeared! If your eye could follow it, you would see that it makes its way through the compact earth not less easily nor less rapidly than it would along the surface. If you take it into your hand, you perceive no feet, wings, fins, or limbs of any kind; only this long cylinder of soft flesh, divided into numerous successive rings, and tapering to each extremity. The very stout which you saw enter so easily into the substance of the soil, is no hard bony point, but formed of the same soft yielding flesh as the other parts. And yet with no other implement

does the little worm penetrate whithersoever it will through the ground. How does it effect this?

The fineness of the point to which the mucus can be drawn is the first essential. This can be so attenuated that the grains of adherent soil can readily be separated by it, when its action is that of the wedge. The body being drawn into the crevice thus made, the particles are separated still farther. Now another provision comes in; the whole surface of the skin secretes and throws off a quantity of tenacious mucus or slime, as you will immediately perceive if you handle the Worm; this has the double effect of causing the pressed particles of soil to adhere together, and then to form a cylindrical wall, of which they are the bricks, and the slime the mortar; and also of greasing, as it were, the whole interior of the burrow or passage thus made, so that the Worm can travel to and fro in it without impediment; while the fact that the slime is continually poured forth afresh prevents the least atom of earth from adhering to its body. This you have doubtless observed, or may observe in a moment, if you will take the trouble to thrust a spade into the ground and give it two or three shakes. You will presently see on all sides the alarmed Earth-worms cowering swiftly to the surface, and will notice how perfectly sleek and clean they are.

But these contrivances are only accessories: we have not yet discovered the secret of the easy movement. The mere elongation of the snout is no explanation of the disappearance of the Worm in the burrow: for you will naturally and reasonably say that this elongation cannot extend beyond a certain limit; and what then? No further progress can be made unless the hinder parts of the body are, by contraction, drawn up towards the elongated front;—but what holds the front in place meanwhile? Why, when the muscles contract, does not the taper, wedge-like muzzle slip back and lose the ground it had gained?

This we will now look at. I take up this Worm and put it in a narrow glass cell, where we may watch its movements. It presently begins to elongate and contract its body vigorously, apparently alarmed at its unwanted position; and the mucus is thrown off in copious abundance. We apply a low microscopic power to it, and catch glimpses, now and again, as it writhes about, of a number of tiny points protruded and retracted with rhythmical symmetry through the skin. Its mobility precludes our discerning much more than that these points are very numerous, that they are arranged in four longitudinal lines, running along the ventral side of the animal—two lines on each side—and that in each line there is a point protruded from each of the many rings of which the Worm's body is made up.

In order to see a little more of these organs we must sacrifice a Worm; having killed it, and divided the body in the middle, I cut off, with sharp scissors, a small transverse portion, say two or three rings, and press the fragment between plates of glass. Now, with a higher magnifying power, we discern in the midst of the translucent flesh the points in question. They are not, however, single; but each protrusible organ consists of a pair of transparent, brittle, glassy rods, shaped like an italic *f*, of which the recurved points are directed backwards when thrust out from the skin.

The mode in which these assist the progression of the Worm is well described by Professor Rymer Jones. "The attenuated rings in the neighbourhood of the mouth are first insinuated between the particles of the earth, which, from their conical shape, they penetrate like a sharp wedge; in this position they are firmly retained by the numerous

recurved spines appended to the different segments; the hinder parts of the body are then drawn forward by a longitudinal contraction of the whole animal—a movement which not only prepares the creature for advancing further into the soil, but by swelling out the anterior segments, forcibly dilates the passage into which the head had been already thrust: the spines upon the hinder rings then take a firm hold upon the sides of the hole thus formed; and, preventing any retrograde movement, the head is again forced forward through the yielding mould; so that, by a repetition of the process, the animal is able to advance with the greatest apparent ease through substances which it would at first seem utterly impossible for so helpless a being to penetrate."

Implements analogous to these are found in most of the animals of the class *Annelida*, to which the Earth-worm belongs. \* \* \* \* \*

From this complex and formidable mouth we will pass to one of quite another form, not less effective, perhaps more formidable, but ordained by the goodness of God to be a most valuable agent in the relief of human suffering. I mean the Medicinal Leech, of which we can readily procure a specimen from our friend the apothecary.

Here it is. There is no protrusible proboscis, but the throat is spacious, and capable of being everted to a slight degree. The front border of the mouth is enlarged so as to form a sort of upper lip, and this combines with the wrinkled muscular margin of the lower and lateral portions to form the sucker. With the dissecting scissors I slit down the ventral margin of the sucker, exposing the whole throat. Then, the edges being folded back, we see implanted in the walls on the dorsal region of the cavity three white eminences of a cartilaginous texture, which rise to a sharp crescentic edge; they form a triangular, or rather a triadate figure.

Now, if you recollect, this is the figure of the cut made in the flesh wherever a Leech has sucked, as it is of the scar which remains after the wound has healed. For these three little eminences are the implements with which the animal, impelled by its blood-sucking instincts, effects its purpose. But to understand the action more perfectly, we must use higher powers.

I dissect out of the flesh, then, one of the white points, say the middle one, and laying it in water in the compressorium, flatten the drop, but use no more pressure than just enough for that. Now I apply a power of 150 diameters, and we will look at it in succession. You have under your eye a sub-pellucid mass of an irregular oval figure, and of fibrous texture, one side of which is thinned away apparently to a keen edge of a somewhat semi-circular outline. But along this edge, and as it were imbedded into it for about one-third of their length, are set between seventy and eighty crystalline points, of highly refractive substance, resembling glass. These points gradually decrease in size towards one end of the series, and at length cease, leaving a portion of the cutting edge toothless. At the end where they are largest, they are nearly close together, but at length are separated by spaces equal to their own thickness. The manner in which they are inserted closely resembles, in this aspect, the implantation of the teeth in the jaw of the dolphin or crocodile.

But this appearance is illusory. By affixing the little jaw to the revolving needle, we bring the edge to face our eye. It is not an edge at all; but a narrow parallel-sided margin of considerable breadth. And the teeth are not conical points, as they seemed when we viewed them sidewise, but flat triangular plates, with a deep notch in

their lower edge. Thus they partly embrace, and are partly inserted in, the margin of the jaw.

Observe now how beautifully this apparatus subserves the purpose for which it is intended. By means of its sucker, the Leech creates a vacuum upon a certain part of the skin, exactly like that produced by a cupping-glass. The skin covered is drawn into the hollow so far as to render it quite tense, by the pressure of the surrounding air. Thus it is brought into contact with the edges of the three jaws, to which, by means of powerful muscles attached to them, a see-saw motion is communicated, which causes the little teeth soon to cut through the skin and superficial vessels, from which the blood begins to flow. The issue of the vital fluid is then promoted by the pressure around, and so goes on until the enormous stomach of the Leech is distended to repletion.

It has been suggested that this whole contrivance, with the instinct by which it is accompanied, is intended for the benefit of man, and not of the Leech. Blood seems to be by no means the natural food of the Leech; it has been ascertained to remain in the stomach for a whole twelvemonth without being digested, yet remaining fluid and sound during the entire period: while, ordinarily, such a substance cannot in one instance out of a thousand be swallowed by the animal in a state of nature. Whether this be so or not—whether man's relief under suffering were the *sole* object designed, or not, it was certainly *one* object; and we may well be thankful to the mercy of God, who has ordained comfort through so strange an instrumentality.

For "The Friend."

In a meeting, which Daniel Wheeler had on one of the Friendly Islands, with some of the white people then present there, he reminded them of their having long had possession of the Holy Scriptures, a blessing invaluable, for which we cannot be thankful enough, and proceeded to declare: "But they are a sealed book, until our understanding is opened by the same Holy Spirit, which inspired those holy men that gave them forth: even the followers of our Lord, when he was upon the earth, could not understand them, until their understandings were opened by Him. Without Him, we can do nothing. The Jews had the scriptures; and yet they were the enemies of Him, of whom they so faithfully testify: they felt themselves secure, and thought they had in them eternal life; but what said the Prince of life,—'Search the scriptures, for in them ye think ye have eternal life; and they are they which testify of me, but ye will not come unto me that ye might have life.' So that although they are an inestimable gift out of the divine treasury bestowed upon man by the Holy Ghost, for his greatest outward heavenly comfort, to strengthen his hope in the promises of God, of life eternal through that Saviour, who is Christ the Lord, and are profitable for doctrine, for reproof, for correction, for instruction in righteousness, that the man of God may be perfect, thoroughly furnished unto every good work;" and although they are able to make wise unto salvation,—it is only "through faith, which is in Christ Jesus," of whom they so abundantly testify from their earliest pages. And yet, if we could repeat them from the beginning of Genesis to the end of Revelations, they cannot save one soul, nor blot out one sin. But they direct us unto Him, unto whom all power in heaven and earth is given; who only hath the words of eternal life, who is Himself that eternal life. To Him, then, we must go to be saved, in Him we must believe; to His Holy Spirit in our hearts we must turn, whose light shineth in all. His long suffering and good-

ness will lead us to repentance, when we look on Him, whom we have so grievously pierced, and from whose merciful reproofs we have so long revolted, and which we have disregarded with hardness of heart and unbelief in his power to save. This light in us, will not only set all our sins in order before us, that we may repent of them, and forsake them; but as we abide under the righteous judgments of the Lord's redeeming love, they will, though they may have been as *scarlet and crimson*, be made white as snow and wool, by the blood of the Lamb, and be remembered no more by Him, who redeemeth our life from destruction, and crowneth us with loving kindness and tender mercy for His great name's sake. Behold then, the blessedness of those who know the Lord for themselves, who have come to the knowledge of the only true God, and Jesus Christ whom he hath sent, by believing in the power of the Holy Spirit, and sitting under its heavenly teachings:—'this is life eternal.'"

#### Concerning Peas.

The pea is generally supposed to be a native of southern climates, and was well known both to the Greeks and Romans, frequent mention being made of it in the works of the old writers on rural subjects. Dr. Lindley considers that the common grey pea, still found growing wild in Greece and other parts of the Levant, is the origin of our common pea and of all the highly domesticated varieties belonging to it. Most early writers have some mention of it, either as a garden vegetable or as being grown as a field crop, in the vicinity of large towns, where a ready market could be obtained for it in its green state.

The pea is a far more delicate plant than the bean, more particular in its choice of soils, and less able to bear the changes of a variable climate. Like the bean, it delights in soils of a calcareous character, and is classed with it as one of our lime plants, or plants into whose composition lime enters in large proportions. The soils most suitable for peas are those of a light loamy or marly character, rather partaking of the characters of our best barley soils than of those which we are accustomed to call wheat and bean soils. The necessary conditions in the soil for pea cultivation are, that it be perfectly free from stagnation water, and yet of sufficient depth to retain its natural moisture, that it contain a sufficient proportion of lime, and that it be in good heart and tillage condition; and if these points cannot be secured, the chances of a good return are considerably diminished.

Not only will the pea grow on a lighter class of soil than the bean, but it will grow also on shallower soil, as, although its habit of growth is the same, the plant itself is of more delicate character, and its tap-root contents itself with a less depth of soil than that which the bean requires for its development. Neither the strong clay soils, nor those of a humous character are suitable for peas. The former will frequently carry a good crop, especially in a dry, warm climate; at the same time they would be more suitable for beans and would produce a better crop; while the latter, if rendered suitable by claying or marling, for tillage cultivation, would be likely to induce too luxuriant a growth of stem and to reduce the power of the plant to perfect its seeds. In such soils, however, peas may be grown advantageously, mixed with beans, the bean stem affording the necessary support to the pea, keeping it off the ground and giving it access to the air and sun, and the mixed crop yielding a greater return than if beans had alone been sown. This is a favourite practice in many districts of England, as it is said not only to

increase the yield, but also to reduce the chance of loss from blight, which appears to be less injurious in its attacks than when either plant is sown alone, the beans retaining their vigour and producing a crop, should the "green aphid" attack the peas, while the peas remain uninjured when the "black aphid" is destroying the beans.

When in sowing, old seed is used, it is a good practice to steep it for about twenty-four hours in plain water in order to produce a regular sprouting. The quantity sown is from two to three bushels an acre when drilled, and about double the quantity when sown broad cast. The period of sowing is materially determined by the sort of pea to be sown, the later varieties requiring to be sown earlier than those which come to maturity in a shorter time. As a rule it is advisable to get the crop sown as early as the state and condition of the land will permit, as it has been noticed that the forward plants are less subject to mildew than those of backward growth.—*Late Paper.*

*Ground for Divine support in the day of trial*—The account of many in my native land (America), letting their minds out into the world gives me much concern. It shows what poor weak mortals we are, that when from under the heavy hand of affliction, we soon forget the covenants made in the day of distress. If those who have seen, in the day of proving, the vanity and folly of grasping after the world, and whose spirits were measurably redeemed and purified, turn again to it, they may become more insensible than ever; and if trials return, which in some shape or other they probably will, such may fail to find that confidence and Divine support they mercifully experienced in the late trials. Did not the Lord cast up a way for many, and cause the meal and the oil to sustain, beyond what they could expect? My heart yearns for my dear brethren, and abundantly desires that warning and counsel may not fail to be given. I have thought of the great concern and care of the worthy William Edmundson when Friends in this land were in danger, as great prospects of worldly gain were open to view; how he laboured to curb the inclination; and how his labour was blessed, by a submission on the part of his brethren. May the watchmen maintain their ground and labour for the good of their brethren not being discouraged if some require evil for good.—*John Pemberton. 1783.*

## THE FRIEND.

SEVENTH MONTH 19, 1862.

The accounts of the proceedings of London Dublin and New York Yearly Meetings published in the three numbers preceding this, have given our readers some data for forming an opinion of the state of the Society within the jurisdiction of those meetings respectively. Not that we think such exhibits afford a standard by which we can rightly judge of the religious feeling and growth of the members individually, but that they enable us to discern and to estimate the spirit which bears rule, and moulds the action of the body.

We have always looked with admiration upon the system of church government adopted by our religious Society, and recognized in its simple but effectual working throughout the organization of its various component parts, striking evidence of the divine wisdom in which it originated; and as exercised in which, it has been found all sufficient for effecting the objects designed to be accomplished by the visible church in its care for its members. In this system and organization Yearly Meetings,

as they hold the most responsible position, so their action is the most important and interesting.

In a healthy state of the Society, such annual gatherings must be times of building up the members in their faith, encouraging and strengthening them in the support of the testimonies committed to it to uphold, and seeking to remove those things which obstruct the free circulation of unity and love throughout its limits. At a time like the present, when there is so much outward case, and the temptation is so strong to mingle with the world, to give place to its spirit, to assimilate with its banners, its formal religion, and its pretentious benevolent activity, we would expect to bear the voice of the church in decided language, but in vibrant, maternal tones, pointing out and warning against the surrounding danger; setting forth the true standard, the unalterable requisitions of the gospel of life and salvation; and pleading with the members, one and all, to mind their high and holy calling; and strive to keep within, or to come within the circumscribing limits of the "garden enclosed." If favoured to be brought under a true sense of the weakness and defection of members and of subordinate branches, we would look for a humble and reverent seeking for ability to conduct pertinent counsel, or—if need be—proof, and to put forth a hand of help in order to strengthen the things that remain and are ready to die. So far as the accounts we have given indicate any degree of this religious exercise and holy zeal, we can rejoice; and we doubt not our readers unite with us whenever evidence is afforded by where of attachment to old fashioned Quakerism, or an increase of true spiritual-mindedness among the members. It is upon this spiritual-mindedness, resulting from a thorough change of heart through the cleansing, sanctifying baptisms of the Spirit of Him who is the Head of the Church, that the welfare of the body depends; and where it is not wanting it will be manifest by a humble dependent dependence upon the prompting and guidance of the Holy Spirit in all things connected with religion, whether in individual action or the travail and labour of the church in its collective capacity; and every Friend thus made a member of the mystical body of Christ, is prepared to estimate correctly the value of the doctrine, and testimonies of the gospel as held by the Society, and sets it an imperative duty to seek for ability to uphold them, and to cherish an affectionate attachment to it and to all its interests. Such know that religious duty does not consist in a general benevolence, and activity in what may be supposed to be laudable schemes for the improvement of others, but in keeping in the narrow way after having been enabled to enter the straight gate.

We are aware of the power which that habit exercises over the best of men, and that through the same wise and beneficent characteristic of our nature, which enables us to accommodate ourselves to the varied circumstances under which we may be placed, we are liable to attach value—sometimes mistaken value—to whatever we have been long accustomed to. This is perhaps peculiarly the case in matters connected with religious belief and usage.

It therefore behoves us to guard against allowing a fondness for mere time honoured customs to sour the feelings against those who may object or express disapprobation for those objects of our regard. Genuine love for the Truth, and that which it owns and requires, expands the heart, and fills it with good-will to all, even towards those whom we may know to be deceived.

But while we acknowledge the necessity, under the circumstances in which our religious Society is now placed, of discriminating between what is es-

sential and really valuable, and what is the result of mere education and habit, we feel fully convinced ourselves, and we apprehend that no one acquainted with the faith and history of Friends, unless purposely blind, can fail to see, that in conducting the affairs of the church, as well as in the attainment of what passes for religious growth and influence, there is a wide departure from what William Penn denotes as the "main distinguishing point or principle" of Quakerism, out of which "as the root, the goodly tree of doctrines" grew, and branched; and hence the rapid progress of a spirit of innovation, which under a plea for improvement, has already introduced so many and fallacious novelties within the limits of the Society, and the havoc it has made and is making, in some places more than others, on the long cherished faith and practices of our worthy predecessors. The recorded alterations give but little idea of the great changes which have been effected, or of the close similarity which Quakerism in its present noisiness, as exhibited by many in conspicuous stations, bears to the maxims, the habits and manners of the polite and amiable man of the world. Here is the cause of the disunity and division which have been spread throughout our once peaceful Society; and the changes made and proposed are what are preventing that disunity and division from being removed, and keeping the wounds which threaten the life and organization from being healed. Those who feel bound by "the law and the testimony" and who dare not depart from "the good old way" in which the Truth has heretofore led the faithful among the members of the Society, are alarmed and distressed at the introduction and spread of these new things. They see that the "carved work of the sanctuary" is being broken down, and they fear lest "the holy and beautiful house where our fathers' worshiped, will be covered with a false fire. Hence the shyness and distrust with which many regard all the proceedings of meetings where these things are sanctioned; and their heart and lest the usual epistolary intercourse may introduce them into parts of the Society where their advocates have not yet obtained the ascendancy.

The religion of Christ as laid down in the Holy Scriptures, and always believed in by Friends, admits of no improvement. The only progress it can make, is in extending its influence over the souls of men, until like the leaven brought in the meal, it has changed their nature and brought them to submit to its unalterable terms. The founders of the Society comprehended its principles and adopted its requirements, rejecting that which men in their fallen wisdom had striven to engraft upon it; and in calling upon others to believe and have fellowship with them, they declared what their eyes had seen, their ears had heard, and their hands had handled of the Word of Life. Weak and blind as so many are, there are yet not a few throughout the Society who know in what they have believed; and having had the truths of primitive Quakerism sealed upon their understandings by the convictions of the Holy Spirit, they can unite with no departure therefrom. These may be thought to be governed by prejudice, or a narrow-mindedness which incapacitates from extending their views and labours beyond the immediate circle in which they have been accustomed to move, and hence incapable of properly appreciating the advance that has been made; but judging from the fruit of the new doctrine as exhibited in the adopted dress, language and manners of the world, mixed marriages, missionary projects, scripture and prayer meetings, &c., &c., they may rest satisfied that if these innovations are an advance, it is not in the right direction, and that the gradual

progress of change, is in building up a system, the doctrines and practices of which, must rest upon another foundation than that laid for what they believe to be the true church.

But though there now seems so much to discourage and depress, we do not hope that time will bring a change for the better; that the sincere hearted among those who have been caught by this delusion will see their error and come out of it, while others, still dissatisfied and longing for more latitude and different modes of religious activity than their diluted Quakerism will supply, will seek the attainment of their wishes outside of the Society. How much more desirable that all should be brought, by walking by the same rule and minding the same thing, to see eye to eye, and unite in harmonious effort to restore the Society to its pristine beauty.

We submit the following communication received from a valued Friend, in preference to any further remarks of our own:

"The proceedings of London Yearly Meeting for a number of years past, exhibit mournful evidences of gradual progressive declension from the high standard which our religious Society in that land once upheld. While we doubt not the estimable moral character of the members generally, and are aware that many of them adorn their religious profession by works of active benevolence; we cannot shut our eyes to the melancholy truth, that their Quakerism is with far too many, something essentially different from that of the founders of our religious Society, and such as was manifested in the lives and preaching of divers dedicated servants of Christ within their borders, who during the last quarter of a century have been removed from works to rewards. Some of these faithful ones had a clear sense of the degeneracy, which under very specious and deceptive disguises, was insidiously making progress among Friends, and were often constrained to lift up the voice of warning and solemn admonition to them. Being kept quick of understanding in the fear of the Lord, and jealous for the honour of his Truth, their souls were oft made sorrowful in the prospects of the future, as they marked the increasing prevalence of influences which seemed directed to modify the faith and practices of the Society, and assimilate them to those of other religious professors. Unhappily these warnings and exhortations were too little heeded; the Yearly Meeting, as a body, shrunk from bearing a faithful testimony against innovations in doctrine, plainly presented by individuals high in social and religious standing; and constantly increasing weakness has been the sad and inevitable result.

"We trust and hope however, that there are not a few yet preserved in both Great Britain and Ireland, who are sincerely attached to the principles and testimonies of Friends, in their original simplicity and integrity, and who mourn in secret over the present state of our religious Society. May all these keep near to that divine Power which can alone preserve from falling, and looking singly to our Holy Leader, and following him in entire dedication of heart, they will know him to be their wisdom and strength, his sweet peace will be their portion, whatever trials may be permitted,—and in the end they will surely attain the blessed reward of the obedient and faithful.

"It is in sorrow that we have thus adverted to the threatening dangers which surround our beloved Society in another land, and with earnest desires that Friends everywhere may be on their guard against the seductive workings of that spirit which under the guise of greater liberality is in fact laying waste the precious testimonies for which our worthy

predecessors in the Truth so deeply suffered. We would tenderly remind our dear friends that there is but one ground of safety, and but one effectual remedy for all our maladies and weaknesses. This will be found in a thorough practical appreciation and acknowledgment of the great truth expressed by George Fox in the few emphatic words, "We are nothing—Christ is all." In order to be true Quakers we must first become real Christians, by taking Christ's yoke upon us, and learning of Him who teaches his obedient children by the immediate manifestation of his light and grace in the heart. Every humble, dedicated soul that is willing to take up the cross of Christ, and submit to the cleansing, heart-renewing operations of his Holy Spirit, will find him to be indeed an all-sufficient Teacher and the Physician of value. Those who are thus made new creatures, and by abiding patiently under the operation of the divine hand experience their own wills to be crucified and slain, will, we believe, have no desire for a broader way than that in which our worthy forefathers walked. Oh, that the number of such disciples and true followers of Christ was greatly multiplied among us!—These having been taught in the same school, would be found speaking the same language; the gospel truths and religious testimonies which were dear to those devoted servants of the Most High, who have gone to their everlasting reward, will then be dear to us also, and we may reverently trust and hope that fervent charity and love unfeigned would more richly abound, binding together the living members of the church wherever scattered."

#### SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 4th inst. Lord Palmerston, in the British Parliament, reiterated his declaration against the possibility of mediation at present. He contends that what is wanted in order that the war may come to an end, is that each party be brought to apprehend its real interest. In the House of Commons on the 2nd inst., H. Berkley moved the second reading of the bill providing for taking votes by ballot, and reiterated the various arguments in its favour. Sir G. Peel opposed the majority commission project about 126. The prospect of the grain crops in England and France, is reported as more favourable. The French manufacturing accounts also, show more animation.

The French Government is stated to show some inclination in regard to further hostilities with Mexico. The Paris correspondent of the Times, says that dissatisfaction at the Mexican policy is openly expressed, and letters from Mexico convey the same feeling.

The Spanish Government had again declared its firm determination not to prejudice the independence of Mexico.

A new Bourbon conspiracy had been discovered at Naples, and several arrests had been made.

The Russian Ambassadors, bearing the official recognition of the Kingdom of Italy by Russia, had arrived at St. Petersburg. A high military commission is about to assemble in Russia, to consider the possibility of reducing the military budget. Important changes in the tariff will be reported and proposed to the new Chamber. The Journal de St. Petersburg says the criminal attempts of certain military individuals will exercise no influence on the reform undertaken by the Emperor. He will punish the guilty parties, but those exercises could not obstruct the patriotic work of placing the internal organization of the Empire on a footing with the material and moral wants of Russian society. The St. Petersburg Journal says the complete destitution as regards ready money, renders the exportation of grain by agriculturists, impossible. The consequence is, foreign vessels do not come to Odessa, and commerce generally is in a most precarious state. The Grand Duke and Duchess Constantine, returned from their tour on the 2nd, and were well received by the people.

The disturbances in Greece have subsided, and a general amnesty has been granted for past offences.

The sales of cotton in Liverpool for the week, were 118,000 bales, of which 24,000 were American. The weather being favourable for the

crops, breadstuffs had a downward tendency. Consols, 92. The demand for discounts at the Bank of England was light, and the impression prevailed that the rate would soon be reduced to  $\frac{3}{4}$  per cent.

The Mexican army near Orizaba, was surprised and routed by the French on the night of the 14th ult. The communications of the French with the sea coast, have been cut off by Mexican guerrillas.

**UPPER STATES.**—On the 22d inst. news were received, that the Mexicans are increased energy and boldness in various quarters, and have also been successful in several military movements. On the 13th, a rebel force of several thousand men, attacked the town of Murfreesboro, in Tennessee, about thirty miles south of Nashville. One of the rebel troops was killed, and the remainder of the rebels got possession of the town, destroyed the railroad depot and other property, and took several hundred prisoners. Generals Duffield and Crittenden, were also captured. The affair created great excitement in Nashville, where an immediate attack from the rebels was expected. Formidable bands of guerrillas, have suddenly appeared at several points in Kentucky and Tennessee. One of these bands burned the town of Lebanon, Ky., and robbed the bank located there. Considerable alarm had been caused in Louisville, by the appearance of lately a number of armed rebels in the vicinity. Frankfort, the capital, has also been threatened by them. The town of Memphis in North Missouri, had been visited by an armed band, who carried off ninety Union citizens. The forces of Gen. Curtis, in Arkansas, remained, at the latest news, in a perilous position between Cash and White rivers, and the other east of Cash river, seventy-five miles from Memphis, Tennessee. Gen. Hindman, the rebel commander, had ordered all the inhabitants in the vicinity of the Federal forces, to burn their provisions and shoot their cattle. A rebel report, published in the Grenada, Miss., *Appal.*, states that a foraging party of 1000 of Gen. Curtis' men were attacked, and nearly all killed, but few being taken alive. A despatch from Memphis, states that a battle occurred on the 4th inst., near Batesville, Arkansas, in which several hundred of the rebels were killed and wounded. The reported surrender of Vicksburg was untrue. On the 7th inst., the bombardment was still going on. The work upon the canal, which is to make a new channel for the Mississippi, was progressing, and of lately the rebels had been employed in its neighbourhood. The city has been greatly injured by the bombardment.

**The Army in Virginia.**—Gen. McClellan's army has not yet been seriously disturbed by the rebels in its new position. Considerable reinforcements have been sent within the last two weeks, including a division of Gen. Shields, and a large part of Gen. Burnside's forces. The army was visited by the President of the United States, who arrived there on the 8th inst., and returned the following day. In a brief address to the soldiers, he said he had no doubt that they would, and to know the situation of affairs, and that he should go back satisfied. The latest despatch from Gen. McClellan, says that the army is constantly improving in strength and efficiency. The losses in the late battles are stated to be considerably small, and the soldiers are first reported. The Richmond *Observer* of the 8th, admits that Gen. McClellan has secured the safety of his army in a most masterly manner. The position chosen is said in effect, to be almost impregnable against attack. The hope is, however, expressed, that some advantage will be derived, to relieve that portion of Virginia from the presence of the invader. The number of U. S. troops taken prisoners in the late battles, is stated at 4000. They were confined in the tobacco warehouses in Richmond. The Richmond Examiner says, "Our knowledge is not so reliable as to the number of men, at least, 15,000." The rebels have planted batteries in various places on James river, for the purpose of firing upon the transports, and interfering with the supplies for the U. S. army. This may make it needful for the gun boats to convey the transportation vessels. The rebels have already repeatedly struck the whole line of the contest upon the stand they are now making at Richmond, and with this object in view, have concentrated their whole disposable force. All accounts concur in stating that the rebel army near Richmond, numbered 15,000 men.

**South Carolina.**—A steam transport, with sick and wounded soldiers, from Gen. Hunter's command, brings Port Royal dates to the 11th inst. Affairs were a discouraging aspect. The health of the troops was becoming daily more and more the best of the rebels. The prevailing diseases are typhoid fever, bilious fever and chronic

diarrhoea, the latter somewhat malignant. The wounded in the hospitals were said to be suffering dreadfully from the heat and vermin. No military movements were reported.

**New Orleans.**—The Delta reports quite a stir in cotton on the 25th ult., and some which had been stored away for a year or more, sold at twenty-five cents per pound. Shipments of sugar were being made to the extent of 100,000 lbs. per day. The quantity of some kinds were tolerably plenty, but there was a great scarcity of flour, which was selling at \$24 a barrel. The Governor of Louisiana had issued a proclamation, forbidding provisions of all kinds to be sent to the city while it is held by the U. S. forces.

**The Confiscation Bill.**—The passage of the Senate, with some modification, adopted by the House of Representatives.

**Running the Blockade.**—The British steamer Modern Greece, while going into Wilmington, N. C., on the 27th ult., was run aground by the blockading fleet. She had 900 tons of powder aboard, much of which it is said, will be saved by the rebels.

**West Virginia.**—The bill providing for the admission of the new State of West Virginia into the Union has passed the U. S. Senate, by a vote of twenty-two yeas and twenty-one nays, subject to the following condition, that all slaves born within the limits of the State after the 4th of Seventh month, 1863, shall be free.

**Slave Emancipation.**—The President of the United States on the 14th inst., sent to both Houses of Congress the following bill, having for its object the emancipation of any State which may abolish slavery within its limits. The provisions of the bill are as follows:—That when the President shall be satisfied that any State has lawfully abolished slavery within its limits, either immediately or gradually, it shall be the duty of the President, assisted by the Secretary of the Treasury, to deliver to such State an amount of six per cent. interest-bearing United States bonds, equal to the aggregate value, in dollars, per head of all the slaves within such State as are reported by the census of 1860; the whole amount to be delivered at once if the abolition is immediate, or in an equal annual instalment if it be gradual; the interest on such bonds to begin at the time of delivery.

Any State, however, having received one or more of the said bonds, which shall subsequently reintroduce or attempt to reintroduce slavery, shall be liable to have the same considered null and void in whosoever hands they may be, and the offending State shall be required to refund all the interest which may have been paid on such bonds.

In the Senate, after some discussion, the draft was referred to the Committee on Finance; and in the House to the Select Committee on the abolition of slavery in the Border Slave States.

**Philadelphia.**—Mortality last week, 365.

**The Markets.**—*See*—The following were the quotations on the 14th inst. New York.—Specie, 100 in the New York banks, \$32,098,174. Shipments of gold during the previous week, \$3,424,916. American gold, 16 $\frac{1}{2}$  a 16 $\frac{1}{2}$  premium, gold bars 17 $\frac{1}{2}$ . Cotton, 43 cts. for middling uplands; red wheat, \$1.08 a 1.26, for the various grades; white, and red, 93, for white; rye, 73 cts.; corn, 51 cts. 52 cts. Oats, 31 cts. 31 cts. 31 cts. 31 cts. 31 cts. 31 cts. Good red wheat, \$1.24 a \$1.27; white, Virginia, \$1.35; rye, 68; yellow corn, 55 cts. 56 cts. Pennsylvanian, 50 cts. 58 cts. 40 cts.; Southern, 37 cts. 38 cts. *New Orleans.*—On the 3rd inst., sales of 1200 hhds. of sugar, at from 43 cts. to 53 cts. per lb. for "full" and "low" grades, 16 cts. The market bore of sugar. It has retailed as high as \$40 per barrel. Corn, \$2.00 a \$2.20 per bushel; oats, \$1.50; eastern hay, \$70 a \$80 per ton.

#### RECEIPTS.

Received from Nathan Linton, Pa., per N. K., \$2 vol 35; from Frances Armistead, N. Y., \$2, vol 35.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA), Physician and Superintendent, —JOSHUA H. WORTHINGTON.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

WM. H. PILE, PRINTER.

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, SEVENTH MONTH 26, 1862.

NO. 47.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Leisure Hour.

## Lights Afloat—The Aurora Borealis.

In higher latitudes than our own, when the sky of the winter night is clear of clouds, the air calm, and the stars shine out with the greatest distinctness through the transparent atmosphere, while variously-coloured auroral lights flare aloft, finely contrasting with the silvery snow of the ground beneath, the scene is very striking, often gorgeous; yet it is solemn withal, and sometimes even awful to the stranger, owing to the seemingly portentous features of the celestial spectacle, gazed upon amid the solitude and stillness of an arctic region. Such a scene suggested the fine lines of a northern poet, Evening Reflections on the Majesty of God, on seeing the great Northern Lights.†

Now day conceals her face, and darkness fills

The field, the forest, with the shades of night;

The gloomy clouds are gathering round the hills,

Veiling the last ray of the lingering light.

The abyss of heaven appears, the stars are kindling round;

Who, who can count those stars, who that abyss can sound?

† Just as a sand 'whelm'd in the infinite sea;

A ray the frozen iceberg sends to heaven;

A feather in the fierce flame's majesty;

A note, by midnight's maddened whirlwind driven,

Am I, midst this parade, an atom, less than nought,

Lost and o'erpowered by the gigantic thought.

And we are told by wisdom's knowing ones,

That there are multitudes of worlds like this;

That your numbered lamps are glowing suns,

And each a link amid creation is:

There dwells the Godhead too; there shines his wisdom's essence,

His everlasting strength, his all-supporting presence.

Where are thy secret laws, oh, Nature, where?

Thy North Lights glitter in the wintry zone:

How dost thou light from ice thy torches there?

There has thy sun some sacred, secret throne?

See in yon frozen sea what glories have their birth:

Thence night leads forth the day's illumine the earth."

The writer, Michael Lomonosov, flourished during the first half of the last century. He was the father of Russian poetry, became eminent also as a man of science, and rose to the directorship of the university of St. Petersburg. Born near the icy shores of the White sea, he was far more familiar with auroral phenomena than we are. Though seen in our own country, the luminous meteor is

only an occasional visitant, and there are often long intervals of intermission; but in more northerly latitudes it occurs with great frequency, and with incomparably greater splendour. While also to us merely an object of curiosity and fascination, its brilliant convulsions are of practical utility to the inhabitants of polar climes. Being without the light of the sun in winter for months together, they relieve their long dreary night, compensate for the absence of the solar illumination, and aid in the discharge of the various occupations of life.

"Even in the depth of polar night they find  
A wondrous day; enough to light the chase,  
And guide their daring steps to Finland fairs."

Though the meteoric display has been viewed with astonishment and admiration for ages, alike by the peasant and the philosopher, it still remains one of the unexplained wonders of nature.

The term Aurora Borealis, or Northern Lights, *Nordlichter* of the Germans, properly the Northern Day-break, originated with Gassendi, in France, in the year 1621. The name alludes to the site of the appearance, towards the north part of the heavens, and to its resemblance at times to the faint streaks which mark the sky a little before sunrise. Historical notices of the phenomenon date from the time of Aristotle, who undoubtedly refers to it in his work on meteors, describing it as occurring on calm nights, and comparing the exhibition to flame mingled with smoke, or to the distant view of burning stubble; purple, bright red, and blood colour, being the predominant hues. Seneca, Pliny, and other classical writers, refer to the same strange lights aloft; and mediæval chronicles of swords gleaming, armies fighting, and blood flowing, in the night sky, are allusions to auroral displays distorted by the imaginations of the vulgar.

The following "strange, terrible, and unwonted apparition," observed at Hull on the night of the 3d of September, 1654, the anniversary of the battle of Worcester and the battle of Dunbar, when Cromwell's second parliament was summoned to meet, is thus recorded by an authority of the place: "On a sudden the sky seemed to be of a fiery colour, and there immediately appeared in the air in the east, a huge body of pikemen, several parties marching before as a forlorn hope. Suddenly was beheld in the west another army, which seemed to march towards the eastern army with all possible speed. And then first there was the representation of some skirmishes between parties of each army. Afterwards both parties did engage, and furiously charged each other with their pikes, in such dreadful sort as the beholders were stricken with terror thereat. Both these armies appeared of a red colour. Within a little while, there came from the north-west another army, greater than the former, which marched directly to the place where the former battle was fought. This army was black, and here was perceived horse as well as foot. And now began another battle, far exceeding the former in fierceness and cruelty. Reader, what interpretation thou wilt make of this apparition I know not, neither shall I add anything of my own to the relation; only take notice and

believe it. It is no fiction nor scarecrow, but a thing real, and far beyond what is here reported."

Although we may smile at the panics that have been sometimes caused by auroral displays, not the less solemn is the remembrance of the Divine power which regulates all the wonderful phenomena of the natural world. "If," says the pious Hervey, in his "Meditations," "if this waving brightness which plays so innocently over our heads be so amazing to multitudes, what inexpressible consternation must overwhelm unthinking mortals when the general conflagration commences! Oh! how shall I, or others, stand undismayed amidst the glare of a burning world, unless the Lord Jehovah be our defence? How shall we be upheld in security when the globe itself is sinking in a fiery ruin, unless the Rock of Ages be our support!"

Auroral appearances are so very diversified, that it is impossible to include every particular in a brief and general statement. But the following features are commonly conspicuous in localities where the meteoric lights have the most distinct character, and are revealed in their full glory. A cloud or haze is first seen in the north region of the heavens, which gradually becomes darker, but has very little density, as the stars are sometimes beheld shining brightly through it. This cloud assumes the form of a circular segment, resting at each corner on the horizon. It is soon surrounded by a broad luminous arch, usually of a bluish-white colour, which remains visible for several hours, but is in a state of constant motion. It rises and falls, extends towards the east and towards the west, or breaks in one part, then in another. From this arch, rays shoot forth with the rapidity of lightning one after another towards the zenith, where they unite to form the so-called *corona*, or crown, which encircles the summit of the heavenly canopy. But it is only in rare instances that a perfect crown or circle appears. The grandeur of the spectacle has then attained its maximum; and from this time the lights become faint and intermittent, till they entirely fade from the sky. A strong tremulous motion from end to end is almost always observable in the rays, comparable to the convulsions of a snake, or the flutter of a ribbon agitated by the wind. They have been acquired the name of the "merry dancers" in the Shetlands, while viewed with awe by rude Indian tribes as the spirits of their fathers roaming through the land of souls.

To conceive aright of the magnificence of the display, where its greatest splendour is seen, the effect of colour must be remembered. The arches are sometimes grey, gold yellow, white bounded by a fringe of yellow, or nearly black passing into violet blue. The rays are steel grey, yellowish grey, pea-green, celadine green, gold yellow, violet blue, rose red, and blood red. When the latter colour has been prominent, rustic sages have shaped the crimson beams into aerial confidents.

"Fierce, fiery warriors fight upon the clouds,  
In ranks and squadrons, and right form of war."

Maupeituis describes a very remarkable aurora, seen in Lapland, December 18th, 1786, when an extensive region of the heavens was tinged with

such a lively red that the whole constellation of Orion seemed as if dipped in blood. He adds, that he observed only two of these red coloured lights in that country, where they are exceedingly rare, although the variety of tints is very great. Hence they are regarded by the natives as of portentous omen. But red auroras have of late years been seen in the Shetlands, in many parts of Scotland, and in England from the north to the south extremity. One of a fine blue colour was seen at 10 P. M., October 24th, 1847, when, such was the vigilance of our metropolitan firemen, that they set out in various directions to extinguish the celestial blaze! A crimson aurora was seen October 15th, 1848, when Taurus was magnificently red. The intensity of the light varies from a faint radiance to a lustre nearly equaling that of the moon. Lowe, of Highfield House, remarks: "9 h. 36 m.—Could read the words, 'The Times, Friday, April 9th, 1856.'" An aurora afforded Dr. Dalton sufficient light to read by on an evening in the middle of October, at eight o'clock. Lowenbörgh recognised the phenomenon in bright sunshine.

In the interval between September, 1838, and April, 1839, M. Lotin, an officer of the French navy, and member of a scientific mission sent to the northern seas, observed nearly a hundred and fifty meteors of this class. They were most frequent from the 17th of November to the 25th of January, being the period during which the sun was constantly below the horizon. During this space of time, sixty-four auroras were visible, besides many which a clouded sky concealed from the eye, but the presence of which was indicated by the disturbances produced upon the magnetic needle. On one occasion, while on the north coast of Norway, a light fog appeared between four and eight o'clock P. M., which became coloured on its upper edge, being fringed with the light of the meteor rising behind it. The border at length took the form of a regular arc of a pale yellow colour, and swelled slowly upwards. Rays streamed from it, sometimes in-tantaneously, sometimes gradually, of very various length, but all converging to the same point of the heavens. Now they quivered like a leaf in the breeze; anon they curved like the folds of a serpent. The base of the rays was blood-red, the middle pale emerald, and the remainder clear yellow. Waves of differently coloured light also occasionally intermingled with the rays. "Let it then be imagined that all these vivid rays of light issue forth with splendour, subject to continual and sudden variations in their length and brightness; that these beautiful red and green tints colour them at intervals; that waves of light undulate over them; and, in fine, that the vast firmament presents one immense and magnificent dome of light, reposing on the snow-covered base supplied by the ground—which itself serves as a dazzling frame for a sea calm and black as a pitchy lake—and some idea, though an imperfect one, may be obtained of the splendid spectacle which presents itself to him who witnesses the aurora from the Bay of Alten."

Various results of calculation have been given as to the elevation of aural phenomena. Early observers were disposed to fix the seat beyond the limits of our atmosphere. But this hypothesis is clearly untenable, from the fact of the earth's diurnal motion having no effect upon the apparent position of the luminous display; and while thus partaking the rotation of the globe, other circumstances intimate its purely terrestrial character. Heights ranging from the region of the lower clouds to 500 miles and more above the surface, have been estimated for different exhibitions. The wide geographical area over which the same aurora

has occasionally been seen, undoubtedly involves a very considerable altitude. Thus, one example, that of the 3rd of September, 1839, was observed in the Isle of Skye, by M. de Saussure; at Paris by the astronomers of the Observatory; at Asti, in the Sardinian States, by M. Quetelet; at New-haven in Connecticut, by — Herrick; and at New Orleans by credible witnesses. The remarkably fine display of the year 1716, seen by Halley, and described by him in the "Philosophical Transactions," was observed all over Europe, from the confines of Russia on the east, to Ireland on the west. On the other hand, the evidence is equally decisive at times in favour of a low elevation. A brilliant aurora was seen by — Farquharson, the minister of Alford, in Aberdeenshire, on the 29th of December, 1829, from eight to half past eleven in the evening, above a thick bank of clouds, which covered the tops of the hills to the northward of his residence, and which never rose to any great altitude above the horizon. The same aurora was seen in the zenith, at a quarter past nine, by — Paul, another minister, at Tullynessle, only two miles north of Alford, so that its height could not have exceeded that of the summit of Ben Nevis. Captain Parry, during his third voyage, observed an aurora even between the hills and his ship, anchored at Port Bowen.

(To be concluded.)

*Disobedience to the gentle monitions of the Spirit of Truth, is the sure way to fall by little and little; and finally to become a prey to our soul's enemy.*—It is an awful thing to disobey the gentle monitions of the spirit of Truth, and to give way to reasoning against its requirements, even in little things; how frequently do we see those who do so, fall by little and little, and become a prey to their soul's enemy, even in things which they once thought they never could be induced to do. But those who are faithful in a little, shall be made rulers over more. What can all the world do for thee, if thou couldst gait it, by following its maxims and copying its fashions? Surely, it could afford thee no substantial enjoyment. He who tasted all the gratifications which it is capable of producing in their greatest perfection, and who could say, "whatever mine eyes desired I kept not from thee; I withheld not my heart from any joy"; was obliged to confess in the end, that all its vanity and vexation of spirit, there is no profit in them. The world cannot give the true riches which fade not away, and while its votaries are equally liable to the sorrows and trials of life, they are, through their disobedience, debarred participating in the hope and consolations which are in Christ, and the comfort and support which he mercifully affords those who walk agreeably to his commands. "In the world," says He, "ye shall have trouble, but be of good cheer, I have overcome the world."

Be watchful, said R. B. on his death bed, when addressing his son and daughter. "Be watchful, and the Lord will bless you; beware of the world and its delusions, it often promises what it cannot impart; I have nearly passed through life, and have found; I have no refuge like that of turning in to God, and placing my confidence in his never failing arm of power." If the love and fear of God had their proper place in the mind, and we kept constantly in view our entire dependence upon him, and the great sinfulness of not obeying him in all things, would not our language be, when tempted to deviate, even in small matters, how can I do so, seeing I shall thereby offend my gracious Creator? Should we go on disregarding our duty, how can we expect the Almighty will hear us when we cry unto him in adversity? Having chosen our

own ways, can we think him unjust in not hearing us? How have many suffered deep anguish of mind on a death-bed, and had bitterly to repent their disobedience to his manifested will, before they could feel forgiveness and peace with their Maker, and an evidence that he would receive them.

Be not discouraged, dear young friends, you who have seen the necessity of taking up the cross in your dress and address, and have, in some degree, yielded obedience thereto. Regard not the frowns or the scoffs of a world which lies in wickedness, but acknowledge your allegiance to your dear Redeemer, by a firm and steady compliance with his commands. This will preserve you from the deplorable effects of Satan's transformations, inspire you with holy resolutions, and enable you to maintain them all in godly conversation and purity of life and faith, adorning the doctrine of the gospel by a blameless demeanor. Mimic not fashions, nor cheat yourselves by saying, that you are not old enough or good enough, to appear in that simplicity which Truth requires, for thereby you will deprive yourselves of the good which the Lord has in store for all those who really love and obey him; and instead of becoming such members of the church militant, as he designs you should be, weakness and blindness will come upon you, and in a day to come, deep sorrow and remorse. A consistent walking in conformity with the testimonies of the society with which you make profession, will dignify and ennoble you in the eyes of all those who value uprightness and sincerity. Oh! none have ever had to repent an early sacrifice of their wills to God, or thought that they have too fully served him; but many, when they have seriously reflected on, and come to see the beauty of holiness, and the excellency of a life of righteousness, have lamented that they had not sooner given up to divine impressions, and been more fully devoted to serve the Lord, and walk uprightly before him, whose ways are ways of pleasantness, and all his paths are peace.—From *Observations on Plainness.*

#### Alligators.

We have as yet seen no traces of alligators, though in the Madalian branch they are said to abound, and last spring I saw a very large one; it was a disgusting-looking object, a great flat slimy-looking thing—a tail stuck on a hoghead. They are not, however, dreaded, as they can obtain a very plentiful supply of food from the pigs which constantly swim from bank to bank. Otherwise, it would be unpleasant to have to steer a boat, when the man-devouring reptile strikes his victim from the stern with a blow of his tail. This happened to an unfortunate Malay in the Siol branch of the Sarawak, who was pulling up that river with his wife, in a small canoe. The death of this man drew attention to the monster alligator I have previously referred to, and — Crookshank and Sadam, a very courageous Malay, went down to place a bait on the banks of the Siol. When this was done, they pulled back, — Crookshank steering. They had seen nothing of their enemy, so that Sadam jumped up, and flourishing his spear began in a loud voice to defy the alligator, using very insulting terms. Suddenly he dropped his weapon, and seizing his paddle, began pulling away with might and main, for the animal had just risen to the surface of the water, not twenty yards from the boat. Though the steersman's position was by no means an agreeable one, Crookshank could not help laughing at the change of countenance of his companion, who excused himself by saying, it was the suddenness of his challenge being accepted that made him pull away in an excited manner. "But now," he added, rising to his feet, "let him

show himself again, and I will not attempt to run." He had scarcely uttered the words, when the alligator, which was accustomed to follow boats, again rose to the surface. There was no more boasting, but a frantic attempt to get out of the Siol branch. The alligator took the bait, but got rid of the long rattan fastened to it, by accidentally or purposely winding it round a tree, then breaking it off. However, though his body was not secured, it was most probable he died from the lacerations of the stomach, caused by his endeavours to break the rattan, as I have not heard of his being seen since. It was up the Siol branch that a place was found where the body of one of his victims appeared to have been beaten, to break the bones, previously to swallowing. The Malays say the alligators do it by repeated blows of their ponderous head; in fact, one of the large teeth of the reptile was found snapped off on the above mentioned spot.

As I have told the story of Sadam's alarm at the sudden appearance of the alligator, I ought, in justice to him, to mention an occurrence that took place last year. He and his brother Dand, were wandering near Tanjong Po, a rocky point near the entrance of the Sarawak river, when they came to a cave; hearing some movement inside, they entered, and saw two huge alligators at the further end. Knowing that these ferocious reptiles are not very active, except on soft mud, or in the water, they determined to attack them. They were armed with spears and swords, and entering the cave, Sadam approached the first beast, and actively springing clear to avoid its rush, drove his spear into the soft side, and with his brother's aid, soon severed the head from its body. Encouraged by their success, they advanced to attack the second, which was vainly endeavouring to escape over the broken rocks, and soon succeeded in destroying it.

I was conversing one day with a French artist, who had resided many years in Siam, and he told me he had seen them catch the alligator in the following manner:—In the upper Mæman, where the river is broad and shallow, but with deep pools occasionally, the alligators are both numerous and fierce; yet the inhabitants, who are very fond of eating the flesh, pursue them with great courage and skill. Six or seven men proceed to a pool where one of these reptiles is supposed to lurk, and with long poles sound every portion of it; if an animal be there, he is soon disturbed, and driven towards the shallower part of the river, even to the sand-banks, where expert men throw their lassoes round his feet and tail. When they think him somewhat exhausted, a bold hunter, springing on the alligator's back, places his hands over the creature's eyes, which then always remains quiet. A noose is quickly slipped over his head, and the animal is hauled ashore. Alligators lay their eggs in the jungle. I remember hearing he late—

Bereton told the following story: He was one day hunting in the jungle near the Sakarang fort, when his dogs gave tongue. He followed up quickly, and found they had disturbed a female alligator laying her eggs. Directly she saw him, she gave chase, and he had some difficulty in getting away from her, though the dogs distracted her attention. Alligators very seldom attack boats, but a case occurred in the Sambas river, where a man was dragged out of a large prahu from among twenty of his companions. My own party was never in danger from them but once, when a large alligator rose within three feet of the boat; but before he could do anything, I had put a rifle-ball into his side, as I happened at that moment to be looking out for a shot at them on the mud banks.—*Life in the Forests of the Far East.* By Spenser St. John, F. R. G. S., F. E. S.

*Curious Manufacturing Processes at the London Exhibition.*—There is one portion of the exhibition building to which (says the *London Times*), we should wish to direct the attention of general visitors who may be in search of an hour's instructive amusement. This is what is called the Process Court, on the south ground floor of the building, between the Glass Court and the wall of the picture galleries, where the mechanical processes gone through in various branches of industrial and art manufacture are exhibited. Here is shown almost every variety of sewing machine, working by hand labour like steam engines, literally turning out yards of well-sewn cloth in the space of two or three minutes. Here is ivory turning, lithographic printing, steel and copper-plate printing, machines for making sculpture, for striking dies and medals, for making envelopes, printing linen, and a type-composing machine, where the operator sits down before a row of keys like a piano, and the copy being before him, plays into type such articles as are now before the reader. This machine, the principle of which is, however, not entirely new, is, as we have said, like a piano in front, each note or key being marked with the various kinds of letters or numerals used in composing. These keys communicate by wires with the corresponding letters in reservoirs above, so that when a key note is depressed a type slides from the reservoir down an inclined plane, into the receiving line, and thence by means of a small pusher, put in motion by a treadle worked by the player's foot, it is pushed forward to make room for the succeeding type. The machine is furnished with as many reservoirs and keys as there are distinct characters in a font of type, so that any player who can read the manuscript and the letters on the keys, can set up words and sentences as fast as his skill in the use of the instrument admits. By means of these facilities it is said that a compositor, after a short time of practice, is able to set up from twelve to thirteen thousand letters per hour, and there seems no reason why, with the rapid habit acquired by constant use, still more might not be done, as the machine itself in no way sets limits as to speed. Care is taken that in its passage from the reservoir to the receiving line, the face of the type is never touched, and advantage is taken of this circumstance that only a certain description of type is generally used to arrange the key-notes in such a manner that those most required shall be most accessible to the fingers of the player.

*A Fool and a Gazing-stock.*—She was much concerned for her grand-children, and when any of them came to see her, she advised them to prize their precious time, saying, "I was once young as well as you, or others, and delighted in the pleasures and vanities of this world." But the Lord in his love and mercy met with me, yea, he laid the axe to the very root of the tree, and made me willing to part with all my lovers, my pride and vanities, and become a fool and a gazing-stock to the world. But all was as nothing to me in that day, in comparison to the love and favour of God to my poor soul, that had long wanted peace with the Lord. In that day it was my care to accompany myself with those that I thought walked most circumspcctly, and dwelt nearest the Lord in their spirits; and not to look out at, or take example by those that were for most liberty, as too many now do."—*From a memorial of Sisannah Gorton. Piety Promoted.*

The Christian cannot rejoice but through suffering, nor abound but through previous abasement.

### The Vampire Bat.

They abound from Paraguay to the Isthmus of Darien; and the reports of early travellers, and the figurative language of poets, so long discredited, are found to be much nearer the truth than the world has believed. These creatures are a formidable enemy to the herdsman, who finds it difficult to rear cattle with any success or profit, from the havoc they commit among his calves. I have often had my own horses and mules bled and sucked by these sanguinary phyllostomata; morning after morning have I seen beasts of burden, once strong, go staggering from loss of blood, drawn during the night by these hideous monsters. In almost every instance they had taken the life-current from between the shoulders, and when they had finished their murderous work the stream had continued to flow. The extremities, however, are the usual points of attack; and the ears of a horse, the toes of a man, and the comb of a cock, are choice morozcaux for the display of the vampire's phlebotomizing propensities.

The exact manner by which this bat manages to make an incision has long been a matter of conjecture and dispute. The tongue, which is capable of considerable extension, is furnished at its extremity with a number of papille which appear to be so arranged as to form an organ of suction, and their lips have also tubercles symmetrically arranged. These are the organs by which it is certain the bat draws the life-blood from man and beast, and some have contended that the rough tongue is the instrument employed for abrading the skin, so as to enable it the more readily to draw its sustenance from the living animal.

Others have supposed that the vampire used one of its long, sharp canine teeth to make the incision, which is as harmless as that made by a fue needle. Wallace says that he was twice bitten,—once on the toe, and a second time on the tip of the nose. "In neither case," writes that explorer, "did I feel anything, but awoke after the operation was completed."

The wound is a small round hole, the bleeding of which it is very difficult to stop. It can hardly be a bite, as that would awake the sleeper; it seems most probable that it is either a succession of gentle scratches with the sharp edge of the teeth, gradually wearing away the skin, or a triparting with the point of the tongue till the same effect is produced. My brother was frequently bitten by them; and his opinion was that the bat applied one of its long canine teeth to the part, and then flew round and round on that as a centre, till the tooth, acting as an awl, bored a small hole,—the wings of the bat serving at the same time to fan the patient into a deeper slumber. He several times awoke while the bat was at work, and though of course, the creature immediately flew away, it was his impression that the operation was conducted in the manner above described. There is much in their dental arrangement to make this seem plausible,—though Dr. Gardener, an accurate naturalist and observer, is of the opinion that it wounds its victim by the sharp, hooked nail of its thumb. Some of these bats measure two feet between the tips of their wings.—*Sketches in Brazil.*

*Preservation through watchfulness.*—He was very watchful lest he should be led away from the grace vouchsafed to him; frequently refraining from conversation apparently innocent, and in which he delighted, lest at any unguarded moment he might grieve that Holy Spirit, whom he felt to be his comfort and guide.—*From a testimony concerning Daniel Wheeler.*

For "The Friend."

A Few Extracts from the Correspondence of John Kendall, England, with some Brief Remarks.

Towards the close of a long and useful life, our beloved Friend, at the commencement of the present century, evidently from emotions which had long been secretly at work within him, penned the following:

"The state of the society of which I am a member, is often a subject of my serious consideration. I fear for many among us that they are verging towards a conformity to the customs and manners of the times, out of which our forefathers were led, especially as to speech and apparel. I observe in many a compliance with the custom of speaking to a single person in the plural number instead of the singular; and of changing the colour and fashion of the clothes as the times require, so that they are not to be distinguished from their neighbours by their outward appearance: this I fear will lead to a conformity in other customs which are not suitable to the plainness and simplicity for which we were distinguished in the early times of our society. I fear likewise for some, that they will grow weary of that way of worship which has been adopted by us of following a great part of the time of our meetings to silence, without having any one appointed to speak at fixed times as a public preacher, or to make use of prayer in a customary way. When in our religious assemblies we are at times deprived of ministerial help, there is this advantage in it, if rightly improved, that it puts us upon enquiring into the ground of our religion; what experience we have of Divine support, separate from all secondary means, should they be withdrawn from us. We are too apt to depend on the help we have been used to receive from the labours of those who are employed as the ambassadors of Christ; and when they have no longer a message to us, the time we spend together is unpleasurably wasted for want of that self-employment, in which we might find, through the gracious assistance of our Divine Instructor, that which would prevent all tediousness, and bring us to say, let not man teach us, but do thou teach us." 1802.

"The state of our society is often the subject of my thoughts. When I perceive a declension among us in many places, as to the life of religion, I am led to fear the good testimonies we have had to bear should be made light of, or neglected, and gradually lost. From the most early times of the society we were distinguished by a conduct in divers respects different from our neighbours; and our dissent was not from a view of singularity, but from an apprehension that there was need of a further reformation than had taken place among the various professors of the christian name, and that many customs of former times were retained not consistent with the spirituality of that holy religion, which we are called to partake of. When it was found we could not prevail to introduce better ways than had been adopted, we thought it right to attend to our own conscientious scruples; and by degrees formed a society of religiously disposed persons, whose principles and practices were more agreeable to christian simplicity, and the nature of true religion." 1807. And in his address to London Yearly Meeting, 1811: "I take this opportunity of advising my dear Friends to avoid the great harm which comes from unsuitable connections by marriage with persons of different persuasions, both in a religious and civil capacity," and on a similar occasion, 1813: "As that which first formed us to be a people was love, so it will be the support of the society, when all other supports fail and come to an end." Thus was our dear departed Friend concerned, and I have no

doubt many feel unity, full unity with every sentence.

Oh! then, may we be enabled so to conduct and demean ourselves in this day of too much indifference, that we may be accorded worthy in some small degree to maintain the true order and the ancient decorum of our first and valued Friends. There has of late years been in most of the denominations of religious professors, a great deal said about the new birth, and faith in the Lord Jesus Christ, and this, it is to be feared, arising from exciting and creaturely feelings, or rather passions of the senses wrought up to a high pitch, by much creaturely activity; and it is to be feared too many of our younger Friends have been a little tinctured with it; for a very calm, serene, cool, and quiet state of mind is absolutely necessary to hear the "still, small voice" within; and then after we become acquainted with the teachings of the Good Shepherd, so as rightly to distinguish it from all others, to be so subdued from all self-will from earthly and carnal affections and lusts, and to have our hearts and minds renewed and Christ so formed within us, that we may be enabled truly to say with the great apostle, "I live, yet not I, but Christ liveth in me," is something infinitely beyond what has been for years going on at protracted or revival meetings. The anointing, as it was received even under the old covenant, evidently made the recipients grave, righteous, and distinguished characters, and well it might, for the anointing was from and was the Spirit of Christ upon or within them. And the new covenant in these respects is in no wise lessened, but as our Saviour said, "by their fruits shall ye know them," so we now see many of these very characters in deadly hostility to each other; instead of meekness, long sufferings, forbearing and forgiving, it is alas! the very reverse.

Many of our early Friends whilst they were clearly given to foresee much that has occurred, have also declared of a very glorious time that should follow, so that I was made willing to encourage my Friends who may feel a little as one formerly, who said, "By whom shall Jacob arise, for he is small!" to remember that it is not by "might or strength, (human,) but by my spirit saith the Lord." And not a few have testified that every attempt at innovations in our Society should be frustrated by an All-wise and overruling Power. Oh! then, may none be too much cast down, for the Lord will not forsake them; his power and grace is the same as ever, and the cause of Truth and righteousness must finally prevail. S. C.

East Shelby, Orleans Co., N. Y.,  
29th of Sixth month, 1802.

From Evenings at the Microscope.  
Jelly-Fishes.

As this afternoon was delightfully calm and warm—the very model of an autumnal day—I took my muslin ring-net and walked down to the rocks at the margin of the quiet sea. Nor was I disappointed; for the still water, scarcely disturbed by an undulation, and clear as crystal, was alive with those brilliant little globes of animated jelly, the Ciliograde and Naked-eyed Medusa, apparently little more substantial than the clear water itself. Multitudes of them were floating on the surface, and others were discerned by the practised eye, at various depths, shooting hither and thither, now ascending, now descending, now hanging lightly on their oars, and now, as if to make up for sloth, darting along obliquely with quickly-repeated vigorous strokes, or rolling and revolving along, in the very wantonness of humble happiness.

After gazing awhile with admiration at the undisturbed jollity of the hosts, I made a dip with my net, the interior of which, on lifting it from the water, was lined with sparkling balls of translucent jelly. They were far too numerous to allow me to transfer them all to captivity; they would soon have choked up and destroyed one another; I therefore selected the finest and most interesting, shaking an example or two of each kind into my glass jar of sea-water, where they immediately began to frolic and revel as if still in the enjoyment of unrestricted liberty. And here they are.

Among these bright and agile beings which are shooting their wayward traverses across each other, and intertwining their long thread-like tentacles, we will select one or two for examination, as samples of their kindred. And first let me isolate this active little Beroë, (*Cydopea pomiformis*.) which I dip out with a tea-spoon and transfer to this other glass jar, that we may watch its form and movements unaffected by the presence of its companions.

We see, then, a little ball, almost perfectly globular, except that a tiny wart marks one pole, of the size of a small marble, and apparently turned out of pure glass, or ice, or jelly—according to your fancy—perfect transparency and colourlessness being its characteristics, so much that it is not always easy to catch sight of the little creature, except we allow the light to fall on the jar in a particular direction. From two opposite sides of the globe proceed two threads of great length and extreme tenacity, which display the most lively and varied movements.

These filaments shall occupy us for a few moments. We trace them to their origin, and find that they proceed each from the interior of a lengthened chamber, on each of two opposite sides of the animal. Suddenly, on the slightest touch of some foreign object, one of the threads is connected to a point and concealed within its chamber, but is presently darted forth again. When the lovely globe chooses to remain still, the threads hang down, gradually lengthening more and more, till both extremities lie along the bottom of the jar, extended to a length of six inches from the chamber. Then we see that this delicate thread is not simply, but is furnished along one side, throughout its length, at regular distances, with a row of secondary filaments, which project at right angles from the main thread.

These secondary filaments constitute an important element in the charm which invests this brilliant little creature. They are about fifty in number on each thread, and some of them are half an inch long, when fully extended, but it is seldom that we see them thus straightened; for they are ever assuming the most elegant spiral coils, which open and close, extend and contract, with an ever-changing vivacity. The animal has a very perfect control over the threads, as well as over the secondary filaments in their individuality. One, or both, are frequently projected from their chambers to their full extent by one impulse; sometimes the extension is arrested at any stage, and then proceeded with, or the thread is partially or entirely retracted. Sometimes the secondary filaments are coiled up into minute balls scarcely perceptible, or only so as to give to the main thread the appearance of small beads remotely strung on a fine hair; then a few uncoil and spread divergently; contract again, and again unfold; or many, or all, interchange these actions together, with beautiful regularity and rhythmical uniformity, repeating the alternation for many times in rapid succession.

The beauty and diversity of the forms assumed by these elegant organs beguile us to watch them

with unwearyed interest, and we wonder what is her function. For, with all our watching, this is by no means clear. They are certainly not organs of motion. At times it seems as if they were cables intended to moor the animal, while it floats at a given depth; or we see them with their extremities spread upon the bottom, to which they appear to have a power of adhering, thus forming fixed points, from which the little globe rises and falls at pleasure, shortening or lengthening its delicate and novel cables, maintaining all the while its rest position.

When the *Cydippe* swims, however, which it does with great energy, the threads seem unemployed, streaming loosely behind, and evidently taking no part in the progression, though still adding beauty and grace to the *taut ensemble*. The organs by which the sprightly motions of the whole animal are effected are of quite another character, and shall now engage our attention.

You have doubtless observed, while gazing on an animal, a peculiar glittering appearance along its sides, mingled in certain lights with brilliant rainbow-reflections. Now let us take an opportunity, when it approaches the side of the glass, to examine this appearance with a lens. The globe, you see, is marked by longitudinal bands, eight in number, set at equal distances, and ranging like peridians, except that they do not quite reach to either pole. These bands are the seats of the bottle organs, which are highly curious, and in one sort peculiar.

Each band is of considerable width in the middle, but becomes narrower towards the extremities. It carries a number—usually from twenty to thirty—of flat thin membranous fins, set at regular distances, one above the other, which may be considered as single horizontal rows of cilia, agglutinated together into flat plates. Each plate has a rapid movement up and down, from the line of its insertion into the band, as from a hinge, and thus striking the water downwards, like a paddle. The whole band may be likened to the paddle-wheel of a steamer, except that the paddles are set in a fixed line of curvature instead of a revolving circle. The effect, however, is exactly the same; that of adding the beautiful little globe vigorously through he water. The prismatic colours are produced by the play of light on their glittering surfaces, which are ever presented to the eye of the beholder at hanging angles.

We rarely see these rows of paddle-fins wholly at rest, but occasionally one or two bands will be done in a state of vibration; or one or more will suspend their action while the rest are paddling. Sometimes in a band that is at rest, a minute and momentary wave will be seen to run rapidly along its length. All these circumstances show that the dilatory motion is perfectly under the control of the animal's will, not only in the aggregate, but in every part.

Look at the pretty little *Medusa* in his new abode, at once recovering all his jelly-hood as he feels the water laving him, and dashing about his new domain with a vigour which makes up for rest.

It is a tall bell of glass, a little contracted at the mouth—its outline forming an ellipse, from which about a third has been cut off. The margin of this bell carries four tiny knobs, set at equal distances, and thus quartering the periphery; and these are the more conspicuous because each one is marked with a bright-orange coloured speck. Physiologists are pretty well agreed to consider such specks as these, on the margins of the smaller *Meduse*, as eyes—rudimentary organs of vision, capable, probably, of appreciating the presence

and the stimulus of light, without the power of forming any visual image of external objects. You will not gain much information about their function from microscopic examination; for all you can discern is an aggregation of coloured specks, (pigment-granules,) in the midst of the common jelly.

The knobs, however, are connected with other organs; for from each of them depends a highly sensitive and very contractile tentacle. Sometimes one, or more, or all, of these organs hang down in the water motionless, lengthening more and more, especially when the bell is still, until they reach a length some twelve or fifteen times that of the bell, or *umbrella*. Then suddenly one will be contracted, and, as it were, shrivelled, to mere fragments of a quarter of an inch long; then lengthened again to an inch or two; then shortened again. Now the little bell resumes its energetic pumping, and shoots round and round in an oblique direction, the summit always going foremost, and the tentacles streaming behind in long trailing lines. Now it is again arrested; the bell turns over on one side and remains motionless, and the tentacles, as "fine as silk-worms' threads," float loosely in the water, become mutually inter-tangled, instantly free themselves, pucker and shrivel up, slowly lengthen, and hang motionless again, or, as the bell allows itself to sink slowly, are thrown into the most elegant curves and arches.

Though these tentacles look at first like simple threads of extreme tenuity, yet when viewed closely they are seen to be composed of a succession of minute knobs separated by intervals—like white beads strung on a thread; the beads being more remote from each other in proportion as the tentacle is lengthened.

This structure is worthy of a more minute investigation. We will, therefore, confine our little *Sarsia* in this narrow glass trough, which is sufficiently deep to allow its whole form to be immersed, though somewhat flattened; which is an advantage, as its movements are thereby impeded. Now, with a power of 300 diameters you see that each of the knobs of the tentacle is a thickening or swelling of the common gelatinous flesh, in which are imbedded a score or two of tiny oval vesicles, without any very obvious arrangement; but for the most part so placed that the more pointed end of each is directed toward the circumference of the thickening. The intermediate slender portions of the tentacle—the thread on which the beads are strung—is quite destitute of these vesicles.

These little bodies are called *cnidæ*, and, in the whole of this class of animals, and also in that of *Zoophytes*, they play an important part in the economy of the creature.

Each one of these tiny vesicles carries a barbed and poisoned arrow, which can be shot forth at the pleasure of the animal with great force, and to an amazing length—that hundreds are usually shot together—and that this is the provision which the All-wise God has given to these apparently helpless animals for securing and subduing their prey.

There is, however, another organ still more conspicuous in our little *Sarsia*, of which I have not yet spoken. As the whole animal has the most absolute transparency, we see that the roof of the bell is much thicker than the sides, and that it gradually thins off to the edge. The interior surface is called the sub-umbrella, and it carries within its substance four slender tubes, which, radiating from the centre of the roof, proceed to the margin, where they communicate with another similar canal which runs round the circumference, sending off branches into the tentacles. This is

the circulatory system; and you may see, with the magnifying power which you are at present using, that a clear fluid is moving rapidly within all these canals, carrying minute granules; not with an even forward current, but with an irregular jerking vacillating movement, as if several conflicting eddies were in the stream. Yet we discern that, on the whole, the granules are moved forward; passing from the centre of radiation towards the margin, when we see them slip into the marginal canal from the several mouths of the radiating canals.

This is a very simple and rudimentary blood-system. There is here no heart with its pulsations, no proper arteries or veins, no lungs for oxygenation; but the products of digestion are themselves thus circulated through the system. And this brings me back to the central point, whence you see depending the curious organ I spoke of. A long cylinder of highly moveable and evidently sensitive flesh hangs down from the middle of the roof exactly like the clapper of a bell; and as if to add to the resemblance, this same clapper is suspended by a narrow cord, and is terminated by a knob.

Sometimes this whole organ is allowed to hang about as low as the edge of the bell; then it gradually lengthens to twice, thrice, nay to five times that length; the tongue lolling out of the mouth to a most uncouth distance, and even the suspending cord (as I presume to term the attenuated basal portion) reaching far beyond the margin; then, on a sudden, like the tentacles, the tongue is contracted, thrown into wrinkles, curled into curves, and the whole is sheltered within the concavity; presently, however, to loll out again.

This proboscis-like organ is called the peduncle, and its office is that of a stomach, of which the knob at the end is the mouth, having a terminal orifice with four minute lips. The flexible substance and rapid motions of this peduncle are suited to enable it to seize small passing animals that constitute its prey; and I have seen the *Sarsia* in confinement seize with the mouth, and swallow, a newly-hatched fish, notwithstanding the activity of the latter. For hours afterwards, the little green-eyed fry was visible, the engulftment being a very slow process; but the medusa never let go its hold; and gradually the tiny fish was sucked into the interior; and passed up the cavity of the peduncle, becoming more and more cloudy and indistinct as digestion in the stomach dissolved its tissues.

The greater portion of the food is by-and-by discharged from the mouth, the fluids which have been extracted from it being on the other hand carried up through the base of the peduncle, and distributed along the four radiating vessels, conveying nutrition, supply of waste, and growth to all parts of the system.

*The Young in Years.*—"Oh, how the love of God has flowed in my heart towards some young in years, compared with myself, and the breathing of my soul has been for them, that they may keep in the simplicity, not suffering the example of others to cause them to stumble at the cross of Christ, for a dreadful day will come upon all the careless, and those who in their conduct deny him before men." At another time he remarked, "I have had a testimony to bear against little things, (as many call them,) I have been faithful thereto, and I feel peace, substantial peace."—*Joseph Delaplain*. 1799.

What danger there is in indulging a too earnest desire of standing well with the world, or in cherishing a too anxious regard for its good opinion.

## THE CROWDED STREET.

BY WILLIAM CULLEN BRYANT.

Let me move slowly through the street,  
Filled with an ever shifting train,  
Amid the sound of steps that beat  
The murraining walks like Autumn rain.

How fast the fitting figures come!  
The mild, the fierce, the stony face—  
Some bright with thoughtless smiles, and some  
Whose secret tears have left their trace.

They pass to toll, to strife, to rest—  
To halls in which the feast is spread—  
To chambers where the funeral guest  
In silence sits beside the dead.

And some to happy homes repair,  
Where children, pressing cheek to cheek,  
With mute caresses love to declare  
The tenderness they cannot speak.

And some, who walk in calmness here,  
Shall shudder as they reach the door  
Where one who made their dwelling dear,  
Its flower, its light, is seen no more.

Youth! with pale cheek and slender frame,  
And dreams of greatness in thine eye!  
Go'st thou to build an early name,  
Or early in the task to die?

Keen son of trade, with eager brow!  
Who is not fluttering in thy snare?  
Thy golden fortunes tower they now,  
Or melt the glittering spires in air?

Who of this crowd to-night shall tread  
The dance till daylight gleam again?  
Who sorrow o'er the thimble dead?  
Who write in the annals of mortal pain?

Some, famine-struck, shall think how long  
The cold, dark hours, how slow the light;  
And some, who flaunt amid the throng,  
Shall hide in dens of shame to-night.

Each, where his tasks or pleasures call,  
They pass, and heed each other not.  
There is who heeds, who holds the all  
In his large love and boundless thought.

These struggling tides of life that seem  
In wayward, aimless course to tend,  
Are eddies of the mighty stream  
That rolls to its appointed end.

*The great work of the Ministry.*—This is the great fundamental, "that God is light, and in him is no darkness at all," and the great work of the ministry is to show men where this light is, and to turn men from the darkness, wherein is the power of Satan, unto this light, wherein is the power of God. And be that comes into this light, and into this power, is owned in the light and in the power, wherein is the life of all the saints, and the true fellowship with the Father and the Son, and one with another. And the true trial of spirits is not by an assent to doctrines (which the hypocrite may assent to on the one hand, and the true believer may startle at on the other hand,) but by feeling of them in the inward virtue of the light, in the Spirit, and in the power. This was the apostle's way of trial, "I will know, not the speech of them which are puffed up, but the power; for the kingdom of God is not in word, but in power." A man may speak high words concerning the kingdom, and get all the doctrines about it, and yet be a stranger to it, and quite ignorant of the power; and another may waver diverse doctrines concerning it (perhaps some of those which men call fundamentals,) and yet be a citizen of it, and in the power.—*Isaac Pennington.*

Selected.

[As many of our subscribers are interested in knowing the provisions of the Tax Bill recently enacted by the Congress of the United States and approved by the President we give the following as the best synopsis of it which we have been able to obtain, from the portions published in different periodicals.

It is entitled "An Act to Provide Internal Revenue to Support the Government, and pay interest on the Public Debt."]

To carry out the provisions of the bill a department of Internal Revenue is created; the President, with the consent of the Senate, is empowered to appoint a commissioner to preside over it, whose salary is to be \$4,000 per annum. The President is also empowered to create convenient collection districts in the several States, but no State (except California,) shall be divided into a greater number of districts than it has representatives in Congress. The President, with the advice of the senate, is to appoint a collector and assessor for each district. The duty of the latter is to assess the value of property liable to be taxed under this bill; of the former, to collect the assessment. The assessor is entitled to a compensation of three dollars per day while preparing for his duties, and five dollars per day while actually engaged in his duties, together with one dollar for every hundred names contained in the tax list within his district. The collector is allowed, as compensation in full for himself and such deputies as he may appoint, four per cent. on all sums collected up to \$100,000; above that amount, one per cent. on all sums collected, provided that in no case shall his compensation exceed ten thousand dollars per annum. The district assessors and collectors are authorized to appoint deputies; for the conduct of the deputy collectors the district collector is responsible. The deputy collector is paid by his principal, as we have stated, the assistant assessors are allowed three dollars per day for each day engaged in their duty, and one dollar for each hundred names on their tax list, the same as the district assessor. The collectors and assessors may sub-divide their districts.

On or after the first of Eighth month next, it is the duty of all persons liable to be taxed (except on incomes) to furnish to the assessors an account of the same, and the assessor is directed to make an examination within his district of the persons and property liable to taxation. For this purpose he is empowered to make such examination as may be needed. The bill goes into operation on the first of Eighth month; but the income tax is for the year ending with Twelfth month next, and is collectable on and after the first of Fifth month next, and each year thereafter up to 1866. The duty on liquor is imposed on all manufactured after the first of Seventh month. The assessors are directed to make out lists of the property assessed, to notify owners of the same, and to advertise where such lists may be seen. The district assessor will hear any person who feels aggrieved by his assessments, and his decision on such complaints will be final; but appeal may be made to the Commissioner of Internal Revenue for such relief as he may be disposed to grant, and he may refund the whole or part of the money unjustly paid.

On and after the first day of Eighth month next, all persons engaged in manufacturing, liable to duty under this act, are required:

"Before commencing, or, if already commenced, before continuing any such manufacture, for which he, she, or they may be liable to be assessed under the provisions of this act, and which shall not be differently provided for elsewhere, within thirty days after the date when this act shall take effect,

he, she, or they shall furnish to the assistant assessor a statement, subscribed and sworn to, or affirmed, setting forth the place where the manufacture is to be carried on, name of the manufacturer, the proposed market for the same, whether foreign or domestic, and generally the kind and quality manufactured or proposed to be manufactured.

"He shall within ten days after the first day of each and every month, after the day on which the act takes effect, as hereinbefore mentioned, or on or before a day prescribed by the Commissioner of Internal Revenue, make return of the products and sales or delivery of such manufacture in form and detail as may be required, from time to time, by the Commissioner of Internal Revenue.

"All such returns, statements, descriptions, memoranda, oaths, and affirmations, shall be in form, scope, and detail as may be prescribed from time to time, by the Commissioner of Internal Revenue."

An income tax of three per cent. is levied on all incomes in excess of \$600. On all incomes in excess of \$10,000, five per cent. goes to the government. On all incomes in excess of \$600 received from property in the United States by persons residing out of the United States and not in its service, five per cent. is imposed. On incomes in excess of \$50,000 per annum, a tax of 7½ per cent. is laid. Several distinctions are made, however. For instance, as will be seen hereafter, a duty of three per cent. is collected on all railroad dividends. In estimating one's gains, the income derived from interest on railroad bonds or shares is excluded; and on like principle, incomes derived from the following sources are not estimated: From advertisements, dividends on stock, dividends on capital or deposits in any bank, trust company, savings bank, insurance, gas, railroad, bridge, express, ferry-boat, and steamboat company, and from the manufacture of any article upon which a stamp or *ad valorem* duty is laid. Incomes derived from interest on securities of the United States are taxed but one and a half per cent., and from all incomes may be deducted the amount paid for State and local taxes. The income tax is laid upon all incomes for the year ending Twelfth month next, and is collectable on the first of Seventh month, 1863, and each year thereafter up to 1866, when the time expires as regards the income tax, if the same be not renewed.

The tax on spirits commences on the 1st of Seventh month.

The tax on manufactured articles, dividends, stamps, etc., on the 1st of Eighth month.

The tax on incomes is due on the 1st of Seventh month, 1863.

Manufacturers are required to pay the duty at the time the goods are to be removed from the premises. Whether selling for cash or on time, this, of course holds, good. Thus, in addition to selling goods on time, there will be the further additional risk of losing three per cent. of good and lawful money paid to the government. Returns are required to be made monthly or quarterly, or at such times as the Commissioners may determine.

One per cent. tax is laid on the gross receipts of insurance companies for premiums. This clause goes into effect on the 18th of Tenth month. Mutual insurance companies, whose business is confined to insuring the property of its members, and who are to make no dividends, or have or to have no profits, are excluded.

On passports issued after the 1st of Seventh month a duty of 83 is levied, to be paid when application is made to the Secretary of State for said passport.

On and after the date when this act shall take effect, the tax on each head of cattle slaughtered or sale is chargeable.

The tax on auction sales is imposed on sales on and after the 1st of Eighth month.

No person subject to pay license can continue a business legally without license after the 1st of eighth month. License is to be granted to any resident of the United States, but nothing in this act interferes with the license laws now in force, and with any license law that may hereafter be passed.

In the States where the law cannot be enforced present, five per cent. will be imposed as interest on the amount collectable under the law.

Severe penalties are imposed for violating or attempting to violate the law, and summary powers are given for disposing of the property of delinquent tax-payers. Five per cent. additional is added in most cases for the retention of the amount of the tax after it has been demanded and has become due. With regard to the stamp act, agreements of whatever nature made on paper requiring stamp are made invalid and of no effect if a stamp be not used, in addition to a fine.

On and after the 1st day of Eighth month, 1862, there shall be levied the following taxes: On all bred cattle exceeding 18 months old, slaughtered for sale, 30 cents per head; on all calves and cattle slaughtered for sale, under 18 months old, 5 cents per head; on all hogs exceeding 6 weeks old, slaughtered for sale, when the number thus slaughtered exceeds 20 in any one year, 10 cents per head. On all sheep slaughtered for sale, 5 cents per head: Provided that all cattle, hogs, and sheep slaughtered by any person for his or her own consumption shall be exempt from duty.

On all receipts for advertisements, a tax of 3 per cent. is to be levied; papers excluded from the bill, 10 per cent. Papers not circulating 2000 copies, or whose income from advertisements is less than one thousand dollars per annum, are not included. All periodicals are subject to the same tax as newspapers. The amount received for advertisements is excluded from taxation under the head of income tax; on paper there is an *ad valorem* tax of 3 per cent. Printers' ink is not taxed.

A duty of 25 cents on each hundred dollars is to be paid on the gross amount received by auctioneers; brokers acting as auctioneers, same tax. On all bank dividends, 3 per cent. Railroad dividends, 3 per cent. On gross receipts on toll bridges, 3 per cent. Railroad companies, 3 per cent. Dividends, when the annual income from an enterprise is over \$600 and not exceeding \$10,000, 3 per cent.; ditto, when over \$10,000 and not exceeding \$50,000—on excess over \$600—5 per cent.; ditto, exceeding \$50,000, 7½ per cent. Railroads—for carrying passengers by steam—on gross receipts, 3 per cent.; ditto, horse, 1½ per cent.; ditto, on amount of interest on bonds, 3 per cent. On the gross receipts of steamboats, except ferry boats, 3 per cent. Ferry boats propelled by oars or steam, on gross receipts, 1½ per cent. On dividends of trust companies, 3 per cent.

Bone, copper, glass, hemp, iron, lead, pottery, seal, wood, (in.) brass, cotton, gold, horn, hoop-iron, ivory, leather, silk, tin, wool, bristles, candles, gutta percha, india rubber, jet, jewelry, lard, tallow, wax, paraffin, card, &c.) silver, willow, iron, &c. and of other materials not otherwise specified, each 3 per cent. on the gross value of the manufactured article, and not as some suppose, on the net profits derived therefrom.

The following articles are not considered as manufactured articles by this law: Bricks, con-

centrated milk, books, malt, newspapers, pig iron, stoves, coal tar, timber, flour, printers' ink, pamphlets, plaster.

Persons engaged in the following businesses are required to take out license, for which they will be charged the amounts following: apothecaries, \$10; auctioneers, \$20; bankers, \$100; billiard tables, each, \$5; brewers, \$25 and \$50; brokers, \$50; brokers in land warrants, \$25; bowling alleys, for each alley, \$5; cattle brokers, \$10; claim agents, \$10; coal oil distillers, \$50; commercial brokers, \$50; confectioners, \$10; circuses, \$50; dentists, \$10; distillers, \$12 50 to \$50; eating-houses, \$10; horse-dealers, \$10; hotels, see "hotels," from \$5 to \$200; jugglers, \$20; lawyers, \$10; livery stable keepers, \$10; manufacturers, \$10; peddlers, see "peddlers," from \$5 to \$20; photographers, \$10; pawbrokers, \$50; physicians, \$10; retail dealers; \$10; retail dealers in liquors, \$20; stills, from \$12 50 to \$25; surgeons, \$10; tobacconists, \$10; theatres, \$100; tallow chandlers, \$10; soap makers, \$10; wholesale dealers, \$50; wholesale dealers in liquors, \$100.

## THE FRIEND.

SEVENTH MONTH 26, 1862.

The policy now adopted by the United States Government in relation to the emancipation of the slaves, the earnestness with which the President has urged the Representatives of the Border States to give their sanction to it, their replies to his address, and the open advocacy of the measure by a large party in those States, including some of their most influential citizens, are all significant of the great change which has taken place in the public feeling within the last year upon this subject, and give reason to hope that the pressure of existing circumstances will prove irresistible, and oblige those States, if not others, to take early measures for the termination, sooner or later, of the system of slavery that has been so warily and so pertinaciously cherished among them. How far the resources of the country, already greatly taxed by the expenditures of the dreadful civil war going on, may be able to bear a further drain to meet the enormous cost of the slaves set free, it is not easy to see; but if this horrible evil can be thus got rid of, we are willing to believe that the people will not repudiate such a debt, onerous as it will be, contracted, not merely to free so many thousands of fellow-beings from the galling chains which bind them to degradation and misery, but to save the country from being hopelessly wrecked, and the border States from being fastened to a confederacy which finds its whole system of government upon the perpetual and unconditional slavery of the millions of poor blacks within its limits.

The gradual development of events in the war, show conclusively that the determination to maintain slavery; not to relax their grasp upon the men, women and children whom they claim as property, but to preserve inviolate the peculiar characteristics of the social and domestic society which are inseparable from slavery, are the objects which unite the rebels in their prolonged resistance to the government, and stimulate to the sacrifices and persevering efforts they are making to establish their independence. The pride of opinion, the love of arbitrary power, and the lust for supposed material interest, have been so long indulged by the great majority of slave-holders, as to blind them to the ultimate consequences of the destructive course they are pursuing, and to render them reckless of the suffering and privation that course is inflicting upon the millions of their fellow-countrymen. The

investigations made at the taking of the different decennial censuses, have shown a deplorable want within the slave States, of the means for general education, and consequent prevalent ignorance of the rudiments of common scholastic knowledge. Hence it is, that the body of the people there, are incapable of appreciating their true interest, and relying on the assumed superior ability and political wisdom of the oligarchy among them, are induced by them to believe that the North is bent upon their subjugation, and purpose, while robbing the masters of their slaves, to set the latter above the poor whites. The bitter spirit of hostility towards their fellow citizens of the free States, imbibed by the common people of the south, not owning slaves, and the almost ferocious spirit with which they have engaged in the conflict when brought into the field by the conscription forced upon their respective States by the slave power, are among the striking evidences of the degradation of one portion and the tyranny of another portion of the population, wherever slavery is allowed to exist.

That great suffering must exist in many sections of the Southern States, perhaps almost universally, independent of that immediately resulting from the maiming and the loss of life in the many sanguinary battles fought, there can be no doubt, but so far as reliable information can be obtained, there is little or no complaint made of the course of action pursued by the leaders in the rebellion which has brought that suffering on the community; and very little feeling is manifested favourable to a return to submission to the authority of the United States. What will be the final result of the struggle now being carried on with such fearful energy, on such a gigantic scale, and with such direful destruction of life and property by both parties, it is vain to predict. The ways of Divine Providence are inscrutable to our finite wisdom. While he makes use of the war to punish the nation, He may at the same time cause it to unloose the bonds of the poor blacks, and give them an inheritance in the land where they have so long toiled for the benefit of others. The cruel prejudice against them, entertained in many parts of the free States, which leads some of those States to forbid their entering within their limits, and incites a large portion of the citizens of others, to frown upon the efforts of those living among them, to raise themselves in the scale of domestic comfort and social intelligence, give but little ground for expecting the Divine blessing to rest upon us. If the measures for promoting emancipation arise solely from political motives and the hope of injuring the rebels, while the hearts of the people are filled with hatred or ill will to their oppressed fellow creatures, because of their dark coloured skin; and actuated by self-love and contempt for them on account of their supposed inferiority, they strive by withholding their just rights, to force them to leave their native country and seek a home in foreign lands; it may be that defeat and disaster will attend the efforts to suppress the rebellion, until the people learn that they are no better in the Divine sight than those they have so unjustly despised and injured, and are made willing to recognize their claims as fellow men, and admit them to an equal share in the rights and privileges which the government confers. It is now said that if the rebellion is to be brought down, and kept from again raising its head, it will require all the force which the government can put forth, and a long time to wield it in a manner which threatens extermination. What an awful picture is this! and especially when we reflect upon the thousands who have already been slain on the battle-field, and the tens of thousands who are now languishing in the

hospitals over the country. What a deplorable comment is the condition of the whole country upon the insane policy of resorting to war in order to settle national disputes. Had this sectional difference been met and managed in accordance with the injunctions of the great Christian Lawgiver, and in the spirit and wisdom which He gives to his devoted subjects, He would have secured its peaceful solution in a way which would have promoted the welfare of both parties; and the destruction of human life, the misery of the poor mutilated soldiers, and the anguish of thousands of bereaved hearts and homes, would have been spared. As it now is, the end is shrouded in uncertainty, and it will be well if the prayers of those who are really humbled under a sense of the deserved judgments of the most High, may avail to move him to have mercy upon the nation, stop the devouring sword, and once more entrust us with the blessing of peace.

## SUMMARY OF EVENTS.

**FOREIGN.**—News from Liverpool to the 12th inst. The total stock of cotton at Liverpool had been reduced to 156,000 bales, of which 56,000 were American. Fair uplands were quoted at 184; New Orleans, 194. The bread stuff market was without material change. The price in the bank of England had increased £25,000. Consols, 92½ a 93. The London money market was abundantly supplied. Rates of discount, 2½ a 3. In the House of Lords, the African slave trade bill has been read a second time. Earl Derby expressed fears that unless a treaty was made with France like that of America, the putting a stop to the slave trade bill was insufficient. Earl Russell said that France had declined to enter into a similar treaty, but he believed that she would offer no objection to the exercise of its provisions. Lord Palmerston confirmed the statement that Russia had recognized the treaty, and said that the United States would be obliged to the same. The London Times has daily editorials on the position of affairs in America. It says that the disaffected States seem to be fast approaching that point where they must become two reasonable nations, or go on to anarchy and ruin. The same journal regards the new Government of the United States, in effect, prohibitive of imports from Europe, and says the measure will enlist on the side of the South all the sympathies and interests of the two greatest nations in Europe. A large open air meeting had been held at Stockport, in which the speaker had increased £25,000. Praying that the government would take into serious consideration the propriety of the government using its influence to bring about a reconciliation between the northern and southern States, as it is from America alone that an immediate supply of cotton can be expected, and if need there should be, that the government will not hesitate to acknowledge the southern States, as they believe that must be the ultimate result. The series of battles is treated as a severe reverse for the Unionists by the whole British press, and Gen. McClellan's position is highly criticized. The Viceroy of Egypt, in a speech at Manchester, said in regard to cotton, that next year he felt confident in promising from Egypt, if not double the amount of the last crop, at least an increase of one-half.

**INTERNAL AFFAIRS.**—The 25th of Congress, Legislature adjourned on the 17th inst. Congress during the recess, appropriated about \$800,000,000, including upwards of \$500,000,000 for the army, and somewhat less than \$100,000,000 for the navy. The following comprises the most important enactments of the session. Free Homestead Act. The Pacific Railroad Act. The revision of the Supreme Court Judicial Districts. The act appropriating Public lands to the foundation and support of Agricultural and Mechanical Colleges in the several States. The prohibition of Slavery in all the Territories of the Union. The abolition of Slavery in the District of Columbia. The act confiscating the property and emancipating the slaves of persistent rebels.

The following bills failed.—The National Bankrupt Law. The Abolition of the Fugitive Privilege. The Mileage Reform. The admission of the State of West Virginia. The bill providing for a National Banking System.

An act passed just before the adjournment, making private stamps a legal tender, prohibiting the issue by banks or individuals of any token, note, or device for less than one dollar, to circulate as money.

**The War.**—An amendment passed Congress to the bill for calling out the militia. It provides that the President may, at need, cause to be enrolled and put into service for a period not exceeding ninety months, any able bodied citizen between eighteen and forty-five years of age—the number to be apportioned among the States, according to their representative population; that, in addition to the men he is already authorized to raise, the President may accept 100,000 volunteers for twelve months, and every volunteer shall be paid his first month's pay and a bounty of \$25 in advance; that to fill up the existing regiments, he may accept volunteers for twelve months, who shall have \$50 bounty, one half in advance, the other half when their term of service is up. Measures have been taken to raise 100,000 men, and every man has been ordered to his first month's pay and a bounty of \$25 in advance, and around Washington. Gen. Halleck has been relieved from the immediate command of the army in the South-west, and has been ordered to Washington. It is supposed that he will take the post of General-in-Chief, or act as military adviser to the Administration, in either case, the object being to secure unity of action and a specific plan of operations.

**Virginia.**—A despatch from Gen. McClellan's army, dated on the 19th, states that everything was quiet, and the health of the troops gradually improving. The Federal army were now within four or five miles of the pickets during the battles of seven days near Richmond, are now being released on their parole, to be exchanged at some future time. According to a statement in the New York Times, the losses of the U. S. army during these battles, amounted to 20,000 men, 204,000 rounds of ammunition, and missing. The "Prince of General Pope's army, has occupied Gordonsville, at the junction of the Orange and Alexandria, and Virginia Central Railroads, 76 miles northwest from Richmond. Being located at the junction of two principal lines of railway, it has hitherto been a point of great importance to the southern army. Another portion of his army is stationed at Culpeper Court House. For the purpose of advancing with celerity, General Pope has prohibited the use of supply or baggage wagons, and has signified his intention to subvert the troops under his command upon the first opportunity to do so. The Government has also given notice to the people of the Valley of the Shenandoah, and throughout the regions of the operations of his army, residing near lines of railway or telegraph, that they will be held responsible for injuries done to the property of the Government by any volunteer soldier or legitimate follower of the army shall be fired upon from any house, the building shall be razed to the ground, and the inhabitants taken prisoners. A cavalry expedition sent out by Gen. Pope from Fredericksburg, has been despatched upon the Virginia Central Railroad at Beaver Dam, thirty-five miles from Richmond. They destroyed the track for several miles, together with the telegraph line, and burned the railroad depot with a quantity of ammunition. The rebels have become very annoying to the shipping all along James River. They make the rifle pits and snipe at water-courses.

**South Carolina.**—The division of Gen. Sherman has been ordered to the Potomac to reinforce the army operating against Richmond. The troops arrived in Hampton Roads on the 17th. All the sick and disabled men of the command were left in South Carolina. A. A. Pickens, Governor of South Carolina, in a War, states that the freed negroes are working industriously, and were contented and happy. About 15,000 acres were under cultivation in corn and cotton. He says they will cease to be a burden to the government as soon as they are properly educated.

**Louisiana.**—Gen. Shepley has been appointed Military Governor of this State. A regiment of Louisiana was about being organized in New Orleans. Arms, clothing, &c., had arrived from the North for five regiments. In consequence of an arrival of flour, its price had fallen to \$1.25 per bushel. The Saxtons River War, states that the freed negroes are working industriously, and were contented and happy. About 15,000 acres were under cultivation in corn and cotton. He says they will cease to be a burden to the government as soon as they are properly educated.

**Mississippi.**—The attempt to capture Vicksburg, and open the navigation of the river from Memphis to New Orleans, has thus far, been unsuccessful. The iron-clad steam ram Arkansas, which escaped when Memphis was taken by the U. S. fleet, recaptured the Yazoo river, and made a dash upon the U. S. gun boat below Vicksburg, inflicting some injury upon them. The attempt has showed that Vicksburg cannot be effectively attacked from the river, and that it can be assailed successfully only by a large force operating upon the land. **Arkansas.**—John S. Phelps has been appointed Military Governor of Arkansas, and will soon leave Washington for that State. He has full powers, similar to those conferred upon Governors Johnson, Stanton, &c., for the purpose being to assist the local people in re-establishing their government in accordance

with the Constitution of the United States. Gen. Curtis, after a march of great difficulty, finally succeeded in reaching Helena, on the Mississippi river, with 14,000 men. The supplies he had were forwarded from St. Louis, for the use of his army. During the march, the U. S. troops were constantly harassed by the rebels, and several severe battles were fought.

**Tennessee and Kentucky.**—The movements of the rebels in these States, consist of the most daring character. U. S. troops at Nashville have been reinforced. The rebels on the southern bank of the Tennessee river in Alabama, are being heavily reinforced and are throwing up fortifications. The rebels have retired from Murfreesboro in the direction of Chattanooga. The towns of Crawley and Keokuk, were taken on a band of guerrillas under the leadership of Col. Morgan. Other companies of rebels have advanced to the Ohio river, and taken possession of Henderson, Ky., and Newbern, Ind., on the opposite bank of the river. A much alarm has been caused by these incursions, that the specie in the banks of Lexington and Frankfort amounting to about \$25,000,000, has been sent to Cincinnati for safe-keeping. Troops have entered Kentucky from Ohio and Indiana, for the purpose of cutting off the retreat of the rebels.

The Charleston papers state that salt is being manufactured in considerable quantities, around that city, there being twelve boiling establishments in and near Charleston. The Columbus, (Geo.), Sun, says that an immense amount of clothing is manufactured in that city for the Confederate army. Twelve hundred men had been packed there within a few days of Gen. Bragg's army. The Savannah Republican says that the corn crop of Georgia and the adjacent States, is immensely large. The Richmond Enquirer speaks of Gen. Pope as an officer of great activity and daring, and one of the most dangerous of the Union commanders. The same paper says, "It is no longer four or five miles from the lines have been brought closer to Richmond, but a large force have been left immediately in front of the enemy as an obstruction to any advance movement on his part." The Enquirer also expresses its conviction, that the determination of the North to capture Richmond, no matter at what expense of time, treasure and blood.

**New York.**—Mortality last week, 586. **Philadelphia.**—Mortality last week, 368. **The Markets.**—The following were the quotations on the 21st inst. **New York.**—American gold, 20 per cent. premium. Middling upland cotton, 49½ cts. a 50 cts. Wheat, \$1.18 a \$1.28 for red, and \$1.33 a \$1.41 for white; corn, 50 cts. a 54 cts. for eastern, and 54 cts. a 56 cts. for western. Oats, 47 cts. a 49 cts. **Philadelphia.**—Fair and prime red wheat, \$1.25 a \$1.30 white, \$1.40; corn, 57 cts. a 60 cts.; oats, 40 cts. a 41 cts.

## FRIENDS' ASYLUM FOR THE INSANE.

NEAR PARKERSBURG, (TWENTY-THIRD WARD, PHILADELPHIA. Physician and Superintendent, —JUSTUS H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, 107 Chestnut Street, Philadelphia, or to any other Member of the Board.

MARRIED, on Fourth-day, 16th of Fourth mo., 1862 at East Chalm Meeting-house, Chester Co., Pa., James F. REID, to MARTHA, daughter of Mordecai and Sarah Larkin, all of the former place.

DIED, Fourth of Seventh month, 1862, DR. LOVETT BROWN, aged forty-nine years, a member of Falls Monthly Meeting, Bucks Co., Pa. He bore his protracted and painful illness, his disease being a cancer on the face, with patience and resignation, and although his mental as well as physical sufferings for a time were great through adorable mercy, he was enabled to know his sins to go beforehand to judgment, and a new song to be sung in his mouth. Often in referring to his woful hours in the night season, (of which he speaks) he said they were some of the happiest of his life wherein a feeling of melody and praise were much to covering of his spirit, and on referring to these seasons joyfully he said his disease, he said, gave praise to Him; it is whom he belongs to, and in nothing to flatter it; it is all of his mercy and goodness.

WM. H. PILE, PRINTER, Lodge street, opposite the Pennsylvania Bank.

VOL. XXXV.

SEVENTH-DAY, EIGHTH MONTH 2, 1862.

NO. 48.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Leisure Hour.

## Lights Aloft—The Aurora Borealis.

(Continued from page 270.)

The sudden glare and rapid bursts of these wondrous aerial fires render it difficult to imagine them altogether without the accompaniment of explosive sounds. In fact, hissing, rattling, murmuring, and crackling noises are reported by the Jopper Indians, Croes, and Esquimaux; by Hensler in Iceland; Hearne at the mouth of the Coppermine river; and Gmelin in Siberia. The latter states that, on the confines of the icy sea, the spectral forms appear like rushing armies; and that the hissing, crackling noises so terrify the hunters and their dogs, that, overcome with terror, they fall prostrate to the ground. But the counter-sensations are so numerous and influential as to engender the suspicion of some mistake. Captain von Stood for hours on the ice listening, without catching the faintest sound. Parry, Franklin, and Richardson, in polar regions; Thienemann, in Iceland; Giescke, in Greenland; Lottin and Brevis, near the North Cape; Wrangel and Anjou, on the coast of the Arctic Ocean, observed the aurora hundreds of times, and bear witness to the complete noiselessness of the spectacle. Perhaps the following remark by Lieutenant Hood explains the discrepancy: "We repeatedly heard a hissing noise like that of musket balls passing through the air, which seemed to proceed from the aurora; but Wentzel assured us that this noise was occasioned by severe cold succeeding mild weather, and acting upon the surface of the snow previously melted in the sun's rays." Humboldt quaintly remarks, that auroras have become less noisy since their features have been more accurately noted.

There is reason to believe, though the fact is perfectly inscrutable, that auroral exhibitions have a character of periodicity, being rare through a certain cycle of years, and common through another, while remarkable also for splendour and peculiar combinations of form and colour. Prior to the beginning of the last century, the luminosity was considered a great rarity by the inhabitants of Upsal, in Sweden, a country in which it has since been an ordinary spectacle. Nothing is more usual now in Iceland than the fantastic flickering glare; but Torfaeus, the historian of Denmark, an islander, who wrote in 1706, records his remembrance of the time when it was an object of terror in

his native island. Halley tells us that, when he observed the great aurora of 1716, he had begun to despair of ever seeing one at all, for nothing of the kind had occurred in England for upwards of eighty years, or of the same magnitude for nearly a century and a half, in the reign of Queen Elizabeth. On the occasion referred to, the afternoon was very serene and calm. As it began to grow dark, about seven o'clock, an unusual illumination appeared in the heavens, streaming out of a dusky cloud low down towards the horizon in the north-east. Halley was spending the evening in a house of a friend, and was not aware of what was passing without till between nine and ten. He was speedily out of doors at a favourable gazing station, and continued watching the extraordinary scene to its termination, after midnight, with the interest and admiration natural to a man of science and of taste. The converging streamers formed a well-defined corona near the zenith. "Some likened it," he states, "to that representation of glory wherewith our painters in churches surround the holy name of God; others to those radiating stars with which the breasts of the Knights of the most noble Order of the Garter are adorned; many compared it to the concave of the great cupola of St. Paul's." Owing to the near coincidence, in point of time, of the grand apparition with the execution of the unfortunate Earl of Derwentwater, for his part in the rebellion of the previous year, it was long remembered by the northern peasantry under the name of the "Derwentwater Lights." Courty sceptichants of the House of Hanover did not fail to recognize the meteor as a kind of celestial inauguration of the new dynasty.

Auroral gleams continued increasing in brilliancy and frequency to the middle of the century, when there was a temporary retrogression. Another period of visitation dates from the year 1827. Fine exhibitions occurred in the autumns of 1847-8, also in the spring of 1859; and it may be noticed that they ashered in the remarkably exceptional weather of the last eighteen months. "All over the world," says Admiral Fitzroy, referring to the early autumn of 1859, "not only in the arctic but in the antarctic regions, in Australia, South America, and the West Indies, Bermuda, and elsewhere, auroral and meteoric were unusually prevalent; and they were more remarkable in their features and appearance than had been noticed for many years. There was also an extraordinary disturbance of currents along telegraphic wires. Submarine wires were unusually disturbed, and this was followed within two or three days by great commotions in the atmosphere or by some remarkable change." In September, marked magnetic disturbances were noted at Kew; and towards the close of October, that series of storms commenced, with prevailing ungenial weather, the like of which has not been recorded in our annals. It is desirable to notice concordant physical facts, though their precise relations may not be understood, and they may have no relation at all except as closely coinciding in their occurrence.

Contrary to an old opinion upon the subject,

the same phenomenon adorns the sky of the southern hemisphere; and there it must be designated Aurora Australis, the Southern Lights, *Südlüchter* of the Germans. But, as appearing in the direction of both poles, the term Aurora Polarior, or Polar Lights, would be the most appropriate style. Don Antonio Ulloa, off Cape Horn, in the year 1745, witnessed the first appearance of the kind to Europeans in that region. Captain Cook also saw it in the night-sky of the south. In the narrative of his second voyage, it is remarked that, on the 17th of February, 1773, "a beautiful phenomenon was observed in the heavens. It consisted of long columns of a clear white light, shooting up from the horizon to the eastward, almost to the zenith, and spreading gradually over the whole southern part of the sky. These columns sometimes bend sideways at their upper extremity, and though in most respects similar to the northern lights, yet differed from them in being always of a whitish colour, whereas ours assume various tints, especially those of a purple and fiery hue. The stars were sometimes hid by, and sometimes faintly to be seen through, the substance of these southern lights." Subsequent voyagers in high southerly latitudes have given descriptions of the Aurora Australis—as M. Simonoff, the astronomer to Bellinghausen's expedition, and Sir James Clark Ross. These southern lights have been seen more than once in England, while the northern lights have been caught sight of as far as latitude 45° in the opposite hemisphere.

Various circumstances show the aurora to be unquestionably a meteor of the electro-magnetic class. Its light may be very correctly imitated by passing a current of electricity through an exhausted receiver; and while irregular movements of the magnetic needle accompany its appearance, the oscillations are most intense near the magnetic poles. The general conclusion may therefore be adopted, that the equilibrium being disturbed in the distribution of terrestrial magnetism, it is restored by a discharge attended by the evolution of light—the flashes of a magnetic storm—in the same way as in the electrical storm, the forked lightning indicates the restoration of the disturbed equilibrium in the distribution of electricity. But great obscurity rests upon this department of meteorology; and from science we pass to poetry, again quoting the lines of Lomonosov:—

"Come, then, philosopher, whose privileged eye  
Reads Nature's hidden pages and deciphers;  
Come now, and tell us whence, and where, and why,  
Earth's icy regions glow with lights like these,  
That hit our souls with awe; profound inquirer, say,  
For thou dost count the stars, and trace the planets'  
way."  
"What fills with dazzling beams the illumined air?  
What wakes the flames that light the firmament?  
The lightnings flash: there is no thunder there—  
And earth and heaven with fiery sheets are blent;  
The winter's night now gleams with brighter, lovelier  
ray  
Then ever yet adorned the golden summer's day.

"Is there some vast, some hidden magazine,  
Where the gross darkness fumes of fire supplies?  
Some phosphorus fabric which the mountains screen,  
Whose clouds of light above those mountains rise?

Where the winds rattle loud around the foaming sea,  
And lift the waves to heaven in thundering revelry?

"Thou knowest not! 'tis doomb, 'tis darkness all!  
Even here on earth our thoughts beighted stray,  
And all is mystery through this earthly ball—

Who, then, can reach or read you Milky Way?  
Creation's heights and depths are all unknown—in-  
trodden;  
Who, then, shall say how vast, how great, creation's  
God."

For "The Friend."

"He that endureth to the end, the same shall be saved."

The following instructive observations respecting faithfulness to manifested duty, and patient continuance in well-doing, were made by John Barclay, in 1817.

"In reading the 13th chapter of the 1st book of Kings, I have at this time been much instructed, and am ready to take the lesson to myself, as a warning or special admonition. Herein we see, that it availed nothing in respect to the future, that the prophet had, (though so lately,) been favoured with a divine commission, and was hitherto, upright in the faithful discharge of that arduous duty which devolved upon him from his Lord, even that of openly proclaiming the vengeance of the Almighty against the idolatry that had overtaken the people, and boldly asserting the destruction of the priests, even to their faces, and in the presence of their king; saying to him in reply to his invitation, 'If thou wilt give me half thine house, I will not go in with thee; neither will I eat bread nor drink water in this place.' Yet, after all, he was weak enough to give up his own clear convictions of duty, as revealed in and to himself, (the truth of which was indubitably evinced and sealed by the miracle which attended the partial performance of them,) and to prefer obeying the old prophet, before compliance with 'the word of the Lord.' Oh! how greatly have I longed, in a peculiar and especial manner, for myself, as I am now situated and circumstanced, that I may steadfastly adhere to no other law but the law written on the heart; and closely attend to the secret dictates of best wisdom alone. For assuredly there is no safety but in implicitly giving up to the reproofs of instruction, which are, and ever will be, the way to life.

"Be ye followers of me," says the apostle Paul; but he adds, "as I also am of Christ;" intimating surely, that the examples of others in life and conversation, are to be followed, only so far as they accord with the example and precepts of Him who said, 'I am the light of the world,' 'whilst ye have the light, believe in the light,' 'walk whilst ye have the light.' So that in looking back at such acts of dedication, as have been (according to my belief,) required at my hands, and in contemplating the peace which has ensued after even the smallest surrender, when the sacrifice has been offered out of a sincere and upright heart; I have earnestly, and I may truly say, above every other earthly consideration, desired that nothing may be suffered to hinder me, to turn me aside, even in trifling, as well as in great matters and concerns, from carefully, closely, unremittently attending to, and abiding by the counsels and teachings of that divine principle, even the Spirit of Christ, which is given to every one for his guide in the way of salvation. I have found amongst many other acts and false suggestions and temptations, which the enemy makes use of to deter us from giving up ourselves to the guidance of the Holy Spirit, one which is much talked of and acted upon by many, through their own inexperience, and the deceit of the prince of darkness, namely, that these lead-

ings and secret influences and inspirations, are not distinguishable from the workings of our own mental or rational powers, and if they are distinguishable, that these persons have not felt them or known them. Now, in answer to this, which has been my own delusion, I may say, that every one who has for a long season, habitually stifled this divine monitor, cannot expect to bear or to understand so plainly its voice, as those do who have for a long period listened to its secret whispers, and surrendered themselves unreservedly to its injunctions. These can testify that they follow no uncertain vapour or idle tale; but that its reproofs are to be plainly perceived, and its incitements early to be felt; and that the peace they witness cannot be imitated, neither can it be expressed to the understandings, or conceived by the imaginations of such as have none of this blessed experience. Nor let any poor, seeking, sincere, or serious minds be discouraged, that they do not, upon submission immediately, or very quickly, feel what they wait to feel, even the arising of that secret, influencing, actuating, constraining and restraining power or Spirit of the Lord. Let them not be discouraged if this be their case, nor be dismayed if even, after some considerable sacrifices and trying testimonies of sincerity, they find not that rich reward of peace which they had expected. Let such remember it is written, 'he that endureth to the end, the same shall be saved.' Now, when there is a moment's enduring only, and that previous to or whilst in the performance of what is required, this cannot be called 'enduring to the end,' but oh! it is that 'resistance unto blood,' (as it were,) in faith and faithfulness, that patient continuance in well doing, in defiance of difficulties, discouragements, darkness, doubt, and distress, which will give us the victory, and will make us, through the mercy of God in Christ Jesus, heirs of that eternity of peace and rest, and joy, which we know is prepared for such as overcome.

#### Telescopes.

In the year 1666, Newton turned his attention to telescopes; and, finding that there were many disadvantages to contend against in refracting substances, he was led to the construction of what has since been called the Newtonian, or reflecting telescope. Some years after the construction of the Newtonian, another class of reflecting telescopes was invented by Dr. Gregory, in which, from a difference of arrangement, the observer is stationed in a line with the object, whereas, in the former he is at right angles to it. The larger reflecting telescopes of the present day are usually constructed on the Newtonian plan, but smaller ones are more frequently fitted up after the manner of Dr. Gregory. Just as the illuminating power of the refracting telescope depends upon the size of its object-glass, so the illuminating power of the reflecting telescope is determined by the area of its object-speculum, because it is of the light which this receives that the image in the focus is formed. The first reflecting telescope ever made was moulded by the hands of Sir Isaac Newton, and was furnished with an object-speculum measuring two inches and three tenths in diameter. Hadley first used a speculum of six inches; Watson, Short, Ramsay, and Tulley, by slow degrees, extended its dimensions to nine inches, fifteen inches, and three feet.

Toward the close of the last, and in the beginning of the present century, the improvements in the construction of telescopes received a vast impulse from the labours of Sir William Herschel. Educated under circumstances but no means favourable to great powers, the ardor of his mind surmounted every opposing difficulty; and from a

humble, though respectable station in life, he raised himself to a rank in society which genius, when directed and sustained by virtue, seldom fails to reach. Though his scientific studies did not commence till he had arrived at the middle period of life, yet he pursued them with all the energy of youthful devotion, and with that dauntless perseverance which renders genius almost omnipotent. Every step, indeed, of his astronomical career was marked by discoveries of the most splendid character. New planets, new satellites, new celestial bodies, were successively presented to science; a man was enabled to extend the power of his senses, as well as the energy of his reason, to those remote regions of space where his imagination had hitherto scarcely dared to wander. His invention of instruments and methods of observation, too, were no less surprising than the wonders which they disclosed. Obstacles insuperable to other men he speedily surmounted. The telescope which Galileo held in his hand as a portable toy, became, under Herschel's direction, a machine which supported the astronomer himself, and which mechanical energy was requisite even to move. There was no continuity, in short, between his inventions and discoveries, and those of astronomers immediately preceding him. He ventured upon a flight which led them at an immeasurable distance; and he penetrated into regions, of which they dared scarcely form a conception. After having constructed a great variety of telescopes, both of the Newtonian and Gregorian forms, he at length determined to make one of a still larger size, and after some failures, and many obstacles, surmounted by his patience and genius, he completed, in the year 1789, his gigantic telescope. This instrument was forty feet in focal length, and its object-speculum four feet in diameter, weighing, when newly cast, two thousand one hundred and eighty pounds. But the triumph of mechanical achievement, in the construction of the telescope, was reserved for Lord Rosse, a nobleman, who, imitating the example of his great predecessor, Tycho Brahe, devotes his wealth, as well as the energies of his mind, to astronomical research. By the application of beautifully devised machinery to the task of polishing, he completed a telescope whose object-speculum is of the enormous diameter of six feet while the metal of which it is composed is of faultless material and perfect form.

The size of the lens or mirror is not merely a general indication of the power of the telescope; inasmuch as if each instrument were tested separately, in respect chiefly of the reflecting or transmissive qualities of the metal or glass, we might obtain by means of it much more than a general or rough comparative estimate. But since nothing is dependent on minute exactness in speculation concerning the enormous distances we are about to mete out within infinitude, it is enough for present purposes that we can reach a tolerable approximation. Now, regarding his own telescopes, Herschel computed that the seven-foot reflector had a power to penetrate into space, which, compared with that of the naked eye, was twenty and a quarter; the ten foot, a comparative power of twenty-eight and a half; the twenty foot, of seventy-five; the twenty-five foot of ninety-six; and the forty foot, with its four-foot mirror, the immense power of one hundred and ninety-two. It is not easy to compare Lord Rosse's telescope with these instruments, inasmuch as their various relative qualities would require to be ascertained by direct experiment; but if, as seems fully established, his Lordship's three-foot speculum is much superior in space-penetrating power to the larger size in possession of his great predecessor, we shall

we obliged to endow the six-foot mirror with an efficacy to pass without difficulty into space at vast five hundred times further than is possible or unassisted vision; in other words, it will describe a single star six times more remote than an average orb of the first magnitude; or, though it were separated from our abodes by an interval so tremendous that, were a new star, at a similar distance, created now, its light, even though its velocity be next to inconceivable, would travel through the intervening spaces probably for more than six thousand years, ere, by reaching this earth, it could tell of a new existence having been summoned from the void.—*Electric Magazine.*

“Judge not.” Mat., ch. vii. 1.

“Observation. A judging teacher is not fit for disciple, in the eye of Christ. Judging is not an action becoming a disciple: is not such an action Christ alloweth in him.

“There are two things exceeding lovely in a disciple, both whereof this is contrary unto.

“The first is, *A brokenness of spirit in himself or his own wickedness.* Though a man be pardoned for his sin; yet, the sight of what he was—the remembrance of what was blotted out in himself; of what is still in him and upon him, further than the Lord is pleased of his own free goodness, to blot it out continually,—should keep him very low in his own eyes, even as low as if he were still living under the guilt and condemnation of it.

“The second is, *A pity and tenderness of spirit toward sinners.* He who knoweth the bitterness of his own wound, although he be in part healed himself, yet cannot but yearn over those who remain still exposed to the bitterness of the same wound. How did Christ pity sinners,—even the most stubborn sinners? Oh, Jerusalem, Jerusalem, &c.

“The more men lie open to judgment, doth not afford us the more liberty of judging them; but the more it should excite our pity. It no way becomes a condemned person, newly pardoned, to judge his fellow-offenders; but to pity them, and to be abased, under the sense of his own debt, which, by the mere mercy of the Judge, he hath escaped the danger of.—*Isaac Pennington.*

*Usefulness of Diamonds.*—Many persons suppose that diamonds are only used in jewelry—for rings and other articles of personal adornment, and that they are really of no essential value whatever in the practical arts. This is a mistaken notion; they are used for a great number of purposes in the arts. Thus for cutting the glass of our windows into proper size, no other substance can equal, and it is exclusively used for this purpose. A natural edge, or point, as it is called, is used for his work, and thousands of such are annually required in our glass factories. Diamond points are also employed for engraving on corals, amethysts, and other brilliants, and for the finer cutting in cameos and seals. Being very hard, the diamond is also used in chronometers for the steps of pivots; and as it possesses high refractive, with inferior dispersive power, and little longitudinal aberration, it has been successfully employed for the small deep lenses of single microscopes. The magnifying power of the diamond, in proportion to that of plate glass, ground to a similar form, is as light to three. For drawing minute lines on hard steel and glass, to make micrometers, there is no substitute for the diamond point.

The rough diamond is called bort, and the “points” used for glass-cutting are fragments of the bort. Great care and skill are necessary in selecting the cutting points, because the diamond

that cuts the glass most successfully, has the cutting edges of the crystal placed exactly at right angles to each other, and passing through a point of intersection made by the crossing of the edges. A polished diamond, however perfect may be its edges, when pressed upon the surface of glass, splinters it with the slightest pressure; but with the natural diamond the most accurate lines are produced on glass, and their surfaces are so finely burnished, that if ruled close together, they decompose light, and afford the most beautiful prismatic appearance—all the colours of the rainbow flash from them as from the silvery interior of a pearl oyster-shell.

Diamonds are also employed for drill-points to perforate rubies, and to bore holes in draw plates for the wire, and also for drilling in hard steel. Some enquiries have been made recently in regard to using them for dressing millstones, as a substitute for steel picks. We apprehend that they are altogether too expensive to be used for this purpose at present; but if some of our inventors would make the discovery of manufacturing diamonds as cheaply as we make charcoal, which is of the same composition, we might be able to recommend them to our millers. The coke obtained from the interior of gas retorts, in many cases is found so hard that it will cut glass; but as its point endures but for a short period, it cannot be made available as a substitute for the natural diamond for such purposes.—*Late Paper.*

#### LETTER LXXI.

ADVICE RESPECTING CHURCH DISCIPLINE.

*Dear Friends,*—Dearly beloved and honoured in the Lord, because of his honourable presence and power, which is so preciously manifested and found to be among you in your meetings.

Blessed be the Lord, who hath thus gathered you! and given you hearts to meet together, to feel his precious presence and power, and wait to do his will therein, as he shall please to call, and make your way clear thereto. And blessed be the Lord! who doth encourage and reward you daily, and make your meetings pleasant and advantageous to your own souls, and towards the seasoning and holy watching over the several respective places, where your lot is fallen.

Oh! what would the Lord do more for his people, than to turn them to that pure Seed of life, which will make them all alive, and keep them all in life and purity; and then, to make use of every living member in the living body, as his Spirit shall please to breathe upon it, and his power activate it! And indeed, there is need of all the life and power to the body, which the Lord sees good to bestow on any member of it; every member of the body having life given it, not only for itself, but likewise for the use and service of the body. Only, dear Friends, here is to be the great care, that every member keep within the limits of life, wherein its capacity and ability for service lies, and, out of which, it can do no real service for God, or to the body. Oh! therefore, eye Life, eye the Power, eye the presence of the Lord with your spirits! that ye may go along with you, and guide you in every thought ye think, in every word ye speak, in reference to his work and service.

And, dear Friends, what is now upon me to do? it is one thing, to sit waiting to feel the power; and to keep within the limits of the power, thus far; and another, yet, and harder, to feel and keep within the sense and limits of the power, when ye come to act. Then your reasonings, your wisdom, your apprehensions, have more advantage to get up in you, and to put themselves forth. Oh! therefore, watch narrowly, and diligently against

the forward part; and keep back to the life, which though it rise more slowly, yet acts more surely and safely for God.

Oh wait and watch, to feel your Keeper keeping you within the holy bounds and limits, within the pure fear, within the living sense, while ye are acting for your God! that ye may only be his instruments, and feel him acting in you. Therefore, every one wait to feel the Judge risen and up, and the judgment set in your own hearts; that, what ariseth in you, may be judged and nothing may pass from you publicly, but what hath first passed the pure judgment in your own breasts. And, let the holy rule of the blessed apostle James, be always upon your spirits. Let every one be swift to hear, slow to speak, slow to wrath! O let not a talkativeness have place in any of you! but abide in such gravity, modesty, and weightiness of spirit, as becomes the judgment-seat of the Spirit and power of the Lord. Ye can never wait too much for the power, nor can ye ever act too much without it; power; but, ye may easily act too much without it.

And as this troublesome, contentious business, (if the Lord should yet order it to be brought before you,) the Lord teach you to consider of, and manage it in a wise, tender and healing spirit. Ye must distinguish in judgment, if ye judge aright, between enemies and erring friends. And, take heed of the quickness and strength of reason, or of the natural part, which avails little; but, wait for the evidence and demonstration of God's Spirit, which reacheth to the witness and doth the work. Are they in a snare? are they overtaken in a fault? are they in measure blinded and hardened, so that they can neither see nor feel, as to this particular? Retire, sit still awhile, and wait for the Lord, for his life will arise in any travail for them. Fear not, his will arise in any of you, and how mercy will reach towards them; and how living words, from the tender sense, may be reached forth to their hearts, deeply, by the hand of the Lord, for their good. And, if ye find them, at length, bowing to the Lord, Oh, let tender compassion help them forwards! that what hath been so troublesome and grievously dissatisfactory in the progress, may, at length, have a sweet issue for their good, and our joy and rejoicing in the Lord.

So, my dear Friends, the Lord be with you, and guide you in this, and in all that he shall further call you to; and multiply his presence, power, and blessings upon you, and make your meetings as serviceable to the honour of his name, as he himself would have them, and as you yourselves can desire them to be.

Your friend and brother in the tender Truth, and in the pure love and precious life.

I. P.

19th of Fifth month, 1678.

*A Remarkable Fountain.*—A writer in *Ballou's Pictorial*, gives the following description of a remarkable fountain in Florida:

“Taking a narrow path, I crossed through some dense underwood, and all at once I stood on the banks of the Wakulla Spring. There was a basin of water one hundred yards in diameter, almost circular. The thick bushes were growing to the water's edge, and bowing their heads to the unrippled surface. I stepped into a skiff and pushed off. Some very large fish attracted my attention, and I seized a spear to strike them. The boatman laughed, and asked me how far below the surface I supposed they were. I answered, “about four feet.” He assured me that they were at least twenty feet from me; and it was so. The water is of the most wonderful transparency. I dropped an ordinary pin in the water forty feet deep, and

saw its head with perfect distinctness as it lay on the bottom. As we approached the centre I noticed a jagged gray limestone rock beneath us, pierced with holes—one seemed to look into unfathomable depths. The boat moved slowly on, and now we hung trembling over the edge of the sunken cliff, and far below it lay a dark, yawning, unfathomable abyss. From its gorge comes forth, with immense velocity, a living river. Pushing on just beyond its mouth, I dropped a ten cent piece into the water, which is there one hundred and ninety feet deep, and I clearly saw it shining on the bottom. This seems incredible, but I think the water possesses a magnifying power. I am confident that the piece could not be seen so distinctly from a tower one hundred and ninety feet high. We rowed on towards the north side, and noticed in the water the fish which were darting hither and thither, the long flexible roots, and the wild, luxuriant grass on the bottom, all arrayed in the most beautiful prismatic hues. The gentle swell occasioned by the boat gave to the whole an undulating motion. Deathlike stillness reigned around, and a more fairy scene I never beheld.

For "The Friend."

#### BIOGRAPHICAL SKETCHES

Of Ministers and Elders and other concerned members of the Yearly Meeting of Philadelphia.

##### ELIZABETH LEVIS.

(Continued from page 364.)

One of her grand-daughters at Duck Creek, was left a young widow about the close of 1773 or the beginning of 1774. Elizabeth Levis on this occasion, addressed the following letter to her daughter and her husband.

"My dear child.—I was very glad to have a few lines from thee; but it affected my mind to hear of your affliction. I consider that when we are under trials, it is a token that we are under the notice of our Heavenly Father; and that he is working to wean us from the love of, and anxious cares for the things of this life, that we may be concerned for his honour and the good of souls, and become fitted for his pure holy kingdom. It is with me to say, dear children, be not discouraged! I feel that the Lord is near you, and is drawing you nearer to himself, that your love may be fixed on heavenly things, and that you may more and more enjoy the comforts of the Holy Spirit, which will drown all the afflictions we meet with here.

"Dear child, thou signifies thy desire of our being together,—I can say amen to it. My desire was great to be in company with you all, but as I was thinking of the satisfaction it would be to me, I thought I heard a watchword in my inward ear, thus: 'Be content to wait the Lord's time, and if he sees meet to bring you together in this world, and you are concerned for his honour and the promotion of his Holy Truth, then you will have comfort in the Lord, and one in another.'—Dear child,—be not discouraged. The Lord is near to help thee through all thy difficulties, a thy eye and confidence are stayed on him alone. As to the hint thou gave me of thy fears and doubts, I say again, be not discouraged! The Lord is near them that walk before him in fear. It is good to think meanly of ourselves, but let us have a care of sinking below trusting in God.

"I cannot well omit making some mention of the goodness of God to my poor soul. He is often pleased to renew his visitations of love to me, and to bring to my remembrance, the times and seasons in which I was ready to shrink from him, when he was pleased to make known to me what he required of me. But Oh! blessed and praised

be his holy name forevermore. His tender mercy is over all his works, and he is not willing to cast off any of his children that are willing to be wrought upon by his Almighty Power. A tender parent, truly concerned for the welfare of his children, when pleasant things will not do, is under a necessity to use the rod, or other severe means. When the child submits, such a parent rejoices, and administers that which is good. So our Heavenly Father rejoices over those that submit under his holy hand. Although he may see meet, sometimes, to use the rod, yet when they submit, he administers at times of his good things to them. He may see meet in wisdom, to hide his face a little, as behind a curtain, for the trial of their faith and love, yet he will appear again, and when he appears, his reward is with him, even peace and joy in the Holy Spirit.

"Dear children, it is my earnest desire, that you may solidly wait upon God, that he may enable you to be true help-meets one to another, in the great work of the soul's salvation. Labour as much as you can to help your children in that great work, which is to be wrought out with fear and trembling. May your dear child that has lost her companion, and has several small children, not be discouraged, but remember the blessed promise of our Heavenly Father, that he will be a father to the fatherless, and a judge of the widow. My desire is that you may comfort and encourage her,—not that I apprehend you are careless of her, but having to sympathize with her in her close trials, it came into my mind to stir you up by way of remembrances. We have great need to keep a strict watch, lest something be forgotten that ought to be remembered. It is with me to say, that those who make it their chief concern to be prepared for their great change, will not be unprepared to meet the trials that may be suffered to come in their way. The regard of the Lord is to them that are labouring to be freely given up to his will. As we read in the Scriptures of Truth, they are to him as the apple of his eye.

"I conclude, with dear love to you and your children, and remain your tender mother."

ELIZABETH LEVIS.

Second month, 1774.

Elizabeth Levis was now an aged woman. Her daughter Lydia, who had remained unmarried, had, after a short illness, been removed from the church militant, closing an exemplary life, by a holy, happy death. The mother desired to be with her daughters, and believing that she had the Divine sanction for such a step, she soon after writing the above letter, removed to Duck Creek. Her residence there was brief. The time of her release from the trials and labours attendant upon this earthly state soon came, and her end was peace. Her character, as given in her memorial may be briefly given. She was a nursing mother, to those seeking a heavenly inheritance, encouraging them, both by precept and example, to press forward in the path of piety, that they might attain it. She also fervently laboured to stir up the negligent to the performance of their duty. She was earnestly concerned to the last for the prosperity of the cause of Truth in the earth. Her life appeared to be one of mourning under a sense of the depravity of the inhabitants of the land, and their rebellion against God. She often expressed her belief that the Lord's judgments were hanging over us, and her fears, that if speedy repentance was not manifest, they would be laid on. Her exercise was increased by the prospect she had that many of her fellow members were running into the customs and manners of the world, actuated by its spirit, and as it were, buried in the earth.

Her last illness was short. On Fifth-day Third month 17th, 1775, she was taken with a heavy chill, and lived but to the following First-day, when she quietly departed. She was upwards of eighty years of age.

*The Camel in America.*—The successful attempt to introduce these useful animals as beasts of burden in the southwestern territory of the United States is well known, and has excited considerable interest. It is said they have been found admirably adapted for the conveyance of goods and passengers across the arid plains lying between Texas and California. The result of a recent attempt to introduce the camel into the more northern and mountainous territory of Nevada, is thus described by a territorial journal:

"The interesting experiment, whether camels are suitable for this country, is now being thoroughly tested by a train of nine Bactrian camels that are running to and from the salt marsh, about 140 miles distant, engaged in packing salt.

The result so far is in some respects favourable; in others not. They are docile and tractable creatures; kneel down to receive their load, which, if well balanced, never gets out of order nor requires adjusting, owing to the peculiar formation of the back. As to feeding these camels, there is no difficulty; they eat all kinds of grass, thistles, tules, willows, and are particularly fond of grisewood. Their carrying capacity as well as speed has been much overrated. The average weight of salt to each animal, has been inside of 450 pounds, which may be attributed partly to the season of the year when feed is dry, and furnishes less strength than in the Spring and Summer. On good level roads their rate of travel is equal to a mule's; on deep sandy soil, they go at the pace of oxen; and in stony, mountainous roads, they show strong objections to travel at all. The greatest difficulty exists in the softness of their feet. On rocky ground the foot becomes tender and swells up, the skin cracks, the alkali enters, and makes the animal lame. The recuperative power of the camel, however, is such, that by not working it for two weeks it is well again. The climate seems to agree with the Bactrian camel, and must be similar to that of their native country. Great heat does not affect them, and against cold they are protected by a thick shaggy coat of hair. Upon the whole, by studying their habits and wants, by selecting proper roads for them, they may turn out a valuable addition to our locomotive and carrying power; but this region of the Great Basin, on account of the many stony mountain ranges which traverse it, is not likely to become what is termed a real camel country.

*How life is rendered a mere bubble.*—"Oh thou men would praise the Lord for his goodness and for his wonderful works to the children of men? What is life without (in effect) speaking such a language? for we cannot otherwise answer the end of our existence on the earth. This state of being is soon at an end, with all that can be enjoyed or acquired, of a transitory nature; therefore to live here without glorifying the great Creator with the body and with the spirit, is to render life a mere bubble, and to have no well-grounded hope of eternal, soul-satisfying delight.—Sarah [Lynes] Grubb.

*The business of life.*—It is a great thing to be prepared to die—and they are unwise who put it off until the closing scene; it is the business of life. I feel my mind quiet, and centred in the ocean of love and infinite goodness.—William Odell, 1805.

### On the Republic of Liberia, its Products and Resources.

BY GEORGE RALSTON, CONSUL GEN'L FOR LIBERIA, (LONDON.)

The small Republic of Liberia, founded by the benevolence of the American Colonization Society on the West Coast of Africa some 40 years ago, for the purpose of furnishing an asylum to the free people of colour in the United States, who, from the unfortunate prejudice against blacks, cannot live happily in their native land, and which has since become the asylum of the recaptured Africans taken out of the slave ships by the American cruisers for suppressing the slave trade, is becoming so interesting and important a community, that I beg to give a concise account of its present condition and its prospects, with the desire of attracting the benevolent regards of all Christian people, but particularly of the British nation, towards the young and rising State.

Liberia (the land of the free), on the west coast of Africa, is a place of refuge for those poor negroes who, not comfortably situated in their native country, have migrated from Virginia, Ohio, the Carolinas, Pennsylvania, Maryland, and other States of the Union. These negroes have been aided by the benevolence of the American Colonization Society, at Washington, to remove to the coast of Guinea, where, after undergoing a variety of hardships and afflictions incident to settling in a savage region, they have formed themselves into a respectable commonwealth, numbering some 500,000 souls, of whom about 484,000 are aboriginal inhabitants of the country, and about 16,000 Americo-Liberians. Their form of government is that of a Republic—having an elected President, and two houses (Senate and House of Representatives) of the legislature. The Vice-President and President are elected for two years, the House of Representatives for two years, and the Senate for four years. There are 13 members of the Lower House and 8 of the Upper House; each country sending two members to the Senate. Hereafter, as the population augments, each 10,000 persons will be entitled to an additional representative. The Vice-President must be 35 years of age, and have real property of the value of 600 dollars; and, in the case of the absence or death of the President, he serves as President. He is also President of the Senate, which, in addition to being one of the branches of the Legislature, is a Council for the President of the Republic, he being required to submit treaties for ratification and appointments to public office for confirmation. The President must be 35 years of age, and have property 600 dollars. The judicial power is vested in a supreme court, and such subordinate courts as the Legislature may from time to time establish.

Liberia is situated on that part of the coast of Guinea called the Grain coast (most fertile in rice,) having for its south-eastern boundary the San Pedro river, 78 miles east of Cape Palmas, and running along the coast to the mouth of the Shebar river, 125 miles north-west of Monrovia; it has about 600 miles of coast line, and extends back about 100 miles on an average, but with the facility of almost indefinite extension into the interior, the natives everywhere manifesting the greatest desire that treaties should be formed with them, so that the limits of the Republic may be extended over all the neighbouring districts. The Liberian territory has been purchased by more than twenty treaties, and in all cases the natives have freely parted with their titles for a satisfactory price. The chief solicitude has been to purchase the line of sea-coast, so as to connect the different settlements under one government, and to exclude the slave trade, which formerly was

most extensively carried on at Cape Mesurado, Tradetown, Little Bassa, Digby, New Sesters, Gallinas, and other places at present within the Republic, but now happily excluded—except in a recent instance at Gallinas, under peculiar circumstances. The country lately devastated by the infamous slave traders, is now being cultivated and enriched by peaceful agriculture and extending commerce. It furnishes a home to the defenceless natives who have fled for protection from slavery and death, liable to be inflicted upon them by their own ruthless chiefs. The natives know that within Liberian jurisdiction they are secure from the liability of being seized and sold into slavery.

The original settlers landed in Liberia and hoisted the American flag on the 25th of April, 1822, at Cape Mesurado, where Monrovia, the capital was established, and they continued under the fostering care of the American Colonization Society until the 24th day of August, 1847, 25 years, when they were proclaimed a free and independent State, with the sanction of the parent Society, and were regularly installed as the Republic of Liberia. England and France soon welcomed this small State into the family of nations, by making treaties of amity, commerce, and navigation with her. These friendly examples being imitated by other powers, it follows that Liberia is acknowledged, and has treaty relations with some of the most respectable States of the world situated in Europe and America. It is deeply to be regretted that the United States, the fatherland of Liberians, has not yet acknowledged the young Republic. It is to be hoped, since the power has passed out of the hands of the pro-slavery party in America, that Liberian independence will soon be acknowledged by the twelfth nation of the world. The Republic of Africa will, no doubt, soon be acknowledged by the mighty Republic of America.

Though Liberia was established on the Coast of Africa as an asylum for the free coloured people of the United States, it was not intended to confine the object merely to the deportation of persons previously free. On the contrary, many slaves were emancipated expressly for emigration to Liberia, and a number of benevolent and kind masters could be mentioned, who not only made great sacrifices, but nearly pauperised themselves by giving up their property in slaves, and also by furnishing them the means of comfortably reaching the colony by a long sea passage, and providing for their welfare after their arrival in their future homes. Upwards of 6000 persons were in this category, most of whom, and their descendants, have since become valuable and useful citizens of this little State, who, if they had continued in the land of their birth would have remained depressed as an inferior caste, repulsed from the society of the white race, and excluded from all but the most menial and least lucrative employments. With all the natural aspirations of freedom, and finding all the circumstances surrounding them in their new homes so favourable to the development of the industry, talents, and enterprise they possessed, we have witnessed all the success which was to be expected. We find them changed from the care-tless, listless beings they were in America, into the pains-taking, industrious, and energetic citizens of Liberia.

It would be easy to mention the names of numerous persons of Liberia who would do credit, by their respectable characters, their wealth, and their general success, to almost any civilized community, who owed their prosperity exclusively to the education of circumstances they found in Liberia, but who would, if they had remained in their native land, under the prejudices and the depress-

ing circumstances surrounding them, have continued mere drones and nobodies. These people were early taught to govern themselves. The white governors sent out by the American Colonization Society, had the good sense to take pains to select the most respectable of the coloured people to aid in administering the affairs of the infant colony, and the training of Lot Carey, Elijah Johnson, John B. Russwurm, and J. J. Roberts, and others that could be named, was so good that on the death of the lamented Buchanan, in 1841, (the last of the white governors,) it was resolved that all in authority hereafter should be coloured persons, and Mr. Roberts was made the governor, and continued so for six years, and on the independence of the State being proclaimed, and the Republic of Liberia instituted, Mr. Roberts was elected President, and on three subsequent occasions he was re-elected President, thus serving eight years as chief of the Republic, and previously six years as governor, making a total service of 14 years as chief magistrate of Liberia.

His excellent successor, the actual President, Stephen Allen Benson, came from Maryland at the early age of six years, and, having gone through all the varied vicissitudes, among others, of being a prisoner when very young among the aborigines, then being a successful merchant, then being a member of the Legislature as Senator, then Judge, then Vice-President of the Republic, and, of course, President of the Senate, and occasionally Military Commander of the volunteer countrymen in resisting the attacks of the natives, became President of the Republic, and, having served three terms of two years each, was inaugurated for a fourth term last January, and, on the completion of eight years of service as President, he will probably retire to his large coffee estate at Bassa, and hereafter some of my present audience may have the pleasure of partaking of probably the best coffee produced in the world from his plantation.

It is instructive to contrast the cheap and successful self-government of the Liberians with the expensive and not over successful government of white men in the Colonial establishments of the Europeans on the coast of Africa. White men, soon dying in the unequal climate of Africa, require large salaries and frequent successors, whilst the blacks, living in a climate far more congenial to them than the temperate zone would be, are long-lived, healthy, and economical administrators of the simple laws of their own framing, which are well adapted to promote the prosperity of their countrymen.

(To be continued.)

*Gay attire and superfluity.*—What think ye? Will the Lord accept of men and women in their pride and vain glory, and gay attire and superfluity? I will tell ye, nay; for such are spotted and stained with the spots of this world; they are too much taken up with, and following, the new fashions and customs of it, which must be repented of and turned from, if they would find mercy with the Lord, if they are not totally hardened and resolved to have their own ways till the last moment of their time.

Oh! therefore, come down, all you lofty souls and daughters in Sion, and put away your pride and arrogance, that you may be prepared for the solemn time and message, and may come before the Lord with true humility, and not be adorned in such a manner as was spoken against by the apostle, which doth not become a people professing the self-denying religion of our Lord Jesus Christ. Being not acceptable to the Lord and a contradiction to our Christian profession.—*Samuel Scott.*

For "The Friend."

*The Ground of Christian Discipline briefly explained; and the necessity of its influence of Heavenly Wisdom for its proper support enforced. By Joseph Titmuss.—Without me ye can do nothing.—John, xv. 5.—Not as though I had already attained, either were already perfect.—Phil. iii. 12.*

[We have received a pamphlet with the above title, containing matter for serious reflection on the part of the members of our religious Society. Much of the trouble and distress introduced into our midst, has had its origin from a disregard of the fundamental principle, that the affairs of the Church can be properly managed only by those who are themselves measurably under the government of the Head of the church, and are thus qualified to understand His will in regard thereto. Another source of disorder and trouble, has been the sentiment expressed and acted on by some, that because there may be a want of rightly qualified members in a meeting, or its affairs be in some instances transacted in a wrong spirit, therefore the requisitions of the discipline are not to be regarded, and members are justified in acting in accordance with their own individual ideas of right, independent of the long established rules which the church has adopted for the government of its members and meetings. Whatever pretensions such may make to superior experience in the law of the Spirit, and though they may claim exemption from the wholesome provisions and requisitions of the discipline on this account, it evidences they are deluded, their practice and pretensions lead to disorder, and, if generally acted on, would end in anarchy. There is a serious truth contained in the declaration, which is not unfrequently quoted by such, that "the letter killeth," but it is a great mistake to suppose that this in any wise sanctions going contrary to the course which the letter enjoins. If we walk in the Spirit, we will be found walking in conformity with the rules which the spirit has authorized the Church to adopt.

We think the author of the pamphlet has pointed out the remedy for the evils referred to.

The body of the work is preceded by the following advertisement.]

*Advertisement.*—Such is the propensity of human nature to deviate from a right course, that, without a frequent recurrence to first principles, there is a danger of societies, as well as individuals, losing their settlement on the foundation upon which they were originally established. From this consideration, the author of the following remarks has been led to entertain a fear, lest the disposition, prevalent in many persons to attempt to set aside the necessity of Divine assistance in conducting the discipline of the church, should increase, and eventually lead us, as a Society, from the true foundation of our religious profession. This has induced him to endeavour, in the spirit of love, to convince the judgments of those who may entertain this sentiment, and thereby to check, if possible, this evil;—an evil which appears to him to savour much of presumption;—to be highly offensive to the *Divine Being*, and likely to draw down his displeasure on our favoured Society.

As these remarks are designed only for the members of our own Society, it may seem the less necessary to observe, that the author by no means wishes to depreciate human abilities, either natural or acquired. These are highly valuable in their places, and may be eminently useful in the church, in various degrees, when they are sanctified by divine Grace, and under the influence of the Holy Spirit. All that he insists upon is, that unless

they are thus sanctified, and act in subservience to this Spirit, it cannot be expected that they will avail towards promoting the kingdom of God.

This kingdom, we are assured, is *within*—of a spiritual nature,—and consists in "righteousness and peace, and joy, in the Holy Ghost;" Rom. xiv. 17, a state of mind in which the Spirit of Christ rules and reigns. If the establishment of this kingdom in the heart is essentially requisite for all, in order that the great purpose of their being may be accomplished, how peculiarly so must it be for those who undertake to build up the church of God, and thereby to promote the establishment of his kingdom in the hearts of others!

Many amongst us, it is to be feared, are lamentably insensible of their insufficiency of themselves for this work; and therefore they feel not the necessity of waiting for the influence of that power which alone can qualify them for such service. It was this power, however, which wrought so effectually in many of our predecessors, and strengthened them to bear such a fight of afflictions, and to contend so valiantly "for the faith once delivered to the saints." *Judic. 3.*

The object of the present little work, is by no means to discourage any Friends from attending meetings for discipline, but the contrary. And as the right support of these meetings, and the part we take in them, are matters of so great importance to ourselves and to the Society, the author is solicitous to put Friends upon a careful examination how far they are active in them, so as to promote their own best interests, and the interest of the cause they profess to serve. For want of attending to the important business of meetings for discipline in a proper spirit, and with a suitable preparation of heart, many, it is to be feared, really injure themselves, and the cause they are desirous to forward. The design of the following observations, is, if possible, to prevent so unhappy an effect; and, if they shall conduce in any degree, to this salutary purpose, the author will think himself amply repaid for his labour.

*The Ground, &c.*—"God is a Spirit;" and communion with him can be enjoyed only through a spiritual medium. For this purpose, in the riches of his goodness towards poor fallen man, He has furnished every individual with a measure of his own pure Spirit;—that "unspeakable gift," purchased for us by the sufferings and death of his beloved Son. Through the enlightening, purifying efficacy of this Divine Principle of life, man is mercifully put into a capacity to see and feel his lost condition by nature, and to regain that purity and holiness, from which by disobedience our first parents fell. For this Spirit, as it is cordially united with, qualifies him to contend successfully with the principle of evil in his own heart, and eventually enables him to be more than conqueror. The strong man armed, that had occupied the house, is cast out, and his goods are spoiled; a complete change takes place in his heart; the affections are transferred from earth to heaven; and the pure Seed of the kingdom, before oppressed and buried, as it were, under the load of sin, gains the ascendancy.

In the progress of this work, the heart becomes the scene of many a conflict between these two powers, the evil nature often striving to regain the superiority; but, as a holy confidence in the measure of light and grace afforded is maintained, and a steady adherence to it preserved, the progress of the soul will be sure, and its efforts ultimately crowned with success. Thus emancipated from this greater than Egyptian bondage, man is enabled to rejoice in "the glorious liberty of the children of God." Having thus, through the

quickening, regenerating influence of the Spirit, known a transition from the carnal to the spiritual state, or, in the language of our Saviour to Nicodemus, being "born again," or from above, he receives spiritual faculties and powers to which he was before a stranger; and, persevering in faithfulness, experiences a spiritual growth from strength to strength—from the child's state to that of a young man; and thence to that of a strong man; nay to that of "a perfect man," a "man of God"—"thoroughly furnished unto all good works."

This was the blessed experience of the truly living amongst our predecessors;—men and women eminently raised and qualified to lift up the standard of truth and righteousness. These, through the powerful operation of the quickening Word, were "baptized into Christ," even "into his death," so that, "as Christ was raised from the dead by the glory of the Father," they also were enabled to "walk in newness of life." They were "made to drink into one Spirit," and thus they became members of that mystical body, the Church, of which Christ Jesus is the Head; growing up into him, and experiencing him to be made unto them, "wisdom and righteousness and sanctification and redemption."

This union of the members of the true church with Christ the Head, is beautifully set forth by our Saviour, when he compares himself to the vine, and his followers to the branches. As these are supported by the root, receive nourishment from it, and entirely depend upon it; so the living members of the true Church depend upon Christ, the Head, and derive their life, strength, and qualification for service solely from Him. For, "as the branch," says our Saviour, "cannot bear fruit of itself, except it abide in the vine, no more can ye, except ye abide in Me."

Thus it is clear, that, consistently with the observation of the apostle, "the natural man receiveth not the things of the Spirit of God, for they are foolishness unto him; neither can he know them, because they are spiritually discerned." Man, therefore, without experiencing that change of heart, through the Spirit of Christ, expressed by the term, Regeneration, or the new Birth, is wholly a stranger to the kingdom of God. This kingdom is of a spiritual nature, consisting in "righteousness and peace, and joy, in the Holy Ghost,"—a righteousness begotten in us by and through the Spirit of Christ dwelling in us, clothing our spirits with his own robe, and diffusing, at times, through our whole man, a peace and joy which those in the natural state cannot even conceive. And our Saviour, in his conference with Nicodemus, positively declares, that "except a man be born again, he cannot see the kingdom of God."

(To be continued.)

*The People shall Dwell Alone.*—In days that are past, this scripture declaration was often quoted as applicable to our Society, "the people shall dwell alone;"—it was when Israel was abiding in his tent, separate from the surrounding nations, that the emphatic exclamation was uttered, "How goodly are thy tents, O Jacob, and thy tabernacles, O Israel! as the valleys are they spread forth, as gardens by the river side, and as cedar trees beside the waters." And of this favoured people it was declared on the same occasion, "the people shall dwell alone, and shall not be reckoned among the nations."—*Mary Hagger. F. L., vol. 1th, pp. 454, 455.*

Carrying on the concerns of the world in the spirit of the world, forgetful of the concerns of eternity, is a very unsafe and lamentable state.

*The Bald Aborigines of the Balonne.*—In the western interior of Australia, beyond the Balonne river, a party of aboriginal natives exist who are entirely destitute of hair on the head. One of the natives was brought to Sidney, and is thus described by the Sidney Empire :

"There needed not, however, this remarkable destruction of hair to show that the individual before us was the type of a race utterly differing in physical peculiarities from the ordinary aboriginals of Australia. The whole contour of the face, form of the head, expression, colour of skin, and listless (almost sullen) attitude, at once suggested the Mongolian." It was impossible to look at this native of the backwoods with the least attention and reflection, without feeling convinced of his Chinese extraction. His physical development is far inferior to that of the healthy aboriginal found in other parts of Australia. The large rapid eye, thick lips, broadly-spreading nose, and deep brown skin were all absent. The peculiarity of the face was most evidently Chinese, and the eye confirmed this impression. The skin of this interesting stranger is precisely of that deep yellow brown shade which might be expected in a descendant from Chinese and aboriginal Australian parents. How long the races have been mingled in the persons of his ancestors it might be hard to say. The representative before us, however, was assuredly more Chinaman than aborigine. The party to whom he belonged—for there is no clear reason for calling it a tribe—appeared to inhabit the country to the north-westward of the Upper Warrego. McKay has not seen more than six or seven of them at various times, one at least of whom was a woman, and one man was much taller and more strongly proportioned than the specimen brought to our office."

It is supposed that these people are the descendants of Chinamen fishermen, who have landed or been cast away on the coast.

*The Faith of the Gospel.*—Let us not stop short, until we have obtained the true precious faith, once delivered to the saints;—the *life* of the gospel, which worketh by love, purifieth the heart, and giveth victory over sin, death, hell, and the grave. A historical or traditional faith, or one that admits of a continuance in sin, is dead and unavailing; but the faith of the gospel is a living, operative, principle,—an impenetrable shield, to smother the fiery darts of the wicked, disarm the sin, justify its happy possessor, and giveth peace with God, through our Lord Jesus Christ: from whom alone it must be obtained, and for it we must all come to Him, in the humility and simplicity of little children; of whom is the kingdom of heaven, though they be upon earth "the poor in spirit." It is Jesus alone who imparts this heavenly treasure,—faith: He is the blessed author and finisher of it; and from him we must receive the precious gift into our hearts.—*Daniel Wheeler. F. L., vol. 7th, p. 278.*

*Greatest delight and satisfaction.*—I can honestly say, that the greatest delight and satisfaction that I ever have in present possession, is to feel the baptism of the spirit to wash my heart, and nite it to the seed in the bitter sense of suffering; and the most pleasing contemplation that I have a future prospect in this life, is to see the prosperity of Truth, and to be favoured with liberty and capacity to serve the cause thereof in my generation. And for the integrity of this declaration I dare appeal to the Searcher of all hearts, who hath even now tendered my spirit in humble prostration before him.—*Richard Shackleton.*

*The progress of a worldly spirit in the heart.*—Though the change from day to night, is by a motion so gradual as scarcely to be perceived, yet when night is come we behold it very different from the day; and thus as people become wise in their own eyes, and prudent in their own sight, customs arise up from the spirit of this world, and spread little by little, till a departure from the simplicity that there is in Christ becomes distinguished as light from darkness, to such as are crucified to the world.—*John Woodman.*

## THE FRIEND.

EIGHTH MONTH 2, 1862.

What is to be done with the emancipated negroes? This is a query which we often hear; and the reply varies according to the feelings, the reflection, and the intelligence of the respondent. It refers to a subject of serious importance, upon the right disposal of which, is depending much of the future quietness and prosperity of our country. If it should be decided in accordance with the ignorance and prejudice unhappily too prevalent among the whites in relation to the moral and intellectual capabilities of the coloured population, we most probably will be involved in endless strife and perplexity; but if the people will allow the precepts of the christian religion to govern them, and adopt the policy which common sense dictates, there need be no further difficulty anticipated, than must attend the necessarily gradual elevation of a people, reduced by the cruel slavery of successive generations to deplorable ignorance and thoughtless dependence.

There has been no little mischief done by determined pro-slavery men, and a shallow, self-opinionated class claiming to be philosophers, who have industriously promulgated a notion that the coloured man is of an entirely different race from the white, who has no right to claim descent from Adam; and that it is impossible for the two races to dwell together as equals; but if they inhabit the same country the one must inevitably take the position of dependent upon and servitor to the other, the white always being superior. Contrary as this is to the teachings of ethnological research and the testimony of Holy Scripture, there are yet many whose want of knowledge on this subject and whose self-esteem, induce them to give more or less credence to this false theory; being glad to avail themselves of it as an excuse—mutable as one as it would be, were it true—for the cruelty and injustice perpetrated against those they brand with being an inferior and helpless race; while the prejudicing of others who do not admit the correctness of the theory, is yet so strong, that they are unwilling to allow the coloured portion of our population the means for entering into fair competition with them, and thus to labour to prove their capacity for acquiring the same amount of knowledge, and fulfilling the same duties as themselves.

It has pleased Divine Providence, for reasons which we cannot fathom, to permit for ages the African to be subjected to galling servitude, either in his own or in other lands, and through individuals, and even some tribes have, at different periods, made some progress in civilization, yet as a distinct portion of the human family, it cannot be denied that the negro in his own land, and his descendants in other places, have for centuries occupied a very inferior position; from which as a class, they have manifested little capacity, and indeed little disposition, to extricate themselves. This degraded position, though probably not originally the result of

organic inferiority, has exercised a controlling influence in preventing the development of mental power. Thus the tyranny and cruelty with which they have been treated by those who boasted of being their superiors, and who have taken advantage of the ignorance and helplessness of the poor black to reduce him to abject slavery, have depressed and brutalized him still more. It is thus we are to attribute his present low grade of intellect, and it will require time and favourable circumstances to enable him to elevate himself to the standard attained by his more favoured white brother. Where these have been enjoyed by him, ample evidence has been afforded of his capacity and disposition to avail himself of them, and there are now many well known instances of coloured men who have arrived at a high degree of mental culture.

The answer to the query, what shall be done with the emancipated negroes? is then plain and easy. Let them remain upon the soil where they were born; place within their reach the means of education, both intellectual and religious; free them from the trammels with which false pride and prejudice have heretofore crippled their exertions to improve their social standing, and their material resources, and leave them to work their way up to the level of the community around them. They will surely repay, by the fruit of their toil, for this enjoyment of their rights, and the nation will be relieved from the sin and shame of employing its power and example, in keeping down a large portion of its working population, which by its unrequited toil, has contributed largely to its wealth and prosperity.

But it may be that very many of our coloured population will prefer emigration to the land of their forefathers, to enter at once upon the enjoyments of all the advantages of social equality, in a cultivated, christian community, rather than to remain in the land of their birth, where, it will require the lapse of many years to remove the feelings of contempt and dislike, entertained by the dominant class towards them. Such a course would seem natural and wise in them, and though the departure of any large portion of them, would be a loss to our country, we would have no right to complain of their wish to leave a land where they have suffered so much, and where, if they remain, they will probably have to suffer so much more.

Liberia is asking them to return to the home of their forefathers, and offering them, beside a rich soil for cultivation, an almost boundless store of material for wealthy commerce, and a congenial climate, all the rights and privileges of social, civic and political life, of which here they are deprived, and to obtain which, they must, it is to be feared, undergo a long and galling contest. The prosperity and extending power of this highly interesting republic, are, we think, constantly assuming increased importance, and can hardly fail in the course of a few years, if its government continues to be as wisely administered as it has been of latter times, to become the grand rallying point of the civilized and christianized blacks in America. In order that our readers may have correct information, respecting the progress made by the community, which, under the patronage and help of many of our philanthropic citizens, has worked out its independence and national recognition, we have concluded to transfer to the pages of our Journal, the greater portion of an interesting sketch of the Republic, recently prepared by our fellow countryman, G. Ralston, consul for Liberia in London. The first portion will be found in our present number.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, EIGHTH MONTH 9, 1862.

NO. 49.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From Evenings at the Microscope.  
Protozoa and Sponges.

We are so accustomed to see certain of the vital functions of animals performed by special organs or tissues, that we wonder when we find creatures which move without limbs, contract without muscles, respire without lungs or gills, and digest without a stomach or intestines. But thus we are taught that the function is independent of the organ, and, as it were, prior to it; though in nine hundred and ninety-nine cases out of a thousand it is associated with it. In truth, the simplest forms of animal life display very little of that division of labour, the minuteness of which increases as we ascend the organic scale; for the common tissue is not yet differentiated (to use the awkward term which is becoming fashionable among physiologists) into organs, but is endowed with the power of fulfilling various offices, and performing many functions. In all probability, the function is but imperfectly performed; the specialization of certain tissues, and their union into organs, and the complexity of such combinations, no doubt, perform the given function in a far more complete degree; and it is the number and elaborateness of these that constitute one animal higher in the scale than another. The human lung is no doubt a more complete breathing apparatus than the entire ciliated surface of an Infusoria, and the human eye sees more perfectly than the loose aggregation of pigment granules on the edge of a medusa. But this diversity is essential to creation, as the great and wondrous plan which we seek to see; and meanwhile, we may rest satisfied that the humblest requirements of the lowest organism are met adequately by its humble endowments.

This evening I propose to show you some of these humble conditions of animal life—the lowest of the lowly. I have here two or three phials of very clear water, dipped from the fresh-water ponds in the neighbourhood. All collections of water are not equally productive; and very far indeed is the popular notion from correctness, that every drop of water which we drink contains millions of animalcules. You may find many collections of clear water, springs, streams, and pools, from which you may examine drop after drop in succession, with the highest powers of the microscope, and scarcely discover a solitary animalcule. Again, it is not stagnant and fetid pools that are the richest in vitality; though no doubt you will always ob-

tain some forms abundantly enough in such conditions. According to my own experience—an experience of many years—the paucity or profusion of animal life in any given collection of water can never be determined beforehand; and the season, the situation, the aspect, the character of the country, and many other unsuspected conditions, may influence the result; which yet one may often give a shrewd guess at. Generally speaking, small ponds, in which a good deal of sub-aquatic vegetation grows—and particularly if this be of a minutely-divided character, such as *Myriophyllum*, *Chara*, &c., and whose surface is well covered with duckweed (*Lemna*), yields well; and in collecting, it is desirable so to dip as that some of the fine loose sediment of the bottom may flow into your phial, and then to pluck up one or more of the filamentous water-plants, and introduce these into your vessel.

Now, to examine such a collection, proceed as I am about to show you. I hastily glance with the pocket-lens over the foliage, and selecting such filaments as seem the most loaded with dirty floccose matter, I pluck off with pliers one or two, together with one or two of the cleaner ones that are higher up on the plant, nearer the growing point. Having laid these on the lower glass of the live-box, I take up with the tip of a fine capillary tube, or pipette, a minute quantity of the water at the bottom, which flows in as you see, carrying a few granules of the sediment. This drop I discharge upon the glass of the live-box, put on the cover and place the whole on the stage of the microscope.

First let us use a low power—one hundred diameters or so—in order to take a general glance at what we have got. Here is an array of life, indeed! Motion arrests the eye everywhere. "The glittering swift and the flabby slow" are as alike here; clear crystal globules revolve giddily on their axes; tiny points leap hither and thither like nimble fleas; long forms are twisting to and fro; busy little creatures are regularly quartering the hunting-ground, grubbing with an earnest devotedness among the sediment, as they march up the stems; here are vases with translucent bodies protruding from the mouths; here are leantooth-bells, set at the end of tall threads, ever lengthening and shortening; here are malacostracs in miniature, and compasses in far less than a teapot; rival and interfering currents are whirling round and round, and making series of concentric circles among the granules. Surely here is material for our study.

I see an object slowly creeping along the glass, which will be just the thing for our purpose. "It is the protozoa (*Amoeba diffians*)". Let me put on a higher power, and submit it to your observation.

You see a flat area of clear jelly, of very irregular form, with sinuosities and jutting points, like the outline of some island in a map. A great number of minute blackish granules and vesicles occupy the central part, but the edges are clear and colourless. A large bladder is seen near one side, which appears filled with a subtle fluid.

But while you gaze on it, you perceive that its

form is changing; that it is not at two successive moments of exactly the same shape.

Lo! even while speaking of these alterations, they have been proceeding, so that another and a totally diverse outline is now presented. A great excavation takes the place of the projections, while the bladder has quite disappeared, &c.; but it is impossible to follow these changes, which are ever going on without a moment's intermission, and without the slightest recognizable rule or order. The projections are obliterated or exaggerated; the sinuosities are smoothed or deepened into gulfs, or protruded into promontories; firths from here, capes there; not by starts, but evenly, and with sufficient rapidity to be appreciable to the eye while under actual observation; though the alterations are more striking if you take your eye off the object for a few seconds, and then look again; and still more so, if you try to sketch the outline. Individuals vary greatly in dimensions; this specimen is about the one hundred and twentieth of an inch in diameter, but others I have seen not more than one tenth as large as this, and some twice as large.

Disregarding now this peculiarity of change of form, which has procured for it the name of the old versatile sea-goat that was so difficult to bind, we will concentrate our attention on some other points not less interesting. That great bladder undergoes changes besides those gradual alterations of place which are dependent on the general form. It slowly but manifestly increases in size up to a certain extent, when it rather suddenly diminishes to a point, and immediately begins to fill again, as slowly as before. These alterations go on with some regularity, and we cannot observe them without becoming convinced that it is a process of filling and emptying; that the bladder gradually fills with a fluid which is either secreted by its walls or percolates into it from the surrounding tissue; which fluid, when full, the bladder discharges by a sudden contraction of its outline. But whether the fluid goes it is difficult to determine; I have never been able, in this or in any other instance of its occurrence—though this contractile bladder is characteristic of the extensive classes *Infusoria* and *Rotifera*—to see any issue of fluid from the body at the moment of contraction, and therefore conclude that it is discharged into the body, perhaps back again into the tissues whence it was taken up, and whence it is about to be collected again. Hence, it is probably the first obscure rudiment of a circulation; the fluids impregnated with the products of digestion being thus collected and then diffused throughout the soft and yielding tissues.

The smaller bladder-like spaces that you see in considerable numbers in the substance of the animal, are collections of fluid contained in excavations of that substance, which are called *vacuoles*, differing from vesicles, inasmuch as they seem to have no proper wall or inclosing membrane, but to be merely casual separations of the common substance, such as would be made by drops of water in oil. These vacuoles appear to be connected with the digestive function; for very many of them are not clear, but are occupied with granules more

or less opaque, and of exceedingly various dimensions. That these collections of granules are food, you will see by this experiment.

I mingle a little carmine with the water, just enough to impart a visible tinge to it, and close the live-box again. Already you perceive that some of the tiny globules are become turbid and red, and that their opacity and colour are deepening perceptibly. We see by this that the particles of carmine have been taken into the jelly-like sarcoele, and are accumulating in little pellets surrounded by fluid, in these casual hollows of its substance. The process is rendered still more obvious when, as is often the case, some *Diatomaccean*, with a hard silicious shell, becomes the food of the *Amoeba*. The apparently helpless jelly spreads itself over the organism, so as soon to envelop it; the flesh, which having no skin can unite with itself wherever the parts come into contact, closes over the Diatom, which is thus brought into the midst of the sarcoele, a vacuole being new made for its reception. This, then, performs the part of a temporary stomach, the digestible portions of the prey are extracted, and then the insoluble shell of flint is, as it were, gradually squeezed to some part of the exterior, and gradually forced out, the vacuole disappearing with it, or perhaps retaining a minute portion of the fluid, and thus perpetuating itself for awhile. This is the earliest condition in which the process of digestion can be recognised.

Laying aside our live-box with its contents for the present, we will have recourse to the tank of sea-water for one or two other objects of intermediate interest. On the green and brown mossy sea-weed which covers the rocks on the bottom, you see many white specks clinging to the filaments; and there are several adhering to the sides of the tank. These are little living shelled animals of the class *Branimifera*, and these which you see include several species. By bringing your eye assisted by the lens to bear upon one of these latter, you perceive that it is a little discoid spiral shell, of very elegant form, marked with several diverging grooves. This is the pretty little *Poly-stemella crispa*, a fair sample of its class, and which does not more than one-thirtieth of an inch in diameter, it is a giant compared with the *Amoeba*.

There is more however than the shell to be seen; though so filmy and shadowy that I wonder not at your overlooking it. Extending from two opposite sides of the shell to a distance each way considerably exceeding its diameter, you discern two threads of clear jelly running out in long points.

At present we see only the shell, the removal of the animal having induced it in alarm to withdraw the whole of its softer parts within the protection of its castle. We must have a few minutes' patience.

Now look again. From the sides of the opaque shell we see protruding tiny points of the clear sarcoele; these gradually and slowly—so gradually and slowly that the eye cannot recognise the process of extension—stretch and extend their lines and films of delicate jelly, till at length they have stretched right across the field of view. The extension is principally in two opposite directions corresponding to the long axis of the shell; though the branched and variously connected films often diverge considerably to either side of these lines, giving to the whole a more or less fan-shaped figure.

These films are as irregular in their forms and sizes as the expansion of the sarcoele of *Amoeba*, with which they have the closest affinity. Their only peculiarity is their tendency to run out into long ribbons or attenuated threads, which however coalesce and unite whenever they come into mu-

tual contact, and thus we see the threads branching and anastomosing with the utmost irregularity, usually with broad triangular films at the points of divergence and union.

There can be no doubt that the object of these lengthened films, which are termed *pseudopodia*, is the capture of prey or food of some kind; perhaps the more sluggish forms of minute animalcules, or the simpler plants. These the films of sarcoele probably entangle, surround, and drag into the chambers of the shell, digesting their softer parts in temporary vacuoles, and then casting out the more solid remains, just as the *Amoeba* does.

Though this beautiful array was so very deliberately put forth, it is, as you perceive, very rapidly withdrawn on any disturbance to the animal, as when we agitate the water, by slightly moving or turning the cover of the live-box. Another fact, of which you may convince yourself, by watching manifest though small changes of position in the shell while under observation, is, that it is by means of the adhesion and contraction of the *pseudopodia* that the animal drags itself along a fixed surface. This it can effect so assiduously, that I frequently find them in the morning adhering to the tank-sides three or four inches from the bottom, though on the previous evening none were visible on the glass. Thus they must crawl, on occasion, from a hundred to a hundred and fifty times their own diameter in a night.

The structure of a Sponge is much the same as that of these animals, with the exception that its solid part or skeleton is not a continuous covering by which the sarcoele is invested, but consists of fibres or points or rods of varying form, which are clothed with sarcoele. This loose sort of skeleton may be of horny or chitinous matter, like that of *Arceles*, or calcareous, like that of the *Foraminifera*, or it may be silicious—that is, composed of flint, (*silex*.)

In some cases, as in the common Turkey Sponge, the horny skeleton consists of a network of solid but slender fibres, very tough and elastic, which branch and anastomose in every direction, at very short intervals, as you may see by looking at this atom, which I cut off from a dressing sponge.

In the lime and flint Sponges, however, the continuity and cohesion of the skeleton does not depend upon the organic union of the constituent parts, as it does in the loose and open network of the Turkey Sponge. For it is made up of an immense multitude of glassy needles, all separate and independent, between themselves, yet so contrived that they do hold together very firmly, and in a great number of cases are arranged on a prescribed plan, so as to give a certain form and outline to the aggregate.

If you have ever shaken up a box of dressing-pins, and have then endeavoured to take one out, you know how by their mere interlacement they adhere together in a mass, so that by taking hold of one you may lift a brittle group of scores. Something of the same principle are the calcareous and silicious pins (*Spicula*) of a Sponge held together by mutual interlacement. Yet their cohesion is aided by the tenacity of the living sarcoele which invests them; for I have found that specimens of *Grantia* (calcareous Sponges) with needles of three prisms) when long macerated in water, so that the sarcoele is dissolved, have very slight power of cohesion among their spicula.

To understand the structure of a Sponge we will shave a thin sectional slice from this *Haliclondria subcreta*. When alive it is of an orange colour, and is always found closely investing turbid binate shells which are inhabited by Hermit crabs. We will macerate the slice in tepid water for a

quarter of an hour, and then examine it in the live-box.

The surface is a thin layer of greater density than any other part, and is composed of coloured fleshy granules—omitting for the present, the skeleton. Of the same substance is the whole slice composed, but looser and more open as it recedes from the surface. It is separated by blank spaces which are larger towards the centre, smaller and more numerous as they approach the exterior.

These openings are sections of so many canals, by which the whole substance of a sponge is permeated. The surface is perforated with minute pores, at which the surrounding water enters on all sides. These presently unite into slender pipes, which, irregularly meandering, are continually uniting into larger and yet larger canals; of which the greater open spaces that you see are the oblique divisions. These have certain outlets, called *ostia*, on the surface, from which the stream is poured out that has thus made the grand tour of the whole interior. Such *ostia*, as you perceive on the remainder of the *Haliclondria*, are usually raised on slight eminences; and resemble, especially when in living action, miniature volcanoes, vomiting torrents of water and granules of effete matter, instead of fire and ashes.

During life these granules were much more diffused, and formed a considerable portion of the living flesh, the remainder being composed of a glairy sarcoele, almost fluid. The whole was maintained in position by the solid spicula of flint, which you see abundantly in this slice. These take a curious form, exactly that of the pins which we use on our dressing tables; each consisting of a cylindrical slender rod, pointed at one end, and at the other surmounted by a globular head, the whole formed of glass—*flint glass* literally. You see them bristling all round the edge of the section, being stuck into the surface of the sponge, exactly as pins are loosely stuck into a pin-cushion. The heads and points, too, project into the cavities; more, however, than they did during life, for you must make allowance for the shrinking of the soft parts; and thus you perceive how the whole structure is permeated by these glassy pins, which seem to be entangled together quite at random without rule or arrangement. And yet there is an arrangement discernible here; for the canals are formed by the manner in which these are grouped; and this is seen much more clearly, in the case of the three-rayed needles of lime in the *Grantia*. — Bowerbank has shown that in *G. compressa* the substance is divided into very regular chambers in a double series, separated by a diaphragm, whose axis is at right angles to the axis of the sponge; and that these chambers are defined by walls made up of the three-rayed needles in their mutual interlacement.

#### For "The Friend" The Ground of Christian Discipline, &c.

(Continued from page 382.)

Our predecessors having known this kingdom to be come, and having, by its power and prevalence in their hearts, experienced an establishment in sound Christian doctrine and practice, it became the concern of that deeply instructed and enlightened elder, George Fox, that they might be preserved therein. He was, therefore, led in the power and Spirit of God, to establish Meetings for Discipline. For this purpose he travelled through most parts of the nation, and wrote epistles, or encouraged Friends to go to such parts as he did not then visit in person. In recording his account of these services, he has, upon one occasion, the following expressions: "There all the Men's Monthly Meetings for

that county were settled in the glorious order of the gospel; that all, in the power of God, might see that which was lost—bring again that which was driven away; cherish the good, and reprove the evil." This concise and comprehensive statement combines the principal objects aimed at in our Meetings for Discipline, and exhibits the foundation upon which they were originally settled; the great purposes which they were designed to answer; and the manner in which they should be conducted, in order effectually to accomplish these purposes—namely, *in the power of God.*

George Fox was also led, under the influence of the same Spirit and Power by which he had established the *Men's* Meetings for Discipline, to establish similar meetings for the *Women*, many things in these meetings being, in his judgment, more proper for the women than the men. And deeply sensible of the great advantages likely to result from this union of their services in the church, he was strenuous in encouraging all, both men and women, notwithstanding the opposition met with from many, to "keep their meetings in the power of God, the authority of them;" whereby they might be preserved both over that spirit which opposed them therein, and over the spirit of the world which opposed their other meetings.

Now these meetings, being settled in the wisdom and power of God, can be properly maintained only by the same power by which they were first established; they should be held *in his name, in his power and authority.* The members active in the support of the discipline of the church, should be "men of upright hearts and clean hands, rightly prepared for the service they undertake," as the right ability for such service is not always present, nor at the command even of minds that have been previously made acquainted with the operations of the Spirit, and his blessed effects in the heart, they should "wait in humility to have their own Spirits brought into a holy subjection to the Spirit of Christ, that thereby they may be duly qualified for the work and service conducive to the building up of his church."

This preparation of heart for the Lord's service will appear the more necessary, when we consider that He is purity itself, and infinite in wisdom; and all who approach Him must, in degree at least, partake of this purity: "Be ye holy, for I the Lord your God am holy." "The carnal mind" we are assured "is enmity against God;" those therefore in whom it predominates, cannot be acceptable to Him. Their minds are actuated by principles which are in direct opposition to Him, and lead to a conduct that would, if possible, entirely subvert his kingdom. This kingdom is spiritual, and the faculties requisite for its support, must, in accordance with the sentiments of the apostle, be also spiritual: "Brethren," saith he in his epistle to the Galatians, "if a man be overtaken in a fault, ye who are *spiritual*, restore such an one in the *spirit of meekness.*"

The carnal and unregenerate know not the nature of the kingdom of God, because, persisting to refuse obedience to his holy Light, they are strangers to his power inwardly revealed, and therefore cannot act in his name or power. To such then, in so unqualified an interference, might not the language be applicable, "who hath required this at your hand?" But if this power be prevalent, the members active in the support of our discipline, having been baptized through the one Spirit into the one body, would be careful to keep a single eye to the Head, Christ Jesus; would move and act solely under his influence, and thus preserve their places in the church, in the dignity and authority of Truth.

In cases which admit of being contemplated in various lights, it may happen, that, from different views which our Friends take of them, a diversity of sentiment may appear; yet this diversity, though at first apparently in opposition, may eventually, by bringing the subject in all its bearings, fully before Friends, satisfactorily conduct to a good meeting, and a right and harmonious conclusion. For, each member being preserved in his proper place, meek and lowly, separate from all selfish considerations, and solely desirous that the cause of truth and righteousness may prevail, he would have no desire to press his sentiments upon the meeting further than his consistent with the will of the great Master; but, having clearly expressed his feelings upon the subject in question, he would leave them, studying to avoid even the appearance of strife or vain glory; and cherishing that disposition which would lead him to prefer others before himself.

And thus, as a real travail of spirit is maintained for the prevalence of divine life and power amongst them, and Friends wait in simplicity for the unfoldings of that wisdom which is from above, they may humbly hope, that He who has promised to be with his disciples to the end of the world, will condescend, on these occasions, to manifest his will, to his own glory, and the edification of the church. If, however, in insertable wisdom, this evidence is for awhile withheld, then faith and patience are called into exercise; and, in such cases, it is undoubtedly safest to stand still, and refuse the subject for further consideration. These seasons of suspense may, like every other trial, if rightly improved, serve to convince us of our utter inability of ourselves to decide, and that *judgment is of the Lord.* They conduce, in a remarkable manner, to humble and mortify the creaturely part in us, and in the same proportion to exalt the Name, the power and authority of Christ.

We may remember the manner in which the conference of the apostles, the elders, and the whole church, was conducted, when they were assembled at Jerusalem, to consider the question of circumcising the Gentiles, and commanding them to keep the law of Moses. In this conference a very considerable difference of sentiment appears to have prevailed: they were, however, eventually enabled harmoniously to unite in the proposition of that eminent servant, James; and in their epistle to the church at Antioch, written upon this occasion, to adopt this expression: "It hath seemed good to the Holy Ghost, and to us," &c., thus declaring their power and authority in deciding this important point, to be in the very ground for which the author contends—that of the Holy Spirit, as the only sure and certain ground of judgment in the church, in the present spiritual dispensation.

If, then, consistently with the example here exhibited, all our members active in the discipline of the church, had previously experienced the Lord's preparing hand, and were preserved in their proper places, diligently labouring to contribute their portion of exercise and travail for the arising of the pure life into dominion in these meetings, all would be careful to "walk by the same rule;" and the affairs of the church would be conducted to the glory of Christ, and to the edification of the body in love.

It may, perhaps, be objected by some, that this preparation for service, by submission to the sanctifying operation of the Spirit, can apply only to ministerial labour, and not to the manner of transacting the usual discipline of the church. We should, however, bear in mind that the great object of these meetings, is "to build up the church of God," and thereby to promote the extension of

his kingdom. This has been shown to be spiritual; and therefore all the wisdom of the natural man, however eminent and refined, unaided by the Divine Spirit, is wholly unequal to the work. The Creator and Governor of the world has endowed mankind with various talents and powers, to answer the wise ends of his providence; and persons of eminent abilities are capable of extensive usefulness amongst men. But in order to promote the spiritual kingdom of God, and to build up his church, these abilities, whether natural or acquired, must be sanctified by Divine Grace. Thus subverted to the Holy Spirit, and devoted to the cause of piety and virtue, they become distinguished as in promoting the good of men, the glory of God, and the prosperity of his church. Whatever labours therefore, for this purpose, are to be performed, the right ability is to be derived from the Spirit:—"It is the Spirit that quickeneth, the flesh profiteth nothing." And whatever diversities of gifts may be conferred upon the church, in order most effectually to accomplish this great work, they all proceed from "the self same Spirit, dividing to every man severally as he will;" and upon all occasions proportioning, in wisdom, the measure of power to the nature and importance of the service required.

And, blessed be the name of the Lord! He has not, even in this day, wholly withdrawn his good Spirit from being thus "a spirit of judgment to them who sit in judgment," as they are attentive, in humility of heart, and under a sense of their insufficiency of themselves for any good work, to look unto Him for the needful supplies of wisdom and knowledge. No, He is at times still pleased, through his humble, dependent children, graciously to communicate his will to us; and He would, no doubt, much more frequently display his power and goodness in our assemblies, were we more alive in our spirits, more engaged to press after the arising of his name into dominion in them, by each one bowing to the root of life in himself, and earnestly wrestling for the blessing of heavenly help.

But if, in the place of this humble reliance upon the great source of wisdom, any one who had not experienced the right preparation for service, should attempt, in the strength of his natural or acquired abilities, to forward the work as he might suppose, his exertions would be a burden to the rightly exercised, living members; and instead of contributing to the edification of the body, would serve only to "darken counsel," and bring death over the meeting. Such as thus officiously interfere or intrude into services not required at their hands, would do well seriously to consider the awful consequence which resulted to Uzzah, from his presuming, unbidden, "to put forth his hand to hold the ark," when the oxen stumbled.

(To be continued.)

*Symptomatic tables and rich and costly attire.*—How sumptuous now are the tables, how rich and costly the apparel, the diet and the furniture, of many Friends even in the country; but more especially in the city! How is the simplicity and plainness of Truth departed from, and pomp and splendid appearances have taken their place! And how much cost and time might be spared from needless things, and applied to bettering our country and helping to turn away the judgment which hangs over us, in part occasioned by these things. —John Clareman.

Repentance has a double aspect, looking upon the past with a weeping eye, and upon the future with a watchful one.

### On the Republic of Liberia, its Products and Resources.

BY GERARD BALSTON, CONSUL GEN'L FOR LIBERIA, (LONDON.)  
(Continued from page 373.)

Liberia has every advantage of climate and of fertility of soil, and of variety of production, to make it a rich and powerful nation. Every species of tropical produce thrives in this country. Rice is abundant, and is cultivated on the high lands as well as on the low grounds near the coast. Indian corn, sweet potatoes, cassia or cassava root, beans, peas, watermelons, pineapples, oranges, lemons, guavas, mangoes, plantains, bananas, papaws, tamarinds, pomegranates, and a great variety of other edibles, afford ample supplies for the tables of the inhabitants, and for the demands of shipping. Among other articles which already yield valuable exports, or are likely soon to do so, are coffee, sugar, cotton, ginger, pepper, indigo, ground nuts, arrow-root, palm-oil, ivory, canwood, and other woods for dyeing purposes, as well as for ship and house building, &c. Nearly all these productions are indigenous in this country. The wild coffee tree may frequently be met with in the woods. It is the same species as that ordinarily reared in other parts of the world, but may be much improved by cultivation. Several of the inhabitants have applied themselves to this branch of agriculture, which may be carried on with smaller means than are required for the cultivation of sugar or cotton, though both of these articles, particularly sugar, have been produced with success. Specimens of Liberia coffee which have been sent to the United States and to Europe have been pronounced, by good judges, equal to the best received from Mocha or any part of the coffee-producing world. The civilized population of Liberia is, however, so small, [American-Liberians only sixteen thousand,] that important exports cannot be expected until greatly increased capital, and a great addition from the free negroes of the United States, shall give a greater command of skilled and industrious settlers who will be fortunate in finding abundance of native labourers at the low rate of three dollars and rations per month all through the country. Liberia is already prepared to receive seven thousand or eight thousand American negroes per annum, and every year will give it increased ability to receive comfortably additional thousands, until twenty-five thousand or thirty thousand emigrants per annum will not be inconvenient. The United States has four millions of slaves and half a million of free negroes. Liberia could receive all of these in the next twenty-five or thirty years with great advantage to both the American and the African Republics.

The charity and liberality of the Liberians have been taxed by the sudden and unexpected landing upon their shores of nearly 5,000 savages, taken from slave-ships within a few months, but such has been the energy of the government and the well directed efforts of the well-disposed people of Liberia, that the sudden and unexpected addition to their population had been provided for most humanely, and with every prospect that these poor wretches, wrested from the hands of the infamous slave traders, will be reared up to respectability and useful citizenship. An important feature of this new immigration is that it consists principally of young people, mostly boys and girls under twenty years of age, who will be more readily moulded into civilized and advanced inhabitants than if they had been of more advanced years. The American Government has lately made an arrangement to allow the Liberian Government one hundred dollars per head for all the landed re-captives, over eight years of age, and fifty dollars per

head for all under eight years. These poor creatures are carefully looked after in a moral, religious, and economical point of view. Already some of the Congoes landed from the detested slavers have become useful and successful citizens, some being even magistrates, members of the legislature, and missionaries.

The climate of Liberia is warm, (the latitude of Monrovia is only 6.19 north of the equator,) but equable, and tempered by frequent rains and daily sea breezes. The year is divided into but two portions, known as the rainy season and the dry season. The rainy time commences the middle of May, and the dry season commences the middle of November. It should, however, be understood that this absolute distinction is in some measure to be qualified, as there are rainy days, and clear, pleasant days, in every month of the year. The dry season is the warmest, and January is the hottest month in the year—the average height of the thermometer usually being about 75 deg. The negroes from the United States do not find the heat oppressive at any season. It is a mysterious and unaccountable fact, that the climate that is fatal to the whites, is not only innocuous, but is congenial to the blacks. This is a benevolent provision of Providence. If white men could have lived in Africa, within the tropics, the whole continent would doubtless long since have been subjected, like America, to the domination of rulers of European origin, which has resulted in the extirpation of the aborigines. Many attempts have been made by different nations—Portuguese, Dutch, English, French, Danes, and Swedes—to establish settlements of white colonies on various intertropical portions of the African coast, and all have failed from the same cause—the deadly nature of the climate. Yet at Sierra Leone and Liberia coloured men, whose ancestors for two hundred years had resided within the temperate zone, find the climate salubrious, and live as long as others of the race in America. All immigrants, however, have to pass, shortly after their arrival, through what is called the acclimating fever. It is a bilious remittent fever, which usually passes into the intermittent form. The first settlers suffered severely from this disease, but now that its treatment is better understood, and the proper accommodation and attendance is provided, it has ceased to be so much dreaded as formerly. Two or three deaths usually happen out of every one hundred emigrants who arrive, but it is observed that the fatal cases are almost always those of persons who were previously in bad health, or who neglected the simple precautions which are prescribed for new comers. In many cases, on the other hand, the immigrants find their health improved by the change of country. It is a remarkable fact that foreigners may visit this coast, and land at six or eight o'clock in the morning, and remain on shore all day, until six or eight o'clock P.M., with perfect exemption from coast fever, if they only are careful to sleep on board ship at night. It seems that African fever is contracted principally while asleep, or while exposed to the miasma, which appears to be more noxious during night. There are numerous cases of foreigners being detained on shore at night, and for several nights at a time, who shut themselves up in a close room, with a little fire to expel dampness, and who escaped entirely all deleterious effects of climate, except a little lassitude for a day or two.

There are no very large rivers within the present limits of Liberia. The two largest are the Cavally, in the southeast, having water enough for vessels of fifteen feet draft for eighty miles, and the St. Pauls, in the northwest, having a navigation of

sixteen miles for vessels of eleven or twelve feet draft of water, and having a course of three hundred miles through a fertile and beautiful country. There are numerous small streams, some of which are half a mile wide at a distance of fifty miles from the ocean, but none are navigable for large boats more than thirty miles from their mouths. Their currents are obstructed by rapids, which will make hereafter fine seats for water-power manufactories, and most of the rivers are capable of being much improved for navigation by engineering art. The rivers St. John, Junk, St. Paul, and Cavally, are those running through the most fertile and well cultivated countries. The Junk and St. Paul countries are more famous for sugar cultivation, whilst the people upon the St. John are more addicted to coffee culture, though sugar grows well also. Cotton grows spontaneously all over Liberia, and only requires care to make it a great staple of export.

For political and judicial purposes, the Republic is divided into counties, which are further subdivided into townships. The counties are four in number, Montserrado, Grand Bassa, Sinoe, and Maryland. The townships are commonly about eight miles in extent. Each town is a corporation, its affairs being managed by officers chosen by the inhabitants. Courts of monthly and quarter sessions are held in each county. The civil business of the county is administered by the four superintendents appointed by the President, with the advice and consent of the Senate. The county system of government is capable of indefinite extension over new districts of territory that may be acquired, giving all the advantages which local self-government affords to the inhabitant added to the conservative and effective metropolitan governmental benefits of the central power of the entire Republic. The system has thus far worked well, and it may be in time worthy of imitation by other countries, provided the experience of a few more generations shall prove its efficiency.

(To be concluded.)

For "The Friend."

#### Corroborating and Confirming Testimonies.

The concurrent and encouraging testimonies of three departed hand-maidens of the Lord, of latter time, shortly before the close of their faithful labours, may tend to the confirmation of our faith in the continued mercy and goodness of our heavenly Father, who is still waiting over his church and people, in good, and waiting to be gracious, that he may "bless the provisions of Zion, and satisfy her poor with bread."

In the testimony borne by Ann Jones in 1841, as recorded in "The Friend" of Twelfth month 25th, 1861, we find the following encouraging and comforting language, viz: A salutation of encouragement springs in my heart to the mourners, the tried, the proved ones; to some who may be said to be the Lord's poor and afflicted children. Although it is a day of discouragement and treading down in our poor, scattered, backsliding and worldly-minded society, yet I would say to these, cast not away your confidence, cast not away the shield as though it had not been anointed with oil, for I have seen a brighter day that is about to dawn; and though I may not see it with the natural eye, yet I have seen it in that which cannot deceive, and never has deceived me. And I do believe a brighter day is approaching; for the Almighty will have a people professing as we do, that will show forth his praise to the nations, and he will yet overturn the wisdom of the wise, and will bring to nought the counsel of the prudent, and show himself to be God over all, blessed for ever.

le will work, and who shall hinder; bringing forth he did our early predecessors and forerunners in the Truth, from all the lo heres and lo theres, out amongst the world's people, from the wild and wisdom of man, living in the faith of the gospel, not in their own righteousness, but in the righteousness of the saints. And if those who are the Lord Jesus Christ in sincerity, and are afraid to offend him are but willing to abide in his patience and the faith, they will come forth a fine gold, bearing the inscription of holiness to the Lord, as prepared and qualified vessels, sanctified and fitted for the Master's use, sent to reach among the nations the unsearchable riches of Christ."

Very much in correspondence with this is the testimony of our late beloved friend, Sarah Ems, in the last Yearly Meeting of Philadelphia which she was permitted to attend, with a sense of near approach of the solemn event which soon followed. After some preliminary remarks expressive of deep and lively sympathy, she exhorted us: "Have long patience;" [my friends,] "the word of Hosts is purifying his people. Earnestly I crave that I may be one with you in patiently awaiting all the Lord's appointed time, that the church may be thoroughly purified; for the King's daughter is all glorious within; her clothing is of wrought gold; and pure gold, my friends, we know cannot suffer loss by the fire;" and we believed "some of the obscure ones, as they bode in the patience, would be brought to show themselves to the people; would become as the golden pipes which were to convey the golden oil in the sanctuary;" that the harmony and unity of the spirit in the bond of peace would once more prevail; expressing her firm conviction that nothing could be permitted to hurt or destroy in all the Lord's holy mountain, and the desire that the prayer might be raised in every heart, "Have mercy upon us O Lord! have mercy upon us, lest we have sorrow upon sorrow."

Added to these we have the encouraging and confraternal, as well as more recent testimony, of our late friend Elizabeth Evans, in a Meeting of Ministers and Elders, which she attended but a few hours before her sudden departure, as given in "The Friend" of Twelfth month 21st, 1861, of which the following is in part the substance: After expressing her belief that the state of the church called for deep indwelling and travail of spirit before the Lord, to which she encouraged us, she also expressed the belief that although discouragement might so abound, that some who were thus exercised might conclude they were among the hiddermost of the flock, or might even doubt whether they were of the flock of Christ, yet as they struggled to maintain the warfare, reservation would be wrestled; that it was in the night season, Jacob wrestled with the angel, and was declared of him, "as a prince thou hast power with God, and has prevailed." Then after speaking of what a mercy it is that we have an High Priest who is touched with a feeling of our infirmities, and encouraging all to persevere in sleep, inward, fervent prayer, she expressed the conviction, that as such an exercise was maintained by those who mourned for the desolations of Zion, "judges would be raised up as at the first, and counsellors as at the beginning," adding, "it is my firm belief and faith that it will be so, though I may not live to see it."

With these encouraging testimonies before us, and the continued tokens of the Lord's favour and goodness towards us, let us be persuaded to hold up our heads in hope, not doubting that He will continue to work for, in, and through us, as we

maintain the warfare against the enemies of our own souls, whereby any may have been led from the meekness and patience of the saints, into personal or party hostility, to the scattering and division of the flock. The return of unity and harmony amongst us, must indeed be the result of individual faithfulness, upon which the blessing of the Lord will surely rest, to the rejoicing of our souls, and the praise of his name.

Let, therefore, every root of bitterness be plucked up and cast from us, that we may again witness the springing up of the plant of renown, and the abounding of the fruit of the spirit; that so "love, joy, peace, long-suffering, gentleness, goodness, faith, meekness and temperance," may prevail, to the honour of our high and holy profession, and the glory of that living and saving Power, by which our worthy forefathers were redeemed from the world and its spirit. Then may we believe that "unity and harmony will once more prevail," and "judges will be raised up as at the first, and counsellors as at the beginning;" for the Lord hath declared it, and will bring it to pass.

## THE CHRISTIAN HOUSEHOLD.

And they constrained Him, saying, Abide with us.—LUKE XXVI. 26.

"Oestig Haas wo man dich aufgenommen."

O happy house! where Thou art loved the best,  
Dear Friend and Saviour of our race,  
Where never comes such welcome, honoured Guest,  
Where none can ever fill Thy place;  
Where every heart goes forth to meet Thee,  
Where every ear attends Thy word,  
Where every lip with blessing greets Thee,  
Where all are waiting on thy Lord.

O happy house! where two are one in heart,  
In faith and hope are one,  
Whom death can only for a little part,  
Not end the union here begun;  
Who share together one salvation,  
Who would be with thee, Lord, always—  
In gladness or in tribulation,  
In happy or in evil days.

O happy house! whose little ones are given  
Early to Thee, in faith and prayer—  
To Thee, their Friend, who from the heights of heaven  
Guards them with more than mother's care.  
O happy house! where little voices  
Their glad hosannas love to raise;  
And childhood's hisping tongue rejoices  
To bring new songs of love and praise.

O happy house and happy servitude!  
Where daily, in Thy altar pray;  
Where daily, in Thy strength pursued,  
Is never hard nor toilsome known;  
Where each one serves Thee, meek and lowly,  
Whatever Thine appointment be,  
Till common tasks seem great and holy,  
When they are done as unto Thee.

O happy house! where Thou art not forgot  
When joy is flowing full and free;  
O happy house! where every wound is brought—  
Physically, Comfort—to Thee.  
Until all rest, earth's days work ended,  
All meet thee in that home above,  
From whence Thou comest, where Thou hast ascended,  
The heaven of glory and of love!

—Spitta.

## THE CONTENTED PRISONER.

Madame Guion was imprisoned about ten years in the Bastille and other French prisons. During this period she employed herself chiefly in writing. The following translation of one of her poems illustrates her state of mind in her afflictions.

A little bird I am,  
Shut from the fields of air,  
And in my cage I sit and sing  
To Him who placed me there;  
Well pleased a prisoner to be,  
Because, my God, it pleases Thee.

Nought have I else to do,  
Lying the while day long;  
And the while much I love to please,  
Doubt listen to my song:  
He caught and bound my wandering wing,  
But still he bends to hear me sing.

Thou hast an ear to hear,  
A heart to love and bless;  
And though my thoughts were e'er so rude,  
Thou wouldst not hear the less;  
Because thou knowest as they fall  
That love, sweet love, inspires them all.

My cage confines me round,  
Abroad, I cannot fly;  
But though my wing is closely bound,  
My heart's at liberty:  
My prison walls cannot control  
The flight, the freedom of the soul.

Oh! it is good to soar  
These bolts and bars above,  
To Him whose purpose I adore,  
Whose providence I love:  
And in Thy might will I find  
The joy, the freedom of the mind.

From "The British Friend."

## The School-Room a Preparation for Life.

The heading of our paper may be supposed to convey what is familiar to everybody, and on which nothing remains to be said. But does nothing remain to be done? Do not some of us feel that we might have learned in youth, and others of us see that our children might be learning, things almost certain to be wanted in after life, and which the present is their best time for acquiring?

We wish at once to guard against a misunderstanding. Far be it from us to degrade education into a mere sharpening of the individual's faculties towards the acquisition of the good things of life, or what are commonly understood as such. The educator has three things before him:—to enrich the mind with knowledge; to exercise its various powers; and to teach both head and hands as much as he can of what will be likely to be required of them in after-years. The last of these aims he should have daily before his mind, and make a point of attending to, whether there is time for the others or not. For instance, suppose the child is to leave school at twelve years old—he is now eleven—you have three half-hours a week in which you would teach him either Latin or mental calculations. You perhaps, are very fond of Latin, and would like him to derive the same pleasure and advantage from it that you have done. Still that is not the point; the calculations are necessary, the Latin not so, however beneficial; make him a good mental calculator, and let the other take its chance.

The present paper, then, has to do, not with the direct cultivation of the mind, but with its cultivation as bearing on the circumstances of life.

Language is the embodiment of thought, the means of intercourse with our fellow-creatures. Whatever station in society, then, the boy has to fill, whatever trade he will follow, it is of the first necessity that he should have a respectable acquaintance with his mother tongue. Not all the knowledge of French and German cases, genders, and numbers, valuable and useful as they are, can atone, in a native of England, for writing *ridiculous for relation, agreeable for acreable*, as we have known persons do, who passed for being very clever, and who really were so in some things. One meets with others, well informed, highly cultivated, who cannot write off a familiar, easy letter. Such have not a proper command of their mother tongue. They may be able to write an elaborate theme on Justice or Friendship, deliberating ten minutes over every sentence; but if they cannot sit down

and express what is in their minds in a simple, rapid, and agreeable manner, they are lacking in what is more useful, and in which many excel, whose abilities are far inferior.

Proficiency in slate arithmetic will not compensate for the want of readiness in mental calculation. "The fishwoman cries sprats a penny a pound, herrings two a penny; suppose the price of sprats and herrings to be equal, what would a herring weigh?" might puzzle a child who could work a rule-of-three man. Ladies are often lamentably deficient in practical arithmetic, in that knowledge of it which they require in their domestic affairs. They have "done" tare and tret, and learned how many ounces make a pound of gold, but they cannot easily reckon over their butcher's and grocer's bills, nor keep neat and correct accounts. They are not familiar with the quarter-days, and it puzzles them to calculate what so much a week is per month, quarter, and year. And as to how many yards of carpet would cover a room of a given size, that must altogether be trusted to the upholsterer. But the learning of these things would only occupy the time sometimes spent over such arithmetic as is not likely to come into direct use in a woman's life, and certainly only a small fraction of the hours devoted to the piano-forte.

How many young people are born and grow up in a county with little more knowledge of it than they have of those the most distant. They cannot tell what is most interesting about their own town and neighbourhood; in what direction other towns lie in relation to it; what are the soil, productions and manufactures of their native county; its rail-roads, rivers, hills, and moors. These points have only been brought before them as they occurred in the geography book, in turn with the same things as connected with other counties. But surely a thorough knowledge of them would not only lay the foundation of a correct idea of geography, but make their residence in any locality intelligent and interesting.

It is well to study the course of the river Amazon, but better to be well acquainted with that of the Great Western Railway. The reign of Queen Victoria; the repeal of the corn laws; the introduction, first of the fourpenny, and then of the penny post; the discovery of the planet Neptune; the introduction and extension of railways; the application of the electric telegraph—a knowledge of all these things is likely to come in usefully to my child ten times for every one that he will want to know exactly where Humbal's army encamped. Yet to which of the two are the precious school-hours, and the expensive chart, devoted? and which is left for him to pick up as he can?

The power of drawing common objects, as the furniture of a room, as it appears in different perspective positions, may be acquired, with comparative ease, more quickly than the power of representing foliage with grace and effect; and it is certainly a much more available power for the practical purposes of drawing; yet there are persons who copy landscape drawings beautifully, who could not take the pencil and rapidly produce the chair, the sofa, the shelf, the moulding. Again, we must say that the design of this paper is to urge the most practical subjects of instruction, not to depreciate those which are less so; to press those things which should be attended to in the first place—not to discourage those which are valuable in the second. There is much more development of intellect and taste in transferring to the paper the beauties of a beech-tree than the outline of a chest of drawers; still, the latter is more likely to be really wanted. Teach that then first, and afterwards the other, if there be time.

The world around, both of nature and art, surely deserves a larger proportion of attention than is often given to it in the school-room; something much beyond the half-dozen questions and answers learned off weekly out of Dr. Bower. Long before the child can, to any advantage, be taught the nature of the British constitution, or anything whatever of the government, agreement, and opposition of words,—at an age when the study of these subjects only disgusts him forever with what he might ultimately enjoy—he will receive, at any rate, a general and useful idea of how the water rises in the pump; what makes the clock tick; how the barometer shows when rain is coming; why it must always be so much longer than the thermometer; and even how his mamma's likeness was taken at the photographic-rooms. True, it is far easier for the teacher to hold Mangual's Questions in his hand, listening to the lesson repeated by heart, than to explain these things in a familiar and pleasing manner; but let him only try the latter course, and he will be repaid in interest to himself as well as in sense of benefit to those who will, all their lives, retain the effect of such instruction.

If it came to the point of choosing, would it not be better to understand the method by which a bird rises in the air, than the possible motives of Darius in entering upon the Scythian war? what it is which gives us the grateful and the timely warning of twilight, than the reasons assigned by lexicographers for laying the accent on the penultimate or antepenultimate?

In most neighbourhoods, there are opportunities for showing children something of trades and manufactures; how ropes, and candles, and gas, if not paper, and fire-irons, and pens, are made. Now, would it not be well worth while to break in, more than is generally deemed proper, on routine hours, for the sake of learning lessons in this delightful and impressive way? Few teachers would object to let their pupils leave their books and slates to come and look through the telescope at the transit of Mercury, because Mercury will cross the sun at his own time, whether that happens to be in or out of school; but they would perhaps hesitate if an opportunity presented of the sort we have mentioned above.

Particular children are supposed to be unusually quick and clever, because they know, or can do, at ten or twelve years old, what others cannot do on leaving school. But no; both are children of merely average powers; but the first have been taught to rule their own lines and fit their own work, and their first awkward attempts encouraged, until they have, for their years, a respectable skill in the arts sure to be called for in daily life.

## Ministry.

"Dear brethren and sisters, all of you have a godly care of judging or contradicting one another in public meetings, or showing any marks or signs of division therein, amongst ministers or others; it being of a pernicious consequence to bring blame or contempt upon the ministry, and a great hurt to our youth and others."

"We entreat you [who are in the ministry] that in all our religious meetings appointed for the worship of Almighty God, you wait in humble reverence for the influence of the Word of life. Be cautious not to move in acts of devotion, in your own will;—set not self to work, but patiently attend and wait for the gift and enlivening power of the Divine Spirit; without which, your performances will be unacceptable, and, like those of old,

of which it was said, Who hath required this your hand?"

"We desire that none may despise the shortness or simplicity of any offerings in the ministry; that all may be careful not to indulge in a criticising spirit; much less in a disposition to swell, to judge their brethren, or in controversy. Such things are highly injurious and unbecoming; they lead off from that individual watchfulness, that knowledge of ourselves, which are essential to a growth in grace; and they are opposed to meekness and lowliness of a disciple of Christ."

"It is the prerogative of Christ Jesus our Lord to choose and to put forth his own ministers, and clear apprehension of scripture doctrine, and heart enlarged in love to others, are not of the selves sufficient for this work. Whatever may be the talents, or the scriptural knowledge, of a unless there be a distinct call to the ministry, a Society cannot acknowledge it; and except he be a sense of the renewed putting forth, and of quickening influence of the Holy Spirit, we believe to be utterly unsafe to move in this office. We all be concerned to minister only in the abill which God giveth."—*Ancient Epistles*.

From "The Leisure Hour

## The Lake Region of Eastern Africa.

Scarcely a year passes without some additional light being thrown upon the obscurity which has so long enveloped the central African region, and so many expectations cherished. Geographical research, commercial speculations, colonial enterprise, missionary zeal—each and all point this *terra incognita* as a spot of the deepest interest. What then, has the last traveller from these hitherto unexplored regions to tell us respecting their nature and inhabitants? Some answers to this question we propose to offer to our readers.

In the year 1857 an expedition was sent out by the Royal Geographical Society, for the purpose of ascertaining the limits of the Sea of Ujiji, or Tanganyika Lake, a large sheet of inland water about the size of the Caspian, declared by the Arabs to lie some twenty marches, or 276 miles westward beyond Unyamwezi, or the far-famed Land of the Moon. A second object of the expedition was to determine the exportable products of those districts, and a third to gain information respecting the ethnography of its tribes. Captain Burton, the leader of the party, an officer of the Indian army, and the same celebrated explorer who has penetrated to Mecca, disguised as a Mohammedan pilgrim, has given us the result of his African investigations in two volumes, full of graphic descriptions and perilous adventure.

Embarking from the Island of Zanzibar a landing at Kaole, a small settlement on the eastern coast, the aspect of the country appears to be particularly interesting. A profuse vegetation, the result of tropical suns and copious showers, cloth the soil; forests of white and red mangrove stand over the alluvial plain; and beyond rises a blue line of higher level, marking the frontiers of the districts, inhabited by half-caste Arabs and Colesans, who retain amidst their semi-civilized many habits and customs derived from the degraded savages. One important difficulty—East African travelling appears to arise from the numerous dispositions of native esquires, porters or servants. On six different occasions of emergency large numbers of Captain Burton's hired men deserted him; and he is led to the conviction that the best escort for a European would be a small party of Arabs fresh from Hazramant, and untaught in the ways and tongues of Africa.

From Koale the route lies to Unyamwebe, the trial province of the Land of the Moon, and the great meeting-place for merchants, whence their caravans, laden with cotton, cloth, beads and wire, penetrate into the surrounding districts, or carry an ivory and slaves to the coast.

Burton and his companions endured great hardships and encountered perils innumerable in this venturesome journey. They were often prostrated by attacks of fever, and suffered from ophthalmia, which encircled objects as by a misty veil. On the maritime districts, which are peopled with two distinct races, the half-caste Arabs, and the Wawirra, or Coast clans, the expedition struck towards into the Kingani and Mgeta valleys, where the narrow footpaths connecting the villages often plunge into dark and dense tunnels formed by overhanging branches and boughs, which delay the file of laden porters. Merchants traverse such a file with trembling, as a caravan may be easily ordered by some of the barbarous tribes who inhabit these regions. After halting at Zungomero, the expedition crossed the East African Ghauts.

"Truly delicious," remarks Captain Burton, as he escapes from the cruel climate of the valley to the pure sweet mountain air, and to the aspect of clear blue skies. Dull mangrove, and jungle, and monotonous gull were succeeded by tall solitary trees, amongst which the shy tarantula rose graceful; and a swamp, cut by a network of streams, nullahs, and stagnant pools, gave way to dry healthy slopes, with short steep pitches and gently shelving hills. The beams of the large sun of the equator—and nowhere else I seen the rulers of night and day so large danced gaily upon blocks and pebbles of red, blue and dazzling snowy quartz, and the bright breeze waved the summits of the trees, from which depended graceful bananas, and wood-apples, such as melons, walnut croppers, like vine tendrils, from large bulbs of brown-grey wood, clung loosely to their stalwart trunks. Monkeys played hide and seek, chattering behind the bolls of the banana, with its painted scale-armour, issued forth back upon the sunny bank; white-breasted weavers cawed when disturbed from their perching places; doves cooed on the well clothed boughs, and hawked soared high in the transparent sky. The loud cricket chirped like the Italian cigala in the field bush, and everywhere, from air, from earth, upon the hill slopes above, and from the marshes below, the hum, the buzz, and the loud continuous noise of insect life, through the length of the day, spoke out its natural joy. Our gipsy encampment

"By shallow rivers, to whose falls  
Melodious birds sing madrigals."

"By night, the soothing murmurs of the stream of the hill's base mingled with the faint rustle of the breeze, which at times, broken by the clamor of the night heron, the bellow of the bull-og in his swampy home, the ephyrena's whimper, and the fox's whining bark, sounded through the dense most musical most melancholy. Instead of the cold night rain, and the souging of the blast, we saw disclosed a peaceful scene, the moonbeams veiling like sheets of snow upon the ruddy highlands and the stars hanging like lamps of gold from the dome of infinite blue. I never weariied with contemplating the scene; for, contrasting with the splendours around me, still stretched in sight the drough of Despond, unhappy Zungomero, lead-coloured above, mud-coloured below, wind-swept, fog-veiled, and deluged by clouds that dared not approach those detestable mountains."

This high region extends from 37° to 36° east longitude, and is eighty-five miles in breadth. It

is traversed by two main lines; and should Europeans ever settle in Eastern Africa as merchants or missionaries, it appears they might reside here with advantage until acclimatized for the interior. The chief clan now inhabiting this district is the Wasagara, a noisy and riotous race of mountaineers. They display great varieties of complexion, some being almost black, whilst others are chocolate-coloured. Each village has its head man, who, however, owes imperfect allegiance to the district chief. The young men and warriors adorn their locks, we are told, with the feathers of vultures, ostriches, and a variety of bright-plumed jays, and some tribes twist each ringlet with a string of reddish fibre. They distend the ear-lope till it serves for a variety of purposes foreign to the member; it often carries a cane snuff box, or a goat's horn, and in old age it hangs in a deformed loop to the shoulders.

(To be continued.)

#### The Tarantula and its Destroyer.

In Texas there is a large brownish-black spider, whose body is covered with short glossy hairs. It is armed with large, curved cheliceres or fangs of a glossy black color. This spider is commonly known as the Tarantula. Wonderful stories are told of the poisonous character of its bites, which are said to have proved destructive to several human beings. This is one of the largest spiders of North America, only being excelled in size by the *Mygale americana* of the Central American region. Full grown specimens of our species are about two inches long and one and a quarter broad. Its habits are those of the other hunting spiders; it has no web, but lives in cavities, excavated by itself, in the earth. The entrances to these cavities are said to be sometimes closed by a trap-door, which, however, I have never observed, though I was in Texas. I have frequently seen their tunnels in which they were hiding with only their heads protruding above the openings. Sometimes it lies in wait near its den. At other times it sallies forth moving slowly in the neighborhood of its dwelling, and should it discover a weaker insect, it darts quickly and often secures the unwary one for its food.

It very rarely injures any person, as it never bites unless disturbed, nor does it often choose an abode near houses. I have several times teased it with a long stick, but could never make it jump more than a few inches. It would stand erect and fight bravely, biting the provoking instrument, but would always run away the minute the stick was withdrawn. The Texan Tarantula is entirely distinct from the spider of the same name found in Italy, belonging in fact to a different genus. The *Mygale dentata* was first described by Girard in Major's Report of the Exploration of the Red river of Louisiana.

To prevent too great an increase of these large spiders, Providence has created an insect of the wasp family, (*Pompilus formosus*, Say) called by the Texans the tarantula-killer. It is about an inch and a half long with a bluish-green body and golden-rufous wings. It is a bustling, unquiet insect, always in motion, flying now here, now there, and when running on the ground, its wings are in a constant state of vibration. Should it discover a Tarantula, it begins instantly to fly in circles in the air around its victim. The spider, as if knowing its fate, trembles violently, standing up and making a show of fight, but the resistance is very feeble and of no avail. The spider's foe soon discovers a favourable moment and darts upon the Tarantula whom it wounds with its sting, and again commences flying in circles. The injured

spider is thrown into a tremor, and often becomes paralyzed, though the infliction of a second and even a third wound is sometimes necessary. Sooner or later the spider becomes powerless, when the victor approaches, carefully feeling its way to see if its work has been effectually performed. It then begins to drag the Tarantula into a hole which it has previously dug in the ground, where after the deposition of its eggs by the *Pompilus*, the spider is covered up and allowed to remain.

By some wonderful provision the spiders are preserved fresh to afford food for the young of the *Pompilus*. The same poison which kills the spider appears to prevent it from decaying.

Once I met a *Pompilus* who had just killed a large *Mygale*. This was in central Texas, in mid-summer when the rain had not fallen for a long time, and the prairie-soil was filled with numerous sun cracks. The size of the spider was, at least, three times that of the wasp, yet the wasp, running backwards, dragged it along through the dry grass which offered considerable resistance, overcoming every obstacle by earnest perseverance. The route was rendered still more difficult by the cracks in the soil, down which both occasionally tumbled, and several times I thought the Tarantula was lost at the bottom of a crack, but both would soon again emerge. I had never seen such an exhibition of strength and perseverance even among ants. I watched for half an hour, much interested, the energetic wasp dragging the spider through cracks and over fallen weeds, and through fences, and I following determined to see the result, although it was near sunset and I was distant from our encampment. After going a short distance, the wasp and spider fell into a large crack. I was then sure that the *Mygale* had been lost. After a little I bent down to see what had become of them, and was much surprised at seeing the wasp dragging the spider from the crack. At such an exhibition of strength, I inadvertently exclaimed aloud, "You are a stout fellow!" This exclamation caused the wasp to drop the spider and gaze a moment, having noticed me then for the first time; it then flew three or four times around the spider, as if to mark its locality, and went away. Sorry for its departure I took the spider to our tent and preserved it in alcohol. It is now in the Geological Rooms at Austin in Texas.

Mrs. Halsey, of Chappell Hill, Washington Co., Texas, showed me a hole in the ground in which a *Pompilus* had been seen to take a *Mygale*. The hole had been excavated by the wasp; it was altogether twelve inches long, descending at an angle of about forty-five degrees to an extent of eight inches, afterwards horizontally for four inches, and at the end of the horizontal portion the spider was buried.—*Country Gentleman*.

**Over-Bathing.**—If a fish be deprived of its scales, it will be chilled to death: and reasoning analogically, and knowing, too, that human skin scales are destroyed by the alkali of soap, a man may wash himself too much; may actually wash away the scales of his body, leaving the pores so unprotected against heat and cold and obstructions, that death will inevitably ensue; indeed, physiological research proves, that if a third of the skin is removed from the body by scalding or otherwise, a fatal termination is unavoidable. Observant persons know how soon the skin becomes pale, shrivelled and tender, even on the hardest hands, if kept a great deal in cold water. These are suggestive considerations for those who believe that continual water sloshings are indispensable to health and longevity.—*Hull's Journal of Health*.

*Dress*—We should ever bear a strong testimony against that vain desire of the fallen natural heart, which seeks respectability and admiration from dress; to the great neglect of the Divine presence; "Be not conformed to this world;" and in some cases almost to the total disregard of true delicacy, and even decency.

## THE FRIEND.

EIGHTH MONTH, 1862.

### SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 20th ult. In the British House of Commons, Lindsay's motion to offer mediation and for the recognition of the Southern Confederacy, was debated pro and con. Lord Palmerston opposed it, and applied to the only satisfactory termination that could be anticipated, was an amicable separation. This object, he thought, would be impeded rather than promoted, by interference from abroad. Sales of cotton in the Liverpool market for the week, were 55,000 bales. Stock in port, 15,000, including 48,000 American. New Orleans fair, 19d.; middling 18½d. The market for breadstuffs was more active, with an advance of 2d. in wheat; corn had advanced 4d. a *cd.*

**UNITED STATES.**—*The War.*—On the 4th inst, the War Department issued an order requiring the immediate draft of 300,000 of the militia of the States, for the service of the United States, for the term of nine months, unless sooner discharged. It is also ordered, that if any State shall not, by the 15th of the present month, furnish the quota of 100,000 volunteers, teachers, authorized by law, the deficiency of volunteers in that State will also be made up by special draft from the militia. An order respecting absent officers and privates has been issued. After the 11th inst, all leaves of absence and furloughs, (except those given by the War Department) shall be and be absolutely annulled. It is stated from Washington, that although there are on the roll of the U. S. Army, more than 600,000 enlisted men, the number at the present time actually on duty, does not exceed 365,000. The difference is made up by the sick, and in Fort Mifflin. The number absent on furlough is estimated at about 100,000 men. It is asserted that hereafter more direct and decisive action will be taken in the prosecution of the war, and that a perfect agreement exists between the principal generals and the Executive branch of the Government. An army officer of high rank proposes, if a President and Secretary of War will authorize the proceeding, to raise promptly a brigade of young able-bodied intelligent colored men for service in the South; the brigade to be kept distinct from all other troops, and commanded by white officers, and made up of prisoners in progress, several thousands having already been surrendered on each side.

*Virginia.*—There has been a great deal of sickness in Gen. McClellan's army, but its sanitary condition is said to be now improving. It is reported that the rebels have evacuated Richmond, and taken up the south bank of the James river as the line of their defence. The movement is attributed to the breaking out of a pestilence in Richmond, where for weeks previously the mortality among the sick and wounded has been frightfully great. A balloon, on board the James river, below Harrison's Landing, has disclosed the fact that a rebel force exists on either bank of the James, and that Fort Powhatan is unoccupied. The attacks upon the U. S. transports and forces, have been made by guerrilla bands with flying officers, and not by forces of the rebels, with fixed batteries. On the 20th ult. the 1st inst., a body of rebels approached the river banks and threw about five hundred shells across the river into Gen. McClellan's encampment, killing and wounding a number of the troops. Two regiments were subsequently despatched to the spot, and immediately occupied. They cut away the trees and destroyed all the buildings that could shelter the rebels in their nightly operations. It is generally understood and believed, that two of the iron clad gun boats constructed at Richmond, have been completed, and have actually come down the river

to Fort Darling, where they are awaiting a favourable opportunity to attack the Federal fleet. The U. S. fleet in James river has been increased by the arrival of Com. Porter's mortar fleet, from the Mississippi. It consists of twelve mortar boats, and a gun boat. The rebel Gen. Pope's army, had crossed the Rappahannock and advanced to Orangeburg, which was occupied by two regiments of rebel cavalry. The rebels were routed with considerable loss. Great numbers of sick and wounded soldiers, and a large number of Virginia mules, were taken to the quarters, but there still remained on the 1st inst, about 6,000 in the vicinity of James River, who were waiting conveyance northward.

*The West.*—The aspect of affairs in several of the Western States is considered ominous. The Legislature of Missouri has been called together by Governor Magoffin, whose sympathies are said to be with the rebels. Irregular bodies of armed rebels have created great alarm in many parts of the State. Russellville, the capital of Logan county, has been captured by them. The alarming prospect of Confederate guerrilla bands to Cincinnati, Ohio, has induced some of the bankers of that city to send their funds to Chicago. Over \$2,000,000 in gold have been already forwarded. Missouri has been invaded by a large guerrilla force from Arkansas. Advices from the expedition into the Indian Territory, state that the rebel forces are wanted elsewhere, from fear of the backward movement notated. The rebel general, Albert Pike, was near Fort Washita, in Tennessee, various encounters between the hostile forces have occurred, with perhaps, equal loss on both sides. The siege of Vicksburg seems to have been abandoned for the present, as the naval force is wanted elsewhere, and no land force could be spared to co-operate with it. The U. S. forces have evacuated Grand Junction, and the place is now occupied by the rebels, who also have possession of nearly all that portion of the Memphis and Charleston Railroad, between Memphis and Corinth. The U. S. commanding general at Memphis, has issued an order prohibiting speculators from paying specie for the products of the rebel States. When Treasury notes are refused, the parties so refusing will be arrested, and such of their crops as are not needed for the subsistence of the families will be seized by the Government Quartermaster. Speculators paying specie, in violation of this order, will be arrested and sent North, and the property so purchased be seized for the benefit of the Government. A despatch from Helena, Arkansas, dated the 20th inst., states that the rebels have been reinforced, and is again competent for offensive operations. Gen. Hindman was at little Rock, Ark., with about 6000 rebel troops. There were nearly 3000 confiscated slaves at Helena. The cotton of their rebel masters was being sold for their benefit. The rebels have the iron-clad and thirty steamers up the Yazoo river and have them secured against attack by the Federal gun boats.

*The South.*—Positive information has been received at Fort Royal, S. C., that the iron clad steam ram, which for the 2d inst. has been in process of construction at Savannah, is completely manœuvred and ready for service. Her early appearance was expected, and Admiral Dupont had made preparations for such an event. The British steamer Memphis, which ran the blockade to Charleston, with a valuable cargo of ammunition from Liverpool, was captured on her return, by the consent to New York. She was loaded with Sea Island cotton. The health of the troops at Fort Royal and vicinity was suffering from the extreme heat of the weather. Fever and dysentery were common among them. Advices from New Orleans, state that Gen. Beauregard's men are unencamped, all have sent away their baggage, and Gen. Butler, in a note to Reverdy Johnson, says no merchandise, whether cotton or sugar, will in any event be seized or confiscated by the United States authorities there. The shipping trade of New Orleans is rapidly falling. On a single day of late week there were five arrivals at New York of vessels from that port, laden with sugar and other commodities, including some cotton. The quantity of that article burned by the rebels is supposed to amount to a million of bales. Flour had fallen to 100 cents.

*New York.*—Mortality last week, 457. Exports of the week, \$4,134,314. Premium for gold on the 4th inst, 144 per cent. Specie in the banks of the city, \$34,022,100. Money very abundant. The whole number of vessels in port by actual count, was found to be 458.

*Philadelphia.*—Mortality last week, 384.

### RECEIPTS.

Received from John Brantingham, O, \$2, to No. 11, vol. 36.

### FRIENDS SELECT SCHOOLS.

These seminaries will, it is expected, be re-opened after the summer vacation, on or near the first of Next month next, the Boys' School being situated on Cherry Street west of Eighth, and the Girls' School on Seventh Street between Cherry and Race Streets.

The course of instruction now adopted in the Boys' School, embraces, besides the ordinary branches, a selection of more advanced mathematical, scientific and classical studies, on the satisfactory completion of which the pupil will be entitled to a diploma or certificate of scholarship.

During the winter months, lectures on scientific subjects are regularly delivered, illustrated by appropriate apparatus and experiments.

The course of study at the Girls' School embraces, in addition to the elementary branches,—Algebra, Geometry, History, Natural Philosophy, Chemistry, Astronomy, Physiology, Natural History, Botany, Physics, Geography, Mental Philosophy, Etymology, Rhetoric and Composition. Instruction is also given in Trigonometry, Mensuration, and the French and Latin Languages.

As the proper classification of the scholars, early in the session, is important, it is desirable that those who intend to enter pupils for the coming term, should do so as early in the season as possible. Application may be made on the opening of the Schools, to Joseph W. Aldrich, Principal of the Boys' School, and to Margaret Lightfoot, the Principal of the Girls' School.

With the present arrangement, it is believed that these schools offer unusual advantages to Friends for the liberal education of their children, and at a very moderate cost.

Their attention is also invited to the Primary School in the Northern and Western Districts, where provision is made for the careful elementary instruction of children too young to enter the principal schools.

On behalf of the Committee,

JOHN CARTER, Clerk.

### WEST-TOWN SCHOOL.

The Committee under appointment to visit the school at West-Town will meet here on Seventh day, the 10th of the Eighth month, and proceed in the examination on Second and Third days.

JOEL EVANS, Clerk.

Eighth month 6th, 1862.

### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent,—JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

### TEACHER WANTED.

A teacher competent to give instruction in Reading and other branches, is wanted at the Select School for Girls in this city. Apply to Sarah Williams, 732 Arch Street, Deborah M. Williamson, 1624 Arch Street, or Rebecca S. Allen, 335 S. Fifth Street.

### BOOK OF DISCIPLINE OF PHILADELPHIA YEARLY MEETING.

Copies of the above are now for sale at the Book Store, No. 284 Arch Street. Price 50 cts.

DEAD, on the 25th of Fourth month last, at the residence of her husband, Mary P. wife of Benjamin W. Passmore, in the thirty-third year of her age, a member of Concord Monthly Meeting, Pa. Although, by the nature of her last illness, she was prevented from imparting any counsel to those around her, yet, being adorned with a meek and quiet spirit, and firmly attached to the primitive doctrines and testimonies of Friends, the language of her example to her survivors is very emphatic, to "come and follow me, as I have endeavored to follow Christ."

WM. H. FILE, PRINTER,

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, EIGHTH MONTH 16, 1862.

NO. 50.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a-quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

## From "The Leisure Hour." The Lake Region of Eastern Africa.

(Continued from page 293.)

It was in this district that the tembe or hollow was observed for the first time, and is an effective feature in African scenery. It appears, so far, like a short line of raised earth. The form is a hollow square or oblong with curves, projections, and semicircles. Where timber is scarce, the walls are composed of clods loosely put together, mimosa trunks or stout stakes. Where reses abound, the tembe is surrounded by a separate palisade of young unbarbed trunks, capped here and there with cattle-skulls, blocks of wood, grass wisps, and other talismans. Occasionally his is hedged with a high thick fence, even doubled or trebled, of pea-green milk bush, which looks pretty and refreshing, and is ditched outside with deep trench serving as a drain. An exterior ditch is sometimes added, where the men work at the forge, or sit in the shade, and where the wench bask, pound, and cook their grain. The general roof of the tembe is composed of mud and clay leaped upon grass, thickly strewn over a framework of rafters, supported by the long walls, bark bins of grain, gonds, old pots, firewood, water melons, mushrooms, and other articles, are placed on the roof to ripen or dry in the sun. In each external side of the square, one or two door-ways are pierced; these are jealously closed at sunset, after which hour not a villager dares to stir from his home till morning. The inner tenements are divided from one another by warty-walls, each house having two rooms, which vary in length from twenty to fifty feet, and in depth from twelve to fifteen. After further description of this tembe, Captain Burton mentions that in the central court stands the little *nizimu* or fetich hut, to receive the oblations of the superstitious. Their faith in magic is nearly universal. Near the fetich hut handfuls of grain or small pots of pombe are placed, to propitiate ghosts and defend the crops from injury. Witchcraft is practised by thousands, with the firmest conviction of their own power, though frightful tortures await the wizard or witch who is condemned for the destruction of chief or elder. If questioned concerning the giver of his daily bread, the African, will coin with a devotional aspect towards the light of day; and if asked what caused the death of his brother, will reply, "Jua," or "Rimme," the sun.

He has not, like the Kafir, a holiday at the epoch of the new moon; like the Moslem, however, on first seeing it he rises and claps his hands in token of obeisance. The only approach to image-worship seemed to exist in one district, where rude carving was attempted on the massive posts at the entrance of the village.

The habits of burying slaves with the deceased, of carrying provisions to graves, and of lighting fires on cold nights over the last resting-places of the departed prevail throughout eastern and western Africa. How far these customs point out a belief in a future state of existence it seems difficult to determine.

But the limits of this paper will not permit us to linger amongst the Usagura mountain tribes, or to accompany the travellers across the interminable jungles, or through the ill-omened forest that separated them from the frontiers of the Land of the Moon.

On the 7th of November, 1857, the expedition entered Kazel, the capital village of the Omani merchants, reached by a march of 600 miles from the coast. After a halt for the purpose of recruiting their party, which from various vexatious causes of delay, detained them for more than a month, they pushed onward to Nisene, a mass of detached settlements, where the climate was peculiarly unhealthy, and Captain Burton was seized by an attack resembling paralysis, induced by the miasmatic air of the district. The habits of the native population here appear to be more than usually degraded, and the industry of the place is confined to manufacturing a few cotton cloths, coarse mats, clay pipe-heads, and ironmongery.

"All the female part of the population," says Captain Burton, "from the wrinkled grandmother to the maiden scarcely in her teens, assemble together, and sitting in a circle on dwarf stools and bays of wood, apply themselves to their long black-holed pipes. They smoke with intense enjoyment, deeply inhaling the weed, and exhaling clouds from their nostrils; at times they stop to cool the mouth with slices of raw manioc, or cobs of green maize roasted in the ashes; and often some earnest matter of local importance causes the pipes to be removed for a few minutes, and a clamour of tongues breaks the usual silence."

At length, after days of perilous and laborious marching, the travellers came within sight of the Great Lake, the goal of their enterprise. Let Captain Burton's own words convey his impressions of the scene—"Nothing could be more picturesque than this first view of the Tanganyika Lake, as it lay in the lap of the mountains, basking in the gorgeous tropical sunshine. Below and beyond a short foreground of rugged and precipitous hill-ford, where the footpath zig-zags painfully, a narrow strip of emerald green, never serene, and marvellously fertile, shelves towards a ribbon of glistening yellow sand, here bordered by sodgy rushes, there cleanly and clearly cut by the breaking wavelets. Further in front stretch the waters, an expanse of the lightest and softest blue, in breadth varying from thirty to thirty-five miles, and sprinkled by the crisp east wind with tiny crescents of snowy

foam. The background in front is a high and broken wall of steel-coloured mountain, here flecked and capped with pearly mist, there standing sharply pencilled against the azure air; its yawning chasms, marked by a deeper plum-colour, fall towards dwarf hills of mound-like proportions, which apparently dip their feet in the wave. To the south, and opposite the long low point behind which the Malagarazi River discharges the red loam suspended in its violent stream, lie the bluff headlands and capes of Ughubha; and, as the eye dilates, it falls upon a cluster of outlying islets, speckling a sea horizon. Villages, cultivated lands, the frequent canoes of the fishermen on the waters, and on a nearer approach, the murmur of the waves breaking upon the shore, give a something of variety of movement, of life to the landscape; which, like all the fairest prospects in these regions, wants but a little of the neatness and finish of art—mosques and kiosks, palaces and villas, gardens and orchards—contrasting with the profuse lavishness and magnificence of nature, and diversifying the unbroken *coup d'œil* of excessive vegetation, to rival, if not exceed, the most admired scenery of the classic regions. The riart shores of this vast crevasse appeared doubly beautiful to me after the silent and spectral mangrove-creeks on the East African sea-board, and the melancholy monotonous experience of desert and jungle scenery, tawny rock and sun-browned plain, or rank herbage and flats of black mire. Truly, it was a revel for soul and sight. Forgetting toils, dangers, and the doubtfulness of return, I felt willing to endure double what I had endured; and all the party seemed to join with me in joy."

It appeared to Captain Burton, from a careful investigation and comparison of statements, that the Tanganyika receives and absorbs the whole river system, the network of streams, nullahs, and torrents of this portion of central Africa. The general formation suggests, as in the case of the Dead Sea, the idea of a volcano of depression. Judging from the eye, the walls of this basin rise to 2000 or 3000 feet above the water level. It lies almost due north and south, in form a long oval, in extent, as nearly as can be estimated, ninety miles. The water is sweet and pure, of a dull sea-green or clear soft blue. The periodical winds over the lake are south-east and south-west, and it is subject to a certain extent, to tidal influences. Sixteen tribes inhabit the surrounding districts, all more or less sunk in the grossest barbarism, and cannibalism exists on the western shores of Tanganyika. Of one tribe, however, the Wabisa, our author is fond to remark: "They are semi-pastoral, fond of commerce, and said to be civil and hospitable to strangers." Respecting the commerce of these regions, that existing at Uvira, the furthest point on the north-western shore, may be taken as a sample of the rest. Slaves, ivory, grain, bark-cloth, and ironware are the chief exports, also the mawezi, or palm-oil, whose various uses in Europe render it an article of considerable traffic in these districts. The imports are ritindi (or coil bracelets), salt, beads, tobacco and cotton cloth. The market varies with the number of caravans present

at the depot, the season, amount of supply, etc. There are many varieties of fish in the waters of this lake, and the natives narcotize them with the juices of certain poisonous plants. The canoes are of the rudest description; clumsy, misshapen planks, forming, when placed side by side, a keel and two gunwales, the latter fastened to the centre pieces, by cords of palm-fibre passing through lines of holes. The want of caulking causes excessive leakage; the crew take duty as balesmen by turns, keeping up an incessant chorus of shouts and howls, which mingling with the bray and clang of horns and tom-toms, rend the air, till some approaching squall or thunderstorm keeps them silent in terror; then one or another will occasionally break the mournful stillness with the exclamation, "Ya ngiri wanjé!"—"O, my wife!"

After a month's stay in these regions, the travellers commenced the 200 miles return march to Unuyayemba, and their homeward route to the coast diverged but little from the former track. It may be mentioned, however, that while halting at Kazeh, these indefatigable explorers determined to attempt a march northward to the Nyanza Lake, and ascertain its extent. Captain Burton's companion, Captain Speke, succeeded in reaching its shores; and though considerable doubt still rests on the accuracy of the estimate, its total length is assumed at 250 miles, and its breadth at 80. Whether the Nile derives its sources from this reservoir seems still to remain a secret, reserved for the fortunate discovery of some future traveller. It will be found that Captain Burton, although no missionary, like Dr. Livingstone, possesses in the highest degree patience, resolution, and fortitude, and is moreover an excellent scientific observer.

Before concluding this sketch of the Lake Regions in Central Africa, let us glance at a few practical conclusions arrived at by the explorers, concerning the capabilities for commerce in the interior. In a land abounding in timber and iron, and where there are but few engineering difficulties to encounter, the construction of a tramroad from the coast will be the first step towards material improvement. The copal mines will be inefficiently worked, till European industry and energy is brought to bear on the native population. The ivory trade can only be rendered lucrative by an improved mode of conveyance from Ugogo and its encircling deserts, now so abounding in elephants; the trade in cattle is capable of extensive development; and above all, the cultivation of the cotton-plant, which is indigenous in the more fertile regions, and which rivals in fineness, firmness, and weight, the medium staple of the New World, would open up a large and profitable source of wealth. "Here," says our author, "as in Europe, the battle of protection has still to be fought; and here, unlike Europe, the first step towards civilization, namely, the facility of intercourse between the interior and the coast has yet to be created." Nor should we lose sight of the inestimable blessings it is in our power to bestow as christian merchants, naturalists, or philosophers, on the unenlightened African. Recent events in another continent have painfully taught us the truth of Dr. Livingstone's conviction, namely, that "those two pillars of civilization, christianity and commerce, should ever be inseparable."

For "The Friend,"

The Ground of Christian Discipline, &c.

(Concluded from page 387.)

As the writings of our early Friends uniformly concur in maintaining the necessity of waiting for this pure, heavenly wisdom, in order to qualify an individual or a meeting to act consistently with

the principles we profess, it might not be improper, upon this occasion, to bring into view the particular sentiments of different Friends, all tending to confirm the preceding remarks. The limits, however, prescribed to these observations, will not admit of many extracts. The following from an epistle of that valuable minister and elder, Charles Marshall, is peculiarly apposite:—

"Set not about the affairs of Truth without some feeling and helping of it (the pure, heavenly wisdom.) For this I have seen; no parts or acquisitions whatever, without the guiding, counseling, instructing wisdom of the Lord will carry on truly, or effect rightly, the affairs of the Truth, although it be in its outward things. And my heavenly Father, whom I have loved and feared from very tender years, has shown me, that in the sensual wisdom stands the strife, and out of that ground arise the exaltedness, haste, rashness, schemes, rents, and sects," &c.

In confirmation of this expressive extract, I may add a recommendation of the Yearly Meeting in London, by its epistle in the year 1706: "And dear friends and brethren, in the name and power of our Lord Jesus Christ, keep all your meetings entirely, both those for his divine worship, and those for good order and discipline in the church, which Divine power we all ought to wait to feel, to prepare and sanctify our minds and spirits, that we may be duly qualified for our share and part of our service therein. And in the same heavenly power and dominion, labour to keep out strife and contention, and stand over all forward and contentious spirits, not in your own, but in the meek Spirit of the Lamb of God."

In perfect union with this, is also the following advice of the Yearly Meeting held in Dublin, 1814: "Dear Friends, in the words of an eminent servant of the Lord, 'keep all your meetings in the power of God.' Feel after, wait for, the arising of his power in all your meetings, both for worship and discipline. In conducting the weighty affairs of the church, let us not rest satisfied with an acquaintance with the letter, but seek for that life and power which only can qualify us for rightly supporting our christian discipline, either in our meetings, or in our more private labours with our friends; remembering that 'except the Lord build the house, they labour in vain that build it; except the Lord keep the city, the watchman waketh but in vain.'"

From the preceding observations it appears that agreeably to the standard held up by our worthy predecessors, it was essentially requisite that those who undertook to be active in the exercise of the discipline established amongst them, should have previously experienced the right preparation for service by submission to the sanctifying influence of the Holy Spirit. And as the greatest human abilities, whether natural or acquired, were found insufficient of themselves for the work, they were, in addition to this fundamental experience, to "wait for and depend upon the wisdom and power of God, for counsel and direction," and in their various services, to move under the leadings of his Spirit.

This standard, thus held up, has continued all along unchanged, and still remains to be the standard round which we ought to gather in the present day. To be assured of this point, we need only advert to the many concurring testimonies of Friends of established character, in strict accordance with the various advices which have from time to time, been issued by the body. May all then, to whom the cause of Truth is precious, be encouraged to gather to it, and labour to maintain upon its original basis that discipline, which,

founded "in the wisdom and power of God, would, if thus rightly maintained, preserve us people to his praise!"

For many years after the establishment of Meetings for Discipline, they were restricted to such a by their religious attainments might be considered as fathers and mothers—such as had in their own living experience, known those baptismal preparations, by which they were rightly qualified to administer counsel and encouragement to others. From a desire, however, that the youth, and those of less growth in religious experience, might also receive the benefit to be derived from the attendance of these meetings, they were in process of time open to all other members of the Society; not, it is to be apprehended, in the expectation that they should immediately, whether qualified or not, take an active part in their transactions, but that the might enjoy those opportunities of improvement which such meetings, when conducted under the right authority, are well calculated to afford. Through the goodness and mercy of our Heavenly Father, they have been, and still are, favoured a times with the overshadowing wing of Divine presence; and to the humble, attentive mind, desirous to be taught, they are then, in an especial manner seasons of deep and heartfelt instruction.

In these favoured seasons, young persons have no doubt, many opportunities of obtaining much instruction; and by rightly improving them, may come to know a preparation for service, and a due time receive ability to supply the places of their elder brethren and sisters, removed from works to rewards. Thus, by a proper exercise of spirit, these, in concert with their more advanced Friends, may contribute, according their measure towards raising into dominion that life which is the crown of our assemblies; participate in the enjoyment resulting from its presence; and assist, in an inconsiderable degree, in promoting the edification of the body.

These meetings are also, it must be allowed, from the many deficiencies amongst us which are their brought under consideration, frequently seasons of deep suffering to the faithful; yet it is cause of thankfulness to these, that even in those sufferings, they are favoured to feel a degree of holy assurance that they are therein united to the living body, of which Christ Jesus is the head; and this assurance begotten in them by the power of God, is an unspeakable support to them under every trial.

It is, however, to be feared that many are to be found within our borders, who, instead of contributing to the circulation of life in our meetings as weights and burdens. These unwilling to submit to the restraining influence of the Spirit and desirous to preserve their fancied independence are led, through the subtlety of Satan, to call in question the existence of a Divine communicator to the mind. Thus doubts are excited; and these once admitted, tend, in proportion to the indulgence they receive, gradually to close that eye which can alone enable them to see their real situation and eventually so to darken the understanding that lost to all religious sensibility, they become "like the heath in the desert, and see not what good cometh."

What a distressing prospect does the defector which is to be observed on the part of many, who ought to be coming forward as standard bearers among us, present to the spiritually feeling mind! Where shall we look for a succession of labourers in defence of the noble cause of Truth—a cause for which many of our ancestors sacrificed all that was dear to them in this life—if those who are favoured with every advantage to qualify them to step into the places of their elder brethren and

sisters, withdraw from the labour of the militant church, desert their proper posts, and basely suffer that standard which their predecessors had nobly erected, to fall into the hands of the enemy? Let this consideration excite you, my dear Friends, who see the state of things, and bear the burden of this eventful day, earnestly to seek to dwell near to the Fountain of all-sufficiency, Christ Jesus, "in whom are hid all the treasures of wisdom and knowledge." Here you will experience preservation; and hence you will derive ability to encounter whatever opposition you may meet with from a contrary spirit prevailing in the hearts of those, who have not been willing to submit to the preparing, sanctifying power of the Spirit of Christ. Greater is He that is in you, than he that ruleth in the hearts of the children of disobedience. Fear not therefore, "be strong in the Lord, and in the power of his might." Take unto you the whole armour of God, that ye may be able to withstand in the evil day, and having done all, to stand.

As you are preserved here, watchful against the many wiles of the enemy, faithful to the various duties of your station, and like good soldiers injured to hardness, patient in bearing every trial—every dispensation allotted by Infinite Wisdom, for your own increased refinement, or for the edification of the body, you will more and more experience a union with Christ in spirit; and though it be your lot to know "the fellowship of his sufferings," you will also "know the power of his resurrection," and partake of that consolation which aboundeth by him. Thus as you advance in years, you will have the satisfaction to reflect that you have done *what you could*; you will be enabled to acknowledge with the apostle: "Our rejoicing is this, the testimony of our conscience that in simplicity and godly sincerity, not with fleshly wisdom, but by the grace of God, we have had our conversation in the world;" and at the close of your labours, mercifully "know an entrance ministered unto you abundantly into the everlasting kingdom of our Lord and Saviour, Jesus Christ."

And now, ye little humble ones, who have known in some measure, the preparing hand of the Lord for service in his church—you in whose eyes He has tarnished the glory of the present world, to whom he has unfolded the beauties of his new creation, and whom he has drawn by the pure influence of divine love, to love himself above all; Oh, how I long for your preservation in simple, child-like obedience, and increased dedication to the cause of truth and righteousness! Be assured, my dear friends, that the preceding remarks are by no means designed to discourage the feeblest efforts of the least child of the kingdom, who, in obedience to the gentle intimations of the Master, is drawn in diffidence to offer a sentiment in our Meetings for Discipline. Such communications, proceeding from the pure life, will no doubt be received with acceptance, and gradually introduce you to more enlarged services in the church. Your elder brethren will rejoice in the prospect of such a succession of labourers in the vineyard, and hold out to you the inviting language: "Come and have fellowship with us, for 'truly our fellowship is with the Father, and with his son Jesus Christ.'"

In this fellowship—this heavenly communion of spirit, you will feel an enlivening and animating support, and be increasingly encouraged to devote yourselves, even without reserve, to the most honourable cause of the best of Masters. And though the prospect before you may be discouraging, so much so that at times you may be almost ready to shrink from the service, yet "fear not, little flock, it is your Father's good pleasure to give you the kingdom." The smooth stones which are gathered

in faith from the brook in the valley of humiliation, and cast "in the name of the Lord of Hosts, the God of the armies of Israel," continue to be effectual against the Goliaths, to the present day. Trust only in the Lord, and attempt not to go forth in anything like Saul's armor—in the strength of your natural powers as men. Seek to have your habitation in the light, watching daily at wisdom's gates, and you will be enabled to judge soundly of what is offered by others, see clearly what is required of yourselves, and receive ability to perform it, to your own comfort, and to the glory of the great Head of the Church. Thus you will experience a growing up into him in all things; and, by an honest, steady dedication of heart to his cause, be instrumental in your day, in hastening that period when Zion shall be justly called, "the perfection of beauty"—"the joy of the whole earth."

Before I conclude my observations on the subject of this little work, it may not be improper to make a few additional remarks, which appear to be important, and which may possibly tend to remove difficulties and objections from the minds of some of my readers, and afford a degree of encouragement to others.

It is indeed, as has been already shown, an indubitable and momentous truth, that, in religious matters, we can do nothing that is truly good, and acceptable to our Heavenly Father, without the influence and assistance of the Holy Spirit. The degrees of this influence are doubtless variously distributed to his children and people, to answer his wise and gracious designs in the church. What portion of this sacred influence, will be sufficient to authorize or require any individual member of the society to take an active part in promoting the discipline, it becomes not me to particularize and determine. But we may rest assured that he who possesses an honest, humble, and upright mind, who cherishes in his breast the love of God and the love of men, and who feels solicitous for the true interest of his fellow-members, and for the advancement of a wholesome discipline amongst them, will seldom or never be at a loss to discern, when he is warranted or required to speak or act for the promotion of a cause which he has so much at heart. Is there not rather reason to believe that, in an affair of so much moment, his Heavenly Father will not only give him clearly to see what is required of him, but that he will also furnish the ability to attend to the holy requisition, with an encouraging evidence of peace?

On the other hand I think it may be safely pronounced, without any breach of charity, that the individuals who do not sincerely press after the attainment of these holy and heavenly tempers, evinced by a consistent life and conversation, and who do not feel themselves sincerely concerned for the religious welfare of our society, and the members who compose it, are not rightly qualified to assist in promoting the discipline of the church, whatever may be their talents and qualifications for advancing the civil or general interests of society at large.

Of these Friends, however, a hope may be indulged, that having been educated in the society, and having seen the good works and examples of others, and considered the sound principles from which those works proceeded, they may, in due time, be induced to "go and do likewise;"—to seek for ability rightly to advocate the cause of truth and righteousness, by a patient submission to the preparing, qualifying influence of the Holy Spirit; and thus in true simplicity of heart, and pious dedication of their talents and advantages, may be happily enabled to glorify their Father who is in heaven.

These to whom I have been alluding, in taking a review of years that are past, may have to recollect repeated invitations of Divine Love, which they have unhappily suffered to remain unregarded, some even to a late hour of their day. May they, however, be encouraged to accept the offers of Divine Goodness, and earnestly seek for reconciliation, whilst their day of mercy is, in inexpressible loving kindness, lengthened out! To those who shall have been thus favoured to see their situations, and careful, by submission to the power of Truth revealed within, to avail themselves of this continued forbearance of their Heavenly Father, the truly living amongst us will cordially give "the right hand of fellowship," and rejoice with them in their emancipation from that state of subserviency to the world and its spirit, in which they had been held.

Thus a harmonious co-operation of the different classes amongst us would prevail, and without doubt would be attended with blessed effects. The elders would be animated to persevere with increased alacrity in their labours of love;—the youth would be encouraged to imitate their bright and cheering example; and all would happily concur in promoting upon earth the kingdom of God and his Christ—in accelerating the day when "from the rising of the sun even to the going down of the same, the name of the Lord will be great among the Gentiles; and in every place incense will be offered to his name, and a pure offering."

#### The Art of Not Hearing.

The art of not hearing should be taught in every well-regulated family. It is fully as important to domestic happiness as a cultivated ear, for which so much money and time are expended. There are so many things which it is painful to hear, many which we ought not to hear, very many which, if heard, will disturb the temper, corrupt simplicity and modesty, detract from contentment and happiness, that every one should be educated to take in or shut out sounds according to their pleasure.

If a man falls into a violent passion and calls me all manner of names, the first word shuts my ears, and I hear no more. If, in my quiet voyage of life, I find myself caught in one of those domestic whirlwinds of scolding, I shut my ears, as a sailor would furl his sails, and making all tight, send before the gale. If a hot and restless man begins to inflame my feelings, I consider what mischief these sparks might do in the magazine below, where my temper is kept, and instantly close the door.

Does a gadding, mischief-making fellow begin to inform me what people are saying about me, down drops the portculis of my ear, and he cannot get in any further. Does the collector of neighbourhood scandal task my ear as a warehouse, it instinctively shuts up. Some people feel very anxious to hear everything that will vex and annoy them. If it is hinted that any one has spoken ill of them, they set about searching the matter and finding out. If all the petty things said of one by heedless or ill-natured idlers were to be brought home to him he would become a mere walking pin cushion, stuck full of sharp remarks. I should as soon thank a man for emptying on my bed a bushel of nettles, or set loose a swarm of mosquitoes in my chamber, or raising a pungent dust in my house generally, as to bring upon me all the tattle of careless or spiteful people. If you would be happy when among good men open your ears; when among bad, shut them. And as the throat has a muscular arrangement by which it takes care of the air-passages of its own accord, so the ear should be trained

to an automatic dullness of hearing. It is not worth while to hear what your servants say when they are angry; what your children say after they have slammed the door; what a beggar says whom you have rejected from your doors; what your neighbours say about your children; what your rivals say about your business or dress.

This art of not hearing, though not taught in the schools, is by no means unknown or unpracticed in society. I have noticed that a well-bred woman never hears an impertinent or a vulgar remark. A kind of discreet deafness saves one from many insults, from much blame, from not a little apparent composure in dishonourable conversation.

There are two doors inside my ears—a right hand door leading to the heart, and a left hand door with a broad and steep passage, leading out into the open air. This last door receives all ugliness, profanity, vulgarity, mischievousness, which suddenly find themselves outside of me.

Judicious teachers and indulgent parents save young urchins a world of trouble by a convenient deafness. Bankers and brokers often are extremely hard of hearing when unsafe borrowers are importunate. I never hear a man who runs after me in the street, bawling my name at the top of his voice; nor those who talk evil of those who are absent; nor those who give me unasked advice about my own affairs; nor those who talk largely about things of which they are ignorant.

If there are sounds of kindness, of mirth, of love, open fly my ears; but temper, or harshness, or hatred, or vulgarity, or flattery shuts them. If you keep your garden gate shut, your flowers and fruit will be safe. If you keep your doors closed no thief will run off with your silver; and if you keep your ears shut your heart will lose neither its flowers nor its treasures.

*A call to individual experience of the ancient and sure foundation; with the danger of being corrupted from the simplicity that is in Christ Jesus.*—Assuredly, my beloved friends, a day of trial is approaching, yea, hastening upon the nations, when nothing short of an individual heartfelt knowledge of Him, in whom we profess to believe, will stand unshaken by the storm.

Great is the solicitude I feel on behalf of our highly favoured religious Society, that it may be preserved immovable upon its this ancient and sure foundation, Jesus Christ—"Christ in you the hope of glory;" which never died, and never will fail those, who in simplicity believe, and faithfully build thereon, nothing doubting. By diligently maintaining the watch in that holy light, bestowed in redeeming love on every individual of the human race, the snares of the insidious adversary, although laid in the most insinuating manner, will be detected and broken; the specious guise of a false religion itself will be penetrated. This has assuredly slain its thousands, who dazzled and distracted by creaturely activity and excitement, have thus been corrupted from the simplicity that is in Christ.

"Watch ye, therefore, and pray always; these things that shall come to pass, and to stand before the Son of man." Blessed and holy injunction—never out of season—never more needed.—*Daniel Wheeler. F. L., vol. 7, p. 83.*

*Wrestling of the soul after God, with the awful endlessness of eternity.*—Our blessed Saviour gave his life a willing sacrifice on the cross for us, and we must give up our whole hearts—no cross, no crown, is a sure testimony; if we will not bear the cross, we cannot have the crown. Then addressing her children, "Oh! my dear children, may you

never rest but in the wrestling of the soul, until he has fully redeemed you, until he has finished the work he has begun in you. Oh! from my dying bed, I beg of you, that it may be the earnest breathing of your souls, that you may be redeemed from the perishing things of time, and that your affections may be fixed upon eternity; upon things that will endure for ever. What would it avail me now (or any at such a time as this) to have the world, or as much as might be equal to our most extravagant desires to possess? we would freely give it up in exchange for a happy possession. Oh! press after it; do not be satisfied in any thing that is sensual or carnal, but Oh! that we may press after an inheritance in that which will endure forever!"

"Oh, eternity! Oh, the length of eternity! Oh, that it may be impressed on every heart, the length of eternity!—*There is no end.*"—*Mary Hagger on the bed of death. F. L., vol. 7, p. 461.*

#### On the Republic of Liberia, its Products and Resources.

BY GERARD RALSTON, CONSUL GEN'L FOR LIBERIA, (LONDON.)  
(Concluded from page 288.)

Monrovia, the capital of Liberia, so named after—Monroe, the fifth President of the United States, a great friend to the settlement of Liberia, is beautifully situated on Cape Mesurado, about seventy-five feet above the level of the Atlantic Ocean, in 6.19 north latitude, and 11 deg. West longitude, has a population of about 3,500 souls. Its position is most happy, having, by means of the Mesurado and Stockton, and the St. Paul's and the Junk rivers, the greatest facilities for navigable communication with the interior. Besides being the executive, judicial, and legislative seat of government, it is well furnished with schools, churches, and missionary establishments, a newspaper called the *Liberia Herald*—dating back to 1826—a college, and other evidences of advancing civilization and refinement.

The new college just completed is a magnificent edifice, situated on a most commanding site, on a twenty acre field for play-grounds, granted by the Government, and is due to the liberality of the people of Boston, United States, who not only furnished the funds for the construction of the building, but also have presented a library, geological cabinet, and otherwise endowed it. The Government has also granted 4,000 acres of land, of which 1,000 acres are in each of the four counties of the Republic. This land will become valuable in the course of time. Ex-President Roberts, of Liberia, is the President of the college, and is a Professor of Jurisprudence and International Law. The Rev. S. Alexander Crummell, a graduate and M. A. of Queen's College, Cambridge, England, is a Professor of Moral and Intellectual Philosophy, the English language and its literature. The Rev. E. W. Blyden, a young man of great energy, talents, and usefulness, now the Principal of the Alexander High School for Boys, in Monrovia, and an experienced teacher, is the Professor of Greek and Latin languages and their literature.

To show how entirely sectarian principles are disregarded in Liberia, I may mention that—Roberts is a Wesleyan Methodist,—Crummell is an Episcopalian, and—Blyden a Presbyterian; and there is a prospect of their acting harmoniously together in the advancement of true religion; and the civilizing influences of science and literature which may be expected to flow from the teaching of these excellent men. The greatest benefit to the rising generation is expected from this college, particularly as it will prevent the necessity of sending the youths to England and the United States

for instruction. Measures are being taken for a superior education of girls, which has hitherto been neglected, to the injury of the State, for women, as mothers and sisters, exerting a great influence over society, particularly in attending to the youth of both sexes, are, when they are competent, the greatest social improvers. I hope some liberal Englishmen will emulate the liberality of the Bostonians to the Boys' college, by supplying the means for the High School for girls at Monrovia, which should be liberally endowed and made as effectually useful as possible.

The inhabitants of Monrovia are great Sabbatharians. They go constantly to church; and so closely do they respect the Sabbath, that when Prince de Joinville, the captain of the French frigate Belle Poulé, came into their port on Sunday and offered to salute the flag, it was declined, because of their unwillingness to have the Sabbath desecrated. So also when Captain Eden, of one of her Majesty's ships, was ordered to call a Monrovia, to salute the Liberian flag, he happened to arrive on Sunday morning, and communicated to the President that he wished to salute the flag provided it would be returned, when he was informed that it could not be done on that day, being Sunday, but it would be returned on the following day, (Monday.) Captain Eden, being pressed for time, saluted on Sunday, with the understanding that the salute would be returned to the first British cruiser that came into port.

Such of the aborigines as have for three years previously adopted and maintained civilized habits are entitled to the elective franchise, and a considerable number exercise this privilege. There are native magistrates and jurors. Two of the magistrates serving in Bassa county, and who act as associate justices in the monthly courts, are Bassa natives.

It is the policy of the Liberian Government to induce American immigrants to settle in the interior—some fifteen, twenty, or thirty miles from the coast—where the surface of the country is undulating and hilly, and more healthy for those freshly arrived than the coast country. Carysburg, White Plains, and Clay Asland are some of these interior settlements from which good results have already been experienced. When a new settlement is formed, it is customary for some five, six, seven, eight, or ten families of the old residents of Monrovia, or other old towns, to accompany and guide the strangers, and indoctrinate them into the mysteries of their newly commencing Liberian life. This is a wise course. Each settler, on his arrival in the Republic, is entitled to draw a town lot or plantation. If a town lot be drawn, he is required to build a house, of brick, stone, or other substantial materials, sufficient for the accommodation of all the family of the proprietor within two years, and he receives a fee simple deed. If a plantation be drawn, two acres must be cultivated within two years to get a fee simple deed. Every man may have a town lot, or five acres of farm land, together with two more for his wife, and one more for each child that may be with him, provided that no family shall have more than ten acres. Women, not having husbands, may each have a town lot, or two acres of farm land, on their own account, and one acre on account of each child. Unmarried men of the age of twenty-one, arriving from abroad, on taking the oath of allegiance, shall be entitled to draw a town lot or five acres of farm land the same as family men. There is a penalty of five dollars for cutting down palm trees, except by the fee simple proprietor. Each proprietor of farm lands must show his boundaries by erecting posts at the angles of the same.

The English is the mother tongue of the Liberians, and they are extending its use along the coast and into the interior. Nothing is more common than for the native chiefs and the head men and other important persons among the tribes within the jurisdiction of Liberia, and even far beyond, to place their sons at the early age of three, four, or five years, in the family of the Americo-Liberians expressly to learn English and to acquire civilized habits. Among the natives, to understand English is the greatest accomplishment and advantage; and with some of the coast tribes, knowledge of English is beginning to be regarded as a necessary qualification for the ruling men of the chief towns. Our language has become the commercial medium of communication throughout not only the African coast, but other parts of the world where ships and steamers carry the civilizing influence of commerce, and in time it will become universal.

The revenue of the republic for the year ending the 30th of September, 1861, was 149,550.11 dollars. The expenditure was for same time 142,331.11 dollars.

A portion of the receipts and expenditure arose from the recaptured Africans landed at Liberia, and supported by the Government until they can be placed out to take care of themselves.

The import and export duties are the great sources of income. The total product of import and export duties was 44,000 dollars.

The Liberians are under great obligations to the British Government and British people for their kind regards and useful efforts to encourage and aid them in the great task of building up a negro nationality on the coast of savage Guinea. The British Government were the first to acknowledge the independence of Liberia, were the first to present them with a small vessel-of-war to act as *Guarda Costa*, and to aid in suppressing the slave trade, and have for many years done all in their power to countenance and foster the growth of this youthful State. The British people also have manifested the most friendly and kindly feelings towards this young people.

The principal materials for building purposes are wood, stone, and brick. The forests abound in suitable timber for houses, as well as ships; but for the reason that wood houses are infested with a destructive little insect, locally known as "baguag," stone or brick building materials are preferred by those who can afford the expense. Excellent blue and gray granite, and hard sandstone, as well as clay, suitable for bricks, abound, and innumerable oysters, clams, and snails furnish shells, of which lime for cement is manufactured.

A great variety of excellent fish are found in all the Liberian rivers, of which the mullet, angel fish, and white boys are preferred. From the sea are taken the barracouta, mackerel, cavalla, and a great number of other fish for frying.

Iron ore abounds all over Liberia, but as yet copper, tin, zinc, lead, silver, or other useful minerals have not been discovered in Liberia. Some old and some indications of coal have been found, and I hope, when the four young men now in Hibernia and London receiving education, return home, they will discover copper, lead, coal, and other useful minerals, and also to be able to construct the canal or railway between the Junk and esurado rivers and the breakwater at Monrovia, and other engineering works of prime necessity and utility.

Many persons say that Liberia is a failure—at she has not advanced as she ought to have, and that the results are far less than we expected. But if we consider the small expenditure

upon Liberia—millions of pounds have been spent upon Sierra Leone, thousands of dollars only on Liberia—and that only 16,000 Anglo-Saxon negroes have left the United States, and settled on the coast, and that they have been far more numerous and prosperous, and progressive, in the forty years since they made their homes in this savage country than were the English settlers in Virginia in sixty years after they landed, and have since become a mighty nation of 32,000,000 souls, what may we not expect from Liberia if the four-and-a-half millions of American negroes living most unhappily in their native land could migrate to the next thirty years to the "Land of the Free" on the West Coast of Africa? There can be no doubt that Liberia is far better adapted for the American negroes than Hayti, which has the Catholic religion, and foreign language, manners, and customs—the French; whilst the Liberians have the same Protestant religion, the same language, and the same manners and customs which they left behind them in America. The negroes of the United States should desire to create a flourishing Anglo-Saxon-Negro nationality on the coast of their fatherland, which has been so well commenced by the pioneers who for forty years have been preparing the way for their comfortable residence in Liberia.

The American Liberians, in their Declaration of Independence, use the following language to describe their fortunate change of circumstances by migrating from the United States to this new and improving country. They say, "Liberia is already the happy home of thousands who were once doomed victims of oppression, and thus far our highest hopes have been realized. Our courts of justice are open equally to the stranger and the citizen for the redress of grievances and for the punishment of crime. Our numerous and well-attended schools attest our efforts and our desire for the improvement of our children. Our churches for the worship of our Creator, everywhere to be seen, bear testimony to our piety and to our acknowledgment of his providence. The native African, bowing down with us before the living God, declares that from us, feeble as we are, the light of christianity has gone forth; while upon that curse of curses, the slave trade, a deadly blight has fallen as far as our influence extends. Therefore, in the name of humanity, virtue, and religion—in the name of the great God, our common Creator and our common Judge, we appeal to the nations of Christendom, and earnestly and respectfully ask of them that they will regard us with the sympathy and friendly consideration to which our condition entitles us, and will extend to us that comity which marks the friendly intercourse of civilized and independent communities."

Then follows the Constitution, one section of which declares, "That there shall be no slavery within this Republic, nor shall any citizen or any person resident therein deal in slaves, either within or without its bounds, either directly or indirectly."

#### Some Account of John Spalding.

I shall pass over the early part of my life, only observing I had been educated in a religious way. I mention this, as at times, when I lived in London, where I served an apprenticeship, in the midst of my dissipation, I frequently felt the reproofs of the Lord in mine heart, but which were soon smothered in the vortex of pleasure. After I had served my apprenticeship, I returned into the country to assist my father in his business of a farmer, at Reading, in the year 1786. A little time afterwards, as I attended the parish church so called,

where a celebrated preacher officiated, I found an awakening power, which produced not a little alteration in me. I more constantly attended the services, public and private; joined the more particular professors, and went on for several years as one of them. I also abstained from vain company and conversation which I had before been addicted to, so that I was one of the chief professors; but I found a gradual wearing off of the force of the impressions I had received; less desire to worldly company; and the power of sin gaining the ascendancy; that I at times felt much uneasiness; particularly as, on serious reflection, I felt the strength of my lusts and passions, and the evil propensities of my nature unsubdued; notwithstanding my knowledge of the truths of the gospel, and the profession I made: and observing and conversing with my fellow professors, I found the same great anxiety of mind, and breathings to the Lord, that he would make me indeed what I professed to be; and what I was persuaded by the scriptures of truth, a true christian might be; that is, free from the power, as well as the guilt of sin. Thus I went on till about the year 1792, often feeling the dominion of sin, and desiring deliverance from it; when I was led to consider the people called Quakers, and was soon satisfied there was a manifest difference between them and others, even in outward appearance; which, when I considered, I was convinced was more conformable to christianity than any others I had known; most of whom followed all the fashions of the world, particularly in dress; an inconsistency I frequently observed with much concern. I then sought the conversation of some of them, and still found more simplicity, more like the precepts and practices of Christ and his apostles, that I desired to know the principles from which such superior practices resulted, and inquired for some of their writings. The first book I think that I read was W. Penn's "No Cross, No Crown," which much tendered my spirit, and removed some unfavourable opinions which I had received respecting Friends. I then, in some measure, saw how far what I had known before fell short of what that work directed to; yet I continued attending at the parish place of worship; having the most favourable opinion of the minister there, and a particular esteem for him, as a man who also frequently professed a particular affection towards me. Once I remember, when I had so far deviated from my profession as to go to a horse-race, he sent for me, and kindly admonished me as a friend and overseer. I mention this, as afterwards, when it pleased the Lord to enlighten my mind more clearly, and convince me of the necessity of leaving the form of worship I had been accustomed to, it was a sore trial to me to leave him, in a manner that I apprehended he would feel not a little concerned about. The next book I read, I think was "Barelay's Apology," which opened many things so clearly to me, that I could not but consent to them; nevertheless there were some particulars at first reading I could not assent to, particularly respecting public worship. I thought it peculiar they should be a time appointed, and somebody ready to officiate, that the ignorant might be instructed; and that a man taught might not, at any time the Lord, and properly qualified might, at any time exhort or preach to a people. I still attended the old place, going occasionally to Friends' meetings on any particular occasions, when some strangers were expected; of them, yet were not able to draw me from my former society; but I found the work of the Lord going on by degrees.

At first, I think, I considered the ordinance of the Lord's supper, as it is called, and was sensi-

ble I had never found any profit in it, from the beginning of my partaking of it; and though I had often heard others speak very highly of it, as finding particular and extraordinary comfort and benefit in it; and I often at the time earnestly desired to find the benefit of as well as others; yet it still remained a dead, unprofitable service: I therefore declined it entirely. The next thing I think I observed, was the public singing. I began to see a great inconsistency in that practice, particularly after sermon. I could feel it had in myself as well as in others, a manifest tendency to lightness of spirit, and removing any serious impressions which might have been received from the foregoing discourse; that I soon left the place immediately after sermon was ended. It was not long, however, before I saw a gross inconsistency in the practice altogether, when I weightily considered the matter contained in what was sung, how impossible it was for a congregation of different kinds of people to join in singing whatever might be given out, whether suitable to their conditions or not; much of which, I was persuaded, could not be said by any, without uttering gross falsehoods; which I could not believe would be acceptable in the sight of the Lord. I was in consequence constrained to give forth some observations on the subject in writing, addressed to the professors of religion attending the place called St. Giles' church.

*A few observations concerning the custom of singing in public meetings of worship; by one, who has long been convinced of the inconsistency of it, and now calls upon every one who professes to be a follower of the meek and lowly Jesus to lay aside prejudice, and seriously consider the following remarks, which are offered in the fear of the Lord.*

"First. It ought ever to be considered, that God is a Spirit, and they that worship him must worship him in spirit and in truth. In other words, it is the language of the heart which he regards, not words however excellent of themselves. Now I appeal to the witness of God in every heart, considering the variety of conditions, the different subjects of praise, adoration, confession, petitioning, &c. contained in every collection, whether in the fear of the Lord any one, in whatever state or condition he may be at the time, can with propriety be ready to sing whatever may be given out. It appears to me impossible that a whole congregation (even if we accept the ignorant) can be in the same frame of mind, considering the various dispensations of the Lord's providence towards his people; consequently, if that is not the case, it follows, of course, that if all sing, some must utter words with the mouth contrary to the language of the heart, which so far from being acceptable to the Lord, I am persuaded is hypocrisy, and an abomination in his sight.

"Again, it appears to me inconsistent also with regard to the other parts of worship; for if the language of the heart is spoken in prayer, which often precedes singing, and which implies a sense of our wants, doth it not show an indifference whether our prayers are heard and answered or not to begin singing immediately, perhaps very different in matter as well as in manner, to what has been prayed for?

"Again, after preaching, if the Lord's power is known and felt under the word, is it not more likely to profit, if the mind is occupied in serious meditation, than singing, which from my own experience, I can say, has a tendency to divert the mind from solemn, serious reflection? I am now speaking more particularly concerning those, who have attained to a measure of the grace of God. Ask yourselves seriously, is outward singing in-

tended or calculated to please the carnal ears of men, or a holy God? Why such anxiety about tunes, voices, and music? Is the Lord to be pleased with such poor things? Oh! no; you cannot suppose it. Consider from what root it springs, from the old man or the new; and remember the axe is laid to the root, to destroy all that is of the earth, of our fleshly nature. I have considered those passages in the New Testament, where the subject is mentioned, and am confirmed by them in my opinion, of the inconsistency of public singing. The apostle speaks of singing with grace in the heart; of making melody in the heart to the Lord; not making a noise with the tongue unless that proceeds from the heart; which how seldom it does in public singing I appeal to every considerate mind.

"I am convinced in my own mind, considering our situation here, the power and devices of the enemy, our own inbred corruptions, that it is more seasonable to watch and pray, to be ever on our guard, and waiting to feel the light and power of Christ, to discover and subdue the hidden things of darkness; that as children of the light we may walk in the light, and shed the blood of Jesus Christ, his spirit and power, cleansing us from all sin; than evidencing that trifling, careless spirit, too commonly, if not always, attending outward singing.

"I could say much more against it, but would not be tedious, particularly respecting those that are without. How seldom can such people, living in open and avowed opposition to God, join in singing without uttering gross, abominable lies; and are we not accessory thereto? Is it not expected when a psalm or hymn is given out, all present who are capable will join? Then let it not be said, how can we help the abuse of it. Ought we not rather to set them an example of truth and righteousness, and not countenance any practice that has a tendency to promote lightness and irreverence? Oh! my friends, this cannot be acceptable to the Lord, who requireth truth in the inward parts. I recommend to your serious consideration what the Lord says in the 1st of Isaiah respecting the ordinances, of his own appointing, when not done in a proper spirit. I perceive every day more and more, an evident departure from the simplicity of Christ. Where is the daily cross borne? Observe the appearance of professors. What difference is there from the world? Sure, my friends, these things ought not to be. Bear with me, I beseech you. I am much concerned for the honour of our profession. If the cross is truly borne, all self-seeking and self-pleasing will be done away, and the fruits of the spirit more evidenced; which I am persuaded will not be in the present practice of public outward singing, often of words, as to the matter, scarce within the bounds of probability; and I am convinced if people would seriously consider the matter, it would appear very inconsistent with the gravity and solemnity of the true christian profession.

"May the Lord set these things home upon every heart, that there may be a concern to offer unto him acceptable sacrifice; which more than once is said to be a broken and contrite spirit.

"*Blessed are ye that mourn,* says Christ, (not ye that sing) *for ye shall rejoice;* which rejoicing, it may be applied to the present state of the church here, I conceive to be a grateful sense of the Lord's mercies; and showing forth his praises not only with our lips but in our lives. To conclude, my friends, turn into your own hearts: behold, says Christ, the kingdom of God is within you; look not without for what I am persuaded is only to be found within. It is not much hearing or much

speaking that brings true peace to the soul: the ear is never satisfied with hearing. As a proof of that, do not we see professors running hither and thither, as though the more they heard the better they should be; encompassing themselves about with sparks of their own kindling, but who saith the Lord? *Ye shall lie down in sorrow.* I am fully convinced it is for want of this looking in, and waiting to feel the power of the Lord there, judging and subduing sin, that there is so much talk, so much outward parade, and so little spirituality in the lives and conversation of the people.

For "The Friend."

#### West-Town Boarding-School.

We are apt not sufficiently to prize our privileges; and I have sometimes thought that this is the case with many of us, as respects the inestimable advantage of having in our midst such an Institution as West-Town Boarding-School. Do we sufficiently value it, and appreciate the benefits it has conferred, and, it is to be hoped, will continue to confer, on the members of our Society? It was instituted by our forefathers more than sixty years ago, under a concern for the guarded religious education of the children of the society; and there is good reason to believe that the Divine blessing has rested upon the labours of many of those who have been charged with its care and management. Many discouragements have at times attended these, and some, who have been pupils there, through an unwillingness to submit to that which would have preserved them from evil, have disappointed the hopes of their friends, and neither benefited the Institution, nor derived much advantage from it themselves. Many others, on the contrary, have experienced great and lasting benefits both as to their religious and literary advancement, the latter in many cases furnishing them with the means of making a respectable livelihood. Let all those that have the care of this valuable Institution, whether more immediate or remote, be encouraged to do all that is required of them to promote its efficiency and usefulness; and let the parents and friends of the pupils be careful to avoid doing anything to counteract the concerns and efforts of the committee and caretakers, but do what they can to co-operate therewith. We learn there are at present at the school about eighty scholars of each sex, including a few day-scholars. This number is somewhat larger than it has been in the summer session for two or three years past, but it is very desirable that more of the children of Friends should partake of the advantages offered by this seminary. We trust more of our members will send their children there, and that the labours of the committee and others interested will continue as heretofore to be productive of good fruits. This Institution is much to be preferred for the members of our Society to mixed schools, especially those that are not under the care of Friends, and is, we think, becoming more and more efficient as the means of imparting a thorough education, under caretakers who are concerned for the best interests of the children.

At a recent visit, we learned that there were no cases of serious indisposition in the nurseries, and that throughout the present session the health of the family has been as good as usual. The committee have lately agreed that there shall be two examinations in each session instead of three. By this arrangement less time will be taken up with stated reviews, while thoroughness in their studies will also, it is hoped, be sufficiently provided for.

From "The Sunday at Home."

## The Afternoon Walk.

ON THE LAMB IN THE THICKET.

It was one of those beautiful summer afternoons, such those who are familiar with country life have often enjoyed, that I set forth on a solitary ramb. The sun had shown forth during the morning with unclouded splendour, and all nature seemed to droop under its powerful influence. The soft foliage of the trees seemed to court the cooling breeze in vain, for not a breath of air could be felt nor a leaf moved. The feathered songsters retired to the shade, and the cattle had left the open field, to enjoy the luxury of the friendly ead, or the umbrageous canopy of some wide-reading tree, there to ruminatè listlessly till the red rays of the sun had passed away. I felt a sere to leave for a while my indoor engagements, enjoy the retirement and pleasure which a walk the country lane at this season of the year affords. Crossing two or three small fields for this purpose, I soon reached the lane. It was rather narrow, with a hedge and ditch on either side. The hedge had not been operated upon by the hand of the husbandman for many years, consequently the topmost boughs met overhead, and, intertwining with each other, formed a leafy canopy. Small rivulet which crossed the lane, with its blbling, cheerful noise, seemed the only contrast the stillness which reigned around. On it went its course, bubbling and gurgling, as ever and on it came in contact with some stone lying in the bed, partially obstructing its flow; whilst here, there the busy gambolling minnow sported in the tiny stream.

After pursuing my walk for a short time, I was suddenly aroused from a delightful reverie by hearing a rustling in the hedge close by my side, accompanied by a low stifled moan. At first I was startled, but pausing for a moment, I felt assured that it was a sound of distress, and I determined to ascertain the cause. I at first attempted to do so by looking through the hedge, but this I found to be impracticable, as the bank was high, and the alk deep and broad, so that I was compelled to talk a little farther on to the gate which led into the field. On advancing to the spot from which the sounds proceeded, I discovered the cause of my alarm to be a lamb, entangled in a thicket of orn, and in such a situation, that it must have shortly perished had not some friendly hand extricated it. It was almost strangled, being suspended by the neck, with its hind legs only resting very securely on the shelving bank. Drawing my wife, I very soon succeeded in cutting away from the side the thorns and brambles which held the poor animal fast, when its own weight caused it to fall forward on the ground. After a struggle or two, it rose to its feet, and walked slowly away to its companions, who were standing in a sort stupid amazement at some little distance.

On looking round for evidence of the cause of this mishap, I discovered that the little flock had broken out of the field in which they had been stured, and crossing the lane, had taken advantage of a gap in the hedge to gain an entrance to the field. There was nothing desirable, however, the change, as they had left a rich pasture for scanty picking in arable ground. This poor unfortunate lamb had been more eager than the rest, and in its heedless haste had thus become entangled. As the little animal regained its fellows, I gave mute congratulations which he seemed to receive, and the gladness which each seemed to feel, were to me a sufficient recompense for my exertions. Turning from them, I again resumed my walk,

this little incident furnishing ample food for thought. I could not help reflecting on the analogy which existed between the wandering lamb and the wanderers of the human family. My mind reverted to the first wanderers, our common parents, who, although placed in the richest pastures, yet, tempted by the thought of obtaining knowledge like God, wandered far from peace and happiness into the paths of sin and disobedience. This disposition has become inherent in man, through all the intervening ages of the world to the present time; and can we not look around the circle of our acquaintance, or the more narrow circles of friends, and note one or another who have thus wandered. That bright-eyed girl, the mother's hope, the father's joy; the son, or brother whose countenance beamed with intelligence, and whose wit and vivacity made him the centre of the domestic circle. Alas! how many such have wandered from the home of their childhood, and have become entangled in the thicket of vicious pleasures. Some have been rescued, but many have fallen, and the clouds of the valley have early covered blighted hopes, ruined prospects, and wasted unprofitable lives. Had these loved ones prayed for divine guidance, and sought the care of the good Shepherd, they might have been the stay and support of many a widowed mother, the comfort and solace of a father's heart, and many might have "risen up to call them blessed."

Young friends, just setting out on life's journey, listen to a word of counsel. Perhaps you have often written in your copy-books this sentence: "The path of duty is the path of safety." You may possibly have smiled at it, as old-fashioned, strict, and puritanical. Nevertheless, there is truth in it. As long as you walk through this world in the path of duty, trusting in the guidance of One in heaven, and looking to the Lamp of Truth for light to your uncertain footsteps, you will never wander far away. You are quite safe if you walk in duty's path, with such a leader and such a chart. Make Jesus your friend, counsellor, and confidant, and you will never err. May your prayer ever be—

"Lead me, gentle Shepherd, lead me,  
Till I reach fair Canaan's shore."

Should any youthful reader resemble this poor lamb; has he wandered from the paths of virtue and rectitude; has he become entangled in the thicket of sinful pleasures and vicious pursuits, let him not despair. Christ, the Good Shepherd, waits to extricate the wandering sheep; and not only is he waiting, but willing and able to do so. My young friend, if thou hast suffered through thy wanderings, and hast partaken of the bitter fruits of sin and folly, now come to Jesus; and while, like the psalmist, feeling that thy former fall has been like broken bones, breathe also like him the prayer, "Hold thou me up, and I shall be safe. . . . Oh, let me not wander from thy commandments."

**Trained Hogs.**—In some parts of France and Italy hogs are regularly trained to hunt for truffles, a sort of mushroom of delicate flavour and highly prized, found beneath the surface of the ground. When the hog scents a truffle he expresses his satisfaction by a grunt, then digs up the ground with his snout, seizes the truffle carefully and carries it to his master, who gives him a handful of grain as a reward. And it is a well-known fact that in the midland counties of England some intelligent breeds of hogs have been trained to hunt for partridges, woodcocks, and other game, and have manifested the valuable qualities of thorough bred and sagacious pointers.

*Creatively activity and excitement corrupts from the simplicity of Christ.*—It seemed to me that the minds of too many of our young people have already been so much dazzled with the glare of creatively activity and excitement, as to have but little relish for the plain but incontrovertible truths of the go-spel in their primitive purity. Oh! the beguiling influence of human wisdom! how doth it corrupt from the simplicity that is in Jesus; it strikes at the very life of spiritual Christianity.—*Memoirs of Daniel Wheeler. E. L. vol., p. 293.*

## THE FRIEND.

EIGHTH MONTH 16, 1862.

At the suggestion of a valued Friend, we commence in this number, a brief memoir of John Spalding. Although it has once appeared in our pages, yet it so well exhibits the ground of our peculiar testimonies, and seems so strongly to meet prevailing weaknesses amongst some of the members of our religious Society, that we doubt not the real lovers of genuine Quakerism will gladly give it another perusal.

Even in the brightest period of the early Christian Church, there were those who were weak in the faith,—those who flinched from suffering for the faith, and even some who denied the faith. In our religious society, there have been many, who to the present period, there have been many, who through want of faithfulness to manifested duty, have become the open or secret antagonists of some of the doctrines and testimonies which we assuredly believe were committed by the Great Head of the church to us as a people to bear for his name and Truth's sake. Of these unfaithful ones, the greater part have been content with that kind of opposition which is manifested merely by slighting the testimonies. Such perhaps did not attempt to advocate following the fashions of the world, which yet they were themselves doing. They did not denounce the use of the plain language, yet they were in the world and amongst the world's people, using the customary compliments and the ungrammatical forms of speech of those they associated with. All our members who are flinching from the humble walking, who are disregarding the testimonies borne by the faithful amongst us, whether it be in allowing in themselves or their children things inconsistent with our christian principles, are whatever profession they may make, enemies to the Truth. They may advocate it in words,—they deny it in example. My every one remember, that the most powerful support we can give to the glorious Gospel of our dear Redeemer, is to show by our daily walk and conversation, that we have been made experiential witnesses of its heart-cleansing, softening and elevating effects.

## SUMMARY OF EVENTS.

FOREIGN.—News from England to Eighth month 3rd. Earl Russell justified the vigilance of the Federal cruisers at the Bahamas. The Tuscorora was at Queenstown, watching for a confederate steamer, which had left Liverpool, but put back to Holyhead, and there lost all her men. The *Independence Blye* asserts that France, Russia and England are negotiating a plan of mediation. The two former have submitted a plan to the latter, which has not been replied to yet. It is rumored that a British envoy has been sent to Washington to urge President Lincoln to initiate peace measures in order to avoid mediation. Earl Russell recommends that strict attention be paid to the Queen's proclamation of neutrality. General Pope's order to substat upon the enemy is construed as an adoption of the system of rapine. General Forey left Cherbourg on the 29th for Vera Cruz. Troops were being embarked rapidly for the

same destination. The Time's city article, drawn attention to the fact that within a short period, United States five per cents have fallen from 80 to 63 and 65, being the lowest since the war. The rebel fleet, so far as we know, heavily laden with ammunition and stores for the rebels, sailed from Plymouth on the 29th ult., bound to Nassau, via Madeira. The Bank of England has reduced its rate of interest to two per cent. The Liverpool cotton market was firm, at 19d. for Fair New Orleans Stock in the 1st, 100 pounds, including 37,000 American. The following were the quotations for breadstuffs. Flour, 25s. a 29s.; rye, wheat, 9s. 3d. a 11s. 6d. per 100 pounds; white, 11s. 6d. a 12s. 6d. Corn 20s. a 33s. 6d. per quarter. Consols, 94.

**UNION STRAITS.**—The War Department have been issued from the United States, to prevent all persons liable to be drafted into the army, from leaving the United States for any foreign country. Marshals, Deputy Marshals, and U. S. military officers, are directed to arrest all such persons, and the writ of habeas corpus is declared to be suspended in relation to cases of this class, as well as in respect to persons arrested for disloyal practices. Another order from the War Department, directs the arrest and imprisonment of any persons, who by speech or conduct, or by the publication of libels, or by lists, or in any way give aid and comfort to the enemies of the United States. The U. S. Secretary of State has given notice that until the requisitions of the War Department on the several States for quotas of their militia shall have been complied with, no passports will be issued from this Department for any male citizens of the United States liable to be drafted into that branch of the service. The President, it is reported, positively refuses to employ any negro regiments in the war. Governor Sprague, of Rhode Island, has, however, issued an order requiring that the Sixth regiment from that State shall consist entirely of negroes, and that he will lead them to the field himself. Reports from the various States represent that the enlistments under the first call for 300,000 men to serve three years, were progressing rapidly in most of them, so that their respective quotas will probably be filled. The quota for the State of New York for nine months' service, will, it is stated, have to be obtained chiefly by conscription. The quota for the State of Pennsylvania under the two last calls, is 92,841. A few regiments from the Eastern States have already been sent to the front.

**Virginia.**—A sanguinary battle was fought on the 9th inst., eight miles south of Culpepper, between the armies of Gen. Banks and Jackson. The rebel forces crossed the Rapidan, and were moving towards Culpepper, when the battle commenced by an attack from Gen. Banks' advance. General Sigel, and Major-General McDowell, arrived while the battle was in progress, and engagement does not seem to have been decided in its results, and the two hostile armies remained the next day in near proximity to each other. The movement of the rebel general across the Rapidan, appears to have been unexpected by the Union commanders, whose plan it was, to concentrate their divisions at Orange Court House, and then advance upon Gordonsville.

If such was the plan, it was frustrated by the flight of Jackson, who succeeded in throwing the chief part of his army into confusion, at a place where it could not quickly receive support from the others. A later report from the battle field represents that the rebel army received a severe check in the battle referred to, and was retreating southwards. The flight of Gen. Sigel, and the reconnoissance sent out by the river to Fredericksburg, were reconnoissances of Gen. McClellan, advanced to Malvern Hill, ten miles from Richmond, where they routed a rebel force and made a number of them prisoners. It was apprehended at Richmond that the Federal army was advancing upon the city, and a strong force was sent down to oppose the movement. The Federal troops there returned to the main army on James river. Although it has been repeatedly stated that two of the rebel iron-clad boats were lying at Fort Darling, it is still doubted whether they had actually been captured.

**The South.**—New Orleans dates to the 31st ult.; Mobile bar, on the 1st inst.; Pensacola, on the 3rd, and Port Royal to the 5th, have been received. The health of the people of Pensacola was good. It was rumored that the yellow fever had been introduced by the ship Hunter and Com. Dupont were making preparations to receive the train from Savannah. The flag-ship Hartford, with Com. Farragut, together with the frigates Richmond and Brooklyn, and the gunboats Onيدا and Iroquois, with the rest of the fleet, arrived at New Orleans on the 29th, anchoring off the city. The ship Philadelphia had arrived at New Orleans, from Philadelphia.

A reconnoissance by two gunboats to Manchac and Covington, found everything as Col. Kimball had left it. No bridges had been rebuilt, nor were there other indications of the enemy. The rebel iron-clad gunboat Arkansas, which caused so much damage at Vicksburg, has been destroyed. She passed down the river from Vicksburg to co-operate in an attack on Baton Rouge. After passing Bayou Sara, her machinery became deranged, and whilst attempting to adjust it, she was attacked by several of the gunboats, and, being rendered impossible, she was abandoned and blown up, the crew reaching the shore in safety.

**The West and South West.**—Regular hostilities in this region have been succeeded by a guerrilla warfare, grievously annoying to the inhabitants, attended with much waste of life and property, but without any important results. From the many confused accounts we select a few items. General Curtis and Commodore Davis were at Cairo on the 7th inst., to consult with the War Department at Washington in regard to the future movements of the Southwest and the Mississippi flotilla. It is reported that a rebel force of 15,000 men, with a due proportion of artillery and cavalry, was recently at Knoxville, Tenn., expecting to invade Kentucky at an early day. The daring and successful commander, Morgan, in his report of this late invasion of Kentucky, states that he had captured and dispersed on the 7th inst., near Paducah, Missouri, a number of them killed. In some parts of Missouri, the drafting for the new levy is forcibly resisted by a portion of the people. Various petty collisions in Arkansas and Tennessee are reported, all attended with more or less bloodshed. The United States Secretary Johnson has been authorized by the War Department to release the Tennessee prisoners in the north, and exchange them for the loyal Tennessees imprisoned in the south.

**San Francisco.**—The *Golden Gate*.—This steamer, which sailed from San Francisco for New York on the 1st ult., was destroyed by fire on the 27th. When the fire broke out, the steamer was headed for the shore, which was about three and a half miles distant. On the vessel striking the beach, upwards of 100 of the passengers were killed or swam ashore. The total number on board was 337, more than 200 of whom perished by the flames or drowning. There was \$1,400,000 in gold on board, all of which was lost.

**New York.**—Mortality last week, 568.

**Philadelphia.**—Mortality last week, 446. Of cholera infantum, 79; diphthery, 24; typhoid fever, 21; marasmus, 23.

**The Ohio Wool crop.**—The wool clip of Ohio this year amounts to about 13,000,000 pounds; 2,000,000 greater than that of last year.

**Texas.**—It is stated from Washington, that a delegation from Texas has arrived in that city, to solicit protection from the government for the free citizens of whom there are large numbers in the western part of the State. They have submitted a memorial to the President, urging that his policy of emancipation be applied to Texas.

**Imports and Exports.**—The foreign trade of port of New York continues quite large, the imports last week amounting to \$4,598,275, and the exports, exclusive of specie, to more than \$4,000,000. Since the commencement of the year, the exports of produce and merchandise from New York have amounted to \$79,767,677, and the exports of specie to \$38,231,018, making an aggregate of \$118,004,695. During the same period the imports of all kinds have amounted to \$107,219,881. It is expected that the imports will soon exceed the exports, and that the operation of the tariff.

**The Market.**—The following were the quotations on the 11th inst. New York—Specie in the New York banks, \$34,611,069. Premium for gold, 13 to 14 per cent.; silver, 6 to 7; Uplands cotton, 47; wheat, the white, \$1.40 and red Western, from \$1.10 to \$1.26, and white, \$1.40 to \$1.50; Western corn, \$1.25; Philadelphia Flour and prime red wheat, \$1.33 to \$1.35; \$1.40 and \$1.55; rye, 81 cts. a 82 cts.; yellow corn, 64 cts.; oats, 46 cts. a 47 cts.; and mix, by measure, 39 cts. a 39 cts.

N. B. By an accidental error, John Brantingham's receipt in our last number, reads vol. 56, instead of vol. 36.

#### FRIENDS' SELECT SCHOOLS.

These seminaires will, it is expected, be re-opened after the summer vacation, on or near the first of Ninth month next, the schools being situated on Cherry Street west of Eighth, and the Girls' School on Seventh Street between Cherry and Race Streets.

The course of instruction now adopted in the Boy School, embraces, besides the ordinary branches, a selection of more advanced mathematical, scientific and classical studies on the satisfactory completion of which the pupil will be entitled to a diploma or certificate of scholarship.

During the winter months, lectures on scientific subjects are regularly delivered, illustrated by appropriate apparatus and experiments.

The course of study at the Girls' School embraces, in addition to the elementary branches,—Algebra, Geometry, History, Natural Philosophy, Chemistry, Astronomy, Physiology, Natural History, Botany, Physical Geography, Mental Philosophy, Etymology, Rhetoric and Composition. Instruction is also given in Trigonometry, Mensuration, and the French and Latin Languages.

As the proper classification of the scholars, early in the session, is important, it is desirable that those who intend to enter pupils for the coming term, should do so early in the season as possible. Application may be made on the operation of the schools, to Joseph W. Aldrich, Principal of the Boys' School, and to Margaret Lightfoot, the Principal of the Girls' School.

With the present arrangement, it is believed that these schools offer unusual advantages to Friends for the liberal education of their children, and of a very moderate cost.

Their attention is also invited to the Primary School in the Northern and Western Districts, where provision is made for the careful elementary instruction of children too young to enter the Principal schools.

On behalf of the Committee,

JOHN CARTER, Clerk.

#### WEST-TOWN SCHOOL.

The Committee under appointment to visit the school at West-Town, returned on several days, the 16th of the Eighth month, and proceed in the examination on Second and Third days.

For the accommodation of the Visiting Committee conveyances will be at the Street Road Station on Seventh-day, the 16th instants, to meet the train that leaves Philadelphia at 2 and 4.30 p. m.

JOE EVANS, Clerk.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent,—JOSUAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to ISAAC MORGAN, Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

#### EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Men's and Women's schools. Applications may be made to ISAAC MORGAN, Jr., 622 Noble street, SAMUEL ALLEN, 524 Pine street, Geo. J. SCATTERGOOD, Fifth and Callowhill street.

#### TEACHER WANTED.

A teacher competent to give instruction in Reading and other branches, is wanted at the Select School for Girls in this city. Apply to Sarah Williams, 732 Arch Street, Deborah M. Williamson, 1034 Arch Street, Rebecca S. Allen, 335 S. Fifth Street.

#### BOOK OF DISCIPLINE OF PHILADELPHIA YEARLY MEETING.

Copies of the above are now for sale at the Book Store, No. 384 Arch Street. Price 50 cts.

WM. H. PILE, PRINTER,

Lodge street, opposite the Pennsylvania Bank.

#### RECEIPTS.

Received from John Edgerton, O., per I. Haestis, amt., \$4, to No. 13, vol. 35; from Luke Aldrich, R. I., \$2, vol. 35.

# THE FRIEND.

Selected.

Some Account of John Spalding.

(Continued from page 398.)

This I sent to the clerk, at the same time I sent me reasons for the apparent change in me, as senting from the sacrament, so called; and which I desired him to lay before the minister and hers, at a prayer meeting: which he seemed to reject, to suppose me in an error, and having a very unfavourable opinion of Friends' principles. soon after had some conversation with him on the subject; which rather confirmed me in my opinion than otherwise, his arguments appeared so weak against Friends. Thus I went on some little no longer, still attending mornings and evenings; at attending Friends' meetings in the afternoon. about this time I read "Sewal's History of the Quakers," which I think reviewed every objection, did confirmed me in my opinion of the truth of our principles. Their severe sufferings, their patience under them, and honest boldness before kings and rulers, convinced me that nothing but a divine power could have supported them. I sought a company of some faithful Friends, as I could never in some I had been with, little more than a form. I desired to know the power in myself, did to be truly taught of the Lord, that I might do any thing by imitation, or because others did so; but retired often alone, to be instructed of the Lord, what to do and what to leave; and, glory in his name, he was found of me, and made those circumstances precious and profitable to me, revealing his will unto me by degrees, as I was able to bear.

I now became acquainted with some solid friends, and was occasionally in company with them, which excited the attention of my friends of the neighbourhood; so that there was much talk about me, and various reports were propagated respecting it, most people thinking it very strange I should run Quaker.

About this time I met with a considerable trial, the death of my father whom I dearly loved. I had long been persuaded in some measure of the unity and inconsistency of wearing black clothes on such occasions, knowing it to be only a worldly custom; and had often said to myself during my father's illness, I would not put it on for any one except him; but there appeared so many reasons why I should conform on his account, that it was of till a little time before his death, that it pleased the Lord to remove my scruples respecting it, and

strengthen me to bear such a public testimony, as of necessity that event occasioned. And indeed much opposition I met with on account of it, but the Lord supported me through all. I then constantly attended Friends' meetings.

About this time also I was concerned to write an address to some who usually met on First days, from different parts of the neighbouring country, to hear the minister, at a private house; where I had occasionally attended, with other professors of the town. I also wrote to the clerk, and sent him "No Cross, No Crown;" soon after, "Barclay's Apology;" and to another intimate friend, who was very zealous, I wrote and sent, "Beavan's Primitive Christianity Restored." And though I desired in what I wrote to individuals, as well as the society, that it might be put about for the perusal of any, I found little notice taken by any, I thought they seemed rather to avoid me. One steady experienced man, in a little conversation, observing, he hoped I did not look for that in myself, which was only to be found in Christ, I was concerned to write to him some little time after on the subject; and sent him at the same time, "No Cross, No Crown." While I was exercised towards the society I had left, I met with some more trials from other quarters; my relations complained of my silence, putting unfavourable constructions upon it. Indeed I had so much upon my mind, that I had little desire to speak much; for being often in my way of business with people of consequence in the neighbourhood, most of whom had always shown me much attention and favour, now observing such a change, though only in dress at first, they began to look rather strangely upon me. The enemy of souls was not unmindful of my situation, and raised many difficulties in my way; as the loss of their favours, and, of course, my business; the great offence my conforming to other things not yet done would give them, such as the creoscopy of the hat, the language, and their titles so highly valued; these seemed indeed so great discouragements, that my mind was at times sorely distressed.

I had some time felt an uneasiness respecting the performing some part of my business, such as nicking and cropping horses, &c., punishing them for the sake of appearance, to please the fancies of men. When I began to mention my scruples, much opposition was made, as the consequence must of course be the loss of much business. I know not whether I was not too hasty in this matter, beginning in mine own strength, and not waiting the due time; for I found when I was required to do it, I gave way, which brought trouble upon me; till at last I was enabled to refuse several, among whom was one for whom I did much business, who on my objecting and telling him my reasons, seemed very angry and reproached me for changing my religion, &c. He asked me to recommend some one to do it, but I told him I could not recommend another to do what I thought not right to do myself.

This event occasioned some uneasiness; I was blamed highly on the supposition that I should soon lose my business; and I answered in the words

of our Lord, "Except a man forsake all that he hath he cannot be my disciple." I saw, more and more, how people could follow the ways, customs, and fashions of the world, and use means not always the most honest to get their riches: so true is our Lord's saying, "Where your treasure is there will your hearts be also." Oh! how few really deny themselves and take up the cross.

About this time came the quarterly meeting of a society I helped to establish, called "The Sick Man's Visitor," to relieve the wants of those in distress, conducted by the chief and most serious of the professors, a committee of whom met every week to transact the business of it, and to hold a prayer meeting as they called it, at the same time singing, reading, &c. Being the time I used to serve on the committee, I took the opportunity to write to them, giving my reasons why I could not join in the services performed at the o-6 times; also something more respecting the principles, &c., of Friends, with what was upon my mind besides; observing if any were desirous of more information on the subject, or had any objections to propose respecting Friends' principles, I was willing to receive them.

Hitherto there had not been any material alteration in my dress, except what I wore on First days; I still wearing a modern hat; but now I found it required of me to make an alteration there; which, as it was more conspicuous than any I had made, I found very trying; nature being unwilling to bear the cross; but it pleased the Lord to strengthen me; and indeed it caused much gazing, admiration, and ridicule, as I could perceive and hear, though little was said directly to me, but the Lord preserved me, and I thought I found rather a kindness of behaviour among the more considerable of my neighbours when I attended in the course of my business, particularly from the chief justice Eyre, where I had apprehended not a little discouragement, but I found through the mercy of my God, a very favourable intercourse. And here I may observe respecting these things, I felt a little at a time required of me; and as I was willing to give up, the Lord was pleased to afford me strength to be faithful to him. Now I am aware these things, respecting dress, &c., are, in the eyes of man's wisdom despised, and thought of no consequence: indeed of themselves, I am persuaded they are of no consequence, or if done from a wrong motive may be rather injurious than otherwise; yet when the Lord commands, it becomes his creatures to obey, and not reason about it, whether it is of consequence or not. When I felt a desire to reason about it the example of Naaman the Syrian was brought to my remembrance. When the prophet ordered him to wash seven times in Jordan, his pride and wisdom were offended; he wanted some great thing done, somewhat pompous, and agreeable to the ideas of his worldly mind; and had not his servants been wiser than their master; he might have continued in his disease; but the event proved, how despicable soever the means appeared, it fully answered all he could wish; therefore it is good for any one who feels occasionally the judgment of the Lord, against any

thing however trifling it may appear, not to consult with flesh and blood, not to reason about it, but give up in simplicity of mind; and then I am persuaded it will be found of more consequence than was apprehended; for if we are not faithful in the little, how can we expect the greater will be committed to us. And, indeed, in this matter I have been mentioning, I found not a little advantage; for before, when my appearance was not very different from the world, my acquaintance would enter into familiar converse with me; which too often had a tendency to divert my mind from that seriousness I wished to preserve, and leave unpleasant reflections afterwards; but when they saw (in their eyes) my uncount appearance, it operated as a kind of check to lightness, and preserved me from the snare of unnecessary worldly conversation, so that I had the advantage of more retirement, which I trust I can say I have found the most profitable means. The apostle saith not in vain, "If any man love the world, the love of the Father is not in him." And a follower of Christ will not be conformed to the world, nor uphold whatever is of it, either in himself or others: not merely because it is witnessed against in the scriptures, but being influenced by the same spirit, which was in them, he is taught by it to testify against the same the disciples of old did in their day.

It was a great grief and concern to me to consider, that as it was a day of so great profession, many walking miles to hear what they supposed the gospel preached, our steeple house being generally crowded by people from the other parishes; I say it grieved me, that my leaving the fashions of the world which they all professed to detest, should cause such amazement as it appeared to do even in the professors; which helped to confirm me in my opinion, that how much soever they could talk about religion, very little of the power thereof was known: indeed, had I not felt a want of the power of godliness, I should not have left them, that as there were many ties which held me both to the priest and people. But it was that Divine power I longed for; and nothing short of it could satisfy me, and sure nothing but that could have supported me in the different trials I soon had to encounter; but the battle was the Lord's and his was the victory over every appearance of mine adversary, and to him be all the glory.

For several months my mind was much exercised on various occasions, the enemy assailing me continually with reproaches from without and fears within. My business seemed to decline, and I was reproved for over acting my part, and informed that some of the society had said so. It was great grief to me to observe some friends for whom I entertained great esteem, not so faithful against worldly titles, as Esq. —; Sir such a one; Mr. —, &c., as I believed was required and practised by ancient Friends. It gave the enemies much occasion against me.

About this time peoples' minds were much agitated on political subjects, the French having overturned all orders and distinctions, which gave great offence to people in general; they called their days, &c., as do Friends, instead of the old names. I mention this because the adversary assailed me with the suggestion that I should be deemed of their spirit. I could expect little favour, though politics was a subject I thought little about, and spoke less; believing as our blessed Lord said, "My kingdom is not of this world;" every true disciple being influenced by the same spirit, the attention as well as the affection will be engaged in things above, not of this world, more than needful; and it had been sometime before a concern to me, to observe some of the Society of

Friends meddling with such matters, more warmly than I thought consistent with their profession.

(To be continued.)

#### English Habits of Early Times.

Everybody, not excepting the royal family, rose as early as the light would let him. In the romance of *Hiron de Bordeaux*, one of the heroes is accused of laziness, because he was in bed after cock-crow. Breakfast was a very substantial meal indeed. So late as 1512, we learn from the *Northumberland Household Book*, that even on fish or fast days "the breakfast allowances were as follows: For my lord and lady—a loaf of bread in trenchers, two manchet, a quart of beer, and a quart of wine, two pieces of salt-fish, six baked herrings, or a dish of sprats; for the two elder sons—half a loaf of household bread, a manchet, a bottle of beer, a dish of butter, a piece of salt-fish, a dish of sprats; or three white fresh herrings; for the two children in the nursery—a manchet, a quart of beer, a dish of butter, a piece of salt-fish, a dish of sprats, or three white herrings; and for my lady's gide-women—a loaf of bread, a quart of beer, a piece of salt-fish, or three white herrings." Even in this noble family two persons had only one plate between them, but then, what a quantity of beer!

Dinner was always a great institution in England. Trumpets and music announced it to great families, and servants, headed by a principal domestic, brought it in in stately procession. Swans and peacocks with gilded feet were not uncommon dishes even at dinners that were not banquets. The guests were eaten from slices of bread, however, in lieu of plates, and these were afterward thrown into vessels called *contours*. The number and character of the courses depended upon the wealth of the entertainer. The number of courses was, however, generally three.

There were lavatories in the dining-hall itself, or just outside it, where the guests washed their hands before and after meals; and very necessarily so, since there was, as we have said, only one *tranchoir* between every two, and the use of forks was unknown in England until the reign of James I., when it was imported from Italy. The carving was performed, as at modern fashionable feasts, by a professional person, who was enjoined "never to set on fische, fische, beast, nee fowle, more than two lyngs and a thombe; but the entertainment was by no means *à la Russe*, so that the guests were obliged to contemplate this performance. Meat which was not eaten was generally thrown upon the floor, where there were always expectant cats and dogs, to play with which, however, was held to be bad manners. It was also not considered good-breeding to spit upon the table—

"If thou spit on the bord or elles upon,  
Thou shall be bolden an uncurtesy man."

nor to blow the nose with the hand that was acting as fork; nor to pick the teeth with a knife, or clean them on the table-cloth. The ladies (who appear to have been rather attached to the pleasures of the table) are especially enjoined, when eating with their neighbour, to turn their nicest bits toward him, and not to select the finest and largest for themselves, "which is not courteous." They are also warned not to choke or burn themselves with too large or hot a piece, and entreated to wipe their mouth well, so as not to make the cup unpleasant for the person who shared it with them. The ladies are further and particularly recommended not to utter falsehoods during conversation. When knives are not laid, it is requested that guests will not bring "knytes unsecured" to the table, or, in other words, that they will see

that the knife is clean which each man carried in a sheath at his girdle. The table was merely board placed upon trestles, and the seats were commonly but benches, the cleanliness of which is recommended you should make sure of before sitting down. As for the state of the rush-strewn floor, let us simply remark, without going into details, that it was filthy.

Among the less obvious rules of a good behaviour are these: Do not leave your spoon in the platter; nor eat much cheese, nor more than two or three nuts; nor play with your knife; nor use your napkin into a cord, or tie it in knots. The dinner was almost always accompanied by music and afterward any wandering *jongleur* or minstrel was excessively welcome.

The going to bed must have been an unpleasant piece of business with our mediæval ancestor. Even so late as in the reign of Elizabeth we read in Holinshed's *Chronicles* this unpromising account of bedroom accommodation:—"Our fathers (ye and we ourselves also) have lien full off upon straw pallets, on rough mats, covered onlie with a sheet, and with a good round log under their heads instead of a bolster. If it were so that our fathers, or the good man of the house, had, within seven years after his marriage, purchased a mat tere or flocke bed, and thereto a sacke of chaffe to rest his heade upon, he thought himself to be a well lodged as the lord of the towne, so well were they contented. Pillowes, said they, were thought meete onlie to cover men. As for servants, if he had anie sheet for them, it was well, for seldom had they anie under their bodies to keep them from the pricking straws that ran oft through the canvas of the pallet, and raised their hardenes hides." A description like this could only apply to the lower classes in society, however, who had a yet participated but little in the march of social improvement. Our Norman forefathers of good estate had a quilt of feathers with sheets of silk or linen, and a coverlet of badgers' skins; but they were generally two or three beds in the same room for privacy was very little considered. Curious, enough, however, while no care whatever was taken to cover the body—night-gowns being quite undreamed of—the head was carefully wrapped about at night with a handkerchief. A truckle bed was always found in the chamber of a person of consequence, upon which his attendant slept a his feet; and this was pushed under the large bed during the day.—*Chambers's Journal*.

#### Remnant of the Samaritans.

Priest Anran took me one day (says Miss Rogers) to the Samaritan quarter of Nablus. It is an irregular cluster of two-storied houses in the most crowded part of the town. We passed through white-washed passages, and ascended a crooked, uncovered, steep stone stairway, leading into an open court, where a large glossy-leaved lemon-tree grew close to an arched door, through which we passed after "putting off" our shoes. I found that I was in the synagogue. It is a simple unadorned, vaulted building, in a rather dilapidated state. Anran introduced me to the chief priest, his aged father, Selameh. He received me very courteously. After a short conversation about Jacob-eb-Shehlabi, (the only Samaritan who ever travelled so far west as to England), he said, "I am very old; but I shall die in peace, thanking God that he has let me live to see my people under the protection of the English Government."

A mat was spread on the stone floor, and there I rested, listening to the slowly and earnestly uttered words of the aged priest. He wore a loose blue cloth robe, lined with crimson, over a yellow

red striped satio kumbaz, which is made like dressing-gown. His large turbau and his long ears were white. He directed my attention to a veil of the temple. It was a square curtain of blue damask lince, ornamented with *aplique* work; that is, pieces of red, purple, and green were sewn on to it, forming a beautiful pattern of conventional ornament. He supposed it was six or seven hundred years old; but I imagine cannot be more than half that age. After I had copied the design of the veil, Amran carefully sew it aside and revealed a deep recess where the laws of the law are kept. Then his father rose and with trembling hands brought out the celebrated copy of the Torah, or Pentateuch, which is said to have been written by Abishib, the son of Pinchas, the son of Eleazar, who was the son of Aaron. It is kept in a cylindrical silver gilt case, which opens on two sets of hinges; and on its red cover Hebrew inscriptions are embroidered in gold thread. When Salemah had carefully turned this precious roll to its place, he showed several later copies of the Pentateuch, some in Samaritan, others in the Arabic character; a fitted collection of psalms or hymns; several commentaries on the law, of different periods; history of the community from the Exodus to the time of Mohammed; and a very curious manuscript called the Book of Joshua, which begins with an account of the journeyings of the company of spies who were sent into the promised land by Moses, and concludes with fabulous stories of the life of Alexander. This seems to be rather a favorite book. It is written in Arabic, but the proper names and certain other words are in the Samaritan character. It is said to be of Syrian, or of Hebrew origin.

A number of the neighbours came into the yagooze to see me, and invited me to their houses; and fair little children crowded round. I took leave of the aged Salemah, and he gave me a patriarchal blessing. . . . I visited several houses, and on the whole was favourably impressed with the appearance of the Samaritan community. The men were generally handsome, tall, healthy-looking and intelligent; but very few of them could read or write. The women are modest, and the children very pretty and thoughtful, yet full of life and activity. I am told that the Samaritans owe to a great age, and generally escape the epidemics which break out in Nablus. Perhaps this is owing to the simplicity of their lives, and their scrupulous cleanliness. They observe the ceremonial laws of Moses. Three times a year they go a solemn procession to the summit of Gerizim, Jebel-el-Tor, repeating portions of the law as they ascend; and they still proudly proclaim to pilgrims and travellers, "Our fathers worshipped in this mountain."

They do not receive any part of the bible except the Pentateuch. They say the other books are heresies, and regard 2 Kings xvii as a cruel calumny. The Jews, on the other hand, declare that this portion of the bible is rejected by the Samaritans simply because it records their true history, and testifies against them.

The Samaritans declare themselves to be the children of Manasseh and Ephraim; and their priest is said to be lineally descended from a ranch of the tribe of Levi, by whom their services have been conducted throughout all generations. Amran explained this to me, and then said, "Alas! have no son! I have no son to whom to teach the holy language, no son to assist me in the services, no son to inherit the priesthood. God forbid that I should be the last of my race, and leave my people without a priest!"

It was a cause of bitter sorrow to the Samaritans when, some time ago, the last male representative of the Aaronic family died; for he was the last of their hereditary high priests—the last to offer sacrifices for them. They are obliged now to limit their ministrations to such rites as may legally be performed by Amran and his father, who represent the tribe of Levi; of whom it is written that the Lord spoke unto Moses saying, "Present them before Aaron the priest, that they minister unto him. And they shall keep his charge, and the charge of the whole congregation before the tabernacle of the congregation, to do the service of the tabernacle. And they shall keep all the instruments of the tabernacle." (Num. iii, 4-8.)

Knowing the character of the Samaritans, their belief in the true descent of their priests, their implicit faith in the divine inspiration of the Torah, and their reliance on the efficacy of ceremonial services, I can well imagine their desolation when they buried the last of the anointed sons of Aaron. With that house, the celebration of the highest offices of their religion ceased. No sacrifices can be offered now, and there is no one "to make atonement for the people."

During the days of unblest bread the Samaritans live in tents on the mountains near to the ruins of their ancient temple. "On the 15th day of the first month,"—the whole congregation, men, women, and children, (except such as are ceremonially unclean,) being assembled—the priest stands forth on a mound and reads, with solemn and impressive voice the description of the Exodus.

In a trench ten feet long by two feet wide, previously prepared by labourers, a fire is kindled, and two cauldrons of water are placed over it. A round pit is dug in the form of a well, and it is heated to serve as an oven. Then lambs are brought in sufficiency for the whole community. Seven is not the usual number. At sunset seven men, in white dresses, take each a lamb before him, and at the utterance of a particular word in the service appointed for the day, all seven lambs are slain at the same instant. Every member of the congregation then dips his hand in the blood of the dying victim and beswears his forehead with it.

Boiling water from the cauldrons is poured over the fleeces, which causes the wool to leave the skin without much difficulty. It is plucked off with great nicety. The bodies of the lambs are examined, lest there be any blemish. The right shoulder and the hamstrings are cut off and thrown upon the heap of offal to be burned with the wool.

The seven bodies are then spitted and forced into the hot bake-oven. A trellis-work is then placed over the top of the oven, which is covered with grass and mud to keep in all the heat. A few hours after sunset they are withdrawn; and the Samaritans, each "with his loins girt and a staff in his hand," eat hastily and greedily of the food thus prepared. The scraps of meat, wool, and bone are carefully sought for and burnt on the heap, that not a morsel may remain.

The Feast of Tabernacles is also kept "in this mountain." It happens in the early part of the autumn, when tent life is very pleasant and refreshing. The people "take the branches of goodly trees," such as the evergreen oak and the arbutus, and they "make booths," roofing them with interlacing willows, pinnac palm fronds, and boughs of the glossy-leaved cypress and lemon trees, with the green fruit hanging from them in clusters. For seven days the people dwell there, rejoicing and giving thanks to God.

Sometimes the Samaritans, to their great distress, have been obliged to celebrate their festivals elsewhere and in secret, owing to the fanaticism and

persecuting spirit of the Moslems of Nablus. But priest Amran said: "Now that the English word has been spoken for us we shall no longer fear; and, notwithstanding the civil war, the Paschal lamb will this year be slain on the mountain where our fathers worshipped. The time is near at hand, O lady. Tarry with us until the Passover, and we will make a pleasant tent for you on the mountain, that you, with the consul, may witness the celebration of the festival and eat of our unblest bread."

The women were simply dressed, in trousers and jackets of Manchester prints, and coloured muslin handkerchiefs and veils. When out of doors they shrouded themselves in large white cotton sheets; and though the former were faded and the latter patched, their poorest garments looked clean. I saw very little jewelry, except on the head dresses of the most recently married women. They nearly all, however, wore glass bracelets; and some of the children had anklets made of tinkling silver bells. The girls had a few small coins sewn to the edges of their red turbauches, just in front.

*Curious Mirror.*—Among the curiosities exhibited at the last Paris Exposition, was a huge concave mirror, the instrument of a startling species of optical magic. On standing close to the mirror, and looking into it, it presents nothing but a magnificently monstrous dissection of your own physiognomy. On retiring a little, say a couple of feet, it gives your own face and figure in true proportion, but reversed, the head downward. Most of the spectators, ignorant of anything else, observe these two effects and pass on. But retire still further, standing at the distance of five or six feet from the mirror, and behold, you see yourself, not a reflection—it does not strike you as a reflection—but your veritable self standing in the middle part between you and the mirror. The effect is almost appalling from the idea it suggests of something supernatural; so startling, in fact, that men of the strongest nerves will shrink involuntarily at the first view. If you raise your hand to thrust at your other self, you will see it pass clear through the body and appear on the other side, the figure thrusting at you the same instant. The artist who first succeeded in fashioning a mirror of this description brought it to one of the French kings—if we recollect aright it was Louis XV.—placed his majesty on the right spot, and bade him draw his sword and thrust at the figure he saw. The king did so; but seeing the point of a sword directed to his own breast he threw down his weapon and ran away. The practical joke cost the inventor the king's patronage and favour; his majesty being afterward so ashamed of his own cowardice that he could never again look at the mirror or its owner.—*Late Paper.*

For "The Friend."

The War—Enrolment in the Militia.

No well informed and dispassionate observer of public affairs during the last eighteen months, can reasonably doubt that the present wasting and cruel war has been brought upon our beloved country by most wicked and outrageous means. Unprincipled, ambitious politicians have regarded mainly their own selfish and party policy, until those at the South, foreseeing that the slave power which had long ruled the nation, and ministered to their aggrandisement, was likely to lose its ascendancy; in the midst of unexampled prosperity throughout the land, suddenly made a wanton and incalculable attack on the Union, strove to break up the organization of the government; lawlessly seized its property, and recklessly commenced hostilities against it.

The annals of history will be searched in vain for the record of a war, the pretences for which are more hollow and groundless, or more thoroughly at variance with the religion, morality and civilization of the age. All the excuses adduced in extenuation of it, are too flimsy to be long urged; and the immediate agents of the dreadful evils which now afflict our once happy country, have avowed the real causes of their reasonable and murderous proceedings, to be the maintenance and extension of the abominable system of human slavery.

The government of the United States has been placed in a most painful and trying position, and has strong claims upon the sympathy of its citizens, and their sincere prayers that it may please the Most High to rebuke and cast out the evil spirit of discord and rebellion, and incline the hearts of all peaceably to submit to the salutary restraints of law and order.

Though the long established and well known testimony of the religious Society of Friends to the peaceable nature of the Messiah's reign, prohibits us from joining in warlike measures, or in any wise abetting them, yet we believe there is no religious body which has been more loyal in its feeling toward the government, or more deeply regretted the difficulties which have beset it, and earnestly craved for it the guidance and protecting care of the sovereign Ruler of the Universe, from whom alone we can hope for deliverance or safety.

While no human power, nor any emergency, however extreme, can release us from the obligation steadfastly to adhere to our conscientious scruples against all war and fighting, it is incumbent upon us to do so in a meek, quiet and peaceable spirit; and so to demean ourselves that it may be apparent to all, that we love our country and its excellent form of government, deeply deplore the trials which have overtaken it; and, grateful for the protection and other benefits we enjoy under it, are willing and ready liberally to aid it in any way we can which does not conflict with our well known religious principles. To violate these would add nothing to its real strength, while it would deprive the mind of that calm and peaceful reliance on Divine protection, which is the greatest safeguard and support in every hour of danger.

To use the language of a recent document put forth by the society: "He is the best citizen and the truest patriot whose life is regulated by the law of Christ, and conformed to his pure and holy example; and we can never advance the real welfare of our country, by disregarding these."

Under the authority of the President of the United States, a draft of men is ordered to fill up any deficiency there may be in the 300,000 volunteers called for in the army; and for 300,000 more to fill its wasted ranks. Citizens, between twenty-one and forty-five years of age, are now being enrolled in the military lists out of which these drafts are to be made. A number of Friends have been so enrolled, and will be liable to be selected in the drawing, unless they promptly claim exemption.

The second section of the sixth article of the Constitution of the State of Pennsylvania declares that "those who conscientiously scruple to bear arms, shall not be compelled to do so, but shall pay an equivalent for personal service."

Friends are not likely to be drafted, consistently with this article; but, holding liberty of conscience to be a great natural and indefeasible right, which no government can take from them, or abridge, they equally object to paying a pecuniary equivalent for being permitted to enjoy that right, as it would be a direct acknowledgment that government had power over conscience, and might sell the enjoyment of it at a price fixed by itself.

In claiming exemption from enrolment in the militia, or from any draft, if this portion of the Constitution is pleaded, it will seem more clear and candid to state explicitly the scruple either to bear arms or to pay an equivalent, so that the ground may be clear, and future complication avoided.

The law of our State provides that within a certain number of days after notice of enrolment in the militia, the party claiming exemption from military service, shall leave with the assessor an affidavit stating the ground of such claim. Probably, in the case of Friends generally, it would be sufficient to state on this wise, viz: "The undersigned having received notice of his enrolment in the militia of Pennsylvania, and being a member of the religious Society of Friends, and conscientiously scrupulous against bearing arms, claims exemption, on these grounds, from performing military duty."

This declaration must be signed, and affirmed to, before a magistrate, and handed to the assessor within the time specified in the notice of enrolment.

It is a period of much trial to Friends, and what may yet be before us, none know. Should the war be permitted to continue, we of the North cannot reasonably expect to escape a share of the calamities which always attend this mighty evil; and shall doubtless find need of all the strength and help we can derive from united feeling and harmonious action, for the mutual aid and encouragement one of another.

The state of warfare will be likely to bear with especial force upon those of whom the law requires military service, and the younger class will peculiarly need the tender sympathy, christian counsel and aid of their more experienced brethren. We trust they will not fail to receive them. We would encourage such to seek the advice of their friends, freely to unfold their difficulties, and cherish a disposition to value and to follow the mature and christian counsel given them.

In a time like the present, important duties devolve upon elder Friends, as respects their younger brethren, who have not grown up to much stability and experience in the Truth, and yet have a sincere love for it, and who desire to walk in it. The good in these is to be nourished and cherished; their crude or erroneous views corrected in love, and their minds informed and instructed. Patience and forbearance are virtues especially valuable in treating such; and tenderness and kind consideration often leave an impression which exerts a salutary influence through life, draws them nearer to the society, and, sometimes, wins them over to a religious life. It is very desirable the younger members should see that their elder friends have an affectionate christian interest in their preservation and welfare; that they sympathize with them in their difficulties, are willing to give up their minds to listen to, and ponder them; and, as far as they may be able, to help them over them, in a loving and tender spirit.

And it is no less important that the younger should strive to keep near in feeling to their older brethren; not merely to seek but to follow their counsel, and endeavour to erince by their profiting, that they appreciate the privilege of being under the care and partaking of the sympathy and christian regard of those of riper experience, more mature judgment, and greater stability in the Truth than themselves. Thus we believe the different ranks in our religious Society would be bound more closely together, in united concern for each other, for the prosperity of the body, and for the faithful maintenance of all its religious principles and testimonies; the spiritual welfare of the mem-

bers would be promoted, vital religion increased and our light would shine more conspicuously, to the glory and praise of our Father who is in heaven.

#### A PRAYER.

Lord! let my heart still turn to Thee,  
In all my hours of waking thought;  
Nor let this heart e'er wish to flee,  
Or think, or feel, where Thou art not!

Is every hour of pain or woe,  
When nought on earth this heart can cheer,  
When sighs will burst, and tears will flow,—  
Lord, hush the sigh, and dry the tear.

In every dream of earthly bliss,  
Do Thou, dear Jesus, present be;  
Nor let a thought of happiness  
On earth intrude, apart from Thee!

To my last lingering thought at night,  
Do thou, Lord Jesus, still be near;  
And e'er the dawn of opening light,  
In still small accents wake mine ear.

When e'er I read Thy sacred word,  
Bright on the page in glory shine;  
And let me say, "This precious Lord  
In all his full salvation's mine."

And when before the throne I kneel,  
Hear from that throne of grace my prayer;  
And let each hope of heaven I feel,  
Burn with the thought to meet Thee there.

Thus teach me, Lord, to look to Thee,  
In every hour of waking thought,  
Nor let me ever wish to be,  
Or think, or feel, where Thou art not!

#### WHO IS MY NEIGHBOUR?

Thy neighbour? 'tis it he whom thou  
Hast power to aid and bless;  
Whose aching heart or burning brow  
Thy soothing hand may press.

Thy neighbour? 'tis the fainting poor,  
Whose eye with pain is daim,  
Whom hunger sends from door to door;  
Go thou and comfort him.

Thy neighbour? 'tis the heart bereft  
Of every earthly gem,  
Widows and orphans, helpless left;  
Go thou and shelter them.

From the Leisure Hour.

#### Anecdotes of the White Bear.

The following anecdote was related to me by a naval officer, at a time engaged in the search for the late Sir J. Franklin, and will serve to throw some light upon the powers of the white or Polar bear, (*ursus maritimus*.) Acustomed to see those creatures caged and cramped in the Zoological Gardens, with only a small pond to swim in, we can form no idea of the swiftness with which they move either on land or in the water. The great breadth, length, and flatness of their paws afford a large surface whereby to apply their immense muscular power in progression, and is admirably adapted to the yielding surface of the snow, or to the safe passage over newly formed ice: were it not for this provision, the unwieldy weight of their bodies would be an insurmountable obstacle in pursuing their prey.

From the deck of one of the Arctic ships, a white bear was seen cautiously approaching from the southward over the uneven surface of land ice, stopping from time to time and raising his black-tipped muzzle to sniff the air. The bear's sense of smell is highly developed, the bones and membranes upon which the nerve of smell is spread being usually large in proportion to his other

rgans of sense, and hence we find him trusting more to it than to sight. This is the cause of the peculiar attitude they assume when doubtful of objects before them. The head is thrown back, the nostrils dilated, the breath forcibly drawn in, and the body swayed from side to side.

One of the officers snatched up his rifle and started alone to shoot the animal. In order to avoid being seen, he made a circuit to obtain the shelter of some elevated portions of ice, and by so doing was at a considerable distance from the ships before he came within rifle-shot. Many officers at this time came upon deck, and two of them seeing their comrade single-handed, hastened to his aid. Before they were many yards on their way, he fired. The white bear turned and dashed towards him at full gallop. There was no time to load, and nothing left but to run for his life. Away he went over the floe-ice at a terrific pace. The bear after him, greatly infuriated from the light wound he had received in the skin of the neck. The sight from the ships was one of great anxiety, although the officer was one of the best runners in the vessel. The bear gained rapidly upon him. His two messmates, who had gone on to make a diversion, also ran as fast as they could, with the hope of coming within rifle-shot before the victim should be overpowered. The operations of the next few minutes was intense, and exclamations of "Run, run for your life," and "God help poor P—," were heard from many parts of the shadows. "I hope, unless C— can pick the animal off at a few hundred yards with his rifle," said an old quarter-master. Every eye is steadily fixed upon the chase, till at last the bear is within a few yards of P—. Now he is close, his ponderous paw is raised in the air, the crack went C—'s rifle, and the brute arrested in his course for a moment, and the lower part of the animal, or rather the front part of it, is seen hanging down. The ball had taken effect, and at all events would prevent the use of his both; still, a blow from the fore paw would prove sufficient to destroy life if aimed at the head, and his is the point they attack in the seals, drawing the head backward and breaking the neck. The bear now turned in his agony, and, seeing his antagonist, rushed towards him. A deep breath was drawn by all the spectators, the relief was so great when the animal turned away from his breathless enemy. His new assailant was armed with a double-barrelled fowling piece loaded with ball. The distance grows less between them, and no report as yet reaches the ear. About twenty-five yards, and still no report. Can his gun have missed fire? no; he is now coolly dropping upon one knee, and taking deliberate aim. Ah! there is the flash and now the report! the creature is down and has rolled over. Look he is up again, but only raised upon his fore legs. Now the officer is going close to him; ah! there is another report, and the bear lies full length upon the floe-ice, incapable of further mischief. And now the three hunters meet on the body of their victim. "Ah man!" said P—. "I set my heart knock against my ribs as if it would put a hole there; for I began to think it was all over with me, when I could hear the bear's snort, close at my heels. But for that shot of yours, I should be in a poor case by this time."

From that period, an order was given that no one should leave the ships unarmed or alone.

The Polar bear is capable of getting a living even when blind, as the following anecdote will prove. A travelling party had camped for rest. The men were all of them stowed away in their blanket bags, beneath the wolf-skin coverlet in

their small tent. Suddenly a shock was given to their flimsy house, and presently down it came upon them with a great crash. In a moment they scrambled from beneath the coverings, and beheld a large white bear, quietly poking his nose amongst the articles upon the sledge. Not a moment was to be lost; an old bombardier of marine artillery dived beneath the fallen tent and brought out a loaded gun, and placing it close to the bear's head, stretched him lifeless upon the ice. The party was much astonished at the animal's standing inefficiently to be shot at. On examination he was found to be totally blind, from cataract in both eyes, and must for some time past have procured a living by scent alone.

A sailor who belonged to the crew of a ship employed in the whale fishery, once undertook to attack a large Polar bear which he saw on the ice at a distance. It was in vain that his companions tried to persuade him to give up his design. He laid hold of a whale-lance, and approached the bear; the bear was, however, as brave as the sailor, and stood waiting for the attack. The sailor, seeing him so bold and powerful an animal, grew faint-hearted, and, after standing for some time motionless, took to his heels. The bear pursued him, with maddening strides, when the sailor dropped the whale-lance, his cap, and then his gloves, one after another, to prevent the bear from following him. Bruin examined the lance, tore the cap in pieces, and tossed the gloves over and over; but, not being satisfied with his spoil, he still pursued the sailor, whom he would, without doubt, have torn in pieces, had not the rest of the crew, seeing the danger of their companion, sallied forth to rescue him. The frightened sailor ran towards his comrades, who opened to him a passage, and then prepared to attack the bear. The bear, was however, as prudent as he had proved himself to be brave; for, after surveying the force of his enemies, he effected an honourable retreat. The valiant sailor, who had fled before his courageous enemy, never stopped for a moment in his flight until he had reached the boat, preferring to be laughed at for a coward, rather than remain to encounter a bear.

Let the young remember that fool-hardiness is not real courage.

The Polar bear's average length, when full grown, appears to vary from six feet to seven; there are, however, instances on record of a much greater magnitude; for example, the specimen in the British Museum, brought home by Sir J. Ross from one of his northern expeditions, measured seven feet eight inches, and its weight, after loosing it, is calculated thirty pounds of blood, was eleven hundred and thirty-one pounds; and another individual is described by Captain Lyon as measuring eight feet seven inches and a half, its weight being sixteen hundred pounds.

The first and most striking character of the Polar bear, which distinguishes it to the eye of the non-scientific observer, is its colour, which is of a uniform white, with a tinge of straw-colour more or less prevailing. In its figure, though the limbs have the massive thickness peculiar to its race, there may be easily traced a striking distinction, referable, no doubt, to its almost aquatic mode of life. The contour of the body is elongated; the head flattened, with a straight profile; the muzzle broad, but the mouth peculiarly small. The neck, which forms a most remarkable feature, is continued twice as long and as thick, if not thicker than the head, which is thus thrown out further from the shoulders, so as to give it a poking air. The paws are of huge dimensions, and covered on the under side with coarse hair, whence it derives security in walking over the smooth and slippery ice.

The fur is long and woolly, except about the head and neck, but of fine texture and considerable value.

On the inhospitable shores where the polar bear resides, there are no forests to shelter him in their recesses; he makes the margin of the sea or the craggy icebergs his home, and digs his lair in the snows of ages. His *habitat* may be considered as bounded by the arctic circle, below which he does not willingly pass; the northern and western winds, however often drift numbers on floating islands of ice to the coast of Siberia and the shores of Nova Zembla. On the northern coast of America also, down to Hudson's Bay, the present species is by no means uncommon.

#### For "The Friend."

The selections in No. 47 of "The Friend," made by S. C., through the correspondence of J. Kendall, together with his remarks thereon, were peculiarly interesting and grateful. They show how similar the principles and religious exercises of all true Friends have been in the different periods of the society; and we believe they will continue to be so, as long as we are united in the same faithful members, living in the Truth. We may suppose that there is no Yearly Meeting destitute of such concerned ones, and if so, they must mourn over the alienation which has separated Friends in hearts so greatly from one another, and obstructs the intercourse, which, from the rise of the society, was maintained among all its branches. When the question was put to the prophet: "What dost thou here, Elijah," he replied, "They have forsaken thy covenant, thrown down thy altars and slain thy prophets with the sword;" and such was his opinion of the universal degeneracy, that he thought he only was left, and that they sought his life also. But what was the answer of the Lord to him? "I have left me seven thousand in Israel, all the knees which have not bowed unto Baal, and every mouth which hath not kissed him." If such was man as this prophet, in his zeal for the Lord of hosts, was mistaken in the number of true believers then preserved, is it not possible that many zealous ones now may be wrong in their estimate both of the uprightness, and the number of the faithful preserved among us in this day of degeneracy and departure from our primitive faith.

After pertinently speaking of the importance of certain testimonies, J. Kendall says, "that as it which first formed us to be a people was *love*, so it will be the support of the society when all other supports fail and come to an end." A profession of our doctrines and testimonies however sound, without that divine love to God and for one another, must then fail to uphold the society, and prove not to be a sufficient foundation to preserve us a living body which we were designed to be.

Much has been said and done by which many have been beguiled and turned away from the Truth, as held by humble and sincere Friends from the first; but had those who got wrong in principle, through unwearfulness and the deceitful workings of Satan, maintained a proper regard for their brethren, would they not have had their ears opened to listen to their remonstrances against error,—and would not all those who had escaped unsound doctrine, as they encouraged a similar feeling, have had their hearts softened by the love of Christ, so as to feel tenderly for those who had missed their way, praying for their restoration, and avoiding an uncharitable spirit towards them. Experience of late years has proved, that the unity of a religious society is much more easily broken, than recovered after it has been lost. A violation of its principles and its discipline, whether by meetings or individu-

als, will always tend to weaken the bond of true unity, and to divide and scatter. It is a dangerous thing to tamper with sound doctrines, the established discipline of the society, or with the rights of members. These cannot be infringed or disregarded with impunity, but the consequences will sooner or later come back upon the authors of such violation, and will produce distress and suffering.

A practical return to the ancient, christian faith of the society, with minds imbued with love to God, and to one another, would reunite the members in the bond of true peace. So long as those incontrovertible doctrines are rejected or the ailments of the discipline disregarded, Friends will remain at variance and in danger of breaking up into fragments, a state which cannot glorify the Head of the church, nor promote the blessed cause which life first formed us to sustain in the world.

An ancient epistle, written to Friends in York, by an eminent servant of Christ, speaks decidedly of the building up and preservation of Friends in the adorable Head and foundation, and the circulation and efficacy of the precious love and fellowship which bound them together in the unity of the spirit. We profess to be the same people, contending for the same doctrines and testimonies; let us examine whether the same love and fellowship subsist in our hearts and lead us to desire and pray for one another's welfare.

He says, "And inasmuch as there had been some hurt done in that place, by some that were gone out of the unity of Friends, it was upon me to write a few lines to that meeting to exhort them to keep in pure heavenly love," which brings into and keeps in the true unity. Which was thus:

"Dear friends and brethren in Christ Jesus,—Whom the Lord by his eternal arm and power hath preserved to this day, all walk in the power and Spirit of God that is over all, in love and unity; for love overcomes, builds up, and unites all the members of Christ to him the Head. Love keeps out all strife, and is of God. Love, or charity, never fails, but keeps the mind above all outward things, and strife about outward things. It overcomes evil, and casts out all false fears. It is of God, and unites all the hearts of his people together in the heavenly joy, concord, and unity.

"The God of Love preserve you all, and establish you in Christ Jesus, your life and salvation, in whom ye have all peace with God. So walk in him, that ye may be ordered in his peaceable, heavenly wisdom, to the glory of God, and the comfort of one of another. Amen."

"G. F."

If we are christians indeed, we must labour earnestly to fulfil all the requisitions of the gospel dispensation. Our Lord said to his disciples, "A new commandment I give unto you, that ye love one another: as I have loved you, that ye also love one another."

"By this shall all men know that ye are my disciples, if ye have love one to another."

**Dieting.**—Some persons eat themselves to death, others are dieted to death. When a man is sick he is weak, and concludes that, as when he was well he ate heartily and was strong, if he now eats heartily he will become strong again; well-meaning but ignorant friends are of the same opinion, and their solicitations to eat become one of the greatest annoyances of a sensible invalid. Nature purposely takes away the appetite under such circumstances, and makes the very sight of food nauseating. A sick man is feeble; this feebleness extends to every muscle of the body, and a stomach being made up of a number of muscles, has its share of debility.

It requires several hours of labour for the stomach to "work up" an ordinary meal; and to give it that amount of work to do when it is already in an exhausted condition, is like giving a man worn out by a hard day's work, a task which shall keep him labouring half the night. Mothers are often much afraid that their daughters will hurt themselves by a little work, if they complain of not feeling very well; and yet if such daughters were to sit down to dinner and shovel in enough provender for an elephant or a plowman, it would be considered a good omen and the harbinger of convalescence. A reverse procedure would restore multitudes of ailing persons to permanent good health; namely, to eat very little for a few days; eat nothing but coarse bread and ripe fruits, and work about the house industriously; or what is better, exercise in the open air for the greater part of each day on horseback, in the garden, or walking through the woodlands or over the hills, for hours at a time. Objectless walks and lazy lolling in carriages are very little better than nothing.

The effect of interested, absorbing exercise, is to work out of the system the diseased and surplus matter which poisons it; this relieves the stomach of the burdens imposed upon it, and allows it time to gain strength, so as more perfectly to convert the food eaten into well-made, pure, and life-giving blood. A weakly but faithful servant, in the effort to get through with a specified amount of work, may perform it all, but none of it is thoroughly done; whereas, if a moderate task had been assigned, all of it would have been well done; so a weak stomach, indicated by a poor appetite, may be able to convert a small amount of food into pure, invigorating blood; but if too much is eaten, the attempt to "get through it all" is made, blood is manufactured, but it is an imperfect blood, it is vitiated, and mixing with that already in the system, at every beat of the heart, the whole mass is corrupted, and "I am ailing all over" is the expressive description. In another set of cases there is a morbid appetite; the unhappy dyspeptic is always hungry; and finding that he feels best while eating, and for a brief space afterward, he is always eating and always dying. To hear him talk, you would imagine he could not possibly live long, and yet he does live and grows old in his miseries. Such may reasonably expect a cure.—1st. By eating very moderately at three specified times each day, and not an atom at any other; then in less than a fortnight sometimes these distressing cravings will cease. 2d. Spend a large portion of daylight in agreeable out-door activities. *Halls's Journal.*

For "The Friend."

#### Support of the Discipline.

I noticed with satisfaction, in the columns of the Friend, some remarks on the institution of the excellent system of church government and organization, which, under Divine guidance, has been established in the religious Society of Friends. No one who reads, with an unprejudiced mind, the history of its origin and gradual progress, can reasonably doubt that it owes its rise and development to the wisdom and will of the great Head of the church. This view is fully confirmed by the fact that its faithful maintenance has eminently contributed to the preservation and prosperity of the society; while the neglect of it, or the attempt to pervert it, or to set it aside in order to promote private ends or party purposes, though under very high professions, has always been clearly shown to spring from a defect, secret or open, in christian faith and practice, and has produced confusion and schism.

Several instances of this kind are on record, as

solemn warnings to succeeding generations, from the days of Wilkinson and Story, Perot and Keith, down to the Free Quakers, and more recently, and within the memory of many now living, in the course pursued by the followers of Elias Hicks. Individuals, finding the provisions of the discipline to interfere with, or directly to thwart the carrying out of their own cherished opinions, and determined to attain their ends; either openly attacked the opposing rules, and endeavoured to break them down and have them done away, or claimed the right to act independently of them, and adverse to them, under pretence of spiritual guidance immediately vouchsafed to them. Others, while professing a high regard for the discipline, assumed to put a construction upon its language so entirely contrary to its obvious meaning, and to common sense, as wholly to nullify it; and in nearly if not all these cases, the alleged object or motive was, the carrying out of principles, or the attainment of some good, which, it was said, justified the alteration or evasion.

If we trace the results growing out of such courses, we shall find they have always been bad. An alteration made to accommodate one notion, prepared the way for other changes,—arrogating divine authority for disregarding one injunction, led to a light esteem of the whole; while the perversion of obvious meaning and common sense by professed advocates of the discipline, to snit their own purposes, tended to bring contempt upon the entire government of the church.

And where are now the malecontents? Driven into separation by their determination to have their own way, and to rule or read, they and their deluded adherents withered and dwindled away, until they are no longer known save by the sad record of their schisms; except in the case of the Hicksites, whose principles and condition present no inducement to follow them in their aberrations from the discipline of Friends.

John Griffith, speaking of the establishment of the order among Friends, says:—"Divine wisdom was wonderfully with those worthy first sent and engaged in this blessed work; directing their steps with true judgment, as well as opening the minds of a numerous people of various growths, to receive the manner and form of government and order, which those of the clearest sight discovered in the true Light, to be best adapted to promote the glory of God, and the preservation of his church and people. Yet there were some opposers, as in the primitive times, even of their own body or society; men of perverse spirits, who troubled the church for a time with litigious jangling, and corrupt disputations. But the Lord, who knows how to put a stop to the rage and cunning devices of the enemies of his church, brought a blast upon them, which has exposed the names of the leaders to ages and generations to come. Thus the faithful were enabled to carry on the great work, designed for the defence and preservation of God's people, in defence of all those who were permitted to rise up against them and their godly undertaking."

The introduction to the discipline of Philadelphia Yearly Meeting, sets forth its objects in these words, viz: "for the exercise of a tender care over each other; that all may be preserved in unity of faith and practice, answerable to the description which the ever blessed Shepherd gave of his flock; 'By this shall all men know that ye are my disciples, if ye have love one to another.'" Again it says: "If any member be found in a conduct subversive of its order, or repugnant to the religious principles and testimonies which we believe we are entrusted with for the promotion of truth and righteousness in the earth, it becomes our indispensable duty to treat with such, in meekness and brotherly com-

assion, without unnecessary delay or improper exposure; according to the direction of our Lord to his church, viz.: "If thy brother shall trespass against thee, go and tell him his fault, between thee and him alone. If he shall hear thee, thou hast gained thy brother. But, if he will not hear thee, thou take with thee one or two more, that in the mouth of two or three witnesses, every word may be established. And, if he shall neglect to hear them, tell it unto the church. But, if he neglect to hear the church, let him be unto thee as a heathen man and a publican." Matt. xxiii. 15, 16, 17.

It is worthy of especial notice, that the care exercised is to be *loving and tender*,—that if any member be noticed in conduct subversive of the order of the Society, he is to be treated with *gentleness and brotherly compassion* without needless exposure, and that he is to be first privately told of his fault, then in presence of two or three others, and then by the church, before he is rejected; and surely, if this christian, brotherly course is to be pursued to a single individual, it is no less necessary where several or many are alleged to have departed from established order or principle.

No offender, real or imagined, is to be hastily hidden, or unbraided, or vaunted over, nor his failings unnecessarily exposed; but in lowliness and tender compassion, sought and admonished for his help, according to the command of the apostle: "Brethren, if a man be overtaken in a fault, ye which are spiritual restore such an one in the spirit of meekness, considering thyself, lest thou also be tempted." Friends have a beautiful conventional expression that aptly conveys the true spirit in which all church labour is to be performed,—it is, *"The restoring love of the gospel,"*—not to crush or overwhelm, or to cut off—but to reclaim and rather back into the bosom of the church, to be nourished, and cherished, and instructed there.

Where the heart is thoroughly imbued with the love of Christ, it is more severe and earnest in judging itself than others; and being kept humble and tender, with the eye single to its Divine Master, a recent sense of its own frailty and constant need of Divine forgiveness, while it is firm to the truth, reserves it from all censoriousness, and harsh and hasty condemnation of others. The influence of such a spirit and example, in those who attempt to deal with others, has generally a most salutary effect; opening the mind of the delinquent to receive the counsel imparted, convincing him that a care for his real welfare is the actuating motive, and precluding the suspicion of self-exaltation orarty spirit.

An increase of this heavenly love throughout the orders of our widely extended Society is most desirable, seeing it is the fulfilling of the whole law, and the holy cement which binds together both the militant church on earth, and the glorious church triumphant in heaven. Whatever other religious attainments we may reach; though we have the gift of tongues or of prophecy, understand all mysteries and doctrines, and zealously contend for them; though we have faith which would remove mountains, and a benevolence which would bestow all our goods on feed the poor, yet without this love, the scriptures tell us, we will profit as nothing; will prove our profession to be as sounding brass or a tinkling cymbal. But "Love never faileth;" "for our abideth faith, hope and charity," or *love*, (as the same Greek word is usually rendered,) "but the greatest of these is love."

In making a serious examination how far our spirit and conduct are seasoned by this primary christian grace, we may all be helped in coming to a right decision, by carefully pondering the description given of its characteristics, by the inspired

apostle, viz.: "Charity suffereth long and is kind—charity envieth not—charity vaunteth not itself—is not puffed up—doth not behave itself unbecomingly—seeketh not her own—is not easily provoked—thinketh no evil—joiceth not in iniquity, but rejoiceth in the truth: beareth all things, believeth all things, hopeth all things, endureth all things."

## THE FRIEND.

EIGHTH MONTH 23, 1862.

The calamities of war are pressing more and more heavily upon the nation. Tens of thousands have fallen victims to its baleful presence, and the shadow of death darkens the dwellings of high and low throughout the land. Suffering and sorrow, the inseparable companions of this unchristian age, are making sad impress upon the recently joyous face of our country, while its resources of men and means are being lavishly poured forth to meet the demands of the deadly conflict. The sword seeth insatiate of blood. The papers teem with accounts of battles furiously contested, where brother meets brother in hostile array, and the earth is soaked with the life stream, shed by each others hands. The hospitals erected at numerous points, are crowded with the wounded and maimed, who perish speedily, or drag out a wretched existence, crippled for life; while disease, contracted in noisome camps or on protracted marches, sweeps off thousands to untimely graves. Truly the judgments of the Lord for sin are resting heavily upon our beloved country, and cry aloud to the people to humble themselves under his mighty hand, repent sincerely of their transgressions, and turn from the evil of their ways.

It is a lesson which man is slow to learn, but which individual and national experience must sooner or later confirm, that sin and suffering are more or less closely united, and however hidden or lengthened out may be the mysterious links which fasten them together, they are indissoluble. While basking in the sunshine of prosperity the nation forgot this truth. It looked upon its vast territory, its various material riches, its unexplored resources, its ingenious, industrious and enterprising population, and in the pride and arrogance of its heart vitally exclaimed, as the haughty king of old, "Is not this great Babylon which I have built by the might of my power." The goal of supreme national greatness seemed within easy attainment; and the different parties which struggled for supremacy, disregarding the restraints of religion, hesitated at no means which appeared calculated to advance their selfish interest. Little heed has been given to the warning voice which was again and again raised to stop the downward career, and bring the people to reflect that national sins must sooner or later call down national punishment. But a blow has come from an unexpected quarter, and the nation is staggering under its dreadful force. Our pride and boasting are being sharply rebuked, and we are being taught in the school of affliction, the vanity of trusting to human might and wisdom, and the folly of glorying in our wealth.

All classes have need to inspect their standing, and inquire honestly whether something is not called for at their hands in order to prepare the way for the restoration of peace. Friends have perhaps had as little to do in bringing about the terrible convulsion in which church and state are rent in twain, as any body of citizens; but yet, we believe, the afflictions of the times seriously admonish them to strive for a more general recurrence to a practical exhibit of the pure principles of the Gospel which

they profess. Would that they would universally be willing to search out the causes of the divisions and disunity which exist throughout the society, and in that spirit which seeks the good of all, labour to have those causes removed.

We may be sure, that were we living in accordance with the principles we profess, none of these disagreements and separations would exist. There would be no disposition to try new paths, no attempt to modify our faith in order that the cross may be shunned, none to disregard the order and discipline of the society, that we might escape from suffering or from control. True Quakerism, chastening the spirit, and governing the actions of those who profess it, would remove all this, and bring the society back to that noble and dignified standing which it occupied when personal suffering and trial tested the sincerity of those who acknowledged it before the world.

Nothing more is wanting then, than for each one of us to carry into practice those principles which we profess to be binding upon us, and for which we may have been strenuously contending. We may be sure there can be no growth in the Truth where the heart harbours ill-will and uncharitableness! where we are more anxious to convict and condemn for error, than to strive for that spiritual mindedness in which we may hope to restore in the spirit of meekness that which has gone astray. Every one who has any right sense of his own heart, must be sensible how much, and how often he requires forgiveness; if we would experience this essential mercy extended to us, we must seek to have the heart clothed with the Spirit of Him who dispenses it, when sitting in judgment upon others. Not that we are to approve or connive at error, but constantly to consider ourselves, lest we also be tempted.

There is no way in which Friends as a body, could more effectually promote their own well-being, or give more potent aid to our beloved country in this, her hour of sore trial, than by thus striving to come back to be the humble, self-denying people it was and is the design of the Almighty they should be; showing to surrounding professors, the meekness, the gentleness and the purity of those who are true disciples of the lowly Jesus, the Prince of Peace; and being qualified unitedly to supplicate the Great Disposer of events to spare the nation, cause the sword to be put up in its sheath, and more effectually to visit the people with the Day Spring from on high.

### SUMMARY OF EVENTS.

FOREIGN.—News from England to the 7th inst. It is rumored that several of the European sovereigns will soon meet at Cologne.

Garibaldi's irrepressible call to arms has been met by a counter-proclamation from the King of Italy, threatening the rigor of the law against all who disobey. He adds that he himself will move in the matter of Rome at the proper time. The *Sicels and Opinions Nationales*, while blaming the course of Garibaldi, insist upon the necessity of promptly solving the Roman question, by delivering Rome up to Italy. It is stated that Garibaldi has about eight hundred and fifty followers with him, who are but poorly armed.

A rumor is current at Madrid, that Prince Murat is intended to be made King of Mexico.

R. Rosarian & Co., of Manchester, have stopped. Their liabilities amount to £400,000.

A desperate battle has been fought between the Turks and Montenegrins, both parties claiming a victory. The *St. Petersburg Journal*, denies the rumors that Russia had joined France in a proposition to England for a recognition of the Southern Confederacy.

The *London Times* argues editorially against interference, as calculated to prolong the contest indefinitely. The Queen in a late speech approving Parliament, says "The civil war which for some time has been raging in America, has, unfortunately, continued in unabated intensity, and the evils with which it has been attended,

have not been confined to the American continent; but her majesty, having from the outset determined to take no part in the contest, has seen no reason to depart from the neutrality which she has declared. The London paper condemns the continued aid given the rebels, notwithstanding the proclamation of neutrality. It declares that Liverpool is a kind of Confederate dock, wherein the rebels not only put up their vessels, and obtain cargoes of arms, but even supply their navy with victuals.

The Liverpool cotton market had advanced  $\frac{1}{4}$  d. Breadstuffs had slightly declined. *Two days later*,—It is stated that Sillidell has had an interview with the French Emperor, upon whom he urged the recognition of the Southern Confederacy as an independent power by the government of France. Napoleon is said to have admitted the cogency of the arguments advanced in favor of such a course, but said that the greatest barrier to the recognition of the South, had been the objections of England. Lord Palmerston, in a speech before the House of Commons, had again advocated non-interference in American affairs.

**UNITED STATES.—Virginia.**—The army of General McClellan, which has so long occupied positions near Richmond, is, it is stated, about to be removed to another field of operations. An independent notice by the *Richmond Dispatch*, the number of persons on the sick list throughout the entire army, amounting, at one time, to as much as eleven per cent. of the whole. All the men not capable for immediate service, have been sent down the river in transports, in order to be confined to the best places to recruit their health. It is understood that the great body of the army are retreating to Yorktown, while a portion are leaving the river in vessels. McClellan's army will, it is supposed, either be united to Pope's command or co-operate with it. A despatch of the 17th says that the last of the United States troops crossed the Chickahominy, and the advance was at Williamsburg. The movement had thus far been made successfully, but an attack upon the rear guard on its march was thought not improbable. The supplies and property of all kinds were brought off safely. Gen. Pope took the report of the battle near Culpeper, states the loss of the United States army, to be about 1500, in killed wounded and missing. He supposes the loss of the rebels to have been much greater. The Richmond papers, on the other hand, claim a victory for the Confederates. An expedition of 10,000 men, under Gen. Banks' corps says, that the returns of killed, wounded and missing, from the different United States regiments engaged in the battle, will show an aggregate of twenty-two hundred men. Jackson's army has been reinforced, and amounts to from 60,000 to 70,000 men. After the battle, he retreated to the position near Gordonsville with a large part of his forces. Gen. Burnside's army reached Culpeper on the 17th, and a general advance of the United States forces in the direction of Gordonsville, was in progress. The Richmond Dispatch says, that the officers taken prisoners by Gen. Jackson on the 9th instant, had been put in prison, and will, in a few days, be separately confined, to be tried, and finally punished as felons, should the "recent offensive and uncivilized orders of Gen. Pope remain unrecapitulated." These prisoners were taken in a system in which the military authorities had a number of private taken prisoners by the rebels was about 350.

**Kentucky.**—Governor Magoffin's message to the State legislature, condemns the invasion of the State by Morgan. He says, the members of the 10th and 11th regiments disapproved of it. He reviews the present position of the Federal Government, and recommends the adoption of the Crittenden resolutions as a standing proposition of peace and settlement. Magoffin has resigned as Governor, and his place has been filled by James F. Robinson. The Speaker of the House, and five members of the Legislature, were supposed to be the advance guard of a larger body.

**Tennessee.**—On the 9th inst., an engagement took place at Tazewell, near Cumberland Gap, in which the rebels were defeated with the loss of killed and wounded. The Federal loss was eight hundred and fifty, and the rebels were killed and wounded. **Missouri.**—A large band of guerrillas in Chailion county, was attacked and dispersed by the United States troops on the 14th inst., in which the guerrillas were killed and others wounded.

The South West Memphis to the Chicago Times, represents the condition of affairs in the

South West as very critical. The Confederate army has been swelled by the conscription to formidable dimensions, and is rapidly organizing into a well equipped force.

The number of rebel troops in Mississippi alone, is believed to be not less than 120,000 men.

**Louisiana.**—New Orleans dates to the 10th inst. been received. On the 6th inst., Baton Rouge was attacked by John C. Breckenridge, with an army of 5,000 men. It was defended by Gen. Williams and 2,500 men. At first the Federal troops lost ground, but afterwards rallied and repulsed the rebels with severe loss. Gen. Williams was killed, and 285 of his command killed and wounded. The loss of the rebels was very heavy, amounting to 1,400 men. The Federal men, including three generals and many officers of lower rank. The celebrated rebel steamer Arkansas, was destroyed the day after the battle. With a view of obtaining funds for the relief of the suffering poor of New Orleans, Gen. Butler has issued an order requiring merchants upon whom merchants who assisted the New Orleans Committee of Safety in resisting the authority of the United States. An assessment is also laid upon the cotton brokers for the same purpose, the entire levy amounting to several hundred thousand dollars.

**South Carolina.**—Late advices from that State state that the rebel brigade proved to be a failure, and had been dispersed.

**Rebel Prisoners.**—Among those at Indianapolis who were about being sent south, are 2300 Tennesseans, who refuse to be exchanged, and ask to be allowed to remain in the North, on parole. The matter has been referred to the disposal of Governor Johnson of Tennessee.

**Illinois Cotton.**—The attempt at cultivating cotton this season in southern Illinois has been quite successful. The crop is estimated at 25,000 bales. It would have been increased, if seed could have been procured at the planting season.

**Capture of a British Steamer.**—The steamer Columbia, which sailed from Nassau, with a large and valuable cargo of munitions of war for the rebels, was captured whilst attempting to run the blockade; she was taken by the Armstrong guns, Enfield rifles, powder, shot shell, &c.

**New York.—Mortality last week, 685.**

**Philadelphia.**—Mortality last week, 542. Of sunstroke, 167; typhoid fever, 38; debility, 37.

The Arkansas papers have reported the capture of General Clarendon, Arkansas, which resulted in the defeat of the rebels, and the capture of seven hundred prisoners.

**North Carolina.**—The Newbern, (N. C.) Progress, in speaking of the election which was held in that State on the 7th, says, "The final result of the election has been a sweeping declaration in favor of John Johnston, a Union candidate for Governor, by the unparalleled majority of 49,000. The Union Opposition party have elected nearly every member in both branches of the Legislature by still greater majorities. Every candidate who had accepted the continuation of the war and an separation from the Union, has been defeated in every instance."

**The Markets, &c.**—In New York on the 18th inst., the premium for gold was 15 per cent. The supply of capital continued large, the rate of interest on call was 3 per cent. The quotations in the Philadelphia market on the 18th. The receipt of wheat moderate, with an active demand for good dry lots. Fair Pennsylvania and western red, a \$1.25 a \$1.31; southern, \$1.33 a \$1.35; white, \$1.40 a \$1.52; ryce, 81 cts. a 82 cts.; yellow, 52 cts. a 54 cts.; new Delaware, 39 cts. a 40 cts.; do. dried, \$5.00 a \$5.50. The cattle market was very dull, and prices lower. Rates ranged from 6 to 8 1/2 per cent. according to quality, the bulk of the sales being between 7 and 8 per cent.

#### RECEIPTS.

Received from F. Owen, N. Y., \$2, vol. 36; from E. Hollingsworth, Agt., O., for R. Penrose and J. Dewees, \$2 each, vol. 35, for Wm. Harner, \$2, vol. 34.

#### FRIENDS' SELECT SCHOOLS.

These seminaries will, it is expected, be re-opened after the summer vacation, on or near the first of Ninth month next, the Boys' School being situated on Cherry Street west of Eighth, and the Girls' School on Seventh Street between Cherry and Race Streets.

The course of instruction now adopted in the Boys' School embraces, besides the ordinary branches, a selection of more advanced mathematical, scientific and classical studies, on the satisfactory completion of which, the pupil will be entitled to a diploma or certificate of scholarship.

During the winter months, lectures on scientific subjects are regularly delivered, illustrated by appropriate apparatus and experiments.

The course of study at the Girls' School embraces, in addition to the elementary branches,—Algebra, Geometry, History, Natural Philosophy, Chemistry, Astronomy, Physiology, Natural History, Botany, Physical and Mental Philosophy, Etymology, Rhetoric and Composition. Instruction is also given in Trigonometry, Mensuration, and the French and Latin Languages.

As the proper classification of the scholars, early in the session, is important, it is desirable that those who intend to enter pupils for the coming term, should do so as early in the season as possible. Application may be made on the opening of the Schools, to Joseph W. Aldrich, Principal of the Boys' School, and to Margaret Lightfoot, the Principal of the Girls' School.

With the present arrangement, it is believed that these schools will afford a liberal and judicious instruction in the liberal education of their children, and at a very moderate cost.

Their attention is also invited to the Primary Schools in the Northern and Western Districts, where provision is made for the careful education and instruction of children of too young an age to attend the Primary Schools.

On behalf of the Committee,  
JOHN CARTEL, Clerk.

#### FRIENDS' SCHOOL, GERMANTOWN.

Since the opening of this School, in Ninth month, 1858, the buildings have been enlarged and improved, and the accommodation for Friends' children, and others who conform to the regulations of the School. The situation is pleasant and healthful, adjoining and communicating with Friends' Meeting-House premises, on Germantown avenue. The course of study embraces the usual branches of a good English education; also, the French and Latin languages.

**TERMS FOR TUITION.**—From \$8 to \$20 per Session of five months, according to the ages of the pupils, and the branches taught,—French and Latin, \$8 each per Term.—Application may be made to Alfred Cope, Board of Managers, S. Haines, J. Hill, William S. Morris, George Jones; Elington P. Morris,—or to Amy and Sarah H. Albertson, at the School.

Eighth month, 1861.

N. H.—A limited number of scholars can be accommodated with board and tuition on the premises. Access may also be had by the Scholars to the valuable Library, belonging to the Preparative Meeting.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)  
Physician and Superintendent,—JOSIEPH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be accommodated with board and tuition on the premises. Access may also be had by the Scholars to the valuable Library, belonging to the Preparative Meeting.

#### EVENING SCHOOLS FOR ADULT COLOURED PEOPLE.

Principal and Assistant Teachers are wanted for the Men's and Women's schools. Applications may be made to ISAAC MORGAN, Jr., 622 Noble street, SAMUEL ALLEN, 524 Pine street, GEO. J. SCATTERGOOD, Fifth and Callowhill streets.

#### BOOK OF DISCIPLINE OF PHILADELPHIA YEARLY MEETING.

Copies of the above are now for sale at the Book Store, No. 384 Arch Street. Price 50 cts.

DIED, on the 8th of the Fifth month, 1862, in the Seventy-ninth year of her age, SARAH W. SMITH, a member of the Monthly Meeting of Friends of Philadelphia, on the 16th of the Eleventh month, 1861, JOHN HAWORTH, in the sixty-sixth year of his age. And on the 29th of the Sixth month last, his sister, SUSANNA HAWORTH, in the seventy-ninth year of her age, both members of the Northern District Monthly Meeting.

WM. H. FILE, PRINTER.

Lodge street, opposite the Pennsylvania Bank.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXXV.

SEVENTH-DAY, EIGHTH MONTH 30, 1862.

NO. 52.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Selected.

## Some Account of John Spalding.

(Continued from page 402.)

I was at times so sorely pressed, so burdened in spirit, that I seemed as though my strength was broken, and was ready to cry out, "The children are come to the birth, and there is not strength to bring forth," but still my desires were to the Lord, who had hitherto supported me, that I might still experience him a God near at hand, and not so afar off; for I felt how unable I was to have a step without his divine assistance. So low as I reduced, that though I received several relieving letters, which were clearly against the Truth, had not power to answer them; being taught to have me cause to the Almighty, and not be anxious to justify myself before men, but which may be an encouragement to any who may experience similar trials, I felt a secret upholding, a consoling assurance that the Lord would plead his own cause, and in his own time bring forth judgment unto victory; and I desired that his hand might not spare, neither his eye pity, till his work was accomplished to his own glory, however it might be with me. Thus I continued some time, till it pleased the Lord to give me; when though I had little business in comparison to what I had heretofore, yet I was abundantly satisfied with an cultivating sense of the Lord's presence; which infinitely surpassed all worldly goods, so that in measure I knew the truth of our dear Lord's promise, that whoever may be enabled to leave anything for his name's sake, shall receive an hundred fold even in this life, either in some of the approbation of the Most High, is of infinitely greater value than any thing this world can afford. Oh! that the people, particularly the Lord's professing people, may be encouraged to be willing to part with every thing, however near and dear to flesh and blood, that stands in the way, which obstructs that divine communion with him, so are taught to expect; for true it is, except a man forsake all that he hath, he cannot be Christ's disciple; and he is not a hard master, doth not require any thing to be parted with, but what would really be injurious to our spiritual welfare; though to man's carnal apprehension it may seem in some cases in a different light. Man naturally loves ease. The Cross of Christ is not pleasant to flesh and blood; but, my friends, if ever we know the truth of what Paul declares, that "they who are

Christ's have crucified the flesh with its affections and lusts;" and the more readily we submit to the yoke, I am persuaded we shall the sooner experience that subdued, which dislikes the cross: then we shall know what our Lord said, that his yoke is easy and his burden light.

A fear had arisen in my mind, lest I should be beholding the mote in my brother's eye and not attending sufficiently to that power which could alone remove the beam out of my own; and though my spirit was frequently grieved on hearing vain conversation, and often seemed to feel a desire to reprove, yet I was afraid to cast a stone, feeling myself not without sin, and I had to remember and to desire to practise what is recorded; to study to be quiet and mind my own business; and I think I can truly say, that in stillness and retirement I experienced a degree of peace, and I trust a growth in grace; and I must acknowledge with humble thankfulness, the condescending kindness of my Heavenly Father, in favouring me with much opportunity of retirement; having comparatively but little worldly business, for I sorrowfully found in those lawful engagements, a very great difficulty of keeping in that straight line of duty, which I believed was marked out for me. In the course of conversation words would occasionally drop, which, afterwards, on reflection, brought distress on my mind, and I desired to be thankful that I was enabled not to desire much of this world's goods, but rather the reverse, and to be content with food and raiment. It was a concern to me to observe among Friends, on a young man's beginning business for himself a conformity in some things with the world, I thought to gain their favour and custom; it appeared to me paying very dear for their assistance; and I believed I could prefer working hard as a servant, to the most profitable situation on such terms; and fervent desires would frequently arise in my mind, that all who profess to be followers of Christ, particularly Friends, who profess more than most, would be concerned to practise our blessed Lord's advice, to seek first the kingdom of God and his righteousness; yea, and seek nothing else till they had found it; then I believed by attending to that, they would be divinely directed in temporal concerns; and preferring it above all things, would be preserved from the too prevailing snare of flattering the world for their support. I have thought that people are often led to such practices, by engaging in concerns which require extraordinary expense upon them; which requiring more of the things of this world, a greater difficulty is experienced in bearing a faithful testimony against what they may be convinced is evil. These considerations, through divine assistance, induced me to be careful in confining my expenses in as narrow a compass as I believed consistent with my situation; and though for many years I had strong inclinations to enter into the marriage state, I now experienced a check to every desire of the kind: believing it was my duty to keep myself as much as possible from the cumbrous of this world, and as a faithful soldier to be ready for whatever my great Lord and Master should require of me.

Near the close of the year 1793, I wrote to the

Friends of the Monthly Meeting, to be admitted a member of society; which Friends in due season expressed their unity and compliance with; and here I would observe, that from my first acquaintance with Friends, I could not but approve their caution, in not hastily admitting any into membership; but rather to know that power which first gathered Friends into a society; to experience an union of spirit with the faithful, than any name or outward relationship; and though a little before I wrote to the Monthly Meeting, I had some apprehension of being drawn for the militia, which would have probably exposed me to some severe trial, not being of the society; yet convinced of the necessity of bearing my testimony against wars and fightings, I was mercifully enabled to be still, and leave the event, whatever it might be, to the Lord, who had hitherto supported me, and not apply for admission any sooner on that account.

The first Meeting for Discipline I saw to, I felt a powerful concern to speak on a particular subject, but considering my state of childhood in the society, and a fear lest I should appear forward, I endeavoured to get rid of it, and avoid speaking; yet it seemed rather to increase than diminish, till just at the close I expressed a few sentences, and found in a little time the burden relieved, at least in a degree.

I was often sorrowfully concerned to observe in the nomination of Friends to Quarterly and Yearly Meetings, a disposition to make excuses; believing those meetings were established under the influence and power of Divine Wisdom, I thought if there was a proper attention to the guidance of the same, Friends would be directed in their nomination; that the great Lord of the harvest would choose whom he pleased to employ in any particular service; and I thought there might be danger in highly and hastily making excuses, lest it should be a disobeying the call of the Most High. It appeared to me, that worldly concerns had too much influence; that it was considered whether it would be convenient or not. Now I knew from my own experience, that if an ear was open to listen to excuses, enough would be presented against many services or duties, as attending week day meetings, and others, in times of business. But I saw or felt it was safer and better to have a single eye, to have only one object in view, what the Lord required of me; than to look on temporal concerns, whether it was convenient or not, but simply give up and leave the consequence; and I can with humble thankfulness and gratitude acknowledge the inconveniences, or losses I might have apprehended would be the consequence, were changed into a comfortable sense of divine approbation, and an abundant reward of peace.

The 25th of the Second month, 1794, being appointed by government to be observed as a general fast and humiliation before Almighty God, and the mayor of Reading sending out a bill, desiring all sects and parties to observe it as required: I felt

a concern to write a few reasons, &c., why we, the religious Society called Quakers, could not observe it as required; which were copied and handed out in manuscript. One copy I sent to the clerk of the parish, desiring him to lay it before their ministers, and as many of the people as might be.

"A few reasons why the religious Society called Quakers, cannot observe, as required, the duty appointed for a general fast and humiliation (so called) before Almighty God.

"That the magistrates and people may know it is not from any contempt of authority, nor in rebellion against government, but that they may preserve a conscience void of offence towards God and towards man."

"First, Because we believe that the Lord alone hath a right and authority to enact and require how and when he will be worshipped. That all worship whatsoever performed in the will of man, and which the Spirit of Christ doth not lead into, is not acceptable unto the Lord, who hath declared, that *"in vain do they worship me, teaching for doctrines the commandments of men;"* and that *"the true worshippers must worship in spirit and in truth."* Therefore we believe that it doth not belong to man to impose modes and forms of worship, and if in compliance with the will of men, any should conform to such pretended worship, the conscience not being clear, nor the heart rightly engaged in the service, it would be hypocrisy in the sight of God, and sin to the person so complying; for *"whatsoever is not of faith, is sin."*

"Secondly, Because we believe it is not the fact which the Lord hath chosen, or will approve of, according to what he hath declared by the prophet Isaiah, and elsewhere, as for man to afflict his soul for a day, and to bow down his head as a bulrush. And our Lord called those hypocrites who desired to appear unto men to fast; and commanded his disciples to anoint their heads, and wash their faces, that they might not appear unto men to fast, but unto Him who seeth in secret; who doth not look on the outward appearance, but upon the heart, and who requireth truth in the inward parts. And by the prophet he declared, that the fast which he had chosen, was to loose the bands of wickedness, to feed the poor, clothe the naked, &c., that then he would accept their prayers.

"Thirdly, Because it is required to implore the blessing of Almighty God for the success of our arms, which we believe is repugnant to the spirit of christianity; as Christ is the Prince of Peace, who did not come to destroy men's lives, but to save them; and commanded his disciples not to resist evil, but to love their enemies, and to do good to them that hate them. Therefore, in obedience to these commands, through the influence and assistance of the Spirit of Christ, we cannot willingly think or do evil to any whatever they may intend to do unto us; but are enabled to commit ourselves to divine protection, without the use of any carnal weapons, assuredly believing the Lord will preserve all those who faithfully confide in, and obey Him.

"For these reasons, and not from obstinacy, or perverseness, or any disrespect to those in authority, we cannot keep our shops shut, or in any manner directly or indirectly, uphold or countenance such a custom.

"It is believed by a remnant, who are secretly mourning for the abominations of the land, and travelling in spirit, that truth and righteousness may abound, that there is great cause for fasting and humiliation before Almighty God; for the transgressions of the people are multiplied against him, so that there is reason to expect that the Lord

will visit with his rod even this highly favoured country; and it is their secret desire that as the judgments of the Lord are in the earth, the inhabitants thereof may learn righteousness. But, friends, your pretended humiliation for a day, with your lips confessing your sins, and again returning to your old course, is only mocking God who will not hear, though you make many prayers, and cause your voice to be heard on high, while your lands are full of blood, while you are desiring the destruction of your fellow creatures; for that spirit is not of God, for God is love, and whoever are led by the spirit of God, will love their fellow creatures, and not desire their harm. Therefore, friends, consider what spirit you are of, before you presume to draw near to the Most High, who is not to be honoured with the lips, while the heart is far from him, which it is and ever must be, while defiled with the pollution of sin; but seek for that new heart and new spirit which God hath promised; and remember a language of old, to those who pretend to honour him with their lips, while their hearts are far from him; *"Wash ye, make ye clean, put away the evil of your doings from before mine eyes; cease to do evil; learn to do well."* Then (and not till then, though you make never so many prayers, and afflict yourselves never so much,) the Lord will hear your prayers and regard your petitions."

(To be continued.)

From "The Leisure Hour."

#### My Little Tenants.

Perhaps I ought rather to call them squatters upon my property, for they neither pay me any rent for the abode they occupy, nor have they tendered any, though they have resided upon it for the last two years. The first information I received of their intention to settle was conveyed by the presence of waste building materials, of no great value certainly, for they consisted only of mud and straw. It will be perceived from this, that the intruders were very humble in their notions, and intended only to employ the same materials as the Ancient Britons once used to construct their habitations with.

On seeing these intimations of the presence of strangers on my property, I began to look about for the builders, and, having cunningly ensconced myself in a snug corner, I soon discovered them. They were a newly-wedded pair, remarkable for personal beauty, and an example to married couples generally; for they worked together, and were evidently of one mind in all they did. So prepossessing was the appearance of these young people, that to spite of their audacious intrusion, I could not find in my heart to disturb them by a notice to quit, but contented myself by keeping a strict watch on all their motions, that I might check a too intrusive disposition should it display itself.

But soon every other feeling was absorbed in sympathy for the young architects, who were evidently inexperienced, and very unfortunate in the quality of their materials. The straw was all right enough; but alas! for the earth which should have formed the walls in combination therewith. The season was particularly dry, and the cartleth walls, instead of adhering, as they ought to have done, crumbled and fell once and again, to the great dismay of the little builders, who were anxiously endeavouring to prepare for the advent of an anticipated family.

I suppose, by this time, my readers will have guessed that I do not tell of unfeathered bipeds, but of a couple of newly-wedded swallows commencing housekeeping for the first time. The place they had chosen as the scene of their matri-

monial cares and pleasures was an out-house, formerly used as a stable, with a door, of which the upper half was generally open. This out-building is now my coal-house, and, being rather spacious, serves also as a receptacle for my gardening tools and various odds and ends. On a shelf which runs along the side are deposited my empty flower pots and sundry invalidated dishes, such as a housekeeper in town would cast aside as useless; for they would not be fit to place on a table, even were the leaks stopped with white paint, as is sometimes the custom with us thrifty country folk. Well, two years ago, amongst other matters, a cracked willow-pattern pie-dish was resting from its culinary services, and awaiting some more humble sphere of usefulness, on the shelf in the old stable. As I said before, my young builders were unlucky as regarded materials. In vain did they bring earth; in vain did they work and knead it with their dainty little beak-trowels. Their tiny months did not furnish sufficient moisture to supply the deficiency which the hot sun had caused. The walls would not stick, and I was filled with pity when I saw them suspend their labours and watch the crumbling ruin fall for the second time to the ground. They had found me out before this happened, and used to twist their pretty necks and peer curiously out of their bright eyes, to see if I were manifesting hostile intentions. But they soon became convinced of my pacific disposition, so far as they were concerned, and never ceased their labours on my account after the first three days.

When, a third time, their attempts to form a habitation proved abortive, I thought I should lose my new tenants and that they would betake themselves to some locality where the clay was of more suitable temper for their purpose. To my delight, however, I found they were too well satisfied with their landlord's treatment to leave her unceremoniously. They accordingly gave up all thoughts of building on the rafters, and took possession of my cracked pie-dish as a more suitable and convenient place.

But it must not be supposed they were satisfied to make no display of their architectural powers. Following the promptings of instinct, they brought pellets of earth, with which they duly plastered the bottom and sides of the dish—as a cook prepares hers for the reception of birds by lining it with dough. Then a beautifully-woven circle of hay was placed upon the earth foundation, a lining of feathers added, and the habitation was ready for its tenants. Have any of my readers ever seen such little architects at work? I dare say there are but few who have never handled a bird's nest, and wondered at the amazing skill and beauty displayed in the work of these heaven-taught builders. But in the great towns and cities, people have neither leisure nor opportunity to mark the way in which the wondrous structures are put together. I wished that every lover of nature, and of nature's God, could have seen my little tenants choosing their place of abode, then coming with their tiny bills full, the one of clay the other of straw. How rapid was the motion of the beak as it worked the clay, reminding one of an apothecary tempering the material for pills on a marble slab. My swallows deposited their clay in roundish lumps about the size of a pill, then stuck a straw or two upon that, and again brought more pellets to make it adhere.

All the while the pie-dish nest was in preparation, the young couple roosted-side by side upon the shelf; but as soon as it was completed the lady took possession, and during the process of incubation her lord reposed upon a long nail, which

was in the wall at the opposite side of the stable. I used to peep into the dish every morning and I saw five eggs deposited there one after another—such dainty little eggs, of a warmish creamy colour, with light brown spots; so fragile-looking too, that they seemed too delicate to be touched. But no profaning finger of marauding boy was ever allowed to poke itself into my pie, though doubtless many would have liked to have one there.

While the lady was diligently engaged in hatching her little family, the gentleman was apt to take advantage of her pre-occupation, and to stay out rather late at night, reminding one of the human husband under similar circumstances. Even as the unfathered male biped is apt to stay an hour or two later at his club when the house mother is away, so did my master swallow stay twittering on the roofs, and gossiping with his neighbours, until I was compelled to threaten that I would lock him out. I remonstrated with him by dint of rattling the stable door, and I thus managed to inform him that, being in the habit of going to bed early myself, I expected all dwellers under my roof to be in by half-past nine P. M. at the latest.

After clattering the door, I used to retire into the house for a minute or two, and on my return was pretty sure to find that my obedient gentleman had taken up his station on the nail, when I shut the pair in for the night. To his credit be it spoken, I never found it necessary to do more than remonstrate with my tenant, though I must own, until I saw for myself, I thought that swallows went to bed at an earlier hour than half after nine.

In about twenty days, five little gaping mouths might have been seen over the rim of the dish. The father and mother had a busy time of it then. It required all their industry and diligence to keep up such a continuous supply of food as would satisfy the little clamorers in the pie-dish. My motherly sympathies were stirred at the sight of the hard-working pair, and I thought I would help them. So I began fly-catching, and went with the poor fluttering insects to tender them to the baby swallows in the pie-dish. But, no thank you. My bribes and blandishments were of no avail. However widely the little beaks might be distended, they were always instantly and firmly closed against every dainty that I could offer. They would be fed only by their natural caterers.

It was curious to see these five pairs of little legs were twisted and interlaced like a very piece of network; and the beautiful little heads were placed one over another when they slept, till we saw but a mass of young life rather than so many distinct creatures. As they grew, the dish became literally filled to overflowing—wanting only an upper crust, as I used to say, to complete the pie.

One afternoon, having a young friend with me who had, like myself, taken great interest in my tenants, I lifted down the dish, to take a better view of its contents. I had often done so before, without giving offence; but on this occasion I ventured further. I introduced my hand amongst the network of legs, and disentangled them, when to my dismay, out scrambled the whole party, and fluttered off in various directions. What a clatter there was; doubled in an instant by the voices of the old birds, who indignantly remonstrated against this breach of contract.

My friend and I set to work, and with due penitence and apologies, though not without much chasing and fluttering, succeeded in restoring four of the youngsters to their disconsolate parents. The fifth rather came to grief, and had his temper and feathers a good deal ruffled while scrambling

in and out amongst the fire wood in the corner of the stable. I should say that, though the most friendly relations and perfectly neighbourly feelings existed between my tenants and myself, they never would feel their young in my presence. They would come with their bills full of insects, and wheel round and round, in and out; but I was always compelled to retire ere they would administer the ration to the impatient brood. It appears that, if I were not sufficiently well-informed to abstain from intruding upon them at meal times, they were by no means disposed to permit such a breach of good manners. But when able to stand on the roof, I have often seen the young ones feed, always equitably in turn.

Soon after my unfortunate escapade with the youngsters, the parent couple began to teach their young to fly. Then we had a clamor indeed! Such twittering, such examples of aerial swiftness, gracefulness, and audacious juveniles to follow, until at last the whole party flew out in search of food together. I had been told by a friend of mine—a great lover of natural history—that after the young ones are able to fly, the parent birds continue to feed them thus: The old one with laden bill, meets its offspring in the air, and, without checking the flight of either, the food is rapidly transferred to the beak of the young swallow; but I never, until to day, was fortunate enough to see this pretty and graceful feat performed.

After my little feathered friends were able to fly, they did not return to the dish, but for a short time used to roost with their heads nestling lovingly one over another, on the prongs of a rake which lay upon the rafters in the old stable. But I soon lost sight of them; for the old birds drove them out of the stable one evening, with a prodigious noise, and I never saw the brood there again. The cause of this ejection was manifested on the following day. My tenants, resolved to be house proprietors, had commenced building again, and their labours were crowned with success this time. I regret to state that they were not very honest; for materials, in the shape of a heap of bricklayer's mortar, lay conveniently near and these they appropriated to their own purposes without compunction.

I had all the old scene over again; but the second brood consisted only of three instead of five. In the early part of autumn, when the days began to shorten, my swallows intimated their wish to commence their labours earlier in the day, and made such a clatter that I was fain to slip on my dressing-gown, and come down every morning at four or five o'clock, to open the half-door and allow their egress. The watching of these little creatures beguiled many a weary hour, and when they migrated to other lauds for the winter, I was sorry to lose my tenants, never supposing that I should see them again. But I was mistaken; for they are here now. They came back at the usual season, and this year have reversed operations; first rearing three young ones in a new nest; while at the very time that I write, (July 21th, 1860) there are again five eggs towards a new "family pie" in the old cracked willow-pattern dish, to which, or any other locality they may choose on my premises, I make them heartily welcome.

We cannot observe animate or inanimate nature in any shape, without feeling new reverence for Him who taught the swallow where to find "a house for herself." But the doings of my bonny pets seemed to give me a lesson of perseverance also, and to advise me, when circumstances sometimes prove adverse, that, as they contented themselves with the cracked pie-dish instead of a handsome specimen of swallow architecture, I, too, must

endeavour to be satisfied with, and make the best of, those blessings which my Heavenly Father has placed within my reach.

*Blessings of disappointment.*—A man hurries breathless to the wharf, in order to reach a departing steamer. He is a few minutes too late! The plank is drawn; and as he watches the stately vessel plough her way through the blue waters, she seems to be plunging through his very heart. "How provoking!" he exclaims to the half-smiling, half-pitying, bystanders. He goes home sulky, he retires sulky to bed, and wakes up to read in the morning paper that "a few hours after leaving port, that steamer took fire, and when last seen, was floating on the water a burning wreck!" He fancies himself clinging in despair to a sinking bill of wood, and his very blood runs cold when he thinks how near he came to being on board that death-frightened vessel. And yet the very next time the man is thrown out by Providence in some favourite plan, he is slow to apply the lesson of the past, and thank his Heavenly Father for a disappointment.

I do not pretend to be a very apt learner, but many of my best lessons through life have been taught me by the same stern old schoolmaster, *disappointment*. And one lesson I learned, was that *this world was not made only for me*. If it had been, the sun would have shown just when my hay needed it, and the rain would have fallen only when my garden needed to be watered. But God goes on, and orders things as pleaseeth him best, without consulting us. And when our schemes were thwarted, the stern schoolmaster said: "The world was not made for you alone. Don't be selfish. Your loss, perhaps, is another's gain. The rain that spoils your new-mown hay, makes the blade of corn to grow faster in your neighbour's field. The fall in grain that cuts down your profits, will help the poor widow in yonder cottage to buy bread cheaper for her orphan babes. So don't be self-h."—*Lucy paper.*

#### Chinese Immigration to the United States.

Our country seems to have received the special and difficult mission to settle forever the important question of the mutual relations of the different races. The Negro Question is still distracting the country and fomenting one of the fiercest and most expensive wars of modern times, and already we are warned by California with the danger of a new kind of involuntary servitude—that of the Chinese. For some time past, the people of our Pacific States have become alarmed by the increasing influx of Chinese immigrants, who not only threaten to come into dangerous competition with the white labourer, but also, by their utterly degraded condition, to corrupt public morality to so great an extent as to require precautionary measures.

The Legislature of California, at its last session, enacted a law imposing a heavy tax on every Chinese immigrant, and adopted a memorial to Congress appealing for protection against the contingency of an overwhelming incoming of Mongolians. The memorial predicts that unless the influx of these people is arrested, a new system of slavery will be engrained upon the institutions of the State, as the people are not inclined to tolerate a race so degraded on equal terms, and in competition with the labour of white citizens. As to the prevalence of vice among the Chinese, the memorial says:—

"Whilst the influence of slavery is losing territory in our Eastern sister States, the unrestrained settlement of Mongolians in California is slowly but surely building up such social relations as will soon place the two races practically in the position of

masters and unfree servants. A race so degraded, that it is stated by the committee of this legislature appointed to confer with the Chinese companies at San Francisco, that according to the information from these leaders of the Chinese, there are *but one hundred respectable families*, that is, married women with children, among a population of 50,000 Chinese, a large proportion of which number consists of females—*one sex devoid of a sense of truth and veracity*, that the testimony of ever so many individuals to the same facts has no weight upon the minds of our juries—such a race can certainly not reside long in our midst without awakening all those selfish interests which desire the introduction of cheap labour, and the immediate cultivation of articles heretofore produced by slave labour in the south, even at the cost of an irradicable system of involuntary servitude."

The memorial anticipates another danger from the peculiar social organization of the Chinese, to which it refers as follows:—

"The Chinese population among us forms a State within a State; they are under the secret control of the five organizations, which are known as companies, whose orders and decisions they implicitly obey. All indications tend to show that there exists between themselves a relation of involuntary servitude, but the slavish subjection of the Mongolian to his social system, and the fear of the revenge of his superiors, are so great, that nothing can induce him to disclose the nature of the power which holds him to strict obedience, even against the police and judicial authorities of this State."

It is to protect itself from evils like these that California now invokes the interposition of Congress. The subject is certainly one of importance. The establishment of another kind of involuntary servitude is out of the question. The people of California themselves, we hope, would never vote for such a barbarous measure, and even if they would, the Federal government would never allow its execution. Whether it is possible or even expedient, to prohibit Chinese immigration altogether, is at least very doubtful. But one thing is certain, that as long as there are any Chinese on the Pacific, and especially if they are allowed to come in large numbers, they call more urgently for the opening of missionary operations among them than any other class of our population. Christianity has raised many a degraded race before, and the success of the Protestant and Roman Catholic missions in China itself, sufficiently demonstrates that the Chinese are not inaccessible to the ennobling influences of religion. Let there be a prospect of the Chinese immigrants becoming moral and industrious inhabitants of our country, and the whole question of difference of races will admit, we believe, of an easy and peaceable solution.

For "The Friend."

#### The Landslip at Goldau.

During the last year, a work entitled "The Alps, or Sketches of Life and Nature in the Mountains, by H. Berlepsch," was translated into English by Leslie Stephen, M. A., and published in London. From this publication we purpose making some extracts for "The Friend." The first is taken from chapter VI, which bears the above heading.

"The framework of the earth is in a state of uninterupted ruin and renovation. That great cycle of creation, which we recognise best in the germination, growth, death and decay of plants, because they recur in a period within the grasp of our perceptions, takes place equally in the very fabric of our earth, although its epochs embrace thousands

of years. Here, however, there is a change rather of form than of material.

"If we contemplate the ground upon which we walk, the garden and arable land which bears our corn and our wood for burning and building, or the dust of the roads which the wind whirls and confounds high in the air, if we examine it carefully in the microscope, and divide it into its simple elements, we shall find amongst innumerable particles of half or quite destroyed animal and vegetable organisms, amongst scarcely recognisable infusoria and snail shells, as many and even more new fragments of ancient mountains. A varied mixture of glassy splinters of quartz, and coloured flakes of schist, glistening crystals of mica, and angular grains of porphyry, limestones stones of felspar, and dense particles of limestone will appear, which have been crushed to atoms, and are going through a process of reformation.

"This transforming energy and the continual change of our earth's crust can best be recognised where the moving powers are developed on the largest scale in the service of nature,—on the seashore, and in the mountains.

"On the sea-shore, on that of inland lakes and even of rivers, we see new deposits of earth and stone which are called littoral formations. New islands spring up from the depths of the ocean to enlarge the region of firm land, whilst in other places the uninterupted working of the waves and the surge is continually washing away solid walls of rock, and submerging them in the depths.

"The levelling process shows itself far more strikingly in the mountains. Every rapid melting of the high snows in the spring, every thunder-storm with its vehement shower of rain, every glacier as it slides down, is sending yearly innumerable ruins of rock from the hills to the valleys, to the Alpine meadows and lowlands, and to the lake basins at their feet. If we could calculate their probable influence, we should find that in a vast period of time the atmospheric influences would lead to a complete levelling of hill and valley, were it not that now and then catastrophes occur, which would cause an interruption in the reckoning.

"The dweller in the Alps calls such events and the districts they lay waste, 'Rufe,' 'Steiruseten,' 'Gante,' or 'G'schutzen,' and in all the broader valleys of Switzerland, Tyrol, and the Alpine countries shut in by steep mountain-walls, such deserts of ruin may be seen bare of vegetation, resembling streams turned into stone. In violent storms they have in a few hours covered with sand, and with their detritus, valuable cultivated or meadow land, and destroyed its power of bearing for many years.

"These are not to be confounded with the proper rock falls and landslips, which from time to time visit the Alps, and belong to the most fearful of natural occurrences. Almost all are produced medietely or immediately by the action of water. Either the water continually and unceasingly pierces, gnaws away and bursts the narrow joints in the very hardest rocks; penetrating into them imperceptibly, freezing in the winter, and tearing them open like a wedge by the expansive power of the frost, till the masses of stone, separated from their parent rocks, and completely loosened from their natural base, at length, when the summer comes, and the penetrating ice melts, lose their equilibrium and fall into the valley; or else the separation of different beds and the slight coherance of the adjacent layers and the direction of their dip." This last can only happen in those Alps which are not formed of crystalline rock, granite, gneiss, mica, schist, porphyry, syenite, like the cen-

tral Alps, but only of sedimentary deposits. Here the action of water is direct, especially of the rain and snow water, which penetrates in great abundance into the earth between layers of rock, and dissolves their connection.

"This is especially the case in mountains whose lowest mass consists of compact and impervious layers, into which the water can sink but slightly. When decaying and easily destructible material is placed above those, such, for example, as red marl, and above this again a considerable thickness of a different kind of rock of less density, such as sandstone and nagelfluh, or still more any rock through which the water easily percolates, it follows as a natural consequence that either the water trickles through till it comes to the lowest and densest rock, and runs off in subterranean canals according to the dip of the strata, to appear again somewhere as a spring, or if it cannot find a sufficient outlet, it completely loosens and dissolves the intermediate layers, and changes them into mere soft slime.

"It now depends upon the course of the weather and the nature of the locality, what is to become of this half fluid layer of earth. If very dry weather occurs after lasting rains, it grows hard again, the water is gradually evaporated, the mud dries up, and the threatened danger is averted. But if the west wind continually drives new masses of rain into the hills, and if no lasting dam has been opposed by nature herself to the weakened layer, the whole mass breaks away, and a schlammlaine (slime avalanche) is the result. Wherever it directs its devastating uncontrollable course, it overwhelms, fills up, immures, and often covers by fathoms in depth, whatever stands in its way, like the lava of a volcano. Whatever it reaches is irrevocably destroyed. By such a stream of mud, a great part of the charming village of Waggis, by the lake of Lucerne, was annihilated and overwhelmed in July, 1795. It was announced on the night of the 15th, by a singular monotonous roar, which to the fancy of the people seemed to come from the cellars. When day began, the inhabitants saw with horror a thick dark red stream of mud, several fathoms high, and perhaps a mile broad, rolling down towards the village. Its motion was so slow that all the portable possessions of the villagers could be carried away. It lasted a good fourteen days, till the travelling stream of mud reached the lake shore; but a number of houses and excellent pieces of land were a prey to the catastrophe.

"Such mud avalanches, when they find no outlet, are indirect causes of falls of rock. The layers of rock, resting at great inclinations on these layers of mud, tear themselves loose by their own weight, and slide down the slippery earth to the valley.

"A storm in the ocean, a mountain spitting fire, the blaze of primeval forests in America, the simoon in the desert, may all chill a man's blood in his veins; but no storm in the open sea, no breaking forth of a volcano, no burning of a forest, can cause greater horror, than is felt at the fearful moment, when the mountaineer calls to his wife, children, and neighbours to 'run, for the mountain is coming!'

"There is only one phenomenon which can be compared to a mountain fall, for appalling danger, and that is the earthquake. When a mountain comes down, all that lies before its crushing power, is doomed to death, almost at the same instant that it is warned of danger. Only think of those stable mountain masses which, since the memory of man, have been enthroned above men's heads in death-like, indifferent calm, as if were a building raised by nature for time everlasting, suddenly deprived of their supports by an invisible hand, set in mo-

ion, wavering, tearing themselves loose, and storming down with lightning speed, into the peaceable valley below.

"Such a fearful event destroyed the villages of Joldau, Rötten, Busingen and Lowertz, in a few minutes, by the descent of the Kossberg, lying north of these places.

"The years 1804 and 1805 had been very rainy, and the year which followed them, continued to discharge unusual quantities of rain upon the Alpine land. Midsummer was quite remarkable for its continuous rain which, towards the end of August, and especially on the first of September, threatened to take the form of an absolute deluge.

"The landscape of a plain country looks dismal enough after four weeks of rain, in its saturated, wooded state, but it cannot be compared to a mountainous land after the same period.

"From every gorge and retired valley, destruction peeps forth, and is everywhere shaking and atting away what resists. The earth-stained and swollen waters flowing from every mountain-slope, ran and roar in channels and runlets cut out by themselves. All the hollow ways are deep in water, and the variegated, hieroglyphically-marbled pebbles, deprived of the cement in which they were embedded, shine out so transparently right, that they present a natural mosaic. We may see the bare root-network of the pine and the arches, of the seamyore, of the Alpine alder, or a bristly juniper, whilst other trees standing by are wayside hang drooping over. Wherever the action of the water has borne away the soil from the forest, the proud stems, patricians of the vegetable world, sink down by their own weight, whilst their trunks encumber the free passage.

"Still more torn, pulled down, exhausted and dirtless, are the forest fern, the blooming, burning lights of the epilobium, the hieracium which seem to be peering so curiously forward. It is as if some mischievous boy had been waging war against the plants; for the suppy stalks of the redicene grow fat in the overflow, and those squires of the vegetable world, that warrior troop, armed with arrow and lance against all offence—the harp-spiked family of thistles—in spite of the eating storms of water, set up their sharp angles and spikes in heroic resistance.

"Now the creeping grasses, the broad shield-shaped fescules, the airy copper-coloured bent, the lumpy calamagrostes, the fat-leaved millets with their lofty umbels, the tender hair grass and tough oolce, all lie completely prostrate. Their elastic cover of resistance, the muscular power of their thin blades, is broken. Smoothly combed down by the incessant rain, they cling slavishly to the ground. The rain has shown that he is their master. The quantity of rain on the mountain is different from that which falls on the level plain. Whilst the high level plains of Southern Germany have a yearly rain fall of from twenty-four to twenty-five inches, and the low plains of the north, twenty-two inches, the amount in deep Alpine valleys is fifty-four inches, and on the St. Bernard, according to the average of seven years, it is seventy-three inches.

"This is not, however, sufficient to mark the secular character of the lasting wet weather in the mountains. Something like it may be seen after steady rains in the low country. One thing which gives a more dismal character to the phenomenon in the mountains, is the profound melancholy in which the whole landscape is sunk. The high peaks are invisible; clouds have hung their gray mourning cloaks upon their shoulders. It is not rare for strangers in such weather to be attacked

by anxiety and foreboding, as if some awful misfortune was impending over them.

"The valley of Goldau was in this condition, when unexpectedly, in the forenoon of the second September, (1806) the rain ceased, whilst the melancholy horizon remained monotonously clouded. In the early morning, the people on the Gnypenburg, the eastern part of the Kossberg, and on the Spitzenbühl, remarked fresh yawning clefts in the soil and on the walls of rock. The sods of turf were in many places pushed over each other; and in the neighbouring forests, a dull sound like that of file-filing was heard from time to time, as though the roots were being forcibly torn asunder. At the same time a shower of nagelfluh pebbles came down from the cliffs over the 'Gemeinde-Mareht'; and as such showers often take place when the snow melts in the spring, and at all seasons after long-continued rain, and the inhabitants had long been accustomed to such noises and fallings, little attention was paid at this time to the warnings. The falling of fragments of rock, however, and the ascent of clouds of dust increased from hour to hour. The air trembled with constant oscillations, and the inhabitants of the Kossberg began to feel the shaking of the ground over a wide area. People who were busied digging potatoes, hewing wood, or tending cattle on the neighbouring heights, looked towards the Kossberg with increasing alarm.

"Late in the afternoon,—it had struck a quarter to five on the church clock at Arth, suddenly a vast chasm opened half way up the gentle slope of the mountain in the 'Ruthe' meadow, which grew broader, deeper, and longer. The surrounding turf turned over, so that it showed the red soil as if it had been plowed. At the same time the pine forests on the same level, became unnaturally animated. At first the tall slender pine trunks waded gently to and fro as if touched by an invisible hand, much as in summer the wind produces waves in the half ripe corn. This wave-like motion increased, but in opposing lines, so that the stems and tree-tops struck against and through each other with an irregular and vehement motion. With harsh cries, ravens, crows, jays, and other birds that harboured in the woods, flew upwards and hastened in a south-westerly direction to the forests on the slopes of the Rigi. Now the vibrating and jerking motion, the wave-like rising and falling, passed on to the grass-covered land. It looked as if gigantic moles were burrowing under it. At the same time a gentle sliding and slipping of the whole upper slopes commenced, and became constantly plainer and more rapid. The pine forests struggled to follow the hurried motion, and looked—according to the expression of people who watched the whole terrible phenomenon from beginning to end—something like hair stroked against the grain.

"These alarming phenomena steadily increased. In ever larger circles, meadows and grass lands, orchards, houses and stables with men and cattle, were drawn along into the fearful descent. The people who saw the ground on which they had been born and grown up, give way under their feet, started up in horror, and fled from their homes. Then was heard a thundering roar, as if the old foundations of the earth's crust had given way. The Steinberg-cliff, a rocky wall of millions of cubit fathoms with all the forest upon it, and the nagelfluh wall of the 'Gemeinde-Mareht' had given way. This was the signal for destruction,—then began a tragedy which can be compared with no other phenomenon for its fearful sublimity. In the wildest confusion, blocks of rock and splinters of stone, mud and turf, foliage and trees, some-

times whirled up into the air, sometimes enveloped in clouds of dust, chased each other over the mountain shoulders to the valley of Joldau. One huge fragment seemed trying to overtake another. The chaotic fall of vast masses, the speed of their descent, the universal confusion, increased every moment. Mountain-blocks, as big as houses, with pines fixed to them, hurried as if slung through the air.

"In a few minutes, hundreds of dwelling-houses, and as many stables and sheds were destroyed. The whole slope of the Kossberg, almost up to the Gnypenzpitze, was at that time dotted over with detached houses; and beneath in the valley, between the lakes of Zug and Lowertz, lay the rich villages of Joldau, Busingen, and Lowertz. Under the ruins, four hundred and fifty-seven men found a common grave."

(To be concluded.)

Selected.

"All is vanity and vexation of spirit."—Eccles. ix. 17.  
Let wit, and all her stried plots effect  
The best they can;  
Let smiling fortune prosper and perfect  
What wit began;  
Let earth advise with both, and so project  
A happy man;  
Let wit or favouring fortune give their best;  
He may be blest  
With all the earth can give; but earth can give no rest.

Whose gold is double with a careful hand,  
His care is double;  
The pleasure, honour, wealth of sea and land  
Bring but a trouble;  
The world itself, and all the world's command,  
Is but a bubble.  
The strong desires of man's insatiate breast  
May stand in posture  
Of all that earth can give; but earth can give no rest.

True rest consists not in the oft revying  
Of worldly dress  
Earth's miry purchase is not worth the buying;  
Her gain is loss;  
Her rest but giddy toil, if not relying  
Upon her cross,  
How worldlings drivel for trouble! that fond breast  
That is possessed  
Of earth without a cross, has earth without a rest.

Quarles.

*Ridicule and Repartee.*—The fatal fondness for indulging in a spirit of ridicule, and the injurious and irreparable consequences which sometimes attend the too prompt reply, can never be too seriously or too severely condemned. Not to offend, is the first step toward pleasing. To give pain, is as much an offence against humanity as against good breeding; and surely it is as well to abstain from an action because it is sinful, as because it is unpolite. A man of sense and breeding will sometimes join in the laugh which has been raised at his expense by an ill-natured repartee; but if it was very cutting, and one of those shocking sort of truths, which, as they can scarcely be pardoned in private, ought never to be uttered in public, he does not laugh because he is pleased, but because he wishes to conceal how much he is hurt. As the sarcasm was uttered by a lady, so far from seeming to resent it, he will be the first to commend it; but, notwithstanding that, he will remember it as a trait of malice, when the whole company shall have forgotten it as a stroke of wit. Women are so far from being privileged by their sex to say unhandsome or cruel things, that it is this very circumstance which renders them more intolerable. When the arrow is lodged in the heart, it is no relief for him that is wounded to reflect that the hand which shot it was a fair one.—*Hannah More.*

Human existence is short, and the few fleeting years allotted to man to live, soon pass away.

*An Interesting Fight.*—A gentleman, while walking in the fields at Trough, in Clare, England, recently, in company with a friend, was attracted by a noise in a field bordering on the road. On mounting a bank which hid the field from view, he says:—"I became an interested spectator of the following novel fight.—A fine ewe, with two lambs, one on each side of her, was standing resisting the attacks of a large dog-fox, who was attempting to get at the lambs, no doubt with the intention of treating his wife and family to a nice lamb supper. For nearly ten minutes my friend and I stood watching, with breathless astonishment, this strange scene.—At one time the fox would make a dash at one of the lambs, when the ewe, forgetting its usual timidity, and inspired with courage in defence of its young, would put down her head, and butt savagely at her natural adversary. The fox, baffled in his first attempt, would then run round and try to seize the other lamb; but the mother, quick as thought, would then turn round, and again meet her adversary with her hard and woolly head. The fox then retired a short distance, sat on his brush, and commenced barking, with the evident intention of frightening away the mother, so that he might secure at least one lamb for domestic purposes. At this moment the male parent of the two innocents, attracted to the spot by sly Reynard's musical bark, made his appearance, and seeing at a glance what had happened, made a rush at his enemy, put down his head, and would, no doubt, have destroyed him, only Reynard, seeing his new foe, and fancying the numbers too many for him, and that discretion was the best part of valour, ran away, leaving the ram the undoubted victor of the field."

For "The Friend."

#### The New Order for Enrolling and Drafting.

Since the military enrolment was commenced by the assessors, another order from the War Department, dated the 9th inst., has been issued, prescribing regulations for taking the names of citizens and drafting for the army, which give the movement some new aspects. As it may be useful to some of the readers of "The Friend" to know the purport of the regulations, I will endeavour to give a summary of such parts as will be likely to affect the members of our religious Society.

The 3rd Section directs the Governors of the several States to cause an enrolment to be forthwith made by assessors, or other duly appointed officers, in each county, of all able bodied male citizens between eighteen and forty-five years of age, giving the name, age and occupation of each.

Where there is no special statutory provision made in a State, for carrying the draft into effect, it is ordered that the lists when completed are to be forthwith filed in the sheriff's office of the county where the enrolment is taken.

The Governors of the several States are to appoint a commissioner for each county, who, after the enrolment is completed, is to give notice by hand-bills posted in each township of his county, of the time and place at which claims of exemption will be received by him; fixing the time for draft within ten days of the filing of the enrolment; and all persons claiming exemption from the draft, shall before the day fixed for the draft, make proof of such exemption before the commissioner, who shall decide on the same.

Instructions are then given the commissioners to strike from the lists certain classes of persons, among which are, "all persons exempted by the laws of the respective States from military duty."

Each person drafted is to be served with a notice of the fact and of the place of rendezvous.

These are the principal points of the order. Friends will be likely to be called upon and enrolled, in common with their fellow-citizens, and I believe it will be most consistent with christian candour, to avoid all evasion and insincere excuses, and honestly give the information asked for. Our ancient Friends did not court suffering; but they never shrunk from it in support of their religious principles; and refused not to obey any requisition of the Government merely to escape persecution. With innocent boldness and constancy, they openly met together for Divine Worship, while others assembled in secret; and when their religious assemblies were rudely entered by the officers, and their names demanded, they readily gave them; though they knew that the spoiling of their goods, or imprisonment, or both, would follow. They learned the great christian lesson of treating with meekness and gentleness, and even praying for, those who persecuted or evilly treated them, and thus commended to all their religious profession of being the lowly followers of the suffering Saviour.

Where Friends are enrolled they should ascertain the name of the commissioner appointed for the county to receive applications for exemption, and be careful to present their claims in writing, before the ten days allowed thereof expire.

The words of the Constitution of Pennsylvania, "Those who conscientiously scruple to bear arms shall not be compelled to do so;" seem to present an insuperable obstacle to the drafting of such persons; as it would be absurd to draft men for the army, of whom the fundamental law of the commonwealth declares that they shall not be compelled to bear arms, and who solemnly declare that they cannot conscientiously do so.

The Constitution of Pennsylvania also says that "the free men of this Commonwealth shall be armed and disciplined for its defence,"—and the State Militia Law authorizes the enrolment of citizens between the ages of twenty-one and forty-five only. The clear inference is, that persons under twenty-one years are exempt from enrolment, as fully as those who are who have passed forty-five. This seems so obvious as to admit of no question.

The order of the War Department, as I have before shown, directs the commissioners to strike from the militia lists, "all persons exempted by the laws of the respective States from military duty," and as the above two classes are clearly exempted by the Constitution and laws of Pennsylvania, it follows that they are so by the order of the War Department.

The question is asked by some, if a Friend is drafted, can he avail himself of the liberty given in the 7th section of the Instructions of the War Department, to offer a substitute? The answer would certainly be that he cannot. If a Friend cannot conscientiously go to war himself, he cannot employ another to do so; for that which a man does by his agent he is as much accountable for, as if he did it himself. The substitute, too, might commit great atrocities in war; and his principal would seem to be implicated in the guilt of them; or he might be slain, wholly unprepared for the last great change, and his death with all its sad consequences, rest as a heavy burden on the conscience of the one who induced him to enter the army.

As a Friend, then, can neither procure a substitute, nor pay any fine or equivalent for exemption from military duty, the query is put, What will be the consequences? We need not be anxious to determine this; nor will it increase our strength, or our peace and quietude, to be dwelling upon consequences. If we endeavour in a meek and christian spirit, faithfully to discharge our present duty to our heavenly Father, we may safely commit

the future into his hands, in the humble assurance that whatever he may permit to attend us, as we submissively receive it in obedience to his will, shall ultimately work for our good.

Our fathers suffered great obloquy, imprisonment, and the taking away of much of their property, because of this noble testimony; but they patiently endured it rather than violate their consciences; and He to whom they thus showed their fidelity, graciously sustained them in all their afflictions and losses; made a way for them where they could see none; and brought them safely and peacefully through and over all. The testimony against all war and fighting is as precious now, and of as great obligation, as ever it was. The Divine arm is not shortened that it cannot now deliver, nor is His ear heavy that he cannot hear the prayers of his children; and, if Friends are but faithful in supporting their religious principles in life and conversation; they may look on high for help, calmly relying on Him who is omnipotent, and in reverent confidence adopt the language; "The Lord is on my side—I will not fear what man can do unto me."

Note.—Since the foregoing was in type, we learn that the day for drafting is postponed from the third to the fifteenth of next month.

*The Sleepless Night.*—The following well-authenticated anecdote of the late Sir Evan Nepean carries the mind back to the sleepless night of Ahasuerus, in the palace of Shushan. Sir Evan, when Under-Secretary of State, related to a friend of his that one night after retiring to rest he experienced an unaccountable degree of wakefulness. He was in perfect health, had dined early and moderately, had nothing to brood over, and was perfectly self-possessed. Still he could not sleep, and from eleven till two in the morning never closed an eye. It was summer—twilight was far advanced; and, to dissipate the ennui of his wakefulness, he resolved to rise and breathe the morning air in the park. There he saw nothing but sleepy sentinels, whom he rather envied. He passed the Home Office several times, and at last without any particular object, resolved to let himself in with his pass-key. The book of entries of the day before lay open on the table, and in sheer listlessness he began to read. The first thing appalled him—"A reprieve to be sent to York for the coiners ordered for execution the next day." It struck him that he had had no return to his order to send the reprieve, and he scoured the minutes but could not find it. In alarm, he went to the house of the chief clerk, who lived in Downing-street, knocked him up, (it was then past three), and asked him if he knew anything of the reprieve being sent. In great alarm, the chief clerk could not remember.

"You are scarcely awake," said Sir Evan "Collect yourself; it must have been sent."

The chief clerk said he did now recollect; he had sent it to the Clerk of the Crown, whose business it was to forward it.

"Good!" said Sir Evan; "but have you his receipt and certificate that it is gone?"

"No."

"Then come with me to his house: we must find him, though it is so early."

It was now four, and the Clerk of the Crown lived in Chancery Lane. There was no hackney coach, and they almost ran. The Clerk of the Crown had a country-house, and meaning to have a long holiday, he was at that moment stepping into his gig to go to his villa. Astonished at the visit of the Under-Secretary at such an hour, he was still more so at his business.

With an exclamation of horror, the Clerk of the

rown cried, "The reprieve is locked up in my ark!"

It was brought. Sir Evan sent to the post-office for the trustiest and fleetest express, and the reprieve reached York as the prisoners were ascending the cart.

**Oriental Crows.**—Ceylon has upwards of three hundred and twenty species of birds; and of their odorous numbers, particularly the myriads of rarer-fowl, form one of the marvels of the island. The melody of their song bears no comparison with that of the warblers of Europe; and in beauty of usage they are surpassed by the birds of South America and Northern India; but they have singular grace of form, and utter clear and musical notes in rich and melodious tones. Of all the Ceylon birds in the same order, the small, glossy crows are the most familiar and notorious. The Dutch, during their sovereignty, enforced severe penalties against any killer of crows, thinking them useful; and they now frequent the towns in companies, and domesticate themselves in the close vicinity of every house. They are the flying thieves of the tree; and no article, however unpromising its quality, can with safety be left unguarded in any apartment accessible to them. They despoil ladies' work-baskets, open paper parcels to ascertain their contents, will undo the knot of a napkin to enclose anything eatable, and have been known to remove a peg which fastened the lid of a basket, in order to plunder the provender therein.

For "The Friend."

There is much in the following letter of that deeply experienced christian, I. Pennington, which applies to the state of things in many parts of our religious Society. It is to be feared that many professing with Friends, are striving to substitute private study and scripture readings, with or without commentaries, and often formal praying and preaching, for "writing on the Lord for the glory of his Spirit, and in returning back to the Lord, by his own spirit and in the virtue of his own life, that which he pleaseth to bestow upon them." We offer it for insertion in "The Friend" in the hope it may put all its readers upon their guard against this fearful delusion.

"Because my not praying in my family, according to the custom of professors, seemed to be such great stumbling-block to thee, it sprang up in my art to render thee this account thereof.

"I did formerly apply myself to pray to the Lord, morning and evening, (besides other times,) believing in my heart, that it was the will of the Lord I should so do. And this was my condition then:—sometimes I felt the living spring open, and in true child breathe towards the Father; and at other times, I felt a deadness, a dryness, a barrenness, and only a speaking and striving of the natural part, which I, even then, felt was not acceptable to the Lord, nor did profit my soul; but, apprehending it to be a duty, I durst not but apply myself thereto.

"Since that time,—since the Lord hath again pleased to raise up what he had formerly bestowed in me, and began to feed it, by the pure living forth of that breath of life which begat it, which is the bread that comes down from heaven daily to it, as the Lord pleaseth freely to disperse it,)—the Lord hath shown me, that prayer is his gift to the child which he begets; and that it stands not in the will, or time, or understanding, or affectionate part of the creature, but in his own begetting, which he first breathes upon, and then he breathes again towards him;—and that he worketh this at his own pleasure, and no time can be

set him when he shall breathe, or when he shall not breathe; and that when he breathes, then is the time of prayer, then is the time of moving towards him, and following him who draws. So that, all my times, and all my duties, and all my graces, and all my hopes, and all my refreshments, and all my ordinances, are in his hand, who is the spring of my life, and conveys, preserves, and increases life of his own good pleasure.

"I freely confess, all my religion stands in waiting on the Lord, for the riches of his Spirit, and in returning back to the Lord, (by his own Spirit, and in the virtue of his own life,) that which he pleaseth to bestow on me. And, I have no faith, no love, no hope, no peace, no joy, no ability to any thing, no refreshment in any thing, but as I find his living breath beginning, his living breath continuing, his living breath answering, and performing what it calls for. So that, I am become exceeding poor and miserable, save in what the Lord pleaseth to be to me by his own free grace, and for his own name's sake, and in rich mercy. And, if I have tasted any thing of the Lord's goodness sweeter than ordinary, my heart is willing, so far as the Lord pleaseth, faithfully to point any others to the same spring; and not discourage or witness against the least simplicity, and true desire after God, in them. But, where they have lost the true living child, and another thing is got up in its stead, (which, though it may bear its image to the eye of flesh, yet it is not the same thing in the sight of God,) and, where this nourisheth itself by praying, reading, meditating, or any other such like thing, feeding the carnal part with such a kind of knowledge from Scriptures, as the natural understanding may gather and grow rich by; this in love and faithfulness to the Lord and to souls, I cannot but testify against, wherever I find it, as the Lord draweth forth my spirit to bear its testimony.

"And this I know, from the Lord, to be the general state of professors at this day. The Spirit of the Lord is departed from them, and they are joined to another spirit, as deeply and as generally as ever the Jews were; and that their prayers and reading of the Scriptures, and preaching, and duties, and ordinances, are as loathsome to the soul of the Lord, as ever the Jews' incense and sacrifices were. And this is the word of the Lord concerning them. Ye must come out of your knowledge, into the feeling of an inward principle of life, if ever ye be restored to the true unity with God, and to the true enjoyment of him again. Ye must come out of the knowledge and wisdom ye have gathered from the scriptures, into a feeling of the thing there written of, as it pleaseth the Lord to open and reveal them in the hidden man of the heart.

"This is it, ye are to wait for from the Lord; and not to boast of your present state, as if ye were not backslidden from him, and had not entered into league with another spirit; which keeps up the image of what the Spirit of the Lord once formed in you, but without the true, pure, fresh life.

"From a faithful Friend and lover of souls."  
I. P.

**Cottonized Flax.**—During the past year a series of experiments, mechanical and chemical combined, have been made in Rhode Island, the object of which was to provide, as a substitute for cotton, a material that could be manufactured without any alteration of machinery now in use. The object has been attained by the production of a material which is properly named cottonized flax. The flax is pulled by a machine which does the work of forty

men. Either manufactured flax or flax not in seed may be used. As flax is cultivated for the seed a double crop may thus be produced—a crop of seed as well as of flax. The dried flax as gathered from the field, is first cut by machinery into suitable lengths, representing the staple of upland cotton about 11 inch long. The process is performed by automaton machinery with great facility and at little cost. The material is subjected to a steaming process in large vats, and is then dried by machinery, rapidly revolving. Next, it passes through what may be called a ginning process, whereby the woody husk or chives is separated from the fibre. By chemical process, the fibre is then exploded longitudinally, and assumes the required fineness of cotton. The whole process is rapid, simple, and cheap. In this form the material is successfully carded, spun, and woven. Beautiful specimens of flax cotton, drawings, rovings, yarn, and also of the flax mixed with cotton, have been exhibited to the Secretary of the Interior and others, by Ex-Governor Jackson, of Rhode Island. As a material for mixture with wool the cottonized flax is vastly preferable to cotton. It combines in the carding process with greater facility. The yarn is stronger. The cloth is very durable, even more so than if made wholly of wool. The lustre of the cloth is improved. Flax wool also receives a dye with the same facility as wool itself.—*National Intelligencer.*

**Locomotion.**—A new discovery in locomotion has been made in France, and it is considered to be of so much importance that a commission has been appointed by the Emperor to examine and report upon it. M. Girard has constructed the model of a railway adapted for runners like those of a sledge. The runners move in a sort of slot; between this and the rails water is introduced, and thus almost all friction is avoided. Should this plan prove successful on a large scale, much wear and tear, not only of the carriages, but of the passengers' nerves, will be saved. How delightful it will be to slide smoothly over a surface of water, instead of having one's bones dislocated by being rattled over uneven rails, and one's head stupefied by the perpetual clatter.—*London Guardian.*

## THE FRIEND.

EIGHTH MONTH 30, 1862.

### SUMMARY OF EVENTS.

**FOREIGN.**—News from England to the 14th inst. Agents are now in England making contracts in behalf of the United States Government, for a supply of arms, &c. The contracts are proposed with a clause that they shall be null and void in case of a war with England.

The St. Petersburg Journal declares that it is the desire of the Russian Cabinet to see the civil war in the United States ended by prudent and honorable compromise. Russia's desire is not to divide, but to bring together and re-unite adversaries, who ought always to remain brothers.

The movements of Garibaldi have created great excitement and enthusiasm throughout Italy. The people were rallying to his standard, and it was supposed he would soon be at the head of a large army. He has taken possession of Roava and Palmira. The Government had not taken any further measures against him. In a recent speech, Garibaldi declared, "The present state of affairs cannot continue. I go against the Government because it will not let me go to Rome. I go against France because she defends the Pope. I will have Rome at any price. Rome or death! If I succeed, so much the better. If not, I will destroy the Italy which I made myself."

Two Confederate steamers had sailed from England, having both succeeded in escaping from the United States steamer Taracora, which was watching them.

The returns of the harvest in France were favourable. The French expeditionary force for the Crimea is large. A number of general elections took place in England. The Manchester market had an upward tendency with small sales. The Liverpool cotton market was steady and firm, at unchanged rates for America, but easier prices for India. Breadstuffs quiet and steady.

**United States.**—The reports made up to the last week, considerable uneasiness prevailed in regard to the military operations in this State. General McClellan was permitted to withdraw his army from the peninsula without molestation, but it appears that as soon as the rebel commanders discovered his intention, they took possession of Richmond to operate against Gen. Pope. The various divisions of the rebel army occupying the range from Fredericksburg to Gordonsville, are reported to number from 150,000 to 200,000 men. Gen. Pope was obliged to retreat before the advancing force, which fought against him on the 21st inst., had fallen back as far as Warrenton Junction. During the retreat, there appears to have been a great deal of skirmishing all along the lines, though no serious engagement. In one of these skirmishes, about one-half of a Federal cavalry regiment was captured. A part of Gen. McClellan's army had landed near Aquia Creek, and it is believed the main body has effected a junction with the forces of Pope and Burdise. Heavy reinforcements have arrived at Fredericksburg for the Union army. Another march of the rebels up the Shenandoah valley is apprehended.

**North Carolina.**—The President has authorized Gov. Stanley to order an election for representatives to Congress in the first and second districts of this State. The Governor and members of the Legislature, say that there is no difference between the secession and so-called Union party of North Carolina, in regard to the prosecution of the war.

**Louisiana.**—All the property of John Sidel has been confiscated by order of Gen. Butler. An order from the U. S. authorities at the turning over to the U. S. authorities of all arms in New Orleans. Count Megrav, the French Consul, had written a letter to Lieut. Wetzel, Assistant Military Commandant, expressing a desire that the French citizens might be allowed to retain their arms, out of fear of the Federal cavalry. The General Butler replied to the effect that the protection of the United States will be given in such a case, and insisting on all the arms of the inhabitants, white and black, being under his control. Beverly Johnson, of Maryland, has made his report to the commandant in this section of the Administration of affairs in New Orleans, he long since went thither to investigate, and the President has approved its conclusion. It is understood that he recommends the return to the Consul of the Netherlands of the eight hundred thousand dollars seized by General Butler, in his hands; that the seven hundred and sixteen thousand be returned to the French Consul; also, that a large amount of sugars and other merchandise be relinquished to the Greek, British and other foreign merchants domiciled in New Orleans, as these seizures can be justified by civil or military necessity.

**Kentucky.**—More than 10,000 troops from Indiana have entered Kentucky. A despatch from Cincinnati says, there is too much importance attached to the rebel raids in Tennessee and Kentucky, and the current statements of the strength of the rebels in this section are said to be much exaggerated. The Grand Jury, however, asserts that a general movement of the Confederate armies of the West is about being made, and that Kentucky and Tennessee will be soon in possession of the South.

**Tennessee.**—It is stated that Cumberland Gap has been abandoned by the Federal forces, who have retreated to Barbourville. The rebels have burned two Federal steamers, fifty miles above Fort Henry. Clarksville has been captured by them, and 340 Federal troops taken prisoner. In an engagement with Morgan's cavalry near Gallatin, the U. S. forces, under Gen. Johnson, were defeated with a loss of 300 prisoners, including Gen. Johnson. On the 20th inst., two thousand guerrillas passed through Raleigh, in the direction of Memphis, and retraced their steps the same day, leaving the bridges, and destroying the cotton that could find. Various other ravages by roving bands of rebels are reported.

**Missouri.**—In a battle near Lexington between the State troops and a large body of rebels, the former were defeated, with the loss of 200 killed and 1,000 wounded. Late intelligence states that Lexington had been secured against attack, and that the rebels were retreating, pursued by the U. S. troops.

**Arkansas.**—Gen. Curtis's army at Helena, is said to have been increased to 30,000 men. A considerable fleet is also collected there, it is supposed, for a movement upon Vicksburg. Its efficiency is, however, greatly impaired by sickness, about half of the crew, it is stated, being sick. It is supposed that in the camps all such sickness prevailed, which is attributed to the use of wholesome water. Intercepted letters from Gen. Hindman to the rebel War Department, state that he has 18,000 well armed infantry, 6,000 cavalry and 50 pieces of artillery, at Little Rock. He proposes to attack Gen. Grant from Gen. Critch. Instead of attacking him at Helena.

**The Mississippi River.**—The steamer *Acacia*, recently ran on a snag, fifty miles below Memphis, and sunk in a few minutes. About forty persons perished, she was dismasted, and 50 soldiers, General Sumter, grounded opposite Bayou Sara. The rebel authorities demanded her surrender, but the crew and stores were put on transports, and the Sumter blown up.

**Minnesota.**—A serious outbreak on the part of the Sioux Indians has taken place near the lower Sioux Agency. The Indians being exasperated at the non-reception of the annuities due them by the Government, attacked the whites in the town of Acton, murdering men, women and children, indiscriminately. They afterwards extended their outrages, and according to the latest reports, have destroyed several persons.

**Colonization.**—A colony of colored persons to settle in Central America, is being raised in the District of Columbia. The project is encouraged by the Administration. The Government proposes to send out the emigrants in good steamships, and provide them with the necessary implements of labour, and also sustenance until they can gather a harvest.

**Exchange of Prisoners.**—On the 23rd, about 3,000 rebel prisoners were sent to Cairo to be exchanged; several hundred Tennessees and Kentuckians preferred the offer of a stipend, and were discharged. It appears that the rebels hold more prisoners than the U. S. authorities have in their possession. This was not at first supposed to be the case, but large were the numbers of rebel prisoners taken in the spring, they have since been overbalanced by the numerous disasters to the Federal arms in Virginia, Tennessee, and other places.

**Southern Items.**—Late Richmond, Va., papers, criticize the management of the war with much freedom. The Examiner calls the Confederate President "a weak, opinionated and headstrong man, who has led away the Southern army in inaction, and indecisive battles. The rebel Congress has re-assembled at Richmond, and the Examiner says "it will be for Congress to repair, as best it can, the mischief done the public service by a weak and impractical Executive. The message of Jefferson Davis to the rebel Congress, is a document of small interest or value. It furnishes but little information and presents no new views in relation to the rebellion. The Richmond correspondent of the Charleston Mercury states that the total losses of the Southern army in the late battles near Richmond, amounted to between 18,000 and 20,000 men. The mortality among the wounded is stated to have been frightfully great, in consequence of the great heat of the weather which followed the engagements.

**Children.**—Mortality last week, 520, including 324 children and 196 years.

**Philadelphia.**—Mortality last week, 371.

**The Markets, &c.**—The imports at New York last week amounted to \$3,664,070, and the exports, (including \$787,000 in specie), to \$3,695,316. The total exports of the week, for the beginning of the year, have been \$38,623,776. The specie in the New York banks on the 22nd inst., was reported to be \$25,588,486. Premium for gold, 15 $\frac{1}{2}$  per cent. The following were the quotations of the grain market on the 25th. *New York.*—Red western wheat \$1.28 to \$1.22; white Michigan, \$2.01 to \$1.94; rye, 79 cts. to 80 cts.; corn, 62 cts.; corn, 62 cts.; for western yellow. *Philadelphia.*—Prime red wheat, \$1.30 to \$1.35; white, \$1.35 to \$1.50; rye, 75 cts. to 80 cts.; yellow corn, 64 cts.; oats, 56 cts.; 57 cts. for old Penna.; new Delaware, 37 cts. a 40 cts.

#### RECEIPTS.

Received from John Farewell, Agt., O., for L. B. Walker and John French, \$4 each, vols. 33 and 34, for Benj. Antram and Danl. Test, \$4, vols. 34 and 35, for Nathan Armstrong, \$4, vols. 36 and 37, for Isaac Carr, \$5, for Jaa. Taylor, \$2, for S. Swain, \$2 each, vol. 32, to 27, vol. 38, for J. A. Newell, Agt., N. Y., for Henry Knowles, 10, \$2, vol. 38.

#### FRIENDS' SELECT SCHOOLS.

These seminaries will, it is expected, be re-opened after the summer vacation, on or near the first of Ninth month next, the Boys' School being situated on Cherry Street west of Eighth, and the Girls' School on Seventh Street between Cherry and Race Streets.

The course of instruction now adopted in the Boys' School, embraces, besides the ordinary branches, a selection of more advanced mathematical, scientific and classical studies, on the satisfactory completion of which, the pupil will be entitled to a diploma or certificate of scholarship.

During the winter months, lectures on scientific subjects are regularly delivered, illustrated by appropriate apparatus and experiments.

The course of study at the Girls' School embraces, in addition to the elementary branches—Algebra, Geometry, History, Natural Philosophy, Chemistry, Astronomy, Physiology, Natural History, Botany, Physical Geography, Mental Philosophy, Etymology, Rhetoric and Composition. Instruction is also given in Trigonometry, Measurement, and the French and Latin Languages. As the proper classification of the scholars, early in the session, is important, it is desirable that those who intend to enter pupils for the coming term, should do so as early in the season as possible. Application may be made on the opening of the Schools, to Joseph W. Aldrich, Principal of the Boys' School, and to Margaret Lightfoot, the Principal of the Girls' School.

With the present arrangement, it is believed that these schools offer unusual advantages to Friends for the liberal education of their children, and at a very moderate cost.

Their attention is also invited to the Primary Schools in the Northern and Western Districts, where provision is made for the careful elementary instruction of children too young to enter the Principal schools.

On behalf of the Committee,

JOHN CARTER, Clerk.

#### FRIENDS' SCHOOL, GERMANTOWN.

Since the opening of this School, in Ninth month, 1858, the buildings have been enlarged and improved, for the accommodation of Friends' children, and others who conform to the regulations of the School. The situation is pleasant and healthful, adjoining and communicating with Friends' Meeting-House premises, on Germantown avenue. The course of study embraces the usual branches of a good English education; also, the French and Latin languages.

**TERMS FOR TUITION.**—From \$8 to \$20 per Session of five months, according to the ages of the pupils, and the branches taught,—French and Latin, \$8 each per Term. Application to the Trustees—Messrs. Airey, Coe, Egan, Comfort, John S. Haines; Lloyd Miffin; Samuel Morris; George Jones; Elliston P. Morris,—or to Amy and Sarah H. Albertson, at the School.

Eight months, 1861.

**Board.**—A limited number of scholars can be accommodated with board in the dwelling on the premises. Access may also be had by the Scholars to a valuable Library, belonging to the Preparative Meeting.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent,—JOSUAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 724 Market Street, Philadelphia, or to any other Member of the Board.

#### EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Men's and Women's schools. Applications may be made to Isaac Rogers, Jr., 622 Noble street.

SAMUEL ALEX, 524 Pine street.

GEORGE J. SCATTERGOOD, Fifth and Callowhill streets.

MARRIED, at Friends Meeting House, Goshen, Chester Co., Pa., on the 5th inst., 1862, HENRY WOOD, of Rahway, N. J., and HANNAH FOSYBER, of the former place.

DIED, on the 5th inst., aged sixteen months, JOHNSA SOPHIA, daughter of Dr. J. H. and Mary M. Worthington.

WM. H. PILE, PRINTER,

Lodge street, opposite the Pennsylvania Bank.
